This publication (SA Supplement 182) is presented to all registrants of the XIVth World Congress of Sociology with the compliments of the International Sociological Association (ISA), Sociological Abstracts (SA), and the Montreal Organizing Committee for the 1998 World Congress.

As you will notice, the abstracts are not numbered solely for this publication. Accession numbers have been assigned on the basis of a continuing system used by SA for abstracts of conference papers. For example, the first abstract, that of a paper by Berit Aas, is numbered 98S33442/ISA/1998/10683. The first two digits, representing the year of publication in SA, are followed by the letter S, identifying it as a Supplement abstract. The five-digit number (33442), which identifies its sequential position among all Supplement abstracts published by SA, is followed by the acronym of the association and the year of the congress. The final four-digit (10683) identifies it as the 10,683rd ISA abstract included in the SA database.

SOCIOLOGICAL ABSTRACTS is published by Cambridge Scientific Abstracts (CSA) under an exclusive license from Sociological Abstracts, LLC. The seven issues are published bi-monthly in February, April, June, August, October and semimonthly in December. Subscriptions are \$485 per year. Please remit by check to Cambridge Scientific Abstracts. Checks must state U.S. Dollars and be drawn on a U.S. Bank. If paying by bank wire transfer or international money order, include library order number or CSA account number. California, Maryland, and Ohio residents: Please add appropriate sales tax or furnish your tax exemption certificate number. Canadian subscribers should furnish a GST number.

POSTMASTER: Send address changes to Cambridge Scientific Abstracts, 7200 Wisconsin Avenue, Suite 601, Bethesda, MD 20814.

Periodicals postage paid at San Diego, CA, and additional mailing offices.

An annual Cumulative Index may be purchased by subscribers for an additional \$95 which is then sent by Third Class/Library Rate mail upon publication.

NOTICE: Claims for missing issues must reach the subscription office within six months of date of publication. Notify us, as well as the U.S. Post Office, of change of address as early as possible. The U.S. Post Office does not forward journals. It destroys them, unless specifically instructed not to do so. Issues missing as a result of failure to inform us in time of a change of address will not be replaced free of charge.

sociological abstracts
Published by Cambridge Scientific Abstracts

15 June 1998

Dear Colleague:

The response to the call for abstracts of papers to be presented at the XIVth World Congress was beyond all expectations. **sa** received 3,171 abstracts, 388 more than for the XIIIth Congress.

These abstracts--edited, translated (if need be), and indexed--are all included in this publication. There is also a bibliography of 227 abstracts that arrived too late to be processed. They, along with any other abstracts received between now and 30 September 1998, will be included in the December 1998 update. So, if your abstract is not in this publication, and if you would like to have it included in the **sa** database, please submit an English-language (only) abstract, by mail (not fax), before 30 September, to **sociological abstracts** at the address given below. Please, also submit a copy of your complete paper for sale through **SOCIOLOGY*Express** (see page 1), our Document Delivery Service.

May we remind you that not only do your abstracts appear in this publication, but also, they are already available in the **sa** database via the Internet Database Service from Cambridge Scientific Abstracts (www.csa.com). The Late Arrivals will be available in December 1998.

It is necessary to interject a comment on the advantages, but limitations, of modern technology--specifically, of fax communication. At some point, many of the abstracts herein were transmitted via fax. While this facilitated their timely arrival, a good number of the abstracts were so illegible that we were unable to decipher the copy, necessitating deletion of some portions. Had we been able to contact the many authors whose abstracts arrived in poor condition, we would have done so.

We hope that this publication will facilitate faster and broader dissemination of the proceedings of the XIVth Congress. Thank you all for your contributions. Best wishes for fruitful intellectual encounters throughout the Congress and beyond.

Cordially yours,

Alberto Martinelli

¶ Assesses the continued relevance of union women's separate organizing in the context of globalization. Motivation for this organizing is considered, evaluating its success & providing evidence of its growing legitimacy. Analytic tools for exploring this strategy are refined, outlining distinctions, for example, between separate & autonomous organizing, separate organizing & separatism, & constituency building & representation. An essentialist reading of separate organizing is rejected in favor of a more strategic one. Explored are conditions under which such organizing can avoid both organizational & political marginalization, address diversity, & facilitate coalition building. The artificial binary between separate organizing & mainstreaming is rejected in favor of the promotion of both autonomy & integration. A dual structure combining integrated equity initiatives with constituency-based organizing for women & other marginalized groups is proposed as a strategy to foster equity & solidarity & to undercut the worker competition that is central to globalization.

language in which paper is written

¶ Analyzes the social & urban mechanisms underlying the development of *faubourgs spontanés* (spontaneous suburbs) around Oran in western Algeria. With reference to the *lotisseur clandestin* (clandestine tenant) as a new actor of the urban organization, emphasis is on the emergence of a new system of popular housing development in Third World countries. Organized from complex forms of fraudulent appropriation of state lands, the suburbs of Oran have witnessed the emergence of real urban cores without any structure or any sense of fundamental belonging to a safe city. The infrastructure & basic equipment are lacking, & there exists a conception of housing that promotes exclusion & often links mediocrity, instability, & mercantilism.

Make **SOCIOLOGY*Express** your link to the full text of available conference papers abstracted and indexed in **sociological abstracts**.

Ordering is easy. Simply phone (619) 695-8803 (worldwide); Fax: (619) 695-0416; or write to **SOCIOLOGY*Express** P.O. Box 22206, San Diego, CA 92192-0206.

Turn-around time is fast and pricing realistic. Now you can have the papers you need when you need them!

The cost per conference paper is \$12.50 U.S./Canada; \$15.00 international. All orders are prepaid. (For journal articles, please contact INFOTRIEVE at 800-422-4633).

Aas, Berit (Jornstadveien 30, N-1360 Nesbru Norway (tel/fax: 47-66-846165)), **The Deteriorating Effects of Globalization on Women's Lives: Adjustment or Resistance? A Nordic Perspective.**

¶ A review of the last decades of feminist empirical research documents that globalization has had an increasingly deteriorating effect on women's lives & human rights. The views & prognosis raised by Maria Mies in *Patriarchy and Accumulation on a World Scale* (1986) are theoretically supported. Focus here, however, is on questions about the mentality, the Zeitgeist, that arises in politics & bureaucracy when belief in market mechanisms is unlimited. Market mechanisms have different appearances: laissez-faire attitudes in economic dispositions; privatization within national borders; governmental decisions to loosen control over capital movements internationally; governmental acceptance of multinational corporations' massive attack on natural resources; & exploitation of the weakest groups of a nation's labor force. It is argued that women, who constitute the majority of the global proletariat, must (1) protest, reformulate, & change fundamentalism in mainstream economic theory & (2) organize counterforces to globalization & strengthen their resistance.

Aballea, François & Braem, Sophie (GRIS U Rouen, F-76130 Mont-Saint-Aignan Cedex France (tel/fax: 02-35-14-61-05/04; e-mail: aballea@epei.univ-rouen.fr)), **Identités et registres de légitimité: le cas des techniciens-conseil des CAF en France** (Identities and Forms of Legitimacy: The Case of Technical Consulting of CAF in France). (FRE)

¶ The *Caisses d'allocations familiales* (familial allocation funds) CAF in France is currently faced with a series of technical, organizational, & managerial changes designed to deal with growing numbers of people who find themselves in a precarious financial situation. As a result of this process, the technical counselors of the CAF are confronted with situations where there is a discordance between institutional policies & what they perceive as their professional mandate. This incongruity is responsible for the professional identity crisis currently experienced by these counselors.

Abbasov, Arif (Institut Archaeology & Ethnography Azerbaijanian Academy Sciences, Prospect Djavid 31 370143 Baku (tel/fax: 99412-927590/395692)), **Ethno-Social Processes in Azerbaijan in Post-Soviet Period.**

¶ The collapse of the USSR & Azerbaijanian independence, as well as intensive migration processes, have resulted in qualitative changes in the ethnolinguistic situation. Major changes in the social function & status of languages in Azerbaijan are obvious; bilingualism & multilingualism have increased. A new linguistic policy has been developed with the aim of strengthening the state status of the Azerbaijanian language & protecting languages of ethnic minorities. The transfer of Azerbaijanian written language from Russian to Latin script is also a component of the new policy, evidencing Azerbaijan's desire to shed itself of its colonial legacy & join the world community. However, the acquisition of state status by the Azerbaijanian language is faced with obstacles created by democratization processes. As a result, the Russian language maintains its position in some spheres, as do the English & Turkish languages. As part of its linguistic program, the Azerbaijanian government has implemented the teaching of languages of ethnic minorities in the educational curriculum of schools where they are concentrated. Materials have been

printed in Lezghi, Talish, Kurd, & Tat languages, which promotes development of their social functions.

Abdi, Nourredine (Groupe Maghreb Méditerranée, 142 blvd Berthier F-75017 Paris France (tel/fax: 33-1-46-22-37-60/42-67-91-63)), **Introduction: a la recherche d'une centralité méditerranéenne** (Introduction: In Search of Mediterranean Centrality). (FRE)

¶ The peripheral nature of the Mediterranean is discussed, focusing on the rise of nationalism. The gradual loss of Mediterranean centrality is traced to the decline of the Arab empire in the South & the European expansion into North Africa. Also discussed are the development of a positive interaction between the two shores of the Mediterranean; the global impact of Mediterranean codevelopment, as a contribution to regional political stability; & emergence of a common cultural identity for the area.

98S33447 / ISA / 1998 / 10688

Abdikeyev, Rafik (Dept Sociology Baku Engineering-Bldg U Shakhbazi St 5 370006 Azerbaijan (tel: 99412-250915)), **Social Activity of Azerbaijanian Youth during the Soviet and Post-Soviet Periods.**

¶ The social activity of Azerbaijanian youth in the Soviet period passed three stages of development: (1) In the 1920s & 1930s, an increase occurred in initiatives & enthusiasm of the young generation as a result of industrial development & new opportunities for self-realization. (2) During WWII, there was a rapid increase of political activity among youth, which can be explained by the struggle against the fascist aggression, as well as by patriotism & civic feelings. (3) Lower levels of social activity among youth during the 1950s-1980s can be explained by domination of ideology, growth of national consciousness, & social dissatisfaction. The end of the 1980s saw the beginning of the post-Soviet period when social activity took on a qualitatively new & clearly expressed political character. This activity manifested itself in spontaneous, uncontrollable form & in youth discontent with policy conducted by existing power. This period can be divided into three stages of social activity among youth: (A) involvement in the national liberation struggle for independence & integrity of Azerbaijan; (B) manifestation in different political parties & social-political movements in struggle for power in regenerating the Azerbaijanian state; & (C) relevant to dislocations related to economic change, the forming of market relations & emergence of new cultural values. Comparison of social activity of Azerbaijanian youth in the two periods shows a growth of activity in the post-Soviet period for both separate indices & total degree.

98S33448 / ISA / 1998 / 10689

Abela, Anthony M. (U Malta, Msida (tel: 356-3290-2978; e-mail: aabe@cis.um.edu.mt)), **"Who Wants Divorce?": Marriage Values and Divorce in Malta and Western Europe.**

¶ Compares family values, marriage breakdown, & divorce in Malta & Western Europe, drawing on 1981-1995 survey data. Explored are likely outcomes from a national commission set up to obtain the widest possible consensus for the introduction of divorce in Malta on a Western European model that fits most closely to the local situation. Country-specific factors & social differences for permissive divorce are examined, & a hypothesis of the significance of a Catholic family culture for the upkeep of a restrictive morality on marriage values & divorce is tested. Sufficient reasons for marriage breakdown & divorce—eg, domestic violence, adultery, & alcohol abuse—are discussed, along with ways that justification & support of the divorce principle are differentiated by sociodemographic characteristics. In the Euro-Mediterranean city-island of late modernity, Malta, the observed shift in the values of the family, the secularization of sexuality, & increase in marriage breakdown are still accompanied by a strong Catholic family culture that resists civil settlement by divorce. Divorce might be legalized if the needs of a significant minority are given greater importance over the rule of a moral majority that excludes them.

98S33449 / ISA / 1998 / 10690

Abela, Anthony M. (Dept Sociology U Malta, Msida (tel/fax: 356-3290-2978/336560; e-mail: aabe@cis.um.edu.mt)), **Secularised Sexuality: Youth Values in a City-Island.**

Sexual activity of young people in the city-island of Malta is increasingly under the influence of global & Western European culture. Sea, land, & religious frontiers of a former fortress island have been permeated by the global environment through mass tourism, overseas travel, the media, information technology, new work & leisure patterns, & a rapid expansion of higher education. Here, theories of Sigmund Freud, Michel Foucault, & Anthony Giddens are employed to explain the relationship between religion & sexuality in a modern urban society. Results show how the strict traditional morality of the church in Malta is gradually giving way to a more open discourse on sexuality & its ensuing secularization. Declining importance is given to the church's youth ministry & teaching of the family.

98S33450 / ISA / 1998 / 10691

Abell, Peter M. (Dept Management London School Economics & Political Science, WC2A 2AE England (tel: 44-171-9557357; e-mail: P.Abell@lse.ac.uk)), **Comparative Narratives.**

The social world comprises a network of strategically interrelated human actions that generate outcomes—sometimes intended, sometimes not. The theory of comparative narratives provides a method of mapping such networks onto each other to allow for the detection of common patterns of causality & meaning. Formal foundations of the theory are outlined.

98S33451 / ISA / 1998 / 10692

Abraham, Margaret (Dept Sociology Hofstra U, Long Island NY 11550 (tel/fax: 516-463-5641/2201; e-mail: socmza@hofstra.edu)), **Immigration Policies and Practices in the United States: Gender, Ethnicity, Race and Class, Implications.**

A larger study on marital abuse among South Asian immigrants in the US is drawn on to examine how gender, class ethnicity, race, & legal status play out in US immigration policies & consider the ramifications for abused Asian immigrant women. Three fundamental ideas have played a pivotal role in shaping US immigration policies: individual economic worth (to US business), family unity, & racial/ethnic selectivity. Historically, especially in the context of the 20th century, US immigration policies & practices have been framed around overt & covert racial discrimination, the shifting demands of a labor market for the accumulation of capital, & the principle of family unity. Using an ethnogender approach, it is argued that, through malecentric immigration policies, the racist patriarchal state indirectly ensured that minority women were subject to the racist patriarchal order & made more vulnerable to the power exercised by abusive spouses. Also addressed is how recent attempts by the state to provide better legal protection for abused alien spouses have not been entirely due to deficiencies in legislation & restrictive regulations. This problem is compounded by an increasing legislative & regulatory framework based on the notion that the US must prevent aliens from using fraudulent means to gain immigration & citizen benefits in this country. Briefly considered are the emergence of ethnic women's organizations & their role in challenging immigration policies that discriminate around issues of class, gender, ethnicity, race, & legal status, especially in the context of violence against South Asian women.

98S33452 / ISA / 1998 / 10693

Abraham, Martin & Funk, Walter (Dept Sociology U Leipzig, D-04109 Federal Republic Germany (tel/fax: 49-34-1-973-5666/5660; e-mail: abraham@sozio.uni-leipzig.de)), **Marriage Partners as Co-Workers: Self-Employment, Household Relations and Gender.**

Empirically, self-employed persons with small enterprises often operate with family support. In particular, the formal or informal employment of a marriage partner seems to have many advantages, eg, fiscal benefits & low wage costs. However, from a theoretical point of view, these advantages are jeopardized by serious cooperation problems, eg, loss of former qualifications. Hence a one-sided dependency on the part of the co-working partner arises. This situation can become problematic in the event of conflict within the partnership or a divorce. These problems are more severe for female partners in a lifetime relationship. Data from a sample of self-employed persons are used to analyze a set of hypotheses concerning the related problems of the decision for collaboration & the governance structure in the households of the self-employed. Contrary to the theoretical arguments, it was found that the companion's hours of co-working increased when her external productivity increased. Further, a rising internal productivity of the companion de-

creases her hours of co-working. An ad hoc interpretation based on the double burden of working women is offered to explain these findings. Obviously, co-working increases significantly when intrafirm problems of trust become larger. Clear evidence is found for the prediction that the extent of co-working increases with the duration of collaboration. The data clearly support the hypothesis that co-working companions are more likely to live in a formal marriage than non-co-working companions.

98S33453 / ISA / 1998 / 10694

Abrahamson, Bram & Marck, Raboy (Dept Communication U Montreal, Quebec H3C 3J7 (e-mail: abramsob@ERE.UMontreal.ca)), **Canada's Information Society: Rewired.**

Suggests that Canada has always existed as an information society, & tracks how new terminologies function to smooth over recent transformations in Canadian communication policy, ie, attempts to integrate Canada into a very different kind of information society. By setting competing definitions of information society opposite each other, an element of contestation is introduced into how that term is defined. The process is traced in three sections: alteration of Canadian communication policy-making institutional landscape for integration into the structures & strictures of new versions of the information society (1993/94); accelerated slippage between national & global levels of policy making (1995/96); & dispersal of communication policy into new areas of inquiry & expertise (1997). For policymakers, the gradual transformation of Canadian communication policy across these stages registers as what might properly be called a distant early warning.

98S33454 / ISA / 1998 / 10695

Abreu, Alice R. de P. (U Federal Rio de Janeiro, 20051-070 Brazil (tel/fax: 55-21-224-8965; e-mail: aliaabreu@omega.incc.br)), **The Institutionalisation of Sociology of Work in Latin America.**

Discusses the development of research & research networks in sociology of work in different countries of Latin America & the role of international & national associations in the institutionalization of the discipline in the region.

98S33455 / ISA / 1998 / 10696

Abreu, Alice R. de P. (Federal U Rio de Janeiro, 21941 Brazil (tel/fax: 55-21-224-8965; e-mail: aliceabreu@worldnet.att.net)), **Gender and Work in Latin America.**

The study of women's work has been one of the relevant areas of the modern sociology of work in Latin America. Shown here is how the gender perspective has contributed to renovation of the discipline in the region, bringing important research topics previously ignored to the fore. It is also argued that recent production on gender & work has maintained this innovative characteristic. New approaches to perspectives of the study of gender differences in the workplace in the region are discussed.

98S33456 / ISA / 1998 / 10697

Abreu, Domingos (U Federal Ceará, Brazil 60182-260 (tel: 085-234-06-60; e-mail: infokid@fortalnet.com.br)), **Parents français, enfants brésiliens et associations d'aide humanitaires** (French Parents, Brazilian Children and Associations of Humanitarian Aid). (FRE)

Draws on 1992-1994 interview & participant observation data from French families who adopted Brazilian children & were (N = 50) & were not (N = 15) members of adoptive parent associations to determine why such couples are oriented toward the associations. It is found that (1) international child adoption is perceived as an exchange between a donor & sterile couples. The terms of the "gift" implicitly engage the new parents in material & symbolic exchanges with the Brazilian partners. (2) This work also reveals various kinds of preoccupations with the children's past & future (particularly in adolescence); the child's alterity is the source of worries for the parents.

98S33457 / ISA / 1998 / 10698

Abreu, Domingos (U Federal Ceará, 60182 260 Fortaleza Brazil), **Les Instituteurs et l'art des artothèques: pratique d'emprunt et emprunt de pratiques** (Teachers and the Art of Artothèques: The Practice of Borrowing and the Borrowing of Practices). (FRE)

Explains the establishment by the French government under François Mitterrand of the Maison du Livre, de l'image et du Son (MLIS) in Villeurbanne, which includes an artothèque, much like a lending library, but focused on books of art & offering expositions, conferences, & animated programs for schoolchildren. It is noted that teach-

ers make up only 11% of those persons who borrow works of art, but they make use of other opportunities, eg, fieldtrips with their students. Based on interview & survey data from teachers (N = 16 & 93, respectively), this investigation focuses on the practice of borrowing among certain teachers & the "borrowing of practices" among others. Members of the first group who borrow art to use in classroom instruction tend to have superior educations & be of high social class. Members of the second avoid using works of art in their classrooms, do not like modern art, & attend exhibitions on fieldtrips to give their students information that they themselves cannot provide. Most teachers fall between these two extremes.

98S33458 / ISA / 1998 / 10699

Abreu, Victor (School Economics Central U, Caracas Venezuela), **The Liberal Design of Modernity: Constitutionalism, Peace and Commerce.**

¶ The liberal state is the form that all states will assume in the contemporary world. Constitutionalism establishes adequate institutions that secure private liberty & neutralize the impact of "crowds." The state of law is extrapolated as an aspiration of peace in the worldwide order. England led the way with the abstract principles that inspired the French Revolution. Also, as the "shop of the world," England hoisted the flag of free exchange, which requires peace vs war & territorial expansion. The defeat of Napoleon led to the triumph of the spirit of commerce over the spirit of conquest. Meanwhile, the US began to counterbalance European influence, subordinating a continent under its control. Its monopolies would win the war over the people & carry the US to two worldwide conflagrations. Today's transnationalization will create nation-states with diminished concern for control & repeat the promise of liberal democracy: free commerce & peace forever.

98S33459 / ISA / 1998 / 10700

Adam, Barbara (School Social & Administrative Studies U Wales Coll, Cardiff CF1 3AS [tel/fax: 01222-8740000/874436; e-mail: adamtime@cardiff.ac.uk]), **Contested Rationalities of Time: Challenges to the Theory and Practice of Work.**

¶ An explicit focus on time challenges established social science traditions. As such, it changes the ontology, epistemology, & methodology of the social study of work, & offers a new perspective on power relations, past & current employment & production practices, & the effect of the industrial way of life on the environment. The impact of the commodification of time on work & wider socioenvironmental relations is explored, & the valorization of speed in work & production processes considered, bringing to the fore taken-for-granted incongruities & mismatches between different time priorities & time-based competition. Investigated in conclusion are the implications of the restless, sleepless, nonstop work patterns associated with globalized work time, information, & trade.

98S33460 / ISA / 1998 / 10701

Adam, Barry D. (Dept Sociology & Anthropology U Windsor, Ontario N9B 3P4 [tel/fax: 519-253-3000/971-3621; e-mail: adam@windsor.ca]), **Globalization and the Mobilization of Gay and Lesbian Communities.**

¶ After first considering cultural & structural definitions of globalization, it is noted that, though gay & lesbian movements have tended, with other new social movements, to be placed on the cultural side of this binary, a better understanding of globalization processes is needed in terms of the articulation of new collective subjectivities with changes occurring in the modern world-system. Gay & lesbian movements have been developing a more global face with the increasing adoption of gay & lesbian forms of homosexual bonding around the world. While a certain degree of cultural diffusion occurs despite the hegemony of the world information order, the emergence of a global mobilization of gay & lesbian people can be traced more to changing social conditions that have allowed for the development of gay-identified people in more societies. Neoliberalism, however, tends to be associated with right-wing initiatives that oppose new social movement constituencies.

Adam, Heribert (Simon Fraser U, Vancouver British Columbia V5A 1S6 [tel/fax: 604-291-3146/5799; e-mail: adam@sfu.ca]), **The Politics of Memory: The South African Truth Commission as an International Model?**

¶ Analysts of the "politics of memory" have identified four ways that a new democracy can deal with its unsavory past: (1) amnesia-forgetting was practiced in the Spanish transition from the Francisco Franco dicta-

torship & in postwar Japan & Russia; (2) disqualification—the purge of collaborators from public office ("lustration") presupposing skilled substitutes; (3) Nuremberg (Germany)-type tribunals—hallmark of victors, though power-sharing arrangements can prohibit prosecutions, particularly in situations where authoritarian segments in the army or state bureaucracy (eg, South Africa, Chile) still carry clout to sabotage a fledgling democracy; & (4) truth commissions—first practiced in Latin America, representing a unique compromise between tribunals & ignoring past atrocities on both sides. Here, lessons from the South African Truth Commission are explored, focusing on whether an International Truth Commission, similar to the currently discussed permanent International Tribunal for War Crimes in The Hague, Netherlands, could contribute to long-term reconciliation in place of short-term cease-fires.

Adams, Kathleen Marie (Dept Anthropology Loyola U Chicago, IL 60626 [tel/fax: 773-508-3458/7099; e-mail: kadams@orion.it.luc.edu]), **Fashioning Selves for Others: Identity Politics and the Genesis of Touristic Images on a Remote Indonesian Island.**

¶ Analyses of tourism & identity politics typically focus on established touristic destinations rather than on locales where tourism is undeveloped, but examination of such fringe destinations can offer insights into the larger processes of identity negotiation entailed in tourism development. Explored here is the emergent construction of touristically appealing peoples on Alor, a small island in Eastern Indonesia. Examination of the images promoted by local officials & aspiring guides & the strategic use of Indonesian tourism rhetoric illustrates the politics embedded in the genesis of touristic images of indigenous identity. Moreover, it is suggested that, even in locales so remote that tourism barely exists, ideas & fantasies about tourism can color local politics, flavoring discussions of identity & channeling local actions.

Adams, Mary Louise (Queen's U, Kingston Ontario K7L 3N6 [tel: 613-545-6000; e-mail: mlal@post.queensu.ca]), **Separating the Men from the Girls: Constructing Gender Difference in Figure Skating.**

¶ As one of the so-called aesthetic sports, figure skating is routinely categorized as an activity appropriate for girls. The importance placed on the skater's appearance & body presentation, costuming, musicality, & grace keep skating well in the bounds of traditional femininity. In the past, this has meant that female skaters have not been subject to the same forms of gender surveillance that have greeted other female athletes. By contrast, the masculinity of male figure skaters is a source of frequent comment & concern. Over this century, figure skating has evolved from an almost exclusively male activity to one that puts men on the margins of traditional notions of masculinity. Popular portrayals of skating as an effeminate sport have had well-documented effects in terms of the relative numbers of girls & boys who pursue skating & the extent to which male skaters are accepted by their male peers. Here, it is argued that efforts to masculinize the image of male skaters have helped to entrench extremely polarized notions of gender difference in the sport, notions that place limitations on female skaters to a much greater extent than they do on males. In exploring the space of gender difference in the sport, discussion draws on historical representations of gender in skating, footage of recent skating competitions, commentary on skating, & skating regulations.

Addae, Helena (Dept Management Studies U West Indies, Saint Augustine Trinidad [tel/fax: 809-662-2002/1140]), **The Effects of Work Stress on Job Satisfaction and Turnover Intentions among Teachers in Trinidad and Tobago: An Empirical Study.**

¶ Examines the effects of work stress on job satisfaction & turnover intentions among teachers in Trinidad & Tobago. Results show a negative relationship between work stress & job satisfaction; however, no significant relationship was found between stress & turnover intentions. Interviews conducted with a number of respondents reveal widespread tardiness, but there were no substantive negative consequences. From a practical point of view, it is important for the ministry of education to be cognizant of the fact that, though stress among teachers is pervasive & has led to job dissatisfaction, they have no intentions of leaving their jobs.

Addis, Caren & Gomes, Eduardo R. (Dept Political Science Rutgers U, Camden NJ 08102 [tel: 609-225-6084; e-mail:

a

addis@crab.rutgers.edu)), **Liberalization, Restructuring and Reinforced Corporatism—The Role of the Agencies of Technical Support in Brazil.**

¶ Addresses the impacts of economic liberalization on Brazil's industrial corporatism, focusing on the activities of the less-studied agencies of technical support in Brazil—SEBRAE, the Brazilian Support Service to Micro & Small Enterprises, & SENAI, the National Service of Industrial Training. First examined are the actions of sectoral corporatist groups & their roles in influencing production & market practices, both before & after the market opening. Addressed next are new efforts by SEBRAE & SENAI to help firms face the competition stemming from opening markets. The conclusion argues that these efforts signal the cohesion & revitalization, rather than the decline, of corporatism. Further, these experiences could provide models for other regions' & nations' promotion of restructuring & competitiveness under highly volatile & cutthroat conditions.

Aderinto, Adeyinka Abideen (Dept Sociology U Ibadan, Nigeria (tel: 234-2-2410505; e-mail: library@ibadan.ac.ng)), **The Quality of Life of the Girl-Child in South-Western Nigeria: A Critical Assessment.**

¶ Examines the situation of girls in southwestern Nigeria & how it affects their quality of life, drawing on 3,000 surveys, 18 focus-group discussions, & 3 in-depth interviews. Explored are characteristics such as literacy level & rural-urban divide. Quantitative & qualitative analysis found that, despite increasing awareness of girls, there is still the tacit preference for males, which undermines girls' quality of life.

98S33468 / ISA / 1998 / 10709

Aderinto, Adeyinka Abideen (Dept Sociology U Ibadan, Oyo State Nigeria (tel: 234-2-2410505; e-mail: library@ibadan.ac.ng)), **The Girl-Child Situation in South-Western Nigeria: A Critical Assessment.**

¶ Examines the situation of the girl child in southwestern Nigeria, drawing on survey, focus group, & in-depth interview data from children & parents. Issues addressed include discriminatory patterns against girl children, reinforcing sociocultural factors, & parental & community feelings toward the girl child.

98S33469 / ISA / 1998 / 10710

Adetoun, Bolanle Akande & Adetoun, S. Babajide, **Issues of Food Security in Sub-Saharan Africa. Nigeria as a Case Study.**

¶ Uses Nigeria as a case study to examine sub-Saharan food security in terms of policies appropriate in a region where countries vary per natural endowments & cultural, socioeconomic, & political environment. Since a nation's history influences its present situation & has consequences for its future, long-term trends in Nigerian food issues are critically analyzed. Food security is investigated in light of internal & external social forces, eg, political instability, institutionalization of corruption, ethnic & religious politics, role of international agencies, & multinational companies.

98S33470 / ISA / 1998 / 10711

Adler, Lomnitz & Chazaro-Garcia, Laura (IIMAS U Nacional Autónoma México, 04510 México DF (tel/fax: 52-5-662-35-94/616-26-70; e-mail: larissa@servidor.unam.mx)), **Basic, Applied and Technological Research: Computer Science at the National Autonomous University of Mexico.**

¶ Offers a historical account of the relationship between basic, applied, & technological research, based on a case study of the Instit of Research on Applied Mathematics & Systems of the National Autonomous U of Mexico. It is shown that the academic careers of researchers who have dedicated themselves full-time to the development of technology related to computing science have faced an evaluating system based on an ideal

of basic science, resulting in an adverse environment for technological research. This has negative consequences for basic research itself, as the achievements of basic & experimental science cannot be understood without an active collaboration between technology & theory. Concepts that give rise to different forms of evaluation at the university are demonstrated to have resulted from a value-ridden symbolic construction more than from the process of the actual production of new knowledge.

Adorno, Sérgio (Dept Sociologia FFLCH U São Paulo, 05508-900 SP Brazil (tel/fax: 55-11-818-3304/3158; e-mail: sadorno@sup.br)), **La Réforme de la police et les défis de la consolidation de la démocratie au Brésil dans les années 90 (Police Reforms and Challenges in the Consolidation of Democracy in Brazil in the 1990s).** (FRE)

¶ After the authoritarian regime, 1964-1985, Brazilian society returned to democratic normalcy. The 1988 constitution instituted a new political regime that increased both participation & representation & spread civil, collective, social, & political rights. The constitution's goals of abolishing secret organizations, retaining the principle of transparency in political decisions, & imposing legal limits to the arbitrary character of political power are described. However, despite these important changes, the consolidation of democratic political life in Brazil has not succeeded in eliminating human rights violations, particularly extrajudiciary tortures & executions undertaken by the police against citizens. Examined here are recent reforms in Brazilian police departments implemented in response to public debate. Focus is on reactions against the projects expressed by various social actors (police, magistrates, politicians, social scientists, & the media).

98S33472 / ISA / 1998 / 10713

Agacino, Rafael (Programme Economy & Work Santiago, Chile (e-mail: gmss@reuna.cl)), **Work and Poverty in Chile.**

¶ Chile has been one of the countries in which neoliberal-inspired transformations were applied at a very early stage. While Chile began in 1975, the rest of Latin America was generally more tardy: in some countries, at some point beyond the 1982/83 crisis, & in others, eg, Argentina, Peru, & Bolivia, only in the 1990s. After almost 25 years, the Chilean case can be considered as a mature experiment of the neoliberal counter-revolution. Analysis helps illuminate the sequence & character of these neoliberal reforms, & understand many of the contradictions currently contained under dependent capitalism in conditions of globalization. The productive fragmentation process as a new form of industrial organization, & the extension of the forms & strategies of flexibilization of the job market, are explored. Fragmentation & flexibility are similar processes: the new capital-labor relationships are characteristic of the new Chilean accumulation standard as they are inserted in the world economy. This standard pattern has been shown to contain a contradiction between growth & equity, but also, severe limits to the virtuous link between growth, employment, & poverty. The phenomenon of the precariousness of the occupations is one limit. This explains, in part, why an economy with rapid growth over a decade & declining unemployment rates maintains a large part of its population in poverty conditions. The constitution of the identities of the poor & wage earners in general & their strategies to overcome poverty in contemporary Chilean society are also discussed.

Agarwal, Kuntal (Finishing School Meerut, A-I Kant Kunj Apts 62 Saket 25003 Uttar Pradesh India (tel/fax: 0121-642002/643123)), **Retirement and Work (An Indian Case Study of Male Senior Citizens in an Urban Setting).**

¶ Explores how creative time management can provide retired people with life satisfaction, drawing on 1996 data from a random sample of 100 economically well-off, middle-class, educated senior citizens (ages 62-80) retired from government & private jobs, living in families in Meerut—a city of about seven Lakh populations in Uttar Pradesh, India. A positive association is found between work involvement (either paid or unpaid) or selfless social service & life satisfaction in old age. Welcoming old age with necessary planning & a positive attitude also promotes health living. A balanced attitude toward material & spiritual pursuits provides satisfaction throughout life, particularly after retirement. It is concluded that various problems of old age, eg, loneliness, loss of status & respect, distance from the productive system of society, underutilization, mental & physical ill health, pessimistic outlook, & quality-of-life deterioration can be minimized by adopting work therapy. Cohesive family ties are also important for a satisfactory retired life.

Agocs, Carol (Dept Political Science U Western Ontario, London N6A 5C2 [tel/fax: 519-679-2111/661-3904; e-mail: agocs@sscl.uwo.ca]), **Planning with Vision: A Case Study of a Community-Based Strategic Planning Process in a Canadian Municipality.**

¶ London, Ontario, a city of approximately 326,000 people, initiated strategic planning in 1993 in response to provincial annexation legislation. The 3-year planning process produced six interrelated plans intended to provide a framework for political & administrative decision making over the next 2 decades. The plans were developed through a unique & extensive process of public participation designed to elicit the values & suggestions of numerous stakeholder groups. Presented here is a case study of the Vision London approach to strategic planning in light of criteria drawn from research by J. Berry, K. Portney, & K. Thomson (*The Rebirth of Urban Democracy*, 1993). Vision London was successful in involving local community stakeholders in generating the plans, which reflected a wider range of stakeholder values than plans generated in more conventional ways. However, the local government decision-making environment was overturned by the election in 1995 of a Conservative provincial government with a radical restructuring & cost-cutting agenda. This new environment, & a lack of structures to assure citizen participation in the monitoring of results, have impaired Vision London's political & administrative decision-making effectiveness.

Agozino, Biko (School Law & Applied Social Studies Liverpool John Moores U, L7 4DN England [tel/fax: 44-151-231-3943/3908; e-mail: b.agozino@livjm.ac.uk]), **Where Left Realism Left Realism: The Fragmentation of the Radical Paradigm in Criminology.**

¶ Left realist criminology emerged in the mid-1980s from debates within critical criminology in the mid-1970s. It differs from the old realism that flowered in the US & other places, focusing mainly on the critique of official crime statistics. Most of the realist researchers of the 1960s tried to discover "real" crime by interviewing individuals to see if they would self-report their involvement in criminality that may or may not have come to the attention of the police. Later, the realist criminologists adopted victim surveys to illuminate what they saw as the "dark figures" of crime. New left realism borrowed the methodology of victim surveys & localized it in 1980s GB to find alternatives to Thatcherite law & order policies. Explored here is what is new about the new realism & what is Left in Left realism.

Aguilar, Neuma (Dept Sociology & Anthropology Federal U Minas Gerais, 31270-010 Belo Horizonte MG Brazil [tel/fax: 55-031-950-3734/021-521-3734; e-mail: neumagui@omega.incc.br]), **Multiple Time References: Housework and Labor in a Plantation Society.**

¶ Discusses the uses of time by blue-collar, white-collar, rural permanent, & temporary workers on sugar cane plantations in Rio de Janeiro, Brazil, based on data from interviews with 742 household members & self-administered time-budget diaries kept by a subsample of 50 households, specially designed for assessing time use of illiterate & semiliterate people. Focus is on the relationship between rural, industrial, & household time as these dimensions of daily life determine the time organization of household members, bringing together public & private time. Different types of housing & household composition are examined as important components in the use of time by distinct household members. Also examined are the influences of technology & the recent pattern of urbanization. Findings show that gaps in industrial time use caused by seasonal variation of inputs do not result in higher utilization of the available time in household chores, particularly in relation to child care, even though that is the most time-consuming task. Acquisition of a time orientation—in the sense discussed by Norbert Elias, ie, the arbitrary nature of organizational time combining rural, & industrial activities discussed by Anthony Giddens, ie, the complex interplay between nature & social organization, & by Adams—is the theoretical perspective used to interpret the multiple pattern of time use empirically encountered.

98S33479 / ISA / 1998 / 10720

Aguilar, Neuma (Dept Sociology & Anthropology U Federal Minas Gerais, Cep 31270-901 Belo Horizonte MG Brazil [tel/fax: 031-950-3734/021-521-3734]), **The Women's Movement and Customary Law in Developing Countries—A Review Paper of Case Studies from Asia, Africa and Latin America and the Caribbean.**

¶ Case studies analyzing women's movements in developing countries have sometimes interpreted feminism as a Western cultural phenomenon & considered that, under its influence, local women's movements challenge gender dimensions of customary laws, making pleas for social change. Feminism is then understood to be part of cultural dissemination & assimilation processes attributed to globalization forces. Alternative perspectives on feminism emphasize the historical conditions under which local women & women's movements challenge patriarchal cultures. The focus of their argument lies on endogenous, not exogenous, factors; although global processes may influence local dynamics, they are not a major factor in cultural change. From this alternative viewpoint, there are many feminisms. The concept of culture underlying the two perspectives is discussed: the first perspective looks at culture as a closed & coherent system, leaving out the possibility of contradictions & incoherences among its elements & offering little chance for cultural transformation; the second observes how conflict, contradiction, & innovation emerge throughout history & how cultural elites may clash & replace one another. Through social agency, feminist intellectuals & activists can alter patriarchal values & change gender codes. The two views on culture are used to organize & interpret case studies of the women's movements from Asia, Africa, Latin America, & the Caribbean.

Aguilar Garcia, Javier (Social Research Instit Nacional Autonoma México, Mexico DF-04510 [fax: 5-665-24-43; e-mail: jag@servidor.unam.mx]), **The North American Free Trade Agreement (NAFTA) and Its Impact in Social Structure of Work in Mexico.**

¶ Neoliberal policy & the North American Free Trade (NAFTA) have resulted in serious changes in the Mexican labor world, expressed in the structures of the economically active working & salaried population. The impact is illustrated through contemplation of the three fundamental sectors of economy: agriculture, industry, & services. On some other level, those economical & social changes are reflected in the concrete composition of employment: regular & irregular, employees & the unemployed. New conditions are also changing social & labor union life.

98S33481 / ISA / 1998 / 10722

Aguilera-Vaques, Ruth (Dept Sociology Harvard U, Cambridge MA 02138 [tel/fax: 617-496-3912/3401; e-mail: aguilerar@wjh.harvard.edu]), **Elites, Corporations and the Wealth of Nations: Historical Institutional Patterns of Intercorporate Relations in Italy and Spain, 1977-1994.**

¶ A cross-national, historical study of business organizations focuses on relatively strong intercorporate relationships that can provide for close

a

cooperation between businesses: directorship interlocks & cross-shareholdings. Variations in such relationships are important because they both reflect & shape a country's economic organization & development. A systematic data set, including the largest corporations in Italy & Spain, 1977 & 1994, is analyzed using social network methods, drawing on historical-institutional theory & comparative-historical sociology to interpret the results. Findings indicate that intercorporate relations are shaped by (1) paths to industrialization, (2) degree of state interventionism, & (3) foreign multinational investment. These factors condition the different positions of corporations in the network & the division of labor among family-controlled, state-owned, bank-controlled, & foreign-owned companies; eg, whereas in Italy, sharp divisions exist between financial & nonfinancial corporations & between state-owned & family-run business groups, in Spain, business groups have formed around financial institutions & foreign-owned enterprises.

✓Ahlemeyer, Heinrich W. (ISYS Instit Systemic Social Research, Dieubree 5 D-48157 Münster Germany (tel/fax: 49-251-1414-214/222; e-mail: isys@aol.com)), **Complexity and Organizational Change.**

¶ Following Niklas Luhmann, organizations are conceived of as distinctive social systems consisting of decisions of decisions that they themselves produce. Examined is what characterizes the observation & handling of complexity on the level of organizations by opening a four-field pattern. This is gained by cross-tabulating two basic differences: (1) redundancy & variety as two central dimensions of organizations, & (2) increasing & reducing as two basic ways of dealing with complexity. This pattern is tentatively complemented by a third difference that distinguishes between (the observation of) the self-complexity of the organization & the outward complexity of its environment. This general "grammar" is dynamized by applying it to topical challenges of innovation & organizational change. Data from different case studies of organizational development projects are used to explore the distinction between active propellants of change & passive endurers of innovation & whether there is an excluded third possibility to this dual alternative. Groups & networks are analyzed as two important problem-solving features of organizations in dealing with new dimensions of internal & external complexity that arises from new constellations of competition & cooperation on a global level.

✓Ahponen, Pirkkoliisa (Dept Social Policy U Joensuu, SF-80101 Finland (tel/fax: 358-13-251-4215/4893; e-mail: Pirkkoliisa.Ahponen@joensuu.fi)), **Life-Political Reflexions on Everyday Heroism.**

¶ Draws on autobiographies written by ordinary people who experienced social discrimination to problematize the concept of "heroism" (particularly everyday heroism) in terms of its life-political significance. Explored is how social properties & cultural capacities are used to overcome alienating experiences, controlling risks of social exclusion, & ruling one's own life: eg, how expressions, articulations, & definitions of distinctions & discriminations are used as labels when social identities of "majorities" & "minorities," "normals," & "deviants" are formed & stabilized. Investigated is how experiences of social exclusions (Otherness, alienation, deviation) are culturally reflected, ie, how strategies of togetherness & concepts like fraternity or solidarity are used ideologically by utilizing culturally unequalizing strategies. The possibility of overcoming socially exclusive barriers by means of politics of culture are considered. When studying autobiographies, emphasis is on the subjective experiences & reflexive interpretations of how isolation, exclusion, or alienation as restrictions of success are met during the life cycle; the meaning of becoming "a hero of one's own life" is sought in the context of reflexive modernization.

— Ahponen, Pirkkoliisa (Dept Social Policy & Philosophy U Joensuu, SF-80101 Finland (tel/fax: 358-13-251-4215/4893; e-mail: pirkkoliisa.ahponen@joensuu.fi)), **Life in Cellar.**

¶ Culture is something sublime as compared to the secular. Culture is constituted by symbolic values. But even earthy, underground, & profane can be used as symbolic constructions. Think about culture as a construction like a castle. Are the most valuable cultural symbols situated in the tower? What is situated in the cellar—hidden, unconscious, primitive, poverty, Otherness? We are unanimous in that everyday life happens at the grassroots level. Art, science, discursive consciousness, superego—those entities are high above the ordinary & routine. But there

are also treasures preserved under the earth; there are memories concealed in the cellar of the mind. A cellar is also a place for seeds awaiting their cultivation time.

98S33485 / ISA / 1998 / 10726

— Ahponen, Pirkkoliisa (Dept Social Policy & Philosophy U Joensuu, SF-80101 Finland (tel/fax: 358-13-251-4215/4893; e-mail: pirkkoliisa.ahponen@joensuu.fi)), **Crossing Borders, over Cultural Political Responses.**

¶ Activities of citizens have become institutionalized in the development of modern society. Culture has gained its functional role in defining, affirming, & legitimizing social divisions. Democratization of the art world & leveling of social boundaries between high & low cultures have been main tendencies in the institutionalization of culture. More space has been given to everyday culture (popular culture, entertainment, etc). Inevitably, however, cultural policy is structured by social representations, hierarchically organized on the basis of distinct valuations of different kinds of cultural capital. Certain social groups have dominated the interest-based power field of cultural politics. Membership in a community is culturally significant. Social divisions are legitimated by categorizations of cultural belongings. So far as democratization has proceeded, the political space inside which the networks of interest-based social representations are formed has been enlarged. Social representations preserve cultural separations between "us" & "Others." Universality of diversity, the ideal value of modern culture of globalization, stands up for an integration of increased cultural differentiations. Can it be that even alienating effects of superiority & inferiority in cultural significations are included in the dynamics of social representations? Can alienation be supported by the power mechanisms of cultural politics? How could the alienating ideological boundaries, formed by social divisions, be overcome in cultural actions?

✓Akinola, Olufemi A. (U Asmara, Eritrea (tel/fax: 291-1-161926/162236; e-mail: Femi@chs.asmara.punchdown.org)), **New Nationalism and Political Transitions after the Third Wave: A View from Eastern Africa.**

¶ Eastern Africa—defined broadly to include Eritrea, Ethiopia, & the Sudan—has featured prominently in recent discourse on "new-generation" regimes & the "final wave" of independence in sub-Saharan Africa. Widely associated with rabidly corrupt, self-destructive elites & state collapse in the 1970s & 1980s, the subregion has, in the 1990s, produced some far-reaching changes to Africa's postcolonial political traditions. A major underlying factor in the apparent metamorphosis has been what Markakis has called "new nationalism." Yet, by making possible structural changes some regarded as inconceivable as recent as in the mid-1980s, new nationalism might yet constitute the most forceful, self-justifying argument against further liberalization in the subregion. Either way, new nationalism is a crucial, albeit unfolding, phenomenon on which the prospects for democratic practice in Eastern Africa are likely to turn. The main elements of new nationalism & its place in political-economic controversies arising from democracy's third wave are considered. Also explored is its significance in the calculus of political transformation in the subregion.

98S33488 / ISA / 1998 / 10729

✓Akkerman, Agnes & Torenulied, Rene (Center Social Science Theory Rijks U Groningen, NL-9700 AB Netherlands (e-mail:

a.akkerman@ppsw.rug.nl)), **Divide and Rule Strategy in Industrial Relations.**

¶ Argues that multiple trade union settings are especially prone to manipulation by large corporations in Europe, because the employer is able to distort the potential for collective action by trade unions. The goal is to model employer strategies & trade union behavior & find empirical evidence for the existence of the "divide-&-rule" effect. Several questions are addressed: (1) Are the results of collective bargaining for trade unions smaller when they negotiate with a large company on a sectoral basis with employers or with a small company? (2) Do trade unions anticipate the presumed strength of large companies by being more modest in their demands? (3) Under what conditions are large companies able to apply a divide-&-rule strategy in collective bargaining with multiple trade unions? (4) What effect does this strategy have on the level of industrial conflict? To answer these questions, a rational choice model is developed in which both trade unions & employers choose an optimal course of action, dependent on their preferences & salience for distinct substantial issues within the collective agreements & their relative power. Explanatory variables related to employer strategies are (A) single-multiemployer bargaining; (B) size & multinational nature of the employer; (C) number of unions; (D) preference structure of trade union claims regarding employment conditions; & (E) relative size of the unions. Hypotheses are tested on a dataset of 30 collective bargainings in the Netherlands 1996/97.

✓ Akkermans, Catelijne (Amsterdam School Social Science Research U Amsterdam, NL-1012 CE Netherlands (tel/fax: 3120-525-3511/2446; e-mail: akkermans@pscw.uva.nl)), **Social Psychiatry in the Municipality of Amsterdam during the Thirties. The Rise of a 'Psychiatrie d'urgence'.**

¶ During the 1930s, the municipality of Amsterdam, Netherlands, initiated care arrangements aimed at the reintegration into society of mentally ill patients. These early developments, which can be considered as a forerunner of community care, are discussed on the basis of data from patient files, analyzed both quantitatively & qualitatively. The urge to economize created a climate in which new initiatives could flourish. Hospitalized patients represented a financial threat to the local health authorities. The municipal cites countered this threat by initiating preventive & aftercare organized by the Amsterdam Municipal Mental Health Service, aimed at reducing the number of hospitalized patients. It also developed a *psychiatrie d'urgence* a mobile psychiatrist visiting patients at home. However, these care arrangements brought new problems & threats, which had to be resolved to make dismissal of patients acceptable; the reallocation of psychiatric care created new problems, which, in turn, instigated new forms of care.

✓ Akkermans, Catelijne & Gomperts, Wouter (Amsterdam School Social Science Research, Oude Hoogstr 24 NL-1012 CE Netherlands (tel/fax: 31-20-525-3511/2666; e-mail: akkermans@pscw.uva.nl)), **Interactions between Societal Circumstances, Social Psychiatry and Developments in Municipal Health Care in Amsterdam during the Period 1933-1988.**

¶ Discusses the interaction between changes in societal circumstances, social psychiatry, & municipal mental health care in Amsterdam, Netherlands, 1933-1988, based on qualitative & quantitative analysis of an a-select sample of 550 patient files of the Municipal Mental Health Service. During the 1930s & 1940s, the newly established Municipal Mental Health Service held a key position among institutions in the field of psychiatry in Amsterdam. After WWII, cultural & social-economic transitions, as well as changing psychiatric insights & methods, contributed to the increase & diversification of mental health care institutions. Processes of selection & sifting constantly redefined the leftover group of hardly treatable patients. The Municipal Mental Health Service countered societal commotion & public anxiety by taking care of the "untreatable" & by initiating new care arrangements. In the ongoing process of expansion & differentiation, specific forms of assistance & psychiatric problems were absorbed by other institutions. It is concluded that the Municipal Mental Health Service functions as a last resort for a hardly treatable rear, ie, for those who are in danger of falling through the cracks of the complex modern mental health system.

✓ Al-Kazi, Lubna Ahmed (Dept Sociology/Social Work/Anthropology Kuwait U, 13104 Safat (tel/fax: 965-2424717/5313600)), **The Dilemma of Labour Migration to Kuwait: A Minority in Their Own Land.**

¶ Migration to the oil rich Gulf States has been phenomenal in the last quarter of a century, causing nationals to be a minority in their own lands. In Kuwait, migrant workers are attracted by better wages & employment into the national population, though naturalization is nearly zero. Term of stay, even if it is for more than 2 decades, is not a criterion for naturalization as in many Western countries. Migration policies are formulated to serve the needs of the labor market. Thus, the Ministry of Labour & Social Affairs sets the criteria for the entry of migrants & the Ministry of Interior confirms it, if it does not conflict with the political conditions of the country. Explored here are how migration flows have changed in the last 25 years & if they have complied with the migration policies stated in the labor laws. Discrepancies are analyzed to show how the migrants are now 66% of the total population; changes in their composition after the Gulf War are documented. Future goals of the government are discussed to see if past errors can be eliminated in the coming millennium.

✓ Al-Khalifah, Abdullah H. M. (Sociology Dept Mohamed bin Saud U, Riyadh Saudi Arabia (e-mail: f10c008@ksu.edu.sa)), **Theories of Fundamentalism and Islamic Revival in the Gulf Council Countries.**

¶ In sociological studies of religious resurgence, numerous theories representing different schools of thought have been advanced to account for the phenomenon. These theories are reviewed to examine their strength once they are applied to explain religious resurgence in the Gulf Arab countries. It is contended that religious resurgence in the Arab/Muslim world is not unidimensional in either its form or its underlying structural causes. Consequently, an explanation of Islamic resurgence in one Arab/Muslim country may not be valid for another. The Gulf Council Countries have common political, economic, & social features that set them apart from the rest of the Arab/Muslim world. These features, it can be

hypothesized, should have some bearing on religious resurgence. To examine this hypothesis, a sample of religious activists is drawn, & their known Islamic tapes & books are subject to content analysis to uncover the nature of their discourse. Generally speaking, it appears that critical theories—emphasizing the importance of power & wealth distribution, on the one hand, & the issues of dependency & Western political, economic, & military penetrations, on the other, offer a sound analysis & understanding of Islamic resurgence in the Gulf Arab countries.

✓ **Alanen, Leena** (Dept Education U Jyväskylä FIN-40351 Finland (tel/fax: 358-14-601-681/661; e-mail: alanen@tukki.jyu.fi)), **Actors, Agents and Generational Structures.**

¶ Much of the recent sociological research on children & childhood has contributed to the conceptual autonomization of children in sociological discourse, both by insisting on the significance of studying children in their own right & through its results, which demonstrate the competence, knowing, & achievement of ordinary children. In this way, children are gaining sociological status as social actors, with distinctive practices, interests, & identities. Here, it is argued that this (micro)constructionist perspective on children as (inter)actors is limiting, because of its unreflected & empiricist approach to children. Microconstructionism, moreover, forecloses an analytic perspective in which children's childhoods are determined not only by their being (agential) children. To overcome such problems, a broader constructionist approach is needed in which all social categories are seen as constructions by human (including children's) agency, & equally in need of explanation. An attempt is made to contribute to the development of a more systemic conceptualization of childhood, now understood as a complex set of social relations (generational structures) within which children live their lives while participating in the reproduction/transformation of the specific form of sociality recognized as childhood. Data are presented from ongoing empirical research on children's everyday negotiations.

✓ **Alario, M.** (Dept Natural Resources & Environmental Science U Illinois, Urbana 61801 (tel/fax: 217-333-7635/244-3219; e-mail: alario@uiuc.edu)), **Ecosystem Restoration and Environmental Policy Outcomes: Between Science and Politics.**

¶ Decisions over ecosystem restoration projects can potentially inform the development of a second generation of environmental policy; however, concrete case studies suggest that ecosystem restoration sites have increasingly become contentious turf. It is suggested that, filtered through the medium of deliberation, the ecosystem restoration approach has the chance to grow into a legitimate collective project: given the predicament of the natural environment, it is only reasonable to agree on measures of restoration, control, & management to diminish environmental destruction, & in the process, garner public support. The risk assumed by the political system is not entirely eliminated, but if framed in the context of a deliberative democratic process, then decisions of environmental restoration & risk control may be democratically consulted. A close examination of specific case studies provides empirical evidence of the necessary conditions under which agreeable environmental measures can be pursued. The controversies surrounding Cook & Du Page County Forest Preserve projects in the Chicago (IL) area do not seem to challenge the biodiversity or ecosystem restoration goals, but the nonparticipatory nature of the decisions. There are sound practical reasons to study democratic deliberation structures coupled to systemic imperatives to better understand the degree to which restoration projects may be implemented, since inaction is not a reasonable option. Environmental risks are both decision-forcing situations & action-forcing events.

✓ **Alatas, Syed Farid** (Dept Sociology National U Singapore, 119260 (tel: 65-777-95-79; e-mail: socsfa@leonis.nus.sg)), **Relevance and Irrelevance as Concepts in the Philosophy and Sociology of Social Science.**

¶ Examines postcolonial concerns with the problem of the relevance of the social sciences to the Third World as a legitimate line of inquiry in the philosophy & sociology of the social sciences, discussing two types of approaches to the question of the reliability of knowledge claims: epistemological & sociological. It is suggested that the critique of the social sciences as they are practiced in the Third World cannot be adequately made on epistemological grounds alone. Sociological approaches to the question of what constitutes reliable & objective knowledge have informed a great number of theoretical works on the state of the social sciences in the Third World. Here, the sociological approach is extended to reveal that the question of reliability claims to knowledge has been supplanted by that of relevant knowledge. While the problem of irrelevance had long been recognized in assessments of the theoretical & practical uses of Western social science, neither irrelevance nor relevance has been adequately defined & conceptualized. This is attempted by adding a political & phenomenological dimension to the sociological approach, in which the definition & criteria of irrelevance & relevance are established.

✓ **Alba, Orlando, Terrorism, Drug Traffickers, and New Forms of Organization in the Upper Huallaga and Aguaytia Region of Peruvian Amazonia: The Use of the "Shining Path" Myth in the Context of the All-Out War against the "Narco-Guerrilla".**

¶ The Shining Path movement in the Upper Huallaga Valley & Aguaytia in the Peruvian Amazon was fundamentally one of armed resistance organized by local drug traffickers in 1983 in their fight against the anti-narcotics law-enforcement policies of the government, not an armed revolutionary movement directly tied to the Shining Path, which had previously turned to armed insurrection in the late 1970s in the Ayacucho region of the Andes. A deal was struck between the local drug-trafficking mafia, the army, & special police units whereby a sufficient degree of violence was maintained in these regions for the mafia to be able to continue forcing local farmers into cooperating with it in the production of coca, & for the army, now supposedly engaged in a fight against a Shining Path revival, to share in the profits. Focus is on the mythic elements in Shining Path revolutionary activities.

✓ **Albano, Roberto, Magel, Bruno & Massino, Giovanni** (c/o Massino-U Bologna, I-40126 Italy (tel/fax: 39-51-258095/237265; e-mail: g.masino@mbox.queen.it)), **The Relevance of Giddens' Structuration Theory for Organizational Research.**

¶ Critically analyzes contributions made by Anthony Giddens's structuration to organizational research & explores possible future developments of this path in the organizational field. Theoretical needs & concerns shared by the Giddensian organizational researchers, even in a highly heterogeneous scenario, are identified, arguing an alternative to subjectivist & objectivist approaches is the main concern. While the very general features of such a "third" epistemological view are clear, the specific theoretical concepts are far from being shared & recognized; further, it is still not clear how structuration theory can be used to fulfill such needs. More specific & basic concepts for an organization theory

consistent with a third epistemological view are considered: (1) a concept of human & organizational rationality different from those implied in subjectivist & objectivist views; (2) a processual view of organization & organizational action; (3) focus on the concepts of "rule" & "regulation"; (4) a definition of "structuration" consistent with the above; (5) a Weberian explanatory framework, based on judgments of objective possibility & the distinction between adequate causation & accidental causation. Such a major task could greatly benefit not only from adapting Giddens's structuration theory or other sociological theories, but also & more importantly from reinterpreting some classic contributions in the organizational discipline itself, & from developing exchanges between the US & European literatures. These issues are discussed in the context of a review of the main organizational works based on Giddens's structuration theory, a critical comparison between the theory's original stipulation & its different interpretations provided by organization researchers, & a critical comparison with other social action theory that could be useful for organizational analysis.

Albert, Mathieu (Dept Sociology U Montréal, Quebec H3C 3J7 (tel/fax: 514-343-5722; e-mail: albertm@ere.umontreal.ca)), **Scientific Activities of Social Sciences Scholars in a Neoliberalist Context: Adaptation or Resistance?**

¶ Presents the findings of a study that explored the impact of neoliberalism on social sciences scholars, drawing on interview data from 31 economics & sociology professors, with differing seniority levels from two Montreal, Quebec, universities, as well as their curricula vitae & various university & departmental documents. It is hypothesized that neoliberalism influences the adoption by scholars of a market-oriented logic in the planning of their scientific activities; this progressive transformation is seen as leading to a weakening of the autonomy of the various scientific production areas in the social sciences. Focus is mainly on the criteria for granting tenure as they have been modified since the 1970s, apparent changes in research activity orientation, & rationales expressed by scholars to explain their decisions regarding scientific activities. Findings reveal a progressive adaptation of the scholars' research activities to financial constraints caused by government budget cuts. However, contrary to what was expected, economics scholars appeared to be more impervious than their sociology colleagues to pressure induced by neoliberalism. Findings are discussed in light of Pierre Bourdieu's concept of field & of Mode 1 & Mode 2 categories as mapped out by Gibbons et al.

Albuquerque, Rosana (U Aberta, P-1250 Lisbon Portugal (tel/fax: 351-1-397-2334/3229; e-mail: cemri@univ-ab.pt)), **Strategies of Inclusion and Society's Resistance to Change: The Case of Luso-African Youngsters in Portugal.**

¶ Because Portugal is a recent immigration country, confrontation of Portuguese society with a visible Other within its borders is a new phenomenon. Despite miscegenation between the Portuguese & other peoples, there is rejection of other ethnic groups. The case of people of African descent is paradigmatic: while they have formal citizenship, they are identified as Africans & foreigners who do not belong to Portuguese society because of their ethnic background. Here, examined is how Luso-African youth identify themselves—eg, their feeling of cultural belonging & personal identity—in the context of rejection by the society into which they were born. Drawing on qualitative data from children of Cape Verdian immigrants, born in Portugal & living in Lisbon, it is found that such youth are willing to participate in Portuguese society, & they identify it as their own. They have a very positive self-image, characterized by a strong feeling of solidarity toward their origin ethnic group; yet, they are

"producers of interculturality" because of their proximity to a so-called Luso-African cultural identity. Associations of Luso-African youngsters have been created in the last 3 years for revindication of their rights as Portuguese citizens & expression of their intrinsic diversity through intercultural activities & events. It is argued that these "new Portuguese" are developing strategies of inclusion in confrontation with the resistance of a society that does not accept the idea of losing its "whiteness" & actively discriminates against ethnic groups when economically troubled.

✓ Alexander, Jeffrey C. (Dept Sociology U California, Los Angeles 90024 [tel/fax: 310-825-1313/206-9838; e-mail: Alexande@soc.ucla.edu]), **(Madisonian) Pessimism and (Jeffersonian) Optimism about the Self-Society Relation: American Sociology and the Contradictory Discourse of Civil Society.**

¶ Offers a new perspective for analyzing long-term structural patterns of US social & sociological thought. In contrast to the European focus on the power of society, for better & for worse, US thought focuses less on state, economy, or culture per se than on the health & pathologies of civil society. Various levels of US sociological analysis concentrate on the motives of individuals (action), their relations (interaction), & the institutions (organizations) they form. Recent analysis of civil societies have suggested that they are organized around a bifurcated discourse—a positive discourse of liberty & a negative discourse of repression. US social thought manifests a similar binary structure, an optimistic discourse about positive modernity that has its roots in Jeffersonian thought, & a pessimistic discourse about destructive modernity that has its roots in Madisonian thought. Developments from Transcendentalism & pragmatism to functionalism, neo-Marxism, & recent postmodernism are reconstructed in terms of this analytic-historical framework.

✓ Alexander, Jeffrey C. (Dept Sociology U California, Los Angeles 90024 [tel/fax: 310-825-1313/206-9838; e-mail: Alexande@soc.ucla.edu]), **Multiculturalism as a New Mode of Civil Incorporation.**

¶ Analyzes recent developments in the social theory of Alain Touraine, positively contrasting his recent focus on modernity & democracy with his earlier emphasis on postindustrialism & radical social movements. Taking off from Touraine's argument for more pluralistic forms of democracy, it is suggested that there are three ideal typical forms of incorporation into civil society: assimilation, hyphenation, & multiculturalism. These ideal types are contended to reflect increasing degrees of civil solidarity; only if members of a social system identify strongly with one another as fully human is it possible to make the recognition of "difference" a principle for rights & resources.

98S33514 / ISA / 1998 / 10755

✓ Alexander, Malcolm L. (Griffith U, Nathan Queensland Australia 4111 [tel/fax: 61-7-3875-7169/7730; e-mail: M.Alexander@hum.gu.edu.au]), **Globalization and Capitalist Class Organisation: The Case of Australia.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-

0416. E-mail: socio@cerfnet.com

¶ It is argued that, although the capitalist class is inherently transnational, its organized power is still grounded in the legal & juridical apparatus of nation-states. Contemporary globalization creates transnational commodity & capital markets, but the organizational, legal, & accountability requirements of corporate entities create the need for a home base. Considered here is the case of Australia, an economy heavily penetrated by transnational capital, but one where a significant organization of capitalist class power remains intact. A case study is presented of the de-regulation & internationalization of the finance sector to illustrate, & it is suggested that recognition of the facilitating role of the nation-state in globalization gives a better understanding of the sociology of the global system than accounts building on an opposition between nationalism & transnationalism.

98S33515 / ISA / 1998 / 10756

✓ Alexandrova, Gubina Svetlana, Vladimirova, Ladugina Marina & Vladimirova, Yachmeneva Natalya (Dept Sociology Russian Chemical-Technological U, Moscow 125047 [tel/fax: 007-095-280-99-03/200-42-04]), **Biography of Generations in Situation of Conflict and Transformation of Societies.**

¶ The research of self-biography & social genealogy by Russian Chemical-Technological U (Moscow) students in the last 5 years became an effective method for self-analysis & exploration of conflict & transportation, dynamic of values, succession of generations & generation gap, & social migration. In this situation, help of family resources, eg, social status & connections, makes adaptation to new conditions easier. Biographical research offers rich material for quality analysis of value conflict, which is occurring in Russia during the current transitive period. Results of the analysis of biographies of students shows that the most important values for them are common human values: happy family, health, & love. Also, there are values that belong to modern society: comfort, independence, self-confidence, & freedom. Movement of such values as justice, equality, & laws to the last position shows that students associate them with traditional society. The values of postmodern society, eg, rich information & interesting job, are not important to students.

✓ Algan, Ece (School Telecommunications Ohio U, Athens 45701 [tel: 614-589-6939; e-mail: ea148487@oak.cats.ohiou.edu]), **Is Cultural Diversity Still Threat?**

¶ When looking at the history of social thought to trace the roots of intolerance toward cultural diversity, one can see some important clues in the idea of science developed to instigate social change by the thinkers & revolutionists of the Enlightenment era. While science diminished the authority of the church, it also started the first bases of social thought that valued objectivity & universality. However, the idea that science is the ultimate form of attaining knowledge invalidated or marginalized non-scientific ideas & societies based on traditional practices. To discredit social hierarchies that promote racism, caste, & class differences, humans were regarded as being equal & uniform & sharing a common identity. Enlightenment's role in guiding a society hostile to individuality, social differences, non-Western cultures, & non-scientific ideas has been pointed out by postcolonialist scholars. This is because the assumption that Europe is the center of civilization still prevails. Questioned here is how the idea of cultural diversity is viewed today as we leave the "modern societies" behind & try to see what follows postmodern identities.

98S33517 / ISA / 1998 / 10758

✓ Aliyev, Ramiz (Dept Social Sciences Baku Research Instit Pedagogical Studies, Prospect Azerbaijan 40 370110 Azerbaijan [tel/fax: 99412-960886]), **Sociological Traditions and Outstanding Representatives of Social Thought in Azerbaijan before 20th Century.**

¶ Sociological traditions of Azerbaijanian social thought have an ancient history. They can be found in the Turkic folk epic "Dada Gorgud," created in the 7th century, which addressed such topics as the improvement of personality, family, education, & role of women. Azeri poet & thinker Nizami Gyandjavi (1141-1209) considered that progress of society is possible only due to joint activities of all people. Educators Siradjaddin Urmevi (1198-1283) & Nasiraddin Tusi (1201-1274) thought that progress consisted of wise, clever, & fair leaders. All these educators linked the prosperity, stability of the country, & the base of people's welfare with equitable & democratic laws. During the centuries the attention of Azerbaijanian thinkers was attracted by the problem of personality & the role of heredity vs environment & upbringing in personality formation. Maragali Akhvedi (1274-1338) & Abdurrahman Bakuvi (1360-

1430) showed the role of education, as well as its importance, in overcoming inherited vices. Such thinkers as Khagani, Fizuli, Mirza Fatali Akhundov, & Said Azim Shirvani believed that a noble man could be formed through the correct education. From mid-19th to early 20th century such Azeri thinkers as Akhundov & Hasanbey Zardabi, among others, mentioned the motive role of environment & upbringing in forming man. They attached importance to building of a democratic, legal state, education of people, & women's freedom & active participation. Opinions of Azeri thinkers about man, society, & state retain their social importance today.

✓ **Allatt, Pat** (U Teeside, Middlesbrough Cleveland TS6 0QS England (tel/fax: 01642-342900/342925)), **Young People, Time and Place: Lifelong Learning, the Flexible Worker and Issues of Policy.**

¶ Explores the interrelated concepts of the independent, lifelong learner, in what is coming to be termed the learning society, & the new flexible worker, phenomena purposively constructed & reflective of the contemporary pressures toward a reorientation to time & place. Identified is the special place the young hold in the articulation of this reorientation by virtue of their position in the life course & the value society accords their time. Manifestations & meaning in young people's lives are traced via empirical studies of policy & practice in which these reorientating concepts are embedded, eg, in education & independent learning, the welfare-to-work program, & welfare policies, & studies of the experience of employment/unemployment. It notes how, while emanating from the public arena, particularly those associated with education & work, other arenas of young people's lives are implicated, reflecting the redefinition & amorphous nature of the boundaries between public & private spheres in the reshaping of the social order via youth policies. Highlighted are the tensions & contradictions such policies generate for the young in the ordering of their lives in the context of change.

✓ **Allcock, John Bartlett** (U Bradford, West Yorkshire BD7 1DP England (tel/fax: 44-1274-233993/720494; e-mail: j.b.allcock@bradford.ac.uk)), **Eliminating the Tourist: 'Dissonant Heritage', 'Symbolic Capital' and Consumption.**

¶ The danger that sociology might disintegrate into subdisciplines (eg, the sociology of tourism) has been noted in the past. This risk is exemplified in recent work on "dissonant heritage" (Tunbridge & Ashworth). Its originating impulse comes from the study of tourism, but questioned is whether it does so in a manner that cuts off analysis from more general frameworks in sociology. It is argued that the work for which this idea is supposedly fitted is already achievable using Pierre Bourdieu's approach in terms of symbolic capital. Wider conceptual economies of scale along these lines might be possible in tourism studies. One might ask whether the concept of "the tourist" is necessary. How does tourism differ from any other act of consumption? Following Bourdieu & Anthony Giddens, the tourist might be conceptualized as a consumer in an economy of symbolic values. The move compels clearer definition of the theoretical significance (if any) of the spatial displacement (or relocation) of the tourist as consumer.

✓ **Allen, Sheila** (U Bradford, West Yorkshire BD7 1DP England (tel/fax: 1274-733466/385480; e-mail: N.Scott@Bradford.ac.uk)), **Moving Concepts: Same Realities.**

¶ Arguing that the transformation of work requires close sociological analysis informed by a historical grasp of the organization & meaning of work, explored are conceptualizations of work & working relations, raising theoretical & methodological questions about the social & economic changes claimed to constitute the transformation of work, focusing on gender relations. The modernist conception in social science equates work with employment & some forms of self-employment, ignoring or downgrading other types of paid work & virtually neglecting unremunerated work. This conception is imbued with meanings that influence how the majority are judged & rewarded. It is associated with legitimacy to claim rights, both economic & social, in the public & private spheres. Attempts to analyze work in a broader sense were made predominantly by feminist scholars & those in the field of development, 1970s-1980s. It is contended that these attempts are undermined by those who interpret the changes in ways of working as a postmodern phenomenon. The ideological context of the free market is examined in terms of its impact on work organization & its social & economic consequences, particularly in relation to women. Values associated with different forms of work &

the meanings attached to them are discussed with reference to sociological theory & research.

✓ **Allsop, Judith Mary & Mulcahy, Linda** (Dept Health Studies De Montfort U, Scaptoft Leicester LE7 9SU England (tel/fax: 44-18-17493264/231296; e-mail: allsopj@dmu.ac.uk)), **Maintaining Professional Identity: Doctors' Responses to Complaints.**

¶ Draws on secondary empirical data from a number of British studies to examine doctors' responses to external criticism of their work to throw light on how the boundaries around work are maintained. The findings indicate that doctors felt threatened by a complaint. It posed a challenge to their sense of professional identity, & involved them in processes they did not understand, & could not control. Most complaints were seen as unjustified & unfair. They were attributed to the failure of complainants to understand the limitations of biomedicine, the characteristics of the complainant, or, more rarely, the shortage of resources. Doctors tended to turn to close colleagues for support & often excluded managers. Some took action to avoid complaints or improve practice. The process of responding to complaints demonstrates how identity work is accomplished by clinicians & that the strategies are defensive. The effect is to (1) deny lay concerns & the possible contribution of lay knowledge to medical practice; & (2) deny the claims of managers for complaint reporting to achieve quality & risk management. The findings suggest that further training & the development of medical management are required to change the predominantly defensive response.

Matos** (Dept Sociologia Pontificia U Católica Rio de Janeiro, 22453-9000 RJ Brazil (tel/fax: 55-021-5529981/2744197; e-mail: marlisem@mardic.com.br)), **Identity as a "Frontier", Sexuality and Body as "Territories" and Transference as "Temporality": Battles of Power between the Psychic and the Social.**

¶ An interdisciplinary partnership between sociology & psychoanalysis is identified based on an articulation where identity & sociological phenomena are seen as dynamic, relational, & historically situated. Gender identity is understood as a fundamental part of social identity. Psychoanalytical theory attempts to recover conditions of possibility & confront relational reference with the construction of gender identities, pointing to sexuality as a primordial territory where identification occurs. Identity, as an alive frontier, is anchored in marks that can be located in bodily/sexual territory without being necessarily stable. Three other central concepts are borrowed from sociology: performativity (Butler, Judith, 1997 (see abstract 9710519)), social practice (Bourdieu, Pierre, eg, 1980 (see abstract 90c01302)), & reflexive hermeneutics & liminality (Lash, Scott, 1996 (see abstract 95c02185)). Temporality is approached from two axes: (1) the "experience of transference" among two actors (in the situation of a researcher/scientist & informer), mentioning the methodological character in social sciences research; & (2) articulation of the "repetition phenomenon," starting from three dimensions: (A) "traditional" temporality (common practice & social habits); (B) "addictive" or "neurotic/compulsive" temporality (characterized by freezing of emotional dimensions in the internationalization process of the Other); & (C) "temporality of the new" (referring to possibilities of changes & transformation in human action). Attention to the theme of memory is also important, in that it is responsible for making recognizable (internally & externally) such dimensions. It is maintained that social practices (marked by time & space) are never neutral, but embody an arena of interaction involving true power battles.

a

(tel/fax: 22-29-24-71/26-35; e-mail: jalonso@mail.pue.udlap.mx)), **Spanish title not provided** (Globalization and Informality in Latin America: NAFTA's Impact on the Mexican Clothing Industry). (SPA)

¶ Mexico has received current globalization's full impact since 1994 when NAFTA (North American Free Trade Agreement) became a reality. Focus here is on the effect that this globalization process, triggered by NAFTA, is bound to have on the industrial & occupational structure of a semiperipheral capitalist country such as Mexico. The main hypothesis is twofold: On the one hand, Mexican industries will not be able to compete with US firms &, as a result, will adopt the subcontracting system (*maquila*). On the other hand, only a few Mexican industries will establish full-fledged relationships with US firms; therefore, most small & microindustries will be forced into the informal economy. Data obtained from official statistics & an exploratory survey conducted in 1996 are drawn on to examine the state of Tlaxcala's clothing industry. The primary findings concern (1) the new roles that US direct investments are playing in the industrial development of Mexican regions located far from the Mexican-US border; & (2) the growth of the informal sector on the microindustrial level, including home industries, in the state of Tlaxcala. It is concluded that most Mexican clothing industries are not prepared to meet the new demands of globalization imposed by NAFTA.

¶ **Alues, Francisco da Costa** (Coll Engineering U Federal São Carlos, 13565-905 SP Brazil (tel/fax: 5516-274-82-36/40; e-mail: dfca@power.ufscar.br)), **The New Rural Work Occupations in the State of São Paulo.**

¶ Explores the recent changes in rural labor relations provoked by mechanization of sugar cane cutting in São Paulo, Brazil. It is argued that the mechanization of the work process is the employer's answer to trade union organization in the early 1980s. With the sugar cane cutting mechanization occurs a reduction of the number of employees, & consequently, increases the qualification requirements to the workforce. The mechanization requires a polyvalent worker who can do different high-productivity activities in a day's work. The criteria to select new workers include higher educational credentials, behavior characteristics, internalization of disciplinary rules, & lack of trade union participation.

¶ A study of induced abortion in Spain focuses on the impact on public opinion of the 1985 passage of a law that allows a woman to have an abortion under certain restricted conditions, based on survey data from several opinion polls conducted before & after passage of the law. The treatment of induced abortion as a crime in the Spanish legal system prior to 1985 shaped a distinctive opinion profile change. Before 1985, attitudes of acquiescence & rejection were polarized; since that time, the clash between agreement & disagreement has gradually smoothed, leading to a myriad opinions. Factorial & discriminant analyses revealed the characteristics of groups with different opinions. The use of both analytical methods on survey data obtained over 10 years provides not only cross-sectional & longitudinal results, but feasible explanations about the impact of the law on Spanish public opinion.

¶ **Ambrogetti, Francesco** (CERFE, via Monte Zebio 32 I-00195 Rome Italy (tel/fax: 39-6-3232505/3221218; e-mail: cerfe@pronet.it)), **Re-introducing Myth and Ritual in Sociological Theory: The Challenge of Cognitive Revolution.**

¶ Offers a proposal for a reintroduction in sociological theorizing of concepts & theories related to myths & ritual. In spite of the centrality of these concepts in classical tradition, myths & rituals have been neglected by sociological theory, becoming specialized tools of research for the anthropology & sociology of religion. Investigated are the consequences for sociological theory of the discoveries of the neurophysiology of the "social" part of the brain & to the synchronization mechanisms activated by ritual & myths in contemporary society. The relevance of myths & rituals is part of the challenge that sociology must face in a growing "cognitive society." Discussed is the "cognitive revolution," eg, the increasing relevance of the cognitive sphere in society, in comparison to the past when structural phenomena had a major impact. In a globalizing world, where computer-assisted productive processes reduce the value of workers' labor, the cognitive aspects of economic production, as well as of social life, become dominant. There is an increasing ability of individuals & groups, also thanks to technological innovation, to construct & reconstruct ideologies, myths, identities, etc, without the mediation of big bureaucracy, parties, & trade unions. The unexpected return of "organic solidarities" (Smelser, Neil) & the religious & ethnic revivals in modern & Western societies could indicate the increasing relevance of the cognitive dimension in contemporary society (as well as myth & ritual).

¶ **Ambrogetti, Francesco & Quaranta, Giancarlo** (CERFE, via Monte Zebio 32 I-00195 Rome Italy (tel/fax: 39-6-3232505/3221218; e-mail: cerfe@pronet.it)), **"Seccessio Patrum". A Proposal for a New Approach to Social Relationship.**

¶ The formation of central state organizations met the need for controlling social risks caused by poverty & for preventing violent uprisings of poor against political elites. The increasing economic dependency of the elites on the lower classes (as understood within G. W. F. Hegel's analytical framework of master-slave dialects) turned the possibility of a violent "exit" of the poor from the system (ie, the "seccessio plebis") into an actual risk to control. In a globalizing world, where the computer-assisted productive processes reduce the value of workers' labor & the cognitive aspects of economic production as well as of social life become dominant, meanings & function of the monopoly of violence seem to be radically changed. Centralized power is no longer aimed at controlling the poor but rather at preventing highly educated transnational elites (Robert Reich's "symbolic analysts") from establishing their own world by separating themselves from the other social & economic groups. This trend toward a "seccessio patrum" is witnessed, among other things, by the increasing orientation of the upper classes to set up their own service networks or that of the richest regions or states to cut off linkages with the poorer parts of the world or nation. Global trends & the actors feeding fragmentation & facilitating secessionisms & those establishing new transnational bounds providing the foundations for the global ecumene are discussed. In this perspective, globalization seems to be, not a unitary trend entailing given outcomes in terms of fragmentation & integration, but the overall outcome of the interaction between often diverging economic, environmental, social, & cultural forces. The risk deriving from the lack of new advanced forms of world governance able to support integration & the role of social science in this framework are also addressed.

A Question of Difficult Consequences, Posed by the Decline of German as a Language of Science.**

● Complete paper available from Sociology*Express. Prepaid orders

only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ During the 20th century, German has lost ground to English as a language of science, as is demonstrated by representative data up to 1996. Here the question of English as the language of teaching at German universities is addressed. Introducing this would be in line with the German university tradition of relating teaching as closely as possible to research where English prevails. However, for the larger European language communities, or their countries, introducing a foreign language for such a function appears incompatible with national interests & pride. The German nation is still partially based on the idea of "language nation." Introducing English for teaching at the nation's highest educational institutions appears destructive to the nation. These & other problems are discussed in light of the possibility that there may be no way around using English for teaching.

✓ **Antaki, Charles & Houtkoop-Steenstra, Hanneke** (Dept Social Sciences Loughborough U, Leicestershire LE11 3TU England [tel/fax: 44-1509-8362/1509-22-3944; e-mail: C.Antaki@lboro.ac.uk]), **Creating Happy People by Asking Yes/No Questions.**

¶ Quality-of-life questionnaires attempt to measure respondents' (Rs') reports of their material conditions & their feelings of satisfaction. Reported here is an examination of what can happen in the actual administration of a quality-of-life questionnaire to people with learning disabilities (mental retardation). Interviewers deliver questions to Rs "optimistically"; ie, they change complex, apparently neutral questions into simpler yes/no questions that favor a positive answer. This policy is occasioned by four environments: (1) when the R has shown trouble with the initial version of a question; (2) when there is evidence of the R having had trouble with the previous question; (3) after the R's unclear talk; & (4) after a number of contradictory answers given by the R. Findings cast doubt on standard notions of the validity of interviewer-administered quality-of-life questionnaires. From a sociological point of view, they show how interviewer use of positive, simple yes/no questions manifests the difference between the institutional & interactional demands of the interview.

✓ **Antal, Árpád & Kovács, László** (Pro Scientia Transsylvaniae Foundation, R-3400 Cluj-Napoca CP 1-488 Romania [fax: 40-64-193-038; e-mail: antala@tpmn.sbnnet.ro]), **Attitudes towards Persons of Other Nationality in a Multi-Linguistic Transylvanian Town.**

¶ Scrutinizes the change in ethnic composition of a small town (Rupea-Kohalom-Reps) in southeastern Transylvania, Romania, & examines its inhabitants' preconceptions & attitudes toward each other. Scale data are used to sketch the people's accommodation strategy & their relations to other nationalities in a town that once had a German ethnic majority. Census data show the change of ethnicity of a representative sample, & portraits that people made of one of another are considered. Recently, the gypsy population has increased. The powerful antipathy toward gypsy ethnics is one reason why their unemployment is so high & heads of families with many children turn to alcohol abuse. Latent frustration of the Gypsies & Romanians toward Germans & Hungarians is evident & could cause future conflict, but, paradoxically, Romanians regret Hungarian & German emigration.

✓ **Antikainen, Ari** (Dept Sociology U Joensuu, SF-80101 Finland FIN-80101 [tel/fax: 358-13-747172/2512714; e-mail: ari.antikainen@joensuu.fi]), **Life Histories of Learning, the 'Learning Society' and Globalization.**

¶ Discusses a research project that is exploring the meaning of education & learning in the lives of Finns, with particular focus on life-long learning in the social context of a swiftly changing society. In addition to formal education, adult education & other less formal ways of acquiring knowledge & skills are examined. The theoretical framework analyzes the meaning of education on three levels: (1) How do people use education in constructing their life courses? (2) What do educational & learning experiences mean in the production & formation of individual & group identity? (3) What significant experiences do Finns have in the different stages of their lives, & do those experiences originate in school, work, adult study, or leisure-time pursuits? What is the substance, form, & social context of significant learning experiences? Education is considered as a productive—vs only reproductive—factor in the individual's life. It is hypothesized that education has several, emancipatory meanings.

Also considered is whether a cultural pattern of lifelong learning exists in Finnish society, & whether a new learning society is emerging. Implications for educational policy are addressed.

✓ **Antunes, Maria Christina Almeida** (Faculdade Arquitetura & Urbanismo U São Paulo, 05508-900 Brazil [tel/fax: 011-241-9414/535-1512; e-mail: cris@becrev.com]), **Considerações sobre as implicações do processo de constituição da trama urbana na (in)viabilidade de uma intervenção de uma intervenção de habitação de interesse social** (Considerations on the Implications of the Urban Process in the (In)viability of Social Interest Housing Intervention). (POR)

¶ How urban land is used in large Brazilian cities is a crucial issue for low-income housing solutions. Experiences suggest that the main obstacles to low-income housing production are linked to the landed property situation. Analysis focuses on land property regulations & the use of urban soil in São Paulo, introducing the participatory approach as a means for overcoming obstacles created by the traditional administrative structure in urban & housing planning. It is stressed that social organization produces far more realistic results than direct management; & urban & housing planning can benefit from the capability & awareness of citizens with autonomy to organize their own environment, counting on technicians & planners to bring together social organizations to enable more effective regulations & constructive answers.

✓ **Appay, Béatrice** (GEDISST-IRESO Centre national recherche scientifique, 59-61 rue Pouchet F-75017 Paris Cedex 16 France [tel/fax: 33-1-40-25-12-44/03; e-mail: appay@msh-paris.fr]), **Social Precarisation and Life Stories.**

¶ Concentrates on individual dismissals & a case study of a full-time cashier in a supermarket in the Paris (France) suburbs in the context of recent changes in the labor process described by the concept of *précarisation sociale* (social precarization) to show how they can provoke resistance & rebellion at individual & collective levels. As a mother of four children, the cashier's job was important, & her sudden dismissal & replacement by a part-time worker elicited a strong reaction at individual & collective levels from colleagues, customers, neighbors, family, trade unionists, & even politicians. This case is an example of new emerging forms of solidarity in a period of strong social precarization.

98S33548 / ISA / 1998 / 10789

✓ **Appay, Béatrice** (GEDISST-IRESO Centre national (recherche scientifique 59-61 rue Pouchet F-75017 Paris Cedex 16 France [tel/fax: 33-1-40-25-12-44/03; e-mail: appay@msh-paris.fr]), **Recent Changes in the Labor Process: Economic Concentration and Cascading Subcontracting, the Roots of Social Precariousness.**

¶ Presents a critical analysis of the international debate on the "end of work" & "lean production." Empirical data & examples are drawn from a French research program, including recent data on restructuring pro-

cesses in different industries & on new forms of work organization, showing how flexibility & competitiveness are achieved in different contexts. Focus is on several theoretical proposals, particularly the concepts of controlled autonomy, cascading subcontracting, & social precariousness, highlighting how economic concentration is combined with atomization, & control with autonomy. Core firms, which master the capacity to expand in periods of permanent crisis, are central to this restructuring process. Subcontracting represents the externalization of the labor force, with its risks & responsibilities. It is concluded that social precariousness identifies convergent economic & social trends in industrial societies.

¶ Since access to abortion was decriminalized in Spain in 1985 under certain restricted conditions, an increasing tendency in the number of interventions has been observed both in absolute terms ($N = 16,755$ in 1987 vs 47,832 in 1994) & relative measures (the ratio being, per 1,000 live births, 39.3 in 1987 & 129.2 in 1994, & per 1,000 women, ages 15-44, 1.99 & 5.38, respectively. Here, 1994 cross-sectional data from the official registry of 8,138 induced abortions in Madrid (23.2% of the total in the country) are drawn on to analyze related sociodemographic variables, including age, marital status, educational level, occupational status, & previous childbearing experience. After availability of services is controlled, significant predictors for abortion are socioeconomic characteristics & marital status. A direct relationship is found between education & economic autonomy; ie, women with lower school levels & those married & not economically self-sufficient are less likely to terminate an unwanted pregnancy.

✓ **Araghi, Farshad** (Florida Atlantic U, Boca Raton 33431), **The Rise and Demise of the Discourse of Development and the Internationalization of Agriculture: 1945-1998.**

¶ Traces the origins of the "discourse of development," arguing that its construction was a formative component of the rise of US hegemony in the postwar era. Drawing on Antonio Gramsci & Michel Foucault, shown is the constructive role of discourse in social change. After WWII, two distinct discourses of development competed on a world scale: (1) Soviet/state-socialist discourse & (2) US/free-market discourse. Both were shaped under the hegemony of modernism & saw industrialization as an end in itself—a legacy of 19th-century progressivism. Development discourse underwent continuous rearticulation as it helped to create & order the postwar world, adapting to new conditions & adopting old & new ideologies & texts to help recreate & reorder the world. Development discourse was a dynamic process defined by complex, contradictory, & global relations of power; thus for nearly 30 years after the war, development discourse carried in itself the contradictions of "nationalism within internationalism," to be resolved in the 1980s with the rise to dominance of globalization discourse. Suppressed in development discourse is questions of who defined development, how it was defined, & whom did it serve. How were national & international relations of power codified in this definition? What were the effects? The role of development discourse is related to adoption of policies that defined the trajectory of Third World agriculture. It is contended that the demise of development discourse was a precondition for the internationalization of agriculture. Examining discursive formations in world-historical context allows transcendence of methodological individualism & sociological determinism.

✓ **Araki, Isao** (Dept Applied Sociology Bukkyo U, Kyoto Japan 603-8301 (tel/fax: 81-75-491-2141/493-9030; e-mail: i-araki@bukkyo-u.ac.jp)), **An Approach to the Information Space and On-the-Line Interaction.**

¶ Computer networks have introduced & added various new dimensions to life & society, especially in the realm of information. Among others, the so-called virtual community being formed in information space is a crucial topic for sociological study. However, the term might be a kind of metaphor of "real community," which sociologists have long studied. If so, it is necessary to clarify its nature & difference from that of real world as a theoretical matter in sociology, & to develop appropriate ways of analyzing those phenomena as a new reality. The task here is to present a conceptual framework for approaching the information space & a

method for analyzing information exchange processes & the relationships between participants in the community on the electronic network.

✓ **Araújo, Emilia Rodrigues** (U Minho-ICS, Gualtar 4700 Braga Portugal (tel/fax: 053-6042-80-81/676966; e-mail: era@ci.uminho.pt)), **Representações sociais em relação ao teletrabalho** (Social Representations in Relation to Telework). (POR)

¶ Explores the implications of telework for daily life, with focus on (1) telework discourses, distinguishing between optimistic views of telework as a reality & a potentiality & pessimistic views of telework as a myth & an ideology; & (2) social representations, arguing that the success of a telework experiment depends largely on workers' perceptions about their actual & ideal workspace, understood both on a physical level, as well as mental & relational levels. Survey data obtained from 52 respondents are used to analyze three aspects of telework: power relations, sociability, & perception of time & space. Results indicate that potential candidates for telework generally do not know what it is nor what it represents; moreover, they express resistance to the concept. Reasons for these findings are considered.

✓ **Arber, Sara L. & Ginn, J.** (Dept Sociology U Surrey, Guildford G42 5X4 England (tel/fax: 44-1483-300800/259551; e-mail: s.arberesoc@surrey.ac.uk)), **Gender, Autonomy and Independence in Later Life.**

¶ Draws on 1993-1995 personal interview data from the British General Household Survey (9,000 people, ages 65+) to explore the gendered meaning of autonomy & independence in later life via examination of the differential life course of older women & men. Focus is on how independence & autonomy are maximized when older people have financial resources, private transportation, & good health. Examined is how access to each of these resources is gendered & how state policies can either promote or reduce their gendered nature of inequality. Implications for autonomy of older men's higher levels of financial resources & lower reported levels of disability, measured in terms of activities of daily living across various age groups of elders, socioeconomic status, & lifestyles, are also considered. Differences in marital status & living arrangements are assessed for their effect on autonomy & independence, because most older women are widowed, whereas the majority of older men are married, & relatively few are widowed & live alone.

98S33555 / ISA / 1998 / 10796

✓ **Arce, Alberto** (Wageningen Agricultural U, NL-6700 HB Netherlands), **Knowledge and the Reconstitution of Rurality.**

¶ Argues that local knowledges open opportunities for a new attribution of meaning to existing rural social groups. This process reconstitutes the existing social boundaries of rural spaces & allows rural people to internalize the social consequences of what is to make the rural fabric in this new rurality. This situation needs to be looked at. Proposed is a way of dealing with the main social components of knowledge processes & how these are significant for the future of rural sociology. The importance of this growing interest in knowledge issues is explained, & critical dimensions in rural sociology are identified for further exploration.

✓ **Archer, Margaret S.** (Dept Sociology U Warwick, Coventry CV4 7AL England (tel/fax: 01203-523-499/497; e-mail: M.S.Archer@warwick.ac.uk)), **Social Mechanisms of Institutional Maintenance.**

¶ Argues that the historically acquired structure of social institutions exerts a profound effect on the processes that subsequently govern their maintenance/transformation. As far as structural properties are con-

a

cerned, focus is on their relative centralization or decentralization. With all emergent institutions, three processes are held to be of universal importance for morphogenesis/morphostasis: internal initiation, external transactions, & political manipulation. However, it is maintained that, while structural conditioning in decentralized institutions means that these three processes enjoy a rough parity of importance, in centralized institutions, political manipulation plays the key role in generating institutional maintenance of elaboration. The effectiveness of all three processes is ultimately dependent on agency, ie, on interest groups mobilizing for their use. Such groupings are, however, differentially privileged in terms of their positions relative to major resource distributions (hence there is both historical & contemporary conditioning by institutional & societal structures involved). Outcomes are seen as the product of conflict, compromise, & concession among the collective agents in play & are therefore ultimately agentially determined. Although structural conditioning is never determination (&, indeed, structural features can be transformed by the above processes themselves), nevertheless, while ever institutions remain distinctively centralized or decentralized, this produces quite distinctive patterns of both social interaction & structural elaboration. These arguments are illustrated by reference to four state systems of education (English, French, Russian, & Danish) since their emergence.

98S33557 / ISA / 1998 / 10798

Archer, Margaret S. (Dept Sociology U Warwick, Coventry CV4 7AL England [tel/fax: 01203-523-499/497; e-mail: M.S.Archer@warwick.ac.uk]), **Agents, Actors and Persons: A Realist Re-Conceptualization.**

It is argued that the solution to the problem of structure & agency necessarily involves a reconceptualization of both terms such that the properties & powers—distinctive of, yet irreducible to, one another—are properly disengaged to examine their interplay. The central concept of agency needs to be treated as stratified, & distinctions maintained between agents (collective), actors (individual), & persons (who anchor the other two in common humanity). The basic argument is that agents are shaped & reshaped (a regrouping of their regrouping) in the process of pursuing social transformation. As the latter takes place, new roles that individual actors can occupy & personify are created, thus changing the social selves that they can become. Hence agents are the parents of actors, but neither lose their anchorage in the human being, whose properties & powers are primitive to society & necessary to secure the thread of cross-cultural intelligibility—over time & societal transformation.

Arellano-Hernández, Antonio H. & Ortega, Claudia P. (Instit Literario U Autónoma Estado México, Toluca 50000 [tel/fax: 72-12-31-97; e-mail: aah@coatepec.uaemex.mx]), **La Biotechnologie agricole et les défis de compréhension des réseaux socio-techniques globaux (Le Cas de la biotechnologie du maïs)** (Agricultural Biotechnology and the Challenges of Grasping Global Sociotechnical Networks [The Case of the Biotechnology of Maize]). (FRE)

An ethnographic case study of Mexico considers the main biotechnical laboratories doing research on maize, focusing on social & technical issues in biotechnical research & the diffusion & application of new technologies of manipulating nature. Problems & obstacles in synchronization between worldwide scientific progress & in developing countries such as Mexico are described. It is concluded that, to better understand biotechnologies in sociological terms, it is important to encourage collaborative work on case studies by international teams.

98S33559 / ISA / 1998 / 10800

Arellano-Hernández, Antonio & Ortega-Ponce, Claudia (Instit Literario U Autónoma Estado México, Toluca 50000 [e-mail: aah@coatepec.uaemex.mx]), **Agricultural Biotechnology in Developing Countries and the Challenges of Grasping Global Social and Technical Networks (The Case of Biotechnology of Maize).**

Draws on an ethnographic study of the main biotechnical laboratories in Mexico, to examine the history & present state of Mexican biotechnical research on maize. Social & technical issues in biotechnical research, & the diffusion & application of new technologies to manipulate nature are discussed. Some problems & obstacles in synchronization between the worldwide scientific progress & transformations lived in developing countries are examined. Findings are presented that indicate that, to better understand biotechnologies in sociological terms, it is important to encourage collaborative work on case studies by international teams.

98S33560 / ISA / 1998 / 10801

Arkhangelsky, Vitaly D. (Saint Petersburg State U, 195009 Russia [tel/fax: 7-812-542-22-45/251-30-31; e-mail: vitaly.arkangelski@aoa.hist.no]), **Finance of the State Pension Insurance in Russia.**

Examines the mechanisms of state pension system operation in Russia in the context of the transition from a socialist economy to the contemporary welfare state. Using demographic categories, it is shown that pension reforms are based on popular measures: the preservation of the existing pension eligibility age & preliminary pensions for some categories of citizens. By giving the right to employed pensioners to receive pension & wages (which was not allowed during the Soviet era), the reforms in Russia have a more democratic character. However, such changes have not been possible to implement because of the pension fund insolvency & budgetary debt. These fiscal problems have contributed to the rise of private pension systems, which should support the survival of the existing pension system in its optimal regulation. It is argued that the pension reform in Russia has been hurried, without adequate recognition of the economic development & experience of foreign countries that may facilitate the transformation. Russia should be included in the global welfare economy, & developed countries should find new ways for maintaining their own social security & public finances.

Arias Fernandez-Armesto, Carmen (Dépt Historia Comunicación U Complutense Madrid, E-28040 Spain [tel/fax: 91-394-2131/2130]), **Homo particeps, Homo expoliatus (Homo particeps, Homo expoliatus).** (SPA)

Inquires into the ideological bases that make possible through time the formation of a participant man summoned to rationality, freedom, transcendence, & transformation, hardly recognized by a man violated by propaganda, publicity, & surrounding media.

98S33562 / ISA / 1998 / 10803

Ariza, Marina E. & De Oliveira, Orlandina (Instit Investigaciones Sociales U Nacional Autónoma México, CP 04510 Mexico [tel/fax: 525-622-7400/665-2443; e-mail: ariza@servidor.unam.mx]), **Contrasting Scenarios: Family Formation and Woman Condition in the Caribbean and West Europe.**

Examines available information on the Caribbean & northern European countries to contrast non-coresidential family formation patterns existing in both types of societies, by exploring their diverse backgrounds & main characteristics, specially in relation to the status of women. The well-known "visiting-union" families as a salient feature of some Caribbean countries & the growing presence of noncoresidential arrangements in northern European countries comprise two family institutions in which family members live together but in different spaces. Nevertheless, their fundamental differences & contrasting cultural origins trigger the discussion about the diverse consequences of various family formation patterns for the situation of the women involved in them. Due to their distance from the normative model (legal marriage), visiting unions allow women a certain degree of independence & self-control over their lives (Ariza & Oliveira, 1997). At the same time, noncoresidential unions in postwar Europe (ie, "living apart together"), frequently an alternative to marriage after divorce or widowhood, leave a considerable space for individuality & autonomy to both partners. Knowing that different marital unions comprise variations in the quality of family life experience, explored are such consequences, seeking a better understanding of the changing relationship between family formation & the condition of women.

Armer, Michael & Guedalla, Martin (Dept Sociology Florida State U, Tallahassee 32306-2270 [tel/fax: 001-904-644-6416/6208; e-mail: marmer@garnet.acns.fsu.edu]), **Analysis of a Model of Social Entrepreneurship.**

Most approaches to entrepreneurship focus on individuals & emphasize either particular personality traits (orientations & behaviors) or financial assistance programs that facilitate successful self-employment. The model discussed here focuses on team building & joint efforts by individuals who are unemployed or in industries that are being downsized, & on departments in organizations that seek to develop team creativity & leadership. The program consists of training groups of these individuals in group dynamics as well as in business skills. Each group's goal is to become a team & design a new enterprise that will meet a need in their community as well as provide an income for participants. The program is described in detail as applied in different international contexts, & evidence regarding the degree of its success in England is reviewed.

98S33564 / ISA / 1998 / 10805

Armony, Victor (Dept Political Science U British Columbia, Vancouver V6T 1Z1 [e-mail: armony@interchange.ubc.ca]), **The Ideology of Globalization. A Latin America Perspective.**

¶ Addresses the ideology of globalization, focusing on the Latin American context. Several authors have already pointed out that the process of globalization is extremely ideological, because it tends to present itself as a necessary step in the natural evolution of humankind. Indeed, globalization would seem to embody the very values of modernity: ever-increasing freedom, procedural rationality, & peaceful & mutually beneficial interaction among individuals & groups. The normative images evoked by globalization are very strong & appealing: artificial frontiers must go down, bureaucratic chains must be broken, creative forces must be liberated, etc. Obviously, this conception is far too idealized & incomplete. Individuals are still, if not more than ever, tied by nation-state-granted citizenship, & borders are not disappearing, but have only become more selectively permeable. Shown here is how the idealized conception of globalization is nevertheless furthered by government discourse in several Latin American countries. Through the analysis of various official statements by the chiefs of state, some of their key propositions & arguments are examined. Offered in conclusion is a more general reflection on the fact that there is no equality in nature; the pervasive notion of globalization as the "natural path of history" can eventually lead to the negation of equality among & in national communities. It is argued that equality is an "artificial" concept of reason through which one can try to think about society, not as it is "meant to be" by the laws of nature, but as one wants it to be, ie, as a voluntary scheme of cooperation.

98S33565 / ISA / 1998 / 10806

Armstrong, Nicola (Sociology Dept Massey U, Palmerston North New Zealand [tel/fax: 06-350-5627/5023; e-mail: n.l.armstrong@massey.ac.nz]), **Flexible Time? Home-Based Work and Family Relations.**

¶ One advantage of working from home (teleworking or telecommuting) is assumed to be the time & space independence such employment allows. Examined here is the use of time by women & men home-based entrepreneurs who are the parents of young children in New Zealand, investigating the division of time between paid & unpaid work, leisure & emotional labor, to explore whether the promise of temporal flexibility is delivered for home-based business people. Also considered, are the implications of the lack of a temporal boundary between home & work for the partners & children of home-based entrepreneurs. Reflections on the seductions of flexibility & the discipline of self-employment for parents who work from home are outlined in conclusion.

98S33566 / ISA / 1998 / 10807

Arnason, Johann P. (School Sociology/Politics/Anthropology La Trobe U, Bundoora Victoria 3083 Australia [tel/fax: 61-3-947-92286/92705; e-mail: J.Arnason@latrobe.edu.au]), **The Troubles of Social Theory and the Question of the Subject.**

¶ Two contemporary approaches to the question of the subject are compared, those of Niklas Luhmann & Alain Touraine. In both cases, a specific theoretical perspective on subjectivity is related to other aspects of a more complex argument, but in very different ways. For Luhmann, the notion of the subject is an epistemological obstacle & must be taken seriously, as long as the theoretical basis for a self-description of modern society remains incomplete & inadequate. For Touraine, the rediscovery & retheorization of the subject is at the center of an ongoing reorientation of sociology. As a nonsocial principle that governs social relations, the subject is the key to understanding historical transformations of the social world, changing constellations of modernity, & the unfolding agenda of social theory. In particular, a return to the subject serves to redefine the relationships between social actors & social systems & to mount a more effective challenge to the logic of systemic reductionism. Touraine's positive conception of the subject & its central place in social theory is defended against Luhmann's strategy of liquidation. But this line of argument entails a distinction between basic conceptual issues & the more contestable empirical claims to which Touraine links them, as well as a more explicit discussion of the philosophical background to sociological figures of the subject. The idea of a subjective articulation of social & metasocial fields must be related to a broader interpretive framework &, more particularly, to the dialectic of radicalization & recontextualization that dominates modern conceptions of the subject. The historical interaction of these currents of thought can be understood only from a philosophical perspective that places more emphasis on the structural re-

lationship between the subject & the world than does Touraine. The view is predicated on a hermeneutical approach that does not reduce the task of theorizing subjectivity to an analysis of agency, but tries to thematize the unity & difference of agency & interpretive horizons (or praxis & interpretation).

98S33567 / ISA / 1998 / 10808

Arnopoulos, Paris (Dept Political Science Concordia U, Montreal Quebec H3G 1M8 [tel/fax: 514-845-1976/848-4072; e-mail: paris@vax2.concordia.ca]), **Sociophysics and Sociocybernetics—An Essay on the Natural Basis and Limits of Political Control.**

¶ Given the complexity, extensity, & intensity of contemporary social systems, can some optimal sociocybernetic principles be found to apply universally to issues of social control by political institutions? Here general systems, complex, quantum, & chaos theories are combined, & the sociophysics paradigm is applied in the context of the hypothesis that some measure of social control is necessary, possible, & desirable to address the question of when, where, & how it can be optimized. Under the circumstances, human interference with fragile or chaotic systems found in both nature & culture should be based on the principles of minimizing environmental disturbance & maximizing holistic balance. The best policy would then seem to be choosing a postmodern sociocybernetic strategy that approaches a golden mean between the libertarian & totalitarian extremes.

Arregi, Begoña & Larrañaga, Isabel (Dept Sociology U Basque Country, E-48940 Leioa Spain [tel/fax: 34-4-464-8800/8299; e-mail: cjpargob@ehu.es]), **On the Reproduction of the Family in the Basque Country.**

¶ The evolution of reproductive behavior in the Spanish Basque region in the last 2 decades has been marked by the intense & progressive decline of period fertility. The birthrate has fallen from 2.78 children per woman in 1975 to 0.89 in 1994 in parallel to a significant increase in the age of marriage for both men & women & in the age at first child, while the recorded levels of cohabitation of divorce remain low. This demographic experience is paradoxical: the strength of family network that has been the backbone of Basque culture & tradition accounts for its stability & adaptation to the impact of industrialization, immigration, & political or economic crises. The family is expected to be a solid kinship unit with a clear interest in reproducing itself expressed in a desired & intended family size always above replacement level, but in clear contradiction with reality. Offered here is a detailed analysis of reproduction & family indicators based on the 1991 Census & Fertility Survey, together with the initial results of a research project on the Basque family designed to interpret declining fertility & its impact on family structure. It is argued that women's economic participation has but marginal influence in family formation; current low fertility levels respond more clearly to cultural, historical, social, & strategic factors than to economic ones. In this sense, current lifestyles & future expectations of the young indicate that parenthood is increasingly unrelated to the adult stage of the life cycle, with a negative impact on family formation & reproduction.

Arrighi, Giovanni (State U New York, Binghamton 13902-6000 [tel/fax: 607-777-6750/4197; e-mail: arrighi@binghamton.edu]), **Globalization and the Demise of the Theory and Practice of National Development.**

a

¶ "Globalization" as discursive practice, along with the new "Washington consensus" of the 1980s, have thrown development theory in complete disarray. There is no agreement on what such a theory is supposed to explain nor on how to explain whatever needs explaining. Even the idea that general or abstract principles should be resorted to in investigating developmental issues—i.e., there should be some kind of theory of development at all—is itself in question. World-systems, postmodernist, & neoliberal critiques of theories of national development are examined, arguing that these critiques point to the need of reconstituting theories of national development on new grounds, rather than eliminating what such theories in their golden age of the 1950s & 1960s were meant to explain.

Artemov, Victor (Instit Economics & Industrial Engineering SB RAS, 17 Laurentiev prospect Novosibirsk 6300900 Russia [tel/fax: 7-3832-35-4425/5580; e-mail: arttime@ieie.nsc.ru]), **Social Policy, Liberalization and Use of Time: The Case of Russia in the 1970s-1990s.**

¶ Data from longitudinal time-budget studies & social surveys are used to show changes in people's daily activities in the period of societal liberalization with respect to different social policies pursued by the government & to conditions of severe economic depression experienced in Russia, 1970s-1990s. Though the process of liberalization has, on the surface, intensified in the 1990s, most people feel that their opportunities have decreased, because means are scarce, not only for households, but also for the state & municipal institutions of educational, children's, cultural, & recreational services. The data confirm the priority of economic factors & material living conditions. These conditions, not liberalization measures as such, have determined time-use trends. A reduction of contracted paid work has led to increased domestic & household production work, & consequently, fewer hours for & less diversity of leisure activities among a greater part of the population.

Artemova, Olga (Instit Economics & Industrial Engineering, SBRAS 17 Lavrentiev's Prospect 630090 Novosibirsk Russia [tel/fax: 7-3832-354425/355580; e-mail: arttime@ieie.nsc.ru]), **The Work Structure Changing of Siberian Rural Working Residents in 1970-1990s.**

¶ Data gathered 1975/76, 1986/87, & 1993/94 from three representative sampling surveys on the living conditions & time use of rural population in southwestern Siberia indicate that, on the whole, the role of home economy in supplying the family with food products has increased; the proportion of adult unpaid labor in aggregate labor inputs into agricultural production appreciably rose, in absolute & relative terms, in the prereform years & especially during the implementation of the reforms; & although the amount of labor invested in fully or partially reorganized collective & state farms decreased, total workload is as high as before. Another finding concerns noticeable changes in the division of labor among family members, mostly regarding different spheres of its occurrence. Daily activity has changed; time spent on advanced cultural behaviors & social activities has decreased, while time spent on recreational behaviors such as TV watching has increased. Overall involvement in household production has closed the gap in patterns of daily activities between residents of town & village & between different social groups.

Artigiani, P. Robert (History Dept US Naval Academy, Annapolis MD 21402-5044 [tel/fax: 410-293-6253/2256; e-mail: artigian@nadn.navy.mil]), **Human Values and Social Complexity.**

¶ Social systems emerge as solutions to survival problems computed by human interactions when populations exceed natural carrying capacities; i.e., biologically stored genetic information no longer suffice, nor can they obey biological urges that conflict with societal networks. To avoid

breakdown, individuals must regularize behaviors, which correlate activities across space & time. Choices & actions regularize behaviors, which correlate activities across space & time. Choices & actions regularized as "social roles" allow people to know each other's business & synergistically amplify the effects of each other's activities. Thus, societies become wholes greater than the sums of their parts, thereby transforming the environmental scale on which selection occurs; societies now become objects of natural selection. Since moralizing choices constrains individual actions & correlates behaviors, variations in values, ethics, & morals, the information structuring social systems, become potentially significant. Values, ethics, & morals encouraging individuality & autonomy prove advantageous, because the roles they script efficiently access resources; but initiatives releasing new or amplified resource flows threaten stability. Survival solutions are computed by adding roles & redefining relationships, which increases complexity; accelerates change; & transforms values, ethics, & morals. Here, the possibility that contemporary science improves societal adaptability by reinforcing humanistic values, ethics, & morals is explored.

Arum, Richard & Way, Sandra (Dept Sociology U Arizona, Tucson 85721-0027 [tel/fax: 520-621-3480/9875; e-mail: arum@u.arizona.edu]), **The Significance of School-Business Institutional Ties: Effects of School Assisted Job Placement on Male and Female Early Labor Market Outcomes.**

¶ While school-assisted job placement is rarely used in US schools, when schools do facilitate employment through institutional ties with employers, labor market benefits occur—particularly for women. These institutional connections between schools & employers account for some labor market gains women receive from taking high school vocational business coursework. Men use school assistance for finding employment even less than women & receive fewer benefits from these connections. Findings support recent work that suggests the substantive importance of focusing greater attention on school institutional environments in structuring young adult labor market outcomes.

Arvanitis, Rigas (ORSTOM, 32 ave H. Varagnat F-93143 Bondy Cedex France [tel/fax: 33-01-48-02-55-00/47-30-88; e-mail: rigas@internet.com.mx]), **R & D et innovation dans l'industrie chimique en Amérique Latine (R & D and Innovation in the Chemical Industry in Latin America).** (FRE)

¶ The development of a industrial sector such as the chemical industry is often linked to R & D (research & development) inside companies. An attempt is made to explain the place of research in firms in four countries (Brazil, Mexico, Venezuela, & Argentina) & to evaluate the sometimes complex link between research & the development of technologies. It seems that R & D in Latin American responds to the development of new products in order to diversify production & meet the needs of clients, rather than taking a stance toward exports. Firms that want to export are less interested in innovation & prefer to satisfy quality & efficiency criteria. Thus, very different behaviors are observed depending on whether firms sell to domestic or foreign markets. The question is raised whether such differences are generating distortions in the industrial sector of these countries.

Asgeir, Solstad (Dept Social Science Bodoe Coll, N-8002 Norway [e-mail: asgeir.solstad@hibo.no]), **Household Economy and Modernity in Rural Areas.**

¶ In the urbanized Western world, households have long lived as consumers, depending on the paycheck, though people's understanding of the meaning of work, household, & money have changed with changes in modernity. In rural areas, modernity is a postwar phenomena. People in these areas took a giant step from a traditional economy, partly self-sufficient, based on a combination of fishing & agriculture, into a modern household economy. Here, data from 1997 qualitative interviews with 5 households in a rural town in northern Norway are drawn on to describe attitudes toward economy & money among the adult generation. As these attitudes were established in a traditional society, they were only partly able to hand over perspectives & understandings relevant to a modern household economy in their socialization of the next generation. Differences between ideals of economic management in traditional & modern household economies are identified, focusing on topics where traditional understandings of money/household represent problems in managing the household economy in a modern, individualized culture.

Asheulova, N. A. (International School Sociology Science & Technology, Universitetskaya nab. 5 Saint Petersburg 199034 Russia [tel/fax: 812-301-4820; e-mail: root@kugel.spb.su]), **Free Market and the Development of Science.**

¶ The world's experience shows that state control over the development of science, primarily a financial one, remains necessary even in the conditions of developed market relations. The organizers of reforms in Russia had been clinging to the point that the market is an autonomous power on which the development of science can be based. They did not take into consideration the strong connection of the applied sciences with industry. It is argued that privatization of industry ought to be performed 10-15 years before privatization of the applied sciences. As a result, industry in the conditions of crisis makes no demand on the achievements of science. The cease of financial support of applied research brings high-technology branches of industry to decay. Now, with the rapid weakening of applied science, only those who manage to find foreign partners or grants have a chance to survive. Conclusions are based on research in St. Petersburg, contending that academic science has survived thanks to state support (ie, direct state financing or the activities of scientific funds) as well as to the support of international scientific foundations.

Ashley, Mark (Dept Political Science U Chicago, IL 60637 [tel/fax: 773-883-7235/702-1689; e-mail: m-ashley@uchicago.edu]), **Constructing National Culture and National Economy.**

¶ Seeks to relate the construction of national identities with the construction of economies. Most analysis of nationalism has focused largely on the cultural & political expressions of the nation & has largely ignored economics. If deemed relevant, economics is usually considered only as a structural factor leading to the possibility of nationalism in a given society. Economics is treated as an integral part of nationalism itself & not an institution or practice distinct from the cultural & social spheres. By making adherence to a particular economic system or set of policies integral to membership in the nation itself--& vice versa--nation builders link politics, culture, & the markets that operate in them. Membership in the political community is therefore defined not only legally & culturally, but also economically. This argument is based on evidence from the interwar US of the 1930s, when nationalist rhetoric & economic protectionism went hand in hand. It is suggested that the creation of markets & national cultures in the new states of the former USSR is illustrative of the central claims of this analysis.

98S33582 / ISA / 1998 / 10823

Ashley, Mark (Dept Political Science U Chicago, IL 60637 [tel/fax: 773-883-7235/702-1689; e-mail: m-ashley@uchicago.edu]), **Nationalism and Economics: The Construction of National Economic Identity and the Challenge to Globalism.**

¶ In the context of globalization, it is useful to illustrate the construction of national identities & economies to explain why, given all the arguments for interdependence, public rhetoric of the nation has not declined. Most analysis of nationalism has focused largely on the cultural & political expressions of the nation, largely ignoring economics. If deemed relevant, economics is usually considered only as a structural factor leading to the possibility of nationalism in a given society. Here, economics is treated as an integral part of nationalism itself, & not an institution or practice distinct from the cultural & social spheres. By making adherence to a particular economic system or set of policies integral to membership in the nation itself--& vice versa--nation builders link politics, culture, & the markets that operate in them. These linkages on the level of identity, not merely on the level of exchange, limit globalism's universal reach, even as the decline of the nation-state is being heralded by academics. Evidence is offered from two cases: (1) US trade policies during the 1930s as a historical example of the interaction of nationalism & economics, & (2) contemporary Japanese cultural-economic nationalism.

Aspers, Patrik (Dept Sociology Stockholm U, S-10691 Sweden [tel/fax: 46-8-163178/6125580; e-mail: aspers@sociology.su.se]), **The Economic Sociology of Alfred Marshall.**

¶ Presents the economic sociology of Alfred Marshall (1842-1924), showing his relevance for the sociological perspective of the economy. Topics discussed include Marshall's theory of action & his ideas of how preferences are generated, two themes intertwined in his thinking. His usage of industrial districts & social capital is discussed also, noting that the former is being used by contemporary sociologists. Marshall's idea that preferences are generated by activities has recently been used by Gary Becker. The activities or actions take place in a social framework, which means there is a sociological dimension in how preferences are generated. Parsons's influential interpretation of Marshall is discussed also. Marshall's idea of economic actions provide further insights into the sociological aspects of his writings. It is shown how the very foundation of action is socially situated. Even in "pure" economic exchanges, actors, according to Marshall, relate their choices to one another in a sociologically interesting way. It is argued that Marshall's approach enhances understanding of the economy & macrolevel outcomes.

✓ **Atani, Alice F.** (U Estadual Paulista, 13500 R o Claro S o Paulo Brazil (tel/fax: 1955-19-534-0122/8250)), **The Invisible Work: The Transportation Service Sector.**

¶ Service work is examined within the context of technological transformations, based on survey data gathered from transportation service workers, 1985-1994. The experience of the service worker is characterized by the lack of materiality of his work product. His work is not only unproductive, it has become virtual &, now, invisible. Service work is analyzed by trying to "look at" these invisibilities, at actions as well as working conditions, & how they can be perceived in terms of the worker's health.

98S33588 / ISA / 1998 / 10829

✓ **Atherton, Graeme** (Dept Sociology U Liverpool, L69 7BX England (e-mail: graeme@liv.ac.uk)), **Globalization, Reflexive Education and the Working Classes: A Case Study of Liverpool.**

¶ In the mid-1990s in the UK, a dominant discourse concerning the learning society has emerged that is based on a narrowly defined link between education & individual & collective economic well-being. The policies that have resulted through this discourse fail to address the traditional chronic underrepresentation of working-class people in education; further, education offered to working classes is often inadequate to meet their needs in late modernity. Here, given this situation & the extreme economic pressures faced by working classes caused by globalization, it is considered whether working-class adults should give up on education. Contemporary social theory on the relationship between structure & agency is utilized to argue that, while the working classes have to develop reflexive capacities & identities to ensure economic & social well-being, the freedom implied by reflexivity is bounded by the existence of dominant discourses like the one surrounding the learning society. Ongoing research into two educational projects in Liverpool, England, suggests that, even within the parameters set by the dominant discourse, it is possible to meet the need for working-class people to develop reflexivity via education. Therefore, education is not a lost cause for working-class adults; however, education in any context cannot guarantee work. Undoubtedly, a lack of secure paid work remains the major factor separating the lower working class from the rest of society; however, in prioritizing work as the solution to the problem of the lower working class, as does the new Labour administration, work becomes tied up with social worth, identity, & belonging. Moreover, the globalization agenda defined by global capital makes such policies highly unlikely to provide rewarding work for those who need it. Hence, the reflexive changes identified by the research are likely to be available only to the minority & cannot be guaranteed to be permanent.

✓ **Attir, Mustafa O.** (Dept Sociology El Fatih U, Tripoli Libya (tel/fax: 218-21-75769/3338412)), **Modernization, Globalization, and Islamists in Libya.**

¶ Modernization in Libya was made possible when three main factors came together: oil, central planning, & widespread population readiness for change. With modernization came many social problems; focus here is on factors related to the Islamist movement. Certain aspects of modernization in Libya contradict traditional values, some of which are derived from historical interpretations of Islamic principles. In every Muslim society, some individuals believe that only traditional interpretations are true, while others become aware of different aspects of life & lifestyles in other societies. In Libya, these two groups are both dissatisfied & in conflict. The modern Libyan state did pay attention to religion, especially in the areas of education, legal procedures, & certain aspects of social relations, but as individuals became better educated, more ideas from abroad crossed the border. Focus here is on the impact of outside views, especially those of religious fundamentalists, groups that use traditional interpretations of Islamic principles to rationalize violent activities against the state. Many factors involved in this process & what has happened, & may still happen, in Libya as a result are examined.

✓ **Ault, Amber** (Dept Sociology U Wisconsin, Madison 53706 (tel/fax: 608-246-8027/265-5389; e-mail: aault@ssc.wisc.edu)), **The Psychiatric Institutionalization of Childhood Gender Pathology. The Case of Gender Identity Disorder.**

¶ Analyzes the psychiatric institutionalization of norms for childhood gender comportment in the US & Canada & implications of this phenomenon for views of normative childhood gender among European mental health workers. Focus is on the psychiatric diagnosis of gender identity disorder, first officially applied to "gender nonconforming" children in the US following two significant developments in the history of sex & gender in that country: the American Psychiatric Assoc had just voted to depathologize homosexuality & the US feminist movement had begun to promote nonsexist child socialization. Although homosexuality is no longer labeled a mental disorder, children diagnosed with gender identity disorder are treated primarily because their "symptoms," which may reflect new, feminist childrearing notions, are seen as signs of nascent homosexual identity. As a diagnosis, gender identity disorder has been exported from the US to other countries, which have established gender identity clinics. Sociocultural & historical underpinnings of this diagnostic category are probed for what they reveal about changing notions of childhood & sexuality in psychiatry.

✓ **Azuma, Shoji** (Dept Languages U Utah, Salt Lake City 84112 (tel/fax: 801-581-7326/7581; e-mail: shoji.azuma@m.cc.utah.edu)), **Linguistic Nature of Code-Switched Units in Japanese and English.**

¶ Investigates the lexical features of units code-switched in a Japanese/English environment in Japan. It is argued that the relevant feature is +N, which allows an item to meaningfully stand alone. A unit that has the feature N can be code-switched, whether it be one word or more. A typical intrasentential switch in the present data set is the switching of a lexical item into English, which, in turn, is followed by a Japanese bound morpheme. An item that is not N can also be code-switched by re-categorizing the item as nominal (N) in the matrix language; eg, verbal switching is accomplished by a verbal noun construction in which an English verb is re-categorized as a noun. The data for the study came from natural conversations in everyday life among in-group member female college students as well as disc jockey's speech on radio stations.

¶ **Babon, Kim M.** (U Chicago, IL 60637 [e-mail: kimbabon@midway.uchicago.edu]), **Public Artist, Public Servant? Controversy, Creativity and Change in Public Art Production.**

¶ Analyzes changes in public art policies to ascertain how the roles & artistic expressions of public artists have changed from formalist artistic concerns, eg, minimalism, to the constraints of public expectation. A change in the perception of artists' roles from "individual genius" to "civil servant" is discussed, as well as how artists' roles are shaped & affected by the cultural institutions through which they usually must work. Locating artists within a production system illustrates how the collaborative process between the artist & community affects the roles of cultural producers &, consequently, cultural production. The collaborative effort between public artist & community has resulted in a very different type of public art work—art that relates local history or expresses cultural elements of the local population. These public expressions are dramatically different from monumental sculptures that were created during the 1960s & 1970s, which spoke to universalistic, modernist themes, as were the processes that created them. Changes in institutional policies, the shifting roles of public artists, & the art they are producing highlights the complicated relationships of power between artist, institution, community, & the constraints on creativity.

¶ **Backe-Hansen, Elisabeth** (NOVA/Norwegian Social Research, Munthesgt 29 0260 Oslo [tel/fax: 47-22-54-13-07/12-01; e-mail: elisabeth.backe-hansen@isaf.no]), **Children's Social Competence in Context.**

¶ Explores how children's social competence varies according to the local communities they live in, their family setting, size of their school & form, & leisure activities, drawing on 1997 questionnaire data from 950 10-year-olds, their parents, & teachers in 11 strategically selected Norwegian municipalities. A follow-up in 1999 is planned. Findings from a Norwegian (Backe-Hansen & Odgen 1995) & a comparative Nordic (Backe-Hansen & Odgen 1998) study indicate that, in general, the 10-year-olds were competent & seemed to enjoy healthy & development-enhancing environments. At the same time, 10%-20% seemed to be at risk in various ways because of low competence, more risk indicators in their environment, & developmental history or client status. This estimate might be a little low; even if the participation rate was about 90%, there is reason to believe that the attrition at least partly consists of more marginalized children. Girls emerged as more competent than boys in the eyes of teachers, but this difference was significantly less marked from parental & child perspectives. However, boys dominated once the focus was problems & problem behavior. Belonging to an at-risk group was associated with impaired health & late development during preschool years for a large proportion. Very few, if any, significant differences in social competence could be explained through sociodemographic factors. At the same time, such differences were present between groups of children at

risk & the rest of the sample. Because of this last finding, focus here is on children's important social arenas: family, school, & leisure activities, & the interrelationship between these, besides including the most statistically robust instruments from the former studies. The sample includes 90 classes of whom 33% either has 10 pupils or less or are in schools where children in several forms are in the same class, creating a unique opportunity to find out if class size makes a difference when schools & classes are small.

¶ **Baert, Patrick (Jacques Nicole)** (Faculty Social & Political Sciences U Cambridge, CB2 3RQ England [tel/fax: 00-44-1223-33-45-33/50; e-mail: pjb100@hermes.cam.ac.uk]), **Rational Choice Explanations in Social and Political Sciences.**

¶ Mounts a critical analysis of rational choice explanations in the social sciences, first addressing weaknesses of existing rational choice explanations, then dealing with the question of whether it is possible to develop rational choice explanations that are not similarly weak. The following weaknesses are mentioned: (1) Rational choice theorists fail to acknowledge fully the difference between acting as if one is rational, on the one hand, & acting because one is rational, on the other. (2) While most rational choice theorists concede that rationality is sometimes embedded in people's practical knowledge, the very same theorists cannot help but invoke purposes & goals in the presentation of their results; further, once rational choice theorists invoke the possibility of practical knowledge, it becomes unclear how their theory is distinct from rival theories. (3) It is possible to mold any kind of action in terms of a rational narrative, &, therefore, it is not clear which forms of action are potential falsifiers of the theory.

¶ **Bagher, Saroukhani** (School Social Sciences Tehran U, Iran [tel/fax: 2287551/8012524]), **Traditions, changements sociaux, et le choix du conjoint, une étude sur Mahr** (Traditions, Social Changes, and Mate Selection, a Study of Mahr). (FRE)

¶ According to Iranian tradition, marriage is usually contingent on a commitment by the groom to his future wife called *Mahr* (dowry), which may be in cash or kind. Here, data collected via documentation, observation, & focused, closed interviews reveal, surprisingly, that the main factor determining *Mahr* is the level of education of the women. *Mahr* was initially intended to protect unemployed, uneducated women; when access to work & education is provided, *Mahr* is influenced greatly. While the amount of *Mahr* is increasing, a trend to marry without it is observed. Analysis clearly illustrates the social character of marriage in Iranian society, with the parents (who arrange *Mahr*) functioning as the representatives of society.

¶ **Baharoglu, Deba & Leitmann, Josef** (Instit Housing & Urban Studies, NL-3000 BX Rotterdam Netherlands [tel/fax: 31-10-4021549/4045671]), **Using Institutional Economics to Understand Service Provision in Turkey's Spontaneous Settlements.**

¶ Turkey's spontaneous settlements (*gecekondus*) house 50% of the ur-

b

ban population & face infrastructure deficiencies that reduce quality of life & economic productivity while increasing urban poor vulnerability. Here, research underpinned by new institutional economics is drawn on to examine formal & informal institutional frameworks for infrastructure provision in Turkish cities, focusing on supply & demand in *gecekondu*. In theory, rules should create incentives that produce behavior; however, a key finding was that rules are generally irrelevant. In fact, in the absence of credible formal rules, pressures arise to shape informal rules that then result in behavior. This has important implications for both institutional theory & daily practice.

Baigorri, Artemio (U Extremadura, E-06071 Badajoz Spain (tel/fax: 34-24-289300/272509; e-mail: baigorri@unex.es)), **Hacia la urbe global** (Toward the Global City). (SPA)

¶ The image of "ecumenópolis" is no longer a future possibility, but a reality. Proposed here is the concept of the "global city," not based on the gigantism of large cities & industrial images, but in the Internet, whose extension is limited only by access to telecommunications. The paradigm of world cities, formulated by Friedmann, shows the acceptance of this idea, but is adjusted to the stereotypes of the industrial society, characterized in territorial terms by a hierarchic structure. What is novel in the "global city" concept is the break of hierarchies, due in good part to the break of the identification between national interest & world cities. Some causes are discussed: (1) The disintegration of the nation-state grants to regional spaces the capacity of competing through their medium or intermediary cities. (2) The weakening of vertical instruments of political dominance democratizes decisions in territorial planning. (3) The dissolution of frontiers provokes the appearance of the "mesópolis," or trans-border metropolis, that no longer reflects solely the interests of the nation-state.

98S33605 / ISA / 1998 / 10846

Bailey, Edward I. (Center Study Implicit Religion & Contemporary Spirituality Middlesex U, London N17 8HR England (tel: 44-0-181-362-6220)), **'Implicit Religion' Defined: A Step Beyond the Sacred/Secular Dichotomy?**

¶ When a religious hegemony is questioned (eg, in 18th-century France), then it is "natural" to deny reality to the religious phenomenon. In this situation, to assert the reality of the apprehension of sacredness is the first step toward the recognition of empirical reality. However, to stress the distinctiveness of the sacred while ignoring its simultaneous, inherent sense of holism & reciprocity is to present a lop-sided description of the experience itself. Such an interpretation may seem to provide an existential legitimation for a ministry of cults, but the "fundamentalist" protest is simply the most conspicuous indication of its empirical inadequacy. The concept of implicit religion (defined, for instance, in terms of commitment) moves beyond this (would-be) dichotomization of religion/society, sacred/secular, by allowing for a sense of sacredness to be found in the secular, as well as for the well-known secularity of much of religion.

Bailey, Kenneth D. (Dept Sociology U California, Los Angeles 90095 (tel/fax: 310-825-1313/206-9838; e-mail: kbailey@ucla.edu)), **Social Entropy Theory and Social Autopoiesis: Toward an Integration.**

¶ Integrates Bailey's social entropy theory & Luhmann's social autopoiesis in sociocybernetics. One reason that these approaches may seem difficult to integrate is that they are both rather difficult to operationalize in a social context. However, they also have clear points of congruence in their entropy-fighting properties, primarily boundary delimitation opera-

tions & relations with their environments. These latter properties are exploited to aid synthesis.

98S33607 / ISA / 1998 / 10848

Bailey, Kenneth D. (Dept Sociology U California, Los Angeles 90095 (tel/fax: 310-825-1313/206-9838; e-mail: kbailey@ucla.edu)), **Insider Researchers versus Outside Researchers: Exploring a Basic Dilemma.**

¶ In the context of studying neglected groups, examined is whether the researcher must be a member (an insider), or a nonmember (an outsider) of the target group. Earlier work on this topic has not only failed to reach consensus, but has led to acrimony & inconsistent usage of the terms insider & outsider. Insiders may more easily identify correct research directions, may not abuse research results as readily as outsiders, & may generally be more sympathetic to group aims. Thus, research conducted by insiders can be more scientifically valid, & also less subject to exploitation or misuse. However, insiders may be biased in favor of the group (perhaps with realizing it) & may not be skilled in disseminating or communicating findings to other groups or to relevant persons (eg, government officials). Conversely, outsiders may be biased against the group, exploit it, or use the research to further their own careers or other interests. However, outsiders may be highly skilled in research & adept at communicating findings to outside groups, perhaps to the distinct advantage of the group being studied. Confusion has arisen partially because the problem is multidimensional; some scholars focus on power issues, while others focus on the analysis & publication of research findings. A tentative general model for dealing with these issues is proposed.

Bailly, Florence (Groupe recherches innovations & sociétés U Rouen, Mont-Saint-Aignan Cedex F-76821 France (tel: 02-35-14-61-05; e-mail: Bailly@epeik.uniu-rouen.fr)), **Courrier électronique et groupes professionnels** (Electronic Mail and Occupational Groups). (FRE)

¶ Drawing on ongoing research regarding the role of electronic mail (e-mail) in work activities & relationships, changes in vocational networks related to the use of e-mail (as a technical form of connecting) are analyzed, focusing on the case of a professional group of training & recruitment consultants in a big computer firm. It is shown that e-mail serves as an interindividual connection that makes up work relationships in the group; together with other means of communication, it furthers time-space distanced integration. Also, the morphology of that work group, which is linked to the exchanges inside the network, has something to do with the means of communication used by actors. In particular, e-mail is part of the process that has been leading to denser exchanges, as it makes it possible for socioprofessional links to be maintained continuously; it is easier for the executive in charge to follow the daily work of the consultants & thus to play on professional recognition.

✓ **Bakalian, Anny** (Coll Notre Dame Maryland, Baltimore 21210 (tel/fax: 410-825-7178/532-5799; e-mail: abakalian@aol.com)), **Sociologists Study the Armenian American Community: Questions of Assimilation and Identity Predominate.**

¶ Examines sociological concepts & methods applied to better understand the Armenian American community & contribute to the literature on immigration & ethnicity. The themes of assimilation & identity recur in the handful of 20th-century studies. During this period, the Armenian American community has grown in size & significance, & Armenian identity has changed in form & functions. A more conscious, achieved identity exists among later generations, representing a change from "being" to "feeling" Armenian. With the recent independence of the Republic of Armenia, the Armenian American community is poised to play a new role as the largest & most affluent community in the Armenian diaspora. Beyond concerns of assimilation & ethnic maintenance, there are many questions of interest to sociologists, both theoretically & substantively, that beg investigation.

✓ **Baker, Donald G.** (Southampton Coll Long Island U, NY 11968 (tel/fax: 516-283-4000/287-8203)), **Ethnogenesis and Empowerment: Subordinate Group Identity Construction as Social Movement Mobilization Catalyst.**

¶ Theories of social movements, whether they focus on particularist (individual motivation/socialization), resource mobilization, or macrostructural (including historical & contextual) factors, often imply that these factors are the catalysts that precipitate the emergence of social movements. Here, it is argued that the social construction of a group identity is another factor that may intervene & serve as the catalyst for the emergence & development of a social movement. Such identities are based on a set of attributes or assumptions that precipitate both cognitive & behavioral responses necessary for the development of a social movement. Examples of this process, in recent decades, are drawn from Native American groups in Canada & the US, Maoris in New Zealand, Aborigines in Australia, & the black consciousness movement in South Africa.

✓ **Baldassar, Loretta Virginia & Baldock, Cora** (Dept Anthropology U Western Australia, Nedlands 6907 (tel/fax: 61-8-9380-3997/1062; e-mail: baldassa@cyllene.uwa.edu.au)), **Caring from a Distance.**

¶ Examines the impact of long-distance migration on caring relations between adult children & their parents as they age, ie, the effect of transnational migration on adult children's sense of moral obligation to care for their parents. Analyses draw on two recent studies of groups who migrated from Europe or North America to Australia. One group consisted of working-class Italian migrants from a peasant background, the other of middle-class, mostly English-speaking migrants working in a university setting. While most of the literature on caring relations between adult children & their aging parents comes out of family/gerontology studies, more recent studies on migration as transnational interaction challenge the idea that communities of support (composed of individual families) are bounded geographical entities. The traditional notion of community, comprising close-knit, face-to-face relations between people who are consociates, sharing both space & time & rooted in a particular place, has been superseded by the notion of imagined communities where place becomes an idea that can transcend both spatial & temporal boundaries. Unlike the older conception, this newer definition of community implies that one does not have to be present to be an active member/participant.

✓ **Baldersheim, Harald & Illner, Michal** (Dept Political Science U Oslo, N-0317 Blindern Norway (tel/fax: 47-2285-7189/4411; e-mail: harald.baldersheim@stu.uio.no)), **The Status of Local Democracy in East Central Europe 8 Years after Stunde Null.**

¶ How far has local democracy been able to take root in the soil of post-communist East-Central Europe? There might be reason to expect that the debris of imploded communist regimes would present adverse conditions for the growth of local democracy—economically, socially, & culturally. An attempt is made to answer these questions from the point of view of the mayor, drawing on surveys of mayors in 1991 & 1997, ie, the beginnings of the first & second periods, respectively, of democratic local government in Poland & the Czech & Slovak Republics. How the mayors view their own role (party boss, administrator, or citizen champion) is related to the form of local democracy (institution-building) that mayors try to develop in their localities (eg, citizen-, service-, autonomy-oriented). Day-to-day challenges that mayors face (problems with the council, administration, & central government) & factors that reduce or increase such challenges are analyzed in conclusion.

✓ **Baldus, Bernd** (Dept Sociology U Toronto, Ontario M5T 1P9 (tel/fax: 416-978-3413/3963; e-mail: bbaldus@chass.utoronto.ca)), **Inequality's 'Inner Secrets': A Reconsideration of the Causes of Social Inequality.**

¶ Examines evidence showing that many inequality structures begin with small causes or starting processes with often unanticipated consequences, suggesting two major revisions of conventional inequality theory. (1) There is no single cause for social inequality. Inequality theory must instead consider a variety of nonlinear processes that can lead from small variations in initial conditions to disproportionately large & unpredictable shifts in the distribution of wealth & power. (2) Causes of social inequality do not provide self-evident explanations for its acceptance, duration, & recurrence: inequality is not self-legitimizing. Its persistence depends instead on complex feedback & social control processes made possible once changes in distribution have taken place.

Balsamo, Iris (Instit Public Law/Political Science/Sociology National Academy Science Buenos Aires, Argentina (tel/fax: 54-562-66224/66888; e-mail: ibalsamo@squillermo.datacop3.com.ar)), **Causal Law. Classical Innovation.**

¶ Regarding causality (Max Planck & Albert Einstein), sociocybernetics could use modern science methodology for empirical foundations & validation of its models. The sociological approach formed by the evolutionary articulation of three dimensions—objective, temporal, & social—and the computational expression of the circular causality as eigenvalue by second-order cybernetics are applied to amplify & refine the Galilean concept of causality under Einstein's conditions via experiment. Control conditions are determined by the Renaissance & the Galilean concepts of causality. The result is Galilean law, which maintains the Aristotelian metaphysical meaning of causality & is validated by statistic methods. The causal law is based on the methodological reflections of the theory of autopoiesis & it is formulated according to the four senses of scientific law: objective, nomological, nomoprismatic, & metanomological.

98S33619 / ISA / 1998 / 10860

Baltanova, Gulnara (Kazan State U, Republic Tatarstan Russia (e-mail: gulnara@rocketmail.com)), **Alienation in Interconfessional Relationships: Traditional and New Religions in Russia and Tatarstan.**

¶ Explores conflicts that arise in interconfessional families in multiethnic Tatarstan (Russia), drawing on data from 50+ Muslim-Christian families, representing nontraditional or new religious movements. Conflicts occur between married couples & elder relatives, husband & wife, & parents & children. Conversion of the family members, voluntary or forcible, is widespread, & the most serious alienation is between parents who belong to traditional religion & their child members of new religious movements. Religious intolerance on the psychological level is the predominant factor; many false stereotypes against different religions are still very stable in mass opinion. Thus, it is important to speak about the culture of interethnic, interconfessional relationships on political, family, & individual levels.

98S33620 / ISA / 1998 / 10861

Balzer, Wolfgang (Institut philosophie U Munich, D-80539 Federal Republic Germany (tel/fax: 4989-2180-2148/2902; e-mail: balzer@lrz.uni-muenchen.de)), **Freedom, Equality, Solidarity: A Formal Comparison.**

¶ The notions of freedom, equality, & solidarity, which play a key role in political rhetorics, are formally defined on the basis of relations of causality & influence. Freedom is described as "freedom from influence," arguing that this is more basic than a second version that is used more frequently, ie, "freedom to do what one wants." Equality is treated in both a simple & a sophisticated version, the latter taking into account different domains & kinds of action for which equality is claimed. Relations between the three notions are formally investigated, & implications & independencies stated at two levels: (1) the ideal cases & (2) when approximation is taken into account, ie, when persons are free, equal, or solidified only to some degree. Analysis indicates that (A) in the ideal case, complete freedom implies complete equality, in opposition to political folk rhetorics according to which equality leads to a decrease in freedom; & (B) in the approximative case, & when equality is restricted to special domains, this result no longer holds; special conditions under which weaker forms of this implication are still valid are identified. It is concluded that neither equality nor solidarity has any direct implications for freedom (& vice versa). The relevance of these results to the spatial theory of voting is discussed.

98S33621 / ISA / 1998 / 10862

Balzer, Wolfgang (U Munich, D-80539 Federal Republic Germany (tel/fax: 49-89-2180-3469/2902; e-mail: balzer@lrz.uni-muenchen.de)), **The Structuralist Theory Concept and Its Relevance to Sociology.**

¶ The structuralist theory concept represents a new way of looking at, & representing, scientific theories, their development, & the process of their application to reality. Here, the basic features of this concept are sketched: models, potential models, constraints, links, approximation, intended systems, empirical claims, & intertheoretic relations. The structuralist theory concept has been applied to numerous theories from a wide range of scientific disciplines. Those features of particular relevance to sociology are pointed out: (1) no attempt at universally valid empirical claims, (2) a homogeneous apparatus to analyze the relations of meaning & fit between data (eg, from a panel survey) & theory, & (3) a powerful

& flexible apparatus for the comparison of different theories.

Bamyeh, Mohammed A. (Gallatin School New York U, NY 10003-6006 (tel/fax: 212-990-7457/995-4509; e-mail: mohammed.bamyeh@nyu.edu)), **Chaos and Conduits of Audibility.**

¶ Examines connections between the emergent perspective of chaos & sociological theory. Rather than drawing on models through which chaos was formulated in the natural & mathematical sciences, it is argued that, for social science purposes, novel approaches that incorporate the evolutionary contexts of sociological theory itself should be taken. Further, it is impossible to theorize chaos directly in terms of a sociological perspective. This does not mean that sociology ignores chaos, only that sociological theory detects chaos in terms of its symptoms & conceptualizes it through expressive conduits that make it audible & communicable. Identified are four basic theoretical strategies for channeling chaos organized in terms of totality, procedure, representation, & narrative. Main conceptual implications of these conduits of rendering chaos in the social world in audible formats are outlined, & it is suggested that resorting to one conduit or another is more connected to value orientations in society than to corrective or cumulative trajectory of inert sociological theory.

98S33624 / ISA / 1998 / 10865

Bamyeh, Mohammed A. (Gallatin School New York U, NY 10003 (tel/fax: 212-928-7457/995-4509; e-mail: mohammed.bamyeh@nyu.edu)), **Fragmentations and New Totalities: Globalization and the New Imperialism.**

¶ Much of the contemporary Left critique of globalization focuses on its rapacious economic aspects, but it is argued here that the fundamental problem to which globalization gives rise concerns global politics, rather than global economics. Emerging is a new form of imperialism less attached to economic or other material interests than the traditional theory of imperialism has proposed. Divorced from triumphant capitalism, this imperialism is less predictable than ever before, thriving on a self-referential exercise of power. While the traditional theory of imperialism has presumed a continuity of interests between political & economic centers of power, the logic of globalization today is introducing a fundamental divorce between the logics of global politics & global economy. The fact that global economy & transnational corporations transcend the parochial limits of the modern state does not necessarily mean that the state will wither away for lack of purpose. Rather, the state reinvents its purpose, on the basis of a new form of imperialism that is less attached to economic interests or even systematic worldviews. Five points of disjunctions between old & new imperialism are outlined: (1) declining need for coercive economic incorporation of tributary regions into world systems, since the whole world is already incorporated, & since embeddedness in a global economic order is sought largely voluntarily; (2) blurring of traditional notions of core & periphery from the point of view of transnational capital vs centers of political power; (3) removal of the rational predictability of traditional imperial systems, as political & capital interests come to inhabit increasingly noncommunicative spheres; (4) confinement of the rhetoric of state responsibility to noneconomic functions as a consequence of globalization; & (5) dramatic shifts in the nature of solidaristic ideologies in the post-Cold War period.

Banerjee, Bobby (Dept Management U Woolongong, New South Wales 2522 Australia (tel/fax: 61-242-214045/272785; e-mail:

apache@uow.edu.au)), **Managerial Environmental Attitudes and Corporate Environmentalism: A Preliminary Investigation.**

¶ Examines managerial perceptions of corporate environmentalism & describes how key organizational members interpret the relationship between their firm & the biophysical environment. In several firms, senior managers have helped develop & implement environmental management strategies. It is argued that understanding how managers interpret environmental issues facing their firm is an important step in attempting to understand the development of proenvironmental organization behavior as it is the attitudes & behaviors of managers that shape corporate behavior. Attempts to incorporate the biophysical environment into organization theory has resulted in two main areas of research: (1) using an interdisciplinary approach & discussing the paradigmatic implications of including the dynamics of the biophysical environment into traditional economic & management paradigms; & (2) examining the strategic implications of environmental issues for organizations. Managerial perceptions of the organization-environment relationship can also be influenced by the level of concern an individual has for the environment. Researchers have conceptualized "environmental concern" in different ways & have developed several scales that measure environmental concern. However, the validity of some of these scales are questionable: attitude-behavior correlations remain modest, at best. Added to this is the inconsistency in the dimensionality of environmental concern—while some researchers claim that environmental concern is a unidimensional construct (Dunlap & Van Leire 1978), others argue that it is multidimensional (Dillman & Christenson 1974).

Bang, Henrik & Sørensen, Eva (Dept Economics/Politics/Public Administration U Aalborg, DK-9220 OE Denmark [tel/fax: 45-96-35-8192/98-15-53-46; e-mail: bang@socsci.auc.dk]), **The Everyday-Maker: A New Challenge to Community Governance.**

¶ Based on a qualitative study of political identity & institution building among users of local welfare institutions in the inner Noerrebro neighborhood of Copenhagen, Denmark, a new mode of citizen orientation, termed "the everyday-maker," is identified. The character of this new form of citizen orientation is probed, & attempts are made to assess its implications for community governance. The everyday-maker appears to be more closely connected with the concrete & policy-oriented issues of "low politics" than with the more abstract & ideological issues of "high politics"; actively & self-reflexively dissociates from both liberalist & communitarian doctrines; is skeptical toward both competitive & participatory democracy; is as critical of new constructs of local democracy, eg, neighborhood councils & user boards, as of traditional representative institutions; refuses to map him/herself onto the Left-Right axis of the party system; cannot relate to the strong antagonisms of old & new social movements toward capitalism & the system; & does not consider him/herself particularly rational & preference driven or motivated by a general norm of the common good. In reflecting quite a new way of assessing & providing input into localities, the everyday-maker constitutes a threat against, as well as possibility for, democratic community governance.

Bannet, Eve (U Oklahoma, Norman 73019-2021; [tel/fax: 405-325-4661/0831; e-mail: etbannet@ou.edu]), **Matter's Metaphors: De-alienation and the Cyberversion.**

¶ Rather than reading Karl Marx's early texts on alienation as concretizations of Hegelian dialectics, it is suggested that they be as an extended metaphor in which the characteristics of materialism's exemplary signifier of matter—the finite, separate, circumscribed, & industrially produced object—are transposed onto the (separate & divided, "circumscribed" & "egotistical") individuals of liberal ideology. Alienation thus represents a state of separateness or division between entities that should be related, eg, subject & object, subject & subject, the concrete & the abstract, matter & spirit, heaven & earth. The Kabbalist would say that this world of discrete objects, where related things are separate & divided, characterizes RESHUT HARABIM, the domain of plurality or world of matter. Postmodernism's exemplary signifier of matter is the computer-generated cyberversion, where metaphorization has already begun. Explored here is how the computer-generated cyberversion quite concretely changes the *Weltanschauung* (philosophy of life) generated by the industrial object, & how it can serve as a material metaphor for Kabbalist representations of dealienation.

Barbieri Masini, Eleonora (Faculty Social Sciences Gregorian U, I-00197 Rome Italy [tel/fax: 39-6-8072529; e-mail: fmasini@pelagus.it]), **Futures Studies and Sociocybernetics.**

¶ Sociocybernetics appears to be of interest to futures studies, especially as second-order cybernetics, given the importance in the latter of the interaction between subject & observer. Futures studies have, in fact, stressed relatedness to value sensitiveness in choices of research topic & variables, key variables, & indicators of change, leading to possible alternative futures. Possible alternatives are many, but slowly become fewer via the search for probability, feasibility, & desirability. There is, hence, a growing sense of relatedness between subject matter chosen in a given futures study & the observer's values & choices. There is a second element of relatedness between sociocybernetics & futures studies—the importance for both of the growing complexity of society & related sciences.

98S33631 / ISA / 1998 / 10872

Barbieri Masini, Eleonora (Faculty Social Sciences Gregorian U, I-00197 Rome Italy [tel/fax: 39-6-8072529; e-mail: fmasini@pelagus.it]), **Futures Studies and Sociology.**

¶ Futures studies developed formally only after WWII, while sociology has a history of 100 years. Futures studies have tended to ignore sociology & its contributions to the understanding of the present & the past. Sociology, on the other hand, has disregarded the importance of a future-oriented approach, in both its theory & its empirical work. These attitudes have been damaging to the disciplines over & beyond any discussion on the scientificity of futures studies. Analysis of the thinking of some futurists & some sociologists, & of some institutional contributions in the directions of both disregard & reciprocal contribution, are presented. It is concluded that futures studies should take into account the results of sound bases for its activities, & sociology should consider a future-oriented perspective.

98S33632 / ISA / 1998 / 10873

Barchiesi, Franco (Dept Sociology U Witwatersrand, Johannesburg 2050 South Africa [tel/fax: 27-11-716-3290/339-8163; e-mail: 023Frb@cosmos.wits.ac.za]), **Trade Unions and Organizational Restructuring in the South African Automobile Industry: A Critique of the Co-Determination Thesis.**

¶ The concept of codetermination has received growing attention among South African scholars in industrial sociology, with proponents arguing that institutional & legislative developments in the sphere of workplace union representation & tripartite social & economic policy making provide trade unions with important opportunities. In this perspective, changes in the industrial relations system, which have provided statutory workplace forums & a decisive role for organized labor in centrally nego-

b

tiated policy processes, are considered as first steps for a system of German-style codetermination. Thus, union strategies could combine a proactive approach to productivity & competitiveness inside the workplace with aims for a more equitable distribution of power & rewards in a context of fundamental social change. In-depth observational research, intensive interviews in a leading automobile manufacturer, & visits to other car companies are drawn on to challenge the above picture, especially at the workplace level. Findings suggest that the most successful cases of adaptation to changing global pressures in the South African automobile industry are those companies that have substantially rejected the codeterminist approach. These companies have been able to combine highly authoritarian technological innovation with a unilateral restructuring of work & production organization, & the persistence of hierarchies & forms of inequality embedded in a strong sense of corporate paternalism. Nonetheless, these companies could maintain domestic market shares, expand exports, & substantially reduce their indicators of workplace conflict. Conversely, the introduction of codeterminist methods in other companies has led to processes of cooptation of union structures, grassroots rebellion, & workers' rejection of national centralized agreements. However, observations from the first group of companies show that behind their apparent success to adapt to global competition lies strong worker dissatisfaction, coupled with a demand for the union to develop new decentralized strategies for increasing worker control. It is argued that the crisis of codetermination in the automobile sector shows a need for more research on new forms of worker responses & conflict, & on possible organizational strategies to articulate changing demands for workplace control with a new radicalism in centralized negotiations.

98S33633 / ISA / 1998 / 10874

Barchiesi, Franco (Dept Sociology U Witwatersrand, 2050 Johannesburg South Africa (tel/fax: 27-11-716-3290/339-8163)), **Flexibility and Changes in Forms of Workplace Subjectivity: A Case Study of the South African Motor Industry.**

¶ Investigates worker responses to restructuring of work & production organization in the South African automobile assembly industry, following the introduction of lean production methods, based on findings from two companies analyzed through observational research & semistructured interviews with workers & shop stewards, 1995/96. Focus is on the notion of worker subjectivity as attempts by the employees to collectively make sense of, & respond to, industrial change according to regulative ideas & general moral, cultural, & discursive constructions of the meaning of capitalist restructuring. Results support arguments in the relevant literature that are critical of concepts of "lean production" & "flexibility," assumed to be distinct from Fordist mass production methods. In the South African case, managerial strategies for flexibility coexist, in fact, with relevant continuities in patterns of hierarchy, inequality, & authoritarian technological innovation. However, substantial problems of control emerge; in fact, the valorization & formalization of worker cooperation, implicit in the notion of flexible production, define crucial contradictions at the workplace level. In particular, the clash between formalized worker cooperation & authoritarian management styles leaves little scope for processes of negotiated change, while at the same time it marginalizes the union. This process, however, allows worker resistance to develop out of the contradiction between the promise of greater worker control that flexibility implies, & the violation of that promise due to the permanence of authoritarianism. It is shown that, while these dynamics represent a challenge to union organization, they allow worker resistance to take other forms & channels. In particular, it can be noticed how worker discourses & practices of opposition to restructuring tend to reappropriate & re-elaborate the promise of flexibility & elements of managerial ideology to legitimize claims for greater worker autonomy & control.

Barnes, Jo & Dharmalingam, A. (U Waikato, Hamilton New Zealand (tel/fax: 64-7-838-4251/4654; e-mail: dharm@waikato.ac.nz)), **Ethnic Identity and National Identity in New Zealand.**

¶ New Zealand is officially a bicultural society, reflecting the two significant cultural groups: Maori (indigenous population) & Anglo European descendents. However, immigration, particularly from Asia, in the last few decades has contributed toward widening the cultural milieu. This, some political leaders claim, has implications for the continuance of bicultural policy & the strength of national unity. Several questions derived from the above considerations are discussed: (1) How do the two major ethnic groups perceive the New Zealand identity? (2) How does the construction of national identity in New Zealand compare with that of Australia, which has an official multicultural policy? Analysis is based on the perspective that national identity is multidimensional: ascribed (nativism), achieved, & affected (civic culture). The role of socioeconomic factors is also considered. Data are drawn from a 1996 survey involving telephone interviews with 1,043 adult respondents, supplemented by published materials using data from a 1997 survey (by F. L. Jones) comparing national identity in Australia & New Zealand.

✓ **Bas, Enric** (Dept Sociology II U Alicante, E-03080 Spain (tel/fax: 34-96-590-3497/3495; e-mail: bas@ua.es)), **New Challenges, Old Approaches; the Need of Rethinking Sociology.**

¶ We are living in a reality whose main threats are change & complexity—in a kind of transitive society. This multidimensional change demands perspectives of sociological analysis, not just explanations, but also prescriptives & normatives. Complexity demands of sociology a bifrontal challenge: a broad, holistic perspective of analysis, & new indicators, tools, & technologies in social reality analysis. Understanding sociology as a tool not only for understanding, but also for improving, social development implies its task of developing ways to help decision-making processes. Therefore, it is necessary to rethink sociology in terms of opening it horizontally (looking for holism & transdisciplinarity) & vertically (not only reflecting about the past or thinking about the present, but also foreseeing the future) if it is to face today's new challenges. Therefore, approaches long refused by much of academia—eg, the world-system perspective, futures studies, & peace research—should be part of the reconstruction of sociology for the 21st century.

¶ Explores relations among the environment, population characteristics, & the socioeconomic & cultural systems via case study of the environment & quality of life in Rome, Italy. Elaborated is the new ecological paradigm theoretical framework proposed by Catton & Dunlap (1979), which examines how interactions between population; technology; & cultural, social, & personality systems influence the physical environment. The concept of "sustainable city" is defined as social ecosystem, with a carrying capacity that must see to the needs & social pressures of present & future generations. On the basis of this definition, predisposed is a set of indicators that represents the classical factors of pressure on environment. Data is interpreted in terms of population, economic, social, & cultural dynamics, as driving forces of the pressure on urban environment.

98S33645 / ISA / 1998 / 10886

✓ **Battisti, Francesco M.** (Dept Science & Society U Cassino, I-03043 Italy (tel/fax: 39-6-4461001/776-299792; e-mail: battisti@flashnet.it)), **Assessing Elders' Adaptation to Information Society.**

¶ Elder adaptation to the information society is assessed via 1997 survey from 750 elders, average age 75, in Italy, Greece, Ireland, GB, & Sweden. Elders in southern European countries & Ireland are less familiar with services offered by information technology, depending on families to receive personal & medical services. Elders in Sweden appear able to carry out more independent living, are familiar with information-related services, & use these services to overcome their difficulties in moving & transportation to urban & rural settings. Computer use is mostly limited to word processing & mailing over the Internet. In a retired population, computer use is motivated by entertainment & need for information from & communication with distant relatives. A "mouse test" has been prepared to predict ability in computer use & adaptation to this information technology.

98S33646 / ISA / 1998 / 10887

✓ **Baumgartner, Thomas, Burns, Tom R. & Gacui, Bernard** (Dept Sociology Uppsala U, S-75108 Sweden (tel/fax: 46-18-471-1203/1170; e-mail: tom.burns@soc.uu.se)), **The Three Faces of the Coin: Toward a Socio-Economics of Money as Symbol, Technology, and Institution with Applications to Analysis of the EURO and Its Predecessors.**

¶ Outlines a broad, multifaceted approach to conceptualizing & analyzing money & money systems in modern societies. No single theory is conceivable, but a complex of interrelatable theories can explain many aspects of money & money systems: (1) money as a means to represent & communicate value; (2) money as technology embodying in its design particular rules & collective representation(s) & associated with a variety of techniques & strategies for using it; (3) monetary orders as sociotechnical systems that are in part designed, administered, & regulated; (4) multiple perspectives, meanings, & uses of money within different institutional domains & social settings; & (5) contradictory uses & purposes of money in modern societies. The concepts & models introduced are used to analyze, among other things, the social construction of money through institutional alchemy & the establishment & maintenance of binding definitions of the social fact or reality of money as a medium of exchange & store of value. Money systems are seen to be complex, changing systems subject to failure or collapse—causing widespread eco-

b

conomic, social, & political problems. This necessitates their systematic regulation & stabilization, but regulative mechanisms themselves fail in the face of modern, complex, dynamic money systems. Considered in conclusion is the establishment of "monies" within the European Union & the current preparations for & problems of institutionalizing a new money, the EURO. This illustrates key aspects & problems of money systems, including problems of establishing the social reality of a money, but also those of regulating & stabilizing money systems.

Bazeley, Patricia A. (U Western Sydney Macarthur, Campbelltown 2560 Australia (tel/fax: 61-2-462-03268/72406; e-mail: p.bazeley@uws.edu.au)), **Qualitative and Quantitative Computing—Bridging the Divide.**

¶ Qualitative & quantitative methods no longer sit on two sides of a paradigmatic & methodological divide but are widely seen as complementary in almost any paradigm or methodology. New tools for qualitative computing have now made it possible to readily combine data types—taking the analyst a step beyond complementarity & simple triangulation. Data may be transferred in either or both directions between SPSS & NUD*IST, to enrich analysis & interpretation. It has long been possible to automatically code documents in NUD*IST for their descriptive attributes, using inserted keywords & text-search command files. This has now been greatly simplified, with the capacity to import tabular data to set up categories (nodes) & code documents in one step. Explanations provided in surveys, which previously, at best, were categorized and counted, can now be reviewed verbatim in relation to categorical responses & scaled measures. Alternatively, codes derived from unstructured text can be exported from NUD*IST into SPSS to serve as independent variables, potentially contributing to an explanation of a quanti-

tative outcome. The usefulness of these procedures is demonstrated with reference to particular projects. Such techniques inevitably will challenge traditional assumptions of particular methods. Perhaps, with limited exceptions, all research is essentially qualitative.

Beach, Betty A. (U Maine, Farmington 04938 (tel/fax: 207-778-7176/7157; e-mail: bbeach@maine.maine.edu)), **Support for Parenting in Rural Communities.**

¶ Examines childhood & parenting in two rural ME communities. Drawing on human ecological theory, focus is on neighborhood & community support factors that influence children's development. Features in the rural community environment that contribute to social capital in support of healthy development in children are identified. A community context of support for parenting in rural areas & reasons for why rural areas are popularly perceived as "great places to raise children" (Bonner, 1997) are suggested. Research strategies used to report on this yearlong study employ a qualitative rather than experimental orientation. Methodologies included (1) document analysis of relevant census data, community surveys, & newspaper reports; (2) 100 hours of naturalistic observations of children's public community participation; & (3) 25 semistructured interviews with local adults active in work with children. Results & implications of this study address both the structures & processes of rural communities that provide social capital to children & support for parenting. Key factors described include children's public visibility, the nature of civic organizations, economic structure, & density of acquaintance-ship.

Beal, Becky & Weidman, Lisa (U Pacific, Stockton CA 95211 (tel/fax: 209-946-3133/2731; e-mail: bbeal@cs.uop.edu)), **The Skateboarding Image: An Analysis of the Industry's Impact on the Participant's View of Authenticity.**

¶ An exploration of the interplay between the image of a skateboarder presented by the skateboarding industry & the image considered authentic by skateboarders. A content description of the advertising in *Thrasher Magazine* (a leading US skateboard magazine) is offered, together with the insights of one investigator who was the advertising manager for that magazine, 1986-1992. How skateboarders "read" the advertising is explored through focus groups to assess images participants consider authentic or inauthentic. The insights of both investigators, who have done previous research & have extensive background with skateboarding, are drawn on to provide a broader content of its changing image & style in the US.

Beatriz, Julieta & Ramos Desaulniers, Julieta Beatriz (Rua Barão de Ubá 392, 90450-090 Porto Alegre RS Brazil (tel/fax: 5551-320-3555/3602; e-mail: julietard@music.puers.br)), **Formation de compétences et innovation** (The Formation of Competence and Innovation). (FRE)

¶ Changes in the workplace due to technological innovations are discussed, noting that similar innovations are needed in schools to ensure that students are competent with new technologies. Circumstances that hinder such training are examined, focusing on educational formation to meet the demands of the work world offered by Brazilian Catholic schools in Rio Grande do Sul, particularly since 1990. An effort is made to determine how these Catholic schools train the "citizen-worker" when faced with the current demands of the work world. The teaching of cleverness-based competencies that involve all dimensions of the individual & accent critical analysis & autonomy is considered, & implications for the internal dynamics of scholastic institutions are addressed.

✓ **Bech, Henning** (Sociology Dept U Copenhagen, DK-1361 Denmark [tel/fax: 45-353-239-50/40; e-mail: bech@sociology.ku.dk]), **Real Deconstructions: The Disappearance of the Modern Homosexual and the Queer.**

¶ The differences between homosexuality in the modern West & same-sex sexual relations in other parts of the world have been emphasized by many scholars during recent years. Here, it is argued that national differences within the West are so huge by now that they can no longer be adequately conceptualized in the same terms. In the period after the classic homosexual—the period of post- or late modernity—terms such as “gender,” “men,” “sexuality,” “homosexuality,” etc. refer to radically different universes of experience in different national contexts. In fact, the differences between the disappearing homosexual in Denmark & the queer in the US may be almost as huge as (though obviously not identical to) those between same-sex sexual relations in classical Athens & the contemporary US. In consequence, sexual politics takes on very different meanings in these different contexts. These are described, & some aspects of the (non)politics of disappearing homosexuality vs queer politics are presented.

✓ **Beckford, James A.** (Dept Sociology U Warwick, Coventry CV4 7AL England [tel/fax: 44-1203-523-156/497; e-mail: syred@csv.warwick.ac.uk]), **Space, Time and the Sacred in Prisons.**

¶ Argues that prisons, ostensibly unlikely venues for religious activity, are sites in which space, time, & the sacred actually attain surprisingly high levels of social & cultural significance, even in societies where rates of participation in formal religious organizations may be low. Findings of a comparative, empirical study of prison chaplaincy in England & the US are used to show that the timetable & locations of organized religious activity in prisons are politically contentious because of the rivalry & competition between faith groups for these scarce resources. The significance attached to such issues as physical & symbolic cleanliness of places for worship or the timing of prayer meetings is heightened in the confined conditions of prisons. These conditions also generate unusually intense preoccupation with religion in some prisoners & a stronger than normal sense of the boundaries between religious groups. It is hypothesized that the growth of religious diversity among prisoners in societies affected by global flows of people & ideas helps to crystallize religious identity in surprisingly clear forms at a time when pastiche & bricolage are supposed to be characteristic of religion.

✓ **Bedford, Susan L.** (Carleton U, Ottawa Ontario K1S 5B6 [tel: 613-8341055; e-mail: sbedford@ccs.carleton.ca]), **There and Back Again, from the Ivory Tower to the Field and Back: Researching Relationships.**

¶ Too often in the past, sociological research has offered the enumeration of households in place of understanding of how kinship functions (Morrisey, Marietta, 1991 [see abstract 93Z6003]). Yet, this is an age where there is an efflorescence of family forms, eg, serial stepfamily arrangements, gay/lesbian relations, new reproductive technologies, & single-parent families, & kinship forms that are historically unprecedented (Strathern, 1992). To remedy this, the research proposed here is with single-parent families, separating & divorcing couples, gay/lesbian couples, etc., who are part of the self-help movement (Kaminer, 1992). This is one site where quasi-kin relations may be formed. Ethnographic work is necessary to map these new forms of relationships & to pay attention to the emotional interior of these alternative forms of family. Through such work, understanding develops on how kinship functions both as structure & as lived experience, & in the process, alternate forms of kin making may be perceived as less threatening, & normative notions of family may begin to be demystified.

✓ **Behrens, Dean M.** (Dept Sociology U Toronto, Ontario M5S 1A1 [tel/fax: 41-978-8265/3963; e-mail: dbehrens@chass.utoronto.ca]), **Self-Isolation and Social Support.**

¶ Draws on interview data from 79 men & women who have been tested for human immunodeficiency virus to study their social support & information networks & test & expand the theory of action called maximal network stability theory (MNST). The MNST prediction that people under stress will actively restructure their support networks in such a manner that they become smaller, denser, & more stress related was supported. Analysis of responses to a hypothetical situation (preference analysis) provided additional support for MNST hypotheses. These analyses also suggest additional factors that affect interaction choice: (1) family membership; (2) perceived type of support provided by each network member; (3) perceived amount of social support provided by each network member; (4) perceived degree of similarity between each network member & the ego; & (5) perceived frequency of current interaction between each network member & ego. Qualitative analysis supported the quantitative findings & corroborated many of the hypotheses suggested by MNST.

✓ **Beilharz, Peter** (Dept Sociology La Trobe U, Bundoora Victoria 3083 Australia [tel/fax: 61-3-94814357/394-94792705; e-mail: P.Beilharz@latrobe.edu.au]), **Sociology as History—Centres and Antipodes.**

¶ Explores whether sociology is really only its history & applicable to its country of origin. The sense of sociology as a project started by the classics yet to be fulfilled is itself reminiscent of Jürgen Habermas's hope for modernity; perhaps neither will ever actually be fulfilled. Only then, as “Weltgeschichte ist Weltgericht,” the stories told about national sociolo-

b

gies become identical with sociology, once the project is informally thus redefined. To examine these issues, two of the most evocative (& different) recent works in the field are drawn on: Donald Levine's *Visions of the Sociological Tradition* (1995 (see abstract 96C03032)) & Wolf Lepenies's *Between Literature and Science* (1988). The question of cultural imperialism of cultural traffic is also investigated, drawing on the author's book, *Imagining the Antipodes* (1997). If culture in general, & intellectual culture in particular, results from global traffic, profound in its own ways despite the asymmetries of power, what might it then mean to talk about the US or sociology in Australia? Sociology's project is clearly coterminous with that of the nation-state &, therefore, also with a particular form of imperial or colonial relations. Does postmodernism, or post-colonialism, change all this, or modify its dynamics? If the fate of sociology has hitherto been caught up with that of modernism, ought then should Zygmunt Bauman's hint at a fundamental choice be followed: postmodern sociology or a sociology of postmodernity? Or does the historicist/nominalist sensibility that sociology was only ever a name given to a hope remain a more enduring message?

✓ **Beladis, Touria** (LADYSS Centre national recherche scientifique, 191 rue Saint Jacques F-75005 Paris France (tel/fax: 01-43-29-01-47/25-45-35; e-mail: Beladis@msh.paris.fr)), **Les Espaces périphériques Oranais (Algerie): exemple d'une exclusion urbaine et sociale** (The Peripheral Spaces of Oran (Algeria): An Example of Social and Urban Exclusion). (FRE)

¶ Analyzes the social & urban mechanisms underlying the development of *faubourgs spontanés* (spontaneous suburbs) around Oran in western Algeria. With reference to the *lotisseur clandestin* (clandestine tenant) as a new actor of the urban organization, emphasis is on the emergence of a new system of popular housing development in Third World countries. Organized from complex forms of fraudulent appropriation of state lands, the suburbs of Oran have witnessed the emergence of real urban cores without any structure or any sense of fundamental belonging to a safe city. The infrastructure & basic equipment are lacking, & there exists a conception of housing that promotes exclusion & often links mediocrity, instability, & mercantilism.

✓ **Bélanger, Jean-Pierre** (Quebec Public Health Assoc, Montreal H2L 1E4 (tel/fax: 514-835-5075; e-mail: jeanpb@autray.net)), **Social Capital, Public Health and Social Development in Quebec: Review of Theory and Recent Experiences in Quebec.**

¶ The close connection between socioeconomic inequalities in societies & the level of health of their population is well-established; however, it is difficult for people in the public health field to influence relevant social factors, because to do so requires action in fields where they are not legitimated to intervene. The concept of social capital is discussed as of primary importance. Recent research (eg, Marmot, M. G., et al, 1997) indicates that the effect of the social gradient is largely mediated by social capital, a collective characteristic that helps to redefine problems not just in terms of lack of money or jobs. It is considered whether it is possible to improve the overall level of health & well-being of the population by acting on those factors that directly increase the level of social capital in a community. Recent & promising experiences in Quebec are reviewed.

✓ **Bell, James W.** (School Education Murdoch U, Western Australia 6150 (tel/fax: 61-8-9-360-6460/6296; e-mail:

jwbell@central.murdoch.edu.au)), **Crossing Borders: Multiculturalism and Racism in Educational Settings in Australia.**

¶ Critiques the educational implementation of two extreme notions of multiculturalism in Australia—as diversity & as racism—in the context of significant debates on multiculturalism. A notion of multiculturalism as critical engagement is developed that is informed by recent writing on "border pedagogies." At the core of this approach is the development of students' & teachers' abilities to cross the boundaries of their cultural traditions to more fully understand how these borders have been created, whose interests they serve, & how they limit or contribute to people's abilities to participate democratically & act responsibly. Much of the writing on border pedagogies has tended, however, to be more theoretical than practical. Here, border pedagogy approaches are applied to several critical teaching incidents related to multiculturalism & racism to achieve a more responsive & responsible educational multiculturalism.

¶ Explores documentary photographs by British feminist Jo Spence (1934-1992), who was notable for her attempts not merely to deconstruct traditional representations of women's bodies & relationships between photographers & subjects, but to construct an alternative discourse of the body that is more fluid & collaborative. Beginning in 1982, at the time she was diagnosed with breast cancer, Spence engaged in a series of collaborative projects to construct photographic narratives of her experiences with illness, medicine, & alternative healing practices. How these photographic narratives of living with cancer are similar to & different from narratives produced in research interviews & autobiographical accounts is considered in terms of how Spence put herself into her pictures; in what respects her photographs were produced collaboratively & how these collaborations shaped the images; how structural elements—themes, plots, characters, moral, & political arguments—took shape in her photographs; how her narratives are embedded in & reflective of political, economic, & cultural systems; the extent to which her narratives resist or produce alternative relations of power in & beyond the frame in photography, medicine, & women's everyday lives; & what affinities this narrative genre has with other narrative genres.

✓ **Belmas, Marie-Paule** (INJEP Ministère jeunesse & sports, 9-11 rue Paul Leplat F-78160 Marly le Roi France (tel/fax: 33-1-39172727/90; e-mail: belmas@injep.fr)), **Data Network and Implementation of Youth Policies: The Example of INFOJEUNESSE.**

¶ INFOJEUNESSE was established in 1991 by UNESCO to (1) implement suitable & consistent youth policies, & (2) find an effective way of dealing with the numerous data sources available on young people. The goal to make all the information, experiences, & analyses used to elaborate youth policies available to all concerned, while at the same time promoting synergy. INFOJEUNESSE is an innovative framework, linking a national institution & an international organization. It exploits the complementarity between governmental & nongovernmental sectors & combines the input of several networks to feed the database. The complex interdependence between the technical, economic, social, & cultural found in any youth communication network means that the approach must necessarily be sociocultural. Several questions are addressed: What should the relationship between promoting information resources & the development of youth & cooperation policies be? Will new information tools make the world more or less democratic & elitist? What role can networks play in social change?

98S33671 / ISA / 1998 / 10912

Ben-Porat, Amir (Ben-Gurion U Negev, Beersheva IL-84105 Israel (fax: 07-472-932; e-mail: benporat@bgumail.bgu.ac.il)), **Football and Nationality: What Can the Army Do for Both?**

Discusses the association of football (soccer) & nationality, focusing on the tripartite association of nation building, the military, & football in Israel in the early 1950s after state establishment. This tripartite association was operated a few more times in the late 1950s. During the independence war of 1948, there was no football league at all. Before 1948, football in Palestine involved three parties, the Jewish league, the Arab league, & teams of the British army. At the end of the war, the British had gone, & the Arabs who remained in the sections of Palestine that had now become Israel were in some disarray. While football was not among the first priorities of the new state, the military was called on to restore the football league, & between 1949 & 1951, military authorities ran the sport. Several factors caused the military to be chosen for this assignment: (1) Many of the players were mobilized, & the system of calling up civilians to perform periodic duty in the reserves enabled the military to mobilize civilian players. (2) After the war, the military remained a major organization, but was relatively idle & hence, was available to carry out nonmilitary assignments. (3) The military was viewed as a "people's army"—efficient, apolitical, & instrumental for nation building. Results of the military involvement in football were as follows: the league framework was restored; football was injected with a measure of Jewish nationalist-Zionist identity; & the Arab sector was, in effect, excluded for some years. Football was thus used to support the process of state building & the hegemony of the political elite at that time.

Ben-Rafael, Eliezer (Dept Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel (tel/fax: 972-3-540-6297/2291; e-mail: eliezer@spirit.tau.ac.il)), **Contemporary Multiculturalism.**

A major aspect of the reality depicted as postmodern is the multiplication of segmentation forces & "desystemization" of society. Here, the multiculturalization of society is explored, & a framework developed for the comparative analysis of multiculturalism. Three major parameters of sociocultural boundaries in societies are identified: (1) stratificational dimension of cleavages, (2) orientations of the dominant culture toward social cleavages, & (3) orientations of groups themselves. Different types of multiculturalism are outlined to illustrate various possibilities pertaining to the space outlined by these parameters. The dynamics of multicultural settings are described, focusing on political opportunities offered in modern democracies to the articulation of collective claims & the influence that cleavages pertaining to the same society may have on each other. It is suggested that such a systematic consideration of a given category of fragmentation phenomena leads to a reformulation of accepted generalizations about processes associated with the notion of postmodernity.

98S33673 / ISA / 1998 / 10914

Ben-Rafael, Miriam (Dept French Tel-Aviv U, Ramat-Aviv IL-69978 Israel (tel/fax: 972-3-5406291/5402291; e-mail: eliezer@spirit.tau.ac.il)), **Le Code-switching dans la langue de l'immigrant: le cas du Franbreu** (Code-Switching in the Immigrant's Language: The Case of Franbreu). (FRE)

Changes experienced by French immigrants to Franbreu, Israel, in leaving a location where they were the majority & coming to live in a place where they are minorities, are examined. The simultaneous use of French & Hebrew in this situation is investigated through semistructured face-to-face interviews & the recording of natural conversations, focusing on the mechanisms behind this new linguistic model. The different types of code-switching used are discussed, primarily borrowing & sequences, using the hypotheses advanced in Myers-Scotton's "markedness" model. According to this model, code-switching is a form of performance showing the ability of the speaker to exploit the sociolinguistic values associated with different controlled linguistic varieties. An interactionist perspective is adopted in which code-switching can be seen as sequential as well as sociolinguistic.

98S33674 / ISA / 1998 / 10915

Benantar, Abdennour (Groupe Maghreb Méditerranée, 142 blvd Beithier F-75017 Paris France), **Les Perceptions arabe et européenne de la Méditerranée** (Arab and European Perceptions of the Mediterranean). (FRE)

Explores the European vs Arab perceptions of the Mediterranean region as a political & economic entity. Intellectual & political debates about the future integration of north & south shores of the sea are re-

viewed, focusing on discussions emerging in Algeria, Italy, & Egypt. The recently favorable Northern African attitudes toward an integrated Mediterranean are contrasted with those of southern European countries, which consider the region a threat, much like the communist threat of the past. In Algeria, the Mediterranean issue is totally absent from the political/intellectual discourse. But in Egypt, the issue is highly developed & complex. As the most Mediterranean of the European countries, Italy recognizes the importance of European debates on the dynamics of regional cooperation.

Bennett, Larry (Political Science Dept DePaul U, Chicago IL 60614 (tel/fax: 773-325-7000/7337; e-mail: L.Bennett@wppost.depaul.edu)), **The New Style of U.S. Urban Redevelopment: From Urban Renewal to the City of Leisure.**

Giving structure to the evolution of a complicated array of public initiatives to rebuild public infrastructure, stimulate downtown private investment, generate manufacturing employment, & restore the urban housing stock along with many other more specific policy objectives have been two broad policy developments: (1) growth & subsequent withdrawal of the US federal government direct intervention in the definition & implementation of redevelopment policy; & (2) reorienting of the analytical system that has tended to shape how policymakers construe the nature of urban problems. Substantively, this latter analytical shift may be defined as a rejection of a life-cycle analysis in favor of a restructuring model (which includes elements such as the presumption of economic competition in a system of cities, recognition of sectoral shifts in macroeconomic processes, & subsequent exploration of particular economic niches as the proper objective for local redevelopment initiatives). Here, programmatic & analytical components of US urban redevelopment policy are surveyed, focusing on emergent conditions & techniques shaping the "city of leisure" as a characteristic contemporary redevelopment aim.

98S33678 / ISA / 1998 / 10919

Benoit, Cecilia M. (Dept Sociology U Victoria, British Columbia V8W 3P5 (tel/fax: 250-721-7578/6217; e-mail: cbenoit@uvic.ca)), **Gender, Work and Social Rights: Canada, the United States and Sweden as Case Examples.**

The market economics & welfare states of industrial countries are undergoing fundamental restructuring as the next millennium draws near. The globalization of finance & application of advanced information technologies to production of goods & services have created a new world of work, ie, a post-Fordist era, characterized by deindustrialization, transnational corporate linkages, international trade agreements, weakened unions, limited labor contracts, & under- & unemployment. Citizens' social rights, including those fashioned in the past few decades to promote gender equality in employment & family life, have also been jeopardized in restructuring. Retrenchment & in some cases, suspension of key social rights has been the result. Secondary data are used to compare restructuring processes in Canada, the US, & Sweden. While these three countries share many of the economic characteristics associated with

b

post-Fordism, they also differ in substantive ways in the manner in which their respective governments mediate in economy & family to promote gender equality. The welfare state in present-day Sweden can be understood as favoring men to the extent that women rather than men still tend toward dependence in their multiple roles as employees, consumers, & recipients of state services. However, it can also be argued that Swedish women's public dependence, which is far less advanced in North America, is a step forward toward a society based on a shared gender model of paid & unpaid work, with women & men enjoying equal access to social rights, while at the same time sharing opportunities & responsibilities in the spheres of employment & family—in brief, access to a genuine *welfare society*. By contrast, Canada's moderate welfare state & the US minimal counterpart, have tended to foster women's reliance on male breadwinners, leaving women open to exploitation in employment, especially in the private sector, & vulnerable to social stigma whenever they access means-tested welfare benefits. These problems have become even more pronounced for women with the restructuring of the welfare states of Canada & the US. The need for sociologists to engender the notion of work to encompass both employment & family life is emphasized, & it is urged that welfare states, at both the national &, increasingly, the international level, devise relevant social policies to this end.

✓ **Bensaadoun, Yamina** (Groupe recherches innovations & sociétés U Rouen, Mont-Saint-Aignan Cedex F-76130 France [tel/fax: 02-35-14-61-05/16-61-04; e-mail: bensaado@epeire.univ-rouen.fr]), **Formation en alternance et socialisation professionnelle. Le Cas des moniteurs-éducateurs** (Alternate Training and Professional Socialization. The Case of Instructors). (FRE)

¶ Institutionalization of the degree of instructor (IV level) in 1970 in the hierarchy of tutors met two needs: professional recognition for nonqualified staff & junior qualification status instead of qualified instructor (III level). The new degree comes with a training program offered mainly to people who already occupy this position, sometimes for many years. Because it is on a part-time basis, this alternate training is less expensive for the training center (which delegates training hours to the professional field) & employers (whose employees undergo their main period of training in their own firm). Here, these training programs serve as shortage situation device, but can perfectly justify some low-cost practices in staff training & management, raising the following issue: Are training programs legitimized by virtue of economic arrangement?

✓ **Benson, Elizabeth Wasowska** (Dept Sociology U California, Berkeley 94720 [e-mail: elabenson@supermedia.pl]), **Control, Trust, and Trade: Professionalization of the Exchange of Business Information in Poland, 1970-1997**.

¶ Secondary data & interviews are drawn on to trace the transformation of the practice of exchanging business information in Poland, 1970-1997. The socialist state tried to monopolize business information to control economic actors, but socialist enterprise directors exchanged business information to confirm alliances, assert social standing, & solicit informational reciprocity. These two styles of exchanging business information survived to the collapse of socialism in 1989 & shaped formal institutions, eg, the Central Statistical Office & business registers, & informal practices adopted by entrepreneurs in Poland. The uncertainty of the transitional period of the 1990s opened opportunities for commercial information purveyors, eg, market research, corporate intelligence, & consulting firms, which viewed information as a commodity. Their activities, however, challenged the supremacy of the state & informal networks. New information purveyors legitimized their activities by adopting Western business procedures & research tools. Further, the majority of such firms were run by former university teachers & students of the social sciences, who enjoyed access to popular media, which they used to launch educational campaigns among Polish entrepreneurs. As the research shows, however, neither the state nor the networks relinquished their control over the flow of business information.

¶ The shift from sport & rigorous exercise to Canada's moderate "active living" is examined. Policymakers claim that active living represents a new & unique approach to thinking & practice about physical activity & health. Implications of this shift for physical education are explored, focusing on professions & professionalization approaches to examine the marginal role of physical educators within the health/fitness division of labor. Emphasis is directed at the changing role of discourse & ideology as physical education transformed from a scientific bodily practice approach to the informalized exoteric active living approach. Ways in which exercise science knowledge is inextricably linked to power are demonstrated. To the extent that active living is rooted in health promotion discourse, fitness has now become articulated with health promotion rather than with high performance sport, resulting in (1) increased involvement of the state, lay public, & other health occupations in physical activity; & (2) shift from professional to individual & state control over the body & health. Whether physical educators are being deprofessionalized, proletarianized, or are declining in dominance in light of this shift is considered.

✓ **Berezin, Mabel** (Dept Sociology U California, Los Angeles 90095-1551 [tel/fax: 310-825-1313/206-9838; e-mail: berezin@soc.ucla.edu]), **Meaningful Stories: The Role of Multiple Narratives in Cultural Analysis**.

¶ Joins two debates that have defined recent discussions in the sociology of culture: (1) whether one can have a cultural sociology that is both explanatory & interpretive; & (2) how narratives figure in cultural analysis, drawing on Berezin's work on the culture industries of fascist Italy; the ideological program of the regime; & more recent work on terrorism & the memory of fascism. It is argued that narrative can be a powerful tool in cultural analysis because it has the capacity to bridge the explanation/interpretation divide. The key to using stories about events in cultural analysis is to compare, for any one event or action, multiple narrative accounts.

✓ **Bergander, Klaus** (Norwegian U Sport & Physical Education, N-0806 Oslo (tel/fax: 47-22185-730/718; e-mail: klausb@brage.idrettsns.no)), **Sporting Games from the Perspective of Social System Theory.**

¶ Explores sporting games from the perspective of Niklas Luhmann's social systems theory. Established views of games are reviewed, with attention to the discussion between Suits & McBride on the possibility of a definition, & to Gebauer's nonformalistic interpretation of games, which is seen as a step toward a third position in the understanding of games, ie, that of social system theory. The main ideas of Luhmann's theory of social systems, seen as attempts to reduce the complexity of the world, are discussed. Social systems are systems of communication & are constituted through a relationship between meaning-bearing elements. The constitution of elements is guided by a code, ie, an observational logic that takes the form of a dichotomy. On this basis, codes are suggested for sporting games practice at different levels of performance; eg, whereas the code of top-level competitions is the dichotomy win-lose, the code of the same game among children can be performance-not performance. The possibilities & limitations of a system theoretical understanding of games are considered, focusing on the new possibilities offered to the debate over the role & function of rules & moral ideals in sport.

✓ **Berggren, Erik** (Linköping U, S-58183 Sweden (tel/fax: 46-13-28-29-69/13-36-30; e-mail: eribe@tema.liu.se)), **Reconciling Science, Politics and Culture: Gunnar Myrdal's American Dilemma.**

¶ Examines the "dilemma of social engineering" outlined in Gunnar Myrdal's *An American Dilemma* (1944). Through a close textual approach to Myrdal's epistemological argument, questions are raised regarding the connection between, on one hand, his effort to bring about a methodological renewal, his critique of metaphysics & "naïve empiricism," & his attempt at inserting values into research, &, on the other hand, his problematic approach to cultural difference, issues connected to the politics of race, & the politics of research. Focus is on Myrdal's tendency to look at any deviation from white communities as an expression of a "social pathology" & his trust in & emphasis of the "American Creed" (the "value premise" he inserted into his research). As a foil & a reading strategy, the notion of "immanent criticism" is interjected, both in terms of Myrdal's own usage & to understand his texts in a wider circle of influence. The link between Myrdal's epistemological argument & the more or less explicit political argument in his sociological texts is highlighted.

✓ **Bergman, Monica** (Dalarna U, S-781 88 Borlänge Sweden (tel/fax: 46-23-77-89-59/80-50; e-mail: mica@du.se)), **The Position of Early Childhood Care and Education in Studies of the Welfare State.**

¶ Women's growing participation in the labor market since the 1960s has made early childhood provision a social phenomenon of wide-ranging ideological, political, & economic impact. Although a crucial feature in late-modern welfare society, early childhood care & education has been

marginalized in sociological & welfare state theory, particularly among mainstream & "malestream" theorists & feminist scholars. Epistemological analysis has revealed this multifaceted area to be frequently reduced to an issue of childminding. Here, it is argued that questions regarding differences on quantitative & qualitative levels of provision could disclose ambiguities in family policies, education policies, & young children's position in society. Early childhood care & education constitute profound changes in today's society & need to be conceptualized as a considerable factor in welfare &, hence, sociological theory. A device for a sociology of early childhood care & education is considered.

✓ **Berking, Helmut B.** (Dept Political Science Northwestern U, Evanston IL 60208-1006 (tel/fax: 847-467-3207/491-8985; e-mail: hbe295@nwu.edu)), **On the Construction of Locality.**

¶ Whatever else the meaning of globalization might be, the process in question refers first of all to an overall change of sociospatial scales. Given the fact that spatial scales & territorially bounded social entities are highly interdependent, the aim here is to analyze the dynamics of those sociospatial reconfigurations, by which new forms of connectedness—translocalities, diasporas, but also place-related localities & cultures—are being reshaped. The question then, why & how, especially under global conditions, "place matters," is the dominant leitmotiv of this analysis.

✓ **Bern, John & Larbalestier, Jan** (Faculty Arts U Wollongong, New South Wales 2522 Australia (tel/fax: 612-4221-4066/3179; e-mail: john_bern@uow.edu.au)), **Aboriginal People and Citizenship: An Australian Dilemma.**

¶ Discusses an ongoing struggle in which Australia's Aboriginal people assert their claims to collective incorporation in the nation's polity, drawing on Nancy Fraser's (1997) discussion of the "redistribution-recognition dilemma" of contemporary political conflict. It is argued that Aborigines' political rights & obligations are curtailed in contemporary Australia via ignorance, poverty, prejudice, & isolation. Recent Australian governments have devised policies & programs to address & overcome these disabilities. Aboriginal people's incorporation into the nation's citizenry also has a community basis founded in their identities as indigenous people with histories of expropriation, oppression, & dependency. Land rights, self-determination, & other complex claims of peoplehood have significantly affected the Aboriginal community's understanding of their relationship with non-Aboriginal Australia. It is argued, following James Tully (1995), that this interest is a separate part of the national polity & that meaningful inclusion of Aboriginal people in that polity requires the recognition of their distinct status & its accommodation in the national community.

✓ **Bernier, Roxane** (24 rue du Regard, F-75006 Paris France), **Espace muséographique et médiation technologique: les nouvelles technologies aident-elles au processus de socialisation pour les visiteurs? (Museumographic Space and Technological Mediation: Do the New Technologies Help Visitors' Socialization Processes?).** (FRE)

¶ Considers whether the passion for new technologies apparent at expositions is justifiable, given that it is still not clear what they bring to the transmission of knowledge. While new technologies present a novel & mystical face to the public, it is not apparent what their relationships are with respect to the museumographic means of communication already in place at expositions, & whether they substitute for or complement them. The use of a logic of socialization processes for examining new technologies is recommended, since the daily practices & existing knowledge of visitors allow them to discover the technologies' utility & efficiency from a communicative viewpoint. Links between visitors' experiences & perceptions of new technologies are addressed, along with forms of mediation employed by new technologies, both technical & human. It is shown that the technical mediation generates specific logics used for preconstructed forms of use: focus is placed on steps in the acquisition of knowledge.

✓ **Bernik, Ivan & Malnar, Brina** (Faculty Social Science U Ljubljana SLO-1001 Slovenia (fax: 386-61-1685330; e-mail: ivan.bernik@guest.arnes.si)), **Trust in Democracy or Trust in Utility of Democracy?**

¶ Most studies of mass acceptance of democracy in postsocialist societies

b

are based on the assumption that only a broad unconditional support can provide a favorable stabilizing environment for new political order. As long as support for the democratic institutions is not based on deep & unconditional trust in these institutions, the process of its formation cannot be considered as successfully completed. Drawing on survey findings of preliminary research of political culture in Slovenia & of some similar studies in other postsocialist societies, it is suggested that the prevailing mass support for democracy in postsocialist societies does not meet these high standards. According to this thesis, the main source of support for democracy is related to its current & especially expected performance both in economic & social respects. This type of support does not include trust in democracy per se, but trust in utility of democracy. It is argued that this kind of support can provide a stabilizing environment for new democratic institutions. Nevertheless, it remains conditional & can be withdrawn when the performance of democracy does not fulfill the expectations. Findings are compared to the results of some studies of acceptance of democratic institutions in other postsocialist societies.

Bernstein, Martha (Dept History U Montreal, Quebec H3C 3J7), **The U.S. Film Program in France and Psychological Warfare during the Cold War.**

¶ Investigates the use of motion pictures as a US government medium for the containment of communism in France during the early Cold War. In 1952, US cultural policy objectives moved from information strategies to entertainment-oriented activities that were designed to capture the imagination of French mass audiences. The US Film Program was a major activity in this policy. Examined is how special films were planned, produced, & disseminated in accordance with established country priorities that targeted vulnerable French groups suspected by the US of communist sympathies. US political & economic motivation for this are studied, & the extent of US commitment to use film as a cultural weapon in psychological warfare is investigated.

98S33696 / ISA / 1998 / 10937

Berridge, Damon & Penn, Roger (Centre Applied Statistics Lancaster U, LA1 4YF England (tel/fax: 01-524-593063/592681; e-mail: R.Penn@lancaster.ac.uk)), **Modelling Recurrent Ordinal Events: Continuation and Change in the Domestic Division of Labour in Great Britain.**

¶ Examines recurrent ordinal events in a statistical modeling paradigm, drawing on data from the British Household Panel Study that pertain to attitudinal responses to questions about gender & domestic division of labor. The statistical modeling proposed relates these recurrent ordinal responses to a set of explanatory variables, eg, gender, age, social class, educational qualifications, & ethnicity. To assess the degree to which explanatory variables influence the responses to questions on the domestic division of labor, an adequate statistical model must be able to handle the (1) ordinality in the response categories; (2) possibility (or likelihood) that substantial variation between respondents will be due to unmeasured & potentially unmeasurable variables (residual heterogeneity); & (3) possibility that some respondents will always select extreme responses to the same question at different times (ie, stayers). Binary recurrent events can be considered as just a special case of ordinal recurrent events when the number of categories is restricted to two. One model for binary recurrent events handles residual heterogeneity by incorporating individual-specific normal error structures into an event-specific binary logistic framework. Another approach that utilizes the ordinal nature of a single outcome is the continuation ratio model, a direct generalization of the familiar binary logistic model. The model presented here handles residual heterogeneity by incorporating individual-specific error structures into an event-specific continuation ratio framework. Parametric & nonparametric mixture distributions are used to take residual heterogeneity into account. Stayers are handled by incorporating the mover-stayer model into the modeling framework.

Berry, Brian J. L. (School Social Sciences U Texas Dallas, Richardson 75083-0688 (tel: 214-883-2041; e-mail: heja@utdallas.edu)), **Macroeconomy and Polity.**

¶ Clear rhythms link US politics to the macroeconomy. On the long downwave, politics revolves around two poles: major conservative victories follow K-peaks & help promote technological restructuring, but also inequity; at primary troughs, reformists achieve power & change the policy environment to respond to social problems. Reform slows in the K-trough, succeeded by competitive politics & third-party challenges. The

period ends in a trough war that reorients the nation's domestic agenda. On the ensuing long upwave, progressives take over, pushing the technological innovations to market saturation & crafting a new social synthesis that culminates in a major realignment of the political parties amidst a stagflation crisis & a peak war that drives the next K-peak & conservative victory. This cycle has been repeated four times since 1800.

Bertaux, Daniel (EHESS CEMS, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-1-49-54-25-59/44-54-26-70; e-mail: bertaux@ehess.fr)), **Life Stories as Documents for Ethnological Research.**

¶ Explores life stories as part of an ethnological perspective through which to study social phenomena. They constitute excellent tools to collect the lived experiences of people whose lives have been at some point embedded in a given type of social context: their (past) practices will reveal the kinds of norms, games, & rules of such games that structure conduct & actions in such a context. In this perspective, they are taken as informants about a given social context; their personal testimonies are oriented by the researcher toward descriptions of their own experience, eg, what they actually did, what was done to them. How they assess their whole life is not the focus of the interview, & neither is their self-presentation to the interviewer. The appropriate research design will, in a typically grounded theory spirit, collect the personal testimonies of many actors & strive for saturation. Determining degree of truth of people's accounts of their own life experience is solved by confronting various testimonies, bearing in mind from which structurally defined place informants speak, eg, employees vs employers, teachers vs students, parents vs children. Life-story interviews are also a good way to tap actor knowledge of a specific milieu or situation known through lived experience. Actors' interpretations of their own past may vary over their lifetime, but they will usually remain faithful to the facts & life events. Adding other kinds of evidence (statistics, archives, regulations, etc) helps develop & ground hypotheses, but is not always possible, nor essential, if one collects enough personal testimonies to reach saturation.

Bertilsson, Margareta T. & Carleheden, Mikael (Dept Sociology Copenhagen U, DK-1361 K Denmark (tel/fax: 45-35323275/35323940; e-mail: margareta.bertilsson@sociology.ku.dk)), **In Search of a 'Good Society': Sociology in Scandinavia as a Moral Science.**

¶ The history of sociology in the Scandinavian countries seems concomitant with the history of the rise of the welfare society. The political force in establishing sociology here coincided with the vision that the "good life," no longer reserved for a privileged cultural elite, could be extended to the masses. A very strict separation between facts & values accompanied the new science of sociology all over Scandinavia. It bequeathed to the political community matters of value & appropriated what was to be the study of relevant social facts. The values of the welfare society—the expansion of the good life to the masses—were considered universal political achievements. Today, state-controlled values are no longer in vogue, & both politics & sociology aim to rediscover civil societies. Questioned is whether sociologists are critically trained to reflect on the sudden political transformation in the perception of human values or if they are caught in the prevalent ideologies of their time. Focus is on the "aporia" between sociology as a moral science & its lack of reflective moral understanding.

98S33701 / ISA / 1998 / 10942

Bettin, Gianfranco & Recchi, Ettore (Dipt scienza politica sociologia U Firenze, I-50132 Italy (tel/fax: 39-55-5032411/5032426; e-mail: Recchi@ccsp6.scpol.unifi.it)), **Planning Work-Life Entry: Expectations of Class Mobility among University Students in Italy.**

¶ In the 1990s Italian context, investigated are how college students react to the concrete possibility that their degrees shall not be rewarded on the labor market, whether they are ready to downgrade their educational investment, whether they consider the prospect of downwardly mobile occupational destinations, & what makes some young people accept low-level jobs. These issues are deemed relevant inasmuch as the making of youth attitudes toward likely occupational destinations plays a part in the process of social stratification & in rendering stratification & social integration compatible. National survey data obtained in 1997 from 900 parent-student pairs regarding expectations & ideal aspirations of socioeconomic attainment in terms of socioeconomic status scores & class location of possible job destinations are used to assess the impact of class origin (on two generations), individual education (school record & type of training), family cultural capital & values, & personality traits (eg, self-esteem). In particular, evidence on the relative influence of education & class factors in shaping expectations of occupational achievements is put in the context of the theoretical debate between the hypotheses of growing universalism & inequality reproduction on the process of social stratification.

¶ **Beyers, Christiaan M. E.** (Social & Political Thought Programme York U, North York Ontario M3J 1P3 (tel: 416-534-0895; e-mail: cbeyers@yorku.ca)), **Inkatha's Ethnonationalist Politics: The Continuing Legacy of Chieftaincy and the Bantustans.**

¶ Examines the cultural resonance & political potency of the Inkatha movement's ethnonationalist politics, which are seen as a product & response to the spatial politics of South Africa's bantustans & the institution of chieftaincy. After tracing the emergence of the bantustan as the foundation for apartheid's political geography of domination, & the concomitant development of forms of Zulu ethnic entrepreneurship in the Inkatha movement, focus shifts to the transformation of Inkatha from a cultural movement to a political party in 1990. A critical look is taken at Inkatha's role in the political negotiations leading up to the 1994 elections & its strategic employment of the "ethnic card" to gain political ascendancy in the region of KwaZulu/Natal. The key dimensions of Inkatha's postapartheid ethnonationalist politics, in a context where certain old structures of domination persist & new ones are emerging, are identified.

¶ **Bezanson, Kathryn J.** (Graduate Programme Women's Studies York U, North York Ontario M3J 1P3 (tel/fax: 416-923-9169/925-8681; e-mail: bezanson@yorku.ca)), **Community, Family and Friends: Gender and Restructuring in Ontario.**

¶ In the introduction to her 1996 edited collection *Rethinking Restructuring: Gender and Change in Canada*, Isabella Bakker remarks that a dual process is occurring in policy formation internationally: gender is simultaneously being eroded & intensified. Data from two rounds of interviews (a year apart) with 40 households in Ontario are drawn on to discuss the implications for many women in the provinces of this dual process of private-sector-led growth. It is argued that the Conservatives' proposal that community, family, & friends be relied on to assist people in dealing with cuts to social programs & transfer payments is having damaging- & long-term-effects on individuals' most important personal relationships. International literature on the effects of economic restructuring on women demonstrates that there are breaking points to the amount of additional unpaid caring work that women in households can absorb; preliminary findings of these costs in Ontario are shown here. Gender erosion & intensification in Ontario may begin to demonstrate the consequences of, & limits to, privatizing social costs to households.

98S33704 / ISA / 1998 / 10945

¶ **Bezuidenhout, Andries** (Dept Sociology Rand Afrikaans U, Johannesburg 2006 South Africa (tel: 27-11-489-2884; e-mail: ajb@w.rau.ac.za)), **Casuals and Casualties: Trade Unions and the Restructuring of Work in South Africa.**

¶ Historically, the South African working class has been divided into different segments. During the apartheid era, a very stark caste system in the workplace partitioned workers according to race. Consequently, the labor movement was (& still is) divided according to certain of these social separations. Certain new cleavages are emerging in the 1990s, building on these historical divisions, but also confronting organized labor with new challenges. The emerging divisions between a core & a peripheral workforce coincide with existing contours of disadvantage, eg, gender, race, ethnicity, & more recently, citizenship. The implications of a trend

toward the casualization of work in South Africa for the labor movement (ie, the Congress of South African Trade Unions (COSATU)) are examined, drawing on the report of the 1997 September Commission on the Future of Trade Unions, focusing on chapters 6 & 7, which deal with union responses to the restructuring of work, & the organization of new sectors & layers of workers, respectively. It is argued that the labor movement should take the issues addressed in the chapters seriously if it wants to continue to gain members & strengthen its bargaining position, especially in view of challenges posed by workplace restructuring & a trend toward the casualization of labor. That the commission put these issues on the agenda does not, however, mean that the labor movement is engaging effectively to address these issues. Responses, in general, are piecemeal. One of the reasons for this is a lack of capacity in the movement resulting from rapid social transition. Certain relevant developments (eg, the formation of specialized trade unions for casual workers & the possible merging of smaller trade unions that operate in less well-organized sectors, eg, agriculture & the building & construction industries), with larger unions into "super unions," are assessed. The role of sociologists in meeting these challenges is discussed.

¶ **Bhai, L. Thara** (Dept Sociology Madurai Kamaraj U, 21 India (tel/fax: 91-452-608512/859181)), **Concept of Old Age: A Study among Three Generations.**

¶ Traditionally, the elderly in India were regarded highly for various reasons, including their experienced wisdom, but today, old people are not respected, because of changing attitudes toward old age. This changing phenomenon is analyzed here across generations & sex. It is found that the meaning of old age, the approach to old age, & solving the problems of old age have taken new shapes in contemporary society. The concept of old age is explored in the context of the caregiving-care receiving continuum.

¶ **Bhargava, Shruti, Shastri, Jigisha & Mankodi, Hina** (Faculty Home Science U Baroda, India (tel/fax: 0091-265-793984/301006)), **Child Care-Link between Parents and Grandparents.**

¶ In India, a large majority of households consist of three-generation families. With both parents contributing to the family's economy, grandparents are one of the major sources of child care support, which may be one of the major activities to help establish a positive relationship between generations. Here, research conducted with parents & grandparents with reference to childrearing indicates psychological as well as social support between generations. In the absence of parents, grandparents are the major caretaking source. Both parents & grandparents agree that the latter play an active role in rearing grandchildren, functioning particularly as agents for imparting *sanskars*, ie, culturally relevant values, & religious activities.

¶ **Bian, Yanjie, Shu, Xiaoling & Logan, John R.,** **Regime Dynamics, Party Membership, and Socioeconomic Mobility in China, 1949-1993.**

¶ Event-history analysis is used to examine recruitment into the Chinese Communist Party, 1949-1993, & its impacts on socioeconomic mobility. Survey data from Shanghai & Tianjin show that screening for political loyalty has been a persistent feature of party recruitment processes regardless of other changes in the regime. Education emerged as a significant recruitment criterion only in the post-1978 reform period. During this period, party membership is almost a necessary path to positions of political authority, has consistent effects on entry into managerial positions in both state & nonstate sectors, & is an important factor for inclusion in high-income strata & exclusion from low-income strata. Findings suggest the persistence of an important political dimension to the People's Republic of China's stratification system during the current transition toward a market economy. At the same time, the new role of education suggests a shift toward a more technocratic political order.

¶ **Bidart, Claire** (Lamas-CNRS, 59 rue Pouchet F-75017 Paris France (tel/fax: 33-01-40251251/47; e-mail: bidart@mrsh.uci.caen.fr)), **Relationships with Others and Social Participation. Personal Networks of Young People and Forms of Socialization.**

¶ By their participation in the life of the city, young people exert an influence on society, claim they are social actors, signify their position, & indicate the roles they intend to assume. This realization is closely related

b

to the processes of social integration, which can be considered as an elaboration & confirmation of social relationships with the environment. Personal networks form the interface between individuals & society. By their mediation of relationships with other persons, young people anchor themselves in the social arena. The sociability of young people & the structurations of their personal networks are different from those of adults. By analyzing how young people relate to others & to the social world, it is possible to hypothesize how the modes of participation of young people contribute to their socialization. The study of what young people say about their projects & their relational involvements with peers & adults offer insights into their collective commitments.

Biernatzki, William E. (Saint Louis U, MO 63156-0907 (tel/fax: 314-977-7290/7296; e-mail: CSCC@SLU.EDU)), **Catholic Polarization on American Television, 1956-98.**

¶ Discusses 3 cases of Catholic-oriented TV broadcasting—Bishop Fulton Sheen's *Life is Worth Living* (1952-1956), Mother Angelica's *Eternal World Television Network* (1980s-present), & ABC's *Nothing Sacred* (Sept 1997-present)—all of which present orthodox interpretations of Roman Catholic doctrine, but also illustrate the polarization that has taken place in the Catholic Church in the US in the past 40 years. Sheen's simple lecture format succeeded both because of his homiletic skill & because there was little disagreement among orthodox Roman Catholics of that time about Church policies. The *Eternal World Television Network's* traditionalist contents are orthodox, but are so closely controlled by Mother Angelica that US bishops, as a group, have been discouraged from collaborating with it. *Nothing Sacred* is a drama series about the postmodern tensions & ambiguities in the daily life of a heterogeneous, but orthodox, pastoral team in an urban Catholic parish. Clues from these programs are used to trace the polarization process they represent & develop hypotheses about why polarization has not disrupted the US Church's sense of unity.

¶ Since the early 1980s, the model of autopoiesis seems to have fascinated social sciences more than it ever did the natural sciences & its proper field of biology. It sinks its roots in second-order cybernetics, with which it is frequently identified, & radicalizes it. Many applications were devised in the social sciences, including management science, mainly following the suggestions of H. S. Maturana & Niklas Luhmann. A closer look at such applications suggests that they have an essentially metaphorical basis or else were hastily done. Ways that autopoiesis differs from second-order cybernetics are illuminated, arguing that its application, at least to economic organizations, does not work. It is concluded that second-order cybernetics has everything to gain from separating its scientific fate from autopoiesis.

Bilac, Maria Beatriz Bianchini (U Metodista Piracicaba, Rua Luiz Camoes 2641 13417-810 SP Brazil (fax: 0055-019-4226502; e-mail: maria.beatriz@merconet.com.br)), **Socioeconomic Change in Brazil and Immigration: A Case Study on Political Participation and Social Mobility in a Brazilian Town.**

¶ Oligarchical politics are a continual presence in Brazilian history & represent the basis for its structure of dominance with traditional actors defending rights, privileges, & top positions against newcomers, not allowing the democratization of power. The concentration of land, related to the export economy, after the end of slavery engendered a mass of population juridically free, but excluded from the labor market & smallholding system. The great majority of this population faced impediments in maintaining subsistence. In urban areas, the colonialist system hindered the development of manufacturing employment, & the birth of a smallholder class. The *latifundio* (large funded estate) also impeded the rise of a lower strata of the middle class. This pattern of social stratification began to change only by the end of the century, as a result of industrialization & urbanization, which led to the rising of an emergent industrial proletariat. The typical state oligarchies' collaboration that characterized the Old Republic was destroyed by the 1930 Revolution & the Great Depression; from then on, no single class or elite had sufficient power to

rule alone. Urban elites were composed of different social categories. The European immigrants & their descendants, in their turn, had a quick upward social mobility, especially in the south of the country, as a result of urban development linked to the coffee economy. These categories entered the electoral scene disputing & dividing the access to power with the agrarian elites, although the urban masses continued to be excluded from the center of decisions. Since the 1930s, the changes that took place in the political system referred mainly to the increasing participation of the middle class in the electoral field; however, there was neither a significant participation of the popular categories in the political posts, nor a real political representation since they were prisoners of the current elitist politics. One of the most cruel & deep roots of the elitist politics was the exclusion & domination of the lowest strata. After 1945, political life in Brazil flourished, & elections became the most important means of access to the political elite. Nevertheless, the country's redemocratization, 1945-1964, did not mean the transition from oligarchical to democratic politics. There was no radical substitution of the power groups & the same elite that had controlled the ousted regime was kept at the head of the political process.

Bildtård, Torbjörn (Dept Sociology Uppsala U, S-75108 Sweden (tel/fax: 46-18-471-7845/1170; e-mail: Torbjorn.bildtard@soc.uu.se)), **The Sexuality of Elderly People on Film: Visual Limitations.**

¶ Explores how the sexuality of elderly people is depicted in mainstream film, drawing on content & discourse analyses of 1990-1995 Nordic & North American films opening in Swedish cinemas & casting elderly characters in leading roles. It was found that, to an overwhelming degree, elderly people were depicted as having no sexual life at all; a need for tenderness & warmth replaces sexuality. Sexuality was framed in terms of love, health, & bodily youth. Also, elderly women were less likely to be presented sexually than elderly men. Findings were interpreted in a cultural perspective: the commonsense assumption, even among elderly people, seems to be that they do not have a sexual life, even that it would be abnormal. It is argued that these assumptions are reproduced in mainstream film, & films that did show the elderly sexuality were pioneering in finding an image language where this might be accepted by a general audience.

Bimbi, Franca (Dept Sociology U Padua, I-35122 Italy (tel/fax: 39-49-8274312/657508; e-mail: fbimbi@ux1.unipd.it)), **Women and the City: Innovative Time Strategies and Urban Politics. The Venice Case Study in the European and Italian Context.**

¶ Examines the debate on "City Times" evolving in Italy since the mid-1980s & presents a research project on the "City Time Programs" registered in 80 Italian cities, highlighting the Venice case study (Belloni & Bimbi, 1997). It is hypothesized that certain European experiences of administrative decentralization & of a greater autonomy for local government, particularly in Spain & Italy, show that it is possible to think of the city as a place for public action, in a *vita activa* (active life) perspective (Arendt, Hannah, 1958), in which to overcome the stalemate between the contractual & communitarian citizenship viewpoints, & develop within a feminist view of the politics of difference (Young 1990). At the empirical level, the Italian experiences show three main aspects of gender-oriented public action, with their related problems of social conflict: (1) the rationalization of the complexity of the city clock; (2) the introduction of innovations in the public services, especially in child care services; & (3) the introduction of many facilities for working women to arrange their personal time. An outstanding example is the Venice Municipality where a women's center started a project called "Women's Citizenship & Urban Life Quality" & organized a national archive for City Times projects. A Women's Council, with 30 women's groups, organizes its activities, forming pressure initiatives acting on the local administration. Discussion shows that a new gender-oriented concept—the "community of purposes" (Garber & Turner, 1995)—could occupy the middle ground between the contractual ideal & the communitarian idea of citizenship.

Birkelbach, Klaus & Meulemann, Heiner (Instiit Angewandte sozialforschung U Köln, D-50989 Federal Republic Germany (tel/fax: 0211-470-5658/5169; e-mail: birkelbach@wiso.uni-koeln.de)), **Political Attitudes between Youth and Adulthood—The Impact of Biographical Experiences on Postmaterialism and Political Value Demands in a**

Cohort of German Former High School Students between Ages 16, 30, and 43, 1969-1997.

† Investigates the stability of Ronald Inglehart's postmaterialism, which is viewed as an indicator of high value demands to the performance of the political system & two related political attitudes—value demands & recognition of constraints. Data are drawn from a longitudinal study of about 1,600 German former high school students at ages 16, 30, & 43, 1969-1997. It is found that postmaterialism, surveyed in the standard ranking form, is very high at age 30 & very stable until age 43. To differentiate within a predominantly postmaterialist group, questions on value demands & on the recognition of constraints in the form of ratings were administered. The prolonged formative period of the educationally privileged group should lead to high value demands & to a low recognition of constraints at age 30, while educational & occupational advancements, ages 30-43, should reduce value demands & foster the recognition of constraints, reflecting an advancement in the educational & occupational career. Also examined is the extent to which, at age 30, these depend on social background, political interest, value of political participation, & membership in political groups at age 16; participation in demonstrations ages 16-30; & educational degrees attained, time spent in the labor force, & highest occupational prestige attained.

† **Bishop, Kenneth J.** (Dept Sociology & Social Policy Queen's U, Belfast BT7 1LN Northern Ireland (tel/fax: 44-0232-273714/320668; e-mail: K.Bishop@qub.ac.uk)), **Paradise Lost—History of a Belfast "Urban Village"**.

† The Donegall Pass is a Protestant working-class district in South Belfast, Northern Ireland, comprising approximately a .5 square mile in area with a population of about 2,000, mainly Protestant, residents. Since the late 1960s, urban redevelopment & the "Troubles" have changed the social geography & personality of the Donegall Pass community. The community views itself as being historically & culturally neglected. Residents see themselves still as being under threat from not only the surrounding Roman Catholic communities but also now from the British government & their own traditional political representatives. In a sense, the present community is trying to resuscitate a dying age of collective civic pride & political power against the background of the need to survive as a group, while still trying to retain a certain amount of territorial & personal integrity. Here, the social construction of this community's political habitus is traced through its transition from a vibrant community in the early 1960s to the development of its present warrior regimes. It is argued that the political habitus of the Donegall Pass community can be characterized by the continual struggle for the monopolization of power & the attempts by the community's established Protestant population to defend itself against perceived cultural outsiders & recent political changes in Northern Ireland.

† **Bislev, Sven** (Copenhagen Business School, DK-2000 Frederiksberg Denmark (tel/fax: 45-38-153-195/840; e-mail: sb.sprqk@cbs.dk)), **European Integration and Supranational Social Theory.**

† Social science disciplines have found it difficult to comprehend European developments. With no nation-state to act as the superior, sanctified community, several of social science's more advanced systemic concepts do not work in a European context. In theories about globalization, there has been a tendency to see all community disappearing because of the weakening of the state. When the nation-state fails, left are context-free individuals facing overpowering global forces or, alternatively, liberated spirits with unlimited opportunities. The European example situates this important discussion empirically & historically. The social sciences develop approaches to conceive the nature of the emerging European society that demonstrate how the state-dependency of social sciences makes them vulnerable to state reduction. Alternatively, theorizing in terms of different forms of community (state, market, civil society), & their relations with each other, enables one to conceptualize, although on a highly abstract level, a species of community that is no nation-state. Perhaps the lack of a European social science affects the difficult work of integration: without independent social science, a critical public sphere is difficult to build, & without that, community performance may suffer more from inefficiency & corruption.

† **Bittman, Michael** (Social Policy Research Center U New South Wales, Sydney 2052 Australia (tel/fax: 61-2-9385-3854/1049; e-mail: m.bittman@unsw.edu.au)), **Is Leisure Time Becoming Scarcer?**

The Evidence about Overwork, the Second Shift and the Time Squeeze.

† Considerable controversy exists as to whether the balance between time spent in paid work, unpaid work, & leisure is changing. Some have argued that, since the 1980s, advanced industrial societies have been cursed by excessive hours of paid work. Others have pointed to the diminishing significance of paid work in the contemporary life course. It has been claimed that contemporary women (but not men) face a dual burden. However, others claim that men's & women's total work time is very similar. Robinson & Godley have argued that, although more people feel they have insufficient time to do all they wish to do, this subjective impression is contradicted by the facts. Does this mean that these interpretations & the changes in time use have been discredited? Evidence from time-use surveys is drawn on to address these questions.

Blasius, Joerg & Thiessen, Victor (U Köln, D-50931 Federal Republic Germany [tel/fax: 49-221-476-94-46/44; e-mail: blasius@ibm.za.uni-koeln.de]), **Assessing the Meaning of Response Alternatives through Multiple Correspondence Analysis.**

¶ The separation between substantive & nonsubstantive response variation remains a vexing problem for social research. The aim here is to show how multiple correspondence analysis can be used as a flexible tool for interpreting response alternatives in social surveys, using two sets of interview questions from the 1984 Canadian National Election Study. The first set focuses on a battery of political party images. Respondents were asked which political party would be best (& worst) at addressing issues such as pollution, inflation, & relations with Quebec. A large minority of respondents chose a "don't know" or a "no difference" response. Multiple correspondence analysis was used to explore the relation of these two responses to substantive responses in which a specific political party was named. The results show that a "no difference" response lies on the same axis as substantive responses, while a "don't know" response is located in a different dimension. The second set of items concerns political beliefs, which were queried using a standard 5-point Likert response format. Multiple correspondence analysis was used to test whether the middle category ("neither agree nor disagree") is indeed ordinally between the "agree" & "disagree" responses, or is better conceived as a nonsubstantive response analogous to no opinion. Analysis shows that the assumption of ordinality of meaning is not justified among the politically less interested. Further, there is clear evidence of the operation of response sets in that subgroup. In contrast, among politically active respondents, the assumption of ordinality is not an unreasonable one, & response set is substantially less pronounced.

98S33725 / ISA / 1998 / 10966

Blass, Leila Da Silva (U São Paulo, 05009-060 SP Brazil [tel/fax: 011-263-8666/3873-2486]), **French title not provided** (Working Practices of the Globalization Era). (FRE)

¶ In a discussion of working practices & new management processes in Brazil during the globalization era, an attempt is made to (1) identify the cultural concept for divulging business strategies for the implementation of interactive & communication programs, & the main aspects of these management strategies; (2) discuss the civilizing universal models based on the concept of work created in modern times in which work practices are set apart from other social activities; & (3) analyze the meaning &

importance given to wages in the conception of both sociability & identity in different societies. The working transformations engendered by the capitalist production system emphasize its internal contradictions, resulting in a contemporary paradox: the more production becomes global, the more evident become heterogeneous working practices, & the intersection of traditional & modern productive processes.

Blatrix, Cécile (CRPS U Paris 1, F-75231 Cedex 05 France [tel: 01-42-00-22-43; e-mail: josefredric@msn.com]), **Citizenship and New Forms of Public Debate.**

¶ Following Stuart Langton (1978), citizen involvement can be distinguished from citizen action: whereas citizen involvement is initiated & controlled by governments to improve & gain support for decisions, citizen action is initiated & controlled by citizens for purposes that they determine. Explored here is the impact of the former on the latter; ie, what does the existence of institutionalized forms of public debate induce on the citizen action's repertory? Existing works on this subject conclude either to the development of new forms of citizen action or to a moderating impact of public debate on the citizen action's repertory. Based on French recent experiments to improve citizen involvement in land-use policies, it is suggested that the effects of the development of these new forms of public debate are ambivalent.

Blau, Judith R. (Sociology Dept U North Carolina, Chapel Hill 27514-9999 [e-mail: judith-blau@unc.edu]), **Institutional Change and the Role of the Commons.**

¶ Explores the possibility that institutional change on the small scale is occurring in response to change at the societal or national level. This is not completely obvious, owing to insufficient precedent. For that reason, models of path dependence or evolutionary change are inadequate. With reference to the devolution of programs by the federal US government & the implications that this has at multiple local levels, drawing on Max Weber's metaphor, the "switchman" change occurred fairly rapidly at the macrolevel, but events were triggered (& organizations jostled) at the local level. Focus is on the consequences of devolution for the US nonprofit sector, although communities & neighborhoods are also implicated. This nonprofit sector—made up of advocacy organizations, direct services organizations, churches, etc—has acquired increasing responsibility for direct services to clients, including the homeless, immigrants, children, & the elderly. These programs were mandated by law, & nonprofit organizations played a major role in developing & implementing them. With the elimination & cutbacks of federal programs, the nonprofit sector appears to be increasingly energized & innovative. However, questions are raised about accountability & universalism in the provision of services. These ideas are illustrated with findings of an empirical study of nonprofit organizations in NC.

98S33728 / ISA / 1998 / 10969

Bloch, Charlotte (U Copenhagen, DK-1017 Denmark), **The Flow of Everyday Life.**

¶ Presents an empirical investigation of flow—a particular type of experience characterized by feelings of fusion with an ongoing activity, effortlessness, & fluidity—in everyday life, drawing on data obtained during interviews with 36 employees of a public organization. A phenomenological analysis of the qualitative dimensions of flow experiences is followed by a hermeneutic analysis of the social & cultural aspects structuring these experiences. As to the phenomenological analysis, a distinction between three phenomenological structures is revealed, contesting the monolithic conception of flow presented by Csikszentmihalyi. The hermeneutic analysis is still in progress, focusing on discourses, rules, & norms structuring the experiences & expression of different kinds of flow in different contexts in everyday life. Results are discussed in relation to broader historical analysis of construction & management of emotional experiences.

Bloch, Robin (Development Policy Research Unit U Cape Town, Rosebank 7700 South Africa [tel/fax: 27-11-339-1911/5050; e-mail: RBloch@idrc.ca]), **Urban Governance in South Africa: Economic Development—From Exhortation to Experimentation.**

¶ It is argued that South African policy efforts—eg, emphasizing creation of developmental local authorities, infusion of economic development imperatives into their activities, formation of public-private partnerships to promote a vision for local economic growth—remain well-meaning exhortations.

tations without the kind of content provided by designing local-level economic development experiments in which actors from public, private, & community sectors learn about economic development & build competence in the process of implementation. The experience of the city of Port Elizabeth with three such experiments—oriented, respectively, to catalyzing new firm formation, supporting small & medium manufacturers, & promoting investment—is discussed to support this contention. Experimenting with economic development, it is argued, is how boundaries of what constitutes urban governance can be best pushed outward.

Block, Fred & Somers, Margaret (Dept Sociology U California, Davis 95616 [tel/fax: 530-752-5893/0783; e-mail: fblock@ucdavis.edu]), **Two Hundred Years of Welfare Reform: Polanyi Meets Gingrich.**

¶ Karl Polanyi's analysis of the Speenhamland episode (1795-1834) in British poor relief plays a central role in *The Great Transformation* & has been highly influential in discussions of social policy. However, detailed work by social & economic historians has shown that Polanyi & the Poor Law Commissioners were wrong; the Speenhamland system did not lead to falling agricultural productivity & degradation of the rural poor. Ironically, however, when the historical record is corrected, there is even stronger support for Polanyi's core argument—that the fundamental premises of the classical political economy were mistaken. Moreover, the fact that the distorted arguments of the Poor Law Commissioners continue to dominate welfare debates 200 years after Speenhamland confirms Polanyi's wisdom in focusing on this formative historical moment.

Bloemraad, Irène (Dept Sociology Harvard U, Cambridge MA 02138 [fax: 496-5794; e-mail: Bloem@wjh.harvard.edu]), **Agitating for a Nation-State: Is the Quebec Independence Movement an Anachronism or a Vision for the Future?**

¶ Using the Quebec independence movement & the 1995 referendum campaign on sovereignty as a case study, it is argued that, even in the industrialized West, the idea of the nation-state, which includes both a subjective notion of political community (nation) & an instrumental idea of political decision making (state), remains strong. Various scholars have suggested that, as economic systems & transnational problems become increasingly globalized, the instrumental functions of the state diminish in importance, while others argue that identities are devolving to local communities. These pronouncements would lead one to think that the idea of the nation-state is not viable for the 21st century. Yet, an analysis of the discourse of the Quebec sovereignty movement, based on speeches of movement leaders, campaign advertising, government pronouncements, & newspaper coverage of the 1995 referendum, suggests that the movement has been very successful in advancing a state-centered vision of political decision making, using the ideas of devolution & globalization to actually bolster & support this vision. Thus, an independent Quebec would allow citizens more local control in an increasingly global economy. Simultaneously, the movement has been attempting to redefine the nation as being coterminous with the geopolitical boundaries of the state. While this redefinition might not be complete, the dynamics surrounding the definition of the Quebec nation are clearly leading to an overlap of state & nation. The concept of the nation-state consequently remains a vision for the future.

Bloul, Rachel A. (Australian National U, Canberra ACT 0200 [tel/fax: 06-249-5178/0525; e-mail: Rachel.Bloul@anu.edu.au]), **French title not provided (From Moral Protest to Religious Politics: Ethical Demands and 'Beur' Political Action in France). (FRE)**

¶ Traces Muslim youths' ("Beurs") response to their marginalization in France. The Beur movement acquired national significance via the poli-

tization of moral protest in the early 1980s. In spite of early successes, the movement lost impetus when the French government's politics of austerity amplified a social crisis for which migrants became the scapegoats. The Beur movement, like other 1980s youth movements, expressed a search for solidarity & stressed ethical demands. Disenchantment led some to transfer their search for solidarity to the terrain of Islam, which, it is argued, often appears to provide answers to the particular complex of politicoethical demands for social justice & dignity expressed by the Beur movement. However, the Islamist reconversion of some Beur militants is read as the result of a particular conjunction of multiple power relations that would integrate economic, social, cultural, & gender dimensions. Although this development does not necessarily signal a failure to promote progressive transformational politics, it highlights the complexities involved in the politicization of moral sentiments, which are particularly open to diverging (re)interpretations.

Blühdorn, Ingolfur (Dept European Studies U Bath, Claverton Down BA2 7AY England [tel/fax: 01225-826826/826099; e-mail: I.Blühdorn@bath.ac.uk]), **Reflexivity and Self-Referentiality: On the Normative Foundations of Ecological Modernization.**

¶ In the context of the widely acknowledged post-Brundtland "age of the environment," ecological modernization & its theory are celebrated as the key to the ecological transformation of late industrial societies. The proponents of ecological modernization have suggested that the constant influx of new information about the ecological effects of certain social practices & institutional arrangements has established a sufficiently broad foundation for the emergence of an independent ecological rationality that can guide the continual redirection of the core institutions. This newly emerging rationality is expected to gradually catch up with the long-standing dominance of the economic rationality without implying the need for an abolition or abandoning of the economic rationality. Explored here are the normative foundations of this hypothetical ecological rationality. The validity of ecological claims & demands that are based on this rationality are questioned. The argument is based on a criticism of the essentially modernist concept of reflexivity, & it is suggested that this concept has to be replaced by the postmodernist concept of self-referentiality.

98S33735 / ISA / 1998 / 10976

Blühdorn, Ingolfur (Dept European Studies U Bath, Claverton Down BA2 7AY England [tel/fax: 01225-826826/826099; e-mail: I.Blühdorn@bath.ac.uk]), **Biting the Constructionist Bullet: Towards a Refined Constructionist Research Agenda.**

¶ Environmental sociologists taking constructionist approaches have still not dared to depart from central elements of traditional, modernist thinking. Here, an argument is made for a refined & radicalized constructionism. In particular, four recommendations are explored: (1) Most social constructionists share with their realist counterparts the belief that there exist two clearly distinguishable worlds—the extradiscursive world, & the world of socially constructed realities. This opposition between social & natural has to be given up. (2) While it is correct to assume that environmental concerns need an objective basis, there is no reason to believe that this basis necessarily needs to be located in the material world of physics. It may as well be a nonmaterial necessity originating from a certain (modern) way of self-construction. (3) Social constructionists have so far focused on science, pressure groups, & the media, & explored by what means environmental facts are turned into political issues. What they have left unattended is that these moral entrepreneurs are tapping a pre-existing interest in nature as a metaphysical norm & context of values. (4) The skepticism of social constructionists vis-à-vis postmodernist thought is a remnant of environmental sociology's subordination to ecological campaigning. In the interest of a more comprehensive understanding of the societal discourse about ecology, environmental sociologists should fully emancipate themselves from their parent discipline.

Boadu, Kwame A. & Trovato, Frank (Dept Sociology U Alberta, Edmonton T6G 2H4 (tel/fax: 403-424-1872/492-7196; e-mail: kboadu@gpu.srv.ualberta.ca)), **War and Fertility.**

¶ Most writers have attributed the postwar baby boom phenomenon in the West to economic recovery. Here, it is argued that psychodynamic factors also have a role to play in this type of demographic phenomenon. In fact, an increase in fertility during war or immediately after may be attributed to both conscious & unconscious factors. Time trends in births, deaths, & marriages before, during, & after war are analyzed for 8 industrialized countries, 1900-1970, with an economic indicator incorporated into the analysis to gauge the influence of changes in the economy; some cases of recent civil wars in developing countries are also included. It is concluded that theories that emphasize postwar economic recovery as the primary agent of changes in fertility trends in industrialized nations during the baby boom period do not account for the phenomenon fully. It is highly likely that psychodynamic factors have played an important role in human fertility change, not only during times of war, but also immediately after.

Boal, Iain (Dept Geography U California, Berkeley 94720 (tel: 510-642-7710; e-mail: iboal@socrates.berkeley.edu)), **Youth at Risk. The Transvaluation of a Category within Late Capitalist Modernity.**

¶ Explores the historical collocation of two sociological key terms—youth & risk—emerging at sites where the disciplinary regimes of the modern nation-state meet the actuarial practices of planetary capitalism. The long transformation to a "culture of risk" with its contemporary discourses—eg, epidemiology, criminology, urban planning, aid, & development—marks a profound shift in conceptions of society & human subjects, not the least children. The romantic view of the young being carefree confronts a demographical statistical notion of vulnerable & dangerous populations categorized arbitrarily by, eg, age, race, income, zip code, & drug of choice. The stigmatizing & implicitly gendered discourse of at-risk youth mystifies the social forces that created the category in the first place. The self-activity of young people & their resistance to criminalization & commodification are taking place on the hostile terrain of technocratic risk analysis & triage, mapped by new global managers.

Boas, Hans Christian (Linguistic Dept U North Carolina, Chapel Hill 27599-3155 (tel/fax: 919-962-1192/3708; e-mail: hcb@email.unc.edu)), **On the Nature of Language Change: What Role Do Prestige Dialects Really Play?**

¶ A contribution to discussion on the social origins of language change. In earlier work in the "variationist" framework, the idea of a "prestige" dialect & its impact on language change played a prominent role. William Labov (1966, 1994) & Henrietta Cedergren (1973) have shown that language variation correlates with speaker variables, eg, socioeconomic class, age, & sex, as well as contextual style. These studies propose socially based explanations for aspects of language variation in space, time, & social space. These theories suggest that prestige dialects play an important role in language change. However, this view contrasts sharply with ideas put forward by Anthony Kroch (1978 (see abstract 79K0355)), who argues that language change & dialectal differences are caused by ideological factors. In Kroch's view, standard dialects regularly resist natural tendencies in grammar & phonology, which makes them different from nonstandard dialects. The reason for this, according to Kroch, is due to ideology & to the prestige group's desire to mark themselves off as not only distinctive but also superior. These opposing views are discussed, summarizing the studies.

Bode, Ingo (Dept Sociology Gerhard Mercator U Duisburg, D-47057 Federal Republic Germany (tel/fax: 02033792735/4350; e-mail: bode@uni-duisburg.de)), **Interest Group Politics in Late Modern Civil**

Society: Lessons from Germany and France.

¶ In late-modern societies, growing tendencies of sociocultural disaggregation & individual particularism seem to undermine the action capacity of traditional interest organizations. Their political economy appears to be governed by a more selective mode of interest aggregation; & there is a tremendous loss of social inclusion in their organizational realm. Thus, it becomes increasingly difficult to organize collective action on behalf of large social groups. Moreover, the erosion of state corporatist interest intermediation has narrowed major pathways of interest group influence in many policy fields. Also, there has been an upsurge of civil society movements concerning issues of environmentalism, minority rights, or ethnic problems. Students of interest intermediation in European societies, therefore, saw a strong shift away from traditional interest representation to loosely organized forms of collective action. These forms, however, proved to be rather selective in respect to which political issues were addressed & which groups could be mobilized. But recently, forms of large-scale social protest & traditional interest organizations defending social institutions & collective interests have reappeared. Evidence from case studies of interest group action in France & the Federal Republic of Germany concerning issues of social & health policy suggest that a new relation of traditional interest groups to civil society is emerging. Central to this relation is a broader social purpose attributed to these groups by the public. As the political system is no longer really able to deal with major social & economic problems, & because interest groups are much less co-opted to official politics, they may, to some extent, recover their traditional capital, which is to combine interest representation with cultural sense-making. Thus interest groups may become advocates of major moral issues (social justice, citizenship rights, etc) & find a new agenda for collective action.

98S33741 / ISA / 1998 / 10982

Bode, Ingo & Brose, Hanns-Georg (Dept Sociology Gerhard Mercator U Duisburg, D-47057 Federal Republic Germany (tel/fax: 0203-379-2735/4350; e-mail: bode@uni-duisburg.de)), **The New Altruism: Patterns of Private Giving and the Transformation of Welfare Solidarity.**

¶ In recent times, social policy research has given growing attention to nonstatist forms of welfare production, including those sustained by voluntary individual transfers of time or money. These transfers are given to nonprofit organizations, which are frequently seen as part of a new welfare mix in which state provision appears as but one segment of a more & more pluralistic set of actors & institutions. Most discussion about the (potential) role of these voluntary forms of welfare production is influenced by the classical "crowding-out paradigm" which pretends a negative correlation between prosocial private activities & institutionalized forms of welfare solidarity, the latter being instilled in state provision or social insurance schemes. Here, problems with this proposition are identified: (1) Private giving (in monetary as well as in nonmonetary forms) still remains on a high level in the welfare states. Preliminary studies of organizations from the German & French nonprofit sector suggest a shift from traditional ways of time & money giving to more conscious & deliberate forms of individual philanthropy, whereas the traditional type of giving (church collections, rich people's philanthropy, in-group fund raising by workers) is losing ground. (2) Some institutional change in state-managed income redistribution is already taking place. Evidence from France & the Federal Republic of Germany indicates that welfare provision is increasingly discussed in terms of what kind of social needs really should be addressed, & how this might be done most effectively. Conversely, large-scale income redistribution is becoming much less relevant. It is argued that patterns of giving & institutionalized welfare solidarity suggest that the cultural meaning of welfare solidarity is changing, & that a new altruism is going to emerge.

98S33742 / ISA / 1998 / 10983

Body-Gendrot, Sophie (U Paris IV, F-75230 Cedex 05 France (tel/fax: 33-1-43-956347/45-415070; e-mail: bodygend@ccr.jussieu.fr)), **The Social Control of Cities: A French-American Comparison.**

¶ How do cities confront threats of violence & juvenile delinquency? According to national contexts, local autonomy is more or less vigorous; national traditions & culture, institutional patterns, size, & economic circumstances have an impact on their capabilities to act. Here, however, it is suggested that large cities resort to politics of pacification for matters of law & order, which may alleviate national discursive practices defending the strengthening of repression. This seems particularly demonstrated by some US metropolises. Conversely, in France, where a nation-

al policy of solidarity toward cities had been—at least symbolically—designed, security demands from inner-city residents, transmitted by prefects seem to influence Right & Left governmental policies. Local compromises are elaborated.

98S33743 / ISA / 1998 / 10984

✓ **Body-Gendrot, Sophie** (U Paris IV, F-75230 Cedex 05 France (tel/fax: 33-1-43-956347/45-415070; e-mail: bodygend@ccr.jussieu.fr)), **Racisms, Antiracisms and Xenophobia in Western Democracies.**

¶ Explores racism in the context of the challenges set by globalization, especially in France & the US. The context of post-racism can be interpreted as an emergent tendency in which the changes induced in the roles of the nation-states, & convulsive reactions to global mutations, bring forth ethnonationalisms & assertions of identities in most Western countries. Such assertions are made at the expense of weaker but proximate categories that lack political clout. Strengthening security demands on the part of public opinion against a demonized collective Alter are merging at both the external & domestic levels. If repressive (& lucrative) public policies tend to converge, national variations need to be analyzed.

98S33744 / ISA / 1998 / 10985

✓ **Boegenhold, Dieter** (Research Unit Work & Region Bremen U, D-28209 Federal Republic Germany (tel/fax: 49-4403-1441/421-218-2680; e-mail: boegenhold@nwn.de)), **De-Industrialisation and the Increasing Significance of the Tertiary Sector: Creative Destruction of Markets and Self-Employment.**

¶ Discusses decline & rise of self-employment in a historical context characterized by fundamental economic shifts toward the tertiary & quaternary sectors. In the course of this development, established occupations & enterprises disappear, while new ones appear. Observing a secular trend of minimizing the ratio of self-employed people in most of contemporary Organization for Economic Cooperation & Development members does not mean that no "fresh blood" comes into the statistical category of self-employment. Here, the economic & social balance of a creation &, simultaneously, of a destruction of markets, firms, & entrepreneurs are highlighted. This perspective emphasizes dynamic changes of economies & societies over time & discusses effects for the category of self-employment & its inter- & intragenerational composition & mobility. Empirical reverence is especially given to the German case.

98S33745 / ISA / 1998 / 10986

✓ **Boegenhold, Dieter & Fachinger, Uwe** (Research Unit Work & Region Bremen U, D-28209 Federal Republic Germany (tel: 49-4403-1441; e-mail: boegenhold@nwn.de)), **The Social Embeddedness of Consumption—Towards the Non-Linearity of Income and Expenditure.**

¶ Expenditure & income are often considered as two different sides of the same coin called social inequality, & a linear relationship is implied. Questioned here is whether income can be used as a proxy for well-being or for individual participation in the wealth of a nation, because a definite relationship between consumption & income is required for such causality. Repeated cross-sectional data from the 1973-1998 West German Income & Expenditure Survey are drawn on to investigate the relationship between income & expenditures, separating age, cohort, & period effects. Analysis yields evidence about the nonlinearity of the income-expenditure relationship. Previous research showed a substantial income mobility, & analysis here also indicates that the expenditure patterns of households over time seem to be more continuous than income patterns. It is concluded that doing research on expenditure is necessary to obtain information about the living standard of individuals & households in socially stratified societies.

98S33746 / ISA / 1998 / 10987

✓ **Boegenhold, Dieter & Petrowsky, Werner** (Research Unit Work & Region Bremen U, D-28209 Federal Republic Germany (tel: 49-421-218-4059; e-mail: boegenhold@nwn.de)), **Consumption and Leisure Practices between Homogenisation and Differentiation: Towards the Interlinks of Social Positions and Differences in Urban Consumption and Leisure Patterns.**

¶ Analyzes the extent to which an urban population has developed homogeneous patterns of consumption & leisure activities, based on 1992/93 survey data from a representative sample of 1,000 interviewees in Bremen, Federal Republic of Germany. Highlighted are findings on participation in sports & (public) culture & the use of paid home services. Examination of social differentiations in patterns of spending consumption & leisure in different household types reveals few homogeneous leisure

activities. Specifically, the new modern leisure & consumption activities are concentrated in a very small group of the urban population. Specific leisure patterns of women in middle ages & of middle social position are also identified. Theoretical implications about social stratification & life-style are considered.

✓ **Bogason, Peter** (Roskilde U, DK-4000 Denmark (tel/fax: 45-4674-2027/3080; e-mail: bogason@ruc.dk)), **The Role of Citizens in New Systems of Governance in Cities.**

¶ The system of governance in Danish cities is increasingly becoming fragmented in terms of organization. Described here is a 4-year project investigating how the system works, conceived in network terms where well-understood concepts like municipality, municipality council, committee system, & various forms of administrative offices no longer make sense. New contents are put into the relations between organizational entities, new forms of organization come up, & new roles are found for citizens wishing to be part of processes that make a difference in terms of policy organization & contents. Some researchers understand this as citizen or user empowerment, while others are more interested in the new networks of local administration that develop across the public-private divide, which hence becomes obsolete.

98S33748 / ISA / 1998 / 10989

✓ **Bogomilova, Nonka** (Instit Philosophical Research, 6 P. Evtimii St BG-1000 Sofia Bulgaria (tel: 359-2-88-18-41)), **New Religious Movements and Youth.**

¶ Explores important psychosocial characteristics of new religions in Bulgaria, drawing on surveys conducted in several Eastern European countries. The following are the main theses & hypotheses: (1) The breakup of the communist regimes was also a breakup of the institutional authorities: the party, government, parents, & teachers. (2) Longing for charismatic authority is a very important motivation for young people to join new religions. (3) Charismatic authority is characterized mainly by an ability to influence the irrational, subconscious, & emotional part of young persons, ie, the ability to guarantee that the concrete individual is elected, chosen, immortal, & loved.

98S33749 / ISA / 1998 / 10990

✓ **Boiral, Olivier** (HEC Montréal, 3000 Chemin de la Côte St Catherine Quebec H3T 2A7 (tel: 516-3429892)), **Des systèmes de gestion environnementale à la mobilisation des travailleurs: pour une approche humaniste des management** (Systems of Environmental Management for the Mobilization of Workers: Toward a Humanistic Approach to Management). (FRE)

¶ Past reductions in environmental impact are held to have rested principally on technical measurements & to have demanded heavy investment. It is argued that more & more businesses have tried to implicate workers in environmental causes & to promote environmental policies. Highlighted are the development of preventive approaches, the plurality of pollution sources, erratic fluctuations in pollution, & the interdependence between human & technical dimensions of the operations from which pollutants emerge. Integration of these concerns into daily management is discussed, & it is asserted that, to facilitate this process of integration, diverse public & professional organisms have developed systems of environmental management. The success of the international norm of ISO 14001 is considered. Empirical studies demonstrating the role & relative contribution of human efforts in the amelioration of environmental performance as well as the advantages & perverse impact of the implementation of management systems of the ISO 14001 type are presented.

✓ **Boje, Thomas & Almqvist, Anna-Lena** (Dept Sociology Umeå U, S-90187 Sweden (tel/fax: 4690786-5984/6694; e-mail: thomas.boje@soc.umu.se)), **Citizenship and Work Patterns for Women: The Impact of Family Policy on Women's Labour Market Involvement in Different European Welfare Systems.**

¶ Analyzes the interrelationship between social citizenship rights & women's labor market participation in the context of different European welfare systems, including that of Sweden, Denmark, France, the Federal Republic of Germany, & GB. Focus is on the impact of various institutional arrangements concerning parental leave & gender differences in labor market patterns. Also considered is how variations in caring arrangements in the welfare systems influence women's capacity to reconcile labor market involvement & family responsibilities & on the gender division of labor in the family. Gender differences in childrearing & em-

b

ployment in modern welfare state systems must be understood in reference to the complex relation between work, unpaid work, & welfare provision. The question of what reinforces the risk of mothers in losing their income when caring for a child must take into account the interrelationship between labor market organization, family structures, & welfare state institutions. Further, this risk takes different forms depending on the family policy pursued in the individual welfare states: eg, provision of public social services can relieve women of their burdens of care, & access to paid leave facilitates the combining of family responsibilities & continuous labor market involvement of women.

Boldeda, Mario (GREDES U Salta, 4400 Argentina [tel/fax: 54-87-23-4380; e-mail: boleda@unsa.edu.ar]), **Net Migration and Industrial Investments: The Case of North-West Argentina (1950-1990).**

¶ Explores whether net migration rate variations can be attributed, in part, to industrial investments in northwest Argentina, including six provinces (Catamarca, Jujuy, La Rioja, Salta, Santiago del Estero, & Tucuman) with a total population of 4.2 million people in a country whose entire population amounts to 35.9 million (estimations at 31 Dec 1997). This was a very important region in colonial times, when it was related to the Peruvian administration. Things changed when the silver mines were depleted in Potosi, & Buenos Aires began its growth both commercially & politically (late 18th-early 19th centuries). The situation became worse as the country entered the world economic system by developing the wet pampa area. Factories were also there, & people from other Argentine regions began an internal migration process. More recent, net migration rates in these provinces appear less negative, & some even positive. Financial plans promoted by the federal government have helped industrial investors in the region by means of tax reductions. This policy has had a demographic goal as well; authorities have sought to modify the spatial distribution of the national population.

98S33752 / ISA / 1998 / 10993

Bonanno, Alessandro & Constance, Douglas H. (Sam Houston State U, Huntsville TX 77341), **Issues of TNC Legitimation in the Global Era: The Case of ADM, Ajinomoto, and Price Setting.**

¶ In the context of globalization—the increasing mobility of capital, labor, & technology & the rise of powerful transnational corporations (TNCs) as the new coordinators of economic production around the globe—examined is the case of Archer Daniels Midland (ADM), the TNC that advertises itself as the “Supermarket to the World.” Findings reveal that the involved companies work cooperatively to set prices, heralding their motto, “the customer is the enemy.” Analysis centers on the concept of legitimation & implications related to how this traditional function of the nation-state will be performed in a global system whereby the global reach of TNCs outstrips the regulatory reach of nation-states.

98S33753 / ISA / 1998 / 10994

Boneti, Lindomar Wessler (U Regional Noroeste Estado Rio Grande do Sul, Brazil [fax: 055-332-9100; e-mail: boneti@main.unijui.tche.br]), **Progrès technologique et environnement au Brésil** (Technological Progress and the Environment in Brazil). (FRE)

¶ The impact of agricultural technological progress on the Brazilian environment is examined. Research undertaken to evaluate the results of technological development projects is discussed, & it is argued that the dualistic conceptual theory on which public policies of technological development are based is the principal factor involved in environmental destruction. An analysis of the modernization of production reveals an antagonistic duality between technology & the natural environment that encourages the destruction of the environment so that new agricultural technologies may be implemented.

98S33754 / ISA / 1998 / 10995

Bonetto, Maria Susana, Piñero, Maigé & Martinez, Fabiana (Centro Estudios Avanzados U Nacional Cordoba, 5000 Argentina [tel/fax: 54-51-215750; 54-51-239731; e-mail: Liesrl@ONENET.COM.AR]), **Citizenship, Human Rights and Globalization: An Analysis of the Constitutional Debates in Argentina (1994 Constitutional Convention).**

¶ In the current process of globalization-regionalization, the recognition of human rights is framed by a complex pattern of national & international relations & dynamics that impact the classic notions of citizenship & identity built around the nation-state. Analyzed here are the debates held at the Constitutional Convention (Commission of New Rights & In-

ternational Treaties), which led to the Constitutional reform of 1994. The constitutional discourse is considered as a form of political discourse that contributes to the representation of social meanings & definition of collective identities. The figure of the citizen is constructed through those debates at the crossroads between the recognition of the universal subject & his or her particularism. This can have disruptive effects on the constitution of a social collective as a homogeneous political community. To examine a corpus including declarations by members of several political parties, a computer-assisted methodology of lexical & semantic analysis (SATO3.60) is used.

98S33755 / ISA / 1998 / 10996

Bonilla-Castro, Elsy (School Administration Andes U, Bogotá Colombia [tel/fax: 57-1-2849911; e-mail: ebonilla@uniandes.edu.co]), **The Colombian Sociological Association: What Is Next?**

¶ The history of the Colombian Sociological Assoc is strongly influenced by the situation of national sociology. Two related aspects are central to explain this relationship: (1) the difficulties of institutionalizing schools of sociology in Colombia since the first school was founded in 1959 & (2) the status of sociology, but not necessarily of sociologists, on the scenario of the social sciences in the country as a whole. At its inception in 1962, the Colombian Sociological Assoc was sponsored by the better established school of sociology at that time at the National U in Bogotá. The first crisis of that school by the end of the 1960s had a very negative influence on this association & brought about serious difficulties in maintaining a professional institution of sociologists. Four periods in the history of the association are delimited in terms of its organization & performance: (A) 1962-1967, dates of the first & second sociological national congresses; (B) 1967-1978, when the association stopped formally operating; (C) 1979-1989, when it was reorganized by a group of young sociologists & experienced its most active & fruitful period; (D) post-1990, when the association is just surviving with very irregular activities, strong credibility problems, & a very low profile. Different aspects related to the impossibility of institutionalizing the association are explored, drawing on data collected via in-depth interviews with a small group of well-known Colombian sociologists & some former association presidents. Some final considerations are offered related to the future of the association & the implications of its weak role in the development of sociology in Colombia.

98S33756 / ISA / 1998 / 10997

Bonoli, Giuliano & Palier, Bruno (U Bath, Claverton Down BA2 7AY England [fax: 44-1225-826381; e-mail: giuliano.bonoli@issp.unil.ch]), **Restructuring Welfare States: Patterns of Reform in UK and France.**

¶ The UK & France are usually described as belonging to two different welfare regimes. Here, different classifications are identified, & the traditional institutional traits of the two systems are compared, looking at the welfare mix, the claiming principles, scope & level of generosity of the benefits, the structure of financing, & the structure of regulation & administration of the two systems as they were in the early 1980s. Next, changes in the two countries during the 1980s & the early 1990s are examined, with attention to the different types of retrenchment implemented in both countries: changes in eligibility criteria, targeting benefits, tax exemption & incentives to use private protection, reduction of the level of benefits or services, increases of user's charges, budget restriction in public social services, privatization, etc. Factors allowing these retrenchments are tested. Also analyzed are structural changes in the two systems, particularly with respect to the definition of “entitlement,” the nature of the benefits offered, the structure of financing, & the structure of regulation & administration. It is concluded that France has recently implemented more innovative changes than the UK; however, common trends toward retrenchment & recommodification of social protection are evident in both countries.

Bornat, Joanna, Dimmock, Brian, Jones, David & Peace, Sheila (School Health & Social Welfare Open U, Milton Keynes MK7 6AA England [tel/fax: 44-1908-654-270/124; e-mail: j.bornat@open.ac.uk]), **Researching Family Change Using Life Histories.**

¶ Explores the impact of family change on the oldest generation, drawing on 60 life-history interviews with adults in Luton, an industrial town in southern England. Biographical accounts of family change, divorce, widowhood, & separation revealed the impact of external, current debates, & policy reorientations & examples of active renegotiation & reflection

on past experience of family change. Biographical approaches to understanding the impact of family change need to encompass an awareness of these past-present dynamics to acknowledge the influence of altered perspective as family members experience the changes their parents lived through while making sense of broader social changes they themselves have experienced.

Bornscher, Volker (Institut Soziologie U Zurich, CH-8001 Switzerland (tel/fax: 1-634-21-51/49-89; e-mail: voboasoziolegie.unizh.ch)), **The Civilizational Project and Its Discontents: Toward a Viable Global Market Society.**

¶ World society has been so changed since the 1980s that references to the end of the postwar era now actually make sense. The historical turning point was 1989-1991, when the competition between systems ended with the victory of the capitalist market society over its biggest challenger since the industrial revolution, real existing socialism. Some interpreters of history now paint a frightening picture of intensified cultural conflict, which will replace the old East-West contradiction. The ethnicization of the articulation of conflict seems, however, less a sign of the weakness of the modern age than its fulfillment, which is achieved through thrusts in certain phases. For the present moment, doubts may arise as to the contribution of market society to the progress of the civilizational project. The deficiencies of the present form of market society & the possible room for their elimination & the expansion of its basis of legitimation are discussed. New sources of conflict that must be evaluated & taken into account in any discussion of the civilizational project are identified, including the structural change of the core, with which major threats to peace were connected in the past; previous obstructions to, & new possibilities for, catch-up development; & new forms of conflict beyond the interstate type.

Bornscher, Volker & Trezzini, Bruno (Dept Sociology U Zurich, CH-8001 Switzerland (tel/fax: 41-1-634-21-50/49-89; e-mail: vobo@soziologie.uni.zh.ch)), **World Market for Social Order: The Case of Malaysia.**

¶ Various arguments have been put forward to account for economic development in East Asia's newly industrialized countries. A blend of state-centered arguments with a proposed "world market for social order" concept is suggested here. This concept elaborates on the notion that international competition for productive resources takes place between nation-states. To account for comparative long-term economic success it is necessary to ponder the varying degrees of efficiency & legitimacy that any given social order represents in the eyes of capital & citizens. While the case of the East Asian newly industrialized countries is reasonably well grasped by the proposed interpretative framework, one exponent of the latest generation of Asian Tigers—i.e., Malaysia—is discussed, whose socio-political & cultural background rather clearly deviates from the East Asian ideal type of conditions for successful late development. It is concluded that, although the Malaysian case seems to invalidate the propositions herein, more thorough analysis indicates that the explanatory framework is still suitable for an adequate understanding of the peculiarities of Malaysian late development. However, the Malaysian case shows quite convincingly that the world market for social order concept needs further elaboration if it is to be applied to empirical cases.

Bosch, Gerhard W. (Institut Work & Technology, Munscheidstr 14 D-45886 Gelsenkirchen Federal Republic Germany (tel/fax: 49-209-1707-147/124; e-mail: bosch@iatge.de)), **The Reduction of Working**

Time and Employment.

¶ It is generally taken for granted that, without reductions in working time, the productivity gains of the past 150 years would have led to high & persistent levels of unemployment. Here, it is explored how, & under what conditions, reductions in working time might lead to higher employment & how these conditions might be incorporated into policy strategies on working time. Following a brief survey of the historical evolution of working time, productivity, & work organization, the evolution of working time in the more recent past & the varying working-time preferences in industrialized countries are outlined, & relevant research over the past 15 years is surveyed. The analysis reveals close interactions between employment effects of working time reductions, on the one side, & income & income distribution, work organization & productivity, skills, & the structure of the social security system on the other. In all these respects, there are considerable intercountry differences, which makes it difficult to transfer blueprints for a policy of working time reduction from one country to another.

Bosserman, Phillip (Center Conflict Resolution Salisbury State U, Maryland 21801 (tel/fax: 410-742-4945/219-2879; e-mail: philboss@intercom.net)), **Bradbury's Fahrenheit 451 and the Leisure Studies Agenda for the 21st Century.**

¶ Using Ray Bradbury's *Fahrenheit 451*, the possible futures of leisure research & theorizing for the 21st century are explored, recognizing the importance that books & libraries had for Bradbury, what he perceived as happening to the hallowed place of books & writers, & the dialogue they create with their readers. Also considered is how well the events in the 46-year-old book describe the present, eg, the place of libraries & books in contemporary society? Examination of secondary sources addresses how widespread are the practices of casual leisure vs what Robert A. Stebbins calls "serious leisure," an activity from which one derives genuine self-actualization & worth. The forces that led to Bradbury's vision of the future are examined & placed in a possible agenda for research & thinking about leisure.

Bottrup, Pernille (Dept Environment/Technology/Social Studies Roskilde U, DK-4000 Denmark (tel/fax: 45-4674-2000/3041; e-mail: pnb@teksam.ruc.dk)), **Organizational Learning—A Way to Increase Employee Participation?.**

¶ Learning organizations/organizational learning is a new, popular management concept, according to which demands for flexibility, customer orientation, etc, can be met by focusing on learning & continuous improvement in organizations. Supporters of the concept claim that learning organizations are in favor of both management & employees; management will have a more efficient & flexible organization, & employees will be able to develop their own resources as well as participate in development of the organization as such. In this context, several questions are addressed: (1) Do different groups of employees and management have

b

common interests &, if so, to what extent? (2) Which new form of management is on the agenda? (3) What kind of participation is at stake here? (4) Would it not be more fruitful to consider learning & development of organizations a contested field? The aim here is to discuss how organizational learning can enhance employee participation in the development of organizations & working conditions, & to present a critical view on the concept of the "learning organization." At the same time, with regard to understanding the initiation of learning processes as a precondition for development of work & increased participation, it is noted that not all learning processes will lead in this direction. The actual learning space that exists in an organization is of great importance when considering the potentials of participation. Suggestions are offered as to which parameters should be considered when defining this learning space, including elements such as work organization, collaborative & labor relations, & organizational culture.

Boudreau, Julie-Anne (U California, Los Angeles 90095 [tel: 310-477-6593; e-mail: boudreau@ucla.edu]), **The Toronto Megacity Saga: Democracy and Citizenship in This Global Age.**

¶ Draws on fieldwork to examine the results of the Tory provincial government of Ontario's City of Toronto Act, adopted on 21 Apr 1997 after 5 months of political struggles, which forced the amalgamation of the former six lower-tier levels of local government & the upper-tier metropolitan level of government into a "Megacity of Toronto." The government thought that arguments about streamlining, savings, & the creation of a business-friendly climate in Toronto would calm citizens' objections to losing their local government; however, a grassroots movement, Citizens for Local Democracy, pushed the issues of citizenship & urbanity to the forefront of public debates. As democracy is increasingly defined as accountability to customers' choices of services, Citizens for Local Democracy provides a rich illustration of challenges to this pervasive definition. Stimulated by this unique wind of political activism sweeping Toronto, issues of identity & citizenship are intertwined with their evolution in the public discourse.

98S33768 / ISA / 1998 / 11009

Boudreau, Julie-Anne (U California, Los Angeles 90095 [tel: 310-477-6593; e-mail: boudreau@ucla.edu]), **Inhabitants of a Megacity: The Urbanity of Citizens for Local Democracy.**

¶ Argues that planning theory would gain enormous strength for social transformation if it explored the complexities of urbanity. It is suggested that urbanity has become the "solution" to suburban alienation, urban sprawl, segregation, economic redevelopment, & boredom. But for Henri Lefebvre, the urban is not only a mode of cognition & a distinct process in capitalism, it is also a way of being-in-the-world. The urban is an *oeuvre* (creation) produced, made in the everyday by the inhabitants. The everyday is both the residual of organized & planned life & the product of the social whole.

Bouilloud, Jean-Philippe (École supérieure commerce Paris, F-75543 Cedex 11 France [tel/fax: 33-1-49-23-20-96/43-55-99-63; e-mail: bouillou@escp.fr]), **Connaissance et modification du social: le tacite et l'explicite** (Knowledge and Social Transformation: The Tacit and the Explicit). (FRE)

¶ Knowledge of social context is never in the simple mode of the obvious: tacit knowledge interferes. But this "tacitness" is quite different from Karl Polanyi's meaning. Tacit knowledge is not just something explicit

(eg, driving a car); it has to do with communication, & it is not only the "unthought" (Polanyi) but also, even primarily, the "unsaid." Therefore, trespassing the social code of this tacit dimension of communication (that goes without saying) leads to violence: "explicitness" can bring facts, feelings, or judgments from shadow to unbearable light. Following previous works on trust & the status of the discourse, an attempt is made here to analyze the sociological dimensions of "tacitness" in Polanyi's & Alfred Schütz's works.

Boulin, Jean-Yves, Lallement, M., Lefevre, G. & Silvera, R. (IRIS-Travail & société-CNRS U Paris IX, F-75775 Cedex 16 France [tel/fax: 33-1-44054638/48; e-mail: boulin@dauphine.fr]), **L'Impact des nouveaux schémas de temps de travail sur les conditions de vie et de travail des salariés** (The Impact of New Working Time Schedules on Living and Working Conditions of Employees). (FRE)

¶ Presents results of research concerning the implementation of new working-time schedules at the firm level & their impact on employees' lives. Based on interviews with about 150 employees, two main hypothesis are examined: (1) The new social compromises negotiated at the national, sectorial, or firm levels, in a context of high unemployment, give another significance to the will of employees concerning worksharing & the trade-off between time & money. (2) Gender divisions—in work & nonwork spheres—are as significant as industrial relations in understanding the social compromises of worksharing. In this light, three traditional oppositions in sociology are discussed: the tensions between individual logic & collective regulations; the opposition between constraints & chosen working-time schedules; & the opposition between work & nonwork spheres. The main result is to balance these three oppositions in light of the implementation of new working-time schedules.

Boullet, Jean-Yves & Vautier, Claude (U sciences sociales Toulouse 1, F-31000 Cedex France [tel/fax: 33-0-5-61633-579/798; e-mail: ciress@univ-tlse1.fr]), **Production de solidarité et de démocratie: enjeu d'un système d'action collective** (Production of Solidarity and Democracy: A System of Collective Action). (FRE)

¶ Argues that the role of associations in the production of solidarity & democracy can be understood from the viewpoint of a complex model of organized action. Throughout interrelations, each actor strives toward goals, some of which are true to those displayed, & others (simultaneously, inseparable from the former, & occasionally without actor awareness) are oriented toward the objectives proper to actors themselves, in terms of building, reproducing, or reinforcing a concrete system of action, whether it serves the actor as an individual or as a carrier of a collective project that is restricted & corporatist or global as the defense of fundamental values. The strategies thus applied produce effects on solidarity & democracy, which, in turn, reverberate on the actors (in terms of configuration, organization, & action mode) & on established or reestablished relationships. Having noted the effects of this system—a teleonomic producer of solidarity—the emerging balance between the production of solidarity & social control as far as representations & practices are concerned can be appreciated.

98S33772 / ISA / 1998 / 11013

Bourgeault, Ivy Lynn, Angus, Jan & Fynes, Mary (Centre Health Studies York U, Toronto Ontario M3J 1P3 [tel/fax: 416-736-2100/736-5986; e-mail: ivyb@yorku.ca]), **Gender, Medical Dominance and the State: Nurse-Practitioners and Midwives in Ontario.**

¶ Explores the push for reintegration of excluded female health professions (ie, midwifery) & expansion of the scope of practice of subordinated female professions (ie, nurse-practitioners) in Canada, based on documentary & interview data for Ontario. It is found that such efforts are a product of both the state's strategy of containing health care costs & the increasing political influence of women's groups on state policy. Implementation of such policies, however, is more difficult in a system still entrenched with the power & privilege of medicine. The midwifery & nurse-practitioner cases help illustrate the dynamics of gender, medical dominance, & the state in the health care division of labor.

98S33773 / ISA / 1998 / 11014

Bourgeault, Ivy Lynn, Luce, Jacquelyne & MacDonald, Maggie (Centre Health Studies York U, Toronto Ontario M3J 1P3 [tel/fax: 416-736-2100/5986; e-mail: ivyb@yorku.ca]), **The Integration of the "New" Midwifery into Ontario Hospitals: The Views of Midwives,**

Nurses and Physicians.

¶ The recent (re)integration of midwifery into the Ontario health care system not only represents a significant achievement, but also marks a new set of challenges for this profession, particularly in the hospital setting. The literature of midwives' integration into hospitals generally points to how midwifery practice has been constrained, but focuses almost exclusively on extended-role nurse-midwives restricted to hospital practice. Ontario midwives have now been integrated in ways more comparable to those of family physicians, ie, with hospital admitting privileges. Documentary & interview data are drawn on to discuss this unique case, focusing on the views of key stakeholders (midwives, nurses, physicians, & administrators) & the impact of hospital integration on contemporary midwifery.

98S33774 / ISA / 1998 / 11015

✓ **Bouzada, Xan** (Facultad Ciencias Sociales U Vigo, Pontevedra E-36002 Spain [tel/fax: 86-801988/801980]), **El desarrollo local en la encrucijada entre la memoria de la cultura popular, el juego de las estrategias actoriales y la invención del futuro: el caso de Galicia** (Local Development at the Crossroads between the Memory of Popular Culture, the Actor's Strategies Game and the Invention of the Future: The Case of Galicia). (SPA)

¶ Proposes that a transformation of the social actors' "ethos" is presently occurring in rural Galicia, Spain, fluctuating between the previously dominant sociocultural modes. Organizational strategic analysis, along the lines of the proposals by M. Crozier & E. Friedberg, is applied to cases from three areas of Galicia, where the processes of local development took place in the framework of the European Union "Leader" programs. Results allowed conclusions regarding the actor's typologies, especially some defining features of the enterprising subgroup. Interpretative keys of the causes & genesis of the conflicts & the dynamics of cooperation are proposed.

98S33775 / ISA / 1998 / 11016

✓ **Bovone, Laura** (U Cattolica Sacro Cuore, I-20123 Milan Italy [tel/fax: 01139-2-72342598/72342552; e-mail: lbovone@mi.unicatt.it]), **Clothing: The Authentic Image?**

¶ Examines the concepts of image & authenticity, drawing on fieldwork in Milan, Italy, comprising individual or group in-depth interviews with 70 youths, ages 16-26, concerning their way of dressing. Results & connections that the respondents made between clothing & image, & the unexpected finding of a link between image & authenticity, are discussed in the context of previous understandings of the "imaginary," theoretical debates on authenticity, & the larger field of discussion of identity. It is argued that, although these youths appear to refuse involvement in the surrounding society, they are, in fact, totally immersed in it. What they say is not far from what sociologists theorize, not only when focusing on youth culture, but especially when considering the main features of contemporary culture.

98S33776 / ISA / 1998 / 11017

✓ **Bowcher, Wendy L.** (Tokyo Gakugei U, 184-0015 Japan [tel/fax: 81-426-78-1800; e-mail: bowcher@u-gakugei.ac.jp]), **Context and Institutional Talk: An Exploration of Australian Radio Sports Commentating.**

¶ In the context of Australian radio sports commentating on professional rugby, an attempt is made to identify the elements relevant to the categorization of a language activity as institutional talk, drawing on recent work in conversational analysis, particularly, the work on institutional talk reported in Drew & Heritage (1992). According to Drew & Heritage, institutional talk is "goal-oriented in institutionally relevant ways," involves "special & particular constraints," & "may be associated with inferential frameworks." An alternative view of language & context is presented to demonstrate that, to arrive at a description of a type of talk as institutional, the notion of "institutional" needs to be viewed as a continuum along which different types of talk can be placed. Furthermore, the notion of "type of discourse" requires a specific view of the relationship between context & language—one in which context is in dialectic relation with language. A consequence of such a view is that the means through which one can ascertain what is relevant in context is possible by consulting the language used in that context, ie, the relevancies of context are illuminated in the language used. It is demonstrated that Australian radio sports commentating is a form of institutional talk with a highly complex & predictable context.

✓ **Boyce, Rosalie A.** (Graduate School Management U Queensland, Brisbane 4072 Australia [tel/fax: 61-7-3365-6675/6988; e-mail: r.boyce@mailbox.uq.edu.au]), **Using Profession as a Strategic Resource—The Allied Health Professions: From Allied to Medicine to Allied to Each Other?**

¶ Examines the emergence of "allied health" as a political & organizational entity within the Australian health care system under conditions of health sector reform, & contrasts parallel developments in countries such as the UK & Canada. Focus is on analysis of the contemporary organizational, social, & political conditions that have fostered the emergence of allied health as a "profession community" or subculture, rather than the separatist discipline-based focus of the past in which each profession operated in isolation. Traditionally, allied health professions (despite differences in international definitions) are perceived as distinct disciplines such as physiotherapy, occupational therapy, pharmacy, dietetics, psychology, speech pathology, radiography, etc. The study draws on intensive case studies (including 53 interviews) of local workplace organization in Australian general hospitals in the public sector, showing the means through which the allied health professions negotiate new inter-professional managerial relationships as a consequence of new forms of work organization & management associated with internal market reforms & devolved management to clinical units under medical management. These shifts in internal organization are shown to be linked to the development of allied health as a shared strategic resource & a countervailing source of power to the dominance of medicine in institutional settings. The analytical framework included three dimensions: profession-management autonomy, structural utility, & collective allied health processes. The findings demonstrate the importance of local workplace organization in terms of enhancing or diminishing the position of the allied health professions within the organization & in relation to medical power. The future of the health professions is examined in terms of the tension between the development of a nationally organized workplace-driven collective allied health movement, together with the emergence of a new profession-management worker, the allied health director, & the political agenda of long-established professional associations organized as single discipline entities.

98S33778 / ISA / 1998 / 11019

✓ **Boyce, Rosalie A.** (Graduate School Management U Queensland, Brisbane 4072 Australia [tel/fax: 61-7-3365-6675/6988; e-mail: r.boyce@mailbox.uq.edu.au]), **Managerialism and the Politics of the Market: Allied Health Professionals and the Nature of Expertise and Autonomy in a Market Environment.**

¶ Examines the strategic positioning of allied health professionals following sweeping changes in the social policy & managerial context of the provision of public sector health services. Using a case study of & secondary data on the Australian health system, the impact on traditional notions of professional autonomy & expertise are examined in terms of the shift from a professionally (medically) dominated system in which professional judgment was the currency of service allocation decisions to a more market-driven & managerialist system characterized by a purchase (funder)-provider model of service organization & the use of internal & external contracting. In an environment favoring apparent customer sovereignty while reducing provider influence, the level of autonomy of allied health professions are shown to be subject to the dual influence of established forms of medical dominance & emergent managerialism. Strategically, the professions have increasingly drawn on the entrepreneurialism of a more enterprising business culture in their institutional operations & a holistic customer-oriented rhetoric to reposition themselves in the face of the potentially adverse fronts of managerialism & the market. Examined is the tension between these social policy movements & the agency of allied health professionals to reconstruct themselves into a professional project that provides a limited market shelter for their expertise & opens up new forms of business autonomy in the public sector. It is proposed that a likely impact on professional expertise is that the traditional practice model of independent professional expert will be displaced by a market-sensitive service seller model. Likely implications of such a shift in the allied health professionals practice model for clients, & their access to services, are addressed.

98S33779 / ISA / 1998 / 11020

✓ **Boyd, Gary McI.** (Concordia U, Montreal Quebec H3Q 1M8 [tel: 514-848-3459; e-mail: boydg@vax2.concordia.ca]), **Educating for Values Immanent in Five Levels of Sociocybersystemic Being.**

¶ Examines the exhibition of particular kinds of values inherent in each

b

of five sociocybersystemic emergent levels of being. Concepts discussed are (1) an evolutionarily emergent, distinct cybersystemic & sociocybersystemic level system & (2) values that are inherent in the five most recently emergent (sociocybersystemic) levels. It is argued that a conceptual framework of emergent cybersystemic levels is a better way of modeling reality to promote understanding, lead to further possibilities, & probabilistically predict & engineer behaviors, because it is more coherent with the rest of science than are either reductionist or system dynamics models taken alone. An analysis of each of the five emergent levels exhibits the kinds of communicational actions necessary for the survival of sociosystems of that level (& above). These are asserted to be the values immanent in that level of being. It is concluded that, if one accepts the reality of emergent sociocybersystemic levels of being, & if, as an educator, one is concerned to improve the quality & survivability of life, then specifically tailored techniques should be employed to cultivate the values immanent in each of the five sociocybersystemic emergent levels of being.

Boyne, George A. (Business School Cardiff U, CF1 3EU England [tel: 1222-874000; e-mail: sbsgab@cardiff.ac.uk]), **Environmental Change, Leadership Succession and Incrementalism in Local Government.**

¶ Analyzes the determinants of expenditure change in local government. All budgetary outputs may be incremental, but why are some more incremental than others? The general theory tested is that expenditure change is a function of environmental turbulence (ie, changes in service needs & intergovernmental revenues) & leadership succession (ie, changes in party political control & the appointment of new senior managers). A statistical model that incorporates these variables is tested on data for English local government, 1981-1996. The results are compared across several time periods & groups of authorities (eg, London boroughs, metropolitan districts, & nonmetropolitan counties).

98S33781 / ISA / 1998 / 11022

Boyne, Roy (U Teesside, Middlesborough Cleveland TS1 3BA England [e-mail: RoyBoyne@compuserve.com]), **Crash Theory.**

¶ Contemporary Western culture has analyzed the loss of both the future & the past. Confidence in the future is undermined whether one accepts or denies the scientific master narrative of modernity; access to the past is rendered suspect or even impossible by the inevitable ideological gloss of historical interpretation. A powerful case can be made, then, for the supersaturation of Western social life by the present moment—an interpretation that is most strongly encountered in postmodern consumer society theory, yet clearly prefigured by Karl Marx's theory of commodity fetishism & evident in the work of Sigmund Freud. The cinematic oeuvre of David Cronenberg has been concerned with exploring the supersaturation of the present by the present in films such as *Videodrome* & *Crash*. In particular, it can be argued that the latter film provides the most powerful metaphor yet constructed for characterizing the contemporary condition of Western modernity—as automobile movement ended, control functions were broken, & the travelers removed to hospital or morgue.

98S33782 / ISA / 1998 / 11023

Brandth, Berit & Kvande, Elin (Dept Social & Political Science Norwegian U Science & Technology, N-7055 Dragvoll [tel/fax: 47-7359-2285/1564; e-mail: bentb@sv.ntnu.no]), **Modernity, State Feminism and Flexible Fathers.**

¶ Examines the radical changes in the Norwegian parental leave system during the last 10 years & its effect on fatherhood, drawing on survey data from about 2,200 recent fathers & interviews with 30 fathers & their spouses in Trondheim. The changes in the system were instituted to strengthen the relationship between father & child & to facilitate greater child care equality between mothers & fathers. During this period, parental leave has increased from 18-45 weeks with 100% pay, or 52 weeks with 80% pay. Benefits of the program include the paternity quota, ie, 4 weeks reserved for the father, & the optional time account scheme, in which parents may combine parental leave benefits with reduced working hours. This makes it possible for parents to return to work earlier & work shorter hours with no reduction in income. The paternity quota was presented as a way of "gently enforcing" fathers to take leave, but it can be seen as an example of "enforced fathering" imposed by the state feminist system. The time account scheme is the ultraoptional flexible system introduced to tailor individual use of the parental leave system. It is found that 75% of all fathers with an earned right to use parental

leave used the enforced 4 weeks, while only 1% of them (& 3% of mothers) used the optional & flexible part of the leave, suggesting that field flexibility & optional choices do not work, but the standardized, modern, nonflexible solution is an approach to get more fathers to participate in child care. Three questions are addressed: (1) How is this radical reform received & used by the fathers? (2) Do they consider the paternal quota as a state intervention into private family life spheres, or do they see it as a positive privilege given to them as men? (3) What are the possible reasons for the rejection of the postmodern, flexible part of the leave?

Brann, Conrad M. B. (Dept Languages & Linguistics U Maiduguri, PMB 2001 Nigeria [tel: 234-76-232-262]), **Code Alternation in Nigerian Elections.**

¶ Nigerian elections to local, state, & federal government offices, 1996-1998, exemplify the triglottic configuration of territorial/local, communal/state, & national/federal language use. Whereas elections were mainly conducted in languages of the appropriate level, alternation took place with languages of the other two. Analytically, they form one domain of incidence, but individual language events are divisible into language acts & the use of various media. The election agents, candidates, & electors range sociolinguistically from the local to the state & federal levels, with concomitant variations in language use in the triglottic configuration. Here, data were gathered from official & media printed & recorded materials, observation public meetings of various electoral phases, & simple questionnaires. Electoral officials, nominated from the center tended to use the official language, ranging however from the written use of Standard Nigerian English to the oral use of Pidgin. Yet, assistants recruited locally communicated in the local language(s) or the lingua franca. Local electoral candidates, coming themselves from among the electors & expressing their solidarity with them, typically used their common language. Electors, when discussing contestants among themselves, tended to use their own language or the common language. The above typology shows (1) the affirmation of a greater number of local languages than before, (2) use of community languages for interethnic communication, & (3) restriction of official languages to official matters, especially in writing. The electronic media, however, have to concentrate on communal/state & national/federal media of communication, the latter often in the form of Pidgin.

Brante, Thomas (Dept Sociology U Lund, S-22100 Sweden [tel/fax: 46-46222-9629/4794; e-mail: thomas.brante@soc.lu.se]), **General Sociological Theory and STS-Studies.**

¶ Examines why general sociological theory is barely employed in current STS (science & technology) studies. One suggested explanation is that the present diversification of sociology provides no obvious means of applying its theories to the STS domain. It is argued that nonpositivist, causal explanations should be reinstalled as the central concern of sociology. Setting out from the macro-micro & actor-structure issues, an attempt is made to systematize explanatory sociological accounts at different levels. To illustrate, the resulting systematization is applied to a few well-known STS studies. Finally, the merits of an explanatory sociological approach to STS are discussed. It is argued that a reevaluation of the strong program is needed.

98S33785 / ISA / 1998 / 11026

Brante, Thomas (Dept Sociology U Lund, S-22100 Sweden [tel/fax: 46-46222-9629/4794; e-mail: thomas.brante@soc.lu.se]), **Causal Realism, Sociology and Nordic Sociology.**

¶ Employing Thomas Kuhn's notion of crisis, it may be argued that sociology has been in a crisis since the 1960s; ie, far too much time & energy have been devoted to examining the philosophical assumptions of the subject, formulating & comparing rival paradigm candidates, etc, a situation highlighted in the current phase of disciplinary fragmentation. To overcome this dilemma, a new metatheory—causal realism—is proposed, capable of (1) stating some simple but not unsophisticated common goals & assumptions, (2) fostering a reasonably shared identity among the practitioners of the discipline, yet (3) allowing a theoretical & methodical pluralism. Implications of causal realism for sociological research strategies are elaborated & illustrated. Causal realism is then reconnected to postwar, pre-1968 Nordic sociology. It is shown that by discarding the positivistic notions inherent in postwar Nordic sociology, a new, perfectly viable sociological platform & research program, akin to causal realism, emerges. In this manner, the older & somewhat forgotten Nordic sociological tradition can be revitalized as a contribution to discussion of how to resolve current problems of disciplinary fragmentation & reintegration.

Braun, Michael, Alwin, Duane F. & Scott, Jacqueline (ZUMA, D-68159 Mannheim Federal Republic Germany [tel/fax: 49-621-1246176/1246100; e-mail: braun@zuma-Mannheim.de]), **Generational Change in Gender Roles: Western Industrialized and Former Socialist Countries Compared.**

¶ The gender-role attitudes of men & women in former socialist countries—with the exception of East Germany—are much more traditional than their counterparts in Western industrial countries. This difference applies both to perceptions about the potentially harmful consequences of mothers' employment & to more general ideological beliefs concerning the "proper" role of women. Here, data are drawn from the International Social Survey Program to focus on East-West cohort differences in gender-role attitudes & examine the likely role that generational succession will play in future attitudinal change. In former socialist countries, gender-role attitudes seem relatively unconstrained in comparison to the West, & there is little evidence of much support for the package of attitudes & beliefs that support the feminist position. There is also less evidence of cohort differentiation in the East than in the West. What these findings might indicate about the convergence of East-West attitudes is considered, & implications for the progression of gender equality are discussed.

Braungart, Richard G. & Braungart, Margaret M. (Dept Sociology Syracuse U, NY 13244 [tel/fax: 315-443-2346/4597; e-mail: rgbraung@mailbox.syr.edu]), **Life History Analysis of Lajos Kossuth: The Leader of Young Hungary in the Early 19th Century.**

¶ Provides a life-history analysis of Lajos Kossuth, the charismatic leader of one of Hungary's foremost youth movements. Erupting in the early 19th century, the Young Hungary Assoc was part of the larger Young Europe historical generation of youth that challenged the ancien regime & championed nationalism, romanticism, & liberalism. In exploring the intersection between history & the life-course development of Kossuth, focus is given to the interplay between life-cycle, cohort-generational, & period effects as these forces combined in the life of Kossuth & produced a significant political generation in Hungary's history. The emphasis in this life-history analysis is on identifying the dynamics of Kossuth's extraordinary leadership & his ability to act as a major force in creating & mobilizing a constitutional Hungarian nation-state. Attention is also given to the lasting impact of the generational movement of Kossuth's subsequent life-course development & Hungary's history.

Brayfield, April & Mennino, Sue (Dept Sociology Tulane U, New Orleans LA 70118 [tel/fax: 504-862-3001/865-5544; e-mail: aprilb@mailhost.tcs.tulane.edu]), **Academic Representations of Childhood: A Longitudinal Content Analysis of *Journal of Marriage and the Family*, 1939-1997.**

¶ Examined is how scholars have conceptualized childhood in the prestigious US *Journal of Marriage & the Family*, drawing on a longitudinal content analysis of 59 volumes, 1939-1997, to document both quantitative & qualitative trends in academic representations of childhood, popular topics per decade & how the authors' conceptions & (de/re) construction of childhood change over time. Preliminary analysis indicates that, although there has been a dramatic increase in the proportion of articles about children's issues, few authors place children at the center of their research enterprise; most researchers study children from an adult-centered perspective (eg, parenting), thereby ignoring children's agency in the (re)production of their own cultures. Offered here is a more comprehensive & systematic mapping of the intellectual terrain of childhood in the field of family studies in the US.

Breckner, Roswitha (U Halle, Berlin D-10823 Federal Republic Germany [fax: 00-49-30-7870-4516; e-mail: r_breckner@compuserve.com]), **Migration Biographies between 'the East' and 'the West' of Europe: Processes of Constructing Biographical Continuity before and after 1989.**

¶ In East-West migration biographies, the division of Europe became a relevant & even structuring backdrop in terms of polarization between two societal & economical systems until 1989, when, after the fall of the Berlin (Federal Republic of Germany) Wall, another backdrop appeared as relevant in the process of (re)constructing East-West migration biographies: the pre-1945 interrelated European history. Presenting contrasting cases, demonstrated is how the division of Europe became meaningful

in biographical contexts & how migrants from Eastern European Countries, especially coming from Romania to Western Germany, 1968-1989, constructed biographical continuity before & after 1989. Patterns of constructing life stories as "in between" the East & the West of Europe are represented & shown to have served different biographical functions. The tensions as well as the cultural richness of the complex relations between East & West are shown to be, albeit in different ways, constitutive in these types of migration biographies.

Briceño, Miguel Angel (Instit Filosofía U Central Venezuela, Caracas 1041-A [tel/fax: 00582-6930038/6624751; e-mail: mibricen@reacciun.ve]), **University, Knowledge Industries and Sustainable Development.**

¶ The concept of sustainable development denotes the relationship of communities with the environment & the responsibilities of the current generation toward future generations. A sustainable community is one that focuses equally on economic, environmental, & cultural resources & considers not only its short-term but also its long-term needs. New knowledge industries constitute a very important factor because they can put technological change to the service of those communities in their practice of sustainable development. Examined here is the role that the university can & should play in this process.

98S33791 / ISA / 1998 / 11032

Briefs, Ulrich (U Brême Posterholt NL-6061 CD Netherlands [tel/fax: 0031-0475-403343/404066; e-mail: u_briefs_jrs_paris_berlin_p_holt@compuserve.com]), **La Co-détermination à l'Allemande en vue des expériences des derniers années** (The Evaluation of Germany's Comanagement System in View of the Experiences of the Last Few Years). (FRE)

¶ Since the mid-1970s, German employees have been represented on the boards of directors of all large businesses & in a great number of medium-size businesses. It is argued that, contrary to the hopes expressed since the promulgation of the 1976 comanagement law, unions have not known how to turn this situation into an instrument of information & intervention used in the interest of employees. This obstacle is attributed to the internal structural problems of German unions as well as the deterioration of the German social system following reunification. The principal factors involved are synthesized.

98S33792 / ISA / 1998 / 11033

Briefs, Ulrich (U Brême, Posterholt NL-6061 CD Netherlands [tel/fax: 0031-475-403343/404066; e-mail: u_briefs_jrs_paris_berlin_p_holt@compuserve.com]), **La Co-détermination à l'Allemande—exploit ou échec?—Évaluation de l'expérience récente et analyse des perspectives** (Codetermination in Germany—Success or Failure?—Evaluation of Recent Experiences and Analysis of Perspectives). (FRE)

¶ Since the mid-1970s, wage earners have been protected by managerial & watchdog committees in large & medium-sized German businesses, articulating informational, consulting, & codetermination functions. Yet, labor unions have failed to make effective use of these rights, especially following German reunification. While codetermination has been nominally in effect, the employment crisis is evidence of how little impact the legislation has on workers. Here, causes of this situation are traced to labor union structures & practices implemented in the 1950s & 1960s. The effect of German unionism's profound structural reorganization, dominated by a unionist apparatus not open to globalization, is explored. Compounding the problems of increased unemployment is the decline in union membership.

98S33793 / ISA / 1998 / 11034

Briskin, Linda (Social Science Division York U, North York Ontario M3J 1P3 [tel/fax: 416-736-5054/5615; e-mail: lbriskin@yorku.ca]), **Unions and Women's Organizing in Canada and Sweden.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Explores women's union organizing in Sweden & Canada, focusing on the interplay between collective bargaining & legislation in trying to attain equality goals, in particular, around wages. Dominant ideologies about equality & gender are contrasted: In Sweden, emphasis is on common interests between women & men, often expressed in gender-neutral policies that focus on the family & the labor market. In Canada, focus is on diversity & power imbalances that provide support for affirmative

b

action & autonomous organizing by women. Four areas of organizational & strategic interventions are examined: representation, ways of working, separate organizing, & alliances & coalitions.

98S33794 / ISA / 1998 / 11035

Briskin, Linda (Social Science Division York U, North York Ontario M3J 1P3 [tel/fax: 416-736-5054/5615; e-mail: lbriskin@yorku.ca]), **Autonomy, Diversity, and Integration: Union Women's Separate Organizing in the Context of Restructuring and Globalization.**

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Assesses the continued relevance of union women's separate organizing in the context of globalization. Motivation for this organizing is considered, evaluating its success & providing evidence of its growing legitimacy. Analytic tools for exploring this strategy are refined, outlining distinctions, for example, between separate & autonomous organizing, separate organizing & separatism, & constituency building & representation. An essentialist reading of separate organizing is rejected in favor of a more strategic one. Explored are conditions under which such organizing can avoid both organizational & political marginalization, address diversity, & facilitate coalition building. The artificial binary between separate organizing & mainstreaming is rejected in favor of the promotion of both autonomy & integration. A dual structure combining integrated equity initiatives with constituency-based organizing for women & other marginalized groups is proposed as a strategy to foster equity & solidarity & to undercut the worker competition that is central to globalization.

Britto da Motta, Alda (Dept Sociology U Federal Bahia, 40210730 Salvador Brazil [tel/fax: 355-71-247-2978/2800]), **The Dimension of Gender in the Analysis of Aging.**

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Gender & generation, as fundamental dimensions of social life, also correspond to basic- & mutually articulated-categories of analysis of social relations. Being old is a situation lived both homogeneously & differentially according to the gender & social class of individuals in an age group. Gender structures social expectations & informs social action; thus, a gender perspective is especially important in clarifying different life trajectories traced by men & women & how they, as gendered subjects, experience aging in their daily lives & are affected by aging-related public policies. These dynamics are illustrated via findings from research conducted in Bahia, Brazil.

Broadbent, Jeffrey (Dept Sociology U Minnesota, Minneapolis 55455 [tel/fax: 612-624-1828/7020; e-mail: broad001@atlas.socsci.umn.edu]), **Environmental Politics as Multiple-Ontology Systems: A Case Study in Japan.**

¶ Examines the sociopolitical process by which a society recognizes, defines, & responds to an environmental problem, eg, pollution or resource depletion. The process is seen as consisting of diverse ontological dimensions, ie, of fundamentally distinct & autonomous aspects of society that interpenetrate in unpredictable ways to generate the definition & response to a problem. The distinct dimensions are material, institutional, & cultural. These three dimensions manifest in influence exchanges among actors engaged in the sociopolitical process of recognition & response. Depending on the existing amalgam of the three dimensions that characterizes a given site (society, location, era & issue), the relative contributions (weights & specific contents) of the three aspects to the process will differ, leading to site-specific processes. The generality of a given empirical pattern of interpenetration of the three dimensions should be assessed by empirical research. The results of empirical measurement of these three dimensions (& various subtypes) & their relative contribution to outcomes of policy & practice are presented. The data come from a case study of industrial development & environmental conflict in Japan, with the influence exchanges of actors coded to reflect the three-dimensional analytical schema noted above. The findings indicate a shifting predominance of actors & dimensions of sanctions in the political process. The significance of the approach for the general study of environmental sociopolitics worldwide is indicated.

98S33797 / ISA / 1998 / 11038

Brodeur, Jean-Paul (Centre international criminologie comparée U Montréal, Quebec H3C 3J7 [tel/fax: 514-343-6168/2269; e-mail: brodeurj@cicc.umontreal.ca]), **La Recherche et l'évolution de la police (police communautaire et police intensive)** (Research and Changes in Policing [Community Policing and Intensive Policing]). (FRE)

¶ The place of researchers in the formulation, development, & implementation of the paradigm of community policing is evaluated, using a problematic developed in Canada. It is shown that the desire of researchers to expand the police mandate & to decenter it with regard to the suppression of crime has had a paradoxical result, weakening the idea of police duty & reinforcing crime suppression at the expense of duty. The initial goal of tempering the nature of policing has progressively been abandoned in favor of intensive policing, articulated by the concept of zero tolerance for crime & disorder.

98S33798 / ISA / 1998 / 11039

Brogden, Mike (Instit Criminology Queen's U Belfast, BT9 5BY Northern Ireland [tel/fax: 44-01232-335456/664816]), **Deconstructing Age, Crime and Fear.**

¶ Two academic traditions have been evident in the approach to older people's fear of crime. Administrative criminology attempted to dispel fear by denying its substance, drawing on evidence primarily from orthodox surveys of victim-of-public-space crimes. A second, current, approach argues that the fear is often legitimate; however, its substantiation depended on two key elements—recognizing the crimes of private as opposed to public space & deconstructing the notion of the elderly into its constituent elements, especially those of gender, ethnicity, & socioeconomic class. The latter approach is elaborated, drawing on current work in the UK.

98S33799 / ISA / 1998 / 11040

Brooks, Ethel C. (Dept Politics New York U, New York 10003 [tel/fax: 212-998-8500/995-4184; e-mail: ecb1656@is.nyu.edu]), **Maquilas and Sweated Girls: A Study of Transnational Protest and the Garment Industry in El Salvador.**

¶ The globalization of manufacturing has given rise over the past few years to the globalization of industrial protest. Movements to improve working conditions now organize transnational campaigns. Like corporations themselves, the campaigns are increasingly concerned with affecting a product's image, marketing, & consumption. Benefits & drawbacks of this new method of protest for the people who work in the factories that are the focus of the corporate campaigns are examined by studying the protest campaign carried out by the National Labor Committee & other US-based nongovernmental organizations against the maltreatment of workers & violation of labor codes at the Mandarin garment factory in El Salvador's San Marcos Export Processing Zone (EPZ). Mandarin produces clothes for US retailers, eg, the Gap, companies central to an industry exemplifying the most advanced forms of globalization, labor exploitation, & advertising. The campaign's tactics were aimed at the corporate image of the Gap & included consumer boycotts, protests at retail outlets, & a US speaking tour of Mandarin workers. The campaign succeeded by 1996 in setting up a "Labor Code of Conduct" for all Gap suppliers & in forming an Independent Monitoring Group at Mandarin for labor conditions at the factory. Focus is on the relationship between the campaign & the shopfloor, specifically, on how the mostly women workers at Mandarin are represented in the corporate campaign & on the manifestations of the campaign at the factory, in the EPZ, & in the daily lives of the women at the center of both the production & the protest campaigns.

Brooks, Herb (Voters Revenge Press, 11039 North 105th Ave Sun City AZ 85351-4103 [tel: 602-977-5715]), **The Cost of Bribery in the U.S.A..**

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ The real cost of bribery is several times the actual amount because of the multiplier effect. Before the savings & loan (S&L) collapse, the median cost was about 15 times the amount of the bribe (19 cases). For the S&L cases, the median multiplier in loan frauds was 21 (7 cases) except for legislators, for whom it was about 10,000 (6 cases). Financing a legislator was an excellent "investment": the median cost/loot multiplier was 6 (12 cases). Much of the loot went to foreigners. Sending money to foreign countries invites corruption, & national boundaries screen bribes.

At least \$1 billion of the S&L loot went into offshore bank accounts. The high cost of bribing congressmen led to investigation of other congressional activities. For farm price supports, the median multiplier was 4,127 (15 cases). The transfer efficiency of public money to the farmers (usually large corporations) was about 33%. The other 67% was wasted. The loot/bribe multiplier exceeded 1,000. Much of the sugar subsidy went to foreigners. Therefore, bribery is objectionable for economic as well as ethical reasons.

98S33801 / ISA / 1998 / 11042

Brose, Hanns-Georg (Gerhard-Mercator-U GH Duisburg, D-47057 Federal Republic Germany (tel/fax: 0203-379-2739/4350; e-mail: brose@uni-duisburg.de)), *Sociology of Work in a "New Working Society"*.

¶ Perspectives for a sociology of work in a "new working society" are outlined in the context of massive change in the model of mass production & Fordist regulation. New patterns of the division of labor on the international level, between services & production, between & within firms, & between the sexes all have consequences for the rearrangement of industrial & employment relations, career patterns, work-time arrangements, & lifestyles. Changing relationships between producing/providing & consumption/application affect the management of the interferences between the different stages of the value-added chain, the evolution of a postbureaucratic structure of work organizations & employees' social vocational skills. These changes of the model of mass production gain still more importance in the context of the crisis of the welfare state. Hence the sociocultural model of the postwar working society of the Western world appears to be fading. Implications for a reorientation of the sociology of work are discussed.

98S33802 / ISA / 1998 / 11043

Brown, Flor (U Nacional Autónoma México, Mexico DF 04510 (tel/fax: 5-622-2341/616-0834; e-mail: brown@servidor.unam.mx)), *The Mexican Industrial Structure in the Open Commercial Context*.

¶ Analyzes the impact of economic liberation on the industrial structure of Mexico during the 1980s. Numerous questions are raised in regard to Mexico's place in the global economy. It is not necessarily true that the changes will result in Mexico becoming a major marketing power. The insertion of Mexican industries in the international market has implications for many companies in terms of competitive strategies & productivity.

98S33803 / ISA / 1998 / 11044

Brown, Richard (Dept Sociology U Maryland, College Park 20742-1315 (tel/fax: 301-405-6393/314-6892; e-mail: rbrown@bssl.umd.edu)), *Post-Industrial Production Postmodern Selves*.

¶ The focus of this examination of postindustrial production is on two questions: (1) What is the relation between modes of production & modes of identity, particularly in the current era—i.e., the times/places within the core states characterized by postindustrial production & postmodern modes of images & information? (2) What identities emerge for the communicative flows, from the shift toward modes of information & consumption, from the movement in advanced sectors of both manufacturing & service, from Fordism to flexible production?

98S33804 / ISA / 1998 / 11045

Bruederl, Josef, Diekmann, Andreas & Engelhardt, Henriette (Institut Soziologie U Munich, D-80801 Federal Republic Germany (tel/fax: 0049-89-2180-2901/2922; e-mail: uf341ga.mail.lrz-muenchen.de)), *Premarital Cohabitation and Marital Stability in Germany*.

¶ Data from the West German family survey of 1988 are used to explore whether premarital cohabitation influences the divorce rate of a subsequent marriage. Contrary to the "weeding-out" hypothesis, which postulates that cohabitation should decrease divorce rates because high-risk partners will separate before marriage, results indicate that cohabitation increases the risk that a subsequent marriage will end in divorce. However, more sophisticated analyses hint at the possibility that this result is due to self-selection: high-risk persons choose cohabitation. Using a bivariate probit model, it is shown that cohabitation—net of self-selection—actually decreases the risk of divorce.

Brunell, Laura (Dept Political Science U Colorado, Boulder 80309-0333 (tel/fax: 303-492-6632/0978; e-mail: brunell@colorado.edu)), *Embedding the Local State: Urban Activism in Post-Communism*.

¶ The role of the postcommunist local state in fostering or inhibiting the organization of civil society is examined, using the Polish cities of Krakow & Lodz in illustration. Focus is on relationships developing between the local state & nongovernmental organizations in three policy areas: economic development, environmentalism, & domestic violence. Also considered is how the governance capacity of the local state is enhanced or hindered by its relationships with organizations active in these policy areas. While governance capacity is found to be spatially differentiated, variance across issue areas in each city is also evident; part of this can be attributed to pre-1989 differences in the organization of civil society in each city, & part to the organization of the postcommunist city governments. It is argued that strengthening postcommunist civil societies & bolstering the capacity of states is contingent on the development of an institutional infrastructure to mediate the relationship between nongovernmental organizations & city governments.

Bryant, Christopher G. A. (Inst Social Research U Salford, M5 4WT England (tel/fax: 161-295-3366/5424; e-mail: c.g.a.bryant@sociology.salford.ac.uk)), *The Uses of Giddens' Structuration Theory*.

¶ Examines the application of Anthony Giddens's structuration theory by scholars & empirical researchers in a wide range of disciplines. It is suggested that the frequency of the usage may divert attention from the

b

selectivity of the theory used; the duality of structure & its dimensions, the stratification model of the agent, time-space, & the dialectic of control may figure prominently, but what else? Reflections on the uses of theory in general, & structuration theory in particular, are offered.

98S33810 / ISA / 1998 / 11051

Brym, Robert J. (Dept Sociology U Toronto, Ontario M5P 1A3 (tel/fax: 416-787-0334/0335; e-mail: rbrym@chass.utoronto.ca)), **Project Babel: A Trilingual Sociology Journal on the World Wide Web.**

¶ The International Sociological Assoc (ISA) is a global organization with three official languages. However, its membership & journals policies reduce access to its publications. One must pay a costly membership fee to subscribe to *International Sociology* & *Current Sociology*, both published only in English. Thus, from the point of view of access to ISA publications, globalism & trilingualism are largely ideals. Proposed here is "Project Babel," a cheap means of publishing a trilingual ISA journal on the World Wide Web & thereby helping to move globalism & trilingualism from ideal to practice: (1) All national associations that belong to the ISA & publish journals in the ISA's official languages would be required, as a condition of ISA membership, to submit current issues of their journals to the ISA in machine-readable form within 6 months of publication, & the ISA would submit current issues of its journals. (2) Articles from these journals would then be placed in a database stored on the ISA Web site, set up so that it is keyword-searchable in any of the ISA's official languages & password accessible to all ISA members. (3) Existing translation software would be licensed, enabling users to obtain rough but virtually instant translations of articles in any of the ISA's official languages (Visit <http://babelfish.altavista.digital.com/cgi-bin/translate?> on the World Wide Web for a sample of this software.)

98S33811 / ISA / 1998 / 11052

Bu, Xin (Family Ethics & Women's Development Research Centre, Apt 1101 Dongzongbu Hutong 19 Beijing People's Republic China 100005 (tel: 86-10-65269239)), **The Family Value of Human-Centered Neutrality.**

¶ Argues that neutrality is the truth of the universe, & for human beings, it is human-centered neutrality. The two extremes—excess & reachlessness—cause only harm. In the Orient, ancient Chinese philosophy put forward yin & yang, the two opposing principles in nature. Based on cultivating body & mind, Confucianism & Taoism maintained the golden mean—neutrality of yin & yang. In the Occident, the ancient Greek philosopher Diogenes maintained taking the study of human beings as the starting point. Aristotle put forward *mesotes*, the principle of moderation between two extremes. Human-centered neutrality means human-centered sustainable development, which is the convergence of the Orient & the Occident. In the contemporary People's Republic of China, there are 300 million families formed by 1.2+ billion people. Undergoing the long interaction between egoism & altruism, people attach more importance to the family than to the individual or the collective. Here, interviews & documentary data are drawn on to explore family values in terms of (1) the two extremes—excess & reachlessness; & (2) the combination of traditional Chinese culture with modern Western humanism, science, & technology to realize the family value of human-centered neutrality.

98S33812 / ISA / 1998 / 11053

Buchanan, Bruce H. (4690 Dundas St West, Toronto Ontario M9A 1A6 (tel: 416-231-6235; e-mail: bbuchan@netcom.ca)), **Information Requirements for a Viable Society.**

¶ Most current sources of public information serve specialized interests &/or corporate sponsors. Yet, many real problems of societal concern require more comprehensive & integrated approaches for their management, eg, ecology & sustainable development issues. All living systems need brains to manage variety & uncertainty & to increase freedom for adaptive responses. Societies as wholes (as supersystems) require adequately organized & integrated communication structures & processes, & relevant feedback to give direction to values of common benefit. Outlined here is the rationale for involving a variety of professionals in assessments of societal problems & priorities, strategies, & tasks, utilizing systems methods & modern technologies. Designed for appeal to public opinion over the heads of governments & corporate interests, any positive influence would depend on better meeting the public need for useful information.

98S33813 / ISA / 1998 / 11054

Buchmann, Claudia (Dept Sociology Duke U, Durham NC 27708-0088 (e-mail: cbuch@soc.duke.edu)), **Family Background, Parental Perceptions and Labor Demand: The Determinants of Educational Inequality in Contemporary Kenya.**

¶ Combines status attainment research with research on values & beliefs to examine educational stratification in the developing country of Kenya. Interview data from 597 Kenyan households, subjected to logistic regression analysis, are used to examine the impact of family background, family structure, division of household labor, & a range of parental perceptions on children's educational participation. In addition to parents' educational background & household economic resources, parental expectations for future financial help from children & perceptions of labor market discrimination against women are significant determinants of children's school enrollment. Patriarchal norms & the division of household labor have no effect. The analysis reveals that Kenyan families generally exhibit a high demand for education & base their educational decisions on the future welfare of the family. Thus, educational inequalities are better understood as outcomes due to the rational evaluation of returns to schooling for different children than as outcomes due to gender stereotypes, traditional views, or the reliance on child labor. Findings challenge traditional explanations of educational inequality in less-industrialized societies & suggest that policies designed to spark demand for schooling in developing countries may be misguided.

Buck, Nicholas Hedley & Harloe, Michael (ESRC Research Centre Micro-Social Change U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel/fax: 44-1206-873066/873151; e-mail: nhb@essex.ac.uk)), **Social Exclusion in London.**

¶ Explores processes underlying exclusion in London, England, &, in doing so, sheds light on the concept of social exclusion, which has come to dominate European discourses on urban poverty. Critiqued is the concept's narrow focus on labor market exclusion & the (mainly supply-side) barriers to labor market integration, including the alleged disincentive effects of welfare benefits & deficits in education & training (exemplified by the British government's Welfare to Work Programme). Analyses show that London's patterns of inequality cannot be seen either as a consequence of simple labor demand deficiency, to be cured by targeted economic growth, or as a consequence of the disincentive effects of welfare benefits, to be cured by restricting access. Following recent work by Kesteloot, drawing on Polanyi, it is shown how social exclusion in London is best seen in terms of three main modes of exclusion: (1) the market, especially the labor market, where economic restructuring has led to certain groups suffering a loss of market integration, with limited access to the labor market; (2) citizenship, or access to state redistribution, where declining quality & level of state services & benefits, as well as increased difficulties of access, have acted as exclusionary processes for those who are reliant on the state; (3) community or reciprocity, where changes in households & social networks, as well as processes affecting groups defined by race or disability, increase exclusion through social isolation. Demonstrated is how these modes of exclusion interact & in some instances, reinforce one another in London & how the diversity of processes challenge the more simple-minded policy approaches to social exclusion. Implications for relationships between European discourses around social exclusion & disparate debates on urban poverty in other parts of the world are considered.

98S33815 / ISA / 1998 / 11056

Buckley, Walter (20 Riverview Road, Durham NH 03824 (tel/fax: 805-898-0786/5006; e-mail: wbuckley@christa.unh.edu)), **Mind and Brain: A Dynamic System Model.**

¶ Presented as a scientific approach utilizing concepts of modern science & technology, outlined is a systemic process model of mind-brain relations & the generation & maintenance of consciousness & mental events in terms of an organism-environment complex recursive loop. A brain-alone theory is questioned, but the nervous system is given its due in the broader loop, thus avoiding a dualism as the only alternative to brain physicalism. Consciousness & mentality are seen as dynamic system processes, not entities with a spatial or temporal locus. Phases of this organism-environment loop, in which conscious events are generated, are discussed: sensory input, perception & cognition, decision, & motor output back on to the environment. If the loop is broken for a long time, consciousness is impaired or ceases. Conceptual stumbling blocks to a scientific theory are addressed, & resolutions suggested.

98S33816 / ISA / 1998 / 11057

Budowski, Monica & Guzman Stein, Laura (Programa Interdisciplinario Estudios Género U Costa Rica, San José [tel/fax: 506-234-14-95; e-mail: mmmsss@sol.racsa.co.cr]), **Strategic Gender Interests in Social Policy: Empowerment Training for Female Heads of Households in Costa Rica.**

¶ The Program for Holistic Formation of Low-Income Female Heads of Households, in Costa Rica's National Plan to Combat Poverty, aims to reach 45,000 women throughout the country to improve their human capital, professional & social resources, living conditions, & gender equity. The program's first course hopes to initiate a process of empowerment that enables women to actively pursue their strategic gender interests to realize their practical gender needs. Evaluation of the program's five courses in two marginal urban localities of San José (with 152 participants) reveals what has been achieved & what is possible. Data from short standardized questionnaires, group discussions, & qualitative in-depth interviews of about 20% of participants revealed practical problems in the definition of female heads, the selection procedure, & incentives to motivate women to participate. While the course did not offer a basis for longer-term organization & leadership apprenticeship, it did facilitate personal contacts & open new topics of discussion. Participants benefited, regardless of their conjugal status, in terms of self-esteem, self-consciousness, & gender awareness—requisite for any further coping endeavor. The end of the weekly meeting however, was perceived as abrupt; the women felt they were left alone in a barely begun process of change. Continued monthly meetings to consolidate the process initiated are suggested.

98S33817 / ISA / 1998 / 11058

Bühler-Niederberger, Doris, Hungerland, Beatrice & Bader, Arnol (U-Gesamthochschule Uppertal Bergische, Wuppertal D-42119 Federal Republic Germany [tel/fax: 202-439-2283/2431; e-mail: buehler@uni.uppertal.de]), **The Public Image of Childhood in Recent Electoral Campaigns.**

¶ As a moral instance & a minority, children are important for political parties & organizations in gaining public support or for disqualifying opponents focusing on images of the endangered & dangerous child. Here, it is argued that such maneuvers are part of campaigns that ignore unequal distribution & even aim at enhancing inequality (eg, further limiting the rights of children). Purely moral campaigns use the child as a symbol of the innocence they plan to reestablish. The topic of the endangered & dangerous child was seen in the recent German electoral campaign, internationalized by virtue of its reference to analogous attempts in the US & England. In this sense, it is not only a national matter, but a moral enterprise wherein children can save the world. A content analysis of newspaper articles, rooted in a broader analysis of public evaluations of children, illustrates.

98S33818 / ISA / 1998 / 11059

Buikis, Ardis (Science & Dialogue Centre Latvia, Akademijas sq 1 Riga LV-1524 [tel/fax: 722-5674/7520; e-mail: buikis@com.latnet.lv]), **The Evolution of Humanity from an Element of Biosphere to Noosphere through Dissipative Structures.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Explores human evolution in terms of the transition from biospheric to noospheric element, drawing on synergetic notions. Rapid evolution proceeds in a bounded space, with resultant objects termed dissipative structures. Their formation presents a general property of nonlinear system evolution, which does not depend on the peculiarities of the system. It cannot be doubted that the evolutionary process of humanity—or its separate part—must be related to nonlinear processes. Regions of this dissipative structure, where an accelerated evolutionary process occurs, are logically termed nooms (analogous to parts of the biosphere, bioms); thus, the noosphere could result from the confluence of various forming nooms.

Bulmer, Martin (Dept Sociology U Surrey, Guildford GU2 5XH England [tel/fax: 44-1483-259456/259551; e-mail: m.bulmer@soc.surrey.ac.uk]), **Applying Sociology to Policy: What Does This Mean in the Context of Educational Research or Criminology?**

¶ The "engineering" & "enlightenment" models are two ideal types of the relationship between sociological research & policy making. Ex-

plored here are issues raised by the models in the context of the relationship between research & policy making in education & criminology in the US & GB at particular periods. The complex ways in which knowledge & policy formulation intertwine suggest that neither model provides a completely adequate formulation of the influence of sociology on public policy.

98S33820 / ISA / 1998 / 11061

Bulmer, Martin (Dept Sociology U Surrey, Guildford GU2 5XH England [tel/fax: 44-1483-259456/259551; e-mail: m.bulmer@soc.surrey.ac.uk]), **The Social Survey Question Bank on the World Wide Web: A New Experiment in Research Resourcing and Teaching Support.**

¶ The UK Economics & Social Research Council supports the Centre for Applied Social Surveys (CASS), whose aim is to raise standards & appreciation of professionally conducted social survey research in the UK, in developing a Question Bank on the World Wide Web intended to be an electronic resource; it has been open to users since Nov 1996 (<http://www.scpr.ac.uk/cass>). The CASS Social Survey Question Bank contains information on how best to obtain standardized measures of human beings & their attributes, using survey questionnaires. One major component of the Question Bank is copies of questionnaires used in major UK social surveys. The Question Bank is designed to help (1) social researchers devising their own survey questionnaires by providing easily accessed illustrations of how the topics with which they are grappling have been handled/measured in other professionally designed surveys; (2) secondary analysts of survey data; & (3) teachers of survey method. The Question Bank contains a large number of questions that have been used in major quantitative social surveys in the UK, shown on their original context. The Question Bank exploits the latest technology to make material available. Most of the survey questionnaires are scanned & held in portable document format, requiring once-only downloading but offering greater flexibility in presenting material. Examples from the CASS Question Bank Web site are presented to discuss its various uses in sociological research & consider the creation of Web resources that are more like an encyclopedia than a notice board.

Bulmer, Martin (Dept Sociology U Surrey, Guildford GU2 5XH England [tel/fax: 44-1483-259456/259551; e-mail: m.bulmer@soc.surrey.ac.uk]), **The Myrdal's Chequered Family History: Does the Life Have Any Relevance to the Work?**

¶ Gunnar & Alva Myrdal were each world-renowned sociologists in their own right, producing highly original & pioneering works of social science, as well as being prominent political & public figures in Sweden & on the world stage. Both received Nobel prizes. Yet, their family life was dominated by Gunnar Myrdal's self-centered egocentrism, which subordinated Alva Myrdal's career to his needs, led to a lasting rift with their son Jan, & later, a searing analysis of the family dynamics by their daughter Sisella. Progressive ideas did not find expression in personal relations in the family. Investigated here is whether this has any relevance to how the value of their work is assessed today; ie, is there any relationship between the validity of the scholarship that an individual produces & the circumstances under which it is produced?

98S33822 / ISA / 1998 / 11063

Bulz, Nicolae (Ministry National Defence, str Dionisie Lupu nr 50 et 4 ap 9 sector 1 R-70184 Bucharest op 22 Romania [e-mail: fudulu@id.cid.ro]), **The Decisional (Meta)Equilibrium and the Sociocybernetics of the Operative Actions.**

¶ Examines relations among constraints implied by the sociocybernetics of operative actions (as a specialized variety of sociocybernetics). A relation of comprehension (no explanation) is possible, starting with the idea that the social world becomes real (social) only through the existence-reflection connection. This state draws out certain mental constructs (the operational "visible" peaks connected to mental concepts): real (hypothetic) system; model (related to real system); ideal system/norms, rational subject; profound zones (temporary more impenetrable to rational subject competences); responsibility zones (narrow path between security & evolution of the cycle, ie, real system <=> model <=> ideal system <=> rational subject <=> real systems), etc. All these mental constructs belong to a general epistemic base. The sociocybernetics of operative actions represents & solves operative problems (local to global). Its comprehension is drawn related to the general epistemic base, & one aim is elicitation of knowledge across specific constraints. Such elicitation exists if the rational subject (per the general epistemic base) produces

b

statements & reduces them to operative messages; analysis of any statement sets up a specific string. This communication enfolds the mental construct of decisional (meta)equilibrium as a turning point of this specific string.

98S33823 / ISA / 1998 / 11064

✓ **Bunton, Robin** (Centre Social & Policy Research U Teesside, Middlesbrough Cleveland TS1 3BA England (e-mail: r.bunton@tees.ac.uk)), **Drugs, Technology and the Dangerous Body**.
 ¶ Argues that the intoxicated body can usefully be considered a hybrid or transformed body alongside prosthetic bodies, cyberbodies, & other bodily transgressions. Such an approach throws light on how the intoxicated body & the identity of the drug user have become fabricated as a threat to civil society over the last 2 centuries. Examples in literature & science illustrate.

98S33824 / ISA / 1998 / 11065

✓ **Bunton, Robin, Green, Eileen & Dewhurst, Wendy** (Centre Social & Policy Research U Teesside, Middlesbrough Cleveland TS1 3BA England (e-mail: r.bunton@tees.ac.uk)), **Risk, Gender and Young Bodies**.
 ¶ Drawing on data from a 3-year UK project, examined are young people's perceptions of risk, directly problematizing notions of risk, fate, & chance. It is argued that, because young people's experiences continue to be shaped by social dimensions such as class & gender, risk behavior must be analyzed in context. Illustrated is how identity & the gendered body are articulated through differing dispositions toward risk & different risk management strategies. Such differences are related to other more general cultural coding across areas, eg, crime, relationships, & the nature of men's & women's bodies.

98S33825 / ISA / 1998 / 11066

✓ **Bunwaree, Sheila** (Faculty Social Studies U Mauritius, Reduit), **Learning Outcomes and the Trajectory of Youth in Mauritius**.
 ¶ Argues that the formal education system in Mauritius mostly benefits the privileged youth while pushing a large section of youth to the margins. A brief history of Mauritian education highlights how it has shifted from being extremely discriminatory & exclusive during the colonial period to being more democratized in the postcolonial period. However, it is contended that, although the system is less discriminatory, it remains very elitist, privileging those who possess the linguistic, economic, & cultural capital required by the school. Also, demonstrated are the effects of a very fierce competitive examination, which pushes large segments of Mauritian youth out of the system at a very young age, often to become socially excluded. Their futures are unplanned, & their trajectories often remain unknown. How those with the highest home-based entitlements take the greatest advantage from state entitlements is shown. Those better off attend the star schools as a consequence of their "good" performance, & government expenditure is highest in these schools. It is concluded that, unless there are efforts to make the system more equitable, not only will a large section of Mauritian youth become disempowered, but the country, which is resource poor, will also find it very difficult to sustain its competitive edge in the global economy. Suggestions are made for reforming the system.

98S33826 / ISA / 1998 / 11067

✓ **Burch, David & Goss, Jasper** (Griffith U, Nathan Queensland 4111 Australia), **Globalisation and the Emergence of Agri-Food Conglomerates in the East Asia Region: Studies from Thailand and the Philippines**.
 ¶ Prior to the crisis in the Southeast & East Asian political economy, there emerged, in the agrifood systems, companies of global significance. The rise of locally emergent agrifood capitals was a reversal of orthodox assumptions, with these factions dominating regional markets & penetrating US & European agrifood systems of production & distribution. Presented here are two particularly dynamic examples of this: the Charoen Pokphand Group from Thailand & the San Miguel Corp of the Philippines. The current crisis in financial & productive systems has particularly undermined their ability to maintain continued movement beyond their immediate markets. Discussed are the companies' historical development; roles in organizing production, marketing, & retailing; & relationships with institutional & governing bodies. The impact of the current crisis is assessed with reference to the ability of these factions to withstand continued transformations in their profitability & mobility.

98S33827 / ISA / 1998 / 11068

✓ **Burch, Michael** (U California, Davis 95616 (tel/fax: 530-752-3686/6681; e-mail: mdburch@ucdavis.edu)), **Religion, Sport, and the Male Body: Glorifying Masculinity in the Ancient World and Today**.

¶ Although sport is not religion per se, essential characteristics shared by sport & religion are considered, suggesting that a sociohistorical analysis can demonstrate both how sport & religion are intertwined & the role of gender & nationalism in this relationship. By looking at religion & athletics in the ancient world (Greco-Roman religion & Stoic philosophy), as well as at sport & what some sociologists have termed civic religion in US society, it becomes more evident why nationalism & especially masculinity are so closely aligned with sport & religion. At the same time, the female body has played a critical role throughout Western history as the antithesis of the male body. This role has served to accentuate the social construction of the all-sufficient & -powerful male body set in opposition to the weak & inadequate female body. The consequence is that society distances women's bodies (& therefore women) from sport & religion. For women to occupy more "male space," their somatic expressions are often encouraged to become "male-like."

✓ **Burke, Mike** (Dept Politics Ryerson Polytechnic U, Toronto Ontario M5B 2K3 (tel/fax: 416-979-5000/5289; e-mail: mkburke@acs.ryerson.ca)), **Relegating Health Care in Canada**.

¶ The discourse of efficiency poses a direct threat to the publicly funded system of health care. Efficiency is the major principle driving the restructuring of Medicare. This concern with efficiency devalues the relevance of the five criteria of the Canada Health Act & leads to the erosion of the quality of the health care system. The dominant meaning of efficiency has three major components: efficiency is defined as the predominant criterion of public policy evaluation; the public delivery of health services is viewed as inherently inefficient; & efficiency is equated with cost containment. This discourse of efficiency has two important policy implications: it privileges both the commodification & the relegation of health care. The discourse of efficiency provides an ideological rationale for commodifying health by asserting the superiority of markets over states. It justifies relegating health, or downloading health services, onto the family & the voluntary sector, which lack the resources to provide quality care. The promise of efficiency is better care for less money. The practice of efficiency is compromised care for more money, as quality declines & health costs are not eliminated but redistributed to other parts of the system in ways that generate additional social costs.

98S33829 / ISA / 1998 / 11070

✓ **Burlamaqui, Leonardo** (U Candido Mendes, Ipanema Rio de Janeiro Brazil (tel/fax: 5521-5216465; e-mail: lburlamaqui@unikey.com.br)), **K. Polanyi as a Key to the Institutional Structure of East-Asian Capitalism**.

¶ Until recently, the great majority of studies about Karl Polanyi have been concerned mostly with analysis of his thought & the originality of his historical vision, rather than with his theoretical insights. Polanyi has been recast mainly as the "most acute critic of the self-regulating market approach" or as the father of the "embeddedness approach" in economic sociology. Both are true, but this perspective understates his contribution to the analysis of contemporary capitalism. That situation is beginning to change. Polanyi's conceptual framework is being reworked as a valuable tool to deal with the current dynamics of capitalism. This track is followed here, aiming to take Polanyi's idea of the economy as an instituted process—particularly his concepts of "reciprocity," "redistribution," & "markets"—to show how they can be used as interpretative complementary devices for understanding the coordination of an economic system propelled by innovations, dependent on credit, surrounded by radical uncertainty, & prone to instability.

Burnier, Michel (Centre Pierre Naville U Evry, blvd Coquibus F-91025 Cedex France [tel/fax: 33-1-43616478/44277887; e-mail: Evelyne.Fabre@socio.univ-evry.fr]), **A New Profession: Go-Between in the Technopoles World Movement.**

¶ Technopoles link universities, firms, & local bodies, creating a new kind of work located at the crossroad of research & development, managing, & political mediation. Its main figure is the technopolitan organizer, who can be simultaneously an engineer, manufacturer, & administrator, focused on innovation & aided by a multidisciplinary background. Here, in the European context, the analysis shows that the technopolitan organizer seeks a new status, in addition to the original qualification, characterized by relational & informative activity in not-for-profit associations. But this kind of new status is ambiguous; identifying & transmitting information for the realization of high-technology projects lead to a mix of public & private interests, research & production, & cooperation & competition, where skills & aims are self-defined & perpetually redefined.

98S33832 / ISA / 1998 / 11073

Burningham, Kate A. (Dept Sociology U Surrey, Guildford GU2 5XH England [tel/fax: 01483-300800/259394; e-mail: K.Burningham@Surrey.ac.uk]), **Teaching Sociology to Engineers.**

¶ Reflects on personal experiences in teaching sociology to engineers as part of the Engineering Doctorate in Clean Technology in the Centre for Environmental Strategy at the U of Surrey (England). Both an introductory course on social research methods during the students' first year, & a second-year course titled "Understanding Environmentalism" are described, as are examples of teaching methods found to be most effective in gaining students' interest in & respect for sociology. Also discussed is the question of what the consequences might be for the student or professional if students become too interested in sociology—ie, whether this can have negative consequences for them in their own discipline/profession.

98S33833 / ISA / 1998 / 11074

Burningham, Kate A. (Dept Sociology U Surrey, Guildford GU2 5XH England [tel/fax: 01483-300800/259394; e-mail: K.Burningham@Surrey.ac.uk]), **Women's Participation in Environmental Action.**

¶ Introduces an ongoing research project that aims to contribute to the gap in the empirical data on the meanings women attach to their involvement in the environmental movement by interviewing women who are involved in environmental activity. The existing research on gender & environmental action are reviewed. Despite this research, explanations for women's concern & action have remained undertheorized & qualitative studies have not been undertaken to test & develop them. A brief review is provided of the literature on ecofeminism/ecological feminism highlighting its largely theoretical character & the lack of systematic research that explores the salience of the various explanations offered for women actually involved in environmental action.

98S33834 / ISA / 1998 / 11075

Burns, Tom R. & Gomolinska, Anna (Dept Sociology Uppsala U, S-75108 Sweden [tel/fax: 46-18-471-1203/1170; e-mail: tom.burns@soc.uu.se]), **Generalized Game Theory: Rules, Action Modalities, and Transformations.**

¶ Presents a mathematical theory of rules, action modalities, & transformation as a basis for extending & generalizing game theory. The mathematics is based on contemporary developments at the interface of mathematics, logic, & computer science. Generalized game theory draws not only on game theory & rational choice theory, but also on other traditions of social action in sociology as well as theories of norms & institutions. The theory is used to define different types of rules, games, social relationships, roles, & actors (as social beings who embody rule complexes, in part through their roles), & the institutional & cultural arrangements in which human agents, games, & interactions are embedded. Generalized game theory provides a model of action entailing four fundamental mathematical objects in the generation or determination of action: value complex, model of reality (including beliefs & knowledge bases), judgment complex, & modality for generating or determining action. Several modalities of action are identified & analyzed. Classical games such as zero-sum & prisoner's dilemma are shown to be readily representable within a rule-based mathematical framework. These reformulations show that the classical games are instances of particular families of games. It is argued that several interaction processes can be readily & compactly represented & analyzed on the basis of the theory. A theory of game transformation is provided, a conceptualization of the finite

ways in which games (& their agents)—or the rule complexes constituting them—are restructured, as well as the conditions under which such transformations take place. Implications of the theory for social science conceptions of the moral, rational, & creative aspects of human action & interaction are discussed.

98S33835 / ISA / 1998 / 11076

Burton, Michael & Higley, John (Loyola Coll, Baltimore MD 21210), **Elites and the Quality of Democracy.**

¶ Examines the quality of current consolidated democracies. Most observers view these democracies as seriously flawed & possibly declining in quality due to insufficient mass participation & access to decision making, eroding civil societies, weakening parties, & growing economic inequalities. Focus here is on the elite conditions for high-quality consolidated democracies; substantial cohesion, extensive correspondence with nonelites, & circulation into & out of elite statuses that is relatively wide & deep in scope, yet gradual & peaceful in mode. Whether these elite conditions are undergoing significant change, perhaps degeneration, in the West, & what the consequences might be for democratic prospects are examined.

98S33836 / ISA / 1998 / 11077

Busch, Lawrence, Chesebro, John, Middendorf, Gerard & Ransom, Elizabeth (Michigan State U, East Lansing 48824), **What Is a Soybean? US Grades and Standards for Soybeans.**

¶ Explores negotiations involved in establishing & changing the US grades & standards for soybeans, drawing on congressional hearings. In these debates, spokespersons for farmers, elevator operators, & domestic & international grain traders carefully craft their positions on issues such as the acceptable amount of foreign material in soybeans, appropriate tools of measurement, & the very language in which soybeans should be defined. It is argued that these debates over grades & standards are where the ground rules of the soybean trade are laid out. Further, while social scientists have long focused on the wielding of power in agricultural interest group politics (in the Marxian tradition), they have largely ignored the power quietly exercised in negotiating the minutiae of grades & standards. It is time to focus on how interest group politics are translated into the "small" politics of minute power.

Bush, Malcolm (Woodstock Instit, 407 South Dearborn Suite 550 Chicago IL 60605 [tel/fax: 312-427-8070; e-mail: Woodstck@wwa.com]), **Community Activism and the Enforcement of the Community Reinvestment Act in the United States.**

¶ At the beginning of the 1970s, community activists & sympathetic researchers in the US started to describe the process of redlining: ie, banks & insurance companies systematically refusing to do business in low-income & racially changing urban communities. By the end of the decade, the activists had won two major legislative victories: the passage in 1975 of the Home Mortgage Disclosure Act & the Community Reinvestment Act (though the latter remained essentially a dead letter throughout the Republican administrations of the 1980s). Starting in the early 1990s, however, a combination of circumstances has led to dramatic improvements in the implementation of the law. Described here are empirical changes in bank investment in lower-income & minority communities, drawing on data on applications, originations, & denials for all home mortgages by race, gender, & income of the borrower & census tract of the house; the distribution of small business loans by regulated financial institutions; & the distribution by census tract & certain business characteristics of the US Small Business Administration loan guarantee programs. Analysis reveals improvements in lending volume of some bank products to targeted borrowers & communities, & problems with the income & race distribution of other products. Building on earlier legal & political analyses, the impact of local community development activists demanding changes from their local banks is assessed, highlighting the importance of an administration sympathetic to community reinvestment & the comparative effects of financial industry & community activist pressure on the bank regulators & on Congress.

Buskens, Vincent (Dept Sociology Utrecht U, NL-3584 CS Netherlands [tel/fax: 31-30-253-1848/4405; e-mail: v.buskens@sw.ruu.nl]), **The Importance of Reputation in Buyer-Seller Relations: A Vignette Study.**

¶ Presents an experimental study of reputational effects in the decisions of buyers to deal with a certain seller. The theoretical model predicts that

b

buyers are more inclined to trust their sellers if the sellers could lose future business because of a declining reputation. A study of nearly 1,000 transactions between buyers & sellers of information technology showed that anticipated future transactions tended to have a positive effect on buyers' trust in sellers. To obtain insight regarding reputational, informational, & experiential variables, a vignette study was conducted. Results suggest that information variables have larger effects than reputational variables, which, in turn, are more important than experiential variables.

✓ **Buss, Andreas** (U Sainte-Anne, Church Point Nova Scotia (tel: 902-769-2114)), **Introductory Comments on the Concept of Individualism and Its Western History.**

1 Modern Western society may be characterized by its ideology that valorizes the autonomous individual in the world, while non-Western societies did not know the autonomous individual or knew it only outside of society, as a renouncer. Louis Dumont's thesis on the development from outworldly to inworldly individualism in Western society is modified & extended. The early Christian concept of the person is seen to provide an essential link between outworldly & inworldly individualism, & inworldly individualism is interpreted as the precondition of what Max Weber called the ethical personality of the Protestants.

✓ **Byron, Michael P.** (Center Global Peace & Conflict Studies U California, Irvine 92697-5100 (tel: 714-824-3187; e-mail: pmmorgan@uci.edu)), **Characteristics of Social Learning Systems.**

1 Social learning systems are examined evaluating the hypothesis that the contemporary world system constitutes such a learning system. Methodological issues involved in testing this hypothesis via computer simulation are explored, including (1) sensitivity of model system variables to prespecified values, (2) why a particular set of variables was selected for analysis to begin with, & (3) how can model-generated results be meaningfully compared with corresponding aspects of phenomenological reality? To illustrate this process of comparison, data generated from successive, more refined versions of the model are presented in the context of discussion concerning the relationship(s) between these changes in the basic model & its fit with phenomenological reality. A discussion of philosophical differences between theory-predicated modeling (& model refinement) & empirically predicated model alteration is offered in conclusion.

✓ **Caforio, Giuseppe** (Centro interuniversitario studi militari, I-56125 Pisa Italy (e-mail: gcaforio@tin.it)), **Professional Socialisation of Cadets: Expectations and Reality within the Military Academies.**

1 Anticipatory socialization of cadets creates expectations with regard to military life. Focus here is on how certain preconceptions fare in comparison with the reality of military life. Expectations of cadets in 10 European countries, & whether they were met, were measured & compared in the framework of cross-national research; results are summarized. Emphasis is on the evaluation expressed as "worse than I expected," because it has the most implications for possible initiatives by those in authority. From the overall average data, four generalized critical aspects are noted: efficiency of organization, behavior of superiors, impartiality of treatment, & internal dissemination of information. Different attitudes by country, influence of socialization processes, & interaction with general interpretive models of the profession are also considered.

✓ **Caillavet, France** (INRA/CORELA, 65 blvd Brandebourg, F-94205 Ivry France (tel/fax: 33-1-49-59-69-83/90; e-mail: fc@ivry.inra.fr)), **Household Production, Poverty and Exclusion. Contribution of the French Budget Survey.**

1 The analysis of poverty cannot be restricted to monetary standards. Recent works use a new class of indicators, considering extended income, life conditions, & subjective indexes. The study of relative, rather than absolute poverty, is coherent with the analysis of exclusion. In this framework, household production has a special status: the household production theory predicts a compensation between monetary & time inputs, though direct links between low economic resources & household production practices are not evidenced in data sets. The time-poor focus stresses that low-income families lack nonmarket time. Data from the 1985/86 French time-budget survey are used to check whether a time indicator is a relevant criterion for the analysis of poverty in terms of exclusion. Specifically, should home production be valued as a supplementary income, or should it be part of a life-quality indicator?

✓ **Cais, Jordi** (Dept Sociology U Barcelona, E-08034 Spain (tel/fax: 3-402-90-56/280-23-78)), **The Invisible Development of North African Countries: A Possible Explanation of the Absence of Strong Migration Flows in the Mediterranean Basin.**

¶ Demographic differences & pressures within the Mediterranean basin are increasingly becoming a defining & structural feature of the region. Opposing demographic trends on each shore make this region appear as the most demographically unbalanced in the world. Moreover, from an economic perspective, the Mediterranean area seems to convey an image of development vs underdevelopment. However, statistical data show that, despite the fears expressed by the European Union member states, the immigration wave expected from the northern countries of Africa to the southern countries of Europe has not taken place. Analysis of the countries surrounding the Mediterranean basin suggests that an improvement of the variables affecting quality of life of their populations can take place even without them having undergone a relevant economic evolution. The analysis of the countries of the basin, if holistically approached, allows for observing the invisible development taking place in its southern & eastern countries. This phenomenon could not be captured by the specific & more constrained view of each of the different social sciences disciplines. Such an invisible development explains the fact that, although the Mediterranean basin is a potential scenario for massive migration movements, the migration from the north of Africa to the south of Europe has been weak over the past 2 decades.

✓ **Calhoun, Craig** (New York U, NY 10003-6687 (e-mail: calhoun@is4.nyu.edu)), **Uncertain Democracy—Democracy, Citizenship and Social Solidarity.**

¶ Discourse about citizenship is impoverished & sometimes confused when multiple meanings of solidarity & identity are not addressed. While several scholars have attempted to broaden understanding of citizenship, they fail to distinguish among different modes of social belonging. Central for democracy is a conception of public space—a space of discourse but also the space within which jural entitlements can be enforced—distinct from both webs of interpersonal relationships & large-scale categories of cultural identity. Citizenship in this sense is metaphorically located between the locally different & the nationally same. It is not a replacement for either, but is potentially a protection against both, ie, against the demands of extremely dense & binding local networks (eg, kin groups) & against calls for cultural conformity on a national scale. This theme is developed here primarily with regard to the implications of cultural diversity. An important dimension of all these issues is the ways in which a rhetoric or discursive formation rooted in the idea of nation shapes the relevant understandings of collective identity.

98S33850 / ISA / 1998 / 11091

✓ **Calhoun, Craig** (New York U, NY 10003-6687 (e-mail: calhoun@is4.nyu.edu)), **Nations as the Protagonists of History: Narration and Collective Agency in the Construction of Modernity.**

¶ At the end of the 19th century, the discourse of nationalism helped shape identities & movements in Europe & throughout the world. At the same time, it informed the very way in which society came to be conceptualized as the basic unit of analysis in the social sciences. Bounded, discrete, internally integrated societies (& cultures) were understood on the model of nation-states, reflecting nationalist rhetoric as well as institution-building in both Europe & colonies. Crucially, this was accom-

plished in narrations of national histories. In social science & politics alike, nations also provided the idea of progress with one of its primary subjects. Nations became the protagonists of history. Along with classes & individuals, nations figured as both the agents & the beneficiaries of potential progress. Progress was assessed by measuring the strength, freedom, or material well-being of nations. Yet, though the idea of nation was implicitly basic to the social science that gained institutionalization during the 1890s, it was seldom the object of explicit or sustained attention. The shaping of social science during the last fin-de-siècle thus contributed to the surprise of social scientists at the resurgence of nationalism during the current fin-de-siècle. Particular puzzlements arose over how to relate narrations of the historical depth of national identity to cross-sectional criteria for the recognition of national states.

¶ Examines trade union responses to changing working-time arrangements, outlining the strategic dilemmas posed by the development of "flexible" work schedules & the record of national trade union movements in their efforts to resolve these dilemmas, including the disappointing record of Australian trade unionism. Also explored are discussions of working-time issues in trade union circles in the Federal Republic of Germany that aim to overcome the spurious choice of either a simple defense of standardization or a surrender to employer demands for more flexible working-time arrangements. Discussed is the demand from individual employees for greater employee-oriented flexibility in working-time arrangements, foreshadowing a policy that would be reoriented around a theme of "time sovereignty." In pursuing this theme, the German trade union movement has advanced proposals for extending collective regulation to establish guaranteed options in working-time arrangements. This signals an intriguing semilibertarian turn in trade union policy, which points to a possible path forward for other trade union movements.

✓ **Campbell, Iain Graeme** (NKCIR Monash U, Melbourne Australia 3000 (tel/fax: 61-3-9903-8706/8770; e-mail: ian.campbell@buseco.monash.edu.au)), **National Patterns of Temporary Employment: The Distinctive Case of Casual Employment in Australia.**

¶ Reviews the international discussion of nonpermanent waged employment & examines the distinctive case of casual employment in Australia. In most OECD (Organization for Economic Cooperation & Development) countries, temporary employment remains a relatively minor phenomenon, & in few countries is there any clear pattern of growth in its relative significance. But in Australia, casual employment, the main form of nonpermanent waged employment, constitutes a major & rapidly growing component of the workforce. Issues of inferior benefits & heightened precariousness for casual employees & the issue of the dynamics behind the growth of casual employment are discussed. In explaining this growth, the importance of new employer calculations & choices within the constraints imposed by labor regulation is emphasized. Casual employment in Australia has flourished in the (widening) gaps in the system of labor regulation. It has been a prominent example of an invisible aspect of employment, only now slowly emerging into the light.

✓ **Cancedda, Alessandra** (CERFE, via Monte Zebio 30 I-00195 Rome Italy (e-mail: md1971@mcclink.it)), **The Globalization and Decentralization of Social Risk Regimes.**

¶ Welfare may be interpreted as the action of subjects to control dangers that threaten common social assets, transforming uncontrolled dangers into controlled risks, through the establishment of risk regimes. The action of subjects to control dangers that threaten common assets is sparked by interdependencies between subjects, by which an event becomes dangerous for all subjects associated with a subject who experiences a danger. Nowadays, risk regimes that shape welfare are affected by two trends: globalization & decentralization. Globalization has an effect on the extension of the network of ties of interdependence between subjects. These ties, having become global in scope, produce (or are produced by) transnational dangers, subjects, regimes, & welfare systems. Decentralization is linked to the crisis of welfare states & entails a shift from centralized to decentralized social risks regimes, with the involvement of a greater number of subjects (eg, nongovernmental, profit, & nonprofit organizations; individual citizens), besides governments, bearing the consequences of, & trying to control, social risks.

✓ **Cao, Xiaonan** (Graduate School Education Harvard U, Cambridge MA 02138 (tel/fax: 617-495-7813/0551; e-mail: caoxi@hugsel.harvard.edu)), **Debating 'Brain Drain' in the Context of Globalization.**

¶ Attempts to provide a new perspective on the issue of international mobility of highly skilled personnel & to discuss some related educational policies in the context of globalization. It is argued that, as an inevitable result of the process of globalization, this mobility can be viewed as a "brain circulation" rather than a "brain drain" (or permanent loss of a nation's talents). This thesis is developed by first exploring the relationship between contemporary globalization & highly skilled personnel mobility. The characteristics of brain drain vs circulation are compared, & currently employed & recommended policies reviewed, with alternatives recommended. The discussion is supported by examples drawn from the People's Republic of China, as well as other nations. Focus is on the study-abroad issue, because internationalization usually begins with overseas study.

98S33860 / ISA / 1998 / 11101

✓ **Cardenas Q., Nersa M.** (Facultad Ciencias Economicas & Sociales U Zulia, Maracaibo 4011 Venezuela (tel/fax: 58-061-596509/596569; e-mail: tere@ven.net)), **Local Development. Conceptualization and Processes in Latin America.**

¶ Examines historical & conceptual considerations about local development & social processes implied in its construction in the Latin American context. Local development is conceptualized from different perspectives, ideologically & theoretically, & in terms of strategies or models that emphasize the controversy. The resulting systemic definition considers local development a process constructed differently across countries according to various connections occurring in a particular territorial space, its history, its structures, & actions of its social actors. Thus, light is shed on why local development entails (1) a diversity of complex social processes in the social economic, psychosocial, cultural, & bureaucratic-administrative dimensions; & (2) an inside-outside, national-international integration.

✓ **Cardoso, Luis Antonio** (COPPE U Federal Rio de Janeiro, 21945-970 RJ Brazil [tel/fax: 55-21-581-9533; e-mail: cardoso@pqp.ufrrj.br]), **Globalisation and Its Changes in the Labor Relations in a Post-Fordist Era: The Case of the Automobile Industry in Brazil.**

¶ Economic globalization has been changing in a very significant way the international industrial complex. One of its possible forms is related to the fact that the globalization of the automobile industry has pushed for a reconfiguration of wage relationships by emphasizing different aspects of work flexibility (Gerpisa, 1997). Other facts are related to the idea that the economic transformations of the post-Fordist era have brought new social configurations (Cardoso, 1996). Explored here are the main implications of these politics in the productive sector of the Third World. Specifically, recent transformations in the most important implantation of lean production in Brazil (Cardoso, eg, 1998) are discussed. In the automobile plant, the effects of globalization & the concurrent effects originating from the appearance of new spaces have brought major restructuring to the factory, in which the elements of the employee & wage relationship (work organization, hierarchical relations, remuneration systems, & unions) have been hardly oriented to make the plant competitive in the face of new global scenarios & uncertainties. Practices adopted by the plant are described, including (1) a growing tendency toward the adoption of subcontracting systems of the labor force; (2) a tendency to reduce salaries parallel with the national average; (3) affirmation of the individual worker commitment in the face of plant benefits; (4) tendency to the disappearance of union practices on the shopfloor & the avoidance of the incorporation of the unionized labor force; (5) affirmation of the individual commitment of the worker to new forms of work organization & exclusion of the unions from this process; & (6) affirmation of new forms of organizational management founded in models of the learning organization & others. The limits of this changing process are highlighted, along with the main implications for the world complex of industry & society.

98S33864 / ISA / 1998 / 11105

✓ **Carlton-Ford, Steve & Hamill, Ann** (Dept Sociology U Cincinnati, OH 45221 [tel/fax: 513-556-4716/0057; e-mail: steve.carlton-ford@uc.edu]), **Of Arms and the Child: The Effects of National Wealth and Major Armed Conflict on Children's Health.**

¶ Data on health, nutrition, & national economies from a variety of non-governmental sources for 116 nonsocialist countries, 1990-1994, supplemented with information about major armed conflicts from the Stockholm (Sweden) International Peace Research Instit, are used to examine the effects of national wealth (gross national product (GNP), spending on education, health, & military), & major armed conflict (ongoing conflicts with 1,000+ deaths) on four measures of children's biological & social development: (1) calorie supply; (2) low-weight births; (3) immunization; & (4) under-age-5 deaths. Ordinary least-squares analysis indicates that GNP exerts strongly, nonlinear effects on all four dependent measures; children in countries with low GNP's have significantly poorer prospects of adequate development. Major armed conflict worsens both low-weight births & deaths before age 5.

✓ **Carmichael, Isla** (Ontario Instit Studies Education U Toronto, Ontario M5R 1L5 [tel/fax: 416-920-4645/3805; e-mail: kendal@globalserve.net]), **Worker Control of Pension Funds and Social Investment in Canada.**

¶ According to 1994 Statistics Canada data, pension funds form one of the largest pools of capital in Canada, with \$311.5 billion in assets, second in size only to the combined financial assets of the major banks. This massive pool of capital represents workers' deferred wages. Control over pension fund investment is critical if working people are ever to exert serious influence over the marketplace. However, this capital is also critical

to the interests of organized capital & its control of the economy. There are, therefore, significant barriers to worker control, effected through trust law, financial management practices, & market theory. Overall, these barriers have marginalized workers' interests by applying narrow financial criteria to investment decisions, &, further, by characterizing social criteria as antithetical to the rate of return. Despite these barriers, there have been significant union successes in gaining control of pension funds & in social investment. There are now indications that the trade union movement will put worker control of deferred wages higher on its agenda, thereby exerting more influence on the market economy.

¶ Explores industrialization in Mexico's smallest state, Tlaxcala, where industrial activity & development started to increase in the early 1970s as a result of the industrial decentralization efforts, in a relatively equilibrated regional pattern. Location factors that industrial entrepreneurs considered in deciding whether to go to Tlaxcala are investigated, based on a 1998 survey of 30 industrialists in the state & analysis of published data. Evidence suggests that Tlaxcala offers important supply advantages, eg, low labor costs for large firms, as well as some demand factors, mainly for small firms, because of a nonconcentrated distribution of population in the state, but also proximity to the largest market of the country, Mexico City. Tlaxcala offers an important lesson to other states for fostering regionally equilibrated development, which is considered a prerequisite for taking advantage of Mexico's involvement in the North American Free Trade Agreement: using regional planning, not concentrating population or industry in any one particular region, & allowing development of industrial firms of all sizes.

✓ **Carrington, Ben** (Chelsea School U Brighton, Eastbourne BN20 7SP England (tel: 01273-643745)), **Deconstructing Bodily Narratives of 'Animalism' and 'Athleticism': Race, Gender and Sexualisation of the Black Sporting Body.**

¶ Provides a corrective to some of the more Eurocentric accounts of the body, drawing on the work of Frantz Fanon & other postcolonial theorists to trace how the black body, & in particular, the black male sporting body, has historically been constructed in the West as a threat to white supremacy & how the black male has simultaneously been controlled via a complex process of sexualization & symbolic castration. It is argued that contemporary representations of black males in Western media continue to play out colonial fantasies of "animalism" & "athleticism" about the Other that get encoded into the bodies of black men. Theoretical arguments are illustrated via a textual reading of contemporary representations of black male bodies from both the US & UK print media, & personal interview material, using case studies of the two most famous black men in GB, ie, Linford Christie & Frank Bruno. It is argued that Christie's achievements over the past decade have been systematically devalued by a process that has sought to reduce him to a deliberately manufactured sexualized identity that can be read as a form of feminization. Further, Bruno has been subject to a process of patriarchal objectification, & these representations ultimately try to depoliticize the agency of black male bodies, rendering them commodities.

✓ **Carter, Bob** (Dept Adult Education U Leicester, LE1 9BH England (tel/fax: 44-0116-252-5916/5909; e-mail: bc20@leicester.ac.uk)), **Reorganizing Labour in the State: MSF in the New National Health Service.**

¶ Trade union organizations in the British state sector appeared in the postwar years to benefit from a sympathetic employer & structures, resulting in a higher union density than in the private sector. One consequence of the relationship to the state was a particular form of unionism based on national collective bargaining & specific mechanisms of conflict resolution. With the advent of the 1979 Conservative administration, there was overt hostility to the trade union movement & a move toward the decentralization of bargaining & introduction of market forces into state employment practices. These changes have thrown into doubt the ability of unions to continue in their old forms & methods. Based on a study of union organization in two distinct geographical areas, the effect of employment changes on the position of MSF in the National Health Service is examined. Particular focus is on how, as part of the union's turn toward an organizing model of unionism, there has been an attempt to transform union practice & organization. Attention is given to the problems of, & resistance to, change, both at the level of workplace organization & in the union as a whole.

Casas Perez, Maria de la Luz (ITESM, Morelos Mexico [e-mail: mcasas@campus.mor.itesm.mx]), **Construction and De-Construction of Cultural Identities; The Case of Canada and Mexico within NAFTA.**

¶ Explores the notion of cultural identity, considering its dynamic impulse in structuring national unity & political differentiation among societies. Analyzed are the role of culture in the articulation of new political & economic alliances, eg, the North American Free Trade Agreement (NAFTA), & works on the basic concepts in which cultural identity is formed, especially in the case of Canada & Mexico vis-à-vis their common neighbor the US. Some basic underlying questions, ie, the nature of the agreement itself & the nature of the relationship between the three countries, are also considered. One of the main conclusions is that the new relationship has led to a partnership that goes beyond the linking of economics & guides those countries into new forms of coalition. It is suggested that the need for common social & international goals generates processes in which cultural boundaries are formed to articulate rather than resist; thus, cultural identities adapt by the construction & deconstruction of their previous social meanings.

Casas, Rosalba & Gortari, Rebecca (Instit Investigaciones Sociales U Nacional Autónoma México, 04510 Mexico DF [tel/fax: 622-74-00; e-mail: rcasas@servidor.unam.mx]), **The Relation Science-Society in Mexico. Evolving Patterns and Current Analytical Approaches.**

¶ As Mexican society becomes more integrated into the global economy, large changes are taking place in the role of science in society & how it is being produced. Institutions in charge of science production are getting into complex knowledge networks, giving rise to a wide variety of interactions through which knowledge is flowing to specific sectors of society. Currently, different patterns to integrate science & society are being attempted by a set of institutions—ie, public universities, research centers, & firm associations—all of which are trying to play a more active role in regional economic & social development by means of a science base. These patterns of change are discussed, findings of recent research are synthesized to characterize specific regional models of science-society interaction, & reference is made to the current dynamics of knowledge flow in regions of Mexico. Discussed are the contributions of Mexican science & technology studies & how they have influenced science & technology policy making. An agenda is elaborated for further science studies approaches & for a new way of approaching policy making in Mexico, given the current new mode of knowledge production facing most countries.

Casey, Catherine J. (School Commerce & Economics U Auckland, 1 New Zealand [tel/fax: 64-9-373-7999/7499; e-mail: c.casey@auckland.ac.nz]), **Culture, Identity and Globalization: Reflections from a Small Nation-State.**

¶ Questions of culture & identity have become a major concern for social analysts from various disciplines. While few analysts have addressed these issues in the context of a globalizing world, questions of culture & identity are increasingly being played out within & against a condition of globalization. Many cross-disciplinary scholars & observers are now employing the notion of globalization in their efforts to understand social, political, & cultural patterns of the late-20th-century world. Among diverse writings, a common concern with the tensions between compression, homogeneity, & heterogeneity in world societies is discernible. Discussed here are questions of cultural & identity production in a small, nationally constituted society affected by the globalization of technology, economy, & culture. This critical, reflective essay considers the local in the context of the global & attempts to weave an ultimately transnational path between them.

Casey, Catherine J. (School Commerce & Economics U Auckland, 1 New Zealand [tel/fax: 64-9-373-7999/7477; e-mail: c.casey@auckland.ac.nz]), **Work, Non-Work and Resacralizing Self.**

¶ Seen against a dominant sociopolitical momentum of increasing & unmitigated instrumental rationality, which Max Weber foresaw pervading all spheres of life in modern industrial society, are new social & cultural signs of contestation & counterpoint. Critical social analysts have argued variously for delimitations to instrumental & economic rationalities, & these modern contestations to instrumentality & alienation remain apparent in contemporary social & political life. Yet there is evidence of contemporary social efforts that endeavor not only to delimit, but also to refute or transcend, the assumed path of progressive rationalization & secularization. It is proposed that both modern acute rationalization & technicization & postmodern dissociation & dissolution, as well as their respective conditions of alienation, generate countervailing tendencies. The exploratory, interpretive sketch of counterpoint offered here describes some emergent practices of work (including nonwork) that invoke counterrationalities, spiritualities, & soulfulness, & that seek dealienation.

98S33884 / ISA / 1998 / 11125

Cassidy, Tanya M. (Dept Sociology Trinity Coll, Dublin 2 Republic Ireland), **"Going for a Jar? Leave the Car?": Moral Images, Ambiguity and Drink Driving in Ireland.**

¶ The Irish stereotypes surrounding alcohol extend to the issue of drink driving. It has been stated, without evidence, that the Irish are especially tolerant of this behavior. Certainly, as the data presented here show, this has been a hotly debated subject in Ireland, focusing, on the one hand, on debates regarding individual rights (particularly important to a young postcolonial nation), & on the other hand, capturing the postprohibitionist notions of abstinence & zero tolerance, at least for the driver. Underlying the entire issue are strong links with ambiguity associated with alcohol itself. Reconciliation, rather than rejection of ambiguity affords the researcher a more complex vision of this issue, especially when looking at liminal visions that link polar moral extremes (Bauman, Zygmunt, 1991).

98S33885 / ISA / 1998 / 11126

Castañón-Lomnitz, Heriberto (Instit Investigaciones Económicas U Nacional Autónoma México, 04510 Mexico DF [tel/fax: 525-623-0135/0076; e-mail: bety@servidor.unam.mx]), **The Pecking Order: Rationale and Rationalization of Rank in the Mexican Academic Community.**

¶ Prior to 1984, peer review was almost unknown in Mexico. However, creation of the National System of Researchers (SNI) has institutionalized peer review from the top down. The perceived success of SNI has bred imitation by universities & research institutions in the form of peer-reviewed incentive programs. Official statistics are drawn on to show that such evaluation procedures have successfully tightened academic standards; however, there is little evidence of a substantial increase in productivity. The tougher standards, however, tend to further postpone the access of young scientists to an academic career, as few Mexican PhD students graduate before age 35; women's careers are more delayed than men's. Thus, the trend is toward an aging scientific community that tends to value the cumulative weight of publications above creativity.

C

One reason for this trend may be sought in a social mechanism of defensive rationalization of peer review as a form of academic "justice." In countries where peer review originated, reviewers hardly feel inhibited from expressing their personal opinions or prejudices about the work of colleagues. In Mexico, there is a definite tendency to rely on "objective" (legalistic) standards of assessment. Since quality is not easily quantifiable, the emphasis is on numerical criteria, eg, the number of publications, PhD students, or citations. Since membership in the local review committees is selected from among the upper echelons of the academic pecking order, the practice tends to create a bureaucracy of its own where conformity can be valued more highly than originality.

✓ **Castelain Meunier, Christine** (CADIS Centre national recherche scientifique, 54 blvd Raspail F-75006 Paris Cedex 16 France (tel/fax: 01-49-54-25-84/42-84-05-91; e-mail: cadis@chess.fr)), **Telephone Relationships in the Family.**

¶ Examines the telephone interaction between 166 noncustodial fathers & their children; 20 mothers & their children are also examined. Several peculiarities in the children's relationship with the telephone are discussed. They evade conventions, but their strategic abilities are reduced. They slip from one mode to another & have no reflexive conscience. Three types of reactions are analyzed: (1) one type allows the adult to adapt in relation to the child's reactions & spontaneity. Interaction fits into the daily life of the child with his/her immediate reactions, emotions, voice changes, & intonation, which directly impact the conversation. (2) A second type is a source of frustration since it signifies the absence of a direct relationship. (3) The third type is characterized by difficult interactions that are negatively overinvested.

98S33887 / ISA / 1998 / 11128

✓ **Castelain Meunier, Christine** (CADIS Centre national recherche scientifique, 54 blvd Raspail F-75006 Paris France CEDEX 16 (tel/fax: 01-49-54-25-84/42-84-05-91; e-mail: cadis.a.chess.fr)), **Relationships between Non 'Custodian' Fathers and Their Children.**

¶ It is suggested that cultural & social changes in the family have rendered fatherhood less institutional. Divorce has increased the necessity for men, so as to exercise their role as fathers, to have relationships with their children through the telephone. Here, data from a study of interactions between 166 divorced fathers & their children belies traditional representations of male attitudes. Fathers participate in the subjectivation of the child in a privileged form of listening that is more similar to guidance & to providing focus of identity for the child than to traditional authority. However, they often find the relationship difficult & frustrating as it is, in a sense, transformed into "virtual" fatherhood. Contradictions, problems, tensions, & difficulty of achieving fatherhood are delineated.

98S33888 / ISA / 1998 / 11129

✓ **Castillo, Juan-José** (U Complutense Madrid, E-28223 Spain (tel/fax: 34-1-394-2874/2876; e-mail: soso303@sis.ucm.es)), **Spanish title not provided** (Work of the Future, Work of the Past: Renovating the Sociology of Work). (SPA)

¶ Sociology today is confronted with radical changes in work & employment, & also in the social context, that challenge its proper knowledge limits. Current debates focus on the so-called "future of work" from two different, but related, approaches: the asserted disappearance of work, materially; & the correlated radical change in the meaning of work for individuals. The actual evolution of work, diffused & dispersed, contributes to the complexity of society, & what were once clear problems in waged work & employment are no longer so evident. Taking a reflexive approach, ie, contributing to a sociology of the sociology of work, the limits of the mainstream field of the sociology of work are discussed, & a new way of looking at work & its changes in the next century is constructed. Work could become more invisible, even if existing & intensifying, if inappropriate glasses are used to look at it. The main aim here is to break down myths about the "end of the society of work," & contribute to a renovation of the sociology of work.

98S33889 / ISA / 1998 / 11130

✓ **Castonguay, Charles E.** (Dept Mathematics U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5880/5776; e-mail: castonguay@synapse.net)), **Reversing Language Shift regarding French in Canada: Taking Stock after 25 Years.**

¶ Investigates the extent to which recent Canadian & Quebec language policies favoring the use of French have affected language shift regarding

the French-speaking population in each Canadian province. Language shift trends are established as precisely as possible using census data, 1971-1996. It is found that Anglicization rates have increased significantly among all French-speaking minorities outside Quebec & New Brunswick. Within Quebec, the French share of language shift among immigrants to metropolitan Montreal has increased relative to that of English, but not enough to maintain the weight of the French-speaking majority at its present level in the province or in Montreal.

✓ **Castren, Anna-Maija** (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-19123966/967; e-mail: anna-maija.castren@helsinki.fi)), **The Role of the Spouse and the Profession in the Formation of Social Networks in Helsinki and St. Petersburg.**

¶ Data are presented on the ego-centered social networks of 38 teachers in Helsinki (Finland) & 40 in St. Petersburg (Russia), concentrating on the influence of marriage (or cohabitation) & work in the formation of networks. From a life-historical perspective, explored are how the networks, understood as personal communities (Wellman, Barry, 1982) & as the embodiment of cultural resources & capital (Erickson, Bonnie H. 1996 (see abstract 9700190)) available for the individual are composed. Analysis reveals a rather marginal role for the spouse in the network formation process, & no systematic variation in the networks of female & male teachers. Spouses seemed significant when there were socially & culturally "interesting" resources to be attained by their mediation, eg, upward social mobility. The profession is a highly important channel for relationships in both cities, but as a resource, has a somewhat different meaning in the two societies. In Helsinki, the information channel & cultural capital nature of social networks are significant, whereas in St. Petersburg, the dimension of exchange is stressed (eg, Lonkila, Markku, 1997).

✓ **Castro, Lucia Rabello de** (Federal U Rio de Janeiro, Brazil 22240-290 (tel/fax: 021-3262725; e-mail: jobi@infolink.com.br)), **Urban Spatiality and Young Women's Social Orientation: Old Values in New Contexts?**

¶ In contemporary times, urban spatiality plays a role in determining the limits & modes of emergence of subjectivities. Preliminary research found that young women were establishing their social & spatial referentiality on mappings whose criterion was articulated to relational values, configuring an affective-laden spatiality. Topologically relevant spaces were discriminated & differentiated, eg, home & not-home (street). This can be interpreted in terms of difficulties in moving about the city, restricting one's actions, & as a result, maintaining values such as domesticity. An attempt is made to explore how these difficulties affect young women's capacity to handle the complex human & technological environment of cities, transgress the known environment in search of new opportunities & knowledge, & obtain satisfaction from the increasingly rationalized & sometimes dehumanized aspects of city dwelling. Open & semistructured interviews were conducted with girls, ages 12-13, focusing on how they envisage new positions for themselves different from those a priori given to them & what possibilities for social action are thereby engendered.

New Methodologies in Sociology of Work.**

¶ The Latin American literature contains careful analyses on the connec-

tion between productive restructuring, economic adjustment, & work, but there is still an important gap relating to the longitudinal study of occupational chances & workers' strategies in the context of growing unemployment & increasing competition in the labor market. Based on a Brazilian case, this new methodological approach is discussed, attempting to (1) identify patterns of occupational mobility during periods of intensive restructuring; (2) analyze the effects of selectivity in the labor market, relating to personal assets (both acquired, eg, schooling & professional experience, & ascriptive, eg, gender & age); & (3) identify the possible nexus between individual aggregate trajectories & firm strategies.

¶ Radical changes in the UK youth labor market, postcompulsory education & training, & the benefits system have profoundly affected transitions to independent living & adult status for today's youth, reinforcing & complicating traditional inequalities in social & economic outcomes. The popular media & policymakers have turned their attention to the substantial minority of young people who do not benefit from current provisions, becoming increasingly socially disaffected & excluded from the mainstream. The Economic & Social Research Council (ESRC), the principal funder of academic social science in the UK, has funded a program of research on youth transitions by examining both successful & exclusionary pathways to adulthood & comparing the experiences of young people in the UK vs continental Europe. Sketched here are some recent UK policy initiatives relevant to the problems of excluded youth, the content of the ESRC research program, & how it will address these problems. Practical measures to ensure the relevance of the research to current issues & to promote its influence in policy & practice arenas are outlined.

✓ **Cavalcanti, Josefa Salete Barbosa & Bendini, Monica** (UFPE, Brazil), **The Other End of the Chain: Impacts on Local Producers, Migrant and Female Labor in Brazilian and Argentinean Fruit Sector.**

¶ Globalization of food has been paralleled by local & regional effects on the organization & structure of production as well as on how labor is included or excluded. According to patterns of quality & other commodity requirements, in production development, certain relations are established between large & small producers, brokers, & retailers that allow production to pass through global market barriers with impacts on labor control & quality. Decisions made on the production side have changed how labor is incorporated & how producers organize to face challenges presented by transnationals. Here, how those types of relationships interfere with labor recruitment & control, mainly migrants & women, the most vulnerable groups in the chain, & the producer strategies to compete in the global sphere are explored in the context of the Brazilian & Argentine fruit sectors.

¶ Argues that the key element in globalization is neither internationalization of trade in commodities nor internationalization of production of goods or provision of services, but rather worldwide, instantaneous, & largely uncontrollable capital flow. Global capital does not submit itself to what Adam Smith called the "invisible hand" of market forces (supply & demand) but succeeds in organizing markets to its own advantage. Neoliberal economic policies attempt to accommodate global capital interests to attract or maintain places of employment. However, sustainability of regional development is not on the global agenda. In continual search for capital "spot markets" yielding highest returns on investments, flexible global capital may be "here today & gone tomorrow." Research on noneconomic determinants of innovation & entrepreneurship in regional economies is drawn on to explain why owner/managers of SMEs (small-medium-sized enterprises) are the most promising agents of sustainable regional development, ie, nonglobal players with regional overheads who are nevertheless capable of successfully participating in globalization processes. Unfortunately, SME entrepreneurs are put at a comparative disadvantage by current economic policies, particularly with regard to international corporate management. Particular attributes of SME entrepreneurs amenable to sustainable regional development are identified, & suggestions for policy adjustments elaborated.

¶ The development of sociology in Turkish academic & intellectual life is chronicled along four distinct streams: (1) the works of Turkish intellectuals in the field of social sciences; (2) the teaching of sociology in Turkish universities, first as an individual course, then as a certificate program in departments of philosophy, & finally in independent undergraduate & graduate departments; (3) periodicals publishing the works of Turkish sociologists; & (4) the association of Turkish sociologists under the umbrella of a formal organization. Though each of these streams has mainly followed its own course, they occasionally seemed interrelated, either by supporting each other, by some relationship that cannot be deemed really meaningful, or under the impact of an intervening variable. Focus here is on the fourth stream.

✓ **Celebi, Nilgun** (Faculty Sociology U Ankara, Tandogan TR-06100 Turkey [tel/fax: 90-312-310-3280/5713]), **The Dilemma of Islam and Women in Modern Turkey: What Islam Means to Non-Islamist Turkish Women.**

¶ Analyzes the phenomenon of social change relating to Islamic behavior in contemporary Turkey. Secular Muslims have, until recently, been inclined to consider religious faith a private matter. Traditionalists, however, have generally shown their adherence to Islam openly. Observations indicate that this process is changing; eg, secular women are now inclined to take part in funeral rites (*namaz*) in public places. More women are trying to perform their five daily prayers in mosques, side by side with men, without wearing the traditional turbans. An attempt is made to test the hypothesis of whether this social change represents a new phenomenon, an element of identity, &/or an aspect of the impact of Islamist movements on the behavior of social actors. Content analysis of relevant studies supports the examination.

C

61-2-96920230/93376762; e-mail: dandc@ozemail.com.au)), **Who's Sorry Now? Apologies and Nation Building in the Era of Reconciliation.**

¶ The political apology has become part of the international currency for dealing with the past to create a shared, cohesive national future. Several political apologies are compared here, including the Canadian government's apology to aboriginal peoples affected by policies of child removal, US President Bill Clinton's apology to the African American men subjected to medical experimentation, & the apologies given before the South African Truth & Reconciliation Commission. Also considered are apologies that have been sought & withheld, eg, apology by the Australian government for the removal of indigenous children. What an apology means & what it is meant to achieve in terms of contemporary nation building are considered from a sociological perspective. The notion of reconciliation is critiqued, & some inherent contradictions in approaches that seek to deal with conflict & cultural diversity by uniting the parties are raised. In remembering & then apologizing for past wrongs, is there a danger of paving over continuing social & cultural differences & conducting a further & new assimilation in the name of cohesion? What else has to happen for the apology to be meaningful & achieve its sociopolitical objectives?

¶ Certe, Gilbert, Boulin, Jean-Yves & Verger, David (U Aix-Marseille II, F-13284 Cedex 07 France (tel/fax: 336-92-75-77-59/76-96)), **Les Salariés de la chimie face à la réduction du temps de travail** (Chemical Industry Employees Faced with a Reduction of Working Time). (FRE)

¶ At either the firm or national level, the impact of a working-time reduction (particularly on the employment situation) is highly dependent on conditions of implementation. The success or failure of reduction is linked to its consequences for the living conditions of employees: these are preconditions for acceptance by employees of new work patterns. A case study of this process is presented, drawing on data from a large union-based survey conducted in the French chemical industry, involving questionnaire responses regarding reduced working hours obtained from 10,000+ employees nationwide. Age, gender occupation, qualification, work patterns, union membership, & household structure were found to play varying roles in employee attitudes.

¶ Chaichian, Mohammad (Dept Sociology Mount Mercy Coll, Cedar Rapids IA 52402 (tel: 319-363-8213; e-mail: mchaichian@mmc.mtmercy.edu)), **The Effects of Cultural Dependency on Shaping the Direction of International Migration.**

¶ Presents an explanatory hypothesis about the significance of cultural dependency between the sending & receiving countries that shapes international migration patterns & cannot be solely explained either by push-pull or structural world-system theories. Historical documents & census data from 1960s-1990s are used to demonstrate that, although international migration can only be understood by a careful historical analysis of the dynamics of a global system of economic & political domination & subordination, the significance of the proliferation of core country language & cultural values in the periphery in hindering or supporting out-migration is worth probing. Comparative analyses of Iran & Egypt, Vietnam & Thailand, & Nicaragua & Guatemala, each with long histories of political, economic, & cultural ties to the US, hypothesize that (1) the mere existence of economic inequalities between country of origin & host society does not induce migration; (2) attempts by center countries to promote their cultural values & language in periphery nations strengthen ties between the two entities yet do not automatically encourage migration; & (3) migratory movements appear to take place only after the outbreak of revolutionary social changes in the periphery sever economic, political, & cultural ties with the core & consequently disrupt the flow of "center-sponsored" cultural programs. If the above hypothesis is supported by historical data, then it can be argued that social upheavals & revolutions uproot people & lead to involuntary population displacements, but, notwithstanding economic & political factors, individuals often make a socially conscious decision to migrate mainly to a country (or countries) with which they have established real or perceived cultural ties.

¶ Chamberlayne, Prue M. (U East London, Essex RM8 2AS England (tel/fax: 44-181-5907000/8493401; e-mail: p.m.chamberlayne@uel.ad.uk)), **Cultural Analysis of the Informal Sphere: Parameters for a New Field.**

¶ Conceptual problems that arise in making cross-cultural comparisons between informal social cultures include (1) key debates that have been framed by individualistic liberalism concerning the public & the private, civil society, & communitarianism may have little salience in welfare regimes characterized as relational or state socialist; (2) neglect by both the Fabian paradigm of social policy & by political science of the informal sphere, sociocultural context, & agency means that conceptual resources have to be drawn from varying discourses & disciplines that do not easily mesh; & (3) the particularistic nature of informal social cultures poses inherent problems for comparative theorizing. Biographical research into cultures of care in West & East Germany & GB is reported which found that the three societies offered quite different sites & opportunities for developing caring strategies, social capacities, & identities. Focusing on forms of social support available to & used by carers, the initial parameters for comparing informal welfare cultures are identified: social context, subjectivity, & politics. The interrelatedness & coherence of the three parameters & their applicability in wider cross-national comparisons are considered. The possible disjunctions between an interpretive framework that is predominantly taken from critiques of liberalism & the matrix of actual social relations & policy discussions encountered in different societies are also discussed.

¶ Chan, Elaine (Faculty Social Sciences U Hong Kong, Hong Kong (tel/fax: 852980-5/852-5170806)), **Structural and Symbolic Centers: Center Displacement in the 1989 Chinese Student Movement.**

¶ An attempt is made to make a distinction between structural & symbolic powers, arguing that the two dimensions are analytically separate & the possession of one does not necessarily entail that of the other. However, for a power holder to be legitimate, it has to be in control of both the structural & the symbolic centers. The 1989 student movement in the People's Republic of China is used to illustrate the two dimensions of power. From the extensive support that students gathered, the need for a crackdown, as well as the reaction of society immediately after the crackdown, it appeared that students had displaced the Chinese Communist Party to become the center of symbolic power. The crackdown reasserted the party's structural control over society only. To regain the symbolic center, the party had taken certain actions & introduced various measures. These actions might look rather bizarre from a structural perspective, but they made good sense when interpreted as the Communist Party's effort to reinstall its place as the symbolic center.

Chang, Chin-fen (Institt Sociology Academia Sinica, Taipei Taiwan), **"Down to Earth": Layoffs in the Process of Privatization in Taiwan.**

¶ As in many other countries, the Taiwanese government has experienced strong pressure to denationalize most state enterprises, but so far, only a few of them have turned to private ownership. Among other impacts of privatization, these changes of state policy made public employees, once-called the "labor aristocracy," come down to earth & become the reserve labor army. Many of them lost jobs as well as trust in the state. Changes of social relations in state business & the employment status of laid-off public employees are examined here in a case study of the Taiwan Motor Transportation Co (TMT). TMT laid off about 2,000 workers in 1996 to prepare for eventual privatization. Questionnaire data from about 500 of these laid-off workers are used to examine changes of trust relations between TMT employees & the state, the union's attitudes toward downsizing, employment status after layoff for middle-aged workers, & views toward privatization & the layoff.

Chapoulie, Jean-Michel (École normale supérieure Fontenay Saint-Cloud, 31 ave Lombart Fontenay-aux-Roses F-92666 France [tel/fax: 01-41-13-25-35/11; e-mail: chapouli@ens-fcl.fr]), **L'Étrange Carrière de la notion de classe sociale dans la tradition de Chicago en sociologie** (The Strange Career of the Notion of Social Class in the Chicago Tradition of Sociology). (FRE)

¶ As a constituent element in sociological thought, the notion of social class is at the same time both an academic notion (defined by its use in research practices) & one that springs from everyday life (a folk concept). Examined here are the different forms of its use by the researchers in the Chicago sociological tradition from the beginning of the century until the 1940s. Present in the work of Albion Small & Charles Cooley, the notion of social class is found only rarely in Robert E. Park's work & not at all in the work of urban sociology that he inspired during the 1920s (eg, Clifford Shaw & McKay), but reappears in the works on race & ethnic relations of the late 1930s (eg, Edward F. Frazier, Hughes). Substitute terms introduced during the 1920s to categorize differences internal to the populations of US cities are examined, demonstrating how the spread of new methods of documentation & of the use of the term brought about its reappearance in the sociopolitical & scientific milieus at the end of the 1930s.

Chappell, Neena L. (Center Aging U Victoria, British Columbia V8W 2Y2 [tel/fax: 250-721-6350/6499; e-mail: nlc@uvic.ca]), **Conceptualizing Independence and Autonomy.**

¶ A review of the literature produces three general meanings of the con-

cepts of independence & autonomy: as physical health, usually measured in terms of activities of daily living (basic &/or instrumental); as access to resources, eg, income &/or social support; & as self-determinism. Self-determinism is frequently labeled autonomy, although the term autonomy is also used interchangeably with the term independence. Drawing on data from a random sample of seniors who do & do not use community support services, each of the three meanings is operationalized, focusing on the interrelationships between social support & self-determinism. Findings reveal a close interconnection between social support (not network size) & feelings of being in control & of mastery. Thus, the current emphasis in health care agencies to focus on activities of daily living misses the importance of notions of self-determinism & its connection with support. Policy implications are elaborated.

Chase-Dunn, Christopher K., Kawano, Yukio & Nikitin, Denis (Dept Sociology Johns Hopkins U, Baltimore MD 21218 [tel/fax: 410-516-7633/7590; e-mail: chriscd@jhu.edu]), **Trajectories of Globalization: 1800-2000.**

¶ The two main objectives of this research are to (1) determine the trajectories of economic, political, & cultural globalization & (2) test models of the causal relationships between these, & their effects on conflict. These tasks required conceptualizing & operationalizing measures of globalization, the gathering of comparable & complete data over the past 200 years, & the splicing of sequences of earlier, cruder series with later, better measures. The data series are graphed to determine the temporal trajectories of the different kinds of globalization. This analysis has important implications for understandings of how the world economy has been developing in recent decades as compared with earlier periods. The data series are used to test propositions about the cause & consequences of different kinds of globalization. A historical-materialist theoretical approach predicts that economic globalization leads, while political &

C

cultural forms of globalization follow. An institutionalist theoretical approach predicts that cultural globalization causes economic & political internationalization. Both of these propositions are tested using time-series analysis & structural equation models.

¶ The Indian *Panchayats* (Extension to the Scheduled Areas) Act of 1996 gave radical governance powers to the tribal communities & recognized their traditional rights over natural resources, which have long been exploited by outsiders. Traditional mechanisms that the tribals used to preserve & maintain the forest resources provided sustainability not only of the environment but also of their livelihoods. Women played a significant role in the tribal economy as well as in the management of natural resources, but they were excluded from the decision-making process in the traditional & postindependence institution. Recent changes toward the self-governance of the tribal areas have given considerable space to women in this direction. Here, this process of social transformation toward self-governance by the tribals is discussed, focusing on how women, as a part of decision-making institutions, can work toward the sustainable use of natural resources for their & their people's benefit. Case studies of women in *panchayats* from different states having scheduled areas are presented.

98S33917 / ISA / 1998 / 11158

✓ **Chauvel, Louis**, **Cohortal Changes in Education, Social Stratification and Mobility, the Case of France (1964-1995).**

¶ In France, because of changes in the rhythm of the development of education, the chances of university access are closely linked to birth cohort. A quasi-longitudinal analysis of official surveys shows that people born 1940-1950 enjoyed an important elevation of their chances to attend a university, while other cohorts did not. The changes in the dynamics of the job market, interfering with the rhythm of educational development, produce a cohortal evolution of the value of grades measured by the chances of access to different social positions: in France, a progressive decline of the value of grades for the population born after 1950 is observed. The consequences of the cohortal dynamics of education & the value of each grade tend to affect (1) chances to find a position in the highest social categories & (2) chances to enjoy an ascending intergenerational mobility. Thus, the cohortal analysis of the social structure is a necessity: the aggregation of data concerning different cohorts might produce misleading diagnoses in terms of social change.

✓ **Chen, Chih-jou Jay & Nan, Lin** (Dept Sociology Academia Sinica, Taipei 11529 Taiwan (tel/fax: 886-2-2652-3394/3398; e-mail: jaychen@sinica.edu.tw)), **Local Institutions in Reforming Socialism: Social Embeddedness and Property Rights Transformation in Rural China.**

¶ The idea of social embeddedness is drawn on to explain economic action, outcomes, & institutions in Chinese reforms, explaining regional variations in economic organizations & property rights relations in rural areas by examining local institutions in which local economic activities are embedded. Case studies & in-depth interviews conducted in two regions, 1995/96, suggest that embedded networks set up affinities for certain types of organizational configurations. When economic actors reproduce these affinities to achieve specific goals in a context of economic action, economic organizations also take on systematic configurations. Localities are highlighted as sites of economic action, & an argument is made for alternative coordinating mechanisms governed neither by hierarchy nor by markets, but by local social institutions. This challenges the neoclassical economic view that assumes economic efficiency will be maximized only through the implementation of privatization & extends the perspective of embeddedness in economic sociology by showing the impact of social institutions on economic activities in a postreform socialist economy.

✓ **Chen, Kuanjeng & Yeh, Hsiu-jen**, **Educational Structure and Educational Mobility in Taiwan.**

¶ Attempts to further document changes in Taiwan's educational structure & refine models of the effects of structural shifts on educational attainment of individuals. Previous work showed that the structural transformation has generated significant & substantial differences in the mean years of schooling across cohorts, & the dependency of son's education on father's has declined. The diagonal parameter(s) are evaluated in a regression model introducing further breakdown of the sample to subgroups of cohorts by mover status. It is expected that the magnitude of the decline in the dependency of son's years of schooling on father's will be substantially reduced in the mover group, due to the effect of the diagonal parameter(s).

98S33922 / ISA / 1998 / 11163

✓ **Chen, Li**, **The Development of World Economic Unification and the Tendency of Youth Cosmopolitanism.**

¶ In the 21st century, the tide of cosmopolitanism in terms of youth development will become a reality with the developing tendency of world economic unification & the rapid development of mass media & high technology. Increasing opportunities in international economic activities will increase communication & learning opportunities for young people from various countries in the field of technology, which will strengthen their commonality. World economic unification will create conditions for the international development of the labor force & international mobility. Employment opportunities for young people in different countries based on their labor skills & employment vision will merge, the characteristic features of different nations will become weaker, & the mutual acceptance of different nations will become stronger. The history of nations will gradually evolve into the history of the world.

✓ **Chen, Shying** (Coll Staten Island, NY 10314-6600 (tel/fax: 718-982-3766/3794; e-mail: chen@postbox.csi.cuny.edu)), **Welfare and Culture: Conceptualizing Social Policy of the "Economic State".**

¶ The postwar development of industrialized nations has been led by the idea of a welfare state. Here, based on an in-depth study of the People's Republic of China, a new model—an "economic state" (Chen, 1996)—is discussed to conceptualize the experience of nations other than the welfare states. It is argued that the economic state represents a unique social infrastructure in which the main function of the state in economic construction is prescribed. Its approach to social welfare is a more radical

one, whereas the role of the welfare state in social policy is more immediate. The economic state does not simply submit itself to the goals & roads that lead to the "eternal" social ideal of a welfare state as various previous models implied. The difference between the economic state & the welfare state reflects different priorities in state policies, & the economic state model expresses a primary concern of many developing nations.

Chen, Sheying (Coll Staten Island, New York 10314-6600 [tel/fax: 718-982-3766/3794; e-mail: chen@postbox.csi.cuny.edu]), **Community Service Movement in Chinese Cities: The Advent of a Progressive Era?**

¶ In US social welfare history, there was a Progressive Era precursored by two significant social movements, i.e., the Charity Organization Society movement & the settlement house movement. Since the mid-1980s, urban areas in the People's Republic of China have seen a conspicuous community service movement aimed at social needs generated in a rapid process of social change. Explored here is why contemporary China is not better off than the US of a century ago in redressing its social issues. An economic state model is used in comparison to the modern welfare state. The future of the urban community service movement in China is also explored via comparison to the characteristics of progressive cities in US history.

Chen, Sheying & Lubben, James E. (Coll Staten Island, NY 10314-6600 [tel/fax: 718-982-3766/3794; e-mail: chen@postbox.csi.cuny.edu]), **Community Care for the Elderly in Urban China: Myth or Reality?**

¶ Presents an exploratory study examining the myth that the Chinese elderly are uniquely cared for by the family & the community, conceptualizing Chinese experience, mainly in the 1980s, through the community care framework. Main features of the People's Republic of China's welfare arrangements for the elderly are highlighted, policy issues are assessed, & some lessons for other nations are drawn. A community care model is formulated under a radical & mixed welfare model of the powerful economic state. The relevance of community care theory to China is explored, & Chinese characteristics are illuminated, considering the implication of China's neighborhood networking strategy, pointing to the gap in income support, housing, health care, & personal social services, e.g., absence of major domiciliary services. Important cultural issues in needs assessment are illuminated, & it is argued that a responsive, explicit community care policy is needed to include the majority of the elderly who have families. Rapid expansion of governmental services, however, is unlikely under the current economic state model.

98S33926 / ISA / 1998 / 11167

Chen, Sheying, Lubben, James E. & Chi, Iris (Coll Staten Island, NY 10314-6600 [tel/fax: 718-982-3766/3794; e-mail: chen@postbox.csi.cuny.edu]), **Social Support, Stress, and Depression in a Context of Aging and Chinese Culture.**

¶ Because genuine effects of stress & social support are not made very clear in empirical study, especially in aging research, provided is an analysis of data on 1,504 elderly Chinese & 204 elderly Chinese Americans. Results obtained with different instruments, e.g., the Lubben Social Network Scale, are compared, & those proven more effective in detecting the relationships among the theoretical constructs are recommended. A multiple measurement approach to psychosocial research opens up new ground for inquiry & debate, revealing unique opportunities for promoting the leading research hypotheses via the Chen Approaches to Unidimensionalized Scaling (1997). Findings reconfirm significant associations among affective functioning (depression), life stress, & social support. The role of personal coping in assuaging stress & depression is also betokened. The hypothetical impact of aging, however, gains only marginal support from the empirical data, although gender difference is relatively noticeable. Evidence is also obtained for the difference between elderly Chinese & Chinese Americans, though the results do not lend themselves to the myth that Chinese culture is associated with extremely low rates of depression.

98S33927 / ISA / 1998 / 11168

Chen, Sheying, Lubben, James E. & Chi, Iris (Coll Staten Island, NY 10314-6600 [tel/fax: 718-982-3766/3794; e-mail: chen@postbox.csi.cuny.edu]), **Culture and Elderly Support: The Case of Chinese Filial Piety.**

¶ In light of the myth of the Chinese gerontocracy, in which the elderly

are portrayed as a group whose needs are met through family & community support, the case of filial piety & "elderly support" is remade to balance a one-sided view of Chinese culture that ignores elderly self-care & caregiving to family & community. Documentary analysis, empirical data from a survey of 80 Chinese elderly persons, & family case studies are used to argue that reciprocity is key to understanding elderly support. Focusing on filial piety (usually losing sight of the role of the elderly) is not enough in explaining the mechanism of family & community care in the People's Republic of China. Care of the elderly themselves is further conceptualized in terms of self-care, self-help, exchanged care, & feedback care as a special kind of intergenerational exchange. It is also discovered that the Chinese *Xiao* bears especially on care by male offspring. Revealing important cultural issues in needs assessment, it is concluded that social services must be developed to prepare for when the elderly themselves & their families cannot meet their basic needs.

Cheng, Lu-Lin (Institut Sociologia Academia Sinica, Nankang Taipei Taiwan 11529 [tel/fax: 02-265-23392/23398; e-mail: 11cheng@sinica.edu.tw]), **Industrial Migration or Network Restructuring? Embedding International Footwear Sourcing Markets.**

¶ Studies the offshore investments of Taiwanese footwear producers since the late 1980s from a global perspective that regards production as only a part of the international footwear supply/sourcing market. Here, market is conceived as socially embedded in trust-mediated transaction organizations, which creates flexible rigidity. It is demonstrated that the foreign investments of Taiwanese footwear producers entail not only a geographical reallocation of footwear manufacturing, but more importantly, a restructuring of trading networks. Studies that focus on either the supplier or the buyer side are therefore prone to be misleading. The argument is further supported by a comparison of two waves of regional production reallocation. Given the similar state policy & global & local environment, the difference between the previous transition from Japan to Taiwan in the 1960s & the current one speaks against the universalistic market theory, which fails to examine the formation of markets historically.

Chernysh, Mikhail (Institut Sociologia Russian Academy Sciences, Krzhizhanovskiy St 24/35b.5 Moscow 117259 [tel/fax: 095-1240022/

C

7190740; e-mail: che@glasnet.ru)), **Russian Youth: A Return to Religion.**

¶ Empirical data show that Russian youth are returning to religion after many years of state-imposed atheism, with 50+% of Russian youths claiming they believe in God. However, their religious beliefs, unlike the convictions of their predecessors, tend to be more nondenominational, & many distance themselves from established religious practices. Two reasons for the alienation from religious ritual are suggested: (1) dislike of its formal side & (2) inability or lack of desire to learn them. No more than 2% of Russian young people attend churches on a regular basis, & fewer than 10% read scriptures & are aware of the main canons of their religions. The nondenominational character of their beliefs make them susceptible to exotic & often harmful religious cults that emphasize internal discipline & drill more than knowledge of established practices.

Chetty, Dasarath (U Durban-Westville, Private Bag X54001 4000 South Africa [tel/fax: 27-31-2044526/3093000]), **Participation and Community Development: The Interface between Community Organizations and Local Government.**

¶ After a historical survey of the essentially antagonistic relationship between community organizations & local government in the South African context, explored is the nature of the present relationship under a new democratic dispensation. The increasing distancing of local government from the organs of civil society is discussed together with current attempts to engage with communities, community organizations, nongovernmental organizations, & civil society in general. The fieldwork is based on 30 in-depth interviews with municipal councillors, representatives of residents, rate-payers, & local government associations, nongovernmental organizations, community policing forums, local economic development forums, & university researchers. The interviews reveal insights into mechanisms for popular participation in decision-making processes, eg, planning & budgeting, with an evaluation of participatory budgeting already being used by some municipalities. The conclusions reflect on the extent to which civil society acts to strengthen democracy at a local level & acts as an important partner in the initiating & governance of development. It is argued through a "new institutionalism" that participative democracy is good for development & may even be a causal factor. This theoretical position is subject to critique in the light of the empirical findings.

Cheung, Edward (Longwave Press, PO Box 111 368 Highfield Road Toronto Ontario M4L 2V6 [fax: 416-406-4694; e-mail: ec@1-888.com]), **Longwaves in Population Growth.**

¶ Examines US & Canadian population statistics, 1789-present, to show that baby booms occur at intervals of 50-60 years, followed by a growth decline. Those born in the days of the growth decline have been labeled as Generation X. When population growth per decade is plotted, the result is a phasal shift correlative to the longwave. Activities of the population are explored to show that a young population engages in different activities than an old population, eg, women's movement, prohibition, urban reform movements, & popular music. The activities of the longwave & the intensity to which these activities are engaged in reflect the age of the population. A youthful population has more energy, generating the upswing of the longwave. An aging population is diminished in energy, which is when the longwave decline begins. This fluctuation in population growth causes fluctuations in consumption growth, which cause fluctuations in economic growth, ie, longwaves.

Chouinard, Omer (U Moncton, New Brunswick E1A 3E9 (tel/fax: 506-858-4498/863-2000; e-mail: chouino@umoncton.ca)), **The Public Participation in the Rehabilitation of Coastal Zones.**

¶ In arguing that coastal zone management & environmental rehabilitation illustrate the importance of the integration of socioeconomic, political, ethical, & technical considerations to achieve successful results & intersectoral & multilevel action, the need to establish a flexible comanagement structure to address environmental rehabilitation of coastal zones is noted. Strong commonality of interest & network approaches between the various stakeholders involved in the comanagement structure facilitate communication & the exchange of information & ideas & allow experience from particular situations to be adapted to suit circumstances elsewhere. Lessons are drawn from cases of public participation in coastal zone rehabilitation along the Gulf of St. Lawrence in the province of New Brunswick. All three levels of government (municipal, provincial, & federal) have to work together under the leadership of members of the community from the beginning in the decision-making process. It must be stressed that the representatives of the governments in the working group are members of the affected communities. The community, by involving the governments, allows them to claim a part in the success of the project while not asking an important financial contribution. Moreover, the flexible comanagement structure gives the community access to governmental resources while leaving it in charge of the process. Instead of addressing lack of local resources with control centralization, a controlled decentralization is evidenced. However, the multistakeholders concept in the public participation process has drawbacks; use of Arnstein's (1969) ladder of participation, often used for assessing the degree of participation in comanagement experience, demonstrates, in particular, the importance of the commitment of the stakeholders. Contractual issues are discussed, along with the danger of excluding so-called non-economically active community sectors by privileging an economic rationality discourse. In an integrated approach of coastal zone management & environmental rehabilitation, the public's participation has to be considered in a broad perspective of networking (Fox, 1981) & should provide web facilitating interaction between members (Taussik, 1996), which helps avoid community withdrawal & cooptation of the comanagement structure by government.

Chouinard, Omer & Babin, Ronald (c/o Babin-Dept sociologie U Moncton, New Brunswick E1A 3E9 (tel/fax: 506-858-4372/4508; e-mail: Babinr@umoncton.ca)), **The Community Reappropriation Movement for Environmental Protection in Acadia-New Brunswick.**

¶ Three local studies involving initiatives (Intergenerational Environmental Project in Cap Pelé, Bay of Caraquet Improvement Project, Cocagne Island Ecodevelopment Project) are drawn on to examine recent steps toward community control of environmental protection in Acadia (New Brunswick). Such local initiatives are developing on fertile grounds inspired by Acadian cooperative traditions of the 1930s & an educative approach & contribute actively to the movement for sustainable management & development in New Brunswick. What is sought concerns the search for a new partnership based on more egalitarian exchanges involving compromises whereby people do not renounce their respective viewpoints while engaging in undertakings with governments & private interests for the betterment of the environment & quality-of-life standards. Further, this tradition contributes to concrete social economy initiatives involving grassroots association, & public & private organizations. A comparative study of the three initiatives illustrates the direction & scope of this ongoing dynamic & defines the underlying meaning of what is at stake in this structuration of contemporary social relations.

Christiansen-Ruffman, Linda (Dept Sociology Saint Mary's U, Halifax Nova Scotia B3H 3C3 (tel/fax: 902-420-5886/5152; e-mail: ruffman@huskyl.stmarys.ca)), **Patriarchy, Women and Changing Social Order: A Feminist Perspective about Knowledge from Atlantic Canada.**

¶ Focuses on alternative ways of understanding the interrelationships of patriarchy, women, & changing social order. The analysis is grounded in personal experiences & research as a woman sociologist living on the margins of North America, where assumptions about social location, social space, & knowledge differ from the dominant ones. Examined is (1) how knowledge would look if it were designed to serve & empower the interests of the poorest women & children in society, & (2) how social order would change if these social goals were central. The legacy of several stages of the women's movement & resulting changes to the social order are briefly analyzed. Assumptions of feminist knowledge are examined & its analytic components are contrasted with those of patriarchal knowledge, including that of hierarchical fundamentalism. Globalization & its associated economic fundamentalism are discussed. Contemporary contradictions are explored with respect to the changing social order brought by globalization, with a focus on the political implications of current globalization rhetoric & practice, especially for democracy. Also examined are the conceptual & empirical interrelationships between women's lives & globalization that researchers have come to "know," including their implicit micro-macro dichotomies & hierarchy. Examples illustrate how the patriarchal heritage of knowledge & its patricentricity generate neopatriarchal social forms. A focus on women's experiences, the women's movement, & changing social order is offered in conclusion with a look toward the future & feminist strategies for changing the social order.

98S33943 / ISA / 1998 / 11184

Christiansen-Ruffman, Linda (Dept Sociology St. Mary's U, Halifax Nova Scotia B3H 3C3 (tel/fax: 902-420-5886/5152; e-mail: ruffman@huskyl.stmarys.ca)), **The Beijing Platform for Action and Beyond: Feminist Praxis in the Context of Policy Constraints and Paradigmatic Containment.**

¶ Based on participant observation, interviews, & content analysis, examines the Beijing (People's Republic of China) Platform for Action (1995) & its construction. Alternative perspectives of the major participants are briefly characterized, & their differences in process, content, & paradigmatic form are considered. A contrast is made with the UN's World Summit for Social Development. Implications of the process, policy, & paradigm for monitoring subsequent follow-up of the Women's Conference in China by governments, the UN, & women's groups around the globe are discussed. Contradictions that develop out of the policy constraints & paradigms both for the implementation of the Platform for Action & for feminist praxis are addressed.

Chuprov, Vladimir I. & Zubok, Julia A. (Center Sociology Youth Inst Socio-Political Research, 32a Leninski Prospect 117334 Moscow Russia (tel/fax: 7095-938-19-10/374-6132)), **Russian Youth: Contradictory Integration into the Labour Market.**

¶ Explores factors that affect social & personal integration of Russian youth into the labor sphere, analyzing youth policy & its effects & examining such issues as the ability of young people to negotiate the labor market & the correlation between professional position & the process of integration/exclusion. Many contradictions & conflicts between young

C

people & the institute of employment are identified. In contrast to stable societies, where such conflicts are local in character, in contemporary Russian society, caught in the midst of a severe crisis, they escalate up to the macrolevel. Conflicts lead to youth exclusion from the labor sphere, eg, age discrimination & marginalization. One of the main findings concerns the extension of such social exclusion.

98S33946 / ISA / 1998 / 11187

Chuprov, Vladimir I. & Zubok, Julia A. (Centre Sociology Youth Instit Socio-Political Research, 32a Leninski Prospect 117334 Moscow Russia (tel/fax: 7-095-938-19-10/374-6132)), **Russian Youth on Its Way to World Integration: Trends and Problems.**

¶ Peculiarities of Russian youth world integration are examined. Data show that youth consciousness is formed under the influence of new human values, ie, an emphasis on new human qualities, as indicated by the fact that approximately 33% of young people identify themselves with humankind as a whole. Thinking globally is a positive tendency among the young (ages 14-18), particularly in the context of escalating nationalism & primitive tribal self-determination. Such consciousness is an important condition for the consolidation of progressive forces inside Russia & the integration of its youth into a larger world. However, young people do not identify this process only with Westernization; comparative research demonstrates that the idea of a original Russian way is gaining favor among the young generation. Integration tendencies may be grouped on several bases. Cultural aspects reflect the emerging tendency of strengthening coordination between standards & behavior patterns in youth subculture, ie, music, leisure interests, & fashion. Dissemination of Western mass culture patterns, life values, & communicative norms among the young Russia is analyzed.

98S33947 / ISA / 1998 / 11188

Ciarallo, Ana (U Nacional Comahue Mendoza, Rio Negro Argentina (tel/fax: 941-336-70/68; e-mail: pelu@rionet.rionegro.com.ar)), **Between Conversion and Tradition: Family Farmers in the Upper Rio Negro Valley-Patagonia-Argentina.**

¶ Family farmers from the rich fruit-growing region of the upper Rio Negro Valley of Argentina are going through profound discursive & cultural changes as a consequence of the application of neoconservative policies from the central administration. The productive practices that—since the beginning of the century—have granted these farmers an important place in the productive structure are no longer valued in an economic organization that is becoming more globalized & competitive. Smallholders are urged to learn & reinterpret efficiency, management, reticular organization, & risk-taking behaviors if they aim to remain in the export-oriented production circuit. This shift in production practices emerges at a time when farmers suffer from lack of both financial aid & productive autonomy & are threatened with losing the social place that they have earned & held throughout many decades. Explored here are strategies these social actors have adopted in their everyday life to stay in a globalized economy blending elements identified as traditional with elements from conversion discourse & practice, specifically the decoding & reshaping of intervention programs oriented toward productive & organizational changes.

Ciccantell, Paul & Bunker, Stephen (Dept Sociology Kansas State U, Manhattan 66506 (fax: 913-532-6978; e-mail: ciccant@ksu.ksu.edu)), **Nature, Society and the New Historical Materialism.**

¶ A longstanding debate in world-systems theory & more broadly, in the analysis of the rise of capitalism or, alternatively, the capitalist mode of production, has focused on how & when capitalism & what Immanuel Wallerstein (1974) termed the capitalist world-economy came into existence. Elements of this & related debates are outlined. It is argued here that the effort to broaden the historical scope of world-systems analysis & overcome the Eurocentric biases of social scientific analysis has lost the analytic power of historical materialism. Specifically, it is argued that the relationship between society & nature must be the central analytic focus for examining the historical evolution of economies & societies. From this perspective, the capitalist world-economy of the last 500 years represents a new pattern of relations between society & nature &, as a result, of social relations. The evolving character of nature-society relations in the capitalist world-economy & other historical patterns of nature-society relations are compared. This theoretical & methodological position, termed the new historical materialism, provides a conceptualization of social change that links interdependent natural & social pro-

cesses.

98S33949 / ISA / 1998 / 11190

Cioni, Elisabetta, Giovannini, Paolo & Perulli, Angela (U Florence, I-50121 Italy), **Time, Places and Locality.**

¶ Focuses on the social construction of time patterns & uses. Some theoretical categories, eg, orientative & ordinative time, are employed to underline the relations between individuals & society, in particular, to stress the social constructions at the geographical level. In this sense, time & space appear as fundamental variables to identify local memberships. Differences & relations between place & locality are examined using a national Italian sample, with distinctions drawn between geographical areas & between metropolitan areas & little towns in the use of both market & family time. Other variables, eg, gender, family pattern, & life cycle, are examined.

98S33950 / ISA / 1998 / 11191

Cipriani, Roberto G. (U Rome, I-00185 Italy (tel/fax: 39-6-5910933; e-mail: r.cipriani@agora.stm.it)), **International Sociology. Current Situation and Policy.**

¶ *International Sociology* seeks a wide geographical & subject spread. To ensure that the entire international community is represented in its pages, regional & linguistic plurality is observed, but never second to editorial quality. All branches of the discipline are represented, & each issue contains a cover article written by an outstanding sociologist. As the journal of the International Sociological Assoc, it maintains some specific features: a global & cross-cultural perspective, the advance of sociology in theory & method, new directions in empirical research, changes in international social structure, comparative studies, & key social problems. Sometimes a roundtable &/or a portrait are published. About 100 papers from many countries are received annually, & each is reviewed by two referees.

98S33951 / ISA / 1998 / 11192

Ciuffolini, María Alejandra (Instit Investigación análisis político U Católica Córdoba, 5000 Argentina (tel/fax: 54-51-940427; e-mail: landra@porrernet.com.ar)), **Desarrollo económico y elites locales: entre la dependencia y la innovación política** (Economic Development and Local Elites: Between Dependency and Political Innovation). (SPA)

¶ Presents a case study of small communities in the Punilla valley of Córdoba, Argentina, to examine the challenges faced by local political & economic elites in promoting economic development, based on in-depth interviews with main actors & residents. Focus is on the strategies used to develop economic self-sustainment in these small communities where options & opportunities are limited. Election rationale among the elites & their constituencies & political decision making are also analyzed, showing how local political, institutional, & economic independence (from the state) is highly valued.

Clancy, Patrick (University Coll Dublin, Belfield 4 Republic Ireland (tel: 353-1-706-1125; e-mail: pclancy@ucd.ie)), **Resisting the Evaluative State: Control of Higher Education in Ireland.**

¶ Conceptualizes the process of governance of higher education systems, & identifies factors that account for differences in the scope & intensity of state control of institutional performance, drawing on a case study on the governance of the higher education system of the Republic of Ireland. It is argued that, while the general trend since the 1960s is one of declining institutional autonomy, recent developments testify to successful resistance by colleges in protecting &, in some cases, enhancing their autonomy. Several examples of resistance are examined, & national cultural & institutional factors that have facilitated resistance to the evaluative state are described.

98S33953 / ISA / 1998 / 11194

Clark, Jeffrey A. (Human Rights Research & Education Centre U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5775/5125; e-mail: jeff@human-rights.cdp.uottawa.ca)), **Human Rights and Democratic Accountability: Toward Useful Brazil-Canada Dialogue on Addressing Institutional Violence.**

¶ Explores the challenges faced by human rights advocates in Brazil, where institutional (ie, police) violence persists in spite of democratic transition, drawing largely from personal experience comanaging a project on institutional violence in Brazil. The project involves supporting efforts to bring the police under democratic control by promoting new

kinds of democratic policy accountability to complement those already in place. Police accountability for human rights is placed in two categories: top-down accountability, ie, formal methods of democratic control (eg, civilian review of police conduct), & bottom-up accountability, ie, informal methods of public control (eg, community policing). This accountability is assessed from the perspective of where Canadian experiences may be relevant to human rights initiatives currently being undertaken in Brazil. It is considered useful to deepen democratic reform by buttressing both bottom-up & top-down democratic accountability.

Clark, Terry Nichols (U Chicago, IL 60637 (tel/fax: 312-702-8686; e-mail: tnclark@midway.uchicago.edu)), **Why Do Social Movements Succeed? Political Parties Shift the Playing Field.**

¶ Attributes social movement success to political parties, drawing on data from some 7,000 cities in 20 countries to assess social movement importance. These differences are explained using a variety of social characteristics (education, income, ethnicity, etc) as in past social movement research; however, also analyzed are political system characteristics, especially number of political parties, their strength, & ideological coherence, to test the proposition that the more numerous & ideologically coherent the parties are in a political system, the weaker are the social movements; eg, the US has ideologically weak but broad parties, which encourages strong social movements, whereas Poland has had dozens of parties, leading many to act like social movements, which, in turn, weakens social movements & the civic sector in general.

98S33955 / ISA / 1998 / 11196

Clark, Terry Nichols (U Chicago, IL 60637 (tel/fax: 312-702-8686; e-mail: tnclark@midway.uchicago.edu)), **Clientelism and the University.**

¶ Develops a model of academic clientelism that contrasts with the universalistic model of science often identified with Robert K. Merton, who applied the term to US political machines. But universities, especially in the US, have seldom been examined from a clientelistic perspective. Such an analysis is shocking & may seem to imply corruption in deviating from the model of science where ideas reign supreme. Still, by international standards, universalism is the outlier. And after 1968, the US system moved toward clientelism. Most national university systems are enmeshed in national politics & ideological debate & are organizationally centralized on the national government. Such structural characteristics encourage academic clientelism, which is probably widespread in much of the world. As resources decline, however, horizontal mobility declines, localism rises, & clientelism grows. The US system is still an outlier, more decentralized, competitive, & universalistic than most national systems, though it lost some of this from the 1960s to the 1990s. This is attributed to the fact that it has (1) fewer resources per researcher (especially in social science), (2) less horizontal mobility, which brings (3) more localism, & (4) more clientelism. The success of Columbia sociology is used to illustrate the points.

98S33956 / ISA / 1998 / 11197

Clark, Terry Nichols (U Chicago, IL 60637 (tel/fax: 312-702-8686; e-mail: tnclark@midway.uchicago.edu)), **The New Political Culture: *Alltaglichkeit* of a Radical Interpretation.**

¶ The new political culture, which was radical a decade ago (& less so today), represents a new set of rules by which political decisions are made in many countries. Explored here are the implications of these new rules for citizens, social groups & leaders, & class politics. Empirical data on the limits of the new political culture are presented from some 7,000 cities in 20 countries. New political cultures do promote innovations in government. Locally, they often come with a new mayor & council, who effect small revolutions. "Reinventing government" & similar labels stress similar concerns. Controversies over these issues are summarized. *The New Political Culture* (1998) synthesizes some eight years of work on these issues. Related are Mike Rempel & Terry Clark's analyses of citizen survey data in *The Politics of Post-Industrial Society*, & *Urban Innovation*.

Clarke, Egerton (Kent State U, Salem OH 44460 (tel/fax: 330-332-0361/9256; e-mail: Clarke@Salem.kent.edu)), **A Symbolic Interactionist Approach to Conflicting Role Expectations in Caregiving.**

¶ Arguing that institutional health care delivery is characterized by interdependency among caregivers & between caregivers & care receivers, examined are intra- & intergroup conflicts & coping strategies of formal

caregivers in response to conflicting role expectations. Guided by a symbolic interactionist perspective, data from 218 Italo-Catholic & Anglo white nursing home residents in Toronto, Ontario, show that caregivers were more likely to reject conflicting role expectations that came from different groups (intergroup conflicts) than conflicting role expectations that came from the "same other" (intragroup conflicts). Generally, the lower the socioeconomic status of residents & their families, or the less frequent the interaction between residents & their families, the more likely resident expectations were rejected by caregivers.

98S33958 / ISA / 1998 / 11199

Clarke, Egerton (Kent State U, Salem OH 44460 (tel/fax: 330-332-0361/9256; e-mail: Clarke@Salem.kent.edu)), **Toward a Triadic Exchange Relationship in Long-Term Care.**

¶ Uses social exchange theory to shed additional light on the link between formal & informal caregiving. Data from 218 nursing home residents in Toronto, Ontario, show that conversations between formal caregivers & families of elderly persons are more important for Italo-Catholics than for Anglo whites. The more often residents were contacted by families, the more care & attention residents reported from formal caregivers, raising concern about who speaks for those residents who have no contact with families. While Italo-Catholic residents had more confidants than did Anglo whites, no evidence was found to suggest a positive relationship between number of confidants & feelings of well-being. It is argued that one close confidant may provide just as much or more than do several. Who the confidant is & how readily available he or she is are important factors.

Clarke, Susan E. (Political Science Dept U Colorado, Boulder 80309 (tel/fax: 303-492-2953/0978; e-mail: clarkes@colorado.edu)), **Local Culture Wars: Social Construction of Abortion Politics.**

¶ Local officials in the US are increasingly involved in culture wars over issues involving conflicting values & worldviews. In these conflicts, the political uses of culturally rooted resources to define issues-articulated in frames-by different groups are central. Language is used to connect policy agendas with cultural symbols & values & potentially mobilize both citizens & policymakers to act. Here, described is how, from 1989 to 1996, local officials in Denver, CO, were embroiled in local culture wars over abortion. They faced mobilization & countermobilization of local groups triggered by national & state decisions on abortion restrictions & targeted disruptive protest. The framing of the abortion conflicts by government & pro-choice groups is reconstructed using a computerized file of 280 local newspaper accounts of abortion issues. Three linked policy responses are compared: (1) repression, justified by socially constructing disruptive challengers as negative, outside groups; (2) curbing the expansion of repressive strategies in the face of city council concerns that more repressive tactics would unduly constrain local electoral constituencies; & (3) efforts to normalize disruptive abortion conflicts by bringing them within the boundaries of accepted political exchange.

Clemen, Manfred (Dept Sociology J. W. Goethe U, D-60054 Frankfurt Federal Republic Germany (tel/fax: 49-69-781335/787135)), **Fragments of a "Skin"-Career.**

¶ From the context of biographical theory, structures of a reflexive society & individuals are demonstrated from the perspective of individuals who are nonreflexive or only partially or superficially individualized to show that the theory of individualization (concentrated on macro-sociological aspects) cannot account for this phenomenon, drawing on a case study of a skinhead in the eastern Federal Republic of Germany. Although he grew up in a society not completely modernized, subjective factors necessary for the development of autonomy & reflexivity were evident. The basis for these qualities are argued to be established in early childhood (in a triangulated mother-father-child-relationship or an emotionally stable primary relationship to one person), & it is suggested that this basis was missing from the skinhead's childhood.

Close, Paul (Policy Research Instit Leeds Metropolitan U, LS2 8AJ England (tel/fax: 0113-283-3225/3224)), **Reviewing the Concept of 'Childhood' as a Sociological Tool.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

Starts from current notions of childhood & various overlapping concepts, eg, citizenship & social exclusion, & draws on recent literature. Insofar as childhood is defined in terms of such considerations as power & control, rights, & inclusion-exclusion in social (even global) relationships, systems, & processes, the issue arises of the value of conceptualizing childhood in a manner whereby it is released from its (perhaps sociologically restrictive) life-cycle ties & parameters.

98S33963 / ISA / 1998 / 11204

Close, Paul (Policy Research Instit Leeds Metropolitan U, LS2 8AJ England (tel/fax: 0113-283-3225/3224)), **The Comparative Study of Supranational Regional Regimes within the New World Order: Global Prospects and Sociological Implications.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

Argues that in the new world order, the European Union (EU) is just one among a growing number of regional regimes acquiring prominent roles in the process of global governance, to some extent through the operation of differential zones of geopolitical management. The EU is currently the most advanced & influential example of a regional regime by virtue of having the novel European community (EC) at its core—the EC being uniquely constructed around supranational institutions, decision making, & laws. But, the EC's uniqueness is unlikely to last. The evident competitive advantages of supranational regional regimes, in conjunction with the realism generally adopted by various global players, is conducive to the consolidation & proliferation of such regimes in a manner consistent with the neofunctionalist perspective on the progress of the EU. Other prospective supranational regional regimes can be found emerging in Asia & the Americas. It is contended that the emerging character of the global system will increasingly depend on these regimes, relationships among such organizations, & the doctrine of supranationalism.

98S33964 / ISA / 1998 / 11205

Cloutier, Esther, David, Hélène, Prévost, Johane & Teiger, Catherine (GRASP U Montréal, H3C 3J7 Quebec (tel/fax: 514-343-6196/2334; e-mail: davidh@ere.umontreal.ca)), **Transformation des pratiques professionnelles des infirmières dans le cadre des programmes de maintien à domicile** (The Transformation of Nurses' Professional Practices in the Framework of Home Care Programs). (FRE)

As a result of Quebec's health care reorganization, more nursing & other health-related activities take place in homes rather than hospitals. It is argued that this change in place involves a reworking of various practices in the necessary infrastructure (equipment, material, personnel, information, etc) that were previously concentrated in the same physical environment. The need for polyvalent coordination efforts to deal with these transformations is noted. A case study undertaken in a local health center is presented, focusing on the tasks of normal nurses, eg, responsibilities for both dispensing daily care to housebound patients & coordinating complex webs of care & services.

98S33965 / ISA / 1998 / 11206

Cloutier, Fernand & Hamel, Jacques (Dept sociologie U Montréal, H3C 3J7 Quebec (tel/fax: 514-343-7159/5522; e-mail: hamelja@ere.umontreal.ca)), **La Culture d'entreprise chez les francophones au Québec: une forme d'organisation du travail nouvelle ou ancienne?** (The Enterprise Culture among Quebec Francophones: A New or Old Form of Work Organization?). (FRE)

An exploration of the new styles of work organization that shape corporate culture, hypothesizing that corporate culture embodies a style of work organization based on old, socially conscious production relations,

the transformation of which challenges the traditional rapport between management & unionized labor, as well as Taylorism's organization of work & the social role of the enterprise. Data collected via participant interviews & observations of selected Quebec business enterprises reveal that corporate culture imitates the kinship relations that were once the cornerstone of the economy of Quebec's Francophones. The significance test posits Pierre Bourdieu's reversal theory that societies are evolving from those that model economic dealings on kinship relations to those in which the reverse is true.

98S33966 / ISA / 1998 / 11207

Coburn, David & Rappolt, Susan (Dept Public Health Sciences U Toronto, Ontario M5S 1A8 (tel/fax: 416-978-7513/2087; e-mail: david.coburn@utoronto.ca)), **Medical Dominance, the 'Logic of Medicare' and Variants of Capitalism: Competing or Complementary Views of Health Care in Ontario?**

Analyses of power in health care have concluded that medical dominance, or the ability of medicine to shape events to its own interests, has been a major force in determining the nature of the Canadian health care system. Recently, however, medicine in Ontario has been losing some of its once almost hegemonic power, partly because of state involvement in health care insurance (medicare). It has been claimed that, because medicare was government financed, pressure arose to control costs & rationalize care, a practice termed the "logic of medicare." It is contended here that a better understanding of both medical dominance & the "logic of medicare" could be gained by contextualizing these phenomena within changes in variants of capitalism. Drawing on the work of R. J. S. Ross & K. C. Trachte (1990) on global capitalism, it is argued that viewing changes in dominance & state involvement in the context of broad structural change in the Canadian & international economy—from entrepreneurial, to monopoly, to global capital—enhances understanding of state policies in health care. Health care change is just one facet of much broader structural processes involved in the transformation of capital to its global form. In fact, the rise & decline of medical dominance & the formation of, & contemporary attacks on, medicare are part of the same structural processes.

98S33967 / ISA / 1998 / 11208

Coen, Anna (ISPE, via di Villa Albani 26 A I-00198 Rome Italy (tel/fax: 39-6-68361/6836422)), **Une Recherche sociologique sur le rôle prospective des femmes dans l'économie italienne** (A Sociological Study of the Prospective Role of Women in the Italian Economy). (FRE)

Recent changes in Italian business practices that have led to the dismantling of large factories in favor of diffused production are discussed, & it is held that this turned, which demands complex networks & value-added quality in terms of research, technological innovation, & commercialization, even at the international level, may serve as a door of opportunity for working women. The effects of the transformation to diffused production are considered, looking at the predominantly female position of the secretary. If the work of the secretary is complemented by continued professional training, it could become a stage in an apprenticeship leading to greater professional responsibilities at higher remuneration. The importance of studying women's work as secretaries for identifying possible scenarios for women in advanced societies is emphasized.

98S33968 / ISA / 1998 / 11209

Coenders, Marcel, Scheepers, P. & Verberk, G. (Dept Sociology U Nijmegen, NL-6500 HE Netherlands (tel/fax: 31-24-361-2337/2399; e-mail: m.coenders@maw.kun.nl)), **Blatant and Subtle Prejudice: Two Distinguishable Types of Out-Group Prejudice?**

Longitudinal survey data in Western societies have shown an overall decline in so-called blatant outgroup prejudice, but several authors have proposed that a new, more covert & subtle form of prejudice has emerged. Previous research on this topic is critiqued. Whereas some authors (eg, Sniderman & Tetlock) question whether subtle prejudice is really distinct from traditional forms of prejudice, Meertens & Pettigrew (eg, 1997) stress that blatant & subtle prejudice are distinguishable types of outgroup prejudice. Here, the proposed blatant-subtle distinction is tested in a more consistent & rigorous manner through a reanalysis of 1988 Eurobarometer data from 4 Western European countries. Explanatory & confirmatory analyses indicate that most of the subtle prejudice items cluster with the blatant prejudice items, forming a general prejudicial attitude. Those subtle prejudice items that are distinct from this general prejudicial attitude are methodologically questionable as measures of prejudice. In addition, analyses with regard to the social-structural & policy-related correlates of the prejudicial items show that the distinction between blatant & subtle prejudice is highly questionable. Theoretical implications of these findings are discussed.

✓ Coetzee, Jan K. (Dept Sociology Rhodes U, Grahamstown 6140 South Africa (tel/fax: 27461-318361/25570; e-mail: scjc@warthog.ru.ac.za)), **Interpreting Trauma Narratives: Comparing the Life Histories of Former Political Prisoners in South Africa and in the Then Czechoslovakia.**

¶ Describes & applies a fragmentary method to life histories of former political prisoners in South Africa & former Czechoslovakia to compare experiences, efforts to build group solidarity, opportunities to devise survival strategies, & how they managed their frustrations. Lessons about the nature of memory as reflected in the narratives are considered.

98S33970 / ISA / 1998 / 11211

✓ Coghlan, Andrew F. (Australian Emergency Management Instit, Mount Macedon Rd Mount Macedon (tel/fax: 0354-215-100/272; e-mail: acoghlan@ema.gov.au)), **Post-Disaster Redevelopment.**

¶ Many decisions concerning rebuilding of elements of a disaster-affected area are made on an ad hoc basis. It is essential that long-term planning be undertaken & the recovery process used as an opportunity to redevelop the built & natural environment in a positive manner. An overview is provided of key issues to be considered in the planning & redevelopment of the physical environment of a community following a disaster. Topics addressed include postdisaster needs; sense of place & preservation of visual & historical links with the past; the capacity for disaster-affected communities to cope with change & redevelopment; involvement of the community in the redevelopment process; & the opportunity for disaster-affected areas to be improved, rather than just restored, through redevelopment. One key component of both the physical redevelopment & the emotional recovery of any disaster-affected community is the creation of community memorials; also discussed is the issue of how appropriate memorials may be achieved without damaging the already fragile postdisaster community fabric.

98S33971 / ISA / 1998 / 11212

✓ Cohen, Maurie J. (OCEES, Oxford OX1 3TF England (tel: 44-0-1865-270886)), **The Socio-Historical and Intellectual Foundations of Sustainable Development.**

¶ The confusing maze of definitions & policy prescriptions surrounding sustainable development has crystallized (at least within the world's advanced nations) since the 1992 Earth summit in Rio de Janeiro, Brazil, into two overarching discourses. On the one hand, national governments & corporate interests have begun to promote a menu of managerialist strategies that emphasize the redesign of manufacturing systems, the implementation of new accounting frameworks, & the harmonization of economic goals with environmental performance. On the other hand, local advocacy organizations have embraced a more participatory package that aims to empower people by encouraging them to work collectively toward a more environmentally responsible future. The two approaches are rife with incongruities & cleavages, particularly concerning the issue of popular engagement, the scale of envisioned transformation, & the role of technology. The dual ascendancy of these discourses is not surprising, & correlates of this dialectic between utilitarianism & idealism are readily identifiable in all phases of modern environmentalism.

98S33972 / ISA / 1998 / 11213

✓ Cohn, Amélia (U São Paulo & Cedec, 05002-270 SP Brazil (tel/fax: 5511-3871-2966/3872-2123; e-mail: cedec@eu.ansp.br)), **The Challenges of Implementing Community Health Care with Multiple Inequalities—Brazil.**

¶ Attempts to analyze health programs recently implemented & based on the community health care model, in the context of reforms implemented in the Brazilian health system, characterized by deep inequalities in distribution of health equipment & in composition between private & public health service sectors. The Community Health & Family Health Agent programs, implementation of which faces distinct challenges in the poorest & richest regions of the country, are studied, assessing not only the impact of these programs, mainly in reducing infant mortality, but also the problems found in implementation in areas of the country characterized by social inequality & poverty. The analysis focuses on a perspective of equity.

98S33973 / ISA / 1998 / 11214

✓ Coit, Katharine (42 rue Moulin vert, F-75014 Paris France (tel: 33-01-45435917)), **Housing and Power Relations: A Study of the Impact of Socio-Political Culture on Housing Provision in the Third World.**

¶ The provision of housing is generally thought to be a question of the availability of either affordable houses or the essential resources needed to build them. Based on observations & case studies, analyzed here are barriers that hinder poor people in obtaining decent housing & different types of informal power structure that condition housing provision in low-income neighborhoods of the Third World. It is shown that economic constraints, while a major barrier, compose but one type of exclusion faced by low-income populations: others include legal restrictions, administrative red tape, & ethnic & racial prejudice. To overcome these obstacles, they must confront those in command. With the hypothesis that power relations often have a much greater weight on how people act than is generally recognized, analyzed are power relations forms in different Third World cultures.

✓ Collin, Jean-Pierre & Champagne, Eric (INRS-Urbanization, 3465 rue Durocher Montreal H2X 2C6 Quebec (tel: 514-499-4000; e-mail: jean-pierre.collin@inrs-urb.quebec.ca)), **Economic Development Strategies for Greater Montreal: New Actors Configuration and Orientations Rephrasing in a City-Region Era.**

¶ In urban studies & regional politics, many authors have discussed the emergence of the US metropolitan area & the commitment to renew the scale of territorial planning strategies in a metropolitan interdependence perspective. In Canada, to characterize this new territorial configuration & its urban impacts, the city-region concept is commonly used to describe the interactions between center city & suburbs. Analyzed here is how public, private, & civic actors in Greater Montreal, Quebec, are replying to this changing reality & the economic policies specifically developed to face the metropolitan interdependence issue. In 1991, the Provincial Government of Quebec introduced a strategic plan for Greater Montreal that recognized the area's prominent significance for the Quebec economy, & as such, the necessity to renew dialogues among metropolitan actors. Since then, new public initiatives & metropolitan organizations have emerged. Old & new metropolitan organizations are compared, noting the emergence of a new generation of metropolitan management.

✓ **Collinge, Chris** (CURS U Birmingham, B15 2TT England (tel/fax: 44-1214-14-3783/3279; e-mail: c.j.collinge@bham.ac.uk)), **Self-Organisation of Society by Scale: A Spatial Reworking of Social Regulation Theory.**

¶ A neglected aspect of the spatial articulation of society is its organization by scale. The scaling of social systems gives rise to a vertical ordering that combines with the more familiar horizontal ordering by place. The theory of social regulation is examined here to suggest how this may be reworked to generate a model of societalization by both scale & place. The regulation approach is at heart a cybernetic theory, whereby innovations in accumulation & regulation—whatever their origins—will tend to be selected & woven into a stable pattern if they contribute to expanded reproduction of capital. Systems of accumulation & regulation that are to survive by resolving the economic problems of the preceding period must respond to the constraints & opportunities associated with the latter by meeting certain requirements—spatial conditions—involving scale organizations of accumulatory & regulatory practices that complement one another & contribute to their combined reproduction. Analysis suggests that it is possible on this basis to develop a regulationist account of the fundamental tendency toward the integration & division of societies at different scales & the emergence through this process of dominant scales of societalization in each epoch.

✓ **Connolly, Linda** (Dept Sociology University Coll Cork, Ireland (tel/fax: 21-902592/272004; e-mail: l.connolly@ucc.ie)), **From Revolution to Devolution: The Contemporary Irish Women's Movement.**

¶ Explores the evolution of the contemporary women's movement in the Republic of Ireland, from the foundation of the state to the present, drawing on a social movement's perspective. Processes through which the women's movement, & in particular, its constituent organizations, came to fruition as agencies of social change are examined. It is argued that, fundamentally, the women's movement in Ireland is characterized by its interconnectedness; eg, the central tensions, themes, & organizing strategies of the movement interpenetrate not only across different social movement organizations, but across time & space. The movement's development is reconceptualized in terms of four states: abeyance, advancement, internal reappraisal, & new directions. Demonstrated are the continuities linking the movement & its constituent organizations across these development stages. A key theme is the continual process of formalization, which has incorporated radical organization into the mainstream. Parallels can be drawn between the period of advancement in the 1970s & the new kinds of consolidation & formalization occurring in the 1990s. A modified resource mobilization model is applied, & the political opportunity structure, potential for the development of external alliances, existence of sympathetic elites, & the role of ideology as source of conflict & valuable resource are considered. Challenged is the view that the women's movement "happened" in Ireland as part of a generalized modernization trend in the post-1960 era.

98S33983 / ISA / 1998 / 11224

✓ **Connolly, Paul J.** (School Social & Community Sciences U Ulster, Derry BT48 7JL Northern Ireland (tel/fax: 44-1-504-37-5241/5402; e-mail: pj.connolly@ulst.ac.uk)), **Reconciling the Two 'Minorities': A Critical Review of the Impact of Research on Education and Community Relations in Northern Ireland.**

¶ In relation to the ethno-religious divide in Northern Ireland, it has been argued that there are two minorities: While Catholics constitute the minority in the state of Northern Ireland & Protestants the majority, in the island of Ireland, Protestants now constitute the minority. Consequently, a deep fear & mistrust have developed among both minorities, which underpins fundamental social, political, & economic cleavage between them. De facto segregation in the education system exemplifies this problem, with some 97% of schools either controlled (Protestant) or maintained (Catholic). In this context, research on education & ethnicity has been less concerned with the incorporation, marginalization, or exclusion of the minority population than with the deep divide between the two minority populations & the role of the educational system in addressing this to promote good community relations. Educational research has been focused on (1) understanding how & why the educational system became segregated; (2) understanding & assessing the role that schools have been given in community relations work; & (3) assessing the development & impact of the small but growing integrated schools movement. Methodological & other problems have hampered the success of such research. Illustrations are presented from recent ethnographic research investigating the impact of cross-community contact schemes among children, ages 10-11, from two neighboring youth clubs in Northern Ireland. Only by increasing use of ethnographic methods can educational researchers continue to make an important impact on practitioners & policymakers in Northern Ireland.

✓ **Conrad, Peter** (Brandeis U, Waltham MA 02254-9110 (tel/fax: 781-736-2635/2653; e-mail: conrad@binah.cc.brandeis.edu)), **Constructing the "Gay Gene" in the News: Optimism and Skepticism in the American, British and Gay Press.**

¶ Examines how the US, British, & gay press reported Dean Hamer's re-

search finding of a connection between a genetic marker on the Xq28 region of the X chromosome & male homosexuality, based on largely qualitative analyses of newspapers & newsmagazines in 1993 & 1995 (the 2 years Hamer's research was reported). Hamer's 1993 study became front-page news in both GB & the US, although it was less consistently reported in the gay press. Overall, the three press cultures framed their stories about the research differently. The US press presented the science of the research in detail & framed the story with "cautious optimism," viewing the "naturalization" of homosexuality as likely to be good for gay men. The British press framed the story as "the perils of the gay gene," emphasizing concerns about potential discrimination, misuse of the research, & the dangers of eugenics. The gay press saw the research as a double-edged sword that could have some benefits for gay rights but also might be deleterious to the gay community. The differential framing of the gay gene in the press cultures is rather striking & shows a strong continuity in the reporting of Hamer's second affirmatory paper in 1995. Sources & potential consequences of such variant framing of the gay gene are discussed as illustration of how a genetic finding can be framed differently in the public discourse.

✓ **Constantopoulou, Chryssoula** (U Macedonia, GR-54006 Thessaloniki Greece (tel/fax: 00-30-31-891-858/844-536; e-mail: konstant@macedonia.uom.gr)), **Contemporary Social "Knowledge": The TV News.**

¶ Challenges notions that contemporary knowledge is exact through discussion of TV's role in the construction of reality. Watching the TV news, especially in the evening, is the daily ritual of most individuals in the world, enabling them to be connected with, & get informed about society. Following the two-level construction of social reality this behavior can also be seen as a daily ritual. Because a few agencies diffuse the world news, it can be assumed that special political or economic interests influence the choice of what is to be known. Although the main social belief nowadays is that contemporary knowledge has immediate access to an event, events are not news because they just happen, but because they are chosen to be narrated reality. This selection occurs even when connections with networks pretend to escape official choice; eg, on the Internet only rumors can circulate (which is illuminated by Kapferer's analysis). The medium imposes mise en scène & special aesthetics; thus an image showing an event has no informational value itself. Considering that contemporary society recognizes as social reality what is summarized (narrated) as "news," it is argued that myths continue to be socially central, & contemporary knowledge is not as exact as the technical capacities to surpass obstacles of time & space can make it. It is concluded this mythmaking process is a basic cognitive characteristic, an obscurant presented as transparent knowledge.

98S33988 / ISA / 1998 / 11229

✓ **Constantopoulou, Chryssoula** (U Macedonia, GR-54006 Thessaloniki Greece (tel/fax: 00-30-31-891-858/844-536; e-mail: Konstant@macedonia.uom.gr)), **Mythologies contemporaines, représentations et médias** (Contemporary Mythologies, Representations, and the Media). (FRE)

¶ It is held that the favorite choices of the TV-viewing public throughout the world are TV films & series, despite the public's awareness of the mythic side of these mass productions. How, in this way, contemporary myths play out is examined. It is suggested that this simple mythology is also the most "innocent," & if one accounts for levels of mass communication where the social knowledge of the real is formed, eg, the newspaper, it is apparent that stories presented as "news" are inspired by the same logic found in contemporary myths, save that they presuppose the public's belief. The connection between knowledge & artistic creation should be of great interest to the sociologist.

✓ **Conway, Dennis** (Dept Geography Indiana U, Bloomington 47405 (tel/fax: 812-855-0571/1661; e-mail: conway@indiana.edu)), **Nations Unbounded: A Critical (Re)read of Transnationalism Suggests That U.S.-Caribbean Circuits Tell the Story, Better.**

¶ Globalization, new information technologies, neoliberalism, & a new international economic (dis)order are some of the interwoven yet fundamental global shifts at work in the 1990s. One idea emerging from current discourse on population movement has been the development of "transnational communities." Undertaken here is a critical (re)reading of transnationalism as it is promoted as a cultural process in narrated abstractions & social anthropological discourses. Fault is found with several notions, eg, "deterritorialized nation states," & the idea that transnationalism is a cultural artifact of today's globalizing world of advanced capitalism & core hegemony. Forwarded is a counterargument that a better understanding of the processes creating today's multilocal immigrant communities in world cities can be gained from examining the century-long evolution of North American-Caribbean migration & circulation patterns & processes. Many of today's migrant & home communities in the US & Caribbean are highly interdependent & constantly adapting to changing circumstances, resources, & capricious turns of fate. Perhaps what is new in today's globalizing world is that other non-traditional immigrant groups coming to the US are becoming "transnational" as well.

✓ **Cook, Thomas D.** (Center Advanced Study Behavioral Sciences Northwestern U, Evanston IL 60208 (e-mail: d-winslip@nwu.edu)), **The Generalization of Causal Connections.**

¶ Discusses a theory of the generalization of causal relationships, understanding causal relationships in the sense of the "manipulability" theory of causation. Evidence is adduced that the theory of generalization preferred in statistics & the social sciences, based on sampling with known probability from a clearly designated universe, does not apply to causal relationships understood in the above sense. However, an alternative theory can be adduced that is more relevant (albeit, parsimonious & less elegant & independently warranted) than the preferred theory. The alternative theory of generalization can be reduced to five principles abstracted from practice in generalizing causal connections across many natural & social sciences. These principles form what might be called a quasi-sampling theory of the generalization of causal connections; ie, they depend on purposive rather than random sampling.

¶ Examines the phenomenal growth of educational privatization since the early 1980s. With the collapse of the USSR & the development of a truly global marketplace, state control systems of education are under siege & are threatened by competition, deregulation, & other major economic & social trends that favor the private over the public sector. In the next 10 years, the very definition of public & private is likely to be significantly altered as the two merge into a new organizational & social identity. Here, the origins of the privatization movement, its basic presuppositions, & its global spread are examined, & possible scenarios of the consequences of privatization on education generally, on state education particularly, & on the nature of civil society are discussed. In effect, the social contract that was agreed to during the European Enlightenment is being replaced by a new social contract that is undefined, may lack accountability, & is, in some ways, self-reverential. The analysis draws on data from current studies & from the author's recent research.

98S33993 / ISA / 1998 / 11234

✓ **Cooper, Doris** (U Chile, Santiago (tel/fax: 56-2-2713269/6787777; e-mail: dptosoci@abello.dic.uchile.cl)), **Female Delinquency in Chile. Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Empirical data from universes & stratified samples of the condemned in jails & paradigms & theories integrated in the subcultural continuum of delinquency underpin a description of the predominant type of female delinquency in large industrial/urban, traditional rural, & transitional ecological areas in Chile, comparing them to a male typology for the same ecological areas. Urban female delinquency is modern delinquency (crimes against property, drug-traffic crimes, & blood crimes), compared to rural traditional delinquency, where crimes associated with family conflicts (comprising parricide, homicide, & infanticide) predominate. The criminal counterculture & female jail subculture are described, comparing in-jail female sexual behavior to that of males.

✓ **Cooper, Geoff** (U Surrey, Guildford GU2 5XH England (tel/fax: 44-0-1483-300800/259551; e-mail: g.cooper@surrey.ac.uk)), **The Limits of Institution: Dedifferentiation and Redifferentiation.**

¶ It has been argued that underway is a process of dedifferentiation in which the university comes to be shaped by the same instrumental values that prevail in many other institutions. Drawing on work in deconstruction, it is suggested that interrogating the institutional character of the university points to certain problems with this account. M. Archer (1995) saw the university as an institution that incorporates certain "necessary incompatibilities," eg, it embodies two forms of cultural capital (Bourdieu, Pierre, 1988), & this can result in instability. Dedifferentiation is misleading in that it neglects this instability & formulates institutional relations in purely structural terms. Behavior in the university involves the reflexive & ongoing production & simulation of institutional identity, difference, & affiliation for the purpose & audience at hand. Three senses of limit are considered: limit as institutional boundary; the limit of institutional efficacy; & the limitation of certain theories of institutions.

✓ **Coronil, Fernando** (Dept Anthropology U Michigan, Ann Arbor 48109 (tel/fax: 313-647-4434/763-6077; e-mail: coronil@umich.edu)), **Eurocentrism in the Age of Globalization? The Easure of Place in Contemporary Political Economy, Anthropology and Geography.**

¶ From a Latin American perspective, it is striking that the growing academic field of postcolonial studies in the metropolitan centers has been fundamentally defined by work produced about northern European colonialism in Asia & Africa. Latin America, as an object of study & as source of knowledge, is significantly absent from this field's central texts & debates. This exclusion has also entailed the neglect of imperialism, a central concern of Latin American thinkers critical of ongoing forms of imperial subjection after political independence since the early 19th century. Here, it is explored whether these two absences are related to each other, & what this silence about Latin America & about imperialism says about the politics of theory & about new colonizing modalities of influence over regions & academic disciplines. It is argued that the territorialization of Europe, the geographic invisibility of financial circuits, & the centrality of nature in the current era of imperial globalization make it necessary to move from the critique of Eurocentrism to the critique of globecentrism.

98S33998 / ISA / 1998 / 11239

✓ **Corradi, Juan E.** (New York U, Florence Italy (tel/fax: 39-55-5007205/472725; e-mail: corradi@is2.nyu.edu)), **Fragmentation, the Academy, and Implicit Ideologies.**

¶ Analyzes the causes & consequences of the end of articulated ideologies, as well as the emergence of new, "implicit" ideologies. These processes are illustrated by explicit reference to the academy, understood as simultaneously a network of institutions & a market. Both the persistence & redeployment of fragments of defunct ideological debates & rhetorical strategies are noted, eg, methodological suspicion, interest attribution, the construction of new identities, & the imputation of discourse to a political unconscious. A hypothesis is formulated about the emergence of new principles of ideology formation, ie, repressive tolerance, censorship, & political correctness. These principles are analyzed in terms of the unanticipated consequences of purposive behavior. Critical reflection is offered on the academy as a site of ideological shadow-boxing on the ruins of older intellectual missions. The making & breaking of disciplines in the present-day academy is explored, emphasizing the new marriage of specialization & interdisciplinarity. Closing comments are offered on the persistence of ideology in an age of political & social fragmentation.

Corredine, James T. ((tel: 516-924-2466; e-mail: james.corredine@asb.com)), **"The Aggregate Virtual Working Life Tenure" Population Dynamics Longwave Theory.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The fundamental force that drives 54-year Kondratieff long economic waves is the same force that drives individuals, ie, the relative intensity of vitality over lifetimes. This fundamental force in the aggregate drives the fluctuation in aggregate economic data over the long term. Differences in the relative aggregate intensity of the population's vitality (& the relative aggregate intensity of the population's leadership cadre's vitality) over time create a regime, the aggregate virtual working life tenure, with a vitality that fluctuates in a range of two fundamental extremes, vigor & torpor, driving economic phenomena familiarly described as vigorous or torpid. Economics in the British/US tradition made a wrong turn at Ricardo/Malthus. Things would be clearer had the thread of thought been followed from Smith through Malthus & Keynes rather than through Ricardo & his successors. Malthus's demand depression is argued to be rooted in his original, fundamental idea of "intensity of demand." Had he lived long enough, he would have seen his idea of intensity as the cause of the long economic wave. Malthus is drawn on to view the 24-year Kondratieff upslope as the intensity upslope & the 30-year Kondratieff downslope as the disintensity downslope. The 54-year economic longwave is just the manifestation of the underlying relative intensity of human vitality over the 54-year aggregate virtual working life tenure.

Correia, Mario & Pottier, François (Laboratoire Georges Friedmann Conservatoire national arts métiers, 2 rue Conté F-75003 Paris France (tel: 01-53-01-80-04; e-mail: correia@cnam.fr)), **Parcours professionnels, attentes et usages de la formation des nouveaux publics du CNAM (Professional Tracks, Expectations and Uses of Education for the Newcomers at CNAM).** (FRE)

¶ France's National Conservatory of Arts & Engineering (CNAM), founded in 1794, has the primary functions of ensuring employees' high-level advancement & providing vocational training outside of work. While in the past, CNAM attracted mainly salaried employees with high levels of education or professional training, students looking for socioeconomic integration, job seekers, & the unemployed are now expressing interest. How CNAM evaluated its training capabilities to meet this new demand & new expectations is discussed. Reported here are findings of a 1997 survey of 3,000 young people with postbaccalaureate degrees who entered the labor market in the last 5 years, supplemented by statistical data. The construction of "mobile types" for explaining individual social courses is addressed, along with how the integration of different objective & subjective elements assures the theoretical validity of these categories.

Corrigan, Peter (U New England, Armidale New South Wales 2351 Australia (tel/fax: 61-2-6773-2179/3748; e-mail:

pcorriga@metz.une.edu.au)), **Domestic Consumer Objects and Their Meanings: A Study of Female Commodity Worlds in Faisalabad, Pakistan.**

¶ Explores the meanings of domestic consumer objects from the perspective of a sample of mothers & daughters living in the Faisalabad district, Pakistan, using (1) a concept-centered mode, which focuses on analyzing & identifying the meaning structure underlying domestic objects as a whole; here the conceptual analysis comes first, & objects are discussed only as the material precipitates of the meaning structure; & (2) an object-centered mode, which focuses primarily on separate objects, examining the particular meanings associated with each; ie, considering each particular object has its own conceptual fingerprint. Results show that time- & family-related concepts recur across the greatest number of contexts. Time was something to be saved in the case of kitchen items, while, in the case of entertainment items, it was to be spent appropriately. Kitchen items were particularly important in the creation of family togetherness, but some entertainment items were seen as posing a danger to this togetherness by isolating family members. A solution involved the purchase of indoor games for entertainment, considering them as a way to bring family members together again.

Corriveau, Raymond (U Québec, Trois-Rivières G9A 5H7 (tel/fax: 819-376-5170/373-1988; e-mail: raymond_corriveau@uqtr.quebec.ca)), **The Media Activities in Emergency Situation: An Obligation to Maintain the Social Link.**

¶ The communication point of view in the analysis of emergency situations, often oriented toward an instrumental approach, is reviewed based on a long-term analysis of three types of emergency: natural, social, & industrial. The proposed notion of communication is understood in a totally different fashion—analyzed as the essential component of the social link. Movement is from a tool used to establish links with the community to the structural element of the community itself, with heavy conceptual consequences, eg, the definition of the emergency & even the different times in the emergency. A radical shift in the usual paradigm necessitates new definitions of roles, actions, & priorities. Consequently, the media's action is viewed differently: from an information relay, they become the principal actor of the public sphere, an essential player in the regulation process of democratic principles—not an easy task. The road is narrow between the obligation to inform citizens to enable them to make judicious actions, the emerging protection of the private sphere, & the relentless law of the entertainment society.

Corsale, Massimo (U Roma "La Sapienza", I-0185 Italy (tel/fax: 39-6-4453260/9910446; e-mail: corsale@ax-rma.unroma.it)), **The Role of a Clinical Sociologist in the Face of the Great Transformation of Labor Market.**

¶ Reacting to forecasts of a globalization- & automation-wrought post-market era, labor markets have put forward new forms of labor relationships: part-time jobs, freelance relationships, & provisional (interim) jobs. The last pose many difficult questions concerning attitudes of the workers vis-à-vis firms where they are provisionally working, leading to new organizational problems & more general social problems, ie, lack of social identity for workers missing the chance to belong to a "big family" & the collapse of such an important disciplinary institution as factory, or, more generally, lifelong job. What role can a clinical sociologist play in such a problematic situation? Explored here is the promotion of new small communities where members will find mutual help, chances for a collective identity, & new shared values.

Corsaro, William A. (Dept Sociology Indiana U, Bloomington 47405 (tel/fax: 812-855-3988/0781; e-mail: corsaro@indiana.edu)), **Priming Events, Interpretive Reproduction, and Collectively Produced Transitions in Childhood.**

¶ There is a tension in new theories in the sociology of childhood between macrostructural & microinterpretive approaches; eg, macrotheorists, while not denying the importance of children's activities, emphasize the structural permanence of childhood. Here, however, theorists are cautioned not to equate individual development in childhood with children's evolving membership in their cultures; as children develop individually, the collective processes they are part of are also changing. Sociologists need to address these collective processes historically & to document children's changing degrees of membership & participation in the many local cultures they occupy over time & across social institutions. Along

C

these lines, the notion of priming events is presented. Priming events involve activities in which children (& all social actors), by their very participation, attend prospectively to ongoing or anticipated changes in their lives. Analyses of longitudinal ethnographic data on Italian children's transition from preschool to elementary school underpin the discussion.

✓ **Corsianos, Marilyn** (York U, North York Ontario M3J 1P3 (tel: 905-707-7523; e-mail: mcorsian@yorku.ca)), **Paramilitarism versus Community Based Policing: Recognizing Restrictions and Limitations.**

¶ In light of the shift toward community-based policing in Canada, an institutional ethnography explores inherent organizational problems that have impacted police service quality. Outlined are recommendations to improve police-community relations, which redefine the role of "front-line" officers & managers, introduced by certain police departments & the reaction of front-line officers, who have experienced low morale. Thirty interviews with officers from the Metropolitan Toronto (Ontario) Police Service focused on the promotional, evaluation, & disciplinary processes. The significant problems attendant with these areas create an "us vs them" relationship between front-line uniform officers & middle & upper management (senior officers). Further, the system in place supports an archaic, paramilitaristic style of policing intended to preserve the status quo, & therefore, restrictions & limitations are placed on those officers who want to engage in critical thinking, challenge the dominant ideologies, & initiate change in the police service. Changes in ideologies & structures in policing must first be witnessed before the community-police relationship can improve. The complex concept of power is critically examined to begin to theoretically unpack the power relations between front-line officers & their superiors. It is only through the recognition of power that power can ultimately be resisted.

✓ **Corsten, Michael** (Max-Planck-Institut Human Development, Lentzeallee 94 Berlin D-14195 Federal Republic Germany (tel/fax: 49-30-824-06-293/99-39; e-mail: corsten@mpib-berlin.mpg.de)), **Youth Dance Cultures—The Experience of Intramundane Salvation (innerweltliche Erlösung) in the Ritual Dance Practice of the Techno Youth Culture.**

¶ Examines the "sacred" in modernity, which is suggested to have become intramundane, & how it is experienced in contemporary youth culture. Discussed are these interrelations & their further specificities via the interpretative reconstruction of typical descriptions of 65 participants of the Berlin, Federal Republic of Germany, Techno Music Scene. In interviews, participants described the ecstatic experience of the feeling of transgression, to move (or "fly") into another world. The development of such ecstatic states are accompanied by certain interaction rules that are kept by the participants. The narrative descriptions of the body-related interactions of the dancers show a strict differentiation between the rules kept on the dance floor & the rules outside of the dancing place. From the standpoint of the sociology of religion, the strict differentiation of rules could be interpreted as an awareness of the sacred. The extraordinary experience of the self & of meeting/touching the Other in the dance situation is only possible because this practice is taken as sacred. Therefore, the participants follow the rules of a ritualistic order that is only valid in the process of the ritual.

✓ **Coutinho, Marília & Soares, Glaucio A. D.** (Dept International Relations U Brasília, 70919-970 DF Brazil (tel: 55-61-3470523; e-mail: cout@unb.br)), **Men: The Disorganized Majority**.

¶ Prostate cancer, a major health hazard, affects approximately 10 million men in the US. Approximately 80% of the cases affect men age 65+. Estimates indicate that 334,000 men will be diagnosed in the next year, while 180,200 women will be diagnosed with breast cancer. Prostate cancer mortality is rising, while breast cancer mortality is decreasing, but prostate cancer receives about six times less federal funds for research & prevention. Compared to acquired immune deficiency syndrome, discrepancies become even sharper. It is argued that such discrepancies stem from two factors: (1) the relative strength of each interest group, & (2) the social consensus on the relevance & gravity of each disease. Breast cancer activism benefits from the long political experience & organization transferred from the feminist movement. The latter was the leading force in establishing the apparent consensus over the greater seriousness & relevance of breast cancer, as well as over women's disadvantage in health issues generally. By contrast, male sexuality is not an important focus of either public or academic concern, & men, especially older men, are at great disadvantage in the public policy arena. They have not yet been able to get their gender-specific interests to be socially & politically correct. Being viewed as the "default" gender in health issues, society has defaulted their gender-specific problems.

✓ **Couton, Philippe** (Dept Sociology McGill U, Montreal Quebec H3A 2T7 (tel: 514-286-8963; e-mail: pcouto@po-box.mcgill.ca)), **Durkheim on Montesquieu and Rousseau: Consequences for Contemporary Systems Theory**.

¶ Offers a descriptive & analytical reading of the work of Émile Durkheim on the two most prominent 18th-century French precursors of modern social sciences, Charles Louis de Secondat Montesquieu & Jean-Jacques Rousseau, & discusses why anyone concerned about contemporary social theory, particularly systems theory, should care what this

19th-century sociologist had to say about two ancien régime thinkers. Durkheim's central concern was "the continuous repartition of human endeavours" (1964), i.e., the increasing atomization of social roles brought about by industrialization. His well-known solution was the creation of a new normative order termed "moral individualism," in which sociology was to play a central role. His intention in discussing Montesquieu & Rousseau was to evaluate their respective contributions to the scientific study of society & to place them within a larger trend leading to the emergence of this moral order. In Montesquieu's premise that human societies are subject to laws independent of volition, Durkheim saw the first building block of social science. But he systematically underplayed the importance of politics in Montesquieu's work, arguing instead that the belief in the separation of powers that permeates *De l'esprit des lois* ([The Spirit of the Laws] 1748) is merely a particular form of division of labor, which Montesquieu failed to perceive in all its implications. Durkheim's reading of Rousseau is far more appreciative. It is shown that Durkheim's idea that society is, & must be, an external, coercive, & normative whole is strongly influenced by Rousseau's contractarian idealism. How Durkheim read his illustrious predecessors is important for a number of reasons, chief among them the fact that a society-centered approach thereafter dominated sociology, at the expense of any serious treatment of the role of political power. Perhaps like Durkheim a century ago, today's rejuvenated systems theory, particularly in the work of Niklas Luhmann, seems uniquely poised to describe the densely communicational social world of the late 20th century. However, the multiple systems Luhmann describes, like the entropic, atomized world of Durkheim, remain caged by state-based politics. The momentous social changes both theories tackle greatly increase the complexity of the political processes Montesquieu analyzed, but do not render them obsolete.

✓ **Coutu, Michel** (Centre recherche droit public U Montréal, Quebec H3C 3J7), **Fondements sociologiques de la citoyenneté et dualité du concept de nation** (The Sociological Foundations of Citizenship and the Duality of the Concept of Nation). (FRE)

¶ Argues that the concept of citizenship is not only polysemic, but also has an intense ideological & polemic content. How citizenship may be considered a principle of closure for social relationships, in how it limits or determines the conditions of participation in certain social interactions, is discussed. How citizenship is largely conditioned by the representation of national identity that prevails in a state of national unity is addressed. Attention is turned to the contrasting civic concept of the nation, involving the free political association of citizens, & the ethnic concept of nation, which is based on an organic community forged by culture, language, history, & tradition. Whether this dichotomy is an ideal-typical construction rather than the reflection of true historical experience is considered. The concept of legitimacy is used as a point of departure, as it permits the critique of certain positions defending the idea of a post-national identity founded on constitutional patriotism.

✓ **Cox, Susan M. & McKellin, William** (Dept Anthropology & Sociology U British Columbia, Vancouver V6T 1Z1 (tel/fax: 604-822-9856/6161; e-mail: succox@unixg.ubc.ca)), **"There's This Thing in**

C

Our Family." Predictive Testing and the Social Construction of Risk for Huntington Disease.

¶ Recent discussions about the social implications of the new genetics stress the importance of studying the meaning of hereditary risk within the context of familial beliefs & dynamics. Empirical studies on predictive testing for adult onset disorders have, however, focused primarily on issues of individual psychosocial well-being, as well as attitudes toward & reasons for testing. Here, in-depth interviews were conducted with 21 families to examine the social construction of risk in families where someone is having predictive testing for Huntington's disease, an adult onset autosomal dominant neuropsychiatric disorder. There is no effective treatment, but predictive testing has made it possible to determine whether or not at-risk individuals have inherited the mutation associated with Huntington's disease. Highlighting an array of social & biographical factors that families consider when discussing risk, it is demonstrated that lay understandings are no less coherent than the Mendelian theories of geneticists. Given recent advances in testing for multifactorial & polygenic disorders (eg, Alzheimer's & breast/ovarian cancer), this has significant implications for understanding the lived experience of risk.

¶ **Craipeau, Sylvie** (Institut national télécommunications, 9 rue Charles Fourier F-91011 Evry France [tel/fax: 33-1-6076-4688/4383; e-mail: Sylvie.Craipeau@int-evry.fr]), **Techniques d'information et de communication de groupe et individualisation du travail** (Group Information and Communication Techniques and the Individualization of Work). (FRE)

¶ Research examining the processes involved in the introduction & appropriation of communication & collective information techniques (eg, Groupware) is presented. These techniques, particularly Groupware, play an active role in the current transformation of how companies do business. How Groupware functions as a management tool is discussed. The first phase of research is characterized as a series of some 20 semidirective interviews with managers to analyze the processes & orientations involved in team decision making. Four business were chosen as the focus of additional interviews, looking at their use of tools as means of implementation in organizations, as well as means of business management. A quantitative study conducted in one businesses verifies the hypotheses developed in the previous phases. Groupware has become a management principle that reinforces individual attention to tasks & emphasizes an increasingly interdependent form of work individualization. The effects of the weakening of the group as the intermediary between the individual & the organization are considered.

98S34024 / ISA / 1998 / 11265

¶ **Crawford, Margaret & Cenzatti, Marco** (School Public Policy U California, Los Angeles 90024 [tel/fax: 213-851-8916/9810]), **"The Right to the City": Commodification and Decommodification of Public Space in Los Angeles.**

¶ Using Henri Lefebvre's concept of the necessity of reinstating use value to claim the "right to the city," examined are some current urban practices in Los Angeles, CA, in light of the interplay between commodification & decommodification of urban space. Garage sales, street vending, & "borrowed" vacant lots all represent temporary appropriation of conventionally owned land for new purposes. These activities, officially classified as "blight," challenge the existing logics of the real estate market, ownership, & urban regulation, suggesting the potential for political action based on selective or partial decommodification & a temporary reapportionment of use value. In the political context defined by the urban unrest of 1992, these destabilized urban spaces have the potential to generate new forms of political participation & new types of insurgent citizenship.

¶ **Creese, Gillian L.** (Dept Anthropology & Sociology U British Columbia, Vancouver V6T 1Z1 [tel/fax: 604-822-2541/6161; e-mail: creese@unixg.ubc.ca]), **Restructuring, Resistance and Equity: Negotiating Gender and Race in the Office.**

¶ Historically, unions often played a role in negotiating gendered & racialized hierarchies in many workplaces, a legacy that remains embedded in bargaining traditions, practices, & the language of collective agreements. In recent years, however, they have become more involved in negotiating gender & racial equity issues in the workplace. Thus, unions are often caught in a contradictory position of both reproducing & challenging hierarchical relations among their members. These contradictions are explored in two public sector companies in Canada, drawing on

union documents & interviews with union activists. Focus is on the prospects for union-initiated change during a period of economic restructuring in the 1980s & 1990s, when union policies tended to become more protectionist in response to downsizing & workplace flexibility, while at the same time advancing new demands for equity in the workplace.

¶ **Crook, Stephen Anthony** (James Cook U, Townsville Queensland 4811 Australia [tel/fax: 61-7-47-81-4182/5435]), **The New Problem and Politics of Order in Advanced Societies.**

¶ Postmodernizing & globalizing change has provoked popular & academic anxieties about incipient social disorder in advanced societies. Publics fear the loss of secure employment, decline of public services, crime, & fragmentation of national cultures. Many intellectuals find threats to social life in excessive individualism, erosion of family & community, & increasing inequalities. Prompted by these anxieties, an attempt is made here to reformulate the foundational problem of order. Advanced societies are presently shaped by the unruly intersection of three broad orderings: modern (based on state & market), hyperreflexive (based on globalized networks), & neotraditional (based on intense group solidarity). Postmodernizing change has eroded the hegemony of modern ordering & established the conditions for hyperreflexive & neotraditional orderings. The defining problem for an emergent new politics of order is that no single ordering can replace the eclipsed hegemony of modern ordering. Political actors, institutions, & programs must balance modern principles of state & market with hyperreflexive networks & neotraditional solidarisms. Maintenance of social pluralism & complexity depend on their success.

✓ **Crothers, Charles H. G.** (Dept Sociology U Natal, Durban 4001 South Africa [tel/fax: 031-260-2442/2347]), **Global Patterns in Recent Sociology Journals.**

¶ To describe regional & language-based traditions in sociology in relation to the overall pattern of world sociology, topic areas covered by sociology journals published in 1995 are investigated. It is found that demography, human biology, opinion/communication, & family socialization receive the most sociological attention. While there are substantial similarities worldwide, three patterns were found: European sociology, US/UK sociology, & sociology that pertains to the remainder of the world.

98S34031 / ISA / 1998 / 11272

✓ **Crovi Druetta, Delia** (U Nacional Autónoma México, 04510 Mexico DF), **La industria de la educación en los bloques económicos** (The Educational Industry in Economic Blocks). (ENG)

¶ Analyzes the growing process of industrialization that education undergoes, stressed from the integration of the economic blocks. Focus is on the specific case of the North American Free Trade Agreement/TLC/ALENA, revising the treatment that the education theme had in the subscribed commercial agreements between Canada, Mexico, & the US. Considered are the segmentation process of markets & the commercialization of education's role in a compelling social demand: to train people for better performance in the globalized world of the turn of the century, which requires, among other things, the handling of the new means & the dynamics of constant actualization for the growth of knowledge.

✓ **Crow, Barbara** (Faculty General Studies U Calgary, Alberta T2N 1N4 [tel/fax: 403-220-3160/282-6716; e-mail: crow@acs.ucalgary.ca]), **Digital Restructuring, Gender and the Canadian State.**

¶ Examines the representation of digital technology in the Canadian state & corporate (IBM & Bank of Montreal (Quebec)) discourses, revealing the cynical & insidious cooptation of the substance & style of progressive politics, the effect of which is both to coopt & neutralize progressive critiques of restructuring & the failure of governments to offset its negative effects & consequences.

98S34033 / ISA / 1998 / 11274

✓ **Crowley, John** (Centre études & recherches internationales Fondation nationale sciences politiques, 27 rue Saint Guillaume F-75337 Paris Cedex 07 France [e-mail: crowley@ext.jussieu.fr]), **What Does Multiculturalism Add to Citizenship? Implications of the French and British Cases.**

¶ Explores the concept of multiculturalism, drawing on Will Kymlicka's *Multicultural Citizenship* & his sharp conceptual distinction between ethnic groups—voluntary migrants & their descendants—and national minorities. Whereas the former raise no issues of principle that cannot be accommodated by a pragmatic nonethnocentric liberalism, the latter "require recognition as separate & self-governing societies alongside the mainstream society." His reasons for the distinction in a North American context are clear, but a consequence is that, from the perspective of Western Europe, where national minorities are either not an issue or amenable to fairly straightforward federalist solutions, the book seems largely indistinguishable from mainstream liberalism. Discussed is whether there is only one debate with respect to ethnic groups (in Kymlicka's usage)—exclusion vs citizenship—or if there are genuinely competing conceptions of citizenship, which Kymlicka fails to distinguish, with distinct ideological & institutional implications regarding ethnic groups in Western Europe. To formulate these issues more precisely, examined are debates about citizenship in the UK & France—two countries where it is widely felt that competing models of citizenship, nationhood, & statehood are at stake in the treatment of ethnic groups. The unreality of the distinctions made in political debate lends support to Kymlicka's conclusions, although not for the reasons he advances: (some kind of) multiculturalism appears as a consequence of citizenship; therefore, multicultural citizenship becomes blurred as a distinctive concept.

✓ **Crozier, Michael P.** (U Melbourne, Parkville Victoria 3052 Australia [tel/fax: 61-3-9344-6565/7906; e-mail: m.crozier@politics.unimelb.edu.au]), **The Place of Thomas Ramsden Ashworth in the History of Australian Sociology.**

¶ Briefly after WWI, sociology was offered as an undergraduate subject

at the U of Melbourne, but, by the end of the 1920s, it had all but vanished from the Australian curriculum. As a distinct discipline, it only reappeared in the late 1950s with the establishment of a Chair in sociology at the U of New South Wales. An attempt is made here to cast new light on this disjuncture by focusing on the work of Thomas Ramsden Ashworth. Somewhat outside the well-known Australian intellectual circles of the early 20th century, Ashworth had a long-term & well-informed interest in the development of sociology. He was a regular & enthusiastic publicist who attempted to infuse a sociological sensibility into contemporary debate about Australian society. It is suggested that Ashworth's sociological invocations offer new insights to why Australian sociology had such faltering beginnings.

✓ **Scordas, Thomas J.** (Dept Anthropology Case Western Reserve U, Cleveland OH 44106 [tel/fax: 216-368-2259/5334; e-mail: txc9@po.cwru.edu]), **De-Alienation or False Consciousness?**

¶ Religious phenomena are increasingly becoming global in nature, apparently rolling back the advance of modern secularism with a postmodern tide of reenchantment, fundamentalism, charismatic extravaganzas, & multinational evangelism. Whether these phenomena, or some of them, constitute an enlightened dealienation or a reanimated false consciousness cannot be decided until they are recognized as major features in the still analytically underdeveloped cultural/religious/ideological dimension of the world capitalist system. In the condition of postmodernity, the principal cultural dynamic is likely to be between a tendency for master narratives of spirituality to become models of universal (global) culture for the universal (middle) class & a countertendency for modes of spirituality that filter into distinct local contexts to become fragmented into multiple decentered discourses of identity. This dynamic is identified through the example of the Catholic Charismatic Renewal movement & its manifestations in the US, France, India, Brazil, & the Philippines.

✓ **Cubbins, Lisa A.** (Dept Sociology U Cincinnati, OH 45221-0378 [tel/fax: 513-556-4709/0057; e-mail: lisa.cubbins@uc.edu]), **Gender Differences in Lifestyle Effects on Russian Health.**

¶ Recent research on mortality trends in Russia demonstrates a health crisis for men & women. Many social scientists believe lifestyle factors have contributed substantially to the recent rise in mortality. Focus here is on the role of social & economic factors, including lifestyle effects, in predicting self-reported health. Also considered is whether these factors have gender-specific effects on health. The model tested includes social & demographic characteristics, lifestyle behaviors (eg, alcohol use, occupational class), sources of stress (eg, unemployment, income level), & two personality measures (instrumentality & sensitivity). Data were collected from a multistage cluster probability sample of adults in the Moscow metropolitan area in 1996. Results should help social scientists & policymakers better understand the social determinants of health in Russia.

✓ **Cuneo, Carl** (McMaster U, Hamilton Ontario L8S 4M4 [tel/fax: 905-525-9140/523-1158; e-mail: cuneo@mcmaster.ca]), **Internet Quality Standards for Sociology.**

¶ Arguing that, unless the international sociological community develops a set of standards, quality control will be lost on World Wide Web material that passes for professional sociological research, courseware, & other resource, 14 criteria for evaluating the publication of sociological resources to the Internet are proposed. These criteria go beyond the standards for refereed electronic journals, because much quality material is being published of a nonrefereed nature. The proposed standards are meant to stimulate discussion in this area rather than impose a set of rigid criteria on an unwilling sociological community. It is suggested that such standards be employed in screening content for a virtual library currently being reconstructed for the Web by the author.

✓ **Currie, Jan K.** (School Education Murdoch U, Western Australia 6150 [tel/fax: 61-8-9-360-2377/6296; e-mail: currie@central.murdoch.edu.au]), **Impact of Globalization on Australian Universities: Competition, Fragmentation and Demoralization.**

¶ Examines both macro trends toward global homogenization & the concurrent evidence of microlevel variations in higher education policies & practices. Macrolevel policies in Australia are compared with those in

C

the US, Norway, & France, & microlevel variations are analyzed by examining three Australian universities through case studies completed 1993-1996, with a 1997 follow-up. Via interview data, the tendency for competition to lead toward greater individualization of academic staff in their desire to gain research & teaching funds & greater status, resulting in a fragmentation of staff, a loss of a sense of community, & greater demoralization, is investigated.

98S34039 / ISA / 1998 / 11280

Currie, Jan K., Harris, Patricia & Thiele, Bev (Murdoch U, Western Australia 6150 [tel/fax: 61-89-360-2377/6296; e-mail: currie@central.murdoch.edu.au]), **The Anatomy of Power in Gendered University Cultures.**

¶ A comparison of the position of men & women in relation to organizational culture at two public universities in Western Australia. The perceptions of academic general/administrative, & managerial staff were explored, focusing on how women & men found their work experiences & careers shaped by the organization's institutional & cultural practices &, in particular, on how male culture & attitudes acted to exclude or marginalize women. Several images emerged: ruthless, competitive careerists, who knew the rules & how to play the game, & dedicated, decent hard workers who were prepared to sacrifice their personal life for their work & thus deserved the rewards they reaped. Women were seen to be unwilling or unable to make that complete sacrifice of their lives. While few formal barriers to advancement could be identified, many women were convinced that there were informal, subtle, but deeply entrenched barriers to their success.

Czernis, Loretta M. & Clark-Jones, Melissa (Bishop's U, Lennoxville Quebec [tel/fax: 819-822-9600/9661; e-mail: lczenis@ubishops.ca]), **Gender Imagery in U.S. and Canadian Lifestyle Magazines.**

¶ How do the imageries of fashion, identity, & success ideologies, present in lifestyle magazines, reflect unresolved contradictions in corporate capitalism & related conflicts in everyday life? Depictions of women's & men's appearances involve an assemblage of images that vary & vacillate along a number of continua. One is between traditionally defined masculine & feminine norms. Another shifts from bestial to quasi- & superhuman, or deadly personae & characteristics. After examining six key fashion & lifestyle magazines over a 12-month period, the analysis addresses four premises: (1) The nature of fashion as a commercial endeavor is to expand consumption & profit by presenting "the new" as necessary or essential for the individual consumer to achieve self, identity, & status construction. (2) A tendency toward androgyny in such imagery has different implications for women & men, despite the fact that they are presumed to share the worlds of paid work & reproductive/house work. (3) The presentation of men as fathers with children like a prism offers a case in point for such varied meanings (heterosexual, homoerotic, pedophilia), while it registers change, conflict, & hidden unease about masculine roles. (4) A tendency, in the context of conjunctive androgyny, displays men & women together in similar (usually masculine) attire & body type with two discordant effects: (A) transgressing traditional boundaries through cross-dressing; & (B) representing gender through a masculine fantasy optic that reduces the threat of both feminine & adult demands on gender role. Rather than signaling rapprochement of the two genders, it may say "Let's be Peter Pan twins; I won't grow up if you don't either."

98S34041 / ISA / 1998 / 11282

D'Agostino, A. Federico (Faculty Economics U Sannio Benevento, I-82100 Italy [tel/fax: 0824-25-405/231]), **Identity, Time and Death in the Postmodernity—A Triangular Perspective.**

¶ Attempts to clarify the concept of identity & its evolution through the stages of the life cycle toward adulthood & show how identity is intertwined with the symbolic representation of time. Time is considered in terms of a triple distinction: prehistoric, historical, & transhistorical. From these different perspectives, time is related in a different way to the idea & reality of death. Focus is on the postmodern situation, where the conception of time is reduced to the present, which incorporates the past & the future & where the idea of death is removed & incorporated at the same time—hence, the ambivalence expressed by refusal & attraction toward the simulacrum of death. This conception keeps the identity trapped in the individuation globalization of conscience dilemma. A triangular perspective is used to interpret the web of the dilemma & to explain the interplay among identity, time, & death.

D'Amato, Marina (via Macrobio 9, I-00136 Rome Italy), **Offre et demande des biens et des services culturels: analyse sociologique du cas italien** (Supply and Demand of Cultural Goods and Services: Sociological Analysis of the Italian Case). (FRE)

¶ The concept of cultural goods has gained increasing relevance in Italy since the 1970s as the abundant cultural heritage (monuments, cultural landscapes, archeological sites, museums) came to be recognized as a primary resource of economic development, especially in the tourist industry. Explored are a broad range of sociological dimensions of the supply/demand of cultural goods & services. The main dimensions are described as social-psychological, sociopolitical, sociospatial, socioaesthetic, & sociotechnical. Such diverse research themes & problems require a corresponding diversity in methodologies. Most of the typical research methods & techniques are employed along with some quasi-experimental methods.

98S34043 / ISA / 1998 / 11284

D'Araujo, Maria Celina & Castro, Celso (CPDOC Fundacao Getulio Vargas, Praia de Botafogo 190 12 andar 22 Rio de Janeiro 253-900 RJ Brazil [tel/fax: 21-536-9202/539-9421; e-mail: daraujo@fgv.br]), **The Generals Remember: The Case of President Geisel, Brazil, 1974-1978.**

¶ In the context of a dearth of literature (& interest in general) on the military regimes of Brazil, the popular success of the authors' best-selling book-length interview with General Ernesto Geisel, who occupied the presidency from 1974 to 1978 & took the first steps toward normalizing the country's political life, is examined. How the interview was planned, effected, & edited to be a good read are explained. It is suggested that the story of a general's life in his own words aroused so much curiosity because it was a first & because a taboo was broken, for the public never had access to much of this material before. Emphasized is that the making of this interview offered an opportunity to discuss the problem of ethics in social science, particularly, in the use of oral history. Ethical positions are asserted in a number of ways: eg, respect interviewee conditions even if one disagrees with them, let interviewees tell their version of the facts even if one knows there is evidence favoring alternative views. The historical product bears the marks of the interviewee's interpretation & exists in a gray zone between history & narrative.

D'Hauteville, François, Aurier, Philippe & Sirieix, Lucie (Groupe recherche agro-alimentaire Institut national recherche agronomique, 145 rue de l'Université F-75007 Paris France), **A Sensorial Approach to Consumers' Preferences for Rice: First Results of a European Survey (France, Greece, Netherlands, Spain).**

¶ Compares various criteria used by customers to evaluate, in blind conditions, the quality of raw & cooked rice. Survey data are drawn from 750 customers in France, Greece, the Netherlands, Spain, & the UK, half of whom tasted 6 different rices (raw & cooked). The initial results from France, Greece, the Netherlands, & Spain are presented. It is found that there are indeed national differences in rice evaluation. For instance, parboiled rices seem better appreciated by the Greeks & the French than by the Dutch respondents. Individual criteria (age, sex, revenue, habits of cooking) seem to have little influence on sensorial preference. In terms of marketing management, these first results suggest that branding policies are relevant to help consumers choose for quality.

Da, Wei Wei (U Sydney, New South Wales 2006 Australia [tel/fax: 02-9351-5678/4508; e-mail: w.da@edfac.usyd.edu.au]), **Migrants from the People's Republic of China: A Study of Family Practices in Intercultural Perspective.**

¶ Explores the life experiences of a particular group of Chinese migrants living in Australia since the 1970s. On arrival, they showed obvious differences to earlier Chinese immigrants in educational qualifications, occupational experiences, & views & beliefs. Their family practices reflected strong social changes, some policy-related; diversification in terms of cultural resistance/maintenance; & assimilation with respect to attitudes toward sexuality, marriage, childrearing & education, household work, & socialization in an intercultural Australian setting.

98S34048 / ISA / 1998 / 11289

Dabénigno, Valeria & Meo, Analía (U Buenos Aires, 1053 Argentina [e-mail: valdab@chorlo.cpel.uba.ar]), **Una propuesta para el estudio de la informalidad dentro de los hogares y su relación con la pobreza urbana** (Proposal for the Study of Informal Labor at Home and Its Relation to Urban Poverty). (SPA)

¶ Draws on official data, 1990-1997, to examine characteristics of informal labor in poor households in the metropolitan area of Buenos Aires, Argentina. The increase & evolution of informal work is placed in the context of recent labor market disruptions that have occurred in the city, including widespread unemployment. The relationship between levels of poverty & the amount of informal labor in domestic units is explored, & comparisons are made between households with & without formal types of labor.

98S34049 / ISA / 1998 / 11290

Dabrowski, Andrzej & Andersson, Bjarne (Roskilde U, DK-4000 Denmark [tel: 45-46-74-2004; e-mail: ad@nuc.dk]), **Academization of Sociology in the Early Welfare States. A Scandinavian Triptych.**

¶ Chronicles the emergence of modern sociology as an academic discipline shortly after WWII at three Scandinavian universities: Uppsala (Sweden), Oslo (Norway), & Copenhagen (Denmark). All three state universities entered the postwar era as prestigious & largely autonomous professional oligarchies producing academic knowledge & the professional elites of the state. Professors of philosophy were permitted to cultivate their own versions of sociology, called "moral" or "practical" philosophy, as their contribution to the university's cultural mission. Local attempts to reconcile academic traditions (institutional & intellectual) with ambitious visions of the scientific & social benefits of modern sociology are documented. At the U of Uppsala, academic sociology was created by a resolute action of the state. The institutionalization of sociology at the U of Oslo reveals a successful campaign of a network of intellectuals, while at the U of Copenhagen, negotiations concerning the future shape of sociology resulted in an unstable compromise: the university was asked to work on the theory, while its applications were entrusted to a state research bureau.

98S34050 / ISA / 1998 / 11291

Dagenais, Lucie France (Commission droits personne & droits jeunesse, 360 rue Saint Jacques Montreal Quebec H2Y 1P5 [tel/fax: 514-873-5146/864-1562; e-mail: recherche@drprs.gouv.qc.ca]), **Le Travail autonome au Québec: analyse selon le sexe, l'âge et incidences sur le revenu** (Autonomous Work in Quebec: An Analysis of the Impact of Sex, Age, & Events on Women's Income). (FRE)

¶ Changes are noted in the composition of the population of autonomous workers in Quebec, with increases in the numbers of women & young people, groups often considered vulnerable in the work market. An evaluation is undertaken organized around two major axes: the progression & transformation of autonomous (nonagricultural) work according to the categories of sex & age, & the influence of this phenomenon on women's income, particularly in trained & untrained service positions. Comparisons are drawn between the income of men & women in the same sectors.

98S34051 / ISA / 1998 / 11292

Daher, Massoud, Le Liban et la Méditerranée. Une Nouvelle Perspective (Lebanon and the Mediterranean. A New Perspective). (FRE)

¶ Throughout history, the Mediterranean has been both a human & spatial reference point, providing the stage for a host of sociocultural relational issues. In this vast geographic region lies an elaborate social history of peoples & ancient civilizations. According to Fernand Braudel, purely descriptive history is only a "scratching of the surface, of waves caused by tidal effects, a history of brief, rapid & nervous oscillations." The history of the Mediterranean offers the chance to write a model of a living history, with continuing influence on a universal or grand history.

98S34052 / ISA / 1998 / 11293

Dahlgren, Anita & Dahlgren, Rune (Dept Sociology U Lund, S-22100 Sweden [e-mail: soc-ada@pop.lu.se]), **Gemeinschaft and Gesellschaft—A Long-Lived Dichotomy—The Example of Football Played by Young Females.**

¶ Considers the classical dichotomy of Gemeinschaft & Gesellschaft as applied to female football, with reference to Swedish social psychologist Johan Asplund's view of the dichotomy as a "figure of thought" that intermediates between praxis & discourse. His idea is that one cannot see both poles of the dichotomy at the same time, at the risk of losing its dialectical ability. By analyzing four interviews with young women who are (or were) longtime football players, it is possible to categorize their experience of the sport in terms of their longing for Gessellschaft. While male football has a greater public following, creating competition concerning resources, trainers, money, & arenas, there is little debate on how the game should be played.

98S34053 / ISA / 1998 / 11294

Dahlgren, Curt (Dept Theology & Religious Study Lund U, S-22362 Sweden [tel/fax: 46-46-222-9755/4426; e-mail: Curt.Dahlgren@teol.lu.se]), **Announcing Death: Symbols, Religious Themes and Individualisation in Obituary Notices in Swedish Daily Press (1945) 1975-1995.**

¶ A study of how Swedes have changed their relations to death during the period (1945-) 1975-1995, based on obituary notices from randomly selected newspapers. The contents of the texts & the symbols are coded to detect different types of religiosity, as well as gender & regional differences. One hypothesis is that the notices illustrate processes of individualism in Sweden. Many texts can be described as relating to a kind of popular religion, a kind of existence after death that has nothing to do with any established religion. Up to 1977, the cross was the dominant symbol, but today, survivors try to say something about the dead person with symbols of pets, sports, etc. This is interpreted as a change from anonymity (even though the dead person is named) to individualism.

98S34054 / ISA / 1998 / 11295

Dal Rosso, Sadi (Dept Sociologia U Brasilia, 70910-900 DF Brazil [tel/fax: 00-55-61-273-6571/347-3663; e-mail: sadi@guarany.unb.br]), **The Working Time in Latin America.**

¶ Three sets of working-time problems are analyzed: the duration, flexibility, & intensity of use of labor time. The thesis is put forth that working-time issues are crucial elements for understanding the contemporary crisis of unemployment, as well as key components of adjustment of local economies to international competition & pressure. Several expectations regarding labor time in Latin American countries are outlined: working hours may increase; flexible time is strenuously sought by entrepreneurs; & labor intensity may be growing.

98S34055 / ISA / 1998 / 11296

Dallacosta, Giovana Franca (Dept psicologia generale, via Venezia 8 1-35131 Padua Italy [tel/fax: 049-827-6658/6600; e-mail: dallacos@psico.unipid.it]), **Housework as Variable of Adjustment for Development.**

¶ The transformation of the productive system to require a wider availability of labor power for work that is generally more flexible & precarious, & the implementation of the politics of adjustment, eg, cuts in social spending that tend to lower the cost of labor power, have strong implications for the organization of housework performed by women. As unwaged & unlimited work, housework is subject to an intensification of rhythms & an invasion of spaces determined by the other work processes. There is a superimposition of the times & spaces of production on that of reproduction that determines a heavier, sometimes unbearable, workday for women. Although international institutions openly acknowledge this fact, unwaged housework considered as a variable of adjustment is repropounded as a resource for this phase of development, & its importance & strategic function are confirmed. The Beijing (People's Republic of China) Platform for Action is considered.

98S34056 / ISA / 1998 / 11297

Dallaire, Bernadette & Morin, Paul (GRASP U Montréal, Quebec H3C 3J7 [tel/fax: 514-343-6193/2334; e-mail: dallairb@magellan.umontreal.ca]), **Production de sens et production de faits: le critère de dangerosité civile à la jonction de deux mondes institutionnels** (Producing Meanings and Producing Facts: The Criterion of Civil Dangerousness at the Junction of Two Institutional Worlds). (FRE)

¶ Tackles the use of the dangerousness criterion for civil commitment of psychiatric patients (court-ordered confinement & clinical psychiatric examination), identifying theoretical & empirical implications of this criterion & what it reveals about how society deals with deviance defined as psychiatric illness. The notion of dangerousness is approached through its position- & consequent mediating function-at the intersection between psychiatry & justice, two institutional realms where deviant behaviors are defined & controlled. Examined are (1) the balance between two basic principles in free societies-the protection of individual rights to liberty & integrity as opposed to the state's duty to protect public safety & order-& (2) the relative impacts of legal vs clinical & therapeutical considerations in the perception & evaluation of "mentally ill" persons, where the dangerousness criterion is used. Regarding the courtroom situation, it is argued that, while the attributed dangerousness is the object of the judgments, the notion itself is used by legal & medical agents as a reference & tool in a highly codified, structured, & routinized process where meanings-& facts-are produced.

98S34057 / ISA / 1998 / 11298

Daly, Mary (Institut Sozialpolitik Georg-August-U, D-37073 Göttingen Federal Republic Germany [tel/fax: 49-551-397133/399788; e-mail: mdaly@gwdg.de]), **Paid Work, Unpaid Work and Welfare: Towards a Framework for Studying Gender-Related Welfare State Variation.**

¶ Reviews the main approaches to understanding variation among European welfare states in their approach to gender relations, with attention to theoretical/conceptual, methodological, & empirical issues. The breadwinner/housewife typology, which has a central place in the feminist literature on the welfare state, along with the concepts of care & citizenship, are critiqued. The main thrust of feminist work in recent years is considered, & the merits & demerits of typologizing are debated. Ways to improve conceptualization of the relationship between state, market, & family at the macrolevel & of how women's & men's opportunities & life chances are affected at the microlevel are suggested. The central concepts of paid work, unpaid work, & welfare need to be re-worked into a framework capable of countenancing variation & complexity in how welfare states affect gender relations.

98S34058 / ISA / 1998 / 11299

Dandeker, Christopher (King's Coll, WC2R 2LS UK [tel/fax: 0044-171-873-2673/2026; e-mail: christophe.dandeker@kcl.ac.uk]), **Strategic Peacekeeping and Military Culture.**

¶ Explores the idea of strategic peacekeeping-an operation that falls midway between classic peacekeeping & peace enforcement-& how it offers challenges to traditional military culture. After outlining the distinctive elements of military culture & the tensions that can arise between this culture & peacekeeping, examined is how the effective performance of strategic peacekeeping requires changes in traditional military culture: the idea of the "End State"; the use of force; flexibility in the chain of command; the ideas of neutrality & impartiality; the interaction of military & political actors; & interactions between military & nonmilitary actors such as nongovernmental organizations in the area of deployment.

Danilov, Alexander N. (Administration President Republic Belarus, K. Marx St 38 Minsk 220016 [tel/fax: 0172-222-39-21/38-15]), **Problems of System Transformation and Contemporary Society.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The transformation today in Eastern Europe is the only case in history when a large group of countries has attempted to reproduce the sociocultural experience of other countries that is already historically outdated & marked by crisis. The task of the formation of market economies is far from being accomplished. The collapse of the former system of the division of labor has posed problems that, to be resolved, require immense investment & many years of creative labor. The complexity of the tasks is aggravated by the international confrontation for the division of the spheres of preferential influence in the countries under transformation. Yet it is evident that all these countries have to resolve jointly another problem, no less important-participation in the elaboration of a mechanism for coordinating the active work of humankind with the biosphere possibilities of this planet. Bringing together the criteria for the optimal model of socioeconomic development, the materials of the World Forum in Rio de Janeiro, Brazil, 1992, projects the image of a new civilization that advocates equality of nations, new forms of population interactions, & new types of consumption & technologies. Those with a one-sided orientation would prefer to resolve all these problems in the course of globalization by means of establishing supranational administrative organs, via forced reduction of the population, first of all in the poorest areas of the world. We cannot agree with such a formulation of problems & must insist on enabling every nation to choose its own way of development, responding to its historical traditions. The priority task of contemporary science is to establish the problem of the future for humankind as a subject of equal discussion for all the people of this planet.

Dark, Ken R. (Faculty Letters U Reading, Berkshire RG6 6AA England [e-mail: k.r.dark@reading.ac.uk]), **Macrodynamics and the Possibility of Cycles in World Politics.**

¶ The recent development of macrodynamic theory-incorporating perspectives from mathematics, evolutionary theory, anthropology, & social theory-offers new possibilities for identifying cyclical patterns (ie, long-term change) derived from processes of global sociopolitical change. While countering critiques of metahistory & historicism regarding the possibility of historical cycles, macrodynamics suggests that wave-like patterns of long-term change are possible. These patterns are argued to derive from underlying processes based on universally shared features of human groups, predicated on the need for communication & interaction, that foster processes encompassing wide variations in specific events & structures. Thus, a particularistic & agency-based understanding of historical change can be combined with the recognition of shared diachronic patterns. How this approach can be used to identify waves of sociopolitical change is illustrated by examining European & Middle Eastern history since the start of the first millennium AD; far-reaching implications are considered. The new theory may enhance analyses in a range of disciplines, eg, history, political science, anthropology, & archaeology. Application of macrodynamics to these fields has started; however, many more studies using this approach are needed to explore the breadth of its utility, particularly its potential in interdisciplinary investigation.

Darwich O., J. Gregorio (CENDES U Central Venezuela, Caracas 6622 [fax: 58-2-7512691; e-mail: mgosen@etheron.net]), **Del campo de batalla a la construcción de organizaciones: el caso de Venezuela** (The Battlefield for the Construction of Organizations: The Case of Venezuela). (SPA)

¶ Presents a historical analysis of organizational development in Venezuela since the 19th century. Colonial & postcolonial Venezuela was marked by war, violence, & suppression of any organizational development. State centralization & government organizations then began to define political power & dominate society in general. The organizational rise of the oil companies & their acts of socioeconomic exploitation in both public & private arenas are examined. Contemporary organizational development, featuring peace movements, public reform, & local organizing, is compared to developments in other Latin American countries.

98S34063 / ISA / 1998 / 11304

Darwin, John (Sheffield Hallam U, S1 1WB England [e-mail:

sbsjad@shu.ac.uk)), **Partnership: Is There an Ideal Relationship?**

¶ Explores the nature of the relationship between suppliers (contractors) & customers (clients) in the context of compulsory & voluntary competitive tendering in British local government. A review of the literature on partnerships summarizes implications for the nature of the client-contractor relationship based on the distinction between transactional & relational contracting. A research project, funded by the Economic & Social Research Council, is briefly outlined, & the findings on the nature of the relationship are considered. It is shown that textbook approaches provide a useful heuristic, but do not reflect the subtleties of the interactions that develop during contracts. Overall implications are considered in the context of theories of fair process & trust.

Das, Veena (New School Social Research, New York NY 10003 [tel/fax: 212-229-5723/5595; e-mail: dasv@newschool.edu]), **Forms of Community in India: Solidarity, Crisis, and Representation.**

¶ Examines two different moments of community formation in India & tries to show the role of ritual in creating solidarity in face-to-face organic communities. How the death of an individual member becomes the moment for the enactment of kinship & community solidarity, thus creating temporal continuity in the face of loss, is demonstrated. Also examined is the creation of political community based on identity politics. It is argued that there is an appropriation of individual suffering in the creation of community in this process & that legitimacy has to be continuously created rather than assumed. The data are drawn from kinship & ritual practices of urban families & the discourses of militancy in Punjab.

Dasko, Faith D. (U Bremen, D-28334 Federal Republic Germany [tel/fax: 421-218-7476/7474]), **Institutional and Normative Factors in the Development of Female-Headed Family Households: A Comparative Longitudinal Analysis of France and Germany.**

¶ Since the 1970s, in advanced industrialized societies, not only has the importance of female-headed family households with dependent children increased in absolute numbers & relative to other family households with children, but variation has developed in this population as well, & national differences are evident. Explored here is the extent to which formation of these types of households can be attributed to normative, cultural, & institutional factors in France & the Federal Republic of Germany. On the one hand, the two countries have extensive similarities in their cultural & societal systems & values, while on the other, normative & institutional factors related to family life are shown in the family policy & family research literature to be importantly different. Individual longitudinal data from the Fertility & Family Survey are used to explore the institutional set of conditions & /or normative views that help explain decisions concerning family life leading to the entry into, duration of, & exit out of female-headed family households.

Datta, Paul (Dept Sociology Queen's U, Kingston Ontario K7L 3N6 [tel: 613-546-7681; e-mail: 4pd@qmlink.queensu.ca]), **Scandalous Reason: Foucault, Durkheim and Madness and Civilization.**

¶ Astonishing insight, violent optimism that locates reason & its raison d'être in a structure that is, for it, accursed; the sacred banished to the dark waters of madness. The archaeology of power presented by Michel Foucault in *Madness and Civilization* (1972) has at its core the structure of determination that Durkheimians would recognize as the sacred. Two basic questions are posed: the status of the determination of the sacred in modernity, & the status of Foucault's discourse on the sacred. Both of these questions lead toward an engagement with Émile Durkheim as

the site of Foucault's displacement of philosophy. Foucault is criticized for failing to adequately develop implicit Durkheimian concepts, eg, the sacred, which leads to certain epistemological & potential political problems.

David, Robert J. (Cornell U, Ithaca NY 14853 [tel/fax: 607-255-5517/254-8886; e-mail: rjd13@cornell.edu]), **Networks of Learning: Personnel Flows among Canadian Business Schools.**

¶ Viewed from the aggregate of all organizations in a population, the movement of personnel builds a network of relations between organizations. In the case of faculty members, the flow of personnel creates a web of channels for knowledge & scholarly work, often referred to as an "invisible college." An examination of this network in the population of business schools in Canada reveals that schools differ markedly on their source of personnel, with different %s of graduates from the US, top 20 US, & overseas schools. Source of faculty degree is related to school reputation. A clear status hierarchy in the population emerged; some schools received respect, some sent & received respect, & others sent respect. Analysis of network relations revealed clusters of approximately structurally equivalent schools, corresponding to high-status, embedded (middle-status), & lower-status groups. Described is a social structure based on the concrete & basic phenomenon of personnel flow between the business schools.

Davidson, Christopher Dmitri (U California, Berkeley 94720 [tel/fax: 510-642-4766/0659; e-mail: dritaly@uclink4.berkeley.edu]), **Emotional Capital and the Bid for Mainstream Employment: How Supportive Housing Tenants Drop into and out of a Vocational Program.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ It is argued that pride—a deep-rooted, semiconscious sense of connection with others—has an autonomous effect on social action & can be reconceptualized as emotional capital. Like cultural & social capital, it is accumulated, invested, lost, & reproduced. Using data from 15 months of fieldwork in a vocational program for supportive housing tenants, & interviews with tenant workers, counseling staff, & employers, it is shown how tenants gain a foothold in the service sector workplace by drawing on two kinds of resources: (1) the cultural capital to navigate the intricacies of workplace rituals; & (2) emotional capital, which acts as the engine of motivation & helps weather emotionally risky social interactions. Employers praised tenant workers for trying hard even if they lacked cultural capital, but fired them from jobs when they appeared unmotivated. Case studies of tenants suggested that pride makes smooth interaction possible at the workplace & is generated through intimate relationships whose intensity fluctuates over tenants' life course.

98S34070 / ISA / 1998 / 11311

Davidson, Christopher Dmitri (Sociology Dept U California, Berkeley 94720 [tel/fax: 510-845-4325/642-0659]), **Street People, Straight Jobs: Marginal Workers and the Bid for Mainstream Employment.**

¶ Explores the emotions felt & expressed by marginal workers on the fringes of the job market in their bids for mainstream employment. The discussion draws on Ann Swidler's "culture-as-toolkit" model & the sociology of emotions literature to propose a model of emotional capital, defined as a toolkit of behaviors for managing impressions in social situations & controlling the expression of feelings. Interview & ethnographic data from an onsite vocational program at Community House, a supportive housing residence in a large West Coast city, are used to show that the employment trajectories of formerly homeless tenants of supportive housing, most of whom have histories of mental illness & substance abuse, depend not only on their precarious positions in the social structure, but also on their supplies of emotional capital.

98S34071 / ISA / 1998 / 11312

Davidson, Kate (U Surrey, Guildford GU2 5XH England [tel/fax: 44-0-1932-567183; e-mail: K.Davidson@surrey.ac.uk]), **"Doing Good Offices": The Gendered Nature of Selfishness as Articulated by Older Widowed Men and Women.**

¶ Explores the gendered nature of selfishness as expressed by 51 widows & widowers ages 65+ (for at least 2 years), in the UK via in-depth, semi-structured interviews. The word "selfish" was frequently used by the widows when describing their present existence & how they view the lives that men have always led. They frequently used the word "guilty" as a

d

corollary to their admitted selfishness, which was associated with not having to look after someone all the time. Few of the widowers mentioned selfishness & never in conjunction with guilt. Theirs was more likely to be associated with feelings of anger & helplessness at the loss of their spouse. It is concluded that women articulate a clearer concept of the nature of selfishness as it relates to their everyday lives than do men.

98S34072 / ISA / 1998 / 11313

Davies, Celia (School Health & Social Welfare Open U, Milton Keynes MK7 6AA Buckinghamshire England (tel/fax: 01908-652595/654124; e-mail: c.m.davies@open.ac.uk)), **Gender and Race, Class and Age: The Decomposition of the Professional Ideal.**

¶ Builds on previous work (Davies, C., 1996 (see abstract 9707303)) emphasizing the gendered quality of the profession ideal to acknowledge that this ideal is simultaneously "classed," "raced," & "aged," & social change has brought a series of challenges to it. Present trends may be interpreted as a search for new sources of legitimacy in the face of not only 1980s-1990s regulatory challenges posed by the state, but also a search for new forms of practice & legitimation of that practice as old notions of gender, class, race, & age become more deeply contested.

98S34073 / ISA / 1998 / 11314

Davies, Christie (U Reading, Whiteknights RG6 6AA England (tel/fax: 118-9318518/922; e-mail: J.C.H.Davies@reading.ac.uk)), **The Continued Criminal Prosecution of Consensual Sexual Behavior: The Case of Sado-Masochism in England and Wales.**

¶ Despite a general liberalization of the law in England & Wales regarding consenting sexual practices, sado-masochists are still being sent to jail, because the courts perceive their sexual practices as violent assaults rather than sex & claim that consent is no defense against a charge of assault. This has been upheld by the Court of Appeal, the House of Lords, & the European Court of Human Rights. Why is there such a high level of prejudice against sado-masochists? It is argued that it is due to people objecting to the confusing of power relations & sexual relations. In the past, when corporal punishment was very widespread, they did not want power relations being contaminated by the sexuality of those who mimicked corporal punishment or used corporal punishment as a "cover" for sex. Today the objectors object to sex being contaminated by power relations even though these are largely playacting.

98S34074 / ISA / 1998 / 11315

Davies, Christie (U Reading, Whiteknights RG6 6AA England (tel/fax: 44-118-9318-518/922; e-mail: J.C.H.Davies@reading.ac.uk)), **Powerful People with a Stigma: A Sociological Analysis Rooted in Biography.**

¶ Argues that the stigma management of powerful people is best explored using biographical data to show how power was used to hide the detrimental stigma. Biographies reveal two strategies that are forced on powerful people with a stigma: (1) concealment, eg, the case of J. Edgar Hoover, who had to conceal the fact that he was a homosexual & transvestite; & (2) bold revelation of any stigma that is also a source of status, eg, high-status ancestors, but in such a way as to stress their status rather than the stigma of illegitimacy.

98S34075 / ISA / 1998 / 11316

Dávila, Carlos (Facultad Administración U Andes, 4976 Bogotá Colombia (tel: 571-284-9911; e-mail: cdavila@riscadmin.uniandes.edu.co)), **Organization Analysis in Colombia.**

¶ Presents an overview of the state of organization analysis in Colombia, identifying critical issues confronted over the years & prospects for future development. With origins in the early 1970s, it has evolved slowly &, for the most part, in management schools, not in social science departments. A case example illustrates patterns of the international division of labor in the academic setting, drawbacks of intense political activism in the universities, dilemmas posed by use of interdisciplinary approaches, & concentration of scarce, qualified research resources & capabilities in a highly stratified society.

98S34076 / ISA / 1998 / 11317

Davis, Kathy E. (Rijks U Utrecht, NL-3508 TC Netherlands (tel/fax: 31-30-253-7546/5551; e-mail: k.davis@fsw.run.nl)), **Lonely Heros and Great White Gods: Professionalism and Masculinity in Surgeon Autobiographies.**

¶ Cosmetic surgery as part of hardcore medicine is a male-dominated profession that, historically, has played a significant role in the subordi-

nation of women through their bodies. Explored here is the role that cultural discourses of masculinity & femininity play in the decisions of individuals to become cosmetic surgeons, as well as in how they make sense of themselves & their activities as medical professionals. Data are culled from the small, but, nevertheless, recognizable genre of popular autobiographies in which the author describes what it is like to be a cosmetic surgeon. It is argued that such autobiographies provide an invaluable resource for understanding the discourses shaping the profession of cosmetic surgery. By analyzing the textual practices employed by the authors to construct their careers as the idealized story of a cosmetic surgeon, the ideologies of the profession as well as the construction of masculinity in its professionalized form are exposed.

98S34077 / ISA / 1998 / 11318

Davis, Nancy J. & Robinson, Robert V. (DePauw U, Greencastle IN 46135 (tel/fax: 765-658-4518/4177; e-mail: ndavis@depauw.edu)), **"The Poor Always Ye Have with You?": Religious Orthodoxy and Economic Justice in Europe.**

¶ Data gathered in 21 European countries & Israel, 1990-1993, by the International Social Survey Programme & the World Values Survey are drawn on to examine differences in economic attitudes between the religiously orthodox & modernists/secularists. In research on the US (Davis & Robinson, 1996 (see abstract 9703970)), it was found that the orthodox are more liberal than modernists on issues of redistribution of income, job provision, workers' stockholders' rights to profits, etc. Considered here is whether this is a case of "American exceptionalism" or is widespread due to the sociodemographic position & value orientation of the orthodox relative to modernists. The orthodox are generally less advantaged than modernists, giving them an economic interest in greater equality. Moreover, orthodox viewpoints, oriented toward the collectivity or community & toward otherworldly goals, contrast with modernist positions, which emphasize individualism, materialism, & consumerism. These orientations should make the orthodox more economically liberal than modernists. In the majority of countries examined, the orthodox are relatively liberal on economic issues. The orthodox do not differ from modernists in GB, Belgium, Sweden, Finland, & Northern Ireland, & are economically conservative, relative to modernists, in France, Spain, Denmark, & the Netherlands.

de Brita F. Demartini, Zeila (U São Paulo, 05508-900 SP Brazil (fax: 55-11-8183784)), **Japanese Immigrants in São Paulo: Three Generations.**

¶ Presents a study of immigrant Japanese families in São Paulo, Brazil, with special interest in their life projects aimed at social-economic mobility. Focus is on specific themes related to their educational background, cultural habits, & leisure activities according to residence locale & generation, discussing the question of identity. Biographies were collected from interviews of a random number of three generations of Japanese immigrants living in São Paulo, 1908-1990, born in Brazil or Japan. Following the life stories of a specific group of people who have lived in São Paulo for almost a century led to reflections on the biography construction & on the results.

98S34080 / ISA / 1998 / 11321

De Brito Castelo Branco, Lucio (U Brasília, 70910-900 DF Brazil (tel/fax: 061-3482389/3473663)), **The Sport of the Future: Culture, Citizenship and Integration in a Global System.**

¶ Discusses what sport means nowadays, considering its reach & relevance as a worldwide phenomenon, as well as the extraordinary charm coming from different kinds of sports. In fact, most people involved in sport never practice sports nor do they intend to; ironically, Umberto Eco

disqualified people who talk about sport without practicing it. Nevertheless, the empirical importance of sport consists in the mobilization of boundaryless telespectators who are able to chat about sport. The technological wave is not only swallowing industrial work but also many opportunities to work. Mimetic activities are fast replacing the role of work in postmodern societies. Therefore, chat becomes the most important thing for those deprived of work. Internauts spend much time looking for breathless chat (not surprisingly, on-line pornography is a big part of this) in a worldnet of simultaneous interaction—a conspicuous form of virtual entertaining. The sociological meaning of sport becomes more relevant not only inside a globalized mass culture, but as a virtual infrastructure of socialization. The economic & social weight of sport is most obvious; however, its meaning transcends the public sphere of social integration & reaches the function of legitimization of the whole existence. When the effectiveness of citizenship fails & the state shrinks to a mere design, sport becomes—above all kinds of religious & cultural singularities—a unique environment of present &, foremost, future communication.

de Clercy, Cristine A. (U Western Ontario, London N6A 5C2 [tel/fax: 519-679-2111/661-3904 e-mail: declercy@sscl.uwo.ca]), **NUD*IST or ATLAS? Coding Methodology and the Computerized Analysis of Textual Records.**

Recent fourth-generation editions of two popular qualitative analysis programs, NUD*IST & ATLAS.ti, are significant advances from earlier versions. A large dataset of political speeches facilitates a comparative investigation of each program's merits, particularly concerning textbank manipulation, content analysis facilities, & theory-building features. Results suggest that NUD*IST is superior if search & coding terms can be assigned a priori by investigators, but ATLAS is a more powerful & flexible tool for theory development & inductive theory building. Both programs' statistical features have improved in recent versions, but some remaining code & variable assignments remain problematic.

98S34082 / ISA / 1998 / 11323

De Geer, Eric S. H. (Uppsala U, S-75433 Sweden [tel/fax: 4618221257]), **The Regional Presence of Americans in the Nordic Countries.**

Maps the presence of Americans in the Nordic countries at the country, provincial, & regional or municipal levels. The choice of country of birth as criterion is discussed, as is the outcome of using the alternative criterion of citizenship. The different regional strengths of the American presence between & within each Nordic country is demonstrated, noting that such differences are greater when moving from the country to the provincial to the municipal level. Some of the main reasons for these differences are identified, highlighting the hierarchical central place system in combination with—or due to the lack of—economic expansion. For some regions, other agents such as historical traditions have been predominant. Contrary to the general trend of Sweden as the dominant immigrant nation in the Nordic region, Americans are less frequent there than in other Nordic countries.

98S34083 / ISA / 1998 / 11324

De Houwer, Annick E. (U Antwerp, B-2610 Belgium [tel/fax: 32-3-8202863/82; e-mail: vhouwer@uia.ac.be]), **Men, Women and Children: Gender Differences in Attitudes to Child Language.**

Studies of parental input to young children repeatedly point out differences between mothers & fathers in how they interact with their offspring. Investigated here is whether adults' attitudes to young children's speech are gender based. Following the methodology outlined by Annick de Houwer & Wolfgang Wölck (1997), an ethnographically based formal language attitude study was designed to investigate 407 adults' attitudes toward the speech of 4-year-old children living in the same community of Antwerp, Belgium. Response patterns varied significantly by the various child speech samples rather than by respondent gender, & men had a much less mild attitude toward the children than the women did. These results reflect the findings for gender differences in how adults interact with young children, in that fathers have been found to be generally less patient & more demanding than mothers. However, the general attitudes held by both sexes concerning young children are more alike than different.

De Jong, Bote (Goudlaan 43, NL-9743 CA Groningen Netherlands), **Ideology: Some Trends in the Development of a Socio-**

logical Concept.

Ideology is a vague & controversial concept that occurs in everyday language as well as that of the social sciences. In the course of history, a connotative turn occurred, & myths evolved through religion & philosophy into ideology. Different concepts of ideology existed during the 18th, 19th, & 20th centuries. The concept is taken away from philosophy & made part of epistemology & historical sociology. It became the cornerstone of the sociology of knowledge. The concept is neutralized, extended, & specified; it is now more explicit than earlier. Ideologies will not disappear, but a process of crystallization has taken place.

98S34085 / ISA / 1998 / 11326

De Jong, Gordon F., Tran, Quynh-Giang & Chamratrithirong, Aphichat (Pennsylvania State U, University Park 16802-6211 [tel/fax: 814-863-2277/8342; e-mail: dejong@pop.psu.edu]), **Migration and Perceived Well-Being: Life Satisfaction Consequences of Migration.**

The consequences & social outcomes of migration are addressed by analyzing four dimensions of perceived postmove satisfaction of labor force internal migrants in Thailand—income, work, living environment, & community facilities. Major theoretical perspectives are based on the logic of human capital, social network/migrant capital, & migrant decision-making frameworks of migration behavior. Data from the 1992 Thailand National Migration Survey are drawn on to examine (1) the level of perceived increased postmove satisfaction; (2) which migration behavior theories & frameworks are supported by empirical analysis; (3) whether similar determinants of economic & social perceived migrant satisfaction exist; & (4) whether predictors of perceived postmove satisfaction are the same for more permanent vs temporary labor force migrants. Descriptive analysis shows that perceived improved satisfaction ranges from 24% for income to 39% for community facilities. Regression analyses show different predictors & opposite sign patterns for improved postmove satisfactions on income & work vs living environment & community facilities. Further, determinants of improved satisfaction are different for temporary & more permanent labor force migrants. Implications for new knowledge & theory on the consequences of migration are offered.

98S34086 / ISA / 1998 / 11327

De Koninck, Maria, Bergeron, Pierre, Bourbonnais, Renée & Tremblay, Marc-Adelard (Dépt médecine sociale & préventive U Laval, Quebec GIS 7P4 [tel/fax: 418-656-2131/7759; e-mail: maria.dekoninck@msp.ulaval.ca]), **Femmes en médecine: une façon différente d'être médecin? (Women in Medicine: A Different Way of Being Physicians?). (FRE)**

Results of a survey of 3,000 physicians that confirmed differences in training & professional activities for Quebec physicians, supplemented by qualitative interview data from 30 women & 8 men belonging to different specialties & working in different contexts, reveal that underlying professional itineraries are decisions taken at key moments, eg, professional orientation & choice of specialization in which personal characteristics & interests prevail. Women's discourses described how they adopted individual strategies to practice their profession under conditions that account for their personal objectives & the structural constraints of medical practice. Findings suggest conceptualizing differences between women & men physicians in the sense of a different way of practicing medicine.

De La Cueva, Daniel Gustavo (E. GES. Estudio de Gestion Deportiva, Barrio Lomas del Tala Casa no 38 Catamarca 4700 Argentina [tel: 54-76-68-1052; e-mail: dcdeucueva@catam.unca.edu.ar]), **From Olympia to Catamarca: Heritage, Perspective and Challenge.**

Summarizes & builds on various studies aimed at identifying the field defined as sport system in the province of Catamarca, Argentina. Focus is on a revision of the evolution, 1970s-present. It is suggested that, according to the preliminary model, the sport system is affected by demographic, economic, sociocultural, political, geographic, educational, climatic, managerial, technological, & historical factors. Such global factors influence national sport identities & the sport culture. Simultaneously, the mass media influence Catamarca's situation as well as the growth & challenges (eg, development) facing its new sport system. The new management of this system uses models that bring about changes from the national to the province level. The new elements entering the sport model need an in-depth review. The province's sports need to diagnose the situation, particularly in terms of the rules, human resources, strategies, work-time dedication, & the critical state of the associative model.

De La Fuente, Eduardo (School Sociology & Social Work U Tasmania, Hobart 7001 Australia [e-mail: eduardo.delafuente@utas.edu.au]), **"Another Modernity": Why Sociologists Are (Re)Discovering Aesthetics.**

¶ Indicative of an aesthetic turn in social theory, Scott Lash's *Another Modernity* argues that traditional sociological accounts of modernizing processes need to be supplemented with those of aesthetic modernity. This coincides with Michel Maffesoli's claim that sociology ought to consider whether, after *homo politicus* & *homo economicus*, *homo aestheticus* has emerged. Offered is a solution to the problem of what sociology can glean from the aesthetic dimension of modernity that refers back to Georg Simmel's claim in *Philosophy of Money* that modern social processes resemble artworks in their form. It is argued that aesthetic forms function in a similar way to late-modern forms of sociality, in that social entities are more autonomous but also more interdependent—what Niklas Luhmann calls autopoietic social processes.

98S34090 / ISA / 1998 / 11331

De La Fuente, Eduardo (Dept Sociology & Social Work U Tasmania, Hobart 7001 Australia), **The Autopoiesis of the System of Art: Niklas Luhmann and the Sociology of Art.**

¶ Examines the implication of the autopoietic turn in social theory for the sociology of art, focusing on the question of art's autonomy or the autonomization of its system. The so-called autonomy of art (in the modern era) has presented sociological analysis with the conundrum of how to develop an account of a social phenomenon that appears less directly social than forms of social processes. The notion of autopoiesis as developed by Niklas Luhmann is used to argue for a constructivist, but nonreductionist, conception of the social aspects of art. Drawing on Luhmann's "The Work of Art and the Self-Reproduction of Art" & "The Medium of Art," it is argued that autopoiesis is a corrective to the nonsociological postulate of autonomy, ie, that art's autonomy lies in its freedom from social determination. After comparing Luhmann's notion of autopoiesis to Theodor Adorno's dialectical conception of art's autonomy, a post-modern critique of system theory challenging self-reference & system boundaries is considered.

De Leeuw, Edith D., Van der Zouwen, Johannes & De Heer, Wim (Statistics Netherlands, Plantage Doklaan 40 NL-1018 CN Amsterdam [tel/fax: 31-20-6223438; e-mail: edith@educ.uva.nl]), **Methodological Issues in Survey Research: A Historical Overview.**

¶ A historical overview of social surveys is presented, & the historical development of scientific survey methodology & survey statistics described. Although administrative censuses date back to Roman times, surveys can be traced back to the early 19th century; the first scientific survey was

conducted in England in 1912: Bowley used a standardized questionnaire & random sampling in his survey, "On Livelihood and Poverty." Modern survey methods have their roots in the 1930s, when three major aspects of the survey process were developed & refined. At the US Census Bureau & the London (England) School of Economics, sampling techniques were developed & tested. Institutes for polling & market research, eg, Gallup, were instrumental in the development of data collection techniques. Statistical methods for data analysis were developed at several universities by pioneers such as Lazarsfeld. In the 1950s, the scientific survey interview was well established, & handbooks were published. In the early 1970s, telephone interviewing was introduced, & mail survey methods were updated & refined. Computer-assisted interviewing & electronic surveys emerged in the 1980s & 1990s. At the same time, more emphasis was given to concepts such as measurement error, non-response, & total quality control. Although the basic principles of the scientific survey still hold, Bowley would be surprised to see the design of a survey in 2012, which will undoubtedly incorporate new technologies & focus on reducing respondent burden, while improving data quality. Bowley would certainly be pleased to see sophisticated methods for the reduction of nonresponse & measurement error incorporated in a total quality survey design.

De Rond, Mark (Christ Church U Oxford, OX1 1DP England [tel/fax: 44-0-1865-202024]), **The Role and Rhetoric of Social Ties in R & D Collaborations.**

¶ Since the mid-1980s, research into the strategic alliance phenomenon has proliferated, a development to which the biotechnology community has not been immune. The majority of alliance research papers appear to be grounded in resource dependence theory or transaction cost economics, & focus largely on antecedent conditions or outcomes of collaboration. Relatively few academics have taken a process-oriented approach & addressed the evolution of cooperation. Fewer still have explored inter-organizational collaboration from a social network perspective. Yet in an effort to understand cooperation, the network perspective appears to have been put on a par with transition cost economics, resource dependence, resource-based, & game-theoretic views. Is this justifiable? Can a social network perspective help explain the evolution of collaboration? Based on a circular model of alliance process, & incorporating a research perspective by Hakansson & Snehota, an in-depth, longitudinal case study is presented covering nearly 4 years of successful collaboration between a large pharmaceutical & a smaller biotechnology firm. What appear to emerge are three specific roles for social ties.

98S34094 / ISA / 1998 / 11335

De Seve, Michel, **The Erikson and Goldthorpe Core Model of Social Fluidity in Canada: A Comparison with England and France.**

¶ The Erikson & Goldthorpe core model of social fluidity has been verified in many countries, especially in England & in France. It was previously discovered that this model could not adequately describe intergenerational mobility in Canada: short vertical distance effect was weak; inheritance was low, except among the farmers; & the two kinds of specific affinities between some classes observed in other countries did not seem to be present. Yet, these nonconvergent results were observed using a very small sample of the working male population in Canada (987 cases from the 1981 Quality of Life survey). The two main objectives here are (1) to reexamine these results with more cases by merging the data already used with data from the 1982 Comparative Project on Class Structure & Class Consciousness files & (2) to establish the specific characteristics of the Canadian social fluidity regime by comparing it to those observed in England & France with the CASMIN data.

De Swaan, Abram (Amsterdam School Social Science Research, NL-1012 CE Netherlands [tel/fax: 31-20-525-2262/2446; e-mail: a.deswaan@mail.uva.nl]), **The State, Mass Extermination, and the Breakdown of Civilization.**

¶ Explores the Elisian debate over whether massive violence is a manifestation of modernity, perhaps its very essence, or rather, its total opposite, a breakdown of civilization, arguing that, at the core of the civilizing process, another contrary current may manifest itself, allowing extreme violence on a mass scale to be perpetrated toward specific categories of people, while pacification is maintained in other sectors of society. The concepts of identification, disidentification, & compartmentalization should help to describe & explain these "dyscivilizing" processes in their complex relations to processes of civilization.

Deacon, Bob (U Sheffield, S10 2TU England (tel/fax: 44-114-222-6407/276-8125; b.deacon@sheffield.ac.uk)), **Epistemic Communities and the Global Social Policy Dialogue.**

¶ Epistemic communities or global professional policy networks are contributing to the global discourse concerning the future for social policy. Each community active in this field defines the issues differently & therefore offers alternative policy prescriptions. Here, focus is on the field of income maintenance policy/social security policy/antipoverty policy, with attention to a set of professional actors, ie, those working for consultancy companies. The procedures used by the European Union through the PHARE & TACIS facilities, are taken as a case study to examine the business of prescribing social policies for postcommunist countries.

98S34097 / ISA / 1998 / 11338

Deacon, Bob (U Sheffield, S10 2TU England (tel/fax: 44-114-222-6407/276-8125; e-mail: b.deacon@sheffield.ac.uk)), **Recent Developments in East European Welfare States: Is There Social Dumping?**

¶ Reviews the trajectory of social policy reform in Eastern Europe & the former USSR. The categorization of groups used by the World Bank (1996), of countries set on different trajectories or accomplishing reforms at different speeds, is examined in light of the typology presented in Deacon (1992, 1997). Policy reform in many countries in the region is being influenced less by a perceived need to dump social responsibilities to win global competitive advantage, but rather by the playing out of a tension between those who perceive a need to honor inherited communist social obligations & those who believe in the market place as a desirable agency for welfare provision. Welfare collapse, where it exists, is consequential for an impasse in the policy reform process brought about by a stalemate of social & political forces.

98S34098 / ISA / 1998 / 11339

Dean, Kathryn J. & Wister, Andrew V. (Gerontology Research Centre Simon Fraser U, Vancouver British Columbia V6B 5K3 (tel/fax: 604-291-5044/5066; e-mail: Kathryn.J.Dean-2@tc.vmn.edu)), **A Graphical Interaction Analysis of Self-Care Practices among Older Adults Managing Chronic Illness.**

¶ Using a newly developed statistical method called graphical interaction modeling, examined are self-care practices for a chronic condition among persons with arthritis, heart conditions, &/or hypertension. Based on a situational theoretical perspective, it is hypothesized that self-care approaches used to cope with a chronic condition are influenced by the illness context (type, seriousness, & age at diagnosis), the age cohort, & the gender of individuals. Focus is on the interactions between four self-care practices: exercise, mutual aid, reducing stress, & prescription drug use. Graphical interaction analysis of data drawn from the North Shore Self-Care Study, a random sample of 904 persons, ages 50+, who report being diagnosed with one of the aforementioned chronic conditions indicate a strong positive relationship between exercise & coping & an inverse relationship between mutual aid & coping. Stress reduction is only indirectly related to coping through exercise & mutual aid, & interestingly, medicine use is not related to coping with a chronic condition. In addition, the type of illness is related to help seeking, & illness seriousness exerts both a direct & indirect effect on coping. Findings are discussed in terms of understanding complex health behaviors & outcomes.

98S34099 / ISA / 1998 / 11340

Debal, Prava (Indian Renewable Energy Development Agency, India Habitat Centre New Delhi 110003 India (tel: 4642371)), **Women and Renewable Energy: Problems and Prospects for Sustainable Development.**

¶ In view of gigantic demands for & simultaneous growing scarcity of the conventional sources of energy, new & renewable sources have emerged as viable & potential alternatives for sustainable development of a developing economy. However, a social awareness movement is needed to promote the popularization, application, & commercialization of renewable energy sources. It is argued here that women in Indian society can play the role of successful entrepreneurs in achieving this aim & in increasing acceptance of these new technologies in society. Entrepreneurship in renewable resources can also serve as an effective tool for economic empowerment of women in the society, because it provides women with enormous scope of self-expression. Case studies on the problems & prospects of women entrepreneurs & effective use of the technologies are presented.

Decdell-Holzwarth, Hale (Freie U Berlin, D-10963 Federal Republic Germany (tel/fax: 49-30-251-81-31)), **Migration and Workers' Solidarity in the Federal Republic of Germany, 1975-1995.**

¶ Depicts the changes in the relations between German & foreign workers, 1975-1995, & specifies the processes that hinder & favor trade union solidarity. In recent years, there have been increasing reports of open conflict between Germans & foreigners at the plants, concomitant with the politicization of demands of the foreign workers & weakening of their loyalty to the trade unions. Since foreign workers still constitute a significant section of the labor force & are well organized in the metal industries that have, so far, been the strongholds of union mobilization, change in their collective demands & actions is of central importance in assessing the prospects of labor movement in the crisis. Traced are the changes in worker solidarity to employer policies of the state & trade unions that have collectively shaped the relations between German & foreign workers at the workplace & beyond. The impacts on these relations of the settlement since 1988 of nearly 2.5 million immigrants of German descent & of the unification of the Federal Republic of Germany are also examined.

DeGoede, Martijn, Spruijt, Ed & Maas, Cora (Faculty Social Sciences Utrecht U, NL-3584 CS Netherlands (tel/fax: 31-30-253-4438/5797; e-mail: m.degoede@fsw.ruu.nl)), **Individual and Family Factors and Adolescent Well-Being: A Multi-Level Analysis.**

¶ Data from the 1991 & 1994 waves of the Utrecht Study of Adolescent Development (N = 1,450 initial respondents, ages 15-24) are drawn on to investigate the relative importance of family vs individual factors for the well-being of males & females. Analysis reveals that problems in the occupational & relational careers of youngsters have significant long-term effects on adolescent well-being; age & education are not related to well-being, & girls show poorer well-being than boys. Occupational problems of parents do not affect the well-being of their children, but parental relational problems lead to poorer adolescent well-being, particularly for girls. Individual experiences emerge as more important than family factors in explaining adolescent well-being, though family relational problems must not be neglected.

Dehavenon, Anna Lou (Action Research Project Hunger/Homelessness/Family Health, 1150 Fifth Ave Ste 5B New York NY 10128 (tel/fax: 212-289-0768/516-477-2488)), **Women's Research: Potential to Build Coalitions for Addressing Vulnerabilities of the Marginalized and Destitute.**

¶ The most fundamental social problems of the year 2000 will be unemployment, marginalization, & destitution. As speculative investment for profit far outdistances investment for production that creates work in the global market & structural adjustment programs cut local budgets for human services in both the developed & developing works, unemployment will rise among all ages & levels of workers. Contending that macrolevel economic analyses cannot solve the problem of the local need for work, explored is how ethnographers' findings from local use of the basic needs approach can provide the empirical basis for building more effective coalitions among human rights, scientific, & religious groups concerned with the needs of the marginalized & destitute.

98S34106 / ISA / 1998 / 11347

Del Grosso Destrieri, Luigi (Dept teoria U Trento, I-38100 Italy), **Musical Literacy and Musical Creation: Is There a Nexus between Confessional Attitudes and Artistic and Religious Institutions? (An Almost Weberian Query).**

¶ A sustained creativity in any artistic field is probably tied to two conditions: (1) a general & widespread social recognition of the validity of literacy in that field, which permits a wide social basis from which talents can emerge; & (2) economic & social rewards for artistic achievements. This proposition is briefly illustrated through (A) the rise of Protestant sacred music compared to the decline of the Catholic one; (B) the different theological importance given to musical literacy by different confessions; & (C) the consequent building of different institutional practices for the teaching of music. The late-19th-century Catholic reaction to Protestant successes is illustrated by the rise of the Cecilian movement & its impact in a little (both geographically & culturally) Italian border region: Trentino. Empirical data from a sample of students of the local conservatory & of the Instit Diocesano di Musica Sacra are drawn on to illustrate the passage of students from one institution to the other, & confrontation between the musical cultures proposed by each institution. These topics are considered in different European countries. The controversial decisions of Council Vatican II are briefly considered.

Del Pino, Juan (Dépt Sociología U Málaga, E-29071 Spain (tel/fax: 34-1-5-2221553/2132525)), **El saber sobre la participación desde una perspectiva iberoamericana** (Knowledge on Participation from an Iberoamerican Perspective). (SPA)

¶ In each culture there is a deposit, a product of social history, that registers the shared knowledge of multiple aspects of social life. Concerning participation in organizations, the accumulated common root in Hispanic peoples is extensive. From primitive Iberic & indigenous American peoples to the present, there are common participative practices that are well-suited to analysis & comprehension in an adequate theoretical framework, which gives understanding to many of today's experiences.

98S34109 / ISA / 1998 / 11350

Delahaye, Olivier, **Globalization and "Washington Consensus": The Exportation of the Freehold Land American Dream?**

¶ US reflection about agricultural land was elaborated in the particular framework of US land property formation, where land access was done through public land grants in the 19th century & land market in the 20th. In this framework, land has no historical bonds that could affect its commercial exchange. Focus is on social relations as latifundio ground rent, land tenure linked with work or power relations, etc. Land market is seen as the almost unique land tenure regulator. Multinational organizations are prompting land politics based on such an approach in the context of the so-called "Washington consensus." Despite some recent intents for widening the reflection, such a framework does not allow emphasis on essential sociohistorical relations in land tenure of Latin America, Asia, Africa, & Europe.

98S34110 / ISA / 1998 / 11351

Delanty, Gerard (Dept Sociology U Liverpool, L69 72A England (tel/fax: 0044-151-794-2888/2997; e-mail: delanty@liv.ac.uk)), **Theorizing Modernity and the Social.**

¶ Outlines a conception of modernity in terms of a dualism of autonomy & fragmentation, which can be seen as an expression of a deeper conflict between the cultural & the social projects of modernity. The central problem of modernity was the overcoming of this dualism with the aid of politics. Inspired by the power of the political, the discourses of modernity assumed a certain coherence in the relationship between cultural idea (the autonomy of the subject) & social institutions, eg, the nation-state. It is argued that this framework, which arose during the Enlightenment, is no longer relevant today as a result of far-reaching social change, the most important of which pertains to the role of knowledge, which is both a cultural & social category. Against the postmodern thesis & various versions of the theory of reflexive modernization, a cognitivist approach is proposed. The mediation of structure & agency is theorized by means of a concept of culture as knowledge. Such an approach emphasizes the dimensions of discursivity & contestability in cultural reproduction. Implications of this for the concept of "the social" are assessed.

Delcroix, Catherine (U Versailles Saint Quentin, Guyancourt F-78047 Cedex France (tel: 1-39-2556-49-33; e-mail: bertaux@ehess.fr)), **Strategies and Tactics of Families Living in Precarious Situations.**

¶ Interviews with 30 families with at least one child, age 16-25, living in a public housing project in Toulouse, France, are used to explore how they cope with their precarious conditions (ie, scarce resources & perilous environment). It appears that most of these families show high levels of activity & imagination to prevent risks (eg, heavy debt & expulsion from the flat or child's failing at school, exclusion from the labor markets, & drifting into drugs or delinquency). These are defensive tactics with no spectacular results if seen from the outside; however, they entail permanent mobilizations often bordering on heroism.

98S34112 / ISA / 1998 / 11353

Delcroix, Catherine (Dept sociologie U Versailles, Saint Quentin-en-Yvelines Guyancourt Cedex 78047 France), **Fighting for Recognition: The Case of the 'Médiatrices socioculturelles' in France.**

¶ In France, women in public housing districts populated by working & often unemployed classes, with large proportions of foreign migrants, have stepped forward to help their kin, neighbors, & other local residents to deal with local authorities, eg, schools, police stations, & state administrations. Interview data from 80 such *médiatrices socioculturelles* (sociocultural mediators) in 20 sites are used to discuss three issues: (1) Why do women volunteer for this kind of—initially unpaid—function? (2) Why do they have difficulty getting recognized as professionals & possibly as a new profession (their functions are ones that should be fulfilled by social workers, with whom they often work in close association but who are sometimes reluctant to recognize them as professionals)? (3) How do they contribute to the construction of the French republic as an intercultural & democratic society?

98S34113 / ISA / 1998 / 11354

Delgado-Moreira, Juan M. (Dept Anthropology Stanford U, CA 94305-2145 (tel/fax: 415-723-3421/725-0605; e-mail: delgado@leland.Stanford.edu)), **Nation, Multiculturalism and Transnationalism in European Union Citizenship.**

¶ Attempts to connect macrosociological perspectives such as transna-

tionalism & multiculturalism with their practical implications for policy-makers in regard to European citizenship & identity. It is argued that, from a multicultural standpoint, European citizenship should become European cultural citizenship to emphasize that every cultural identity can be preserved while contributing to the mainstream & membership of the union. Consequently, cultural decentralization will benefit from active multicultural policies of representation on the federal or union level. The criteria of representation would not be national but cultural. Obstacles to this form of multiculturalism are the launching of European identity attempted by the European Union administration after Maastricht & the states that are already multinational. To strengthen the public perception of European identity, the European Union has triggered resistance in identity terms at the state level as justification for a union identity that has taken the shape of an official nationalism. However, to make cultural identities the unit of collective membership further undermines national citizenship in multinational states & raises issues as to whose cultural identities they would be, which are discussed here. Examples of the gridlock of European citizenship with regard to multiculturalism, multinationalism, & transnationalism are given, analyzing one policy or case per strategy—eg, European identity & labor mobility, subnational decentralization, & transnational identities.

98S34114 / ISA / 1998 / 11355

DeLisio, Antonio (Centro estudios integrales ambiente U Central Venezuela, Caracas 1051 [e-mail: adelisio@sagi.ucv.edu.ve]), **La ciudad como sistema ambiental disipativo** (The City as a Dissipatory Environmental System). (SPA)

¶ System-Environment-Dissipation is the trilogy used to reconsider the "black box" type of theory that has prevailed in environmental studies of the city. Dissipation is converted into a key concept with which to understand the city as a dynamic environmental system. This requires an ongoing search for new situations of equilibrium concerning fluctuations in energy, material, & information. During certain times, the normal limits are transgressed. The structure is perhaps able to normalize itself at a greater degree of either simplicity or complexity. This reinterpretation of the city provides the ability to move beyond a macroprocessual analysis to focus on the multidimensionality of microprocesses that maintain balance.

98S34115 / ISA / 1998 / 11356

Dell'Aquila, Paolo (U Bologna, I-40126 Italy [tel/fax: 39-543-450-355/356; e-mail: daquila@theo.it]), **Critical Consumption and Virtual Communities**.

¶ Consumption is not simply a product of the alienation caused by the global economy, but also (as for cultural studies) a means for the cultural creation of social worlds in which objects change from a symbol of estrangement to an "intersubjective artifact." The poststructuralist approach to cyberspace is criticized here, & an attempt is made to verify whether the consumer in virtual communities can become more active & intelligent, building social groups & new forms of collective intelligence. Nonstructured groups are distinguished from structured ones, in particular, virtual associations that have a common goal & an organized scheme. These associations often link formal & informal elements, virtual structures (& global dimension), & a minimum level of personal acquaintance. In Italian cyberspace, it is observed that identity is not a "saturated" self (Gergen) or multiple-playing self (Stone, Turkle); in these associations, self is always multiple, but there is a common goal & a common ethos that can offer a source for identification. Some of these groups (also created in community networks) can become lobbies in civil society, particularly for local authorities, regaining "civic sense."

98S34116 / ISA / 1998 / 11357

Demilly, Lise (IFRESI Centre national recherche scientifique, F-59800 Lille France [tel/fax: 03-20-12-58-67/31; e-mail: demilly@ifresi.univ-lille.fr]), **L'Évolution du traitement social de l'expérience professionnelle** (The Evolution of Social Treatment of Professional Experience). (FRE)

¶ Field study data are used to hypothesize that a global change is at work in the handling of professional experience. In a heterogeneous range of pre-Fordist areas, where solitary construction of professional experience remains a key vocational component, the school transmission of professional knowledge, as well as the informal transmission of experiential knowledge are both affected by a change process mainly determined by (1) positive valuation of experience, (2) positive valuation of professional training processes merging experience with theory, (3) methodical organization & management of construction-transmission of experience dur-

ing training & in the working place, & (4) formal shaping of experience-related knowledge in the frame of organizations. It is argued that the global change acts in various ways in various typical frames of professional socialization, the process shaping formally experiential knowledge has contradictory effects on professionals, & "social technologies," eg, communication & management or evaluation have a specific effectiveness in that process.

Demartini, Zeila de Brito Fabri (FE/UNICAMP U São Paulo, 05508-900 SP Brazil [tel/fax: 55-11-818-3735/3784]), **Japanese Immigrants in São Paulo: Three Generations**.

¶ Explores Japanese immigrant families in São Paulo, Brazil, focusing on their social-economic mobility in the context of educational background, cultural habits, & leisure activities. Via interviews, the construction of biographies of Japanese immigrants across three generations revealed strategies, conflicts, & ambiguities in this discriminated-against group.

98S34118 / ISA / 1998 / 11359

Dementyeva, Isabella (Institut Sociologie Russian Academy Sciences, Krzhizhanovskogo 24/35 bl 5 Moscow 117259 [tel/fax: 719-0940/0740]), **Risk Families in Changing Russian Society**.

¶ As a result of market reforms in Russia, the economic situation of many families has worsened significantly; according to state statistics, the incomes of 63% of the population are below the average level, & 24% are chronically poor. Here, data obtained via statistical analysis, a survey of experts, social experiment, & formal questionnaire survey are drawn on to examine risk factors influencing the social well-being of the Russian family, including the lowering of the living standard; decrease in employment & emergence of real unemployment (9.4% of the economically active population); the dynamics of out-of-marriage births (21% of all children born); the decreasing number of registered marriages & the increasing divorce rate; mass recruitment of marginal layers of society due to alcoholism & drug addiction; & the growth of delinquency, especially among juveniles. Effects of socialization in Russian families under the influence of these factors are described. Results portray the critical level of the problems faced by Russian families & demonstrate the need for precisely aimed measures of social support to help at-risk families perform their traditional functions.

98S34119 / ISA / 1998 / 11360

Deniot, Joëlle & Dutheil, Catherine (LESTAMP U Nantes, F-44312 Cedex 3 France [tel: 33-02-40-14-11-23; e-mail: lestamp@hermes.humana.univ-nantes.fr]), **Écouter la voix chantée: la chanson populaire féminine** (Listen to the Singing Voice: Feminine Popular Song). (FRE)

¶ Popular women singers, from Yvette Guilbert to Edith Piaf, are examined, looking specifically at voice & its presentation. Attention is given to how the voice is set up at the moment of being heard, its play of intimate interrelations, & the secrets between the voice & its reception. The tensions involved between music & lyrics, sound & meaning, & the body's materiality & the code of language mark the history of vocalty since primitive times. How psychoanalysis can contribute to the understanding of listening to music is considered. Also examined is how recordings of music introduced singing voices to the home & made listening more individual & private. The notions both of the listening public & the concert were transformed as a result; new conditions & orientations of listening prepared the hearer for an intimate experience & allowed identification with a social & personal drama. The circumstances specific to the hearing of female voices are noted, & changes to the kinds of songs sung in times of economic & social crisis recalled.

98S34120 / ISA / 1998 / 11361

Dennis, Jeffrey P. (Dept Sociology State U New York, Stony Brook 11794 [e-mail: JDennis@lc.sunysb.edu]), **Monstrous Desire for the Infinite: A Queer Reading of Classical Theory**.

¶ Sexuality—including homosexuality—played a key role in the theories of at least some of the people doing sociology in the formative years of the discipline; however, the canonical theorists said almost nothing about nonhegemonic articulations of sexuality, & their tradition continues. The absence of the queer in classical theory leads to the marginalization of the queer in modern theory, in which the deadening repetition of heterosexual coupling as *prima facie* normative & necessary is generally balanced by a few patronizing appeals for tolerance of a small, shrinking homosexual minority. This ghettoization enacts a violence to gay/lesbian

d

identity as profound as overt homophobia. The first step toward claiming a sociology is to reread the classical theorists, especially Karl Marx, Émile Durkheim, & Max Weber, who have not so much marginalized as erased lesbians & gay men in their public & private writings. The theoretical work of Jacques Derrida & Sedgwick, however, reveals that the erasure informs &, to some degree, compels the sociological discourse. The canonical theorists can be reclaimed by a new generation willing to break out of their rigid polarizations of public-private, male-female, & normal-abnormal, force the way into classical equations of coitus & class, locate, even in Marx, Durkheim, & Weber, a necessarily & desirably queer world.

Dent, Mike P. (Staffordshire U, Stoke on Trent ST4 2DE England (tel/fax: 44-0-1782-294649/294760; e-mail: m.p.dent@staffs.ac.uk)), **Clinical Judgement and the Role of Protocols, Guidelines and EBM: Britain, Netherlands and Sweden.**

¶ Qualitative comparative interview data from doctors in England, Holland, & Sweden are used to address the issue of professional self-regulation in the workplace, discussing medical protocols, clinical guidelines, & evidence-based medicine (EBM) in connection with issues of medical autonomy & managerial control. So-called "professional quality control" threatens to replace preexisting medical audit practices in the wake of the introduction of managed care & regulated markets. These practices appear to square the circle between contracted managed care & medical autonomy. In the process, however, they appear to reduce the area of discretion for the hospital specialist. If procedures are carried out that conflict with agreed protocols, doctors leave themselves open to litigation. Findings reveal differences of approach in the three countries: the Netherlands has adopted guidelines; Sweden, protocols; & in England doctors use EBM. These differences inform a discussion of the response of the organized medical professions & the sample set against the backdrop of the corporatist, social democratic & *dirigiste* (planned economy) sociopolitical cultures of the three countries.

Denters, S. A. H. & Geurts, Peter A. Th.m. (Faculty Public Administration & Public Policy U Twente, NL-7500 AE Enschede Netherlands (tel/fax: 3153-489-3198/4734; e-mail: s.a.h.denters@bsk.utwente.nl)), **Neighborhood Voices: Patterns of Local Political Participation and Political Demands on Urban Government from Privileged and Deprived Neighborhoods in a Dutch City.**

¶ Recent work by Sidney Verba & others stresses the importance of resources as determining the political (in)activity of citizens, & considers the possible consequences of differences in political participation on the formation of the political agenda. Explored here are the consequences of the spatial concentration of resourceful & less resourceful citizens in relatively privileged & deprived urban neighborhoods, drawing on survey data from citizens in the Dutch urban municipality of Enschede (140,000 inhabitants). Focus is on whether inhabitants of underprivileged quarters are represented among what Robert Dahl has called members of the "political stratum," & whether messages they convey are representative of the urgent community concerns.

Derouet-Besson, Marie-Claude (Inst national recherche pédagogique, 29 rue d'Ulm F-75230 Paris Cedex 05 France), **Pour une approche sociologique des usages des lieux d'école** (Toward a Sociological Approach to the Uses of School Places). (FRE)

¶ The construction of buildings based on aesthetic & monumental qualifications rather than the use of the building by its occupants is discussed, & it is asserted that the sociology of space is currently less fashionable than at the end of the 1970s & is more often applied to the city, suburbs, or factory than the school. The sociology of education is said to be more centered on the student, his or her origins & future, & socialization than on the places where scholastic activities are pursued. Described here is how, in France, the notion of architectural quality in the construction of public buildings, particularly schools, has returned to prominence after about 15 years. How renewed sociological attention to the value of educational buildings allows the simultaneous analysis of the heterogeneity of demands, the procedures put into place to redirect construction programs, the experiences of students, & astonishing diversity of the uses of space & objects in academic situations is addressed.

Desai, Neera (SNDT Women's U, Mumbai 400020 India (tel/fax:

91-22-430-5853/362-390; e-mail: neeradesai@usa.net)), **Confronting Myriad Challenges: Indian Women's Movement in the Context of Globalization.**

¶ The women's movement's critique of the new economic policy in India is diverse in terms of strategies & even in the nature of its implications. The women's movement, which appeared at one time to be homogeneous, is now facing a number of challenges from macropolicies & in its ranks. Besides differences in assessment of its role, further problems are created by political processes & policies. The challenges before the movement include debates over India's uniform civil code, the relationship with the state, ideological debates in academia, & the grassroots women's plight & struggles in the face of growing fundamentalism. Issues such as cooperation, shifting leadership, changing areas of struggles, & different work styles of some women's groups are raising grave concerns for the women's movement. While delineating all these currents, an attempt is made to show efforts counteracting the mainstreaming of the movement. Strategies developed to increase participation of poor women & ensure gender justice by evolving people-oriented structures are analyzed.

Descarries, Francine & Corbeil, Christine (Dept sociologie U Québec, Montreal H3C 3P8 (tel/fax: 514-987-3000/4638; e-mail: descarries.francine@UQAM.ca)), **Entre mutations et traditions: la valse-hésitation des mères en emploi** (Between Tradition and Change: The Employed Mothers' Musical Chairs). (FRE)

¶ Surveys conducted in Montreal, Quebec, are used to examine the experiences, opinions, & strategies of nearly 500 working mothers in light of the daily context in which they live & work. Results suggest that the discourses & daily practices of these women break away from the traditional arguments voiced about work & family articulation. In fact, most mothers at work, even those with more difficult working conditions, share an innovative & relatively positive perceptions about their double status as worker & mother. Two specific issues are addressed: (1) How do these women's articulations of their private & professional lives shed light on the debate on work & family articulation as a major dynamic factor of change in the family & organizational cultures? (2) What are the potential stakes of such transformations on parental roles & family realities?

98S34126 / ISA / 1998 / 11367

DeSena, Judith N. (Saint John's U, Jamaica NY 11439 (tel/fax: 718-990-6161/5878; e-mail: desenaj@stjohns.edu)), **Women's Community Work.**

¶ Examines women's community work, investigating their informal & formal roles. Community studies women are critically evaluated with respect to analyses of women, & community work of women in Greenpoint-Williamsburg (NY) is discussed in terms of a profile of women's informal & formal activism.

98S34127 / ISA / 1998 / 11368

DeShazo, Randy, Ransom, Elizabeth & Worosz, Michelle (Michigan State U, East Lansing 48824), **Vineworks: The Networks of a Wine Commodity Chain.**

¶ Investigates the development of grades & standards in the MI wine industry. However, to fully explore & understand the grades & standards of MI wine, it is necessary to explore the commodity chain at the national & international level. The various points in the network include wineries, vineyards, the international community, & government regulations. How values enter into an agricultural debate & the fact that the creation & implementation of grades & standards are negotiations of power are highlighted.

98S34128 / ISA / 1998 / 11369

Desmarchelier, Carmel (U New England, Armidale 2351 New South Wales Australia (tel/fax: 0267-733046/733350; e-mail: cdesmarc@metz.une.edu.au)), **Homosexuality and Body Image Issues: Teacher Awareness.**

¶ Explores the understanding of sexuality & body image (size & appearance) by heterosexual & homosexual teachers attending high schools in Sydney, Australia, 1996/97. The concept of habitus (Bourdieu, Pierre, 1984) indicates the level of understanding of these issues & the dispositions to act that are manifested by these teachers. Broadly, those who lack perception of homosexuality tend to also lack understanding of body image, which results in symbolic violence through neglect of the students. Homosexual teachers tend also to be aware of body image issues such as body manipulation through fitness regimes & steroid usage. In schools,

the marginalization of student who are perceived to be homosexual or whose body shape or mannerisms do not conform to the norm is evidenced as bullying & alienation, which contributes to youth suicide. Homophobia is linked with machismo, masculinity, & the depiction of the ideal self as tough, which has parallels with the development of the athletic body as the ideal depiction of the self. Students with low body image have reduced self-esteem, & portrayal of the self is especially ambiguous for homosexuals who lack appropriate role models from teachers & sports figures.

98S34129 / ISA / 1998 / 11370

Desmazières-Berlie, Cécile (Centre recherches sociologiques & historiques éducation École normale supérieure Fontenay/Saint-Cloud, 31 ave Lombart BP 81 F-92266 Fontenay aux Roses Cedex France (tel/fax: 01-41-13-25-11; e-mail: chapouli@ens-fcl.fr)), **The Process of Adjustment of Academic and Social Ambitions in an Intermediate Higher Educational Institution, the Case of the Instituts Universitaires de Technologie (IUT) in France.**

¶ Examines how Instituts Universitaires de Technologie (IUT) students consider their future at the beginning of their 2-year course study, & analyze the process of adaptation & adjustment of their goals, based on observations & interviews. To understand their variety, gender, age, social background, academic success, life-cycle position, & "contingencies" (relations with family & friends, nonacademic interests, etc) are considered. The intermediate position in the higher education hierarchy & various outlets make it possible for students to smoothly adapt their expectations. The usual determinist conception of students' career in term of choices appears then especially inadequate. What are usually considered important decisions influencing the career—often called "choices"—should indeed be regarded as the result of a progressive elimination of alternatives undertaken in a universe of possibilities.

Detelina, Radoeva (U Toronto, Ontario M5T 1P9 (tel: 416-763-3380; e-mail: detelina@chass.utoronto.ca)), **Growing Up in Interesting Times: Radical Social Change and Risk Behaviours in Eastern and Central Europe.**

¶ Analyzes the effects of the expansion of market-driven values on youth subcultural delinquency after the fall of communism in East & Central Europe. In times of radical social change, subcultural forms of delinquency cannot be total rebellious rejections of mainstream values. Instead, they appear to be distorted reflections of core market-related values. In support of the latter position, a recent comparative study of East & West German youth found that East German adolescents are more likely to overemphasize self-interest in comparison to their West German counterparts. This has been interpreted as resulting from the fast pace of social change experienced by East German youths (Hagan, Merken, & Boehnke, 1995). This argument is extended by comparing the effects of radical social change on juveniles' risk behaviors in two other East European contexts: Bulgaria & the Czech Republic. Factor analyses reveal patterns of self-interest similar to those found in East Germany, but the parallels are not clear-cut. Structural equation modeling suggests that, in addition to the rapid transition, other contextual factors may explain the rise of uncontrolled self-interest & risk behaviors; eg. the radical nature of East European change is manifested sometimes in crises of legitimacy & deep social deregulations. Both the Czech & the Bulgarian transitions differ from the planned, orderly process of change in East Germany, & also differ from each other with respect to the severity of legitimacy crises, deregulation, & anomie. Under these conditions, although cultures of competition should encourage higher levels of unrestrained self-interest in more deregulated settings, it is reasonable to expect that the relation of these processes to self-interest & delinquency in adolescents may be nonlinear. High levels of self-interest may not necessarily account for higher levels of juvenile delinquency, depending on whether self-interested competition summarizes achievement or survivalist strategies.

DeVault, Marjorie (Syracuse U, NY 13244 (tel/fax: 315-443-4030/4597; e-mail: mdevault@mailbox.syr.edu)), **Attention to Absences: Feminist Research Strategies.**

¶ Based primarily on personal experiences as leader of a seminar on feminist methodologies, articulated are three kinds of research strategies implicit in feminist methods developed over several generations of feminist research on neglected dimensions of social life: (1) speaking of the neglected, (2) listening to the neglected, & (3) theorizing the neglected. Feminism has always sprung from testimony—women speaking from experience—followed by examination & articulation of that experience & how it differs from what is expected. Seeking neglected dimensions & contexts requires courageous speech about that which has not been said. Hearing the neglected means recognizing that listening is difficult; it requires that those who have already spoken also learn to wait silently as others speak, & those who learn from listening must think deeply about issues of "speaking for." Feminist theorizing includes a search for the "other side" of what is & an attempt to make what is not there part of the project. Though it may sound mystical, feminists have learned that this search is in fact a habit of thought that researchers can notice & cultivate. Addressing absences in feminist analyses requires examination & revision of concepts & frameworks, so that neglected phenomena are not "patched onto" but integrated into disciplinary thought.

Devezas, Tessaleño C. (Dept Electromechanics U Beira Interior, P-6200 Covilhã Portugal (tel/fax: 00351-75-320829/320820; e-mail: tessad@demnet2.ubi.pt)), **The Longwave Phenomenon: Open Questions and New Insights.**

¶ In terms of longwaves (Kondratiev or K-waves in economics), much of the discussion analyzing economics & society (& its future) has been re-oriented & is employing new scientific tools, eg. chaos theory, complexity theory, nonlinear systems, etc, to build a theoretical base in the quest for sustainable development. Complexity theory & nonlinearity are currently hot topics of interdisciplinary interest among the natural & social sciences, but still fall short of explaining the cyclic & evolutionary dynamics of society. It is argued that (1) A comprehensive & embracing theory of Kondratiev economic cycles still needs to be elaborated. (2) K-wave theory is a very useful tool to construct future scenarios, not only regarding the future of technology (Technospheres), but also the future of human reasoning (moral, ethics, common values). (3) The use of these new tools of science may lead to a better understanding of the causality of the phenomenon. The understanding of all these issues, not only in terms of economics, but as a physical or social phenomenon, could contribute significantly to futures research.

Dhaouadi, Mahmoud Habib (Sociology Dept U Tunis I, 1007 Tunisia (tel/fax: 02-402-605/01-567-551)), **Why Humans Live Longer? An Islamically Inspired Theoretical Cultural Perspective.**

¶ Considering the observation that members of the human species live, on average, longer than members of other species, it is argued that neither human biology nor human genetics can fully account for the longer human lifespan. An attempt is made to establish a correlation between the human lifespan & what are termed human cultural symbols (language, thought, knowledge/science, beliefs, cultural values, & norms, etc). Compared to human organisms, human cultural symbols require longer to mature. Consequently, cultural factors influence the very action of the biology & genes of the human species, leading to what is called "acculturized genes-biology"; ie, human biology & genes are designed to lengthen the human lifespan to meet the time required for the maturity of human cultural symbols. This argument is elaborated through a theoretical cultural perspective that considers human cultural symbols as impregnated elements with transcendental dimensions. Islam's vision of human cultural symbols is of great help in articulation of this thesis.

98S34138 / ISA / 1998 / 11379

Diab, Hassan (Dept Social & Behavioural Sciences American U Beirut, Lebanon 735 Don Mills Rd Apt 2107 North York Ontario M3C 1T1 (tel: 416-421-0570; e-mail: hndiab@aub.edu.lb)), **Capitalist Expansion and the Rise of Sectarianism in Lebanon.**

¶ Investigates the formation of sectarianism as a social phenomenon in Lebanon, historically examining the socioeconomic dimension of this phenomenon in connection to early European capitalist expansion into the Ottoman Middle East. Highlighted is the increasing (cultural-humanitarian) involvement of Western missionaries in various communities of Lebanon. In addition to the numerous disparities (socioeconomic, regional, political) that Western involvement helped initiate in Lebanon, sectarianism was an important, obvious outcome that is often used to explain all of Lebanon's major problems, including the collapse of the independent First Republic (1943-1975) & the potential demise of the Second Republic (1989-present). It is argued that sectarianism is a consequence, rather than a cause, of the disparities in the country, & sectarianism is used as an effective ideological tool by the rich to continue accumulating economic benefits while distracting attention from Lebanon's socioeconomic & political ills.

98S34139 / ISA / 1998 / 11380

Diallo, Yahya (Institut fondamental Afrique noire U Cheikh Anta Diop Dakar, Senegal (tel/fax: 825-00-90-825-19-90/24-49-18)), **Les Sciences sociales: mondialisation, défis pour l'Afrique** (Social Sciences: Globalization, Challenges for Africa). (FRE)

¶ Discusses pluralism & cross-culturality in the globalization process, focusing on Africa. Globalization impacts are identified: the emergence of the hybrid political form of "democratorship" (democracy & dictatorship); construction of new symbolic barriers between people; the inevitable rise of the market society; & rediscovery of the regenerating self. Africa must insist on alternative approaches to neoliberalism, in particular an international democracy as reflected in the UN & Bretton Woods. Besides demercantilizing the economy, it is suggested that the labor union movement should shed its bureaucracy & monopoly to promote a fusion of corporatism & social/political centrality.

98S34140 / ISA / 1998 / 11381

Diaz de Landa, Martha Inés (Facultad Derecho U Nacional Cordoba, 5000 Argentina (tel/fax: 54-51-940427; e-mail: landa@powernet.com.ar)), **Old and New Political Cultures in Argentinian Cities: Support to State Reforms, Market Oriented Policies and Social Liberalism Values in Urban Settings.**

¶ Analyzes the patterns under which a new political culture is emerging among citizen residents in different urban settings & how conditions such as social class, age, education, & political party preferences explain political culture differences. Assumptions & hypotheses on these relations rely strongly on theories from Terry N. Clark (eg, 1991 [see abstract 92Y8340]), Ronald Inglehart (1990, 1994), Oddbjorn Knutsen (1994), Daniel García Delgado (1994), & Norbert Lechner (1993), among others. Three localities were chosen by size & economic main activities, & data were obtained via a citizen survey (N = approximate 750). In general, results show a significant relation between political culture variation & individual social class, even stronger than the age effect as it was predicted for the advanced societies. However, this general trend varies when community type is taken into account.

98S34141 / ISA / 1998 / 11382

Diaz Orueta, Fernando & Lourdes Seoane, Maria Luisa (U Alicante, E-03080 Spain (tel/fax: 00-34-6-592-0270/590-3495; e-mail: fernando.diaz@ua.es)), **Reorganización productiva, territorio y cambio social** (Productive Reorganization, Territory and Social Change). (SPA)

¶ Changes in Spain's productive system have modified territorial organization & the structure of social classes. Where the industrial sector is traditionally more important, very different tendencies are observed. Here, a territorial net of small & medium-sized cities is analyzed. How industrial companies are linked to the informal economy in Alicante Province is crucial to understanding the provincial economy, especially inland. Recent modifications experienced in the labor market have strongly influenced the life models of the working people. A new growth model is developing, which is causing an increase in social exclusion. Different groups of people are becoming impoverished, while the territory is developed in a postmodern way.

98S34142 / ISA / 1998 / 11383

Diaz, Fernand, Garcia, Soledad, Ispizua, Marian & Montagut, Maite (U Barcelona, E-08007 Spain (tel/fax: 343-402-1703/280-2378; e-mail: soladg@nsdg2.pco.ub.es)), **Local Democracy in Spain.**

¶ Draws on 1996 interview data from 446 politicians & civil leaders in 30 medium-size cities in Spain to examine their emerging democratic values & practices. It is hypothesized that, from the first local democratic elections in 1979, there has been a consolidation of democratic values. Further, a process of political decentralization has favored the opening of channels of citizen participation. Findings indicate a clear consolidation of democratic values & practices similar to that of West European democracies.

98S34143 / ISA / 1998 / 11384

Díaz, José Antonio (U Nacional Educación Distancia, E-28040 Madrid Spain (tel/fax: 34-1-398-70-84/76-53; e-mail: jadiaz@sr.uned.es)), **Tendencias sociales de las tecnologías de la información y comunicación en España** (Social Trends of Information and Communication Technologies in Spain). (SPA)

¶ Presents results of part of a technological foresight program conducted at the U Nacional de Educación a Distancia (Madrid, Spain) during the last 2 years. The research covered three main technological

areas—information & communication technologies (ICTs), manufacturing (robots), & health & life sciences (biotechnology)—but focus here is on only ICTs. After looking at the theoretical dimensions of the ICT/society relationship from the point of view of the social construction of technological systems, considering the structural change & the application of ICT in economic & social systems, data gathered & analyzed from Delphi surveys are used to examine this transformation in relation to six main trends: computerized homes, teleworking, tele-education, health, friendly technology, & personal communications. Results are compared with those of similar studies done in Japan, the UK, & France.

98S34144 / ISA / 1998 / 11385

✓ **Dickinson, Hilary** (School Social Sciences U Greenwich, Avery Hill London SE9 2HB England [tel/fax: 44-0-181-331-8900/8905; e-mail: A.H.Dickinson@gre.ac.uk]), **Social Construction and Naturalism in Life Stories of People with Learning Disabilities in Selected Novels by Walter Scott, Honoré de Balzac and Charles Dickens.**

¶ Examines characters with learning disabilities portrayed in the 19th-century novels of Walter Scott, Honoré de Balzac, & Charles Dickens. While none of the novels selected is straightforwardly naturalistic, all contain naturalistic elements, & it is shown that their portrayals of learning disabilities are intended to be true to life—whatever metaphorical meanings may also be included. Each character is perceived through a filter of expectations & suppositions about what learning disabilities are & how a learning-disabled person fits into the social world. It is argued that the situation differs little from the 19th century to the present, in that, while cognitive impairment has a physiological basis, its social manifestation is subject to construction & has a value subject to historical change. Some of these historical changes are illustrated along with gender & social class constructions that are attached to concepts of learning disabilities. The social construction of cognitive impairment in the novels will be compared with the life story of a real late-20th-century individual to highlight the interplay between physiological impairment & the social construction of impairment in biographies.

98S34145 / ISA / 1998 / 11386

Diefenbach, Heike (Dept Sociology Chemnitz U Technology, D-09107 Federal Republic Germany [tel/fax: 0371-531-2123/2387; e-mail: heike.diefenbach@phil.tu-chemnitz.de]), **The Intergenerational Transmission of Divorce: Evidence from Germany.**

¶ Empirical data collected in 1996 from 5,000 ever-married people in the Federal Republic of Germany are drawn on to examine the incidence of the so-called intergenerational transmission of divorce known from the North American literature. Survival analyses indicate that the intergenerational transmission of divorce is operating for both sons & daughters of divorced parents in Germany. Various explanations for this transmission effect are discussed, & it is suggested that, rather than considering these explanations as alternatives in the strict sense, they ought to be integrated into one consistent model based on the assumption that the intergenerational transmission of divorce is a cumulative process by which the consequences of parental divorce systematically maximize those factors known to increase divorce risk. Findings from a multivariate analysis support the assumption that the different explanations for the intergenerational transmission of divorce are partial explanations referring to different mechanisms operating at different points of time in the life course.

98S34146 / ISA / 1998 / 11387

Diefenbach, Heike & Klein, Michael (Dept Sociology Chemnitz U Technology, D-09107 Federal Republic Germany [tel/fax: 0371-531-2123/2387; e-mail: heike.diefenbach@phil.tu-chemnitz.de]), **Applying Survey Research to Rational Choice Theory: Coming in an Easy First or Coming Nowhere?.**

¶ Argues that using survey research to generate & test bridge assumptions in rational choice theories is problematic: (1) It is not possible to falsify the bridge assumptions. (2) Bridge assumptions cannot be formulated in general terms, because they originate from inductive reasoning. (3) Bridge assumptions are a tacit fixing of the construction of reality held by the respective researcher. Based on this criticism, proposed is an alternative way of generating & testing bridge assumptions in deductive nomological models: A strict separation of the context of discovery from the context of justification enables researchers to avoid the three problems mentioned above. Drawing on criminological research, discussed is what part survey research can play in the alternative manner of proceeding, concluding that, in the context of discovery, survey research serves to formulate "courageous anticipations" just as well as any other source of inspiration; however, in the context of justification, survey research

seems to be of little use.

Diebold, Martin & Mach, Bogdan W. (Max Planck Institut Human Development & Education, D-14195 Berlin Federal Republic Germany [tel/fax: 49-30-824-06-263/99-39; e-mail: mach@mpib-berlin.mpg.de]), **Job Mobility and Wage Changes during East European Transition: Comparative Panel Analysis of East Germany and Poland.**

¶ Since the late 1980s, institutional structures of former state-socialist countries have reshaped their operating principles by replacing state-controlled redistribution with market-controlled exchange. Job mobility & changes in wages represent two important, interrelated mechanisms of this replacement. High-quality panel data pertaining to (former) East Germany (in 1990 & 1995) & Poland (in 1988 & 1993), are used to document intercountry differences & similarities in both job mobility & wage determination process. Findings show (1) a higher amount of transition-induced job mobility in East Germany, (2) a higher correlation between pretransition & transition wages in Poland, & (3) patterned intercountry differences in the determinants of wage changes as well as in the determinants of pretransition & transition wage rates. It is assumed that the time spans 1990-1995 in East Germany & 1988-1993 in Poland are functionally equivalent & represent the first 5 years of country-specific transition processes. The conceptual framework of the analysis stems from the theory of market transition & the "new institutionalism" in sociology & economy.

Dijkstra, Annebert & Berends, Mark (Dept Sociology U Groningen, NL-9712 TG Netherlands [e-mail: a.b.dykstra@ppsw.rug.nl]), **The Sacred in Education. Academic Achievement in Religious Schools.**

¶ As the effects of public & (religious) private schooling on student outcomes continue to be debated around the world, it is important to understand the wide range of possibilities in the organization of schools & the variety of forms of sponsorship with varying levels of bureaucracy. In the private sector, eg, religious schools are often founded & operated by parent-controlled "school societies" & supported by groups of people who hold similar social & cultural views, particularly those relating to religion & education (Vryhof, 1994). Because Reformed schools in both the US & the Netherlands can be viewed as ideal types of functional communities, as well as religious-based value communities (as described by Coleman & Hoffer, 1987), quantitative, cross-national comparisons of these schools to other sectors may provide important insights into the variety of effects of religious functional communities on student outcomes. Toward this end, the following questions are addressed: (1) What are the characteristics of orthodox Protestant (in particular, the Reformed) school sector in the US & the Netherlands, particularly in regard to the religious communities surrounding these schools? (2) What is the relative achievement growth in Reformed schools compared to public & private schools? (3) What are the effects of religious schooling on student achievement after controlling for important differences among students? An empirical model is developed based on NELS & NELS-CSI data to estimate the effect of attending a Reformed school on student achievement compared to the Catholic & public school effects. Results provide further insights about the effects of functional communities on educational outcomes based on the Reformed case. A multilevel model is developed to estimate the effects of sector in both countries.

Dijkstra, Lewis Willem (Rutgers U, New Brunswick NJ 08901 [tel: 201-659-9747; e-mail: lewis.dijkstra@poboxes.com]), **The Notion of Urban Space: A Comparative Discussion (Power, Culture, and Public Space).**

¶ Argues that the use of power & the characteristics of culture are central to understanding the ill-defined concept of public space. Sharon Zukin discusses these aspects in her two most recent books, *Landscapes of Power* (1991) & *The Cultures of Cities* (1995). Her approach is outlined & compared to the analysis of power by Michel Foucault (1977, 1980), which incorporates the discretion used by law enforcers & the limited potential for resistance. Zukin ascribes to a place a single culture; however, one place can host or reflect several cultures, although not always comfortably. Introduced is a new concept of urban public space that integrates the complexity & potential for several cultures & characters coexisting in one public space.

Diliguenski, Guermann G. (Institut World Economic & International Relations, Profsoyuznaya 23 117859 Moscow Russia (tel/fax: 007-095-728-0749/310-70-97; e-mail: imemoran@glas.apc.org)), **Les Fondements psychologiques de la méfiance: le cas russe** (The Psychological Basis for Distrust: The Russian Case). (FRE)

¶ Postsocialist Russia is today a deinstitutionalized society. Wielding very little power in governmental affairs, corrupt officials tend to a system deprived of values & objectives, unable to answer the needs of the majority of Russians suffering from the crisis. Here, it is argued that distrust in institutions is only the affective side of the attitudes of the majority; but a new aspect of the distrust phenomenon is identified as well. In their rational, commonsense refusal of extremism & rejection of any return to communist rule, voters elected Boris Yeltsin in 1996 to represent the lesser of the evils. While Russia is far behind other more advanced countries in some respects, it is currently developing a similar rationalization of attitudes toward institutions & institutional relationships. This trend toward distrust of the institution is a global pattern that may define attitudes in the next century.

Dingwall, Robert (U Nottingham, NG7 2RD England (tel/fax: 0115-951-5418/5232; e-mail: robert.dingwall@nottingham.ac.uk)), **Herbert Spencer, Professions and Globalization—Back to the Future?**

¶ An important issue in considering the current debates about globalization is the nature & extent to which this may differ from the experience of the high period of 19th-century capitalism, when many traditional societies were forcibly reordered & incorporated into a global market & international culture. How does the contemporary situation differ? One of the most acute observers of 19th-century capitalism was English sociologist Herbert Spencer, who both appreciated the vigor of this mode of social & economic organization & acknowledged many of its pathologies, even if his specific intervention proposals would not necessarily find favor today. Spencer was also one of the first sociological commentators to analyze professions as key actors in modern societies. Here, these two elements of his work are synthesized to suggest that they may offer an alternative insight into contemporary phenomena.

Dixon, Laura A. (Centre Regional Economic & Social Research Sheffield Hallam U, Science Park City Campus South Yorkshire S1

2LX England (tel/fax: 0114-225-4525/253-2197; e-mail: l.a.dixon@shu.ac.uk)), **If at First You Don't Succeed, Try and Try Again: The British Search for Social Balance.**

¶ Since the mid-1800s, the concept of social balance has been used to socially engineer society through the planning of housing developments. However, the concept has undergone regular reinvention to suit the needs of society at any given time. The development of multitenure estates in GB could be viewed as the latest attempt to apply the concept to contemporary society to promote social integration. After discussing various periods in history during which social balance has been implemented, empirical research carried out in five local authority case study areas is reviewed. Results demonstrate that, although the intentions of the organizations involved in the development of multitenure estates are good, how properties are sold & allocated on estates often leads to social imbalance, raising the question of whether social balance can be achieved.

Djamba, Yanyi K. (Population Research Center U Texas, Austin 78712 (tel/fax: 512-471-8396/4886; e-mail: dyk@prc.utexas.edu)), **Beyond Racial Segregation: Labor Force Participation among Afro Populations in the U.S..**

¶ Reports preliminary results of ongoing research on the shared job market of the populations of African origin in the US, using 1990 census data to define four categories of African-origin populations based on place of birth: black Africans, white Africans, African Americans, & blacks from South America. Logistic regression equations, controlling for the influences of sociodemographic characteristics & welfare status, show that Afro-immigration affects African American men & women differently. While white African immigrant men are the most desirable employees among Afro-men, African American men are the least wanted. In contrast, African American women are more desirable than both black & white African immigrant women, but less wanted than black immigrant women from South America, who top women's labor subqueue. These findings indicate that the principles of the queue theory of labor force can be substantially altered when several forms of discrimination are at work.

Djosic, Dusan G. (Dept Sociology U Novi Sad, 21000 Serbia (tel/fax: 021-59-279; e-mail: djasic@EVnet.yu)), **The Regional Aspects of Declining Fertility Rates in Vojvodina, Yugoslavia.**

¶ The population of Vojvodina was the first in Yugoslavia to experience demographic transition. Fertility & mortality rates started to decline at the end of the 19th century. According to the theory of demographic transition, the population is now in a posttransitional period, while others suggest that it is in a second demographic transition. However, one hypothesis of demographic transition theory, that fertility & mortality rate should be at the same level (zero population growth), has not occurred. The latest data show that the natural growth rate of the population of Vojvodina is negative. During the post-WWII period, the crude birthrate continuously decreased. Between 1981 & 1991, the natural growth rate of the whole population became negative. Regional aspects of the decreasing fertility rate have had a crucial influence on the aggregate fertility rate. Statistical data from Vojvodina's municipalities, 1981-1991, show three distinct ways in which the fertility rate decreased. One of the crucial factors that influenced the general decrease in the fertility rate was the changing age structure in all municipalities, both urban & rural. The % of fertile women decreased in Vojvodina as a whole starting in 1971, more intensively in rural areas, but lately in urban areas as well. Another very important factor was the national structure of the popula-

tion in municipalities. Municipalities with predominantly Hungarian populations have had significantly lower fertility rates during the whole process of demographic transition.

Dogan, Mattei (National Center Scientific Research, 72 blvd Arago F-75013 Paris France (tel/fax: 33-1-45358052/47071222)), **Limits to Universalization of Sociology: Absence of Paradigms and Contextual Diversity.**

¶ Chemical reactions are universal, but social reactions are conditioned by contextual diversity: class vs caste, equality or hierarchy, progress or decay, socialism or liberalism. Social realities are not the same in Western Europe as in tropical Africa. Consequently, the concepts & theories needed to analyze them are different. A second limit to universalization of sociology is the absence of paradigms in the social sciences, a word abused in sociology. The recent history of sociology shows that there are no general theories accepted by a large majority. If universalization were really possible, comparative sociology, social psychology, & social anthropology would lose their ground. But, at the middle level, sociology is becoming increasingly international, intercontinental, intercultural, & contextual.

Dogan, Mattei (National Center Scientific Research, 72 blvd Arago F-75013 Paris France (tel/fax: 33-1-45-358052/079222)), **Interrelations between Sociology and the Other Social Sciences.**

¶ The relations between sociology & the other social sciences are, in reality, relations between sectors of disciplines & not between whole disciplines. Since there is no progress without specialization, the creative interchanges occur between specialized subfields. A twofold process can be seen: fragmentation of formal disciplines & recombination of specialties via hybridization. The process of hybridization consists, first of all, in borrowing & lending concepts, theories, methods, & substance. Sociology is one of the most open disciplines; many leading sociologists are hybrid scholars.

98S34161 / ISA / 1998 / 11402

Dohen-Seltzer, Genevieve & Mouchomp, N. (IEP Paris, 224 blvd Saint Germain F-75007 France (tel/fax: 33-1-45-49-26-17/40-47-04-65; e-mail: genevieve.dohen.seltzer@wanadoo.fr)), **Les Représentations sociales de l'emploi dans les entreprises publiques** (Social Representations of Work in Public Enterprises). (FRE)

¶ It is argued that the evolution of work is at the center of current French society & is the force behind contemporary social fragmentation, leading to such events as the conflicts of Dec 1995. In a study undertaken in 1997 to analyze the social representations of work among the personnel of EDF-GDG (acronym not defined), interviews were conducted in 30 different establishments to produce a reflexive analysis of the employees' situation. The post-WWII social pact is described, noting that it allowed entire families guaranteed employment over generations. In the name of modernization, however, public enterprises have changed, adapting new rules & emphasizing the performance of the business itself. Fears associated with this new social pact are investigated, & it is held that current circumstances make the state's return to a regulating role seem welcome.

Domingues, José Maurício (Federal U Rio de Janeiro, 20051-070 Brazil (tel/fax: 021-521-5446/224-8965; e-mail:

maudom@ifcs.ufrj.br)), **Modernity, Tradition and Reflexivity in Contemporary Brazil.**

¶ While modernity constitutes a world civilization, it has specific features in different parts of the globe. The different aspects of the tradition of modernity have been combined with different aspects of other traditions. This has entailed a dialectics between traditional modernity & other civilizational features. Whereas this has always been a reflexive process, the last decades have been witness to a further process of reflexivization, partly due to ongoing globalizing tendencies. Now, as before, collective subjectivities play a key role in the development of modernity in its varied outlook. A theoretical discussion of those problems is developed with reference to contemporary Brazilian society & social sciences. It is argued that the main trend of Brazilian development today runs toward a deepening of the traditions of modernity. Tradition & modernity are well-established topics for the social sciences in Brazil, but they still have to come to terms with reflexivity & contingency, even if the former has worked precisely to deepen the modern features of Brazilian society.

Doreian, Patrick (Dept Sociology U Pittsburgh, PA 15260 (tel/fax: 412-648-7537/2799; e-mail: pitpatt@pitt.edu)), **Causality in Social Network Analysis**.

¶ Considers the argument that social network analysis is revolutionary for the social sciences. Criteria are specified for evaluating this immodest claim, including a consideration of causality in the operation of social network processes generating both network structures & distributions of actor attributes. An examination of empirical network studies suggests that causality remains implicit in the analysis of social network data or is imputed during the interpretation of empirical findings—a characteristic shared with traditional causal modeling. Exceptions are noted & used to specify how causality must be used in network analysis to specify the conditions under which social network analysis can be revolutionary for the social sciences.

98S34173 / ISA / 1998 / 11414

Dörr-Backes, Felicitas M. (Insti Soziologie Ludwig-Maximilians U München, D-80801 Federal Republic Germany (tel/fax: 49-89-2180-2780/2922; e-mail: uf331ac@sunmail.lrz-muenchen.de)), **Life Is in Permanent Flux: New Perspectives on Science and Art in Georg Simmel's Lifetime**.

¶ An attempt is made to illuminate the context of Georg Simmel's interest in art. At the turn of the century, modernization & rising modernity were basically linked to social change. The natural sciences, especially enjoyed a high reputation, because they promoted the process of industrialization & improved the living conditions of the population. Like Max Weber & Wilhelm Dilthey, Simmel resisted applying the methods of natural sciences. By developing a concept of cultural sciences, they all focused on the cultural forces of social processes, but Simmel was the only one who emphasized the importance of art for the study of culture. He developed his specific idea of an aesthetic sociology by examining the dimension of individual experience in interaction with the objects of art. It is shown here how Simmel illustrated his interpretive sociology by linking art & philosophy of life & considered art a cultural realm in which exemplary processes of cultural development, from the Renaissance to modernity, could be studied.

98S34174 / ISA / 1998 / 11415

Doubt, Keith D. (Division Social Science Truman State U, Kirksville MO 63501 (tel: 816-785-4322; e-mail: kdoubt@truman.edu)), **Double-Voiced Discourse and Schizophrenia**.

¶ The work of Russian literary critic & social linguist Mikhail Bakhtin is drawn on to interpret examples of the language used by people with schizophrenia in interactions with others so as to demonstrate its double-voiced nature. Particular examples of double-voiced discourse are parody, stylization, & what Bakhtin (1981) calls "heteroglossia," which is "another's speech in another's language serving to express authorial intentions but in a refracted way." Linguistical perspective of psychotic discourse (Chaika, 1990) is compared with the metalinguistical perspective proposed here so as to preserve the social membership & human significance of people with schizophrenia.

98S34175 / ISA / 1998 / 11416

Doubt, Keith D. (Division Social Science Truman State U, Kirksville MO 63501 (tel: 816-785-4322; e-mail: kdoubt@academic.truman.edu)), **The Hegelian Critique of 'Habits'**.

¶ Robert N. Bellah et al's *Habits of the Heart: Individualism and Commitment in American Culture* (1985) is critically examined from the perspective of G. W. F. Hegel's "law of the heart" in *The Phenomenology of Mind* (1807). The historicity of the term "habits of the heart" is reviewed in the work of Alexis de Tocqueville, Jean-Jacques Rousseau, & Blaise Pascal, as well as in Biblical scripture. Hegel's critique of law of the heart as authoritarian & antiintellectual is directly applied to *Habits* so as to expose ambivalence on the question of individuality & confusion on how to address the subject positively, demonstrating how Hegel constructively reframes the question of individuality in a rational manner.

98S34176 / ISA / 1998 / 11417

✓ **Dougall, Colin** (Business School Napier U, Sighthill Court Edinburgh EH11 4BN Scotland (tel/fax: 0131-455-3334/3486; e-mail: c.dougall@napier.ac.uk)), **The Autopoiesis of Social Systems—An Outline of an Aristotelian Model.**

¶ In doing his science, Humberto R. Maturana begins with what is clearer & more knowable & proceeds through logos to what is clearer & more knowable by nature. The nature of the knowing subject that subsequently emerges has excited great interest & controversy in the social & management sciences, especially as attempts have been made at developing a theory of "social" autopoiesis. What has proven elusive, however, is a hook on which to hang the autopoiesis of social systems. Maturana's celebrated hook is "self-production" with all that it entails. Niklas Luhmann, in spite of his considerable sophistication, has failed to demonstrate that communication is the most appropriate hook for social autopoiesis. In fact, Aristotle adverts to such a hook early on in his physics with his enigmatic phrase, "Some things exist by nature, others are due to other causes." He then proceeds to suggest that the things that exist by nature "have within themselves a source of change & stability," & it is present "in its own right and not accidentally." While these may sound enigmatic, they are no more or less obscure than what is found in Maturana. Once clarified, they provide pointers to a reading of autopoiesis that is both internally consistent & coherent &, at the same time, has enough generality to encompass both physical & social autopoiesis.

✓ **Downing, Jane Duvall** (U Missouri, Columbia 65201 (tel: 573-874-1420; e-mail: c540140@showme.missouri.edu)), **Negotiating Sexual Identities On and Off the Court: An Ethnographic Investigation of Women in Sport.**

¶ Utilizes women's sport as a site in which to empirically examine race, class, & gender in relationship to female sexuality & sexual identity. Current hegemonic constructions of femininity have contradictory relationships to sport; as such, women's participation is often experienced as problematic, particularly in regard to normative assumptions about femininity & heterosexuality. This dynamic is particularly true for women participating in basketball, as this a sport that, from a cultural standpoint, presents sets of contradictory normative ideals for women. Empirical data from an ethnographic study of women, identity, & sport are drawn on to explore how women's understandings of themselves as women & the practices through which they enact these understandings have been influenced by their continued participation in basketball, a sport that is constructed as "male." Focus is on women's encounters with lesbianism in sport, both in terms of stereotypes & actual women involved in intimate/sexual relationships with other women. Ways that women mediate challenges to, condemnations of, or support for their sexual identities, often in the context of simultaneously negotiating their own understandings of their sexual identities, are examined.

✓ **Draper, Malcolm** (Dept Sociology U Natal, Pietermaritzburg KwaZulu-Natal South Africa), **Strange Encounters: Game Rangers, the Big Five and Ecofeminism in the African Wilderness.**

¶ Applies ecofeminist theory to the history & contemporary situation of nature conservation in KwaZulu-Natal, South Africa. The focus is on the Zululand game reserves of Mfolozi & Hluhluwe, which are reputed to be the oldest game reserves in Africa, the century-old site of the salvation of the white rhinoceros, where the (positive) idea of wilderness was imported into Africa from the US in 1955 & put onto local maps & landscapes, as well as into local minds. It was from there that the World Wilderness Congress was born in 1977. Also examined are theories of alienation (from nature) in an attempt to account for the apparently anomalous masculinity of the modern game ranger & the desires of their urban female admirers.

✓ **Dressel, Kerstin** (Institut Soziologie München U, D-80801 Federal Republic Germany (e-mail: R.Fings@t-online.de)), **Borderline-Knowledge as the Cause of the Failure of Risk Management?: The BSE Case in Great Britain and Germany.**

¶ The discourse about BSE is an eminent case of "borderline knowledge," a strongly culturally modified version of Ulrich Beck's (1996) cognitive-connoted "nonknowledge" concept. The debate about BSE is dominated by concepts like uncertainty, ambivalence, & contingency, where every kind of knowledge & every notion of risk is a product of a particular cultural, social, & institutional framing. Thus, borderline knowledge highlights the difficulty of dealing with epistemological & ontological questions in the age of reflexive modernization. Discussed here is the translation of uncertain scientific knowledge into public policy, relating to the implicit models of risk, science, & scientific uncertainty prevalent in the political cultures of GB & the Federal Republic of Germany. Comparative data on the BSE case, based on in-depth interviews with scientists, civil servants, politicians, & journalists involved with BSE/Creutzfeldt-Jacob disease (mad cow disease), & supplemented by government documentation, show how borderline knowledge & the idea of risk with respect to BSE have been constructed, recognized, excluded, denied, & mediated by different actors in GB & Germany. Borderline knowledge should be confronted with the apparent lack of success of risk management in the relevant countries & the European Union in general.

✓ **Dressler, Wanda** (CNRS U Paris X, F-92001 Nanterre Cedex France (tel/fax: 33-1-4097-7081/7155; e-mail: dressler@u-paris10.fr)), **Naturalisation de social et categorisation de la pratique sociale** (Naturalization of Social and Categorization of Social Practice). (FRE)

¶ Explores the naturalization of social sciences through the example of ethnic categorization & its social & political implications as practical categories. The ethnic social construct in terms of emancipating from the centralized states in the 1970s is suggested to be transforming into its opposite; ie, differentialist racism or essentialist ethnonationalism. Instead of being emancipating, social groups seems to be fixed in a status that renews the hierarchy rather than rethinks the democratic link between cultures. Is ethnic politics used by states to identify what they do not want to mix, put some order in the mixing of culture, & recreate Aristotelian categories, or to create solidarity networks to integrate people instead of the states? Is it an unavoidable step in the rebuilding of multicultural states in a sense of a hierarchy of function between ethnic groups that will assume the cultural needs & the supraethnic state that will play the role of arbiter in socioeconomic field? The naturalization of ethnic constructs does not go always with the democratization of multicultural societies. It appears more as a form of institutionalization, a legitimized political construct. It does not inform on the democratic side of this construct, but leaves law in full redefinition & uncertainty & to the new norms the regulatory function of equity between different ethnic groups.

98S34182 / ISA / 1998 / 11423

✓ **Dressler, Wanda** (CNRS U Paris X, F-92001 Nanterre Cedex France (tel/fax: 33-1-4097-7081/7155; e-mail: dressler@u-paris10.fr)), **From National Liberation Movements to the Ethnicization of Politics in Estonia, Kazakhstan and Moldova.**

¶ Explores the change in paradigms of national movements before & after the fall of the Soviet regime. Analyzed is how this change underpins the transition to an ethnonational model referring to nationality & not citizenship rights in Estonia, Kazakhstan, & Moldova. Shown is how the use of concepts & terms for nation allow a certain margin of interpretation for the type of nation built. The main trend in these nations is toward the ethnicization of politics. Globalization is discussed in this context. Movements of collective action participate in redefining symbolic belongings, but not always in the sense expected in the 1970s. New ways to categorize the social field are focused on.

¶ The interest of students of social stratification in the importance of cognitive abilities for occupational attainment processes has decreased, although applications of the so-called "Jencks model" for different socie-

d

ties continue to find direct & significant effects of early cognitive abilities on occupational status & income of men & women, after controlling for parental class, education, income, & educational attainment. Hauser (1998), in a review of evidence of the importance of cognitive ability in social stratification in the US, urges scholars to address these questions for their societies. Used is Dutch longitudinal data set that contains measurements of parental characteristics, scholastic & cognitive abilities, & intelligence for 2,587 children born around 1940, interviewed & tested in 1952, & reinterviewed in 1957-1959, 1983, & 1993. Means & distributions of early scholastic & cognitive ability & intelligence in different occupational groups are compared for this cohort (for men & women, & for first, intermediary, & current jobs separately) to see whether early scholastic & cognitive ability & intelligence became more important for occupational success during the life course of this Dutch cohort. An attainment model (including parental background, scholastic & cognitive ability, intelligence, educational & occupational level, income of children) is applied to establish the direct & indirect effects of early scholastic & cognitive ability & intelligence on educational attainment & occupational attainment in different phases of life.

Du Gay, Paul (Open U, Milton Keynes Buckinghamshire MK7 6AA England [tel/fax: 01908-654487/488]), **Cultural Economy: An Introduction.**

¶ Explored is how to understand economic & organizational life after the cultural turn that has swept the human & social sciences. Key epistemological aspects of the cultural turn are outlined, highlighting how these can be seen to problematize certain ways of conceptualizing the relationship between economy & culture in the social & human sciences. Culture, it is argued, is not something separate from the materialization of economic activities; rather, economy & culture are mutually constitutive. Economic practices & processes—in all their plurality, whether referring to management techniques for reorganizing the conduct of business, contemporary strategies of advertising goods & services, or everyday interactions between service employees & their customers—depend on meaning for their effects & have particular cultural conditions of existence. Through the notion of cultural economy, how the cultural turn adds to, rather than subtracts from, the understanding of economic & organizational life is considered.

Duff, John (School Social Studies Edith Cowan U, Joandalup 6027 Western Australia [tel/fax: 08-9400-5747/5866; e-mail: j.duff@cowan.edu.au]), **Financing Foster Community Health Care: A Comparative Analysis.**

¶ Affluent countries face increasing health costs arising from the chronic

illnesses of their aging populations, & cost containment occupies a prominent place on the political agenda. Reforms to corporatize, privatize, or otherwise deregulate public health care are already being implemented, but in the face of considerable criticism of both their effectiveness & equity. Community care, linked with self-care & family care, promises ways of containing costs, but questions of effectiveness & equity remain. Compared here are Australian Home & Community Care, which reduces dependence on institutional care by supporting voluntary community networks for elderly people, & the system used in Singapore, which has designed health financing around the strong tradition of family loyalty. Singapore's Medisave system requires wage earners to save for their own health costs & for those dependent on their wage. Immediate family members can be called on to help meet each other's health costs. Singaporean health financing requires wage earners to choose between purchasing health services in the present for themselves & those dependent on their wage, or health services in their own future old age. This comparison shows that containing health costs through community care may shift the burden of care in unintended ways & with unintended consequences.

Dulac, Christine (U Marseille, F-13288 Cedex 9 France [tel/fax: 04-91-17-04-44/48; e-mail: dulac@staps.univ-mrs.fr]), **Analysis of a Local Policy Using Theories of Organization Sociology—The Case of Grenoble: Thirty Years of Sports Policy 1965-1995.**

¶ Focuses on the effect of a change in the political majority in Grenoble, France, on the sports policy, as defined by the local councillors, the Sports Dept, & a local sports partnership organization called the OMS. Two crucial concepts used in the study are "local order" & "individual strategies" (Bernoux, 1985; Friedberg, 1993), both drawn on in an analysis of records, newspaper articles, & interviews. The Grenoble sports policy is defined as the result of the mutual exchanges between various groups. Only after the 1968 Olympic Games did the socialist town council succeed in setting up a sports policy. In the mid-1970s, the Council had to face the OMS, which supported sports show clubs &, with them, represented a counterforce. However, the values that it advocated corresponded with those of the right-wing local council elected in 1983. The OMS became a real power & succeeded in reducing the place & the part played by the Sports Dept. Toward the late 1980s, the local council tried to tone down the effects of the boom in sports shows. Results confirm the sociology of organizations hypothesis that individual strategies represent a determining factor in the analysis of a local (sports) policy.

Duncan, Howard W. (Metropolis Project Citizenship & Immigration Canada, 365 Laurier Ave West Ottawa K1A 1L1 [tel/fax: 613-957-5916/5968; e-mail: howard.duncan@9S22apx.cina.cic.x400.qc.ca]), **Policy Research: The Metropolis Experiment.**

¶ The Metropolis Project, which promotes policy research in the field of immigration, particularly as it affects cities, is an experiment in using applied social sciences as policy sciences. Among its goals is to increase the utility & actual use of research in the policy development process. Conventional views of the relation between research & policy portray research evidence as providing some of the premises in arguments that have policy decisions as their conclusions. Typically, these rationalistic forms of explanation are supplemented by social facts, eg, political considerations that affect policy decisions. Too often these accounts of the role of research in policy fail to encompass important facts about the ways in which policy is made. Accordingly, they are neither empirically adequate nor fully useful as prescriptions for how social science can improve policy making. The Metropolis Project assumes that even policy-relevant re-

search may have no utility unless the internal logical relations between evidentiary premises & policy conclusions both are recognized by & psychologically compelling for policymakers & decisionmakers. Social factors may determine whether these necessary conditions can be obtained. How Metropolis capitalizes on these assumptions is described.

¶ Examines the process of judicial writing in Egypt. Advocates & magis-

trates, especially members of the *Parquet* (similar to prosecutors), devote their work in formulating categories mobilized in the clients', accuseds', & witnesses' narratives of facts, giving relevance to statements that do not necessarily follow this objective. It can be inferred, per Martha Komter, that one of the main trial outcomes is reaffirming a prevailing morality rather than obtaining criminal punishment. This supports Conley & O'Barr, who demonstrate that the main purpose of a lawsuit is the victim's public expression of an injustice; ie, application of the legal rule is not pursued, but the individual's feelings are recognized. Per Rod Watson, the categorization processes leading to a judicial verdict are, on the one hand, the means to proceed to autodefinitions & thus, provide motivation, &, on the other hand, the means to allocate & to negotiate indictment, culpability, & responsibility &, thus, are the motives for justification & excuse. It is suggested that the writing of a judicial process reflects more of a formal requirement, ie, to ascribe a legal consequence to a deed, than the social wishes of the actors. For the latter, what is at stake is mainly their membership in the prevailing moral structure & justification of an action in terms of conformity or nonconformity. Examining actor, professional, & layperson reactions to judicial proceedings should permit understanding the unfolding of an abstracting legal work & what it means as formal neutralization of morality & the recurring invocation of moral categories & their importance in legal activity.

✓ **Durand, Ceande** (U Evry, F-91025 France [tel/fax: 01-69-47-70-96/08]), **Les Entreprises occidentales en Europe de l'Est: nationalisation en management participatif** (Western Business in Eastern Europe: Rationalization in Participative Management). (FRE)

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ The implantation of Western businesses in Eastern Europe involves a reformulation of the management of manpower as well as methods of work organization & management practiced under the socialist regime. It is held that the most dominant of the observed changes is the rationalization of the system of production. Here, the character of this rationalization is discussed with respect to its application to work organization through quality control & the informatization of production & its extension to manpower management. Whether the different methods of implanting multinational companies used by the French & German are reflective of cultural differences is addressed. It is argued that the management of these new rationalization systems leads to codification & procedural formalization, & the new business culture can be characterized as a multinational managerial culture where rationalization techniques dominate the authoritarian or participatory modes of direction.

98S34198 / ISA / 1998 / 11439

✓ **Durand, Claire, Chevalier, Serge & Vachon, Sebastien** (U Montreal, Quebec H3C 3J7 [tel/fax: 514-343-7447/5722; e-mail: durand@ere.umontreal.ca]), **Using Surgical Regression to Predict Occurrence of First Contact, Outcome at First Contact and Completion of Interview in Telephone Surveys.**

¶ Examines whether using survival analysis may improve knowledge & interpretation of the impact of various aspects of call management on successful completion of interviews by telephone, investigating determinants of the hazard rates of (1) making a first contact, ie, any outcome except "ring no answer"; (2) first contact results in certain outcomes (interview, refusal, appointment); & (3) final contact will be a completed interview with a selected respondent. Time-dependent covariates (period when calls were made) & time-independent covariates (area of residence, presence of appointments) are used as predictors. Cox regression analyses of data on all calls made on 10,000+ telephone numbers generated by random digit dial, of which 2,995 resulted in a completed interview after a maximum of 9 attempts at contact & up to three attempts at refusal conversion (response rate of 59%) show that making calls on week-

d

days after 4:30 pm increases the hazard rate of making contact by 10%, the rate of completing an interview at first contact by 30%-35%, or of getting an imprecise appointment (made by interviewer or third party) by 32%-43%; it also increases the hazard rate of refusal at first contact by 40%-60%. The hazard rate of refusal at first contact is also heightened on Saturday mornings by 27%, while the rate of getting a precise appointment is reduced by 35%-45% when calls are made on Saturday afternoons & Sundays. As for area of residence, regions outside the metropolitan area are generally related to a faster rate of contact & completion at first contact, a lower rate of refusal for remote regions while being also related to precise appointment taking: positively for peripheral area, negatively for urbanized areas outside the metro region. As for the hazard rate of the final call resulting in a completed interview, it raises by 10%-20% for calls on weekdays after 6:30 pm, but is reduced by 25%-43% for calls on weekday & Saturday afternoons. Further, residing outside the metropolitan area increases the speed of completion by 30%-50%, while taking precise appointments increased the rate by almost 19%; on the contrary, imprecise appointments reduce that rate by the same amount (22%). Whether these effects are related to the respondent sociodemographic characteristics or how samples are managed begs further research. Survival regression's appeal resides in interpretation, focus on getting a completed interview, & flexibility of use whenever a data set with all the information on call attempts is available.

Durrant, Joan E. (Dept Family Studies U Manitoba, Winnipeg R3T 2N2 (tel/fax: 204-474-8060/7592; e-mail: Durrant@cc.umanitoba.ca)), **Children's Nirvana or Hell in a Hand-Basket? Social Conditions for Swedish Children & Youth since the Passage of the 1979 Corporal Punishment Ban.**

¶ In 1979, Sweden became the first country to explicitly abolish parental use of corporal punishment. Since then, international debate has intensified regarding whether similar laws should be passed in other nations. While some fear that children will be apprehended more readily & youths will become unruly, others argue that child physical abuse rates will decline & children's psychological well-being will improve. Analyzed here are relevant social trends in Sweden before & since the ban. Official figures indicate that declines have occurred in rates of (1) children in the care of social welfare authorities, (2) reported physical abuse by young adults, (3) juvenile crime, (4) teenage murder victims, (5) teen suicide, & (6) juvenile substance abuse. Increases in reports of teen violence appear largely attributable to a zero-tolerance approach to bullying. Although these trends cannot be attributed directly to the corporal punishment ban, they indicate that the ban has not led to the social chaos that some predicted.

98S34200 / ISA / 1998 / 11441

Durstberger, Monica-Gina (Dept sociologie U Montréal, Quebec H3C 3J7 (tel: 514-495-3358; e-mail: durstbem@mistral.ere.umontreal.ca)), **An Ethnographic Inquiry into Ethnic Diversity to Study the Impact of Affirmative Action Measures on the Organizational Communication Culture of a Transportation Company.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Demonstrates how organizational ethnography can be effectively used to study ethnic diversity & identify the margins of freedom that members of majority & minority groups have in organizations. To understand the fundamental (ideological) & the practical (operational) dimensions of communication strategies of an organization using an affirmative action program, an interpretative & critical point of view was applied to triangulated methods of data collection & analysis, drawing on the organizational literature & transcripts of conversations with transportation company members to discover the multiple layers of ethnic diversity. A paradigmatic model of ethnic diversity & an aesthetic model of organizational communication were developed & used to analyze external & internal communication & existing relations between organizational documents (texts) & organizational discourse (conversations) in applying analogical reasoning & abduction. The impact of ethnic diversity on organizational communication culture is illustrated via ethnographic description of one microculture of the transportation company.

Duval, David Timothy (Faculty Environmental Studies York U, Toronto Ontario M3J 1P3 (e-mail: duval@yorku.ca)), **One Is at Leisure, the Other at Work: Understanding Intercultural Relations in Tourism Environments.**

¶ Tourism provides an ideal context in which intercultural interaction involving hosts & guests can be studied. The fact that the average guest demands to experience the "authentic" often requires that he/she enter into a relationship with either the Other (the hosts) themselves, or particular structures associated with them. Tourism studies have attempted to determine whether tourists are interested in merely seeking out traditional cultures or, alternatively, perhaps unknowingly destroying the sociocultural fabric of host populations. It is contended that the search for the authentic, in the sense that it brings to various destinations many different types of tourists, each of whom can have different effects on host societies, is the focal point of understanding host-guest relations. Focus here is on this host-guest relationship & the complex interactions that often transpire.

Duvvuru, Narasimha Reddy (U Hyderabad, Gachi Bowli 500046 India (tel/fax: 40-3033283/3010120; e-mail: dnrss@uohyd.ernet.in)), **Neoliberalism and Institutional Support for Social Sciences.**

¶ One of the major measures of structural adjustment under neoliberalism relates to the switch in emphasis from public to private funding of higher education. There are pressures on restructuring of the social sciences to suit the market needs & reordering of the priorities of social science research more in favor of the agenda of efficiency rather than considerations of equity. The consequent tendencies of undermining teaching & research in social sciences, particularly in the Third World, are documented. Social science scholarship is challenged to develop & promote alternative institutional structures. Such possibilities are explored.

98S34204 / ISA / 1998 / 11445

Dwivedi, Ranjit (Instit Social Studies, Kortenaerkade 12 NL-2518 AX The Hague Netherlands (tel/fax: 31-70-4260-437/799; e-mail: dwivedi@iss.nl)), **Environment Movements in the South: Theories and Prospects.**

¶ Situating environmental movements in the context of structural trends in the South, considered is whether current theorizing adequately incorporates the changing subjectivity in these movements & whether the prescriptions-theoretical & political-lying therein sufficiently takes account of both structural constraints & conjunctural opportunities toward reworking the development-environment crisis. Drawing from political ecology studies & environmental movements in India & elsewhere, it is argued that the existing theories on environmental movements may be unable to develop an adequate intellectual framework to understand the crisis given their failure to anticipate complex negotiation strategies required for its reworking. These arguments are used to analyze the prospects of environmentalism in the South, & some gray areas in theorizing are noted.

98S34205 / ISA / 1998 / 11446

Dyck, Noel (Simon Fraser U, Burnaby British Columbia V5A 1S6 (tel/fax: 604-291-4511/5799; e-mail: ndyck@sfu.ca)), **Sociology, Anthropology, and Sport Studies: Surveying the Boundaries.**

¶ Examines theoretical, methodological, & substantive similarities & differences between anthropological & sociological perspectives on sport, focusing on the potential for a distinctively anthropological contribution to sport studies in the coming century. The discussion draws on a review of recent anthropological & sociological sport literature as well as social research on adults & the social construction of children's sport.

Eakin, Joan M. (Dept Public Health Sciences U Toronto, Ontario M5S 1A8 (tel/fax: 416-978-8502/2087; e-mail: joan.eakin@utoronto.ca)), **The Experience of Illness and Injury and the Social Relations of Work.**

¶ Ethnographic interviews with 40 employees in small workplaces are used to theorize the social production of illness & injury in the workplace. It is shown that particular features of working life in small workplaces, especially their personalized social relations & low polarization of employer-employee interests, shape workers' understanding of the employment relationship & of health in relation to work. Strained authority relations form a key social context in which health & injury are constructed. In situations of conflictual supervisory relations, bodily experiences can become problematized. Meanings attributed to health conditions & the quality of the employment relationship are transformed & merged, prompting a questioning of the legitimacy of power asymmetries in the workplace & recognition of the conflicting interests of labor & capital. Illness offers possibilities for resistance & for reasserting the personal in the employment relationship. Bodily experiences become localized metaphors for & symbolic mediators of broader social tensions. Unheeded illness claims deepen feelings of distrust & blame, further deteriorating labor relations & reproducing the social conditions for illness. Implications of this interpretation for understanding the relationship between work & health &, more generally, between individual experience & social structure, are explored.

Ecevit, Mehmet (Dept Sociology Middle East Technical U, TR-06531 Ankara Turkey (e-mail: ecevitm@rorqual.cc.metu.edu.tr)), **Women's Health and the Survival of Smallholder Households: A Village in Rural Black Sea Region of Turkey.**

¶ Field research conducted in a village of the Eastern Black Sea region of rural Turkey in 1997 is used to analyze the relation between the conditions of survival of smallholder families & women's health. It is assumed that such a scope should be investigated according to & based on the basic changing tendencies of agrarian relations & the status of rural women. Focus is on health & demographic policies, population increase, urbanization, migration, age & sex, fertility, illness, mortality, economic & employment structure, environment & pollution, mother's health, health services, family structure, women's education, cultural structure, & social values. The analysis is based on data gathered over 15 days via (1) interviews on the current & past history of the village; (2) interviews seeking health & illness information at the village level; & (3) household questionnaires ascertaining the health of women.

98S34209 / ISA / 1998 / 11450

Ecevit, Yildiz (Dept Sociology Middle East Technical U, TR-06531 Ankara Turkey (e-mail: ecevitm@rorqual.cc.metu.edu.tr)), **The Impact of Structural Adjustment Policies on Urban Women in Turkey.**

¶ Presents a critical evaluation of structural adjustment processes & the "survival" role that women are envisaged to play in these processes in Turkey. Focus is on (1) changes in women's labor force participation & employment after the 1980s, a time when economic policies changed in Turkey; (2) women's increasing involvement in informal sector activities; (3) women's increasing participation in small entrepreneurial activities; & (4) intensification of women's role in maintaining the family & reproducing the household.

98S34210 / ISA / 1998 / 11451

Edles, Laura Desfor (Dept Sociology U California, Irvine 92717

(tel/fax: 714-856-7637/8441)), **Cultural Marxism vs. Semiotics: The Discourse of Cultural Studies.**

¶ Seidman (1997) pointed out that, even today, US sociology "has not made a semiotic turn." The dormant models of the social either imagine that agents "willfully construct society" or install social structure (eg, social class, the market, etc.) as the key organizing social principle. It is argued here that US sociology has failed to make the turn in large part because of its lingering tension with neo-Marxism. In other words, Seidman correctly praises cultural studies for making the semiotic turn, while sociology has not, but he underestimates the degree to which the attempt to blend discursive & Marxist worldviews necessarily results in theoretical contradiction. The work of critical media analysts who have made the semiotic turn, eg, Grossberg, Lull, & Jhally, clearly exposes this tension. Also explored are the seminal culturalists' concepts of discourse, audience, hegemony, & resistance to sort out the theoretical logic behind cultural Marxism & semiotics, & formulate a coherent, synthetic position.

Egger, Rudolf (U Graz, A-8010 Austria (tel/fax: 0316-380-2600/9710; e-mail: regger@balu.kfunigraz.ac.at)), **Beyond Fragments—Biographical Research in Its Social and Ethical Context. Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Focuses on biographical research strategies in adult education, its interpretative & transformative possibilities, & problems using life stories as the basis of social sciences. The theoretical framework & the methodological context of biographic research is described, arguing that this specific method includes many risks & problems in the processes of "going narrative." Personal experiences & reflections related to a long period of biographical research are addressed, & the most challenging roles for researchers in this field of qualitative social sciences are considered.

98S34212 / ISA / 1998 / 11453

Ehrlich, Avishai (Faculty Social Sciences & Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel (tel/fax: 972-03-5257371/3848; e-mail: avinec@serverm.soc.mta.ac.il)), **"Post-Zionism," a Sociological Critique of a Discourse.**

¶ Traces the history & sociological background of the debate surrounding the new historians, critical sociologists, & post-Zionists in Israel. It is argued that the concept of "post-Zionism" is incoherent & groups together contradictory epistemological & theoretical approaches. The sole factor uniting many new historians & critical sociologists is a reformist attitude, located somewhere between the establishment version & the colonization anti-Zionist model of Israeli society. Debates surrounding the new historians & anti-Zionists stem from different normative approaches to the study of Israeli society & the changes that it is undergoing. The attempts to portray post-Zionism as a coherent ascendant force in Israeli academic & cultural life are exaggerated & politically motivated. It is argued that Israel is a settler's society in permanent conflict, & the changes in its structure can be explained by the changing modes of the Israeli-Arab conflict. The post-Zionist discourse is itself an ideological aspect of these changes.

98S34213 / ISA / 1998 / 11454

Ehrlich, Howard J. & Pincus, Fred L. (U Baltimore, MD 21250 (tel: 410-455-3979)), **Ethnoviolence on College Campuses in the United States.**

¶ Racial conflict is still a significant problem on US college campuses. Such ethnoviolence both causes & results from a hostile climate, which is detrimental to both learning & intergroup dialogue. Higher education leaders may not be aware of this unless they look beneath the surface. Presented are findings from (1) 31 studies of ethnoviolence on US college campuses, conducted since 1986; & (2) 1995/96 in-depth studies of two predominantly white, medium-sized public institutions in Baltimore, MD. Implications for future research are discussed.

98S34214 / ISA / 1998 / 11455

Eiffier, Stefanie & Rohlinger, Harold M. (U Bielefeld, D-33615 Federal Republic Germany), **Integrative Approaches for Explanation of Deviant Behavior—An Empirical Analysis.**

¶ Explores an integrative approach for an explanation of deviant behavior as it was recently proposed in the US criminological literature by Elliott, Huizinga, & Ageton (1989). This approach has its special value in adopting & integrating central explanatory elements of classical theories of deviant behavior, ie, concepts of the anomie theory, social disorganiza-

e

tion theory, social learning theory, & control theory. In the secondary analysis of Elliott, Huizinga, & Ageton, it was considered fruitful to operationalize in the context of a primary investigation comprising questionnaire data from 585 adults, ages 18-65, in the Federal Republic of Germany. Results show that the different forms of deviant or risk behavior can be explained by the integrated model; however, not all types of behavior are explained at the same level. There are differences in the amount of explained variance given a particular form. Therefore, slight changes to the importance of the concept as a whole have to be made regarding the extent of explanation. In addition, a correspondence analysis is performed to present the concepts simultaneously in one low-dimensional vector space.

98S34215 / ISA / 1998 / 11456

Eisinger, Peter & Smith, Charles (Coll Urban/Labor/Metropolitan Affairs Wayne State U, Detroit MI 48202 [tel/fax: 313-577-5071/8800; e-mail: aa4291@wayne.edu]), **Urban Prosperity and Globalization.**

¶ Explores the proposition that a major key to urban prosperity lies in links to global processes, not simply for world cities, but for all places. Global commerce & interchange are sources of new markets, capital, & human resources. In the tradition of regional economics, the proposition assumes that (1) export is the primary route to growth & greater well-being; & (2) those places that attract foreign investment, business travelers, tourists, & immigrants will prosper relative to those more parochial, isolated urban areas. Several regression models are constructed to gauge the relationship between various measures of urban prosperity & a series of independent variables measuring global economic & social linkages.

Ejnavarzal, Haribabu (Dept Sociology U Hyderabad, 500046 India [tel/fax: 91-040-301-0500/0145; e-mail: ehbs@uohyd.ernet.in]), **Paradigm and Its Application: A Study of Rice Biotechnology Research Community in India.**

¶ Focuses on the social dynamics of rice biotechnology research in India, noting that employing molecular biology tools in rice research entails interaction between molecular biologists & rice breeders. The interaction involves shared construction of rice biotechnology as a cognitive domain including meanings of the terms of discourse. The construction is a social process that calls for cognitive empathy on the part of molecular biologists & rice breeders to arrive at a consensus. In India, the interaction has yet to be institutionalized; hence, the interaction seems to create anxieties & tensions. Interview data collected from members of the National Rice Biotechnology Research Network are drawn on to discuss issues related to relevance, priority setting, peer review, & recognition in the newly emerging rice biotechnology research community in India.

98S34217 / ISA / 1998 / 11458

Ekerwald, Hedda K. (Dept Sociology Uppsala U, S-75108 Sweden [tel/fax: 46-18-471-11-94/70; e-mail: hedvig.ekerwald@soc.uu.se]), **Radicalism Called in Question: Alva Myrdal's Social Thinking of the Thirties and the Swedish Sterilization Debate in 1997.**

¶ After her & Gunnar Myrdal's journey to the US in 1929, the 1930s were a lively intellectual period for Alva Myrdal. Her visions of a more equal & fair society centered around family reforms. In the Swedish sociologist Jan Olof Nilsson's biography of the young Alva Myrdal (from her birth in 1902 to 1938), her modern project is described, stressing the influences of the 19th-century discourse on hygiene & functionalist architecture. Nilsson also asserts that through the Myrdals, US sociology gave theoretical underpinnings to the Swedish welfare project. In the 1997 Swedish debate on forced sterilizations, 1935-1975, Alva Myrdal's ideas played a major role. Examined here is the picture of Alva that evolves out of this debate & how it compares to her own writings & the general discursive context of the 1930s. Questions of chronocentrism are also discussed.

El-Ayoubi, Mona (Faculty Aboriginal & Torres Strait Islanders Studies Northern Territory U, Darwin Australia [tel/fax: 08-89466062/345]), **Exploring Interpersonal Communication.**

¶ Teaching & learning in the language classroom is a complex & challenging process involving more than an understanding of particular cultural contexts or linguistic/theoretical frameworks. Simply speaking & listening are not adequate; there are internal & external cultural signals that can be employed to achieve meaningful discourses to highlight the collaboration needed in pluralist democracies. Explored here is the con-

cept of communication transfer, considering the indigenous & institutional cultural contexts & the interchange needed to widen the concept of meaning. Reconstructing local perceptions to acknowledge diversity from various levels to disseminate, disclose, & communicate effectively enriches all those concerned in the learning process. Brief, isolated, & fragmentary discourses occur when the transference of communicative knowledge does not take place. What do interchange & interaction represent when talking about talking? How can the existence of varied knowledges in the classroom be acknowledged? What tools can be drawn from both the indigenous & institutional cultural contexts? Creating awareness of alternative worldviews & recontextualizing meaning-making processes to construct inclusive discourses are crucial. The continual dialogue that is needed between the indigenous & the institutional cultural contexts to elucidate how effective communication impacts learning is emphasized.

Elger, Tony & Smith, Chris (U Warwick, Coventry CV4 7AL England [tel/fax: 44-0-1203-523091/523497; e-mail: syrdh@warwick.ac.uk]), **Japanese Inward Investors and the Remaking of Production Regimes: The British Case.**

¶ Explores Japanese foreign direct investment in terms of recent restructuring of European & North American manufacturing, drawing on 200 interviews in six Japanese transplants in GB, taking a regional cluster as a critical test-case of their scope to construct new work practices & employment regimes. Findings reveal that they have (1) constructed a low-wage, low-skill, low-involvement assembly branch plant regime, but (2) face major problems of worker recruitment, retention, & commitment. While these plants have undoubtedly contributed to the recasting of working practices & industrial relations in GB, they have not brought any radical transformation in production regime, & they have not transcended persistent sources of disgruntlement & conflict in the employment relation. Findings have substantial implications for more general debate about the role of Japanese foreign direct investment.

Ellingsaeter, Anne Lise (Institt Social Research, N-260 Oslo Norway [tel/fax: 47-22554510/431385; e-mail: ali@isaf.no]), **Labour Markets, Welfare States and Women's Employment: Convergence or Diversity.**

¶ Three questions are addressed: (1) Are women's employment relations converging as a result of labor market restructuring, or do they develop along diverging paths? (2) Do welfare state policies influence the direction of labor market change? (3) To what extent can variations in women's labor market integration, marginalization, & exclusion across countries be attributed to differences in welfare state policies & institutions? With focus on the relationship between national political-institutional features of labor markets & their outcomes for women, political-institutional features, including work-family policies, employment (de) regulation, & labor market policies, are examined in five countries representing different types of labor markets & welfare states: the Scandinavian countries of Denmark, Norway, & Sweden; the Federal Republic of Germany; & the UK. In contrast to much of convergence theory, it is argued that labor market restructuring & its consequences for social divisions must be understood in its specific political & institutional context—ie, one in which the state & industrial relations influence the operation of labor markets & the organization of work.

Elliott, Jane (CCSR U Manchester, M13 9PL England [tel: 0161-275-4257; e-mail: mrsbeje@fsl.ec.man.ac.uk]), **Strategies and Competing Risks: Issues in the Interpretation of Event History Analyses.**

¶ Discusses the interpretation of event history, drawing on data from work-life histories collected in the 1991 National Child Development

Survey to consider a number of different approaches to modeling mothers' experiences of returning to work after childbirth. Focus is on the problems of interpreting competing events models in sociological applications, particularly where individuals might be thought to have specific strategies that make them unlikely to experience certain risks.

98S34223 / ISA / 1998 / 11464

✓ **Elohim, J. L.** (Schlossgasse 6/16, A-3512 Mautern A/D Donau Austria (tel/fax: 43-504-1188-1186; e-mail: elohimjl@fbcm.tuwien.ac.at)), **Humanitarian Aims in Order to Reach Humane Results Make Indispensable Finding a Way Forward through Cybernetic Learning and Acting.**

¶ Cybernetics should be concerned with learning to purposively conduct the evolution of humanitarian actions to reach humane results, bearing in mind that everything in society is relatively ambiguous, uncertain, unpredictable, incoherent, & inconsistent, because humans have limited capabilities for perceiving real facts & phenomena along with different cultural frameworks. Acquired knowledge about prevailing social, economic, cultural, & anthropological circumstances might dictate the need to improve the outcome of humanitarian actions via culturally proper social entities that are capable of learning from actions & acting on consequent insights.

98S34224 / ISA / 1998 / 11465

✓ **Engdahl, Emma** (Dept Sociology Lunds U, S-22100 Sweden), **The Source of Social Emotions—Reflections from a Sociological Standpoint.**

¶ Discusses a crucial problem for a sociology of emotions, ie, how to understand the source or the origin of emotion. Three different approaches to this question are described, & an alternative is presented. A fundamental distinction is drawn between emotion as a biological phenomenon (instincts, drives, impulses, etc) & emotion as a social phenomenon (eg, shame, pride, happiness, grief, etc). It is argued that the latter has its origin in the social process of "attitude taking," the sense suggested by G. H. Mead. In contrast to Mead, however, it is claimed that "attitude taking" is not only a cognitive, but also an emotional, process. In this process, a language & an ability to think & reflect is acquired, along with a social body & an ability to feel social emotions.

98S34225 / ISA / 1998 / 11466

✓ **Enguita, Mariano F.** (Dept Sociologia U Salamanca, E-37071 Spain (tel/fax: 34-9-23-294695/294713; e-mail: mfe@gugu.usal)), **Social Networks and Modes of Production.**

¶ An attempt is made to define a broader field for economy than the one suggested by economics. Four kinds of economic networks—households, organizations, states, & markets—combine to form six modes of production—domestic, estate, tributary, bureaucratic, mercantile, & capitalist. These modes add specific dynamics to the consistency of network relations. Their threefold dimension—production, appropriation, & circulation—allows for different alignments of interests, with corresponding conflicts. This approach brings into question any monistic vision of social dynamics supported by its identification with one mode of production dominated by one main conflict, eg, Marxism. It also tries to recover the idea that economy cannot be reduced to market plus noneconomic factors.

✓ **Entehal, Ghanim** (Dept Sociology Hebrew U Jerusalem, Mount Scopus IL-91905 Israel (fax: 972-2-6769054; e-mail: msenteh@pluto.mscc.huji.ac.il)), **The Refugees' Experience and Education: The Palestinian Case.**

¶ Explores the refugee experience among Palestinians, & how the state of "refugeeism" has affected perceptions of the value & importance of education. The intergenerational persistence of the refugee identity is examined in terms of exile, collective memory, & the formation of a separate Palestinian identity. The refugees' poor living conditions & their nonabsorption by Arab host societies do not suffice to explain the persistence of this refugee identity. In circumstances of refugeeism, with its attendant helplessness & despair, education becomes an essential resource. The educational experience is perceived not as instrument, but as a social world. Palestinian exile is neither one of displacement nor temporary, but an inherited status, since many Palestinians were born in exile & have never themselves seen their homeland. How this lasting refugeeism came into being & the mechanisms or processes that sustained it & rendered it one of the components of the Palestinian identity are discussed. Ways that this refugeeism influences Palestinians' perception of education &

their massive pursuit of schooling at all levels are described, highlighting education's role as an (1) agent for creating modern resources in the political & economic domains; (2) instrument for positive identity building; & (3) existential text for symbolic survival, interpretation, & construction of meaning.

98S34227 / ISA / 1998 / 11468

✓ **Entrena, Francisco** (Dept Sociology U Granada, E-18071 Spain (tel/fax: 34-9-58-246198/4191; e-mail: fentrena@goliat.ugr.es)), **La Structure sociale comme modèle analytique: une perspective systémique** (Social Structure as an Analytical Model: A Systemic Perspective). (FRE)

¶ Like the notion of system, that of social structure has long been accepted in the evolution of sociological thought, & is complex & polysemic. Some scholars tend to identify this notion with the structure through which social order & the image of the society under analysis are reproduced. Here, this model is conceived as a social construction on the part of the researcher that shows how he or she behaves as a social actor to impose order on or systemize the complexity of social reality with the aim of understanding & analyzing it. In accordance with this idea, a threefold analytical model of social structure is developed with a systemic focus consisting of socioeconomic, politicoinstitutional, & symbolic-cultural dimensions. The use of this model as a theoretical framework to study macrosocial structures & their dialectic & reflexive relationships with the real, microsocial world of people's daily lives is described.

98S34228 / ISA / 1998 / 11469

✓ **Entrikin, J. Nicholas** (Dept Geography U California, Los Angeles 90095-1524 (tel/fax: 310-825-7334/206-5976; e-mail: entrikin@geog.ucla.edu)), **Citizenship, Identity, and Cosmopolitan Place.**

¶ Theoretical discussions of political community have been divided between the two poles of liberal individualism & communitarianism, theoretical positions with implicit geographies that may be described in terms of the distinction between space & place. The liberal individualist conception, in both its civic & market versions, emphasizes homogeneous space in terms of the public space of citizenship or the space economy. The more particularistic communitarian arguments imply a geography of place & territorial identity. The excluded middle in these discussions is a liberal view of political community that incorporates the continuing importance of solidarity in modern societies, while valuing universalism & inclusiveness. Its geography may be described as that of cosmopolitan place.

98S34229 / ISA / 1998 / 11470

✓ **Erassa, Dennis Saturno** (International Rice Research Instit, PO Box 933 1099 Manila Philippines (tel/fax: 63-2-845-0563/891-1292; e-mail: derassa@irri.cgiar.org)), **Gender and Biodiversity: Assessing Linkages and Policy Implications.**

¶ Invigorates the concept of gender by examining its linkages with biodiversity conservation praxis. It is contended that rethinking gender in the purview of biodiversity conservation could only make sense if done in the appropriate context & level of applicability. However, there is a mounting tendency to downplay the role of gender even on the very context where it has crucial impact. The trend is occasioned by the incorporation of the biodiversity agenda in the dominant development model, which emphasized economic growth & is inherently scientific. Hence, the overall value attached to plants' genetic resources & the approaches taken revolved around ex situ conservation that became the official & necessary conservation strategy adapted by the international community. Ex situ conservation is devoid by sociological orientation, at least, as far as the role of gender in biodiversity conservation on the farm, community, & landscape levels is concerned—a limitation on farm conservation has tremendous potentials. Policy implications are considered, regarding a dynamic complementation of ex situ & in situ approaches, which the rice biodiversity conservation practices of the International Rice Research Instit (Manilla, Philippines) exemplifies.

✓ **Ercole, Enrico** (Facoltà scienze politiche U Torino, I-15100 Italy (tel/fax: 39-131-283745/263030; e-mail: ercole@sp.al.unipmn.it)), **The Effect of European Integration on European Cities and Urban System.**

¶ Different as subnational governments in Europe are with respect to structure, culture, & functions, they all try to come to terms with the process of European integration. City, provincial, & regional governments

e

perform at least three roles: (1) they cooperate as members of transnational networks active in various sectors, eg, old industrial regions or large, noncapital cities; (2) they are active in cross-border cooperation, eg, Mediterranean or Alpine regions; & (3) subnational governments participate in the formal consultative body of the European Commission, the Committee of the Regions. Each type of transnational cooperation gives subnational governments new opportunities to obtain funding from the European Union (EU), influence the decision-making process, & learn & adopt institutional & organizational innovations from foreign partners. However, Euro-networks & -regions also compete among themselves as well as within to have access to EU resources. City & regional cooperation & competition go beyond the European level as part of wider worldwide process among local economies brought about by globalization.

98S34231 / ISA / 1998 / 11472

Erdur, Oguz (1116 Amsterdam Ave, New York NY 10027 [e-mail: oe7@columbia.edu]), **Modernity and Transformed Repressions: Sexuality in Urban Turkish Society.**

¶ Discusses the intricate cultural politics around sexuality in Turkey, exploring the extent to which these issues contribute to the transformation of the definitions of gender & how these dynamics relate with the Turkish modernity. The profound eccentricity of the social & historical aspects of the Turkish modernity experience culminated in the economic liberalization period that began in the early 1980s. The emerging possibilities of the new liberal condition have designated a terrain on which a multiplicity of discourses on, norms about, & representations of, sexuality have crystallized. The appearance of liberation created by media representations of new lifestyles & changing sexualities has remained somewhat deceptive, however, because it does not preclude the norms of collective morality & regulations on sexuality that both Islam & conservative nationalism prescribe. On the contrary, the conjunction of liberated aspirations with aggravated ideals of moral enforcement, redefined by the revival of contemporary Islamist movements, intensifies the "cultural schizophrenia" with which the Turkish society has arguably been afflicted. Focus here is on how these conflictual dynamics define new repressions that are counterintuitive. A juxtaposition of the changing positions of the female actors of Islamism & the young, educated, Westernized, urban women reveals how the former enjoy empowerment by gaining public visibility & mobility, while an intensified tension between the seemingly emancipatory possibilities of liberal lifestyle & the preponderate conservative norms, eg, modesty, morality, & virginity, haunts the psyches of the latter as subtle, yet grievous, social repressions.

Eremitcheva, Galina (Instit Sociology Russian Academy Sciences, 7th Krasnoarmeyskaya 25/14 198052 Saint Petersburg [fax: 812-316-29-29; e-mail: inso@ego.spb.su]), **Failed Coping Strategies of Women in the Period of Transition in Russia: Biographical Perspective.**

¶ Investigates the unsuccessful coping strategies of 20 Russian women in St. Petersburg, drawing on 1993 & 1996 biographical interviews. The panel allows tracking of changes in the coping strategies & identification of factors hindering their realization. Barriers for realization of coping strategies are age & employment discrimination, lack of money for professional training & qualification growth, & fear of losing scanty, but guaranteed, earnings & fringe benefits in the state sector. The women's psychological inertia was reinforced by the objective barrier embedded in the contract hiring system of the post-Soviet private sector that now presumes a lack of social guarantees of the employee & hard market competition. Failure to realize coping strategies is often accompanied (or caused) by frustration & relative deprivation, break of former solidarities, individual escapism, & conversion to religion.

Ericsson, Kjersti & Larsen, Guri (Dept Criminology U Oslo, Blindern N-0130 Norway [tel/fax: 4722850-141/252; e-mail: kjersti.ericsson@jus.uio.no]), **Children's Strategies in the Intersection between Home and School.**

¶ Explores how standards of child socialization, division of labor in the process of socialization, & power of definition are negotiated between family & school, drawing on interviews with children, parents, & teachers, supplemented by observation. Parents & teachers may perceive children as living in two separate worlds—home & school; however, from the perspective of the child, the separation may not be so evident. Children probably experience one continuous & coherent life created by them

"from below." Data reveal how children try to master challenges (ie, overlapping problems & resource mobilization) they meet in moving between arenas (home, class-room, schoolyard, peer group). It is argued that children's strategies are mirrored in the frustrations of adults, & in adult attempts to create counterstrategies when agendas of children & adults do not coincide. Sometimes children also approach adults to get help to accomplish something they consider important. In this way, the tales of adults contain information about children as social actors.

Eriksen, John (Norwegian Social Research, Munthesgt 29 N-0260 Oslo [tel/fax: 47-22-54-12-89/01; e-mail: John.Eriksen@isaf.no]), **Marriage and Cohabitation and the Role of Family Policy: The Case of Norway.**

¶ There has been a dramatic increase in the number of cohabiting couples since the 1970s in Norway, as contrasted with the very traditional family life of the 1950s & early 1960s. Different ways in which family researchers have explained unwed cohabitation in terms of social status, education, employment, religion, geographic location, & social values are reviewed, & different features of Norwegian policy relevant for cohabitation/marriage are analyzed. It is shown that family policy has barely been on the political agenda, or political reforms & legislation affecting the family have not been termed family policies. Thus, family policy is analyzed in broad terms, including finances & property, social security & social support, custody & child care, & family law. The degree to which cohabitation is legally & socially accepted is also described. To link changes in marriage/cohabitation patterns with family policy reforms, it is hypothesized that, with few exceptions, family policy reform have been adjustments to changes in family behavior that have already taken place.

¶ To test whether economic ups & downs are governed by laws, an open system view is advocated, assuming that economic changes might be dependent on factors exceeding societal boundaries. Macroecological causes, independent of societal systems, might affect the dynamics of world economies to measurable degrees. Per A. L. Chizhevsky's (1924) hypothesis, solar magnetic activity, causing geomagnetic storms & atmospheric, are suspected to induce mental oscillations of epidemiological scope affecting changes in mass behavior. Data are from Goldstein's (1988) base dating scheme, providing beginning years of economic up- & downswings, with variables being prices, production, trade, innovation, capital investment, & real wages for British, French, German, Italian, Belgian, Swedish, US, & other national economies. In exploring whether Goldstein's turning points in economic history correlate with turning points in the solar cycle, Q-analysis based on Monte Carlo simulation revealed strong statistical relationships. Economic turning points with up & downward directions occur more frequently in solar maximum or adjacent years. However, not every solar maximum period will go along with changes on the world level. It is assumed that solar maximum years without global changes might be accompanied by changes on a smaller scale with opposing directions; a synchrony of changes worldwide might require particular systemic conditions.

✓ **Escobar, Arturo** (Dept Anthropology U Massachusetts, Amherst 01003 [tel/fax: 413-545-2659/9494; e-mail: aescobar@anthro.umass.edu]), **Eurocentrism in the Age of Globalization? The Erasure of Place in Contemporary Political Economy, Anthropology and Geography.**

¶ Contemporary discourses of globalization in many disciplines—particularly political economy, geography, & anthropology—reveal a constitutive asymmetry in their explanation of reality, by which the "global" is associated with space, capital, history, & agency, while the "local" conversely is equated with place, labor, tradition, & status. This asymmetry, some critical scholars have argued, amounts to a veritable erasure of place & place-based modes of consciousness & practices. Here, consequences of such an erasure are examined, & ways suggested to launch a "defense" of place & place-based practices by focusing on the ecological domain & the struggles being conducted by rainforest social movements. This defense of place, it is contended, is not only visible in actual social movement strategies that privilege local cultures & ecologies, but it offers a theoretical terrain for exploring a crucial question that presents itself to those wishing to rethink the local & global from non-Eurocentric & globalocentric perspectives: Can the world be reconceived & reconstructed from the perspective of the manifold local cultural, ecological, economic, & social practices still present in many Third World communities? Posed thusly, the question of the local & the global is transformed in ways that liberate, rather than bury, the potentiality of place.

✓ **Esim, Simel & Cindoglu, Dilek** (International Centre Research Women, 1625 Massachusetts Ave NW #550 Washington DC 20036

[tel: 202-332-2853; e-mail: sesim@icrw.org]), **Women's Organizations in 1990s Turkey: Predicaments and Prospects.**

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Positions women's organizations in a historical & political context in Turkey, discusses the organizational capacity & potentials of these organizations in the sociopolitical climate of 1990s, & points out possible institutional structures & cooperations between women's organizations, government agencies, & international donors that could be developed to achieve the policy objective of gender equity. Practical & strategic gender needs being addressed by women's groups in Turkey are outlined, & women's groups are categorized with respect to their historical & political agendas, ie, as Kemalist, Islamic, or feminist. Both the Kemalist & Islamic groups consider women's position in society symbolic of their larger political projects. Kemalists advocate women's public participation in political, social, & economic life as secular & nationalist agents. The Islamists advocate the view that a woman's place is in the family as a mother & wife. Only the feminist women's organizations advocate a gender agenda that focuses on equity & empowerment for women themselves. While the position of women in society is a central political issue for feminist groups, they have to carve a space for themselves in the same political ground as Kemalist & Islamic discourses.

Etzkowitz, Henry & Leydesdorff, Loet (Social Science Division State U New York, Purchase 10577-1400 (tel/fax: 914-251-6600/6603; e-mail: spi@interport.net)), **A Triple Helix Model of Innovation in University-Industry-Government Relations.**

¶ Examines the triple helix model, which denotes the evolutionary dynamics of network relations between universities, industry, & government, considering its utility for informing science & technology policies. An emerging overlay of global communication between research & development, markets, & policies induces adjustment mechanisms in the institutional dynamics. The results of these interactions increasingly form the basis of regional, national, & multinational innovation systems in various parts of the world. At some places, governments have taken the lead in these adjustment processes, while at other places, industries &/or regional university centers carry the innovative functions. The three partners relate mutually, & continuously select reflexively on these relations, thus codifying recombinations in mutual adjustment processes between the institutional partners carrying this complex communication system. For maintaining this reconstructive reproduction, structures have to be increasingly differentiated in each of the spirals. Whereas Galbraith's (1968) "technostructure" can be considered as an early example of interface management between research & development & markets, a network mode for the production of scientific knowledge has more recently emerged on the academic side (eg, Gibbons et al, 1994).

Evans, Graeme (Centre Leisure & Tourism U North London, N7 8HN England (tel/fax: 171-753-5065/503-5051; e-mail: g.evans@unl.ac.uk)), **In Search of the Cultural Tourist and the Post-Modern Grand Tour.**

¶ Proposes a conceptual & functional definition of cultural tourism in the context of World Trade Organization & European Union (EU) policies toward it. Issues of multiculturalism & the tension between the signifiers & artifacts of the past vs those of today's hybrid postindustrial cities raise the question: Whose image & culture is being promoted? Data from 6,000 tourists in nine European countries confirm Pierre Bourdieu's conception that there is a preference for heritage tourism over live & visual arts consumption. The EU's "Europeanization and Urban Renaissance" project contrasts with cultural tourism in Central America, where staged Mayan heritage sites are separated from & favored over their living descendants.

98S34248 / ISA / 1998 / 11489

Evans, Jessica R. & Dugay, Paul (Open U, Milton Keynes MKT 6AA Buckinghamshire England), **The Cultural Turn: Disciplines and Disciplines.**

¶ Interdisciplinary has long been a familiar term in discussions of education & pedagogy. However, in recent years it has acquired a new force & sense of urgency in the social & human sciences, in large part because of imperatives of interdisciplinarity that are assumed to flow from those epistemological developments collectively known as the "cultural turn". Here, this emerging interdisciplinary imperative, is problematized through an examination of the main theoretical tropes of the cultural turn. To do so is not to dismiss the recent upsurge of interest in culture per se, but rather, to delineate the limits beyond which it becomes distinctly metaphysical. Primary concern lies with the implications of modeling social practices & social identities on insights derived from a particular approach to the study of language. The consequences of this approach for disciplinary integrity are considered, & the claims to political efficacy its proponents make assessed.

98S34249 / ISA / 1998 / 11490

Evans, Karen (Instit Social Research U Salford, M5 4WT Lancashire England (e-mail: k.evans@mcr1.pople.org.uk)), **Populating the Digital City.**

¶ Research into the use of public spaces in cities in the industrialized world has shown that these are often far from the democratic & openly accessible spaces of planners' & architects' ideals. However, these spaces

can also be sites of imaginative & unplanned uses, as different groups appropriate spaces for their own particular needs & desires. By first comparing the democratic & accessible ideal of cyberspace to the reality of its use, & then comparing the use of cyberspace to that of physical space in the urban realm, the question is addressed of whether the same relationships of power & exclusion may be played out in the digital sphere as are present in the physical, public sphere. Findings from research conducted with residents of three marginalized & disadvantaged areas in the Greater Manchester region (England) are drawn on to address notions of exclusion & marginalization from the digital sphere & to discuss how residents might make use of digital technologies & whether they might be able to appropriate certain places in cyberspace for their own & their communities' needs.

Ezzine, Abdelfattah (IURS Rochet Instit, BP 6287 Morocco), **Tanger, la ville méditerranéenne** (Tangier, the Mediterranean City). (FRE)

¶ Considering its geostrategic position in the southwest Mediterranean, Tangier, Morocco, has had an undeniable historic importance in the international & national playing field. During the Arab empire, Tangier was a major city & seaport. After the Middle Ages, it was occupied by colonial Spain, Portugal, & England. Since the end of the 19th century, Tangier has been Morocco's seat for European consular heads, & since the second industrial revolution in the West, its importance in maritime navigation has grown considerably. Continuing pressure by imperial powers at the start of the 19th century & their increasing impact on the *sherifate* led to the rapid rise of Tangier as a key seaport & diplomatic capital.

98S34256 / ISA / 1998 / 11497

Fadayomi, Theophilus O. (Environmental & Sustainable Development Unit African Development Bank, 01 BP 1387 Abiojan 01 Ivory Coast [tel/fax: 225-205-368/033; e-mail: T.Fadayomi@afdb.org]), **Circulation of African High Level Manpower.**

¶ Circulation of high-level African manpower, often characterized as brain drain from countries of origin & brain gain in states of immigration, derives largely from the continent's prolonged depression. The latter's unequal economic impact is usually the explanation for the inter-African migration of skilled personnel from one country or region to another. With the creation of economic unions, such as ECOWAS, member countries like Nigeria & Ivory Coast became alternative destinations for high-level manpower from neighboring countries, who probably would have migrated to metropolitan countries. Another migration phenomenon related to economic depression has been the selective migration of Africans to the developed Western societies, especially Europe & North America, & the oil rich countries of the Middle East. Other important factors driving African brain drain are (1) the increasing supply of high-level manpower deriving from the rapid rate of population growth & the ensuing creation of a surplus pool of educated & skilled cadres; (2) integration of African countries into the international market in professional & scientific skills, whereby high-level manpower with internationally negotiable education & skills could seek professional advancement & recognition in metropolitan countries; & (3) the unstable political situation in many African countries, which engenders the politics of repression, often affecting intellectuals. The role of the international mass media & tourism in painting a rosy picture of the destination to prospective migrants cannot be underestimated. In general, the migration phenomenon often results in the loss of critical skills, impacting development as African countries of origin are forced to source similar skills from developed countries at higher costs. This calls for well-coordinated policy measures to reverse the permanent loss of essential manpower from the continent that needs it most.

98S34257 / ISA / 1998 / 11498

Fagan, Tony (Center Studies Social Sciences Edge Hill University Coll, Ormskirk Lancaster L39 4OP England [tel/fax: 01695-575171/579997; e-mail: Fagan@staff.ehche.ac.uk]), **Power, Risk, and Reflexive Modernization.**

¶ The emergence of social scientific interest in risks associated with modernization has taken place alongside the growth of "enewi" social movements, which ask fundamental questions about the integrity & validity of established political, economic, & social structures. The most significant of these is the environmentalist movement in its various forms & the emergence of a risk perspective linked with concerns about the sustaina-

bility of resources under capitalism. It is argued here that the inequalities & contradictions that prompted class analysis, & the power differentials thus revealed, continue to exist. In the mid-1980s, Mary Douglas suggested that gaps in a system of thought point to a "regularly scheduled obnoxiousness," which reveals much about the institutional framework in which it exists. It is suggested that the development of risk discourse in the social sciences continues to reflect that obnoxiousness. The contrast between the level at which this discourse is conducted & the material reality in which people live their lives is used to emphasize this point.

98S34258 / ISA / 1998 / 11499

Fägerlind, Ingemar E. & Kanaev, Alexander (Institut International Education Stockholm U, S-10691 Sweden [tel/fax: 46-8-16-43-23/15-31-33; e-mail: ingemar.fagerlind@interped.su.se]), **Shaping a Democratic Identity: A Study of the Expectations of Citizenship Education in Five Central Asian Republics.**

¶ Examines citizenship education in the restructuring processes for five countries of the Central Asia subregion (Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan, & Uzbekistan), with special attention given to the readjustment of the new concepts for national identity in civic disciplines in national education systems. The process of building new independent countries requires a new approach toward national history, culture, & identity in the national education systems & in the curricula. Questionnaire data from the Ministries of Education in the five countries are analyzed. Discussed are what young people by ages 14-15 are expected to learn through school curricula on topics like national identity, political structures, international relations, religion, economic principles, human rights, the rule of law, mass media, etc. How these new nations are dealing with the questions & how they are cooperating are discussed.

98S34259 / ISA / 1998 / 11500

Fairbrother, Peter (Centre Comparative Labour Studies U Warwick, Coventry CV4 7AL England [tel/fax: 44-0-1203-523-496/497; e-mail: P.D.Fairbrother@warwick.ac.uk]), **The Depoliticisation of the State and Implications for Trade Unionism: Recent Developments in the United Kingdom.**

¶ The British state has been significantly restructured over the past 20 years, eg, there has been a major reorganization of the public sector, resulting in the fragmentation of the state via internal reorganization of the state apparatus & the redefinition of state boundaries via privatization. The process of restructuring has involved the depoliticization of the state so that it, as an employer, has been reorganized as a managerial state, with changes in the state labor process & class relations. In the process of this restructuring, state-sector unions face a set of challenges that both threaten & open up opportunities for them. The question faced by unions is how to respond to these developments.

98S34260 / ISA / 1998 / 11501

Fakiolas, Ross (U Athens, GR-15772 Greece [tel/fax: 301-7752-544; e-mail: fakiolas@netor.gr]), **Economic Factors and the Emigration of the Highly Skilled.**

¶ Explores the thesis that skilled migrant outflows have short- & long-term, as well as tangible & intangible, costs & benefits for the sending country. A considerable residual factor of the world economic growth has been attributed to the knowledge acquired through skilled migrations. A skill outflow may constitute a negative, zero, or positive sum game for the sending country. The likely improvement in the financial position of the sending country through migrant remittances may enable it to increase technology & expertise transfers from abroad. This may be more beneficial than keeping at home unemployed & rapidly depreciating skill. But a negative sum game may result if skilled emigrants are employed in unskilled jobs abroad. Less developed countries may train undergraduates adequately & at low real costs. Should those countries increase their indigenous & alien student intake when most alien graduates will repatriate & many indigenous students emigrate? Developed countries could specialize each in a (limited) number of postgraduate courses on the basis of their comparative economic advantage, attracting students from both developed & developing countries & recruiting qualified teachers from any available source. It would augment the two-way migration flows of students, academics, & researchers & expand the rational use of the academic capital on a global basis.

Fandino, Juan Mario, Griza, Aida, Tirelli, Claudia & Schabbach, Leticia (Sociology Dept Purdue U, West Lafayette IN 47907 [tel: 765-497-4166]), **Prison Programs Effects on Recidivism: The Case of**

f

Southern Brazil.

¶ Quantifies the effects of three causal dimensions of crime recidivism—prison educational & occupational programs, socioeconomic background (various group statuses), & crime types—as they appeared in official criminal justice & prison records in Rio Grande do Sul State, Brazil. Regression of recidivism average rates revealed that the three dimensions have important separate & interactive effects, with a corrected multiple correlation coefficient above .53. Some programs have a strong negative effect on recidivism, as expected, but others have a positive effect, attributed to the selectivity of program beneficiaries in the prisons. Overall program dimension accounts for about 10% of the variance in recidivism.

¶ **Farmakides, Anne-Marie** (Laboratoire sociologie changement institutions Centre national recherche scientifique, 59 rue Pouchet F-75017 Paris France (tel/fax: 331-40-25-10-67/66)), **Tripartite Participatory Research: Researchers, Trade Union and Company Representatives.**

¶ Based on 2 years of research & 280 employee interviews, the organizational modernization of a large French public company & its repercussions on social relations are examined. Focus is on the method of collabor-

ation adopted by the three parties involved—researchers, trade union, & company representatives—in defining the subject to be studied, conducting fieldwork, monitoring intermediate results, & reaching final conclusions. The object is to illustrate the contribution & limits, from the researchers' point of view, of participatory research, & to highlight the particularity of three-way collaboration: (1) The diverging interpretations of the two other parties can stimulate the research & test the researcher's objectivity. (2) Parties who are simultaneously actors, in the change under observation, may find it difficult to endorse the same conclusions. (3) The risk that the two other parties might adopt an instrumental attitude toward the research program is not necessarily neutralized by their divergent positions & may even increase when it comes from two sources.

¶ **Favell, Adrian** (European Research Centre Migration & Ethnic Relations U Utrecht, NL-3584 CS Netherlands (tel/fax: 31-30-253-3597/9280; e-mail: a.favell@fsw.ruu.nl)), **"We Are All Transnational Now." Comparing Transnational Elites and Transnational Immigrants in the European Union.**

¶ Explores whether a new political opportunity structure at the European level exists for ethnic minority migrants in parallel to the one being exploited by new transnational elites working outside of their traditional national contexts in the orbit of the EU (European Union). These elites are clearly beginning to capitalize on the new European opportunities

opening up in the wake of EU integration & institution building. Such groups are interesting precisely because they are constructing careers & pursuing interests that depend on a fundamental shift in the primary context of their social & political identities: abandoning the national contexts that would have previously bound & defined their actions for a new transnational European context in which their efforts are often devoted to undermining the grip on power & sovereignty held by national governments & state institutions. Given that immigrants have never been invested wholly in their adopted national contexts, & that many have long experience with transnational actions & investments, it may be hypothesized that they would be among the first to benefit from any postnational shift that has rendered these transnational forms of social & cultural capital more valuable or powerful. The history of postwar immigration to Europe is traced, & several models of assimilation, socialization, & nation building are identified. Illustrative examples are offered, highlighting empirical work from Brussels, Belgium, where a combination of these developments can best be found: (1) a transnational elite, exploiting new European opportunities; (2) large numbers of immigrants (principally Turks & Moroccans) struggling for their place in a fragmenting country moving toward ideas of citizenship & governance beyond the nation-state in its management of immigration questions; & (3) the institution-building politics of the EU itself as a venue or channel for immigrant participation & representation.

Featherstone, Mike (*Theory Culture & Society* Centre Nottingham Trent U, NG1 4BU England (e-mail: mike@featherstone.demon.co.uk)), **The Reflexive Life Course and the Ageing Body.**

¶ Rather than seeing the reflexive life course as universal, it is argued that it should be related to the orientation & habitus of particular groups in the new middle class, especially cultural specialists & intermediaries. Common to many reflexive accounts is a particular view of the relation of the self to the body that emphasizes the capacity of the mind to steer the body. The implicit perspective on the life course is that of an active, decisive, youthful, fit, energetic, mobile person. There is little sense of the body in pain, the decline associated with later life, the embodied experience of the aging process, & the possibility of different cultural definitions of the body, body image, health, & risks on the part of different groups. There is also little sense that aging bodies are gendered, & the decline of physical appearance & bodily functions (which has been referred to as the mask of aging) may work differently for men & women. Explored is the relationship between the life course & representations of the aging body in face-to-face & mediated interactions.

Feldman, Shelley (Dept Rural Sociology Cornell U, Ithaca NY 14853 (tel/fax: 607-255-8493/254-5000; e-mail: RF12@cornell.edu)), **Provincial State Practices in the Building of Nationalist Sentiment: The 1952 Language Movement in East Pakistan/Bangladesh.**

¶ Explores the emergence of a growing Bengali sensibility in the context of the language movement in East Pakistan in 1952. Under Pakistani state demands that Urdu be adopted as the lingua franca, this movement attempted to gain recognition for the Bengali language, leading to a growing sense of difference & distinction among the peoples of East & West Pakistan. This movement became linked to the eventual emergence of independent Bangladesh by challenging linear interpretations of historical change. Understanding of the formation & organization of the movement is also linked to processes of state formation during the period when Bangladesh was part of (a colony of) west Pakistan. This historical study provides a window on how liberatory movements emerge through mass mobilization & the organization of civil society, as well as through opposition by forces in the state bureaucracy. The confluence of these capacities, often examined separately, shapes processes of inclusion & exclusion, as well as notions of identification & belonging.

98S34272 / ISA / 1998 / 11513

Feldman, Susan, Kamler, Barbara & Threadgold, Terry (Alma Unit Women & Ageing U Melbourne, Parkville Victoria 3052 Australia (tel/fax: 03-9344-4311/7959; e-mail: seff@dyde.its.unimelb.edu.au)), **Writing Wisdom: Counter Narratives of Ageing.**

¶ Explores aging women, ages 60-90, who are living independently in their communities, focusing on stories they tell in writing workshops & video diaries, & describes the contexts that allowed their stories to be

told. Collective workshop settings counter stereotypes of aging as deterioration & loss & build more complex understandings, based on their own experiences. The women's engagement in a rigorous intellectual community—in critical process of writing/filming, talking, rewriting, & filming—positioned them as powerful collaborators in the research process. Their stories challenge dominant narratives of older women's sexuality, courtship, solitude, & family relationships & have a great deal to say to a culture that reveres youth, idolizes the body, & fears death.

Felipe, Imelda M. (Sophia U, Tokyo Japan (tel/fax: 011-81-3-3445-9206; e-mail: i-felipe@hoffman.cc.sophia.ac.jp)), **Globalization, Out-Migration and Intermarriage: Philippine Government Policies Related to Filipino Women.**

¶ The unprecedented pace of globalization has had a profound impact on the political, economic, & sociocultural makeup of all societies & nations, including massive population movement locally & internationally. One strategy of Filipino women, in the absence of well-paying jobs locally, is to go abroad. Although not a traditional country of immigration, Japan has become an attractive destination for these women, particularly since changes in Japanese immigration law have allowed easier entry during the 1990s. The procedure for visa application however, remains difficult. Marrying a Japanese man is a way of avoiding this difficulty, especially since a number of Japanese men are seeking Filipino wives. The Philippine government is urged to adopt measures addressing the needs of the growing number of Filipino women leaving the country as fiancées & spouses of foreign nationals, & policies & programs designed for this group must be evaluated to determine their effectiveness, even after women go to the host country. Examined here are Philippine government policies & programs concerning these women in the context of Filipino-Japanese intermarriage.

Fernandez, Francisco J., Sanchez, Ximena & Villarroel, Gladys (Dept Sociologia U Chile, Santiago (tel/fax: 56-2-67877-81/77; e-mail: fernanm@reuna.ol)), **Children, Mothers and Teachers: Convergences and Divergences on Television Evaluation in Chile.**

¶ Survey data on TV exposure & audience evaluation of programs in a random sample of elementary school children, their mothers, & their teachers in two urban settings in Chile show that teachers exhibit a lower degree of TV exposure. Further, in relation to program evaluation, children have a more positive evaluation than mothers & teachers, stating that they learn positive values & important material for their school education that differs from what is learned at school. Teachers mainly had negative evaluations of TV content learned by children, which emphasized violence & consumerism, & believed that children's exposure to TV makes teaching difficult. Discussed are (1) how children receive TV messages, rejecting passive reception, & (2) how teachers' negative attitude toward TV & their lack of acquaintance with children's TV use in the current context of high child exposure delays the use of TV as a well-suited educational tool.

98S34276 / ISA / 1998 / 11517

Ferrarotti, Franco (Dipt sociologia U Studi Roma, I-00198 Italy), **Life-Histories between Text and Context.**

¶ If biographical texts are taken as meaningful documents of social reality, it is necessary, in a preliminary way, to develop a specific theory of personality formation whereby the individual is not an absolute. Rather, the individual is conceived as neither totally free nor as a mere epiphenomenon of the social, but as a reality conditioned by the given historical setting. The use of personal (autobiographical) texts passes, then, through various stages as their interpretation requires the understanding

f

of the connection between text & context. In each life history, or text, specific problem areas should be identified & confronted with the global context. The connection between historical moment & lived experience is thus achieved. The context, then, has a triple function: general framework, evocational, & overall statistical & socioeconomic. The role of memory is fundamental, but memory is, by its nature, selective &, as such, cannot be trusted & needs to be systematically checked against the contextual features. This amounts to a dialectical process in which social structures & personal destinies tend to clash & eventually meet.

98S34277 / ISA / 1998 / 11518

Ferrarotti, Franco (Dpt sociologia U Roma 'La Sapienza', I-00198 Italy (tel/fax: 39-6-841-6770)), **Sacred and Religious in Tension: From Bureaucratized Religion to Religiosity as a Personal, Intimate Experience of the Individual.**

¶ Conceives religion as the administrative arm of the sacred to the point that, whenever a given church or established religion claims a monopoly on the sacred, the sacred itself, far from being opposed to the profane & its market orientation, runs the risk of being treated like a scarce commodity. Hence, current trends lean toward a nonritualistic & nonchurch religion in which personal experience gets the upper hand vis-à-vis the religious collective orthodoxies. Confusion of the meanings of "sacred" & "religious" is perhaps responsible for the fashionable theory of the eclipse of the sacred in industrialized societies. Actually, in these societies, the need for the sacred appears to be greatly incremented. What seems to be under attack & losing its grip over believers is organized religion, which, in the near future, will probably be seen as a desacralizing structure.

Ferree, Myra Marx, Sperling, Valerie, Risman, Barbara, Gurikova, Tatiana & Hyde, Katherine (Dept Sociology U Connecticut, Storrs 06269-2068 [e-mail: Barbara_Risman@ncsu.edu]), **The Russian Women's Movement: Activists' Strategies and Identities.**

¶ Seminars for developing women's political activism in Russia provided the basis for field observations & surveys of participants & leaders in the emergent Russian women's movement. The seminars were attended by an elite sample of activists, including those who were long-term participants in the *zhensovety*, those newly mobilized in Western-influenced, explicitly feminist groups, & the majority, who were engaged in women's nongovernmental organizations with a variety of specific goals. Activists of all three types had both a pragmatic orientation to specific, local needs as well as a holistic, strategic one. Activists differed, however, in the extent to which they saw women in politics as more moral than men, as reliable advocates for women's interests, & as basing their politics on their roles as mothers. They also differed in their willingness to define themselves as feminists, although they commonly criticized gender discrimination & valued consciousness-raising about gender issues. Women's movement politics in Russia, more than in the West, is directed toward building the basis of civil society & accountable, democratic government.

Ferreira Filha, Maria de Oliveira & Lazarte, Rolando (U Federal Paraíba, João Pessoa PB CEP 58051-970 Brazil (tel: 00-55-83-216-7229; e-mail: marfilha@openline.com.br)), **El viaje imaginario: el lugar cotidiano de la locura en familias de João Pessoa** (The Imaginary Trip: The Everyday Place of Mental Illness in Families of João Pessoa). (SPA)

¶ Considering the fact that the family generally makes the decision to hospitalize the mentally ill individual, the goal here is to develop an awareness of the major problems they face & develop intervention mechanisms to improve their life together. Presented is a descriptive study with a qualitative perspective of 24 families in João Pessoa, Paraíba, Brazil, with a person designated as mentally ill who has been hospitalized at least once for psychiatric treatment. Results show that 79% of the parents interviewed noted crisis as the principal reason for hospitalization. Several daily family problems with the mentally ill are identified: aggressive behavior, disobedience, refusal of medication, carelessness with personal hygiene, insomnia, & not doing homework. The professional help requested by the parents included how to deal with crises, knowledge about psychotropic medications, & a locale for psychosocial rehabilitation. It is concluded that frequent hospitalizations are closely related to difficulties in family living together & the lack of social programs & other available community resources for helping with the treatment & social rehabilitation.

98S34280 / ISA / 1998 / 11521

Ferreira Filha, Maria de Oliveira & Tavares de Andrade, José Maria (U Federal Paraíba, João Pessoa PB CEP 58051-970 Brazil (tel: 55-83-216-7229; e-mail: marfilha@openline.com.br)), **Challenges for an Interdisciplinary Practice in Mental Health.**

¶ The complex nature of mental health/illness requires interdisciplinary practice in psychiatry & in the institutions that offer psychiatric & mental health assistance. But there is still fragmentation of the therapeutic process, as a consequence of the academic formation of professionals & other factors. Qualitatively analyzed here is the working practice of a multiprofessional team (physicians, nurses, psychologists, social workers, & sociologists) developed in a psychiatric facility of João Pessoa, Brazil, to identify, in the daily working routine, obstacles for an interdisciplinary practice. Semistructured interview data from 8 professionals, as well as field observation, show (1) conflictive/competitive relations between professionals; (2) lack of interaction & integration between the members of the team; & (3) corporative attitudes, fear, & professional insecurity that could be obstacles for an interdisciplinary practice. It is concluded that recognizing its complexity is a prerequisite for realization of interdisciplinary practice.

Ferreira-Da-Silva, Luisa M. P. & Alves, Fátima F. (U Aberta, 4250 Porto Portugal (tel/fax: 351-2-8302611/0249; univab.luisafs@mail.telepac.pt)), **Lay Knowledge about Schizophrenia-Schizophrenics and Their Relatives in Portugal.**

¶ Portuguese community psychiatry stands on family as the almost exclusive social support structure for nonautonomous mentally ill people. The relationship that society keeps with mental illness reproduces tradition (family is the integrative social institution) & simultaneously integrates modernity (community psychiatry professional theoretical thinking). Here, this apparent contradiction is hypothesized to be associated with a prescientific lay knowledge about mental illness (schizophrenia). The kind of rationality existing in ill people & their families regarding schizophrenia is explored, drawing on interview data from 74 schizophrenics at a psychiatric hospital & 29 of their relatives. Portuguese mental health policy & global data about Portuguese psychiatry are also examined.

98S34283 / ISA / 1998 / 11524

Fiechter, Erik (U Amsterdam, NL-9012 CE Netherlands (tel/fax: 020-5252259/2179; e-mail: Fir@hesas.nl)), **Sociology and Self in a Late Modern Age.**

¶ The individual contemplating studying sociology might well be tempted to read a book by today's best-known sociologist: Anthony Giddens. However, while Giddens's picture of sociology might appeal to the reader's self-image, it would be a rather peculiar one as far as sociological theory is concerned. In fact, trained sociologists might feel somewhat surprised with Giddens's present-day focus on the autonomous agent, showing a similarity with Sartrean notions. It appears that Giddens strongly feels that sociology still has a crucial role to play in enlightening agents in an era of shattered experience. In doing so, however, he seems to endorse their self-image as free agents. It is illuminating how differently someone like Zygmunt Bauman (1991) views the effects of expertise & expert systems: if one follows Bauman's argument, the competent agent becomes a far more ambiguous character.

Fiedeldey, André C., Craffert, L., Fiedeldey-Van Dijk, C., Marais, J. L., Van Staden, F. J. & Willers, V. (Dept Psychology U Pretoria, Brooklyn 0181 South Africa (tel/fax: 27-12-420-3041/2404; e-mail: fiedeld@libarts.up.ac.za)), **Complexity as Reality: A Second-Order Cybernetic Analysis of Trans-Cultural Data on Human Perceptions of**

Environmental Change.

¶ A cybernetic approach to the analysis & interpretation of Perception & Assessment of Global Environmental Change study data from four language groups (Afrikaans, Zulu, Sotho, English (total N = 801 in urban & nonurban regions)) will illustrate the relevance of certain basic systemic assumptions. Results suggest that the traditionally conceived ethnic variable is much more complex than is usually acknowledged & is affected by socioeconomic situational factors, eg, poverty. The transactional relationship between humans & their natural environment is seen as also being mediated by cultural factors that are fundamental to differences found in transcultural data. Among these are respondent cosmology or worldview & conceptual aspects of language that contribute to a constructivist mapping of different realities. Cultural & situational factors need to be carefully considered in a macrosystemic framework. They will exert a significant influence on the effectiveness of intervention strategies designed to bring about changes in human values, attitudes, perceptions, & behavior vis-à-vis the environment. Multimodal intervention strategies that are context-sensitive & -specific are proposed as the best possibility for facilitating second-order change.

98S34285 / ISA / 1998 / 11526

Fiedelley-Van Dijk, Carina (Dept Psychology U Pretoria, Brooklyn 0181 South Africa (tel/fax: 27-12-420-3430/2404; e-mail: fiedelley@libarts.up.ac.za)), **Faces of Complexity in Research Methodology: Delphi Contributions.**

¶ In an international Delphi study where respondents commented by means of brainstorming, quantifying descriptions in terms of percentages, & schematic presentation of their ideas on issues regarding research methodology, notions of complexity became a growth experience for the research team. Almost every level & dimension of research methodology were presented with unique attributes that were observed, categorized, & classified into themes & coded during first- & second-order data analysis of the responses. On a third-order level, the observations were conceptually labeled as contributing to complexity. This conception is discussed by following two viable approaches, ie, by looking into issues raised by the respondents regarding research methodology from (1) different levels of expertise, & (2) seemingly different paradigms (ie, positivistic & idealistic) used by respondents. Patterns in these faces of complexity, & observed on the majority of levels, are highlighted. These may be used to explore the meaning of each face in an effort to make it understandable.

98S34286 / ISA / 1998 / 11527

Field, Mark G. (Davis Center Russian Studies Harvard U, Cambridge MA 02138 (tel/fax: 617-495-1719/8319; e-mail: mfield@hsph.harvard.edu)), **Deconstructing Socialized Medicine and Reforming the Russian Health Care System.**

¶ The collapse of the USSR was accompanied by an effort to transform socialized medicine into a hybrid system involving destatization, decentralization, health insurance financing, privatization, competition, market efficiencies, & greater autonomy for the medical profession, while preserving the constitutional right of universal, though not necessarily equal, access to health care of the Soviet era. The transition has met little success because of institutional inertia, lack of experience, a shortage of funds, & a legal system unable to deal with the new conditions. Health care has become polarized between a small private sector & the underfunded remnants of socialized medicine providing mediocre assistance to most of the population. Documented here are problems associated with health reform in a developing society moving from a command to a market economy & in the grips of a serious health & demographic crisis.

Fifield, Judith A., McQuillan, Julia, Tennen, Howard, Reisine, Susan, Sheehan, T. Joseph, Hesselbrock, Victor & Rothfield, Naomi (Health Center U Connecticut, Farmington 06030 (tel/fax: 860-679-3815/1350; e-mail: fifield@ns01.uchc.edu)), **The Relative Importance of Affective Disorder in the Past and the Experience of Major Depression and Symptoms of Rheumatoid Arthritis in the Future.**

¶ To assess the relative importance of a history of generalized anxiety disorder, major depression, or a combination (morbidity) for the illness experience of rheumatoid arthritis currently & over time, 415 patients from a national panel were interviewed annually for 9 years, & depressive symptoms, pain, fatigue, & functional disability were measured. Logistic regression results show that the greatest risks for being diagnosed with a current major depression were a history of anxiety disorder, depression, or their comorbidity. The greatest risks for currently elevated

depressive symptoms were a history of either anxiety disorder or depression. Significant differences were found between the four affective history groups on their 8-year profile of fatigue, with those with a history of generalized anxiety disorder alone reporting significantly higher levels of fatigue than other groups in 6 of the 8 years. Findings illustrate the importance of a history of affective disorder in explaining the experience of current psychological distress & physical symptoms (fatigue both over time & in the present) commonly reported by patients with rheumatoid arthritis.

Figueiredo Dasilva, Carlos Alberto (Faculdade Cidade Rio Janeiro, Brazil (tel: 55-21-5816987; e-mail: aotil@unikey.com.br)), **Seduction Relationships between Teachers and Students in Physical Education and Sport.**

¶ A qualitative, ethnomethodological case study is offered in an attempt to identify, describe, & understand the phenomenon of seduction in physical education & sport. Evidence is provided that the atmosphere of physical education & sport favors the integration & expansion of intense emotions, with types of cognitive apprehension & specific affective reactions. The concepts of Sigmund Freud & Lowen are applied, & it is concluded that the seduction process is built into the interaction, with both parties contributing to the construction of that reality. If a dimension of charm exists in which the individuals build something positive, the seduction illuminates areas that until then were absent. With seduction also exists a dimension of fascination in that a narcissistic personality exercises its domain & a personality echo reinforces the behavior. An encounter with seduction is inevitable & ineluctable; what can be done is to overcome it & grow in such a way as to leave that encounter.

Filion, Normand (Dept Sociology U Toulouse II Le Mirail, F-31058 Cedex France (tel/fax: 33-5-61-50-43-76/46-60; e-mail: normand@cict.fr)), **L'Obtention de l'auto-discipline: normes sociales et surveillance culturelle** (The Management of Self-Discipline: Social Norms and Cultural Surveillance). (FRE)

¶ Presents an analysis & a reinterpretation of the premises, means, & consequences of political domination in organization through renewed forms of human resources management that rise along the reorganization of production activities such as total quality management, delegation of decision-making process, ISO norm system, autonomy, etc. From a critical paradigm standpoint, managerial tools like corporate statements, corporate culture, personnel appraisal, & reward systems are to be understood as means for a social construction of homogeneity where social norms & agents who enact them appear as targets of a conformation process. Information seeking, work & social activity monitoring, surveillance of self-discipline, & concertive control are key features of this type of management that tend to create an overarching rationality. In its essence, this form of political domination rests on an instrumentalization of culture & implies a twist in authority, as obedience is interpreted as the willingness to adopt & internalize dominant ideas, values, rationality, & more generally, normative systems. The consequences are usually a normative schism in the organization due to the partially attained goal of homogeneity & the survival of normative systems related to agents' collective identity.

98S34290 / ISA / 1998 / 11531

Filion, Normand (Dept Sociology U Toulouse, F-31058 Cedex 1 France (tel/fax: 33-5-61-50-43-76/46-60; e-mail: Normand@cict.fr)), **L'Autonomie contrôlée: discipline, gestion et conformité sociale** (Controlled Autonomy: Discipline, Management and Social Conformity). (FRE)

¶ Explores the apparent paradox raised by the recent development of autonomy (as organizational fact & conceptual framework) that takes place in an organization, considered here a structure of political & cultural inequality among its actors. When not informal & illegitimate, but rather institutionalized & accountable, autonomy tends to become a site for "full visibility" of social practices & microdecision making. As far as it is recognized as valuable & an important feature of organizational life, autonomy has to be overseen, mainly through human resources management (personnel appraisal, empowerment, etc), & therefore, its actors are targets of hierarchical surveillance & control. Moreover, the managerial necessity of gathering information (on what is, in its essence, uncontrolled) & monitoring the rationality used in decision making by rendering explicit its tacit assumptions tends to impose specific forms of autonomy. In certain circumstances, the management of autonomy tends

f

to produce social conformity & homogeneity of rationality & to engender new forms of discipline that are acceptable for the organization. Consequently, autonomy inserts itself in the dynamic of "compliant thinking," which reinforces the invisibility of domination as a basic feature of any organization.

Fine, Michael D. (Social Policy Research Centre U New South Wales, Sydney 2052 Australia [tel/fax: 612-9385-3852/1049; e-mail: M.Fine@unsw.edu.au]), **From Alternatives to Continuity of Care: Problems in the Development of Links between Hospitals, Residential Facilities and Care at Home for Older People.**

¶ Explores successful initiatives in community care in terms of improving linkages with more expensive, institutionally based, & professionalized medical services to produce continuity of care in Australia. Evidence suggests that such policies have generally fallen short in practice or have proven incapable of being effectively implemented. Drawing on primary & secondary research, examined are ideological, economic, & social structural barriers to the achievement of better-coordinated systems of care. It is argued that there is a need to go beyond the implicit functionalism that dominates most policy discussion & acknowledge the conflictual nature of power & interests involved in the provision of aged care.

Fischer, Lara (Dept Sociology U Illinois, Urbana 61801 [tel: 217-333-1950; e-mail: L-fisch@ux6.cso.uiuc.edu]), **NGO Discourse and Practice: Continuing Northern Hegemony.**

¶ Although nongovernmental organizations (NGOs) have been hailed as a new panacea in producing bottom-up Third World development, in many ways, they represent the continuing power imbalance between the North & South. Current debates, eg, NGO effectiveness, North-South organizational relations, & NGOs as civil society, when analyzed in terms of power & discourse, reveal this continuing imbalance. Here, a critical review of the literature finds that NGOs are frequently understood & analyzed outside of their global political, economic, & ideological contexts, thus obscuring global power relations. Although some development practitioners recognize the embedded nature of NGOs in the world system, & call for Northern development education & policy advocacy, large academic studies of NGOs have largely neglected the role of developed country interests, policies, & capitalist flows of the world system in understanding & analyzing the role of NGOs. Thus, Northern NGO discourse & practices continue to preserve the dominance of the North over the South in spite of their professed purpose of promoting equality.

Fischer, Tânia & Vergara, Sílvia (U Federal Bahia, 41170-290 Salvador BA Brazil [tel/fax: 5571-247-7297/336-3462; e-mail: nepol@ufba.br]), **Estudos organizacionais no Brasil: dependência, autonomia e opções de ensino e aprendizagem** (Organizational Studies in Brazil: Dependency, Autonomy and Options for Education and Training). (POR)

¶ Examines the rise in post-graduate-level studies on organizations in Brazil over the past 20 years, stressing their growing importance in light of national & international developments & their need to gain more autonomy & improve learning techniques. Recent state reforms & public policy reconfiguration, economic moves toward globalization, & the emerging roles of nongovernmental organizations in Brazilian society

combine to make organizational investigations imperative. Only in the past decade has the academic establishment begun to break away from Western-dominated (particularly French) ideas. Teaching & investigative techniques, institutions, & general trends to increase autonomy & originality over the past 5 years are analyzed.

98S34295 / ISA / 1998 / 11536

Fischer-Kowalski, Marina & Schandl, Heinz (Dept Social Ecology Instit Interdisciplinary Research & Continuing Education, Vienna Austria A-1070 [tel/fax: 43-1-526-75-01-31/523-58-43; e-mail: heinz.schandl@univie.ac.at]), **Physical Dimensions of "Modernization": The Past Three Decades in Terms of Energetic and Material Metabolism, Labour and Economic Growth.**

¶ The early 1970s saw a debate on the ecological consequences of economic growth. Two decades later, the debate tends to focus not on economic growth, but on the amounts of material & energy throughput as having disruptive effects on the natural environment, through resource depletion & pollution. The conceptual separation of economic growth (in monetary terms) & physical growth (in terms of tons & joules) led to a discussion of the interdependence of the two dimensions, & eventually was mathematically expressed in the form of environmental kuznets curves relating resource use & economic development. Still another discussion focused on the relation between environmental protection & available jobs. While, in the old growth debate, environmentalists seemed invariably to be parents of unemployment, the pollution-centered approach of the 1980s generated the idea that end-of-pipe environmental protection would create jobs. When the environmental focus shifted toward limiting physical growth, the apparent contradiction of environmental care & job creation was seen to be possibly resolved with a so-called socioecological tax reform that would raise the price of energy & resource use & simultaneously lower the price of labor. In the meantime, the data to describe the material & energetic metabolism of societies have vastly improved & may well be related to classic economic & social variables. On the basis of existing empirical analyses & of more recent data from Austria, the Federal Republic of Germany, Japan, the Netherlands, & the US, the interrelationship between the above core variables & an attempt is made to test some of the competing hypotheses.

Fischer-Rosenthal, Wolfram (Instt Soziologie Technische U Berlin, D-10587 Federal Republic Germany [tel/fax: 030-314-25-127/623-4483; e-mail: firo0733@mailszrz.zrz.tu-berlin.de]), **Biographical Constructions and Social Reality—How Real Are Biographical Narratives?**

¶ Émile Durkheim's definition of *faits sociaux* (social facts) did not solve the problem of defining the phenomena under study, but extended it beyond simple research method definitions. Questions of how social reality is constructed & maintained & how social science can have access without producing artifacts can be conceived by considering symbolic orders & communicative ways of structuring reality as central. Structuring means reproducing & transforming, ie, dealing with the material, given world as well as producing it. Here, elaborating this problem, the social function of biographical structuring is clarified. Three points are made: (1) Biography is a modern means to solve problems of modern societies. (2) Biographical structuring is used by institutions & organizations to recruit & keep personnel & produce loyal clients. (3) Biography is an ongoing joint narrative construction by individuals & their interactants to integrate their lives. It is hypothesized that current discussion in biographical research about the specious gap between idealistic narrative biographical research & realistic analysis of facts is based on a false distinction of fact & fiction; biographical structuring is intertwining living life & coming to terms with it, thus shaping what people experience & what they do, which is, in essence, producing the real social world.

98S34297 / ISA / 1998 / 11538

Fischler, Raphael (School Urban Planning McGill U, Montreal Quebec H3A 2K6 [tel/fax: 514-398-4076/8376; e-mail: raphael@urbarc.lan.mcgill.ca]), **Citizen Participation in Urban Planning in the Montreal Region.**

¶ Presents a critical analysis of citizen participation in urban planning in the Montreal (Quebec) region over the past 3 years. After briefly reviewing the history of participation in Quebec & its formal status in provincial land-use law & municipal charters, three case studies are presented: (1) A large-scale residential project in Outremont (an old suburb of Montreal) proposed by the Canadian Pacific Railway Co on one of its underutilized railyards was stopped by grassroots neighborhood opposi-

tion, followed by political opposition on the part of a new municipal administration. (2) Although three administrations had promised to use the site of the old Jean-Talon train station in northern Montreal to provide much-needed community facilities in the city's poorest neighborhood, & despite opposition by local residents, community organizers, preservationists, & planning academics, the city approved the sale of the site to a supermarket chain. (3) The Minister of the Metropolis, a new cabinet member, organized a series of public consultations with the purpose of generating the necessary consensus for the institution of a regional planning commission. The Metropolitan Development Commission for the Montreal region will be put in place, even though consensus has remained elusive. These cases illustrate three models of public participation, which vary in the degree to which citizens can actually participate in the decision-making process. The cases highlight not only the institutional but also the political constraints on citizen involvement especially the fiscal conservatism of municipal governments. The question that citizens face in many cities & countries today is whether there is a future citizen participation in planning at a time when global forces seem to dictate local policy in matters of urban development.

98S34298 / ISA / 1998 / 11539

Fisher, Eleanor (Wageningen Agricultural U, NL-6700 HB Netherlands), **Conservation Schemes and the Re-Definition of Rurality.**

¶ Discusses rural sociology approaches to issues raised by protected area conservation in sub-Saharan Africa & views the crisis in Africa wildlife management in terms of a simplistic, linear relationship between the human population, on the one hand, & resource availability, on the other. In that perspective, human social action tends to be reduced to abstract mechanisms, pressures, or descriptions of physical phenomena & instrumental rationales. In contrast, the centrality of human agency is stressed here, emphasizing people's capacity to be discriminant when using resources. In this respect, the concept of livelihood, the importance of the international community, the local dynamic of interest groups & their claims, & the management of a game reserve provide the window to explore issues of governance in situations where the reconstitution of rurality has taken place through the implementation of wildlife conservation schemes.

Fisher, Gordon M. (US Dept Health & Human Services, 200 Independence Ave SW Washington DC 20201 (tel/fax: 202-690-6143/401-6228; e-mail: gfisher@osaspe.dhhs.gov)), **Using a Little-Known Body of Historical Knowledge: What Can the History of U.S. Poverty Lines Contribute to Present-Day Comparative Poverty Research?**

¶ Extensive historical material on US poverty lines since 1870 has been assembled (& summarized in three unpublished papers), using primary sources not widely available. This material provides detailed histories of the official US poverty line & of unofficial US poverty/adequacy standards, 1870-1965. Evidence from the US, GB, Canada, & Australia demonstrate the income elasticity of the poverty line—i.e. successive poverty lines developed as absolute poverty lines tend to rise in real terms as the real income of the general population increases. Implications for poverty research & advocacy are considered: eg, pre-1965 US poverty/adequacy standards were usually developed by advocates of the disadvantaged, not academic theoreticians; which has implications for determining who may be considered qualified to develop unofficial poverty/adequacy standards today. Further, the extensive evidence for the income elasticity of the poverty line has implications for relative vs absolute updating of poverty lines. Finally, the history of US poverty/adequacy standards may be a useful point of comparison for analysts studying the development of such standards in other countries.

Fitzgerald, Rosemary (Faculty Health & Social Science Southbank U, London SE1 0AA England (tel/fax: 0171-815-5757/5799; e-mail: rfitzgerald@mailbox.ulcc.ac.uk)), **Making "Lady Doctors" for India: The Imperial Mission to Provide Medical Care and Medical Education for India's Women.**

¶ Examines how issues of gender, race, & empire were articulated in the processes & practices of imperial medicine in colonial India, later 19th-early 20th centuries. Focusing on colonial constructions of the condition of Indian women & the call for Western female doctors to provide medical relief for their Indian sisters, described is how colonial concerns permeated the struggle for women's access to medical education in GB & how colonial settings offered Western women doctors a wider sphere of

professional opportunity. Medical women who went to India in either a secular or missionary capacity attempted not only to deliver medical care to the female population, but also to develop medical & nurse training programs for Indian women. The medical encounter between women, as colonizer & colonized, involved elements of both compromise & conflict, adaptation & resistance, that reveal the complexity of imperial medicine & its consequences for the postcolonial world.

Fix, Elisabeth (Mannheim Centre European Social Research Mannheim U, D-68131 Federal Republic Germany (fax: 49-621-292-1784; e-mail: Elisabeth.Fix@mzes.uni-mannheim.de)), **Voluntary Associations and the Development of the Modern Welfare State in a Comparative Perspective.**

¶ Although voluntary associations & societies of mutual aid have played a crucial role in building the modern welfare state, this function has been rediscovered since the 1980s when welfare state expansion reached its limits. Here, variations in their contributions to social security systems in Western welfare states are examined. Findings indicate that they have played a minor role in most Scandinavian welfare states whereas they dominated the arena of the welfare regimes in the small democracies of Europe, eg, Belgium, the Netherlands, & Switzerland. Differences in the concepts that voluntary associations, friendly societies, & societies of mutual aid reflect from a sociocultural viewpoint are discussed. An explanatory model of variations in the public-private mix is proposed, & applied by showing the impact of ideas, interest formation, & institutions that gave rise to a sector of voluntary associations in very differing degrees over Western Europe. It is argued that voluntary associations are not a panacea in the reform of the modern welfare states, but will be a successful remedy only in societies with a particular tradition of the voluntary sector.

Fleck, Christian (Dept Sociology U Graz, A-8010 Austria (tel/fax: 43-316-380-3544/9515; e-mail: christian.fleck@kfunigraz.ac.at)), **German-Speaking Social Science Rockefeller Fellows 1924-1964: A Preliminary Portrait.**

¶ Data from the Rockefeller Archive & two published directories of fellowships are drawn on to construct a "prosopographic" portrait of approximately 200 social scientists from Germany, Switzerland, & Austria who received fellowships, 1924-1964, highlighting the connection between this special case of funding social science & brain drain. Of these fellows, 66% received their stipend before 1941 & the rest after WWII. The sex ratio is massively one-sided: only 7% of the fellowships went to women. The main field of research subsidized was economics. All fellows came from well-known universities, but a disproportionately large number were from Vienna. A comparison between the countries of origin & the countries of residence in 1970 shows that at least 33% used the fellowship to migrate permanently abroad; again, a disproportional number of permanent migrants came from Austria. During the Nazi period, a much larger proportion of former Rockefeller fellows left their countries of origin & emigrated abroad, especially to the US, their acculturation perhaps assisted by earlier visits.

98S34303 / ISA / 1998 / 11544

Fleck, Christian (Dept Sociology U Graz, A-8010 Austria (tel/fax: 43-316-380-3544/9515; e-mail: christian.fleck@kfunigraz.ac.at)), **History of National Sociological Association: "No Brains, No Initiative, No Collaboration"—The Austrian Case.**

¶ A more or less chronological overview suggests that the Austrian Sociological Society, established in 1950, did not really exist during its first decade. At the end of the 1950s, one man used the clothes to make it easier for him to get into the International Sociological Assoc. In the middle of the 1960s, when the government, pressed by the Organization for Economic Development, began a reform of the university system, sociology was established as a regular study & the Sociological Society was resuscitated. At the end of the 1960s, the worldwide student's movement spilled over to Austria, & self-proclaimed revolutionaries came to power. Today, the majority of full professors keep their distance from the society. From the mid-1970s, the society became a fairly typical association; establishing a journal, a newsletter, annual conferences, & sections for academic discussion. However, there were & are some peculiarities: (1) The lag between the intellectual beginnings of sociology & the establishment of the society is remarkable. (2) The society does not function like a professional organization. (3) The influence on the university curriculum & the recruitment policies of the departments is weak. (4) Participa-

f

tion of its members is poor. (5) Its international standing is negligible. All in all, the history of the society seems to confirm what the ex-Austrian Paul F. Lazarsfeld wrote in 1959 about the Austrians: "no brains, no initiative, no collaboration."

Fleddt, Helene (Dept Private Law U Aarhus, DK-8000C Denmark (tel/fax: 45-8942-1431/8620-2735; e-mail: hf@jura.aau.dk)), **How Children Experience Daily Life—and Themselves—in Divorced Families.**

¶ Interview data from an ongoing longitudinal study are used to examine how divorced families (N = 20, with 30 children, ages 4-12) experience life in Denmark. The Kinetic-Family-Drawing approach reveals how children perceive themselves in the family setting. Almost all of the children experienced major changes in their daily life during this first year of divorce: one-parent income forced them to move from their original home, often resulting in a change in school or child care institution; further, a number of parents got new partners.

98S34305 / ISA / 1998 / 11546

Flood, Robert L. (Dept MSS, Cottingham Rd Hull HU6 7RX England (tel/fax: 44-1482-466361/466236; e-mail: r.l.flood@msd.hull.ac.uk)), **Stafford Beer's Contribution Revisited.**

¶ Most reviews of Stafford Beer, a cybernetician working in the field of operational research & management sciences, concentrate on one aspect of his work &, in particular, the viable system model. However, it is argued here that it is not possible to fully comprehend what Beer is saying unless a total picture of his work is formulated. Beer argues that techniques of operational research & management sciences have high utility only when employed in the light of a scientific description of the whole situation. Science for Beer is both rational & rigorous, yielding something clear to definite, testable, & repeatable. It also aspires to free will through rigorous choice. Whole situation descriptions come through models built with cybernetic logic, which are homomorphic or isomorphic, not metaphorical or analogical. They are formulated using tools of rigorous science: mathematics, statistics, & logic. Beer's most famous homomorphism, the viable system model, draws correspondence between management & organization & human brain structure & function. The model stipulates rules whereby an organization (biological & social) is "survival worthy": it is regulated, learns, adapts, & evolves. Beer invented team syntegrity to complement the viable system model when applied in social contexts, adding a statement of participatory democracy. Beer recognized early on that the analogue of systems language has unavoidable connotations that he would rather be without; eg, the absurdity of people as deterministic & predictable thinking machines.

98S34306 / ISA / 1998 / 11547

Foddy, Margaret & Littlefield, Lyn (La Trobe U, Melbourne Australia), **Accuracy of Person Perception and Power Balancing Strategies: A Study of Decision Making Power in Marital Dyads.**

¶ Differences in power can lead to power-balancing operations, including demand creation & status giving. The less powerful person in a dyadic relationship will put more effort into perceiving the values & self-perceptions of the more powerful, on the assumption that this will allow the less powerful person to maximize goals under the control of the more powerful. Thus, accuracy of person perception will be an inverse function of relative power. Early tests of this hypothesis confounded accuracy with similarity between perceiver & target. Reported here is a study that examined the influence on accuracy of decision-making power of husbands & wives in several domains (eg, child discipline, employment). Both partners of 100 marital dyads completed a power questionnaire & described their own & partner's self-concepts using the California Q-set. Regression analyses examined the relative contribution of power & personality characteristics of the perceiver to accuracy in perception of the target, & took into account similarity of self-concepts. Consistent with the prediction from exchange theory, power was inversely related to accuracy in certain salient domains.

98S34307 / ISA / 1998 / 11548

Foddy, William H. (Monash U, Clayton Victoria 3168 Australia (tel/fax: 613-9905-5821; e-mail: bill.foddy@arts.monash.edu.au)), **The Identification of Perspectives Adopted by Survey Question Respondents.**

¶ Over the last 15 years, a growing number of survey methodologists have advocated the use of in-depth probes to identify possible shortcomings in questions proposed for use in surveys. Problems investigated include those that center on the range of perspectives adopted by respon-

dents (Rs) when answering those questions. Identification of the perspectives that Rs have adopted is important; if Rs have adopted different perspectives when answering a question, their answers cannot be compared. In essence, they have answered different questions. Unfortunately, identification of the perspectives adopted by Rs has not proven to be one of the more impressive strengths of in-depth testing. Focus here is on the problem of how the perspectives adopted by Rs can best be identified. It is argued that this task can be simplified by classifying perspectives into four categories—causal, evaluative, definitional, & attitudinal—pairing appropriate probes with each category.

98S34308 / ISA / 1998 / 11549

Foldesi, Gyongyi Szabo (Hungarian U Physical Education, H-1123 Budapest (tel/fax: 36-1-156-4444/5966)), **Female Representations in University Sport in Australia, Finland, France, Great Britain, Hungary, Korea, Nigeria and Tunisia.**

¶ Examines how gender inequalities manifest themselves in university sport in countries with variant sociocultural norms & values about gender roles, based on a survey of 800 female students selected randomly in Australia, Finland, France, GB, Hungary, Korea, Nigeria, & Tunisia. The data, collected by document analysis, questionnaire, & face-to-face interviews, provide information about the characteristics of female students' participation characteristics in various types of sport & exercise. Results reveal female students' patterns of contributing to the leadership/decision making, management, & organization of university sport. Reasons for participating in these activities as well as constraints & barriers to participation are discussed. It is concluded that the current system of sport is designed primarily to meet the needs of Western white males &, partly, Western white females. There is a need for many national & international university sport associations to change their present methods of operation & to implement strategies adapted to a higher degree of social-cultural diversity.

98S34309 / ISA / 1998 / 11550

Fontaine, Louise (Sciences administratives U Sainte Anne, Pointe de l'Église Nova Scotia B0W 1M0 (tel/fax: 902-769-2114/2930; e-mail: l.Fontaine@ustanne.ednet.ns.ca)), **Groupe linguistique, conflits politiques: le cas belge** (Linguistic Groups, Political Conflicts: The Belgian Case). (FRE)

¶ For the last few decades, Belgium has been split into various zones of linguistic tension so strong that, in 1962/63, a linguistic border was created to assure a peaceful coexistence among the Flemish, Walloons, & residents of Brussels. How this border led to a series of problems that called into question the form of the state is discussed, & various institutional reforms put into place beginning in the early 1970s are noted. Shifting attention to Belgium's linguistic circumstances in 1998, questions are raised about how the affirmation of Belgium's linguistic groups may have led to increased social division & how this social fragmentation may affect the Belgian identity.

Fontan, Jean-Marc, Hamel, Pierre, Morin, Richard & Shragge, Eric (Dept Sociology U Québec, Montreal H3C 3P8 (tel/fax: 514-987-3000/4638; e-mail: fontan.jean-marc@uqam.ca)), **Strategies of Community Economic Development within Metropolitan Areas: The Example of Montreal.**

¶ Described are the action & projects elaborated by community economic development organizations for the renaissance of poor urban neighborhoods in Montreal, Quebec, since the mid-1980s. The political & institutional context in which these groups have evolved has changed over the last 2-3 years. The financial support from the state is no longer focused solely on the recovery of poor urban neighborhoods, but is spread over a larger metropolitan area. Recently, the provincial government created the Ministry of the Metropolis to define & solve urban & economic problems from this perspective. The impact of this reform is not clear yet. Relying on field & empirical work done over the last 15 years on community economic development organizations in Montreal, recent socioeconomic & institutional changes at the metropolitan level are considered, & several questions raised: Can these groups survive in the new institutional environment? What are the consequences of the recent changes for these groups in terms of local participation & democracy? Do they have to adjust to the new institutional governmental requirements without putting aside their primary objective, the democratization of the local economy?

98S34311 / ISA / 1998 / 11552

Fontan, Jean-Marc, Klein, Juan-Luis & Tremblay, Diane-Gabrielle (U Quebec, Montreal H3C 3P8 (tel/fax: 514-522-3540/3608)), **Territory and Innovation in an Urban Environment: Technopolies versus Local Community Economic Development in Montréal.**

1 Building on theoretical views regarding relations between territory & innovation, analyzed are possible sources of governance of redevelopment action in urban environments, ie, local economic redevelopment initiatives. On the basis of empirical research done in Montreal, Quebec, highlighted are different methods of governance used by community organizations to foster economic redevelopment of metropolitan core marginalized zones. The process of social capital building of the target areas will be explored in several case studies (Pro-Est, Angus, Récollet, Softimage, & Anjou). Conditions (values, institutions, dynamic milieu, effective information diffusion, etc) that appear essential for the territorial dimension to contribute to innovation are discussed.

98S34312 / ISA / 1998 / 11553

Fordham, Maureen H. (Anglia Polytechnic U, Cambridge CB1 1PT England (tel/fax: 01223-363271; e-mail: mfordham@bridge.anglia.ac.uk)), **"You Must Be Careful about Engineers, They Don't Care about the Look of a Thing": Placing Flood Hazard Mitigation in Its Socio-Cultural Context.**

1 Planning for floods is a complex endeavor, even when the decision-making parameters are restricted to scientific & technical dimensions. However, the reality is even more complex, & the most technically competent proposals can fail to win the support of the communities at risk if social & cultural dimensions have been excluded, or included too late. The need for public consultation & participation has become widely recognized & stimulated through Local Agenda 21 initiatives in the UK; however, far from being consensus-building, these activities can be conflict-generating & can expose major disparities between those in professional decision-making roles & the lay public about what constitutes both the problem & its solution. Examples drawn from GB, Portugal, & the US are used to critically examine the dominance of top-down, scientific & technical modes of analysis in decision-making structures for flood hazard mitigation. The possibilities of incorporating more diverse & contextual knowledges are explored, emphasizing social & cultural, over scientific & technical, dimensions, & creating more democratic forms of decision making.

Forrest, Anne (Faculty Business Administration U Windsor, Ontario N9B 3PA (fax: 519-973-7073; e-mail: forrest@unwindor.ca)), **Women and Unions: The Family Connection.**

1 Analyzes the industrial relations literature to demonstrate that conventional theories of union growth & activism rely on unarticulated assumptions about the nature of the patriarchal family that stereotype women as conservative by virtue of their role as wife/mother. Scholars routinely employ Roslyn I. Feldberg & Evelyn Nakano Glenn's (1979 [see abstract 80K7355]) gender model to explain why women workers are less likely to be unionized than men. The most commonly cited variables are women's less stable labor force participation & distinctive occupational choices, both of which are commonly thought to result from family responsibilities or personal characteristics. Interviews with women workers/union members & the feminist literature on the family & household labor are used to question the unidimensionality of the assumption that women are inevitably confined & made docile by their place in the family. It is argued that family circumstances, particularly in these times of changing family structures & acute economic uncertainty, often push women to confront their socially prescribed role of silence & compliance; contrary to common assumption, the family may be the very structure that induces some women to challenge authority.

Forrest, Raymond S. & Kennett, Patricia A. (U Bristol, BS8 4EA England (tel/fax: 0117-9741117/9737308; e-mail: R.Forrest@buis.ac.uk)), **Constructed Communities: Stories from a New Town.**

1 Reviewed here is research concerned with 50 years of social change in council housing, focusing on an estate in Harlow, one of the earliest New Towns in GB. Biographical material of original residents still living on the estate are used to explore how policy has shaped, & interacted with, their daily lives. Moreover, these places & the policy environment in which they are situated have changed substantially over time, particularly in the deregulatory, noninterventionist 1980s. The impact of these re-

cent changes is considered.

98S34315 / ISA / 1998 / 11556

Forrest, Raymond S. & Kennett, Patricia A. (SPS U Bristol, BS8 4EA England (tel/fax: 0117-9741117/9737308; e-mail: R.Forrest@buis.ac.uk)), **Changing (E)States: From Planned Communities to Deregulated Spaces.**

1 Two council estates built in the immediate postwar period in southern England represent some of the highest-quality social housing built through direct state intervention, but these areas have shifted from spaces for working-class renters to multitenurial estates. How the transformation in these areas has been perceived & experienced by the residents was explored here via in-depth interviews in the context of contemporary debates about the social status of council estates & housing policy change & social & economic transformations over the last 50 years. This analysis is part of a wider-ranging project, *New Zones of Transition: Social Change on Council Estates*.

Forrester, Michael A. (U Kent, Canterbury CT2 7NP England (tel: 1227-823489; e-mail: M.A.FORRESTER@ukc.ac.uk)), **A Discursive Ethnomethodology for Studying Conceptions of the Developing Self.**

1 Explores current formulations of the developing self in the context of studying childhood. After touching on theoretical assumptions in cognitive & psychoanalytic approaches, the potential value of narrative is examined, & a conception of the developing self embedded in the subject positionings of discourse is outlined. This approach, defined as discursive ethnomethodology, focuses on narrativization as process. It is argued that Foucauldian discourse genres specific to subject-self positioning provide the scripts for Goffmanesque performance of role enactment. Such scripts are instantiated through the procedures & processes of talk, always inherently dynamic, historical, sequentially implicative & potentially open-ended. Employing a social constructionist reading of J. J. Gibson's (1979) affordance metaphor may help such developments. In addition, the significance of conversation analysis as a key method for studying the production of discursive self-positionings is considered alongside an emphasis on dialogic conceptions of representation. Proposals for a discursive ethnomethodology of the developing self emphasizing the significance of studying conversation for the sociology of childhood are outlined.

Fortier, Anne-Marie (Concordia U, Montreal Quebec H3G 1M8 (tel/fax: 514-848-2581/2577; e-mail: amf@vax2.concordia.ca)), **Interrogating Migrant Belongings.**

1 Examines the role of migration in the creation of new kinds of communities & identities, starting from the premise that migration constitutes the grounds of belonging for an increasing number of people, rather than, say, a primary ethnicity or nationality. Among the implications this premise holds for conceptions of identity, close attention is given to the limits & possibilities of "in-betweenness" as a constitutive feature of new forms of belonging, as well as how it operates differently in theoretical & specific local settings. The argument is linked to abiding issues regarding definitions of identity & subjectivity & their connections. Specifically, the limits & edges of "in-betweenness" will be foregrounded in the light of embodied nationalisms & embodied ethnicities, ie, the bodily performances & representations of collective identities in different institutional settings, eg, ethnic organizations.

Fortin, Andrée (Dept sociologie U Laval, Quebec G1K 7P4 (tel/fax: 418-656-3889/7390; e-mail: andree.fortin@soc.ulaval.ca)), **La Démocratie culturelle et ses acteurs** (Cultural Democracy and Its Actors). (FRE)

1 Cultural democracy is not the expansion of the anonymous public that was the cultural democratization project; rather, it is another mode of relations between the artist & the public, & even a utopia where everyone becomes cocreator or at least cultural actor. These new cultural actors are revealing themselves through artistic production: from *Patenteux* to folklorist, passing from amateur to public participation to artist projects (from happenings to collective creations). They can also work at technical production or the economy of art. Various forms of sponsorship, voluntary, & partenariat can be evoked here. The cultural actor is also the observer that becomes co-creator. He/she is invited to dialogue with the artist & to witness the creation process.

Fortunati, Leopoldina (Sede Staccata Pordenone, via Prasecco I-33170 Italy), **ICT's Know-How in Everyday Life.**

¶ The need to rebuild information & communication technology (ICT) know-how in everyday life is imposing itself with ever-increasing urgency. In Italy, the rate of increase is, in fact, greater at a domestic level than in the business sector, thus making this sector increasingly more strategic. Also, even if teleworking is only slowly developing in Italy, the sole entrepreneur is becoming more frequent, eg, in the Northeast, it has been calculated that sole entrepreneurs represent 25% of the working population. This phenomenon is dragging new technologies into the domestic area, which, therefore, will acquire an even more sophisticated entrepreneurial profile. Finally, whereas know-how used to pass only from the enterprise to the family, today it rebounds freely from one area to another, including not only enterprises, but also education agencies, state services & institutions, & the family. Discussion is based on questionnaire data from a representative sample of 1,400 individuals to verify (1) the measure & articulation of know-how in the more technologically updated group; (2) how this know-how was formed; & (3) how it circulates in the domestic area & is passed on & used in the workplace.

Foster-Gadkari, Sheryl L. (Dept Public Policy Studies Saint Louis U, MO 63103 (tel/fax: 314-889-2462/3729; e-mail: Sheryl_L_Foster@co.st-louis.mo.us)), **Implementation as Sensemaking: An Implementation Study of the Cranston-Gonzalez National Affordable Housing Act of 1990.**

¶ The study of policy implementation focuses on the process that a policy undergoes after it leaves the legislative arena. Focus here is on this process with regard to the Cranston-Gonzalez National Affordable Housing Act of 1990, the most sweeping housing legislation to be drafted in the US. Implementation of this act is examined, drawing on policy implementation theory & housing policy & creating a common thread between them. Karl Welck's theory of sensemaking in organizations underpins a discussion of how a national mandate is incorporated into a local policy organization. Also addressed is how identities & beliefs are interpreted & shared by members of the policy organization & how these beliefs relate to the strategies used to address local affordable housing issues within the parameters of the Cranston-Gonzalez Act. The analysis is conducted in the framework of a case study, using ethnographic interviews, participant observation, & nonreactive measures.

Fóti, Klára (Insttit World Economics, kálló esperes u 15 Budapest H-1124 Hungary (tel/fax: 36-1-319-93-82/85; e-mail: kfoti@vki3.vki.hu)), **Problems and Perspectives of Young Self-Employed People in Hungary.**

¶ Since the postcommunist transition began in Eastern Europe, young people have been prominent in setting up small businesses & becoming self-employed. Incentives to do this include not only the prospects of making considerable money & seizing new opportunities, but also the shortage of other ways of earning a living, especially for those without higher education. Many programs for promoting entrepreneurship have been set up & financed partly by the national governments & partly by foreign sources (mainly US, British, & Canadian funds); nongovernmental organizations also are active in this field, including entrepreneurial networks. However, interviews with 100 young self-employed people in Hungary indicate that a high interest rate, lack of physical infrastructure, scarcity of capital, & high taxes & social security contributions are impediments to business establishments. These issues are addressed through empirical microstudies conducted in 1997 in two regions of Bulgaria, Hungary, Poland, & Slovakia (N = 50 respondents each under age 30) in hopes of achieving a closer & more effective match between young entrepreneurs' needs & the offered support.

Fourniau, Jean-Michael (INRETS, 2 ave Malleret-Joinville F-94114 Arcueil France (tel/fax: 331-47407226/45475606; e-mail: fourniau@inrets.fr)), **Modernisation of Facility Siting vs. Democratization of Decision Making. French Figures of Public Consultation.**

¶ Following various land-use conflicts, a meaningful modification in decision making occurred recently in France with the introduction of a public debate about the opportunity of major infrastructure projects. Here, by summarizing empirical data collected during several public debates about transport infrastructure projects, changes in the relations between public participation & decision making are analyzed. The practical issue of the new statutes is to coordinate the registers of public action legitimacy: legality, rationality & public nature of decision. By observing public debates & analyzing the controversies going off, different figures of the relations between participation & decision making are drawn & specified according to type of articulation, relevance of the technicoeconomic studies made by the project sponsor, & actual participation of the citizens. These figures show that the implementation of new procedures wavers between modernization of public consultation & democratization of decision making. The variation in procedure implementation shows that the institutionalization of public debate & involvement has made room for development in the roles played by the protagonists involved in land-use planning. But combining participation with evaluation & negotiation does not result in a single model of legitimate decision making that could be applied simply as "good practice."

Fournier, Monique (c/o Goldberg, 189 blvd Voltaire F-75011 Paris France (e-mail: monique.fournier@hol.fr)), **Biotechnologies and the Social Construction of an Environmental Concern: The Use of the Mad Cow Disease as a Risk Metaphor against Scientific Expertise.**

¶ The diversity of positions has prevented the formation of a clear consensus & social mobilization concerning genetically engineered organisms. Fears were perceived marginally in their subjective & emotional dimensions & were considered not founded scientifically. It is suggested here that the mad cow disease crisis offered an objective precedent on which environmentalists could ground their objections to transgenic products. The mad cow scandal not only represented a fracture in the social contract between producers & consumers, policymakers & citizens, but also contributed to discrediting the system of risk expertise. Moreover, the disease has introduced a new dimension to the environmental discourse: food safety. The "madness of cows" became a metaphor used by environmentalists to designate any kind of transgression of natural laws & to remind all that scientific assessment & political institutions are not infallible in face of risks. Transgenic plants are referred to as "mad corn," "mad colza," "mad soja," etc. Considered is the impact on political institutions, food producers' practices, & the credibility of scientific expertise. The construction of a discourse based on a strong metaphor such as the mad cow crisis contributed in raising an environmental concern over genetically engineered organisms, which can have more weight than scientific facts in the decision-making process. Assumptions are based on analysis of articles from numerous French newspapers & magazines since 1990, European Union reports, scientific journals, & interviews with environmentalists & government officials.

Frago, Paulo (Oswaldo Cruz Foundation, Ave Brazil 4036 Rio de Janeiro Brazil (tel: 55-021-290-4893; e-mail: fraga@manguinhos.ensp.fiocruz.br)), **Juvenile Delinquency in Brazil: Public Policy and Legislation.**

¶ Describes the situation of delinquent juveniles in Rio de Janeiro, Brazil, with respect to the profile of youthful offenders, the nature of existing

programs, & the sentences applied by the Juvenile Judgeship. It is noted that Rio de Janeiro differs from other metropolitan areas in Brazil in its significantly increased illegal drug trade, the principal source of delinquency in 1997. The extremely high-risk situation of the young & poor in the city is described, & the deficiencies of public policy in improving the situation are analyzed. Comparative data are presented from a research project on the public policy of juvenile delinquency programs.

98S34327 / ISA / 1998 / 11568

Francoeur, Robert Thomas (Fairleigh Dickinson U, Madison NJ 07940 (tel/fax: 973-443-8746/8766; e-mail: rtfancoeur@aol.com)), **Human Sexuality in the 21st Century: Foreshadowings of a Cultural Collapse or Labor Pains of a New Integration.**

¶ "Adapt to a changing environment, or run the risk of becoming extinct" is an indisputable principle of biological evolution. Any comprehensive listing of the technological & medical developments witnessed in this century inevitably spotlights these factors as catalysts for major changes in the social environment. Specifically, these changes in the social environment are radically altering sexual identities, gender roles, & intimate relationships. Only one other period in the 3- to 4-million-year history of human sexuality & relationships appears to have been as "axial"—to borrow Karl Jasper's term—in human consciousness & the ways we experience our sexuality. That first axial period occurred over several thousand years at the end of the last Ice Age when the nomadic, gender-egalitarian, hunter-gatherer clans that had supported emergent human society for a million+ years were gradually replaced by more functional patriarchal, hierarchical urban cultures that emerged as adaptations to the new technologies of alphabet communications, the wheel, mathematics, domestication of animals & agriculture, metallurgy, & the birth of scientific analysis. An analysis of the consequences of the technological & medical developments experienced in this century, complemented by an analysis of recent changes in male-female relations in 32 nations, clearly supports the conclusion that, worldwide, human males & females are caught up in a second axial period, as radical as the first, except that this second period is occurring in a much briefer time frame—a scant century in contrast with several thousands of years. A comparison of the technological & medical factors behind these two axial periods suggests that today's women & men are nearing a crucial turning point in human evolution that requires adapting to radical changes of consciousness in how we (1) see ourselves as sexual persons, & how many sexes there are; (2) view sexual satisfaction; (3) relate intimately as sexual & gendered persons; & (4) experience friendship, pair bonding, family, & parenthood. A tabular comparison is supported by examples suggesting that women are, in many contemporary societies, pushing us toward a new awareness & understanding of human sexuality & relationships.

Franzen, Mats (Instit Housing Research Uppsala U, S-80129 Gävle Sweden (tel/fax: 46-26-147722/802; e-mail: mats.franzen@ibf.uu.se)), **Urban Order and the Preventive Restructuring of Space.**

¶ Explores one aspect of the present, post-Fordist, restructuring of space: the cumulative, but unintended, effects on the public urban order of a growing, & more intense, deployment of border controls. Urban order is understood in the tradition of Georg Simmel, Erving Goffman, Lyn Lofland. Border controls are recognized to operate both in public space & at the entrances to organized activities that directly face public space. How they work is best understood through the criminological concept of actuarial practices. Two preventive impetuses are identified behind this spatial restructuring: one specific, police-related; & one general, related to ongoing socioeconomic changes. To follow the aggregate effects of

such a preventive spatial restructuring, a thought experiment, focusing on the public order in a square, or a segment of a street, located centrally in a relatively great Western European city, foregrounds the targets of border controls—the volume & composition of (1) the passersby & (2) this public space's visitors. Thus, it is possible to delineate how the preventive restructuring of space works on the urban order.

Franzway, Suzanne M. (U South Australia, Adelaide 5034 (tel/fax: 08-8302-4626/4393; suzanne.franzway@unisa.edu.au)), **Sexual Politics in Labour Movements.**

¶ Women unionists struggle to gain understanding & recognition of their interests & to achieve the opportunity to win leadership positions in trade union organizations, &, therefore, must challenge male dominance in trade unionism where paid work, political activism, & leadership are regarded as men's business. Here, in defining this struggle & challenge as sexual politics, it is argued that gender is central to the transformation of labor movement structures & practices, drawing on research on a network of women union officials in the South Australian labor movement. The sexual politics of their views of the labor movement as a men's movement or a "boys' club" are explored, focusing on sexualities & sexual hostilities. Strategic debates among women unionists & other feminists are discussed in relation to the problem of sameness or difference.

98S34331 / ISA / 1998 / 11572

Frederick, Judith & Fast, Janet (Statistics Canada, R.H. Coats Bldg Tunneys Pasture Ottawa Ontario K1A 0T6 (tel/fax: 613-951-0279/0387; e-mail: fredjud@statcan.ca)), **Applications of the 1996 Canadian Survey on Social and Community Support.**

¶ In 1996, Statistics Canada conducted a national survey on social & community support as part of the ongoing General Social Survey Program. A main objective was the improved measurement of informal support. Most notably, the survey identifies the community of informal caregivers & receivers, & enhances the understanding of social support by capturing the types of caregiving activities performed; time devoted to each activity; & social-psychological impact, labor force participation, health, & financial consequences. The relationship between time spent providing elder care & social-psychological impacts on informal caregivers is analyzed. The current thrust of Canadian policy is to download the responsibility for caring for the frail elderly back to the community. Policy implications of this trend are discussed in terms of the hidden costs to elder caregivers.

Freedgood, Laura Anne (Boston U, MA 02215 (tel: 617-241-7921; e-mail: bozo@acs.bu.edu)), **The Role of Pragmatic Markers in Interpreted Courtroom Testimony.**

¶ In a courtroom where the witness is a non-English speaker & an interpreter is present, the participants typically engage in a four-part exchange: lawyer question, interpretation into the witness's language, witness response, & English interpretation. Presented here are results of a pilot study that examined the interpreted testimony of non-English-speaking witnesses & defendants in bilingual courtrooms in the US. Using audiotapes of trials at the municipal/district court level, focus is on pragmatic markers (defined by Bruce Fraser (1996) as words & phrases that are not part of the basic propositional content of the utterance, but either modify it or signal a separate message). Differences in the semantic meaning of the original & the interpreted pragmatic markers in both the English & Spanish utterances are examined, considering whether they affect the interpretation of either the lawyer's or witness's stance toward the basic message of their utterances. It is proposed that lack of a 1:1 correspondence in the interpretation of pragmatic markers may have significant implications for the authenticity of testimony in the bilingual courtroom.

Frenk, Julio J., Knaul, Felicia, Nigenda, Gustavo & Vazquez-Segovia, Luis A. (Mexican Health Foundation, Periférico Sur 4809 DF 14610 (tel/fax: 52-5-655-9011/8211; e-mail: jfrenk@funsalud.org.mx)), **Medical Underemployment in Urban Mexico: Implications for Professional Autonomy and Social Inequality.**

¶ To contribute to an understanding of the changing realities of the medical profession in terms of autonomy & authority from a cross-cultural perspective, medical un- & underemployment in urban Mexico are examined. After describing the development of a conceptual framework & specific methodology for the study of the medical labor market (which may be relevant to different national contexts), survey data obtained in 1986 & 1993 are drawn on to analyze the performance of physicians in the labor market as a function of ascription (social origin & gender), achievement (quality of medical education & specialty studies), & contextual variables (educational generation, reflecting changing policy environments). By comparing two points in time, the impact of short-term fluctuations in economic activity, policy innovations in medical education, & changes in the organization of labor markets can also be evaluated. Results reveal persistently high levels of open unemployment, qualitative underemployment (ie, working in activities completely outside of medicine), & quantitative underemployment (ie, working in medical activities but with very low levels of productivity & remuneration). Such imbalances underscore the need to rethink theoretical approaches to the professions. In addition, results suggest that higher education & health care may be reproducing rather than correcting social inequalities, creating policy challenges to restore a balance between the improvement of working conditions for physicians & the advancement of health conditions for the population.

Frias, Sônia I. G. (ISCSP U Técnica Lisboa, P-1300 Codex Portugal (tel/fax: 01-3637121/3642081)), **Studying the Process of Social and Cultural Changing: The Case of a Group of Muslim Women in Lisbon.**

¶ An analysis of a group of Indian Muslim women who immigrated from Mozambique to Lisbon, Portugal reveals the main difficulties these women have in reconciling their tradition & religious beliefs with the changing process of a European capital. Two main hypotheses are explored: (1) The necessity to face a new life in Portugal obliged Muslim women to find a job, & a professional activity permitted them to develop self-confidence & autonomy. (2) Earning a salary influences how these women deal with family, tradition, & religion. Data from observation & biographies reveal problems these women are facing, in that, in addition to their jobs, all domestic tasks remain assigned to them. Nonetheless, they enjoy earning money & the concomitant sensation of autonomy & freedom. Women are learning to negotiate tradition & modernity. They try hard to find defensive strategies to overcome cultural & social contradictions. A major problem is how to deal with the religious implications of the changing process.

Fridman, Viviana (U Québec, Montreal H3C 3P8), **La Construction identitaire dans le roman juif-argentin contemporain** (The Construction of Identity in the Contemporary Jewish-Argentine Novel). (FRE)

¶ The field of literature constitutes a valuable source for studies of social representation, since it offers a discursive space where the fundamental debates of a society become crystallized. How literary works are inscribed in social discourse is considered. Holding that sociology lacks ad-

equated tools for analyzing literary texts, the methodology offered by sociocritical theory is discussed as permitting examination of the insertion of the social into literary texts without neglecting the specificity of this type of writing & the particular characteristics of works of art. An interdisciplinary framework is used to examine literature in its relationship with social discourse, focusing on society's powerful contradictions & attempting to explain the mechanisms for bypassing these contradictions. Contemporary Jewish-Argentine literature is examined as a case in point, looking at the tension between belonging to the majority culture & identifying with a minority group, as well as the axes national/foreign, assimilation/nonassimilation, inside/outside, & center/periphery.

98S34338 / ISA / 1998 / 11579

Friedland, William H. & Bendini, Monica (U California, Santa Cruz 95064), **Albert Fisher: Shifting Corporate Strategies.**

¶ Albert Fisher became a transnational national corporation for the delivery of fresh fruits & vegetables & seafood only after 1980. Based in the UK, Albert Fisher expanded rapidly in continental Europe & the US with a strategy of filling every location in the supply chain of these products except direct production & retail sales. To accomplish this strategy, Albert Fisher assembled capital primarily in the UK & used this capital to purchase dozens of localized & regional food distributors, accumulating 20% of FL's & 12% of CA's produce. After initial enormous growth, it suffered sharp financial losses that led to a major change in management. New management has shifted corporate strategy significantly, selling off North American holdings & shifting to a South American sourcing strategy that commits it to direct production accompanied by distribution focused on the European Union market. Implications of this strategic shift are still the subject of speculation.

98S34339 / ISA / 1998 / 11580

Friedland, William H., Morvaridi, Behrooz, Murray, Warwick, Renard, Marie-Christine & Vogel, Elizabeth (U California, Santa Cruz 95064), **The Del Monte Fresh Story: Global Shenanigans on the Fresh Produce Front.**

¶ Del Monte Fresh is a transnational grower, distributor, & marketer of fresh produce based in FL. Originally part of the Del Monte Corp, since 1979 it has been owned by R. J. Reynolds Tobacco, Polly Peck International (a Wall Street takeover firm), GEAM (a Mexican financial group), & most recently, IAT (a Cayman Islands-based conglomerate). Through all these ownership changes, Del Monte Fresh has remained among the top five global actors in fresh produce production, distribution, & marketing. Explored here are its tortuous history of ownership & the significance of the respective roles of a transnational corporation, nation-states, & rogue global entrepreneurs.

Friedman, Judith J. (Rutgers U, New Brunswick NJ 08904), **Do Men and Women Live in Different Suburbs?**

¶ Interview data from 66 visual artists are drawn on to look for gender differences in (1) the spaces depicted in their work, & (2) work practices. Sites depicted in artists' suburban work range from their own homes & yards, to retail malls, to industrial parks & remote nature areas. For each artist, the site closest & farthest from the home were located. There are distinct differences between men & women: 50% of the women, but 33% of the men, had dealt with space in their own home, yard, or neighborhood; 40% of the women dealt only with these intimate spaces. Further, among these artists, the most remote sites depicted by women were suburban retail areas. The men also depict industrial parks & more remote

areas. Further, the suburb women present are distinctly more likely to include friends, relatives, & themselves; when the men include people, they are likely to be strangers or imaginary. These differences reflect differences in work practices; men are more likely to work on site, away from their own neighborhood. Why, though, do such differences remain? Do these patterns reflect differences in the spaces of everyday activities? Do these differences mean that men are likely to be familiar with a wider range of suburban spaces? Do they reflect fears for safety in different spaces?

Friis Thing, Lone (U Copenhagen, DK-1361 Denmark [tel/fax: 45-35323-268/940; e-mail: Lone.friis.thing@sociology.ku.dk]), **Gender and Emotions in Sport.**

¶ Sport has long been considered a masculine preserve & a place for the construction of masculine identity. The image & definition of masculinity draw on the figuration pictured as "active" emotions, eg, aggression & excitement. In the last 30 years, there has been a steady entry of female players in sports like soccer, basketball, & ice hockey. The changing gender relations in sports, therefore, challenge both the concepts of gender & emotion. With commitment, pleasure, & bodies that matter, sportswomen embody a historical trend toward a deconstruction of the dominant femininity ideal & challenge the hegemonic masculinity in sport. To better understand women's participation in traditionally masculine sports, discussion focuses on the study of the lived, embodied experiences of female players in soccer, basketball, & ice hockey. Results of in-depth interviews with 30 competitive elite players & their relation to Nordic Danish society & culture are analyzed.

Fu, Yang-chih (Instit Sociology Academia Sinica, Nanking 115 Taiwan [fax: 886-2-2652-3398; e-mail: fuyc@gate.sinica.edu.tw]), **Mobilizing Personal Networks into the Concert Audience: A Case Study of Dyadic Ties.**

¶ Before concerts, some performers invite their acquaintances to attend the upcoming event, & ask their alters to do the same, thus extending the basis for recruiting potential audience members. Such a mobilization process is examined in the case of a piano recital held in 1994 at the National Recital Hall of Taipei, Taiwan, based on data from the contact record between the performer (the ego) & her acquaintances, & between 11 alters & their acquaintances. Of the 283 contacts, 112 attended the recital. Using these dyadic ties as the analytic unit, three sets of factors in determining whether a contact leads to successful outcome are examined: (1) individual characteristics of those who initiate the contacts & those whom they contact, (2) the similarity (homophily) or difference (heterophily) in individual characteristics between the dyadic actors, & (3) types of relationships & the strength of ties between these dyads. Preliminary logistic analyses suggest that a recruiting effort is most success-

ful when mobilizing one's strong ties. This study illustrates a novel way to incorporate the social network perspective & techniques into the understanding of collective social actions.

Fujigaki, Yuko (National Instit Science & Technology Policy, Tokyo 100 Japan [tel/fax: 81-3-3581-0968/3500-5244; e-mail: fujigaki@nistep.go.jp]), **Knowledge as an Autopoietic System: Implication for Knowledge Society.**

¶ What kind of implication does autopoiesis have for social theory? One answer to this question is shown via application of autopoiesis to scientific knowledge. Since scientific knowledge provides the base to many dimensions of society (eg, cultural aspects, technological innovation, economic growth, & social welfare) this application offers many insights for social theory. In this study, the aggregation of publication in scientific journals is defined as the unity of the autopoiesis system & scientific papers as the component of that system; publishing is defined as the operation of the system. Thus, the knowledge system is an autopoiesis system that produces its own walls by its operation—the wall being the boundary of accepting/rejecting papers, which reflect the politics of scientists as well as the validation boundary of the research field. Considering knowledge as an autopoietic system has implications for the knowledge society.

Fukuoka, Yasunori (Saitama U, Urawa Japan [tel: 81-48-858-3070; e-mail: fukuoka@sacs.sv.saitama-u.ac.jp]), **Japanese Alias vs Real Ethnic Name: On Naming Practices among Young Koreans in Japan.**

¶ The present population of Koreans in Japan, descended from Koreans once forced to move to Japan, amounts to 1% of the current Japanese population. However, many Japanese are unaware of this because the great majority of ethnic Koreans use Japanese aliases, thus becoming an invisible presence. Research findings suggest that the government forced the first generation of migrants to use Japanese names; the second generation used Japanese names to avoid discrimination; & the third did so because it had become normal. The relationship between the two oppositions—real name/alias & Korean/Japanese name—takes many different forms. Examples are provided, & it is shown that there is a clear trend toward the use of more Japanese names. Another subtrend seen recently among antidiscrimination activists & others is toward names that reflect heightened ethnic awareness.

✓ **Fulton, John** (Saint Mary's University Coll, Twickenham Strawberry Hill TW1 4SX England (tel/fax: 181-240-4023/4255; e-mail: fultonj@mailint.smuc.ac.uk)), **Linking Religion to Citizenship: The Life History Study of Young Adult Catholics.**

¶ Recent work by Bertaux & Thompson (1997) in the field of social mobility suggests that life history research provides help in developing a sociologically unified perspective on the role of the subject in social processes. Drawing on data from a six-country research project using this technique (Young Adult Catholic Research Group), illustrated is how young adults (ages 18-30) varyingly accommodate to & use cultural & religious resources as well as personal networks to shape, modify, or accept their social space. The common religious influence of the sample is Roman Catholicism (from former Catholics to core Catholics), & the common social framework is varying stages of late modernity. Charted are degrees of alienation & personal success in the English respondents, a common awareness of the moral field in which they operate, a delimited range of social ethical positions on a range of topics in current debate, a similar range of senses of personal responsibility, & a common sense of independent judgment & semiautonomy in the face of externally declared moral precepts. Easy assumptions on the superficiality of contemporary moral consciousness among the new generation, even when there are very low religious influences, are challenged.

✓ **Furaker, Bengt & Schedin, Stefan** (Dept Sociology U Gothenburg, SE-40530 Sweden (tel/fax: 031-773-4801/4764)), **Patterns of Income Mobility—A Study of Swedish Income-Earners in the 1990s.**

¶ Addresses income mobility among Swedish income earners in the 1990s. Since the early 1990s, roughly half a million jobs have disappeared from the Swedish labor market. Open unemployment has thus risen dramatically, from approximately 1.5% in 1990 to 8+% in 1993, & it has stayed high. The aim here is to show how this decline in employment has affected income mobility. Many individuals have considerable difficulties supporting themselves from gainful employment, but what has happened to their total income (ie, including social benefits)? To what extent does the welfare state compensate for income losses due to the decreased employment levels? At the same time, even though the Swedish labor market has deteriorated, there are many whose income has increased in recent years. Thus, upward income mobility is also addressed, trying to determine who is climbing the income ladder during the period of recession, in terms of gender, age, education, social class, national origin, & other relevant factors. Analysis is based on register data from Statistics Sweden for some 250,000 individuals in terms of their income from work, their total income (from work & from the welfare state), & their share of the total household income.

✓ **Gaav, Ludmila** (Le Musée Russe d'État, Saint Petersburg 191011), **Le Changement du rapport entre la culture légale et la culture légitime en Russie: le stéréotype social comme un des mécanismes de légitimation de l'art** (The Change in Rapport between Legal Culture and Legitimate Culture in Russia: The Social Stereotype as One of the Mechanisms of Legitimation of Art). (FRE)

¶ A study of tastes & opinions of art audiences (1988-1997) in the Russian State Museum, St. Petersburg, during the period of sociocultural changes in USSR-Russia allows one to (1) specify the role played by the art museum & its cultural offering in the restructuring of the public; & (2) analyze the changing relations between the legal & legitimate culture in Russia, as well as to suggest an interpretative hypothesis concerning mechanisms of art legitimation. Reintroducing into the cultural field the formerly prohibited art (Russian avant-garde art, Western 20th-century art, some aspects of Russian classical heritage) gave impetus to two principal trends of taste evolution: the extension of the legitimacy of innovative art, ie, the legitimation of counterlegitimate tastes (the cultural consumption typical for the counterculture) & a certain loss of legitimate character by Soviet art, ie, the delegitimation of legal tastes. The importance of the social aspect of art perception & the stereotyped pattern of its assimilation allow one to consider the social stereotype as a mechanism of the art legitimation process. The social stereotype urges to distinguish among the variety of art works those corresponding to the values of the accepted culture (the Soviet official culture, the counterculture), while shaping these receptions according to its norms.

✓ **Gagné, Marie-Anik & Sigal, John J.** (Clarke Instit Psychiatry, Toronto Ontario M5T 1R8 (tel/fax: 416-979-4747/4703; e-mail: manik@hsru.clarke-ints.on.ca)), **The Effects of Worry on Mental Health and Physical Functioning.**

¶ To bridge the gap between sociology & psychology, the concept of worry is introduced to explain the observed relationship between mental health & physical functioning. It is hypothesized that, when controlling for demographic, stress, & support measures, women's worries will significantly affect their physical functioning (measured with the Short Form Health Survey) & their mental health (measured with the Profile of Mood States). A random community sample of 170 women were asked to identify their primary worry & to complete the Cognitive Intrusions Questionnaire & the Impact of Events Scale with reference to that worry. The premise is that, if worry can be shown to be a determinant of mental health & physical functioning, then worry is a possible link between these states. Results of step-wise regressions conclusively support the argument. When demographic, stress, & support measures are controlled, worry affects the perceived physical functioning & mental health of individuals.

✓ **Gagnon, Mona-Josée** (Dépt Sociologie U Montréal, Quebec H3C 3J7 (tel/fax: 514-343-5820/5722)), **Mutations du marché du travail et temps libre: vers de nouvelles inégalités?** (Transformations in the Labor Market and Free Time: Toward New Inequalities?). (FRE)

¶ Transformations in the labor market recently experienced by all industrialized societies are discussed, noting that while schedules of production have been flexibilized, there has been a proportional increase in part-time, temporary, & autonomous jobs. Much importance has been accorded to the reduction of working hours, with the goal of either sharing work or allowing more quality time. Shifting attention to unions, it is shown how they have exhibited an increasing control over work schedules. The impact of this increased union power on inequalities is addressed, & it is proposed that we are witnesses to a "chaotic recomposition" of leisure time.

✓ **Gaines, Jeffrey T.** (22637 Nona St, Dearborn MI 48124 (tel/fax: 313-202-7556/0556; e-mail: jeff.gaines@akahn.com)), **Planning towards the Achievement of a Sense of Community in Residential Development.**

¶ Argues that a sense of community enhances the experience of daily activities & improves inhabitants' quality of life by providing a basis for social interaction & participation. While the physical design of a neighbor-

hood could be a catalyst for a sense of community, automobile dependence, modern communication & other technologies, changing lifestyles, & respondent planning methodologies have changed the notion of community. If planners, architects, & developers are interested in producing neighborhood developments that exhibit a sense of community, they must plan for it. A sense of community in neighborhood development can be encouraged through physical design by creating an environment that is identifiable to its occupants & provides opportunities for interaction in the form of chance encounters & formal gatherings. Choice is a reflection of individuality & can be addressed by providing linkages both in the neighborhood & to its surrounding amenities & a diversity of housing types, amenities, & means of mobility. Residents of any neighborhood will make their own determination of how to utilize their environment, thereby making the provision of choice a meaningful design tool.

Gallagher, Eugene B. (Dept Behavioral Science U Kentucky, Lexington 40536-0086 [tel/fax: 606-323-5804/5350; e-mail: ebhall@pop.uky.edu]), **The Case of Zahira Qetub: Sociological Dimensions of Sophisticated Medical Care in a Developing Society.**

Medical care in an affluent Arab Gulf society is explored via a sociological analysis of the medical charts of 29 hemodialysis patients treated on an ambulatory basis in a teaching hospital; many were also admitted as inpatients when medical complications arose. The chart data was supplemented by interviews with staff, observations of treatment, & administrative documents. Management of illness. The case of Zahira Qetub, a girl born with a severe spinal cord defect whose resultant urinary incontinence & paraplegia led to repeated infection & eventually to chronic renal failure & hemodialysis, reveals the impact of family & culture on the management of illness. Zahira's medical career exemplifies three larger themes: (1) Advanced medical technology has a strong impersonal & acultural thrust. (2) Chronic illness & treatment engender, even in the face of technological impersonality, personalized relationships between patients & providers. (3) Despite its generally high quality, medical care in the Arab Gulf is rendered in a milieu of cultural estrangement, because it depends entirely on the work of insecure, transient, expatriate professionals. The data are also used to address some classical issues in medical sociology, eg, the balance of intimacy/detachment, the effect of provider & patient social identity in medical processes, & the place of the hospital in the total spectrum of medical care.

Galtz, Naomi (Center Research Social Organization U Michigan, Ann Arbor 48109 [e-mail: ngaltz@umich.edu]), **Learning from Mundane Spaces: Exploring Russian Women's Lives in Transition by Way of Stories Told at the Dacha.**

Draws on 1997 open-ended interview data, participant observation, & photographic work, in dacha (garden cooperative) communities around Moscow, Russia, to suggest that interviewing in such a mundane space can lead to a fruitful, densely packed understanding of respondents' lives, as they are simultaneously embedded in larger social processes. Focus is on the stories of 3 recently retired women, all original members of the dacha. It is proposed that emphasis on a specific place allows a fine-grained view of how these three women have marshaled, transformed, & revalued resources to deal with the various challenges of economic transition, as well as personal crises & changes in their family lives. It is also suggested that the focus on a sphere of activity, rather than on a chronology, could make it easier for respondents to talk about their lives without drawing on "standard" turning points in their narratives. Further, in such an interview, the space of the dacha provides an underlying logic for the storytelling, & thus, respondents do not feel forced to produce a single logic regarding their lives. By their own accounts, these women possess multiple & competing motivations & evaluations of the changes going on

around them. This vision of a full-bodied & conflicted actor represents an important revision of much of the literature on transition.

Galvin, Treasa (Dept Sociology Trinity Coll, Dublin 2 Republic Ireland [tel/fax: 353-1-608-2621/677-1300; e-mail: tm.galvin@tcd.ie]), **The Challenge of Change or the Myth of Irish Hospitality-Asylum and Refugee Policies in Ireland.**

Traditionally a country of outmigration, the Republic of Ireland is increasingly becoming an immigration destination. So too, Ireland is simultaneously becoming a more multiethnic & -cultural society. Reported here are findings from research on refugees & asylum seekers in Ireland, focusing on the development of policies & strategies aimed at the new realities of immigration & cultural diversity. The contradictory & ambiguous nature of existing policies for asylum seekers & refugees is contrasted to the failure to develop policies reflective of present processes of social change. The Irish case illustrates how the development of migration policies involves the reconceptualization of migration away from emigration toward immigration. Specific factors in the Irish environment that impact policy formulation are identified, including (1) an emphasis on the homogeneous nature of society; (2) the management of sociocultural & economic change; & (3) the continued links with & reference to GB as the former colonial power. Ways that current policies confine refugees & asylum seekers to the margins of Irish society are considered.

Gamoran, Adam (Dept Sociology U Wisconsin, Madison 53706 [tel/fax: 608-263-4253/265-5389; e-mail: gamoran@ssc.wisc.edu]), **Social Indicators of Religious/Ethnic Heritage: The Case of North American Jewry.**

Presents a new system of social indicators of the heritage of North American Jewish lore, tradition, & values to explore the decline of this religious/ethnic group. Arguing that Jewish education is a key aspect of Jewish life as well as a possible mechanism for preserving Jewish continuity, a survey of educators in three communities provides data on the quality of the educational system. Broader indicators of Jewish life are outlined for future research.

98S34363 / ISA / 1998 / 11604

Gamoran, Adam (Dept Sociology U Wisconsin, Madison 53706 [tel/fax: 608-262-2921/265-5389; e-mail: gamoran@ssc.wisc.edu]), **Professional Development of Teachers in Religious Schools: Inherent Contradiction or Realistic Policy?**

Suggests that "professional development" may be something of a misnomer in education, because it usually consists of isolated workshops that offer fragments of information rather than a sustained, coherent body of knowledge. Recently, a broader & deeper concept of professional development for teachers has emerged that focuses on long-term learning instead of immediate payoffs. Because it promotes collaboration & reflection about teaching & learning in a professional context, it may contribute to professional communities among teachers & thereby enhance the practice of teaching. Survey data collected by the Council for Initiatives in Jewish Education in collaboration with educational institutions in five US communities are drawn on to assess the current status & future possibilities for professional development of teachers in Jewish schools. Examined are the extent & nature of professional development activities, including workshops, courses, & informal study. Focusing on the least-professionalized segment of the Jewish teaching force, the supplementary schoolteachers, discussed are available opportunities & whether these opportunities are sufficient to help establish professional communities of educators.

98S34364 / ISA / 1998 / 11605

Gana, Alia (Cornell U, Ithaca NY 14853), **Agricultural Restructuring: Local and Household Mediation in Tunisia.**

Analyzes the dynamics of farm restructuring in a semiarid zone of northern Tunisia from the perspective of changing social & economic practices of family farm households. Drawing on a survey of 60 farm households & in-depth interviews conducted with family members, different patterns of family farm reorganization are identified that express how households have negotiated their changing access to resources, eg, land, capital, & labor. This reorganization is expressed in significant shifts in households' farming patterns, in important changes in their modes of market integration, as well as in their patterns of labor allocation. It is argued that these dynamics of commoditization & family farm reorganization correspond to increasing (& changing patterns of) differentiation in family farms & also represent a significant break in the patterns of household social reproduction.

✓ **Gandler, Stefan** (Facultad Ciencias Políticas & Sociales U Autónoma Querétaro, Mexico (tel/fax: 011-52-42-156545/167526; e-mail: gast@sunserver.uaq.mx)), **Spanish title not provided** (The Dialectic of Enlightenment: The Frankfurt School Analysis of Antisemitism). (SPA)

¶ Examines the Frankfurt school's analyses of anti-Semitism, focusing on "Elements of Antisemitism" in Max Horkheimer & Theodor W. Adorno's *Dialectic of Enlightenment* (1947). Based both on empirical study & philosophical reflection, this text—written as the destruction of European Jews proceeded—is not only a study of anti-Semitism, but also a theory of modern forms of domination & ideology. In a certain sense, capitalist modernity can only be fully understood if anti-Semitism is theoretically grasped. Emphasized are Horkheimer & Adorno's seven theses, seeking to better grasp today's society & its authoritarian & alienated aspects. Main points include Jews in the contradiction between the particular & the universal; anti-Semitism as aggression against the idea (recollection) of a better world; anti-Semitism as hatred provoked by nonrealized bourgeois promises of happiness; Jews as scapegoats of capitalism; anti-Semitism as hatred of the father-religion; the character of collective paranoia; & anti-Semitism as result of material & ideological mass production.

98S34366 / ISA / 1998 / 11607

✓ **Gandler, Stefan** (Facultad Ciencias Políticas & Sociales U Autónoma Querétaro, Mexico (tel/fax: 011-52-42-156545/167526; e-mail: gast@sunserver.uaq.mx)), **Identity and Difference in Light of Post Modernity**.

¶ The question of freedom or, more precisely, the lack of freedom in bourgeois society is eluded by postmodernism, which generally declares difference as the grand solution of forced equality. This is deemed ingenious because enforced differences & identities, in conjunction with forced equality, are the historical-logical basis of mass society. Hatred of so-called minorities is apparently based on difference between them & so-called majorities. This hatred of the so-called Other is, in reality, hatred of the forbidden internal contradictions of a society in which the majority cannot tolerate the freedom of its members. To declare that the solution to racism, sexism, & anti-Semitism is the acceptance of the Other is argued to be a tacit approval of the false theses of racists, sexists, & anti-Semites & their distorted projections. Scholastic debates over equality & difference, & national, "ethnic," or individual identity are really between alternative yet limited perspectives on the same bourgeois society that rests on forced equality, enforced differences, & imposed identities.

¶ For a long time, small & medium-size enterprises (SMEs) were observed only as an imperfect model of large firms. Then the performance of SMEs was admitted, but considered mainly from a localist point of view: SMEs are successful because they can develop special links & forms of cooperation in their local environment. That was the secret of Italian industrial districts with regard to SMEs. In the current era of globalization, this perspective seems obsolete. It is now more difficult to separate the development of enterprises' external networks from the development of local & internal networks. Innovation lies not only in local forms of organization, & there is no real opposition between international & local networks. On the contrary, firms that develop new international networks develop simultaneously new forms of local or regional links, setting up new forms of territoriality.

¶ A new synthesis of complexity, chaos, evolutionary, & Kondratieff cycles theory is discussed in terms of the consequent theoretical framework for realizing & designing the new social order transition & advancing methodology of future-oriented studies to put it in accordance with changing conditions of evolution. Approaches to advancing forecasting

methodology for unstable systems & adopting forecasting tools to requirements & conditions of transitional periods are addressed. Two controversies are considered: the relationship between determinism & randomness (occasionality) in transition & the boundary between order, chaos, & disorder.

✓ **Garcez, Pedro M.** (Federal U Santa Catarina, 880900-040 Florianópolis Brazil (tel/fax: 55-48-235-2120/331-9819; e-mail: garcez@cce.ufsc.br)), **Successful Cross-Cultural Business Communication: The Case of Negotiation Arguing**.

¶ Reviews extant evidence that particular conversational contexts may minimize the potential for miscommunication in cross-cultural encounters. Unlike noninstitutional arguing, negotiational arguing is topic-restrictive & interactionally bounded, resulting from the participants' institutionally mandated joint efforts to locally establish some degree of common ground. This is needed for a bargaining reply to be proffered & for the parties to be able to commit to particular courses of action in their postnegotiation future. Findings suggest that particular institutional mandates guide interactants (not) to have local conversational reasons for the construction of cross-cultural miscommunication. Revisions in the interactional sociolinguistic model of cross-cultural communication are suggested.

✓ **García Sanz, Benjamin** (Dept Sociology U Complutense Madrid, E-28040 Spain (tel/fax: 34-1-394-2840/2646; e-mail: soso205@sis.ucm.es)), **Emerging Processes in Spanish Rural Society and Its Implications for Agricultural Production**.

¶ As a consequence of the incorporation of Spain into the European Community, its rural areas are more sensitive to the problems derived from globalization, leading to processes of demographic recovery & changes in the composition of activity & rural incomes. Rural areas are undergoing a gradual recovery as a result of (1) the sudden drop in migration trends, & (2) the return of the former rural residents. These processes are modifying sharply traditional forms of rural occupation, with a decay in agricultural employment that is offset by gain in other productive sectors: the diversification of the tertiary, industry, & construction. The dominant pattern is a process of deagrarianization that does not imply a process of deruralization. Rural incomes are also being affected. As a consequence, the rural economy, more diversified than in the past, depends on three sources: unearned forms of income, eg, pensions & other welfare benefits; nonfarm-based income-earning activities; & farm incomes coming from production & European Union subsidies. Implications of these changes in the productive system are (A) rationalization of food production, which implies the concentration of land & the mechanization of agriculture; & (B) diversification of the activity of farm household members, with a tendency toward specialization & separation between farm & off-farm employment.

✓ **García Sanz, Benjamin** (Dept Sociology U Complutense Madrid, E-28223 Spain (tel/fax: 34-1-394-2840/2646; e-mail: soso205@sis.ucm.es)), **The Rural Population of Spain**.

¶ After a long period of continuous decrease, the Spanish rural population entered a new stage of slow & progressive recuperation in the 1980s, which is well-reflected in the population survey of 1996. The recession of emigration & return of migrants to Spain are two factors affecting this new process. It seems that this is not a temporary phenomenon caused by a crisis of urban jobs, but a structural one resulting from the objective conditions characteristic of rural lifestyle & work that have become more attractive for new generations.

García-de-la-Torre, Consuelo & Raufflet, Emmanuel B. (HEC Montreal, 3000 Chemin de la Côte-Sainte-Catherine Quebec H3T 2A7 (tel/fax: 514-340-6537/985-0487; e-mail: consuelo.garcia-de-latorre@hec.ca)), **Les Études organisationnelles au Pérou entre 1960 et 1997** (Organizational Studies in Peru from 1960 to 1997). (FRE)

¶ Examines the evolution of the field of organizational studies in Peru, 1960-1997, distinguishing three eras: (1) Creation of Escuela de Administración de Negocios para Graduados in 1963 by a US cooperation program opened a period of empirical managerial prescriptive studies. (2) The post-1969 National Revolutionary Project nationalized most of the economic sector; consequently, organizational studies were included in the then-dominant stream of sociological studies focused on public agencies. (3) During the post-1978 democratization process, business schools & foreign-funded centers for social research were created, contributing to the introduction of more interdisciplinary approaches in Peruvian organizational studies. It is found that, despite its newness & external research basis, the field of organizational studies in Peru is starting to develop an original indigenous contribution to organization studies.

García-Hernández, Luis A., Martínez-Borrego, Estela & Salas-Quintanal, Hernán (U Autónoma Metropolitana-Xochimilco, 04960 Mexico DF), **Mexico's La Laguna Dairy Industry in the Process of Global and Regional Integration.**

¶ Mexico is facing a strong agricultural globalization, especially in regional terms, because of economic & technological development in the US & Canada. Focus here is on the dairy producers of La Laguna

(LALA). While this cooperative remains technologically dependent on the US & Canada in cattle imports (30%) & in some inputs (ie, automatic milking machines, software), LALA producers have adapted some technologies to their production environment. In fresh milk market competitiveness, LALA holds strong against Canadian & US competition, because it is focused on liquid milk, not products such as cheese or yogurt.

98S34378 / ISA / 1998 / 11619

García-Hernández, Luis A., Martínez-Borrego, Estela & Salas-Quintanal, Hernán (U Autónoma Metropolitana-Xochimilco, 04960 Mexico DF), **Globalization of the Mexican Dairy Industry and Agro-food's Transnational Corporations.**

¶ Transnational corporations' (TNCs') hypermobility & state-nation limited power is a problem that will increase day by day. It is important to understand the evolution from multinational corporations to TNCs, & the modification of the relationship between economics & politics to maintain capital accumulation through direct investments & economic deregulation in developing & developed countries. In 1964, a modification of the Mexican foreign investment law opened the way to the establishment of many TNCs. Originally, dairy TNCs provided importing & trading production inputs; therefore, their presence had a high impact on technological packaging transfer from developed countries & contributed to the Mexican dairy intensive production process. In the 1980s, TNCs focused on dairy industrialization, & technology transfer became more sophisticated: mechanical milking, cooler tanks, computer applications, automatic vacuum, etc. By analyzing dairy TNCs in Mexico, it is possible to establish different phases for their internalization in the Mexican agrofood system.

Garçon, Anne-Françoise (Maison recherche sciences sociales U Rennes 2, F-35043 Cedex France (tel/fax: 33-2-99-27-29-69/14-18-95; e-mail: anne-francoise.garcon@France.uhb.fr)), **L'Esprit Mines" existe-t-il? (La Pensée technique de l'ingénieur des mines, XIXe-XXe siècles)** (Does "Mining Spirit" Exist? (The Technical Thought of the Mining Engineer, 19th-20th Centuries)). (FRE)

¶ The apprenticeship of student-engineers is said to have developed in France in 1752, following an idea of Trudaine that was possibly inspired by Jean Hellot, the chemist. Questions are raised about whether there is a way of thinking, a manner of being, a set of habits, or even a technological profile common to mining engineers that has become progressively more defined, 1750s-present. The training of engineers is examined, looking at the philosophy behind it, & it is argued that a "mining spirit" does exist & makes mining engineers more likely to have a taste for industrial innovation than other engineers. A tight relationship with the business economy is another characteristic of mining engineers, as is a tendency toward diverse types of management. To what extent the notion of the professional body is involved in the homogenization of behavior & the assembling of social & cultural origins is considered, along with how these may be transcended.

Gardes, François & Langlois, Simon (c/o Langlois-Dept Sociology U Laval, Quebec G1K 7P4 (tel/fax: 418-656-2142/7390; e-mail: simon.langlois@soc.ulaval.ca)), **Convergence of Consumption Structures between Socioeconomic Classes in Canada 1969-1992.**

¶ A new Multidimensional Index of Poverty Richness is developed, based on three dimensions: deprivation or nonsatisfaction of basic needs, marginalization (per total household expenditures), & household disposable income per unit. The first two criteria refer to the consumption of a reference group defined along three criteria: age, education, & region, based on Georg Simmel's approach to poverty. Five types of households are estimated with microdata, from the poor to the rich. Changes in the consumption structures of these five types are examined from longitudinal & transversal perspectives. A new approach is proposed to study dynamic or longitudinal changes, with a quasi-panel approach, & the two kinds of evolution are compared, an approach that allows study of cohort, generation, & period effects with microdata. Five Canadian family expenditure surveys (N = 10,000 each, 1969, 1978, 1982, 1986, & 1992) are studied. Three main results are observed: (1) Middle-class consumption structures changed rapidly early in the life cycle, & less in the 1990s, indicating that the middle classes became less capable of improving their situation as they grew older. (2) The social differentiation between consumption structure of different types of households is more pronounced than the temporal evolution, which is an important result estimated for

9

the first time with microdata. This result reveals that the rich & the quasi rich continue to improve their economic situation, which is not the case for the other types of households. (3) The evolution of the consumption structure of the poorest socioeconomic class is different than the evolution observed in the other ones over a long period.

Gardiner, Simon (Anglia Sports Law Res Centre Anglia Polytechnic U, Chelmsford CM1 1LL England [tel/fax: 01245-49-3131/0835; e-mail: S.J.Gardiner@anglia.ac.uk]), **It's a Man's World: Attitude Survey of Violence in English Professional Soccer.**

¶ Violence in professional team sports in GB has become increasingly visible in terms of the availability of remedies for injured victims & effective punishment for perpetrators. The intervention of the law as a form of normative rules has become increasingly common, in terms both of the civil law allowing injured players to sue for compensation & of criminal prosecutions by the state. Although the legitimacy of legal intervention is contested, the reality is that legal rules are being added to the framework of normative rules that regulate violent play on the sports field. Presented here are results of an analysis of qualitative data from a survey conducted 1997/98 concerning the attitudes of professional soccer players to levels of violence in English soccer & the effectiveness of the internal disciplinary & compensatory rules operating within the game. Based on a written questionnaire & a sample of semistructured interviews, data as to the availability of legal remedies in consequence of violent play are also considered. The survey provides evidence for what may be the most effective normative regulatory mechanism for diminishing the perceived problem of violent play in English soccer.

Garhammer, Manfred (Dept Sociology U Bamberg, D-96045 Federal Republic Germany [tel/fax: 0951-863-2593/5593]), **Temporal Structures and Cultures under Pressure of Modernization, Globalization and Europeanization. A Comparative Study of Germany, UK, Spain and Sweden.**

¶ Discusses quality of life in modern societies comparing the Federal Republic of Germany, the UK, Spain, & Sweden with the US & Japan since 1985, & addresses the social policy application of time-use studies from a macrosociological perspective. The question of time use in everyday life is an essential consideration for assessing quality of life in modern societies & is crucial for social acceptance of European integration. Focus here is on a comparative description & analysis of temporal structures & cultures in selected societies of the European Union, addressing the question of how everyday time use has been changed by modernization, globalization, & the currently accelerated integration in the European Union. Comparison with the US & Japan considered whether there is a European model of society, particularly with regard to time use. A complex model of temporal structure at the macrolevel of societies is built according to 34 social indicators of how societies organize time. A secondary analysis of time-budget data from 18,781 respondents in four countries, including the US, 1985-1996, provides information on paid & unpaid (eg, sleeping, eating) labor time, as well as time spent for personal needs. The thesis of a global convergence toward a modern, deregulated or neoliberal model of social time is tested via factor & cluster analysis, comparing 34 variables today vs 10 years ago. The theoretical aim is to show how modernization, globalization, & integration in the European Union are shaping a common societal model &, thus, contributing to a global convergence in the use of time in the highly developed countries.

Garhammer, Manfred (Dept Sociology U Bamberg, D-96045 Federal Republic Germany [tel/fax: 0951-863-2593/5593; e-mail: Manfred.Garhammer@sowi.uni-bamberg.de]), **Time-Use, Time-Pressure and Leisure-Consumption in European Societies: Old and New Social Inequalities in Well-Being in Germany, UK, Spain and Sweden.**

¶ Analyzes old & new social inequalities as these affect, or are affected by, the use of time, arguing that temporal patterns, particularly in leisure consumption, are created by social classes & create social inequalities & produce both social cohesion & exclusion. The emergence of new inequality structures related to time use & pressure is examined in the Federal Republic of Germany, the UK, Spain, & Sweden, based on time-budget data from 1,545 full-time employed people in western Germany, 1991/92, & from socioeconomic panel & other data from the other countries, 1985-1996. Comparative analysis allows for some conclusions on cross-national differences & on social change in time use & leisure con-

sumption patterns—with special regard to the impact of social stratification. Leisure styles are separated on the basis of factor & cluster analysis, & their relationship to social class is tested.

98S34384 / ISA / 1998 / 11625

Garlicki, Jan (Faculty Journalism & Political Sciences Warsaw U, PL-00047 Poland [tel/fax: 48-22-8265791;]), **Youth and Political Reforms in Poland.**

¶ Examines the influence of political & economic changes on the Polish youth's consciousness & the participation of young Poles in the system transformation processes, drawing on 1990-1998 sociological survey data from either nationwide or Warsaw-resident groups of university students & personal observations. In 1989, Poland witnessed the start of political & economic system transformation process. The beginning of the 1990s was the beginning of dynamic changes in the consciousness & attitudes of young Poles, as well as general changes in the model of political socialization of the youth. The range of mass culture patterns diffusion became wider. An influence of electronic media can also be observed. At the same time, teacher authority was weakening, & the efficiency of socialization processes implemented by schools was diminishing. Described are (1) how these processes affected the Polish youth's consciousness; & (2) how, if any, their approaches to others—people of different nationality, religion, culture—were altered. A crucial topic is patterns of political participation dominant among the young, ie, their participation in political movements of adults & the occurrence of youth social movements. Survey data analysis reveals a deepening political & cultural pluralism among Polish youth, & growing tolerance toward others. While this does not mean that stereotypes have vanished, the youth are generally positively oriented toward the system transformation process in Poland.

98S34385 / ISA / 1998 / 11626

Gasper, G. Chinnappan & Ray, Jagruti, **Social Structure and Discontinuation of Education by Girls in India.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Family's educational investment in children augments children's life chances & is shaped by the family environment, ie, its structure, sex composition, size, educational & occupational status of parents, & the interaction between parents & children & among siblings. Explored here is how, & to what extent, the family environment in a stratified society interacts with social background in influencing the educational development of girls. Data are drawn from a survey of 274 schools in Dhenkanal District, Orissa State, India, including interviews with 600 dropout girls & their parents. Results show that various forces control the progress of girls' education in India. Social status interacts with discontinuation of education by girls negatively, & birth order also has strong effects. Parental education has a positive relationship with girls' education, & mothers' education is highly important. Parents' education interacts with social status, & has a greater impact on girls' education in the case of caste groups from relatively lower social status, though parents' interest in girls' education is higher among the higher social status groups. Type of family & household size do not have much effect. It is concluded that family social & economic background are crucial in deciding the educational investment in girls. However, at a tender age, girls can make a substantial economic contribution to the family; thus, the opportunity cost of keeping girls at school is high, particularly in rural areas. Hence, educational policies must focus on rural girls & the socioeconomically weaker sections of the population. Also, since girls who have strong interactions with the peer group are more likely to sustain their schooling, schools & the community should try to develop better understanding & interactions among girls.

Gastaldo, Denise, Lima, J., Chakir, F., Bendris, N. & Vissandjée, B. (Faculté sciences infirmières U Montréal, Québec H3C 3J7 [tel/fax: 514-343-6111/2306; e-mail: gastaldd@ere.umontreal.ca]), **Reproductive and Sexual Care for Arab Muslim Women Living in Quebec (Canada): Looking at Religion, Gender and Immigration to Have a Better Understanding of Health.**

¶ Migration has traditionally been studied as a genderless issue, with women & children portrayed as dependents in this process. In the case of Muslim women in Canada, the stereotypes of being submissive & uneducated have credited the expectation that contact with the health care system should be an empowering experience. Here, data from focus groups with Sunnite Arab Muslim women who have immigrated to Que-

bec from Maghreb & Machreck in the last 5 years are drawn on to challenge these assumptions. Results point to a variety of experiences lived by the participants as women, Muslims, & Arab immigrants, focusing on their needs in terms of sexual & reproductive health care. Religion plays an important role in the construction of the identity of these women, & patriarchal control is experienced in different areas of public & private life, many times not associated with religion. Many of their criticisms of health care are similar to those of any user, concerning the short duration of consultations or the attention received. It is concluded that, to provide quality health care, health professionals should promote relationships where cultural differences are acknowledged, respected, & discussed, creating an environment that allows women to state their personal values & rethink some of their experiences that might be a source of oppression.

98S34387 / ISA / 1998 / 11628

Gastron, Liliana (Dept Ciencias Sociales U Nacional Lujan, Argentina (fax: 0054-323-25795; e-mail: gastron@unlu01.edu.ar)), **Argentine Families and the Elderly in the Future. A New Challenge for Women as Caregivers and Recipients of Care.**

¶ In light of demographic indicators that indicate that the informal primary caregiver problem will assume greater significance, census data are used to analyze changes in fertility levels, life expectancy at birth by sex, children living in one-parent households, numbers of young adults choosing to remain unmarried, average number of children per marriage, tendency among women to be single mothers, family size, family household by sex, & female labor force participation rates in Argentina. As a result of the neoliberal orientation of governments in the 1990s, there is a reduction in the state role, particularly in old age social policy. The belief that elderly people should remain at home commits their children (ie, daughters & daughters-in-law) to the primary responsibility of taking care of them, increasing gender inequalities in later life.

Gaulejac, Vincent de (U Paris VII, F-75251 Cedex 05 France (tel/fax: 33-1-44-27-62-92/28-53)), **Sociologie critique et sociologie clinique** (Critical Sociology and Clinical Sociology). (FRE)

¶ In contrast to an adaptive approach to clinical sociology, the goal of which is to cure individuals, groups, & institutions, helping them conform to the actual social order, advocated is a critical perspective in theory & practice. Theoretical influences can be traced back to Freud-Marxism, the Coll de sociologie in France, & psychosociological works. A core theoretical issue throughout is the subject social status, the creative & free subject challenging the different social determinations as well as psychological constraints. This active expression of the subject is to be found in diverse social settings: formal organizations, education, technological change, & the therapeutic relationship through clinical analysis. The clinical process starts with a call for help & develops in a participation process through which persons can express themselves, free of usual institutional constraints or normative restrictions. This free self-expression in a collective setting is an experience with power. Clinical sociology is shown as an efficient way of analyzing power relations in society.

98S34389 / ISA / 1998 / 11630

Gauthier, Anne H. (Dept Sociology Western Washington U, Bellingham 98225-9081 (tel/fax: 360-650-7520/7295; e-mail: gauthier@cc.wvu.edu)), **Inequalities in Children's Environment: The Case of Britain.**

¶ Examines inequalities in childrearing environment, specifically, the aggregation of multiple deprivation, drawing on data from Wave 4 (1994) of the British Household Panel Study (N = 2,750 children, ages 0-15). Principal component analysis suggests that there is a process of aggregation at work that enhances inequalities between children who live in a relatively risk-free environment & children who are exposed to multiple risks. Findings suggest that, while children from lone-parent families fare badly in terms of economic indicators, children from stepfamilies are the most deprived when noneconomic indicators are examined.

Gee, Ellen M. (Dept Sociology Simon Fraser U, Burnaby British Columbia V5A 1S6 (tel/fax: 604-291-3144/5799; e-mail: gee@sfu.ca)), **Well-Being among Chinese Canadian Elders.**

¶ Examines the well-being of community-dwelling Chinese elders, ages 65+, in Vancouver & Victoria, British Columbia, drawing on 1995/96 interview data from 830 persons (response rate 71.5%). A conceptual model is developed in which well-being is viewed in terms of resources (material & nonmaterial, eg, health, English-speaking ability, & ethnic identity) & social support. Hierarchical ordinary least squares regression analysis shows that the major predictive variables of well-being include living arrangements (with living alone associated with low well-being), health status, & place of residence (persons living in Victoria have higher well-being than those in Vancouver & its suburbs). Income initially appears as an important determinant, but ceases to be significant with the introduction of social support & sociodemographic variables into the model. Results are discussed in terms of theoretical & policy directions.

98S34392 / ISA / 1998 / 11633

Gendreau, Monica & Gimenez, Gilberto (U Iberoamericana-Golfo Centro, 72430 Puebla Mexico (tel/fax: 52-22-31-08-11/339; e-mail: gendreau@uiagc.pue.ua.mx)), **Effects of the Contact with Modernity on Traditional Cultures in Central Mexico.**

¶ International migration & media exposure are examined in light of processes of economic & mass media globalization taking place in rural Mexico. Contrary to the expected integration of economic & cultural systems, rural communities in Mexico are adapting to these, but not losing their identities. This is attributed to the fact that (1) migration is only one of the strategies for survival that are constantly taking place in these communities, & (2) selection of mass-media programming is mediated through popular & traditional codes, subordinate to interpersonal communication & daily activities. Preliminary results of a regional study show how traditional cultures are affected by international migration & the transnationalization of mass culture. Data are drawn from a regional survey that measured the presence & characteristics of regional identity; monographic studies in four small towns to explore local culture; & interviews with economic, political, & cultural leaders.

Geniron, Corinne & Vaillancourt, Jean-Guy (U Montréal, Quebec H3C 3J7), **Dynamique politique et socio-économique de l'environnement: une approche intégrée de la problématique environnementale dans les sociétés industrialisées** (Political Dynamics and the Socioeconomy of the Environment: An Integrated Approach to the Environmental Problematic in Industrialized Societies). (FRE)

¶ The management of environmental issues requires a rethinking of the outdated ecological philosophy of economic institutions. This traditional ecology suggests that, in the human-nature relationship, humanity must first submit to, then take control of, nature. A more modern approach, focusing on human responsibility toward nature, is traced to the interrelated effects of sociopolitical dynamics & material consequences of the environmental crisis. Here, an integrated approach is proposed, highlighting the dynamics underlying the management of the environmental crisis & suggesting new solutions in a global social context. After examining various forms of the economy-environment debate, the evolution of state intervention in managing the environmental issue is traced, noting its legal, financial, & public information action. Also, a critical analysis of business discourse on environmental ethics & voluntary initiatives is presented.

Genov, Nicolai B. (Instut Sociology Bulgarian Academy Sciences, BG-1000 Sofia (e-mail: nbgeu.most.risk@datacom.bg)), **Transformation Risks: Conceptualizing Past, Present and Future in Central and Eastern Europe.**

¶ In the future, Eastern Europe will remain a social territory marked by high-intensity risks with deep structural situational causes. Explored here is whether sociology will be able to live up to the challenges posed

9

by profound regional transformation, suggesting that innovations must occur in five traditional sociological dilemmas: (1) The experience of rapid individualization in old & new communitarian contexts strengthens efforts to conceptually bridge the gap between individual & collective rationality. (2) Cognitive & value-normative innovations under precarious deficits of economic resources provoke reconsidering the links between ideas & material structures. (3) Path-dependency in local & regional development enlivens traditional debates on continuity & change in history. (4) The variety of local events & trends revives the need to metatheoretically coordinate approaches of historical sociology & sociological structuralism. (5) The pressure to carry out action research clashes with the tradition of value-free sociology. Thus, sociology is at risk itself in Eastern Europe, & the quality of disciplinary risk management has broader theoretical & practical implications.

98S34395 / ISA / 1998 / 11636

Genov, Nikolai B. (Instit Sociology Bulgarian Academy Sciences, 13A Moskovska Str BG-1000 Sofia (tel/fax: 3592-9806132/803791; e-mail: nbgen.most.risk@datacom.bg)), **Small Societies in Global Trends: The New Melting Pot.**

¶ Societal adjustments to global trends of spreading instrumental activism, individualization, rationalization of organizational structures & processes, & universalization of value-normative systems are scrutinized. Some societies have the double handicap of being small & belonging to the periphery or semiperiphery. Both characteristics amplify obstacles to adapt to globalization. In these societies, volume of investments & resources available for fostering specialized division of labor are small; horizons for individualization are narrow, capacities for differentiation of structures & processes are scarce; & cultural space of the local traditions is limited. The ensuing frictions are expected to intensify, which could influence ongoing globalization.

98S34396 / ISA / 1998 / 11637

Georgiev, Ivo (c/o Pasztor-Binzstr 1a, D-13189 Berlin Federal Republic Germany (tel: 030-471-0317; e-mail: ivo@zedat.fu-berlin.de)), **Transformation of Elites and System Change in Bulgaria.**

¶ The collapse of state socialism in Bulgaria has been accompanied by changes in the composition of elites raising the questions of who they were, what happened to them, & where the new elites came from. Here, in the context of hypotheses of elite reproduction & elite circulation, age, sex, occupational mobility, political participation, & social origins of old (1988) & new (1993) Bulgarian elites were examined via analysis of survey data. Findings show that the old *nomenclatura* has only partially reproduced itself into the ranks of the new political elite; the majority of the old cadres were downwardly mobile in the social hierarchy. However, a substantial part of the old regime's economic elite managed to survive under the post-1989 democratic regime. In the majority, these are highly skilled middle-aged male officials in the second-level ranks of the state bureaucracy, whose careers were blocked by the previous occupational structure in the late 1980s. The cultural elite has almost reproduced itself in 1993. The reproduction of elites was particularly strong among the old cultural & economic elites. In politics, instead, there was an extensive turnover of governmental & parliamentary elites.

Gerber, Eleanor R. & Wellens, Tracy R. (US Census Bureau, CSMR/SRD Bldg 4 Washington DC 20233 (tel/fax: 301-457-4930/4931; e-mail: egerber@cmail.census.gov)), **The Conversational Analogy, Forms Literacy, and Pretesting in Self-Administered Questionnaires.**

¶ The theoretical framework of verbal conversation has recently been used to explicate the survey response process. Interviewer-administered questionnaires are specialized forms of conversation, but this framework is less fitting for self-administered questionnaires; eg, self-administered questionnaires maintain the structure of conversational turn taking, but violate the sequential nature of these turns, as respondents have access to future "exchanges." Also, reading introduces additional cognitive processes that affect question answering. Cognitive tests on a series of self-administered questionnaires from the US Decennial Census are used to examine the applicability of the conversational metaphor to the self-administered questionnaire. Questionnaires completed by low-literate populations suggest that reading skills & specific familiarity with questionnaire formats & conventions are necessary for successful completion of a self-administered questionnaire. Other respondents use familiarity with administrative documents to make sense of questions; thus, prior knowledge & expectation play an important role in response. Together,

these skills & prior expectations are called "forms literacy." Literacy & prior expectation have important consequences for the pretesting of questionnaires, in terms of (1) choice of respondents in cognitive testing; (2) the practice of reading aloud during cognitive interviewing, & (3) analysis of respondent errors.

Gereffi, Gary (Duke U, Durham NC 27708 (tel/fax: 919-660-5611/5623; e-mail: ggere@soc.duke.edu)), **Commodity Chains and Regional Divisions of Labor: Comparing East Asia and North America.**

¶ A distinct approach is outlined—the global commodity chains framework—as the starting point for comparative national development research. The focus of this approach on firms, industries, & interfirm networks does not easily fit into either statist or traditional world-systems categories. The apparel commodity is analyzed to show the contrasting patterns of industrial transformation in two dynamic global regions: East Asia & North America. In both regions, hierarchies have developed since the 1960s that create complex divisions of labor between countries at different levels of development, all of which pursued strategies of export-oriented industrialization. However, these regional hierarchies are based on different kinds of economic networks & power relationships between the various firms that make up the apparel commodity chain—eg, fiber companies, textile mills, garment contractors, apparel manufacturers & marketers, trading companies, & retailers. The winners & losers in this process are more easily identified at the subnational & transnational levels than in terms of conventional nation-states or social classes. Some implications of global commodity chains analysis for future research on the global economy are highlighted.

Germain, Annick (Instit national recherche scientifique-urbanisation, 3465 rue Dorocher Montreal Quebec H2X 2C6 (tel/fax: 514-499-4001/4065; e-mail: annick_germain@inrs-urb.quebec.ca)), **Grandeur et misère de l'institutionnalisation de l'action collective: le cas des associations dans les quartiers multiethniques de Montréal** (The Rise and Fall of the Institutionalization of Collective Action: The Case of Associations in Montreal's Ethnic Neighborhoods). (FRE)

¶ The institutionalization of collective action has become a key topic in understanding issues pertaining to social movements, & new forms of social dynamics are constantly modifying the parameters of collective action, thus contributing to the complexity of action strategies. There is a need to explore the different forms these processes take, especially at the local level. Focus here is on the evolution of associative dynamics in Montreal's (Quebec) immigrant neighborhoods, based on a study of 7 multi-ethnic neighborhoods in the metropolitan area. Being the provincial metropolis, Montreal has, in the past 15 years, become increasingly cosmopolitan & is home to a wide range of ethnoculturally diversified groups. Only recently acknowledged by community movements, this sociocultur-

al diversity contributes to the complexity of issues relating to the institutionalization of collective action brought on by the redeployment of government action at the neighborhood level. At the same time, there has been some progress toward the opening up of some groups representing ethnocultural communities faced with exclusion. But the issue of institutionalization appears more problematic for these groups than for nonmigrant groups, because they are subjected to a double process of institutionalization.

✓ **Gershuny, Jonathan & Sullivan, O.** (U Essex, Wivenhoe Park Colchester C04 3SQ England [tel/fax: 44-1-206-672-957/873-151; e-mail: gershuny@essex.ac.uk]), **Time Use and Public Policy Regimes.** ¶ Gosta Esping-Andersen suggests a classification of public policy regimes, which might be expected to correspond to national differences in patterns of work & leisure consumption. From his three, two are distinguished: social democratic & liberal market states. The former might tend toward greater provision of high-value services, with a large proportion of high-value-added jobs & a diversifying leisure consumption pattern in these high-value services. The latter, by contrast, might tend toward a low-value pattern, providing comparatively fewer well-paid jobs & many more low-value-added ones, with lowbrow TV & fast food leisure consumption. Domestic work, it is hypothesized, will be less gender-segregated in the former than in the latter. Cross-time data from the US, UK, Sweden, & Finland are used to relate these regime types to patterns of time use by analyzing differentials in work times (paid & unpaid) & consumption patterns (the extent & nature of leisure activities).

✓ **Gevork, Pogorian** (Armenian National Academy Sciences, Yerevan 375010 [tel/fax: 3762-53-05-71/3794-50-59-47]), **Emergency Management System during the Long-Term Disasters: Government and Society Interaction.**

¶ State & society interactions during long-term disasters have a mutually complementary & enforcing character. Steps undertaken by society for surviving in disastrous situations make the government take measures for regulating these mass processes. Automatically, a "dialog" of interaction is created, & the two participants are likely to be partner-competitors. During the last 9 years, Armenia has had several disasters: a disastrous earthquake in 1988, which took 25,000 lives; a blockade of car & railroads because of war in Karabakh & Georgian-Abkhazian conflict; & severe energy & economic crises, which led to mass migration of 700,000 residents. To overcome these disastrous events, the state & society acted with different levels of success, in some cases achieving cooperation, in other cases not. When cooperation was established, their actions were successful. Acknowledging the importance of cooperation, the Emergency Management System was created, which includes not only necessary state structures, but also public efforts—nongovernmental organizations & organized citizens' initiatives.

✓ **Geyer, Felix** (SISWO, Plantage Muidergracht 4 NL-1018 TV Amsterdam Netherlands [tel/fax: 31-20-527-0652/622-9430; e-mail: geyer@siswo.uva.nl]), **Invitation to the Forthcoming Marriage between Alienation Theory and Sociocybernetics.**

¶ Argues that there has been a coevolution & confluence between alienation theory & sociocybernetics since the 1950s. An overview is presented of developments in both fields, showing how they have matured over the last few decades. On the one hand, the emergence of new complexity-related forms of alienation has stimulated new & more value-neutral forms of alienation theory; on the other hand, the application of cybernetics & general systems theory to the social sciences has led to second-order cybernetics, which likewise have focused attention on the accelerated change & resultant increasing emergence of complexity in society. Of course, there will remain a place for more normative types of alienation theory, as long as Marxist & psychiatric forms of alienation continue to exist, & also for the more mechanistic engineering-type approaches in first-order cybernetics, as long as they pertain to relatively simple, nonhuman environments, eg, developments in robotics. Here, however, the stress is on Prigogine-like processes of irreversible & accelerating change that lead to the emergence of new levels of complexity in societal interactions. Sociocybernetics tries to describe these processes, while modern alienation theory concentrates on their dysfunctional effects.

98S34405 / ISA / 1998 / 11646

✓ **Geyer, Felix** (Netherlands' Universities Inst Coordination Research Social Sciences, NL-1010 TV Amsterdam Netherlands [tel/fax: 3120-5270652/6229430; e-mail: geyer@siswo.uva.nl]), **From Simplicity to Complexity: Adapting to the Irreversibility of Accelerating Change.**

¶ Future studies & sociocybernetics have one core concept in common: change. Several irreversible processes (globally increasing interdependence fueled by the knowledge, technology, information, & communication explosions) cause increasingly rapid change in all fields & on all levels of human endeavor, leading to a continuing acceleration of societal complexity & the emergence of new institutions, ideologies, & processes that impinge on the individual's life. Two problems are explored here: (1) How will individuals react to becoming ever smaller cogs in ever more machines, & how will it affect their mental health? How many will try to lead change & in what directions? How many will become alienated & withdraw from wider societal involvements with potentially disastrous results for societal cohesion? How many will fight change, in often fanatical ways, with results out of proportion to their numbers, & what can be done to keep them in check? (2) Can the future be foretold? From a Prigogine-like systems perspective, bearing the principles of chaos theory in mind, it is argued that it cannot: there are too many bifurcation points in dissipative systems to forecast societal developments over more than a short timespan. Therefore, both future studies & sociocybernetics should be modest in their specific predictions of future developments, & should concentrate on discovering the general laws of change under conditions of societal overcomplexity.

✓ **Ghani, Navid** (Dept Sociology State U New York, Stony Brook 11794-4356 [e-mail: nghani@ic.sunysb.edu]), **The Use of Public Welfare by Immigrants in the United States.**

¶ Examines the controversial debate that immigrants are widely abusing the welfare system, that millions of tax dollars could be saved by limiting their access to public services. Following a brief background of immigration to the US, 1990 census data & prior empirical studies are discussed to analyze whether immigrants are becoming a great burden on the economy as a result of their use of welfare services. Findings indicate that the answer to this question is "no." Public assistance received by immigrants is not much higher than that by natives, & in some cases, lower. In areas where the use of public assistance is higher among immigrants, it is usually by refugees, whose use of public benefits is not considered separately. There is little evidence that immigrants come to the US to use public welfare. It is argued that immigrants have helped the US economy to prolong the current economic expansion, & their contribution does much more economic good than harm.

✓ **Gheorghiu, Mihai Dinu** (Centre sociologie éducation & culture, 54 blvd Raspail F-75006 Paris France [tel/fax: 33-1-49-54-2233/2674; e-mail: gheorghiu@msh-paris.fr]), **Minority, Exile, and Elite—The Romanian Case 1945-1989 in a Biographical Perspective.**

¶ With the occupation of Eastern Europe by the Soviet Army at the end of WWII, an out-migration to Western European societies had been initiated in countries who had collaborated with Nazi Germany. It was clearly shaped as "exile" & can be characterized at least as anticommunist & nationalist in a militant sense. The personalities, groups, & generations that migrated in this period belonged mainly to the political, military, & administrative elite. In the process of formation & stabilization of the communist regimes, as well as in interaction with representatives of the dissident exile from the 1970s & 1980s, Romanian exiles diversified mainly into marginalized political groups & more recognized "cultural exiles." Here, based on the reconstruction of relations between two biographies, one representing the former militant exile & the other the dissident exile of the late 1970s, connections & interdependencies of the different milieus of the Romanian exile are shown. They allow insight into the development of an elite outside the country that, despite a decrease of political representation, has constituted a relevant point of reference for the new elite inside the country.

Gibson, Diane M. (Australian Instit Health & Welfare, GPO Box 570 Canberra ACT 2601 [tel/fax: 2-624411-90/99; e-mail: diane.gibson@aihw.gov.au]), **Cash versus Care: Implications for Social Welfare.**

¶ Argues that within the vast bulk of work undertaken on the welfare state, cash transfers have come to be regarded as the paradigmatic welfare state activity, although social services certainly make an appearance. Ways that transfers in kind differ from transfers made in cash are analyzed, noting implications for the understanding of contemporary social policy.

98S34411 / ISA / 1998 / 11652

Gibson, Diane M. & Means, Robin (Australian Instit Health & Welfare, GPO Box 570 Canberra ACT 2601 [tel/fax: 02-62441190/62441199; e-mail: diane.gibson@aihw.gov.au]), **Privatisation of the Institutional Care Sector: Australia and the United Kingdom.**

¶ Compares the Australian & UK long-term institutional care programs in terms of their capacity to deliver efficient, equitable, & responsive services, & considers the extent to which the two systems fall in the relatively broad terrain defined by the term "quasi market." Elements oriented to either marketization or bureaucratic regulation models of care are identified.

98S34412 / ISA / 1998 / 11653

Giesen, Bernhard (Institut Soziologie Justus-Liebig U, Giessen D-35390 Federal Republic Germany [tel/fax: 49-641-99-23220/23209; e-mail: bernhard.giesen@sowi.uni-giessen.de]), **Between Holocaust and Economic Miracle—The Reconstruction of German National Identity.**

¶ After the collapse of Nazi rule & the partition between East & West Germany, German national identity could no longer be based on a territorial nation-state, but had to revive former patterns of cultural identity. It is argued that, until the unification of 1990, Germany's postwar identity was based on tension & continuous conflict between the traditional model of German virtues (ie, the economic miracle) & the model of guilt & moral conversion (ie, the Holocaust identity). Both patterns of identity were carried by different social strata & were fundamentally transformed after 1990. After the collapse of utopias the German Holocaust identity offers a new paradigm of collective identities that cannot be confined to the German case. Universalistic collective identities are no longer constructed by referring positively to a unifying utopia, but by the memorization of victims & a radical departure from the past.

Giglioli, Pier Paolo (Facoltà lettere e filosofia U Bologna, I-40125 Italy [tel/fax: 39-51-301523/300006; e-mail: giglioli@cds.unibo.it]), **Ritual Degradation as a Public Display: A Televised Corruption Trial.**

¶ From Dec 1993 to Apr 1994, a major trial for political corruption took place in Milan, Italy. Broadcast by public service TV, the trial marked

the peak of the process of delegitimation that, in less than 2 years, swept away the major leaders & political parties that had ruled Italy for almost 50 years. Although nominally the defendant was a financial consultant accused of paying politicians large sums to get support for his clients' businesses, key government politicians, eg, two former prime ministers (Craxi & Forlani), & other national political leaders were interrogated as witnesses; for millions of TV viewers, they became the real culprits. It is argued that the trial was not just a mere episode of a larger political crisis that would have run its course, but a crucial symbolic step that culturally codified the divesting of authority from these still powerful politicians & ritually degraded them in front of the whole nation. For many Italians, the political crisis occurred in the form of a media event. It is maintained that the moral result of the trial was in no way predetermined, but was the product of symbolic work performed before a large TV audience. Thus the trial was not only a degradation ritual, but also a moral arena in which politicians fought a battle in defense of their honor, respectability, & public image, a battle whose outcome was contingent on their discursive strategies. On the theoretical level, explored are the connections between politics & culture, structural processes & symbolic forms in the crucial moment of an acute political crisis, as well as the large-scale process of delegitimation & the face-to-face interaction that occurred in the courtroom & became real & palpable for the TV viewers.

98S34414 / ISA / 1998 / 11655

Gijsberts, Mérove (Dept Sociology Utrecht U, NL-3508 TC Netherlands [tel/fax: 31-30-2532101/2534405; e-mail: m.gijsberts@fsw.ruu.nl]), **Equality of Opportunities versus Equality of Outcomes: A Comparison between State-Socialist and Market Societies over Time.**

¶ Central in the study of justice norms is the question of what kinds of principles people employ when making judgments of injustice. Two basic standards can be recognized: the standard of contributions or equality of opportunities is a popular principle in marketplace justice; & the standard of equality of outcomes, eg, through redistributive public policies. The two standards can be seen as contrasting principles when comparing market societies with state-socialist societies. In the latter, the distribution system is ideologically based on equality of outcomes, as opposed to a meritocratic system based on equality of opportunities, found in market societies. The question to be answered is whether the transformation in state-socialist societies changed the importance attached to both contrasting justice principles. Focus is on the extent to which people adhere to egalitarian, as compared to inequalitarian, justice principles in state-socialist, vs market, societies before & after the transformation in 1989, & the extent to which people in different societies are inclined to adhere to both principles at the same time. The hypotheses are tested using data from several studies conducted in state-socialist & market societies, 1987-1996.

98S34415 / ISA / 1998 / 11656

Gilbert, Leah (Dept Sociology U Witwatersrand, Johannesburg 2050 South Africa [tel/fax: 27-11-716-2918/339-8163; e-mail: 029leah@musearts.wits.ac.za]), **Whose Right Is It? The Battle over the Dispensing of Medicines in South Africa.**

¶ A combination of qualitative & quantitative methods, including documentary analysis & interviews with community pharmacists & dispensing doctors, is drawn on to analyze the relationship & controversy between these two groups in South Africa. Findings reveal a deep ongoing sense of competition, manifest in the form of public debate & continuous attempts to protect professional task domains. Most of the pharmacists mentioned the dispensing doctor as the main problem. Meanwhile, the medical profession, as a united front, is fiercely protecting its "inherent" right to dispense medicines. Recent changes in legislation aimed at curbing doctor's freedom to dispense medicines & protect pharmacists' task domain raise interesting issues with regard to this question. Using the South African scenario, issues such as occupational task boundaries, business vs professional systems, & the role of the state are discussed in relation to professional dominance, jurisdiction, & autonomy.

98S34416 / ISA / 1998 / 11657

Gilbert, Leah (Dept Sociology U Witwatersrand, Johannesburg 2050 South Africa [tel/fax: 27-11-716-2918/339-8163; e-mail: 029leah@musearts.wits.ac.za]), **Pharmacy's Attempts to Extend Its Roles—A Case Study of Amendments to Legislation and Special Permit Holders in South Africa.**

¶ Examines the role expansion of the community pharmacy in South Af-

rica against the background of phenomena such as professional dominance & boundary encroachments, drawing on qualitative & quantitative methods, eg, key informants interviews, & documentary analysis, & a survey of community pharmacists in Johannesburg & pharmacists in possession of special permits. The findings demonstrate that pharmacies thrust toward an extended & more meaningful role, making a clear distinction between the granting of additional powers to prescribe medications vs a wider range of activities. Previous claims that the opposition from the medical profession is particularly fierce when it comes to the pharmacist's ability to prescribe are confirmed. Successful granting of special permits to pharmacists to practice an extended role can be explained by the fact that it has been restricted to rural, underserved areas. Although developments signify partial success by the pharmacy profession, it is likely to remain limited because of forces operating against it. Considering this context, the development of health centers might prove to be an alternative venue for the integration of pharmacists into the health care team.

98S34417 / ISA / 1998 / 11658

Gilbert, Nadia & Ng, Solange (U Laval, Quebec G1K 7P4 (tel/fax: 418-652-7068/7861; e-mail: abd104@agora.ulaval.ca)), **Public Management of Cultural Pluralism: A Conceptual Understanding of the Canadian Case.**

¶ Over recent decades, changes in the ethnic & cultural composition of the population have led Canada to redefine, via an official policy of multiculturalism, its accommodation of diversity. At issue is the construction of a national common sense of identity. Three concepts involved in this public regulation of identity, commonality, & pluralism are discussed—constitutional patriotism (Jürgen Habermas), civil religion (Willaime), & public religion (Williams)—& used for a theoretical analysis of the construction of identity by the interpretation of Canadian fundamental law. It is argued that these concepts have to do with a new way for the state to see the nationalization of the sense of identity by the construction of a national political culture.

98S34418 / ISA / 1998 / 11659

Gill, Rajesh (Dept Sociology Panjab U, Chandigarh 160014 India (tel: 780292; fax: 544177)), **Official Approach to Slums—The Indian Case.**

¶ The most pertinent characteristic of the Indian government's approach to slums & squatter settlements is that it has always treated them retrospectively. This approach is critically analyzed, & it is argued that, as long as the phenomenon of urban slums escapes an interpretive understanding at a microlevel, in its own contextuality, little optimism can be expected. After reviewing various official policies & programs designed to address issues of urban poverty & slums, focus shifts to the urgent need for probing into the factors that obstruct effective program implementation. Data from government documents, empirical studies, & firsthand experience with slum dwellers are used to address why the government is so ineffective at the practical level. A commendable step recently taken by the government of India with the implementation of the 74th Constitutional Amendment in different states, is examined in relation to its implications on urban poverty alleviation. Deep concern is expressed regarding a total absence of regular program monitoring by the government & a sheer disregard for accountability at almost every level of implementation.

98S34419 / ISA / 1998 / 11660

Gillborn, David (Inst Education U London, WC1H 0NT England (tel/fax: 0171-612-6811/6366; e-mail: d.gillborn@ioe.ac.uk)), **Policy and Research in Race and Education in the U.K.: Symbiosis or Mutual Abuse?**

¶ Examines the relationship between research & educational policy in the UK, especially that concerning race & ethnicity. Policymakers have proven both willing & able to ignore growing evidence on the extent of racism in the educational system. The complexities of the research/policy nexus are examined in the context of a recent attempt to use research on ethnic minority pupils to inform policy (Gillborn & Gipps, C, (1996)). This document generated considerable debate & controversy, raised the public profile of the issues, & was widely used to campaign for change; however, its wider impact on policy & practice remains doubtful. Despite the Labor Party's election victory, national government continues to adopt a largely color-blind approach to education. Further, it has been argued that research evidence might provide for the reinforcement of existing inequalities by highlighting achievement & expulsion differences. Because complete disengagement is impossible, whatever its philo-

sophical justification, sociologists must be critically reflexive about the constraints on their work & its possible (mis)use by policymakers.

98S34420 / ISA / 1998 / 11661

Gillet, Anne (CNAM Laboratoire Georges Friedmann, 55 rue Turbigo Paris 75003 France (tel/fax: 0140-272763/235; e-mail: Beluga@cpwb-internet.fr)), **L'Agent de maîtrise: une place d'encadrement intermédiaire spécifique dans l'organisation** (The Supervisor: A Midmanagerial Position in the Organization). (FRE)

¶ Argues that, in organizations altered by decentralized activities & responsibilities & affected by structural, technological, economic, & social & managerial transformations, the supervisory function remains central. Documentary research, statistical surveys, observations, & interviews completed 1993-1997 in a major French state firm involved in a wide modernization scheme since 1989 revealed deep changes & stable trends implied by this midmanagerial task, requiring various skills at the core of the division of labor, social regulation, & coordination between several agents. Supervisor profiles are defined by staff management policies, previous socioprofessional experiences, & current occupational situations, which favor regulation & self-improvement. Therefore, analyzed from the supervisory function point of view, firms prove to be crucial in building new professional skills & identities.

98S34421 / ISA / 1998 / 11662

Ginn, Jay & Arber, Sara (Surrey U, GU2 3XH England (tel/fax: 01483-300800/259551; e-mail: j.ginn@soc.surrey.ac.uk)), **Changing Gender and Generational Contracts.**

¶ Considers the connections between the gender & generational contracts & reviews the arguments for shifting the balance of pension provision further toward the private sector. The responses of three contrasting European welfare states—Federal Republic of Germany, Denmark, & GB—are compared to the alleged "old age crisis." Data from the British General Household Survey is used to assess the impact of pension privatization on the gender gap in pension income. It is concluded that intergenerational contracts cannot be fully understood in isolation from the gender contract. Compliance with the gender contract handicaps women in earnings-related pension schemes, especially in the private sector; yet, erosion of the gender contract tends to undermine the viability of pension schemes. Privatization of pensions is likely to exacerbate the feminization of poverty in later life & increase erosion of the gender contract.

Giorgas, Dimi (Research School Social Sciences Australian National U, Canberra ACT 2601 (tel/fax: 02-6249-4273/2114; e-mail: dimi@coombs.anu.edu.au)), **Patterns of Occupational Achievement and Earnings amongst Second Generation Australians.**

¶ A review of research yields evidence that factors such as weak English-language skills & the failure of Australian employers to recognize overseas schooling & qualifications adequately have led to an initial labor market disadvantage with minimal opportunities for social mobility among immigrants. However, while the evidence for first-generation immigrants is relatively clear-cut, there has been less systematic research on occupational achievements & earnings among the second. This is explored here using 1986 census data focusing on specific ancestries—Dutch, German, Hungarian, Polish, Italian, & Greek—which are contrasted with members of the majority ancestry group (third-generation Anglo Celts). Gender comparisons are also made.

Girling, Evi J., Smith, Marion V. & Sparks, J. Richard (Dept Criminology Keele U, Staffordshire ST5 5BG England (tel/fax: 01782-621111/584269; e-mail: cra12@keele.ac.uk)), **"Seductions of Punishment": Towards a Sociology of Punitive Passions.**

9

1 Analyzes 9-year-old children's talk about justice & punishment in a focus group setting in GB to explore a sociology of punitive emotions. The signs of punishment & the rhetorical devices it deploys are part of an institutional discourse that, through "judgements, condemnations & classifications, teaches us (& persuades us) how to judge, what to condemn, & how to classify, & supplies a set of languages, idioms, & vocabularies with which to do so, (thus) seeking to organize our moral & political understanding & to educate our sensibilities" (Garland, D., 1990). Starting with children's talk about justice & punishment, explored are some of these vocabularies & idioms & the contours & limits of penalty that they circumscribe. Garland suggests that structures of modern punishment have historically provided a set of inevitable & limiting ready-made answers to questions of punishment. Children's discursive & imaginative interpretation of the cultural inevitability of punishment is presented, & their sensibilities toward punishment are discussed. Garland & others have shown how societal sensibilities toward punishment shape the character of penal action & determine what developments therein are regarded as legitimate. Yet, sensibility seems a sanitized word—evoking the capacity to feel, ie, an openness & susceptibility to emotional impressions. Further, an investigation of punitive passions, ie, the seductions of punishment, is advocated.

✓ **Girling, Evi J., Smith, Marion V. & Sparks, J. Richard** (Dept Criminology Keele U, Staffordshire ST5 5BG England (tel/fax: 1782-621111/584269; e-mail: cra04@cc.keele.ac.uk)), **Conversations about Justice and Punishment: Children as Penal Commentators.**

1 Reports on methodological implications for penology & criminology of a project researching the cultural dimensions of children's sensibilities toward punishment. A sensitive sociolinguistic approach is applied to children's talk about justice & punishment in a focus group setting that investigates children's penal language & the commitments & disenfranchisements they voice in their constructs & experiences of justice & punishment. It is argued that children are the subjects of authoritative institutional discourses seeking to organize their moral & political understanding & educate their penal sensibilities. Demonstrated is how children deploy & subvert signs & rhetorical devices present in these discourses. Examining children's penal theories & language is deemed central to the understanding of contemporary societal sensibilities toward punishment.

✓ **Giron, Alicia** (Instit Investigaciones Económicas U Nacional Autónoma México, 04510 Mexico DF (fax: 525-291-4416; e-mail: alicia@servidor.unam.mx)), **Financial Innovation, Banking Crises and Alternative Markets.**

1 From an economist's point of view, Mexico has become an early victim of a worldwide process of financial innovation. Deregulation & liberalization produced a banking crisis accompanied by change in the characteristics of the money market, including 24-hour online activity. According to Michel Camdessus, the 1994 Mexican crash was the "first global financial crisis of the 21st century." It was followed by similar crises in South American, Southeast Asia, Korea, & Japan. Each of these crises had been preceded by wholesale privatizations of the local banking system where foreign investment played a decisive role. It is suggested that the cause of this deep process of financial innovation may be sought in the US banking system. As a result of the rise of powerful new middlemen based on offshore & off-balance trading, the share of commercial banks declined & they sought redress in new legislation. The result has been a financial instability that has spawned a sequence of worldwide banking crises. Clearly there is a visible effect on the population in Mexico & other countries hit by the crisis. Current policies of the International Monetary Fund appear to aggravate these effects. Dilemmas of Mexican economic policy & chances for an eventual reform of the international monetary system are discussed.

✓ **Gissinger, Ranveig & Gleditsch, Nils Petter** (Norwegian U Science & Technology, N-7055 Dragvoll (tel/fax: 47-7359-0673/1564; e-mail: Ranveig.Gissinger@sv.ntnu.no)), **Globalization and Domestic Violent Conflict.**

1 Explores the potential impact of economic globalization on civil war, the dominant form of war in the past decade. Liberalists argue that countries with a high degree of dependence on the global economy (whether measured by trade or investment) are likely to experience higher economic growth, greater affluence, more democracy, & increasingly peace-

ful conditions at home & abroad. In stark contrast, many globalists argue that a high level of trade & investment tends to generate greater economic inequality. Relative deprivation theory suggests that such inequality will increase the risk of violent domestic conflict. A set of hypotheses are developed from these two broad perspectives, & tested on a global data set for the period 1965-1994, using economic data from the Penn World Tables & UN statistics, & data on civil war from the Correlates of War Project, as well as control variables relating to regime type from the Polity project.

✓ **Gloppen, Siri** (Dept Comparative Politics U Bergen, N-5007 Norway (tel/fax: 47-55-58-29-86/94-25; e-mail: siri.gloppen@isp.uib.no)), **Constitutionalism in South Africa—Shifting Relations of Power?.**

1 Examines how the new constitution & the shift toward constitutionalism affected the relations of power in South African political society. Changes in the formal structures of the state & the "realia" of a set of power relations closely linked to constitutionalism are discussed. The theoretical framework of analysis draws on different legal traditions feeding into the constitutionalist idea & seeks to bring out the magnitude & significance of the shifts that have taken place in the South African political & legal system. An outline of the apartheid state according to this framework forms the basis for a discussion of the power-map of the new constitutional order. From this assessment of the status in terms of constitutional "formalia," two areas crucial to the establishment of the constitution as a political force are considered: (1) the status of the constitutional Court & its emerging jurisprudence, & (2) the process of establishing the constitutional norms in public consciousness. It is argued that, while skill & ingenuity characterize the strategies adopted, threats to constitutionalism abound, particularly from violent crime & social inequality.

✓ **Glubokova, Tanya** (Kharkiv Social & Economic Instit, 310003 Ukraine (tel/fax: 38-0572-23-46-65/75; e-mail: tat@tanya.iirex.kharkiv.net)), **The Study of Regional Unemployed Market Characteristics and Typologies.**

1 Analysis of statistical data showed that the number of the people who came to job centers is growing; however, a sociological study (N = 1,000+) of unemployed market dynamics & dynamics of social & professional characteristics of the unemployed revealed the inadequacy of the statistical analysis. Although 50+% of the unemployed have no source of income, life quality of some of them is higher than for some groups of employed. Different types of the unemployed are identified: those who are looking for short- or long-term jobs, those who use job centers to increase their chances to get a better job, & those who do not need a job but seek unemployed status & related benefits. It is argued that special criteria for evaluation & elaboration of social programs supporting the unemployed are needed.

✓ **Godbille, Alain** (GRIS U Rouen, F-76130 France (tel/fax: 02-35-14-61-05/04)), **La Socialisation professionnelle des visiteurs médicaux de l'industrie pharmaceutique en France** (The Professional Socialization of Health Representatives of the Pharmaceutical Industry in France). (FRE)

¶ How the socialization of health representatives of the pharmaceutical industry has been involved historically with the relationship between laboratories responsible for managing prescriptions & doctors trying to stay in charge of writing prescriptions is discussed. It is held that the progressive constitution of a closed market, the concentration of the industrial sector, & changes in the control over prescriptions have radicalized the tension between the medical body & the pharmaceutical industry. The medical visitor finds him- or herself involved in delicate transactions of identity, & it is argued that the displacement of professional spaces of recognition, linked to the rationalization of businesses, is perceived only with difficulty. Resulting obstacles to identification mechanisms raise questions about the time frame of relational & biographical processes of professional identity.

✓ **Goh, Daniel P. S.** (National U, Singapore S-119260 (tel: 65-7767127; e-mail: dolidoll@pacific.net.sg)), **Ideology, Culture and Agency in World-Historical Sociology: World-System and Globalization Theories.**

¶ Two approaches to comprehending contemporary global society—Immanuel Wallerstein's world-system theory & Roland Robertson's globalization theory—are contrasted, arguing for the latter because of its epistemological & analytical superiority, while the former is criticized for ideological leanings, unnecessary neglect of agency in favor of structure, & theoretical weakness in handling complex cultural issues. However, Robertson's theory lacks a phenomenological dimension, thus exposing it to criticisms for failing to systematically elaborate the links between individuals & globalization. It is suggested that this problem is easily remedied by employing Jean-Paul Sartre's existential philosophy. A short interpretive diachronic application to Singapore as a locality embedded in globality—which heuristically divides the experience of globalization in Singapore into three overlapping historical phases of colonial, national, & global modernity—is given to affirm & support the arguments.

✓ **Goldberg, Roberta** (Trinity Coll, Washington DC 20017 (tel/fax: 202-884-9224/9229; e-mail: goldbergr@trinity.dc.edu)), **The Social Construction of Adoptive Families: A Follow-Up Study on Adopting Romanian Children.**

¶ Using the principles of grounded theory, 8 US mothers adopting Romanian children were interviewed in depth to explore how families integrate their adoptive status & children's culture of origin with their family identity, focusing on how adoption is socially constructed by families. Findings reveal that, while identity as adoptive families linked to Romania remains vital, it has diminished impact on family life over time, & virtually no impact on daily routines, even for families whose children have health or developmental concerns originating from previously living conditions in Romania. Still, respondents reveal an acute awareness of the importance of adoption to the social construction of their families, including appreciation of Romanian culture & the social conditions prevalent in Romania at the time of adoption. Findings point to the need for expanded research into how adoptive families understand their particular experiences in the broader social context.

✓ **Gómez Cabranes, Leonor** (Faculty Economics U Extremadura, E-06071 Badajoz Spain (tel/fax: 35-24-289551/272509; e-mail: leonor@unex.es)), **Spanish title not provided** (Participation, Organizational Culture and Communication: Toward A Multidisciplinary Dialogue). (SPA)

¶ Organizational culture does not result from a preconceived design; it is a slow construction that emerges from distinct modes of interaction between subjects. Therefore, it cannot be understood as mere organizational syntax or as a mere instrument for the service of "dominative" power. When relations between unequal subjects are interpreted as dominative both suspicion toward who retains power & an obsessive ambition of redistributing it egalitarianly emerge, the alternative being egalitarian participation or domination. But, some feminist theories of power have shown how power can be used not to dominate, but to transform & empower others, creating the possibility of a crescent participation. This idea of the use of power not as domination, but as respect, care, & service, is new to the field of organizations, especially in firms. This perspective is related to ethics. In the doorway of the year 2000, in a post-modern cultural environment, sociology-sociology of organizations, in particular—cannot remain closed to other human sciences: it needs to be opened to multidisciplinary dialogue with anthropology, ethics, etc, to comprehend its proper object clearly & comprehensively.

✓ **González-Pérez, Guillermo J. & Vega-López, María Guadalupe** (U Guadalajara, Jalisco CP 44450 Mexico [tel/fax: 52-3-6411119; e-mail: ggonzal@udgserv.cencar.udg.mx]), **Lactancia materna: es un deber o un derecho de la mujer? (Breast-feeding: Is It a Duty or a Woman's Right?).** (SPA)

¶ In recent years, length of maternal lactation has been substantially reduced in Mexico in association with factors like teenage pregnancy & primiparity. Here, in-depth perinatal interview data from 28 teenager mothers in Guadalajara, Mexico, are drawn on to explore the beliefs & behaviors regarding maternal lactation. Results reveal that, around the beginning of the pregnancy, lactation is conceived as something satisfactory for the mother, but later, especially after experiencing breast-feeding, it is conceived as a duty (but not as a women's right). However, this duty is not necessarily fulfilled by teen mothers; the average duration of breast-feeding was lower than expected, & weaning was commonly

early. Moreover, teenagers showed great confidence in the experience & common sense of their mothers, but excluded their husbands (or partners) from decisions about lactation. It is concluded that breast-feeding should be considered by health institutions as more a sociocultural than a physiological process, with important gender aspects.

✓ **Goodman, James** (U Technology, Sydney New South Wales 2007 Australia [tel/fax: 612-95142714/95142332; e-mail: james.goodman@uts.edu.au]), **Transnational Contestation: Social Movements Beyond the State.**

¶ As economic forces are transnationalized, national state structures become less capable of expressing popular aspirations, thus forcing emancipatory politics into the realm of movement politics. Movements redefine issues of gender inequality, environmental degradation, exploitation of labor, human rights abuses, & others, as transnational problems requiring transnational solutions. In doing so, they articulate the national with the international & reach out beyond the inside-outside dichotomies imposed by the national state. This transnational field of contestation, or public sphere, while offering the possibility of democratic participation beyond the state, also raises problems, especially of correlating the territorial politics of national states with the more fluid logic of movement participation. This raises issues of political identification, nationalism, & movement politics; issues of collective action across cultural & national differences are also implicated. These problems & their consequent dilemmas & possibilities are illustrated via examples drawn from Australia, the global semiperiphery.

✓ **Gordon, Rob** (Dept Human Services Victoria, 32 Arnold St 3128 Australia [tel/fax: 61-3-9890-0598/9870-4348]), **Assessing and Managing Community Disruption following Disasters: An Australian Model.**

¶ A model of community disaster responses provides for minimizing social fabric damage during recovery. A sequence of collective responses has been identified. Communities consist of social units bonded in a structure for everyday needs. These bonds are irrelevant to survival in disaster & are temporarily set aside in favor of survival activity constituting a moment of "debonding" threatening the collective unit & stimulating the formation of a temporary social structure adapted to immediate needs, drawing the community together in a poorly differentiated fusion. However, this is not adapted to long-term recovery. A differentiated social structure must reform. The collective unit must manage transformation from fusion to a new structure. Yet fusion expresses intense bonds

energized by loss, survival, & other factors. It may resist change until it splits along lines of difference or conflict ("cleavage planes"), damaging the social fabric from which recovery is created. Management of this process involves early identification of debonding & fusion, cleavage planes, & community differences. Principles of social & collective psychology form the basis for community recovery strategies that minimize the destructiveness of the aftermath. Case studies illustrate the model in emergencies.

98S34449 / ISA / 1998 / 11690

Gornev, Galin Petrov (Instit Sociology, Moskovska Str 13A BG-1000 Sofia Bulgaria [tel/fax: 359-2-980-9086/5895; e-mail: gornev@bgicct.acad.bg]), **Autopoietic View on Creativity: Implications for Social Theory.**

¶ Two contrasting theoretical strategies from phenomenological & structural sociology tend to accentuate either the freedom of the human agent or the constraining effects of social structure, thus creating unacceptable theoretical disbalance. One of the most promising attempts to overcome theoretical impasse is undertaken by Anthony Giddens; his structuration theory emphasizes social structures' potential for both constraining & enabling human action. Here, Giddens's understanding of structuration is considered similar to an understanding of creativity; most generally, Albert Einstein noted that there is a deeply conservative tendency in every revolutionary act. However, by the detailed implementation of the development perspective in terms of coevolving ratios between "true self" & "false self" activities, from one side, & between structuration processes of sociality & socialization (as introduced by Zygmunt Bauman), from the other, autopoietic-systems-theory-based creativity theorizing is able to cast more light on how the agent is manipulating both the enabling & constraining aspects of social structure.

Gottdiener, Mark (Dept Sociology State U New York Buffalo, Amherst 14260 [tel/fax: 716-645-2417/3934; e-mail: Gottdiener@acsu.buffalo.edu]), **Undertheorizing Globalization and Its Consequences.**

¶ Over the 1990s, the topic of globalization has emerged as the principal way sociologists have discussed issues of social organization. Much of this work rarely reaches beyond descriptive observations & only loosely connects with world system theory; ie, writers on globalization undertheorize their concept & pass along ideas about an alleged global system of capital as if there were a unified subscription to these ideas. Here, several contemporary statements about the globalization problematic are reviewed, & their arguments critiqued as theoretically weak & misleading. It is suggested that, by returning to sophisticated theories of social organization & reexamining the subject of globalization, some deeper insights can be derived. Most critical is an understanding of how finance capital is connected to national capitals, how nation states remain powerful players, & how the crisis base of capitalism remains relevant to new theories of social organization.

98S34451 / ISA / 1998 / 11692

Gouirand, Pierre (Instit prospective tourisme, 27 Promenade des Anglais F-06000 Nice France [tel/fax: 33-4-92-14-86-86/93-82-45-35]), **Le Mythe des palaces** (The Myth of the Palace Hotels). (FRE)

¶ Palace hotels are the commercial equivalent of the castles & mansions of the ancien régime, which offered hospitality to the well-born traveler. In 19th-century Europe, with the Industrial Revolution, the emergence of the bourgeoisie, & the birth of modern tourism, the concept of the palace hotel was created to provide the same service. Explored here are what makes a palace hotel, how it works, & its sociological & economic influence, from the point of view of both clients & employees. The significance of the palace hotel in the modern works is also discussed.

Gould, Mark (Dept Sociology Haverford Coll, PA 19041 [tel/fax: 610-896-1489/1224; e-mail: mgould@haverford.edu]), **Personality, Culture and Society in George Herbert Mead: A Critique of Contemporary Sociological Theories of Culture and Personality.**

¶ Argues that any viable sociological theory must include autonomous conceptualizations of both personality & cultural systems, focusing on a critique of George Herbert Mead's *Mind, Self and Society* (1934). It is suggested that Mead's theory is incapable of explaining the interactions in a song by Oscar Brown, Jr., "The Snake," & that a satisfactory explanation of these actions, which illuminate everyday activities familiar to

all, requires the conceptualization of a personality system grounded in affect & a cultural system understood as a symbolic logic that makes intelligible certain actions. This critique is relevant in terms of rational choice theory & currently dominant conceptualizations that reduce culture to forms of social practice.

Gousgounis, Nicolaus (Pedagogical Instit, Solomou 41 GR-15452 Athens Greece [tel: 30-1-6716755; e-mail: ngousg@itel.gr]), **Children and the Post-Modern Media Challenge.**

¶ Children in the era of mass society risk much more than the average adult by receiving massive media messages, which they are unable to decode, while staying isolated (in their rooms). The pictorial bombardment influences children who have not formulated their identities & flexible value systems. Yet, many support the idea that TV might be the most useful tool of future education. It is argued that the everyday reality of children hinges on the simulated & fragmentary techniques of the media to such a degree that they substitute for the physical contact & interactive communication that past generations of children enjoyed, eg, societal games & competitive participation.

98S34454 / ISA / 1998 / 11695

Gousgounis, Nicolaus (Hellenic Sociological Assoc, Kiritsi Square 2 Athens Greece [e-mail: ngousg@itel.gr]), **Multicultural Cosmopolitanism.**

¶ Explores the meaning of cultural identity under postmodern conditions & how this notion could be defined under globalizing circumstances & media explosion, using the Egyptian paradigm to demonstrate the double quality of the traditionally sacred & modern spirit, where past & present coexist. The myth of North/South in cultural terms & Orientalism as an artificial ideology created by the West for the West are examined to reveal the double character of Egypt as a land of eternal unsolved mystery of its glorious classical past & a land of Islamic Orthodoxy & Muslim fundamentalism given to terrorist anti-Western actions. A journey to the quasi-mythological Egyptian Otherness is seen as a journey to a nonhierarchical difference. "Alexandrianism" is considered a model of an ideal tolerant cosmopolitanism & an important parameter revealing the dimensions of confused multicultural challenges.

98S34455 / ISA / 1998 / 11696

Gousgounis, Nicolaus (Pedagogical Instit, Solomou 41 Athens GR-15452 Greece [tel: 30-1-6716755; e-mail: ngousg@itel.gr]), **New Challenges of the Sacred as a Transgressing Factor of Our Post-Modern Profanity.**

¶ Individuals & crowds face a new challenge in postmodern societies. In contrast to modernity, postmodernity is characterized by an extreme division of the subject (fragmentation) & by a complete illusion of means & aims, as propagated through alienating mediatic messages (simulation). A third feature, traced & named "latency," has the sense of the inconsistency of goals & the flexibility of strategies. Both in the West & in the rest (to use Immanuel Wallerstein's distinction), people conceive the sacred under new influences coming mainly from the media & computer intervention in everyday life. Falsification of pictorial information in parallel with uncontrolled inflation are responsible for spatiotemporal alienation. The result is the inversion of the classical scheme, sacred/profane (conceived as the transgression of the former by the latter). One can speak today, rather, of the transgression of our everyday profanity by new forms of the sacred as developed & manifested under actual post-modern conditions. Focus here is on this recent development of the sacred.

98S34456 / ISA / 1998 / 11697

Gousgounis, Nicolaus (Pedagogical Instit, Solomou 41 GR-15452 Athens Greece [tel: 30-1-6716755; e-mail: ngousg@itel.gr]), **The Challenge of the Discussion Lists on the Internet and the Production of Social Knowledge.**

¶ Analyzes the recent phenomenon of the geometrical expansion of Internet lists, drawing on empirical data collected over 2 years. It is argued that the simulative character of this type of communication is responsible for the change of actual habits of Internet users, & these new practices are influencing the media evolution. Problems of alienation, rationalization, anonymity, & individuality are discussed as deriving from this type of collective communication. The creativity & innovative habits of many members of these lists are considered, & the creation of the so-called "virtual communities" as potential networks of people having common interests is examined along with member selection criteria. The notion of

9

membership is important for the understanding of what is actually happening in these lists. The evangelized absolute freedom of expression is compared with manifestations of annoyance resulting from insulting messages from people characterized as intruders. Other issues considered include (1) alienation caused by virtual communities vs physical communities; (2) how fragmentation of information on the Net affects development of real knowledge; (3) knowledge most likely to be propagated; (4) meaning & educational utility of this type of knowledge; & (5) the future of list owners.

Gousgounis, Nicolaus (Pedagogical Instit, Solomou 41 GR-15452 Athens Greece [tel: 30-1-6716755; e-mail: ngousg@itel.gr]), **Anomie and Alienation in Post-Modern Youth Cultures.**

† Argues that to understand youth, researchers have to clarify how components, categories, & conceptions of youth are socially produced under actual postmodern conditions. The Durkheimian notion of anomie has to be examined under recent sociocultural transitions described in post-industrial societies. Further, Marxian alienation has also been modified under present conditions. By these means youths are in a complex alienating condition: learning alienation & generalized confusion of means & aims common also to their parents.

98S34458 / ISA / 1998 / 11699

Gousgounis, Nicolaus (Pedagogical Instit Athens, 41 Solomou St P Psichicon Greece [tel/fax: 30-1-6716755/6460658; e-mail: ngousg@itel.gr]), **The Concept of Alienation under Its New Virtual Reality.**

† Today, alienation is conceived as a limitation of the self that devalues the sense of individuality, because to be alone & limited to one's boundaries is considered a condition of unease & even inner tension in the age of high communication. In this sense, alienation refers to a "human condition" & cannot simply be a feature peculiar to industrial or post-industrial society. But most contemporary references are related to current peculiarities, as if this period of human history is so distinct from the past that special terms, such as alienation, are needed to define it. Alienation can be an instrument of criticism founded on the philosophical & theoretical contexts from which it receives its meaning & not from the term per se. Here, positive, negative, & utilitarian connotations are discussed, & whether alienation can serve in the postmodern era as a "unit idea" is addressed.

98S34459 / ISA / 1998 / 11700

Goux, Dominique & Maurin, Eric (c/o Maurin-Dept recherche Institut national statistique études économiques, 15 Blvd Gabriel Péri F-92245 Malakoff Cedex France [tel/fax: 33-1-41-17-60-35/46; e-mail: maurin@ensae.fr]), **Selection in the Educational System and Selection in the Social Elite: A Comparison between France and the United States.**

† One of the most influential French sociological traditions argues that the persistently strong link between family background & educational attainment is no accident. Faced by changes in institutional & economic context, elites adopt new strategies to ensure their own continuity from generation to generation, & the educational system is theorized as a key element in these strategies. On the contrary, the mainstream US tradition argues that the costs of education are declining, & social background is bound to have less & less importance in the process of stratification. Reasons for US & French sociologists not sharing the same vision of the educational system are explored, using data from surveys conducted 1970-1995 to compare how family resources determine transitions in the educational system & access to the managerial class in France & the US. Also estimated are models that describe selection into the educational system & into management. Since no constraints are imposed on the covariance of the residuals, it is possible to compare the role of unobserved heterogeneity in France & the US.

Gran, Brian (Instit Social & Policy Studies Yale U, New Haven CT 06520 [tel: 203-432-3828; e-mail: brain.gran@yale.edu]), **Public and Private Pensions: Survival or Retrenchment.**

† In the midst of governmental budget battles over the last 15 years, public pension programs of many countries faced challenges & underwent change. Here, the retirement-income programs of Belgium, Canada, Denmark, & New Zealand, 1980-1995, are examined to evaluate the components of pension programs, both public & private, that were or were not protected from cutbacks. Ways in which the public sector coop-

erates with the nonpublic sectors to form retirement-income policy in these four countries are explored, & the explanatory frameworks that scholars employed to study social policy retrenchment are reevaluated by examining the parts of the pension programs that were maintained vs reduced. Factors that help explain the diminution & durability of public pension programs when considering both public & private pension programs are identified.

Granot, Hayim I. (School Social Work Bar-Ilan U, Ramat-Gan IL-52900 Israel [tel/fax: 972-3-531-8355/534-7228; e-mail: granot@ashur.cc.biu.ac.il]), **After the Bomb: Observations on Crowd Formation and Crowd Control from an Israeli Perspective.**

† Free assembly is one of the fundamental human rights protected by democracy. Since the beginnings of the modern nation-states, however, observers have perceived crowds as a danger. The development of the theoretical background for attitudes toward crowd behavior is examined, using Wright's classification of crowd formation theories in imitation/contagion, convergence, & emergent norm theories. Images of rioting mobs generally influence police attitudes toward crowd behavior & may affect their view of crowds in the aftermath of urban terror bombings as well. The nature of crowd violence, looting, panic, & convergence are reviewed briefly before examining the use made by police of a variety of tactics to manage crowd behavior. Sometimes these tactics are borrowed from riot control & it is falsely assumed that all crowds are hostile & constitute a threat to public order. Not all crowds are, in fact, bent on antisocial behavior. The motives for crowd formation in emergencies are considered & the use of tactics that reduce unnecessary friction with crowds characterized by innocent motivations is discussed.

Greco, Monica (Goldsmiths' Coll U London, SE14 6NW England [tel/fax: 171-919-77-09/13; e-mail: m.greco@gold.ac.uk]), **'Without Words for Emotion': On Pathogenic Normality.**

† The term "alexithymia" (without words for emotions) is a neologism for a clinical phenomenon that has been recognized or defined as such only recently. It is now claimed that the alexithymia construct has the potential to provide the needed interdisciplinary paradigm for psychosomatic research. The concept refers to a series of psychological & psychophysiological characteristics found in patients considered susceptible to somatic, vs psychological, disease. Here, a sociological analysis is offered, based largely, but not exclusively, on a figurational approach. In particular, alexithymia will be discussed in conjunction with the figure of Homo Clausus. However inaccurate & illusory, Homo Clausus is a form of self-perception that structures contemporary experience & produces concrete effects. It is argued that the social constraint to act "true to oneself"—a part of the process of informalization—produces opportunities for self-deception that are described as "normopathological" or alexithymic. The critical potential & implications of the alexithymia construct are discussed in conclusion.

98S34464 / ISA / 1998 / 11705

Green, Linda Buckley (Dept Anthropology Columbia U, New York NY 10027 [tel/fax: 212-854-4561/4374; e-mail: lbg5@columbia.edu]), **Food, Agriculture and Poverty: An Anthropological Perspective on Non-Traditional Export Cropping in Rural Guatemala.**

† Explores the complex & inextricable link between economic & cultural survival for the Maya in rural Guatemala. The growing of corn & beans

on small plots of land—the milpa—have been at the heart of Maya Indian material & cultural production practices for centuries, providing food & forming the locus of a Mayan epistemology. In recent years, with few other opportunities for procuring cash, rural peasant farmers have turned to contract farming, growing broccoli & snowpeas for export on milpa lands. The promotion of such nontraditional crops for export has been a component of a rural development strategy designed to ameliorate poverty in lieu of land reform. The majority of peasant farmers are Mayan Indians who live on the margins of society—87% live in poverty & 61% live in extreme poverty—unable to meet their basic daily needs. It is argued that this transformation to contract farming has led to increasing food insecurity, land differentiation in communities, an undermining of an internal market for sale of basic grains, & changes in the social relations of production & consumption in households. In comparable situations in other areas of the South, the use of anthropological tools, eg, participation observation, is examined to rethink how global development processes affect local people's lives. In the case of the Maya, corn is central not only to their physical well-being, but organizes their relations with their ancestors & their children, connecting them with their history & their future.

Grelon, André (École hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 34-1-40-25-12-42/47; e-mail: grelon@iresco.fr)), **Les Ingénieurs catholiques français face à l'économie libérale: éthique sociale et engagement professionnel** (French Catholic Engineers Faced with a Liberal Economy: Social Ethics and Professional Commitment). (FRE)

¶ Catholics have played an important role in French engineering since the late 19th century, intensifying after WWI, in turning the professional environment into a moral & social community. How these engineers dedicated themselves to both a doctrinal corpus set out by the Catholic Church in 1891 & numerous voluntary groups is examined, noting that they developed a professional ethic based on business values, social dialogue between different professional groups, & loyalty with external partners. Changes to the lives of Catholic engineers after the secularizing effects of WWII are discussed, showing that they continued to exert a moral influence on society thanks to their ideological coherence. During the economic crises of the 1970s, however, with the resulting restructuring of productive materials & increase in unemployment, the engineers' ideology was shaken. The impact of 1990s globalization is also considered, based on results of a recent study looking at engineers' perceptions of the current situation & the solutions they propose.

98S34468 / ISA / 1998 / 11709

Grenier, Line (Dépt Communication U Montréal, Quebec H3C 3J7 (tel/fax: 514-343-2075/2298; e-mail: grenierl@com.umontreal.ca)), **Québécois Popular Music Matters: Conjunctural Articulations of "Truth(s)" and "Value(s)".**

¶ Examines the political, economic, linguistic, & ideological role of pop-

ular Québécois music. As the 2-year success of the exposition, *Je vous entends chanter* (I Hear You Singing) demonstrates, the popularity of Québécois music is linked more to difficulties of social & historical relations in the province than to any intrinsic or ontological properties. Informed by Michel Foucault's analysis of a heterogeneous group of practices, discourses, & institutions that articulate relationships of knowledge & action in the musical field & in specific relationships of governing self- & others' behavior, the use of mediated status-enhancement rituals is explored. The popular song effectively reflects status-enhancement rituals that permit the prescription of certain ways of musical being & acting & the inscription that legitimates & enhances the status of these ways of being & acting.

98S34469 / ISA / 1998 / 11710

Grenzer, Elke (York U, North York Ontario M3J 1P3 (tel/fax: 416-921-0500/736-5730; e-mail: egrenzer@interlog.com)), **The Image of the Parisian Flâneuse: Feminine Transience in Theory and Practice.**

¶ The *flâneuse* is increasingly a symbol in collective life that seems to make reference to the solitary woman who ambles among the city crowd. As an exemplar of modernity, the *flâneuse* has been grafted in recent works as an impossible sign whose signification points to the contradictory position of an anonymous single woman in patriarchy. Examined are the various feminist discourses of women in the city & their representation of the *flâneuse* as an expression of the domination of women in the city. The figure of the *flâneuse* seems to be ruled by the extremes of moral regulation, political economy, or as a restricted economy of escapism. The question presupposed by feminism, ie, the ambiguity of the French metropolis as a feminine city is discussed.

Grichtchenko, Janna (Bel State U, Minsk Belarus 220050 (tel/fax: 0172-63-23-81; e-mail: phse@fef.bsu.unibel.by)), **Political Elites of Post-Soviet Space: From Global Problems to Local Decisions.**

¶ Examines the system power crisis experienced by the Confederation of Independent States (CIS). Empirical data reflect the common tendencies of the CIS transformation process. On one hand is the globalization of the actual problems in the local-governance representatives evaluations. Economic development is considered more important than environmental problems, eg, the consequences of the Chernobyl (Ukraine) catastrophe. Comparative analysis of local leader data reveals that the globalization of this problem has increased significantly. Thus, local levels of power easily delegate responsibility for solving this problem to the centers. On the other hand, at the highest levels, where the global character of economic problems are understood, the practice of individual decisions & local traditional approaches exists. This contradiction between global problems & attempts of the power elite to localize their solution is the main reason why CIS countries are not able to define the issue as one of a system crisis, both economic & political. It does not matter if Russia is considered traditionally as more advanced in the framework of CIS or if Belarussia is considered less advanced. The nature of this response is examined.

98S34471 / ISA / 1998 / 11712

Grieco, Margaret & Apt, Nana (U North London, N7 8DB England), **Gender and Agriculture in Africa: The 'Expert' Neglect of Local Practice.**

¶ Women carry the primary responsibility for food security in Africa, yet development agencies have devoted minimal resources to researching the impact of their agricultural policies & new techniques on the well-being of Africa's women farmers. The dominant focus has been on the cash crop activities of men farmers, & agricultural research & investment have largely been confined to this domain, though there is clear evidence that, in many parts of Africa, women carry the primary burden for the financing of children's welfare. While local practice is to separate male & female economic accounts, women & children are rarely the beneficiaries of the income generated by cash crops; their present well-being is founded, rather, in subsistence farming. The external expert perspective of the key development agencies continues to assume a unified household where income earned by males is shared with wives & children. As a consequence, gender-appropriate agricultural policies & services have failed to develop. Here, the evidence on local practice is contrasted with the persistence of inappropriate external expert perspectives, & recommendations are made for better gendered approaches to agriculture in Africa.

Griggs, Steven (School Humanities & Social Sciences Staffordshire

9

U, Stoke on Trent ST4 2DE England (e-mail: sstsfg@staffs.ac.uk)), **New Social Movements and the Politics of Environmental Protest: Local Residents, Direct Action and Airport Expansion.**

¶ Constructs an alternative explanatory framework to examine new forms of participation, eg, opposition movements & direct action protests, in the policy process in the context of the campaign of local groups & residents against a new second runway at Manchester Airport (England). Insights of the rational choice model are articulated with the recent emergence of a discursive approach to political analysis. This campaign, pursued over several years, was the first airport protest in the UK in which the mobilization of largely middle-class residents was accompanied by the presence of a committed group of direct action protesters, the so-called ecowarriors.

98S34473 / ISA / 1998 / 11714

Grigoryev, Svyatoslav Ivanovitch (Altai State U, Barnaul Russia 656099 (tel/fax: 7-385222-2114/5345; e-mail: grig@agous.altai.su)), **Dynamics of Liberal and Anti-Liberal Views of Russian Youth in Siberia in 90s.**

¶ Explores political opposition & evolution of liberal & antiliberal orientations of Russian youth in Siberia in the context of erratic democratic reforms, drawing on 1993-1997 longitudinal, electorate, & other data from Altai & Krasnoyarsk. Growth of liberal orientations was more typical for youth than for the elderly & was dependent on regional factors; urban young people demonstrated it more frequently than their rural counterparts. Liberal & antiliberal views are often combined in young people. Liberal orientations of young people in Siberia were originally ideologically based, expanding into economic, social, & cultural spheres. Their strong liberal views turned antiliberal in the mid-1990s, with democratic reforms leading to a new centralization, under the guise of the pursuit of state stability.

98S34474 / ISA / 1998 / 11715

Grinberg, Lev Luis (Dept Behavioral Sciences Ben-Gurion U Negev, Beersheva IL-84105 Israel), **The New Post-Conflict Agenda and the Regime Crisis in Israel.**

¶ It is suggested that Israeli society is in a deep regime crisis originated by the derailing of the Oslo (Norway) process. The "peace process" is interpreted as both the outcome of a new agenda in Israel & its main drive. The new agenda is postconflict, composed of issues that were ignored or postponed because of conflict priorities: economic, social, ethnic, religious, gender, & regional issues. The postconflict agenda includes post-Zionist demands, which are broader both in content & numbers of citizens involved. The first Oslo Agreements in 1993 liberated the imagination of a new peace era & pushed political entrepreneurs to make new coalitions. Yitzhak Rabin was the leader of the transition, & his assassination is interpreted as the cause of the regime crisis: the old political parties (conflict-based) are still ruling, but new forms of political identity, enforced by the new elections system, are disintegrating the capability to make authoritative decisions.

98S34475 / ISA / 1998 / 11716

Gronski, Robert & Bonanno, Alessandro (U Missouri, Columbia 65211), **The Alchemy of Blue Gold: Turning Shrimp Culture into a Global Commodity.**

¶ Throughout South & Southeast Asia today, the export-oriented shrimp culture is expanding, despite serious socioecological consequences to the livelihoods of local farmers & fishers & the sustainability of coastal areas. Examined here are the patterns & forces behind agroindustrial & institutional practices that integrate local food growers into a global commodity industry. By focusing on both state & corporate interactions surrounding the shrimp culture industry in Thailand, analyzed is how newly agroindustrialized nations experience the structural transformation of their food production capabilities for world market demands. A critique is offered of the global process that both failed in promoting equitable development & created new contradictions in economic production. Possible responses by local groups to the global corporate food regime are discussed.

98S34476 / ISA / 1998 / 11717

Grosfoguel, Ramon (Sociology Dept Binghamton U, NY 13902-6000 (tel/fax: 607-777-2273/4197; e-mail: grosfog@binghamton.edu)), **Transnational Communities in Miami from the Cold War to the Post-Cold War.**

¶ Analyzes the labor market incorporation, sociopolitical modes of incorporation, & transnational identities of Caribbean migrants in Miami,

FL, within the context of the transition from the Cold War to the post-Cold War. Particular emphasis is placed on recent US migration policies & their effect on the transnationalism of migrants from the Caribbean, focusing on Cubans, Dominicans, Haitians, Puerto Ricans, & Jamaicans. Miami is analyzed as a global city where migrants develop transnational connections with their home communities.

98S34477 / ISA / 1998 / 11718

Gross, Martin, **The Education-Based Allocation to Class—A Comparison of Six Countries.**

¶ It is assumed that the value of educational titles for getting a job depends on the structure of the educational system. Educational titles are more valued in countries having a highly standardized, stratified, & differentiated educational system. Such "credentialist" countries use educational titles as a means of exclusion. The allocative power of education is examined here for six countries: Poland, Russia, the former East & West Germany, GB & the US. Using data from the 1991 International Social Justice Project, three hypotheses are developed & tested: (1) The overall association between education & class is stronger in more credentialist countries. (2) One can distinguish different types of credentialism according to the structures of the various educational systems, which lead to specific class structures. (3) The more important educational titles are for allocating people to jobs, the less important are characteristics of individuals & labor markets; in credentialist countries, educational titles are exclusionary, whereas, in noncredentialist countries, exclusions focus on criteria like sex or age. The association between education, individual characteristics (sex, age), & labor market characteristics (size of organization, economic sector) is examined with multinomial logistic regressions. Results confirm hypotheses 1 & 2 but not hypothesis 3.

98S34478 / ISA / 1998 / 11719

Gross, Martin (Instit Sociology Humboldt-U, D-10099 Berlin Federal Republic Germany (tel/fax: 49-30-2093-4420/2094-4430; e-mail: martin.gross@rz.hu-berlin.de)), **Educational Systems, Intragenerational Mobility and Perceived Social Inequality.**

¶ In countries with highly standardized, stratified, & differentiated educational systems, educational titles are much more important for getting a job than in countries without these characteristics, particularly in obtaining the first job after leaving the educational system. At the same time, intragenerational stability is much more pronounced: educational titles are not only very important for getting a desired job, but people also remain in this job for a long time. Because educational titles are a major means of exclusion, countries with such an educational system can be called "credentialist." A low degree of intragenerational mobility means that the positions in the stratification system are closed: the more people remain in the same position, the more this position can be viewed as a closed position. As suggested by Aage B. Sørensen (1983 (see abstract 83N4006)), in systems of closed positions, employees gain control over access to jobs as well as over performance in these jobs. As a result, rewards paid to employees depend only on the characteristics of jobs, not on the characteristics of the incumbents of these jobs; moreover, educational titles generate economic "rents." Thus, classes of similar positions, yielding advantages or disadvantages that are not associated with individual characteristics & actions, can be distinguished, & people can be expected to engage in collective actions to improve their social standing or defend the advantages of their positions; ie, it is assumed that, in credentialist countries indicators of social stratification like education & class are more important for explaining individual actions & attitudes than in less credentialist countries. This hypothesis is tested with data from the International Social Justice Project (1991) on Poland, Russia, & Eastern & Western Germany. Results show that, in credentialist societies, class & education are more important for explaining attitudes on life satisfaction, social justice & subjective social status than in noncredentialist societies.

98S34479 / ISA / 1998 / 11720

Gross, Toomas (Dept Social Anthropology U Cambridge, CB2 3RF England (tel/fax: 44-1223-364451/335993; e-mail: tg202@hermes.cam.ac.uk)), **Karl Bücher's Legacy to Karl Polanyi.**

¶ Examines the impact of Karl Bücher's (1893) theory of the three stages of economic development, his ideas about the emergence of the market system, & his understanding of the economy in general on Karl Polanyi's substantivist approach to economy as an "instituted process" & his notion of embeddedness. Bücher's own views are put into a wider context by placing special emphasis on the relatedness of his ideas to those of the historical school, although he did not consider himself part

of it. It is shown that many of the theoretical issues that emerged in the debates in economic anthropology between the substantivists, led by Polanyi, & the formalists in the 1950s & 1960s had their roots in the similar arguments presented during the *Methodenstreit* of 1870s & the disputes between primitivists & modernists, especially the famous Bücher-Meyer debate.

✓Grossman, Perry (New York U, NY 10003 (tel/fax: 212-998-8355/995-4140; e-mail: grossman@mail.soc.nyu.edu)), **The Trade-Environment Linkage in the North American Free Trade Agreement.**

¶ In 1990, big business was a major supporter of free trade between Mexico, the US, & Canada, & the passage of a North American Free Trade Agreement (NAFTA) looked fairly certain. However, it encountered significant opposition from labor, certain businesses, consumer activists, church groups, & environmentalists. The last group, in particular (1) cited the rapid industrialization & population growth on the US-Mexico border, associated with the maquiladoras industry, as illustrative of the negative impacts of trade liberalization; (2) argued that Mexico acts as a "pollution haven" for US industries attempting to reduce environmental protection costs; (3) regarded the highly publicized 1991 GATT (General Agreement on Tariff & Trade) tuna-dolphin case as an example of trade agreements taking precedence over environmental conservation initiatives; & (4) pointed to several subsidies & sanitary & phytosanitary measure issues in nongovernmental organizations. Specific arguments of several nongovernmental organizations are reviewed. Defenders of NAFTA argued that economic growth would foster environmentalism, businesses in Mexico would increasingly comply with US standards, & the additional revenues gained from NAFTA would allow for the purchase of environmental protection. Environmentalists succeeded in raising concerns over the trade-environment relationship; however, because the three governments agreed to an environmental side agreement, NAFTA opposition fractured & could not stop the agreement. The groups that remained opposed had relatively weak resources & limited political opportunities, & faced a public sense of inevitability toward the passage of NAFTA. While unable to stop NAFTA, environmentalists did gain a side agreement creating the North American Commission on Environmental Cooperation. In addition, a commitment was made to create the Border Commission for Environmental Cooperation & the North American Development Bank to address environmental & infrastructure issues on the US-Mexico border. Though environmentalists gained some concessions, the passage of NAFTA indicates a process of trade liberalization dominated by industrial concerns.

✓Grotowska-Leder, Jolanta (Dept General Sociology U Łódź, PL-90214 Poland (tel/fax: 48-42-35-42-51/53-09; e-mail: zsol@krysia.uni.lodz.pl)), **Faces of Polish Poverty in the 90's.**

¶ The number of poor people increased dramatically in Poland in the 1990s. In addition to the permanent poor, new groups are at risk, the losers of the changing socioeconomic system & growing socioeconomic insecurity among the working middle classes. Case studies are presented of the Polish contemporary poor: the traditional poor include the ill, disabled, & old, as well as those guilty of job evasion & breaking the law. The new poor include unemployed people, people with low wages, & one-parent families. In general, those defined as poor are those who are granted social assistance. Focus here is on reconstructing the process of becoming poor, strategies of survival, & everyday activities with which the poor need help, eg, family & neighborhood relations, living conditions, efforts for changing their poor status, & thinking about the future. The theoretical background of the analysis of 1993-1997 qualitative & quantitative data is explained, & factors/conditions unique to contemporary Poland that play a role in this situation are outlined.

✓Groushevsky, Alexander Yuri (Center Ethno-Political & Regional Studies, Varvarka 7 307 Moscow 103001 Russia (tel/fax: 095-128-3611/206-6439)), **The Migratory Reaction of Russians to the New Ethno-Political Situation in the Newly Independent States.**

¶ Despite decreased social status of ethnic Russians & rise of anti-Russian feelings almost everywhere in the newly independent states, the migratory reaction of this new postimperial minority differs across countries & provinces in the same state. Analysis of reasons for this indicates that the decision on emigration depends mainly on three factors: (1) cultural proximity of host society, (2) relative level of economic & social development of host country, & (3) perception of "historically approved"

presence in specific provinces (eg, the Crimea, northern Kazakhstan). Consequently, there has been a mass Russian emigration from Caucasus, Central Asia, & southern Kazakhstan; surprisingly few voluntary emigrants from Baltic states; certain outflux of Russian minority from western Ukraine & Moldova; stable migratory situation in eastern Ukraine & Belarus; & militant readiness to defend Russian presence (leading to irredentism) in the provinces considered as "traditionally Russian."

✓Grubel, Ruth M. (School Sociology Kwansei Gakuin U, Nishinomiya 662-0891 Japan (tel/fax: 798-51-1177/0955; e-mail: grubelink@aol.com)), **Foreign Assistance for Disasters in Rich Countries: The Case of the Great Hanshin Earthquake.**

¶ Just an hour after the violent earthquake that devastated Kobe, Japan, & its surrounding area, offers of assistance began pouring in from governments & other organizations abroad. Most postdisaster evaluations agree that government officials were poorly prepared for such a large-scale earthquake, but particular criticisms were leveled against bureaucrats who appeared to obstruct the implementation of foreign assistance. In fact, many alleged that lives would have been saved, & homeless people's conditions restored more quickly, if certain foreign assistance had been accepted. How different is providing aid to an affluent country that still has most regions & resources available for sending personnel & needed goods? Through interviews with responsible government & nongovernmental organization personnel in Japan, & examination of documents related to foreign disaster assistance, an attempt is made to analyze the impact of such assistance on a rich country. Noting the difficulties caused by offers of aid, recommendations are made for those wishing to assist disaster areas in economically developed foreign countries. Most important among them is the necessity of knowing the organizational, personnel, cultural, & material needs of the affected region before sending relief.

✓Guay, Louis (U Laval, Quebec G1K 7P4 (tel/fax: 418-656-2131/7390; e-mail: louis.guay@soc.ulaval.ca)), **The Social Use of Science in Ecological Problem-Solving: A Comparison of Acid Rain and Climate Change in Canada.**

¶ Presents a model of social response to ecological problems based on a social constructivist perspective. Because no solution is brought about without incurring some costs to, or change of behavior in, some social actors, it is expected that those affected will resist & mobilize available resources to minimize the impact of new environmental policies & decisions. Science or scientific information is often contested by opposing social actors & economic interests. Empirical cases of acid rain & climate change in Canada are used to examine how public debates on ecological problem solving have developed, focusing on how scientific information is used, interpreted, contested, & integrated in social actors' positions on the ecological problem. Particular attention is given to responses formulated by economic interests regarding these two ecological problems. In reviewing similar cases, discussed is the role of social institutions in enhancing or closing the debate on ecological problem solving. Institutional arrangements vary across & within countries & bear a great deal on the process as well as on the outcome of such a debate. They may indicate much of science's role in building an understanding of & in solving ecological problems.

Gudagunti, Raghavendra (Government First Grade Coll, Karnataka India), **Autonomy and Professionalism: Study of Indian Work Organization.**

¶ Explores implications of organizational milieu for level of professionalism among Indian executives, drawing on interview & other empirical data from 126 top executives in public & private work organizations in southern India. Following Weberian classification, work organizations are categorized as bureaucratic & patrimonial based on structural features. Findings indicate that Indian work organizations represent a blend of both types, minimizing disadvantages of extreme bureaucratization & chaotic arbitration of purely patrimonial structures. Contrary to general belief, Indian executives are found to exhibit a reasonably high degree of professionalism in their approach & management of work organizations, in spite of the conservative scale of professionalism. Further, the general assumption pertaining to negative association between degree of bureaucratization & level of professionalism in work organizations appears unfounded, at least in the Indian context; executives operating in highly bureaucratic work structures tend to exhibit a relatively higher degree of professionalism. As such, Mertonian dysfunctions of bureaucratization need to be reexamined in the context of Indian work organizations. Results are attributed to general socioeconomic & cultural milieus in which organizations operate.

Guest, Robyn (U Alberta, Edmonton T6G 2H4), **Performing (Pre)forming Gender and Commodity Capitalism: Desire and Alienation in the Service Sector Economy.**

¶ Much of the literature on the service sector focuses on a particular industry, generally large corporations, with rigid routinization, expansive deskilling, & invasive corporate policies that involve an encroachment on workers' sense of self. This focus on singular industries does not get to the heart of the matter, which is how desire drives capitalism at the level of the subject. Explored here is how eras of capitalist ideology perpetuate our most personal ends, individual actions, ethos of conduct, & even aspects of ourselves that have traditionally been held in autonomous status—our bodies, desires, & fantasies. An awareness of the mechanisms of corporate capitalism is not enough to displace their effects. It is argued that desire serves to move these signifying mechanisms, reproducing their effects, which in turn makes resistance difficult. Studies in the sociology of work have begun to focus on so-called soft skills, bringing much needed attention to new areas of vulnerability for workers in the service economy. The best of this literature focuses on the requirement of selling oneself as part of a product, & the consequences of this on notions of subjectivity. Hochschild, in an 1983 study of airline attendants, suggested that workers whose emotions are managed by employers become alienated from their feelings; service workers have difficulty experiencing themselves as authentic selves even when they are not at work. Focus here is

on the relationship between a notion of a real or authentic self & a work self & the implications of this distinction for questions of assistance to oppressive labor practices.

Guha, Amalendu (Institt Alternative Development Research, PO Box 870 Sentrum N-0104 Oslo Norway [tel/fax: 47-22-37-73-63]), **Sociology of Social Transformation from the Last Quarter of the 20th Century towards the First Quarter of the 21st Century: Premises and Perspectives.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The last quarter of the 20th century saw the collapse of the East European, centralized, enforced, homogenized social system; capitalized modernization of the Chinese socioeconomic system; sustainable & relevant development-oriented social change in parts of the developing world; dictatorial-cum-civil-war-related social distress in other parts of that region; & experimental unionization in Western Europe. These trends will play important roles of transformation in the first quarter of the 21st century. Presented under the tridimensional analytical methodology of time, space, & circumstances are the premises-perspectives, cause-effects, & being-becoming aspects of social evolution taking place in this transitional & transformational period. Also addressed are the value dynamics of this transformatory social change.

Guibernau, Montserrat (Center Research Ethnic Relations U Warwick, Coventry CV4 7AL England [fax: 1203-524324; e-mail: ersam@csv.warwick.ac.uk]), **Nations without a State as New Global Political Actors.**

¶ The multinational character of the majority of the nation-states has contributed to the generation of a nationalism opposed to that instilled by the state, ie, the nationalism of nations without states, eg, Catalonia, Scotland, or the Basque Country. Crucial changes affecting the social, political, & economic arenas have been prompted by the widening & deepening of globalization processes. An indirect consequence of this is the unexpected & powerful emergence of nations without states as new global political actors. Explored here are the current relevance & proliferation of nationalist movements in nations without a state & implications for the future development of the nation-states. The nationalism of nations without states not only questions the legitimacy of the nation-state but also stands as a powerful element that is conferring nations without states a new & unprecedented role in international politics. This poses fundamental questions about the ways in which institutions such as the European Union could be developed to deal with their demands. The current reemergence of this type of nationalism is stressed & linked with key factors transforming the ways in which national identities are constructed in an era dominated by the intensification of globalization processes. Examined are the (1) different political environments in which nations without states find themselves; & (2) issues of identity, globalization, & democracy in the nations without states' movements for global recognition as political actors. Specific references are made to the eventual creation of a Europe of the Regions.

Guillen, Ana M. & Alvarez, Santiago (U Oviedo, E-33071 Spain [tel/fax: 34-9-85-103727/230789; e-mail: aguillen@hp845.econo.uniovi.es]), **Recent Changes in Southern European Welfare States: Is There Social Dumping?**

¶ Analyzes social policy reforms that have been adopted recently in Southern European countries (Portugal, Spain, Italy, & Greece). Such measures are aimed at adapting to the restrictions imposed on their na-

tional economies by the creation of the European Economic & Monetary Union. Social policy innovation is also influenced by the arguments & pressure capacities of the different social actors that pursue the implementation of policies favoring employment creation. These policy innovations have entailed the introduction in recent years of a series of measures that have had the effect of modifying both welfare state provision & financing systems as well as taxes on corporations. Moreover, policy innovations intended to foster employment creation may alter competition among firms & may lead to the upsurge of social dumping. Here, a conceptual clarification of the term "social dumping" is presented, & debates among the main actors intervening in the decision-making processes regarding the dilemmas between "social dumping" & "catching up" strategies are discussed. A quantitative & qualitative analysis of actual reform processes & their impact on both public revenues & expenditure is reported, & factors shaping recent policy patterns, paying special attention to the influence of globalization, are assessed.

98S34494 / ISA / 1998 / 11735

Guimarães da Fonseca, Elisabeth (Federal U Uberlândia, Minas Gerais Brazil), **The Youth's Vote. From the Democratic Ideal to the Citizenship Experience.**

† Discusses the introduction of youths' political participation & right to vote, based on field research in schools of Uberlândia, Minas Gerais, Brazil, that compared two turns of the 1994 general elections & the 1996 municipal elections. The methodology included ethnographic observation & social historical analysis. Focus is on the meaning of the vote, especially for the first time, as a democratic attitude necessary for full citizenship. Also discussed are sociability, ritual, & the voting practice itself as a sphere that has meanings beyond the political.

98S34495 / ISA / 1998 / 11736

Guimaraes, Antonio Sergio A. (U São Paulo, 05508-900 SP Brazil [tel/fax: 55-11-818-3716/4505; e-mail: asguima@usp.br]), **Race and Class in Brazil: Politics of Discrimination, Integration and Social Mobility of Blacks.**

† Discusses the process of integration & exclusion of African descendants in Brazilian society. With the emancipation of the slaves in 1888, Brazilian citizenship was extended to all Brazil-born persons, including blacks & Creoles, & Africans won the status of immigrants. However, 100 years later, this right to citizenship is still in process; there have been important cultural, political, social, & economic barriers for blacks to overcome in a society that has maintained traits of colonial, patrimonial rule. The recent development of ethnic & racial identities in Brazil has called into question the traditional assimilationist ideal of a unique Euro-centered culture, which went hand in hand with racial inequalities, & an overvaluation of whiteness. In this context, the actual political challenges confronting black Brazilians are evaluated: rights of multiculturalism, politics of identity, enforcement of individual rights, & redefinition of the merit ideal to include compensatory policies.

Guindon, Gilbert (U Laval, Quebec G0A 2K0 [tel: 418-822-3856; e-mail: gguindon@fse.ulaval.ca]), **Le Réenchantement de la science: le cas du mouvement transpersonnel** (The Reenchantment of Science: The Case of the Transpersonal Movement). (FRE)

† Stemming from the Western sociocultural context of the 1960s & a reflection of the social transformations of religious & existential belief systems, the transpersonal movement proposes a new unified world vision called the transpersonal paradigm, a synthesis of science & spirituality. Based on a critical analysis of selected writings by prominent transpersonal figures (Charles Tart, Stanislav Grof, & Kenneth Ring) close to the academic milieu, important aspects of transpersonal research are reviewed. In general, the transpersonal movement has shown lack of concern for work done in psychology or sociology of religion. Instead, the movement has chosen to speculate about the evolution of consciousness & humanity & to talk about the necessity of introducing the sacred in our lives, heading to a reenchantment of science. In doing so, the transpersonal movement may be seen as a legitimate contemporary myth about a spiritual quest, but not as a valid source of scientific knowledge.

Gunder Frank, André (U Toronto, Ontario M4W 1J8 [tel/fax: 416-972-0616/0071; e-mail: agfrank@chass.utoronto.ca]), **Orient the World-System.**

† Asia was predominant in the real world economy & system until at least 1800. The Braudelian European world-economy & the Wallersteinian modern world-system arose at the peninsular Western extremity as a marginal part of & a derivative process within the development of the Afro-Eurasian (world) system. The widely misinterpreted rise of the West climbed up on Asia shoulders & only succeeded after 1800, following the decline of the East & manifested itself as a temporary shift in its center of gravity in the world from East to West. All three processes were generated by the structure & dynamic of this world-system itself & certainly not any European exceptionalism of received Marxian & Weberian theory, or even through the prior European colonial exploitation of the Americas & Africa as per the theory of the modern world-system. It is time to (re)Orient our perspective on & analysis of the world now that its center is returning full circle to Asia, & especially to Middle Kingdom China.

98S34500 / ISA / 1998 / 11741

Guoyang, Shao (China Youth & Children Research Center), **An Analysis of the Important Phenomena Occurring among Chinese Youth since the Founding of the People's Republic of China.**

† Since its founding in 1949, the People's Republic of China has gone through two periods of important social transformation—1949-1979 & 1979-present—that deeply influenced Chinese youth socialization. Youth & society are in constant mutual interaction & restriction. Youth must adapt themselves to society, but then must engage in activities of social reform to satisfy their social needs & promote social development. The difference in youth phenomena in the two periods lies in the fact that in the first period, the important youth phenomena were more passive, the only choice of most young people in unitary society, while in the second period, youth had more free choice in a society with pluralistic features, which led to social changes in China following a progressive line. Progressive social changes bring about not only increased material wealth, but progress of social life in all aspects, enabling individuals to better develop their talents.

1 Culture shock responds to demographic changes as the population of the work- & marketplace becomes more heterogeneous & "valuing diversity" gains momentum. In Canada, despite public policy urging residents to celebrate cultural differences, some employers seem to be reluctant to value diversity. Cultural clashes resulting from differences in leadership styles, communication patterns, performance appraisal, & other forms of organizational interaction have become frequent occurrences. Addressed here is the issue of workforce diversity in Canada, analyzing problems in implementation of public policies under the equality & equity models, which were expected to influence the management of workforce diversity in workplaces.

98S34503 / ISA / 1998 / 11744

✓ **Gupta, Subhash C.** (Indian Red Cross Society, 3E rue Mollebeau Studio 71 CH-1209 Geneva Switzerland [fax: 41-22-733-0395; e-mail: gupta@ifrc.org]), **Conflict or Cooperation: Chakmas and Regional Economic Pressures.**

1 Presents a case study of Chakma refugees in India. This group has acquired special significance because of their long stay, the lukewarm response from their home country, & the bleak economic prospects they face on their return. During their long refuge in India, the Chakmas have entered into social relationship with the local community, & there are instances of intergroup marriage. Other factors include their gainful economic cooperation & their building of sufficiently strong emotional ties with the community. A combination of these elements are examined to show their strong societal impacts on entrepreneurial relations in the immigrant & host communities.

98S34504 / ISA / 1998 / 11745

✓ **Gupta, Subhash C.** (Indian Red Cross Society, 1 Red Cross Rd New Delhi 110001 [tel/fax: 91-11-4615382/3717454]), **Lessons from Destruction: A Case Study of Earthquake in Maharashtra, India.**

1 The Indian Red Cross Society (IRCS) was invited by the government of Maharashtra, India, to participate in a reconstruction program in Latur & Osmanabad, two districts badly affected by a 1994 earthquake. Discussed here are the problems that the IRCS & other involved parties faced in trying to implement the program. Aside from construction & engineering issues, residents resisted relocation from ancestral homes, despite the risk posed by soil type. However, the IRCS reconstruction project has been completed ahead of schedule, & the Maharashtra government has used it as a model to encourage nongovernmental & other organizations to carry out the same type of work. The IRCS project throws light on important gray areas, including the need to establish clear memoranda of understanding with government, identifying the hidden strings & agendas of big donors, feeling the pulse of the injured community, & that tragedy can be property in the hands of victims.

98S34505 / ISA / 1998 / 11746

✓ **Gurin, D.** (Toronto Planning Dept, 55 John St 22nd Floor Stn 1220 Metro Hall Ontario M5V 3C6 [tel/fax: 416-392-8771/3821]), **Housing Patterns and Prospects in Toronto.**

1 Examines the scope of Toronto's (Ontario) housing problem, drawing on census & other data. It was found that a strong demand for rental units will continue. There is little prospect for new rental apartment construction (irrespective of rent control abolition) since construction costs require rents higher than tenants can afford. It was also found that many households have serious housing affordability problems. Young families are leaving in large numbers to buy homes outside the city, & immigrants & migrants, mostly young renters, are moving into the city. The population is aging, & there are more nonfamily households & renters. Housing stock is being adapted to accommodate different household types than before. More nonfamily households are moving into the lower-density stock, the numbers of families with children are shrinking in the lower-density owner stock & increasing in the higher-density renter sec-

tor, & more seniors are living in houses rather than apartments. It is concluded that Toronto housing policy should (1) meet the diverse, changing housing needs through both new production & existing stock; (2) target the specific groups whose housing demand is growing the most in the city, ie, nonfamily, one-parent, lower-income, & seniors; (3) target the specific groups whose housing demand is shrinking the most in the city, ie, young middle-income owners; & (4) help meet rental needs that market forces are not fully addressing, ie, new supply & affordability.

✓ **Guzmán Cárdenas, Carlos Enrique** (U Central Venezuela, Caracas 1051 [tel/fax: 582-4840281; e-mail: carlosgu@telcel.net.ve]), **Cultural/Communicational Industries, Technological Innovation and Competition.**

1 Draws on current theory, particularly Piero Formica's (1995) studies on information & production management, to examine the effects of rapid communication advancements on the industrial sector in a world increasingly defined by transnationalism. It is argued that telecommunication innovations have created a new technological-economic paradigm for cultural industries throughout the world. Information exchange between organizations has become convenient & widespread, raising the problematic issues of intellectual capital, nonmaterial assets, & intellectual technology. The growing influence of multimedia conglomerates & standardized computer software systems are discussed in terms of maintaining a functioning field of competition for world industries.

✓ **Gvozdeva, Galina** (Instit Economics & Industrial Engineering, 17 Lavrentiev Prospect Novosibirsk 630090 Russia [tel/fax: 7-383-2-35-44-25/55-80; e-mail: gvozdeva@ieic.nsc.ru]), **Time Balance Changes and Women's Use of Their Right to Rest.**

1 Demonstrates the effect of economic changes on Russian rural women's leisure behaviors, opportunities for rest, & possibilities for individual growth. These possibilities are related to changes in basic proportions in the aggregate balance of time put by rural population into different spheres. Before the reforms, women agricultural workers had the least free time. Reduced working time in the public sector led to increased leisure time, although only in winter, a conclusion based on data from Novosibirsk oblast (1993-1996) & from time-budget studies of the rural population conducted in the mid-1970s, 1980s, & 1993/94. Findings show a notable increase in unpaid labor in the 1990s vs previously, mostly due to women's higher contribution to homework & household farm production. Under acute lack of money, more time is spent by women on cooking & related activities, & less time is now spent in community organizations & on self-education. The character of leisure is now more of a passive-reproducing character. According to the 1996 findings, more women than men work to the point of exhaustion, which 10% saw as the reason for health deterioration. In view of the current social detachment

among rural people, local self-government authorities should reinstate traditional integrating behaviors & create new ones for women's involvement in nonstate community organizations, mutual aid, & different creative activities. The individual growth of women & children would also be facilitated if greater funds were allocated to training programs that would allow rural people to acquire different work & cultural skills during their leisure time.

Haav, Kaarel (Free Enterprise Instit Tallinn Technical U, EE-0038 Estonia (tel: 372-6356-346; e-mail: khaav@netexpress.ee)), **Hierarchy versus Partnership: A Framework for Research and Reform in Business and Education.**

Develops a broader theoretical framework for comparative organizational research in both business & education, & tests it in the case of Estonia educational administration. The framework starts from Oliver E. Williamson's (1975) theory, which distinguishes two main social institutions in the economy: the market & the hierarchy; these are considered as a thesis & an antithesis, & their synthesis is the partnership concept. The new framework is contrasted with some models in education. The political (hierarchy) & market (partnership) models by John Chubb & Terry M. Moe (1990) may well be interpreted in the new framework. The main conclusions concern the evils of hierarchy & the virtues of partnership in educational governance in transitional countries such as Estonia. A variety of data indicate that the hierarchy concept enables the Estonian educational oligarchy to hide, justify, & legitimize their privileges. A formal imitation of Western laws, structures, & indicators enable the concealment of the real stagnation in education. The partnership concept enables recognition of the real situation & implementation of a mechanism of improvement. Thus, the alternative concepts of hierarchy & partnership are powerful tools in the struggle between corporate & educational interests.

Haavio-Mannila, Elina (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-191-23960/23967; e-mail: HAAVIOMA@valt.helsinki.fi)), **Types of Love and Sexual Life Style in Finland, Russia and Estonia.**

On the basis of sexual autobiographies collected in the 1990s (N = 166 from Finland, 38 from Estonia, & 44 from St. Petersburg (Russia)), thematic interviews (N = 28 from St. Petersburg & 30 from Finland), & survey data (N = 2,250 from Finland & 2,078 from St. Petersburg), five major types of love stories can be distinguished: searching, one great love throughout life, devitalized marriage, consecutive relationships, & complementary or parallel relationships. Men more often than women have parallel relations, while women tend to have consecutive relations. The other styles are not significantly related to gender. Sexual scripts were more restrictive in the former Soviet Russia & Estonia than in Finland, where the sexual revolution & the adoption of new contraceptive methods in the 1960s-1970s liberated sexual behavior & equalized gender roles. However, the sexual liberalism of the 1917 Russian Revolution left some marks on sexual behavior that are more pluralistic than in Finland. The feeling of passionate & mature love seems to be fairly universal, but cultural context has more influence on sexual behavior in practice.

Hadas, Miklos (Budapest U Economic Sciences, H-1093 Hungary (tel/fax: 36-1-217-03-27/51-72; e-mail: szoc_hadas@pegasus.bke.hu)), **Football, Social Identity and Modernization in Hungary in the Twentieth Century.**

In Eastern Europe, football is a public affair—the affair of peripheral small states afflicted by the complex of marginality & subordination. In the interwar period, football was the symbolic expression of cultural superiority over inimical neighboring countries & of equivalence, with Western civilization set as the model. After WWII, it was a political tool to symbolize the superiority of socialism over capitalism. Here, the changing sociohistorical functions of Hungarian football are analyzed, focusing on the permanent features of the two main clubs often maintained across several political regimes, & their adjustments to varying political climates & constraints. The rivalry between the two football clubs, MTK & Ferencváros, which began at the end of the last century, is an indicator of the competition between Jews & Germans for assimilation in Hungary. The incessantly changing composition of their social bases, supporting political forces, & the contents of meaning & identity in 20th-century Hungarian football are outlined.

Hadas, Miklos (Dept Sociology Budapest U Economic Sciences, H-1093 Hungary (tel/fax: 36-1-217-0327/5172; e-mail: szoc_hadas@euler.bke.hu)), **Faces of Modernity: Masculinity Represented.**

Analyzes how men have been represented in different groups of films, 1988-1998. The following analytical units are constructed: films having the (1) greatest market success in the US, (2) greatest market success in Europe, (3) highest aesthetic recognition in the US, & (4) highest aesthetic recognition in Europe. It is argued that, in the US, both in aesthetically & economically rewarded films, men have been constructed, even at the end of the period, according to the modern myth of the masculine "lonely cowboy." At the same time, in the films prized in Europe, men, in both types of products, have been shown as determined by values, dispositions, & behavioral patterns traditionally classified as feminine. It is also argued, however, that, in the globalized, international film industry, the gap between aesthetic & market stakes & distinctions has been diminishing.

Haddon, Leslie (CULCOM U Sussex, Falmer Brighton BN1 9QT England (tel/fax: 0044-181-9854510; e-mail: LesHaddon@aol.com)), **The Experience of the Mobile Phone.**

Reviews recent European research on mobile telephony that explores the early years of adoption, covering the varied European patterns of diffusion & responses to the technology. Studies also consider problems arising around the mobile phone's use at a stage when the technology is still being incorporated into people's daily routines. It is suggested that issues around mobile telephony may not simply settle down to a more stable pattern. All technologies are potentially technologies in transition; eg, in one of the envisaged futures, mobile telephony competes with fixed-line telephony & becomes part of a move to giving phone numbers to people rather than places. Hence, these studies also allow reflection on such scenarios where personal mobile telephony becomes universal.

Hadj-Moussa, Ratiba (Queen's U, Kingston Ontario K7L 3N6 (tel/fax: 613-545-6000/2824; e-mail: rhm@post.queensu.ca)), **Identité diasporique ou l'affirmation de la subjectivité (Diasporic Identity or the Affirmation of Subjectivity).** (FRE)

Most studies of the relationship between media & immigration have been undertaken from the perspective of representation. Here, an effort is made to examine this relationship with a focus on how first-generation immigrants construct their identities through the production of a counterdiscourse about the dominant images & representations of them. To account for the rationalizations & identity strategies that support this discourse, studied were a population of Muslim women living in the West that, because of the threat of terrorism by radical Islamic organizations, is particularly subjected to being "Othered." This Otherness is expressed from unique positions based on neither territory nor country of adoption, but oscillate between the two, making both ineffectual. Another space then emerges, a new carrier of discourse & practices, that calls for the rethinking of public space & how it is formed by the media.

Hadjicostandi, Joanna (U Texas Permian Basin, Odessa 79762 (tel/fax: 915-552-2362/2374; e-mail: hadjicosta_j@utpb.edu)), **Multiracial Families and Children in Urban U.S..**

The question of racial categorization is still at the forefront of US policy making & society, despite observations that the various races of humankind are markedly more similar than dissimilar. Contemporary dis-

h

cussions over the possibility of a new legal racial category of mixed race have stirred strong feelings from many, especially in the ranks of social scientists. It is also a matter of tremendous importance for people who come from "mixed" families & who are often concerned about their legal, cultural, & psychological well-being. Social scientists are just beginning to address the question of mixed-race people's identification as such, & offering divergent opinions about its ramifications. Research & personal experience—as a Greek growing up in Egypt & as the mother of multiracial children—motivated the examination of issues faced by children of diverse racial & ethnic backgrounds & possible prospects for change. Studying the mixing of races requires an understanding of scientific & pseudoscientific theories, several of which are discussed here. The study of intermarriage became central in this research, the primary topic of which is mixed-race children. Research questions regarding the identity of interracial children are discussed.

Haiman, David S. (U Michigan, Ann Arbor 48109 (tel 734-647-8806; e-mail: dhaiman@umich.edu)), **Housing as a Means of Community Led Investment: Limited Equity Cooperatives.**

¶ Argues that limited equity cooperatives, a communal form of affordable home ownership, can be designed to address the economic & social barriers that prevent low-income residents from engaging in community-led investment—defined as money used by neighborhood residents to improve their immediate physical &/or social environment. The emphasis is on local residents determining priorities for investment. This type of self-determination yields many benefits, including resident empowerment & avoidance of gentrification. However, there are barriers to this type of investment. Residents of low-income neighborhoods frequently do not have the money, experience, & skills necessary for investment. Consequently, funds are leveraged by outside agencies, who may or may not have the best interests of the community in mind. Limited equity cooperatives, however, can address these barriers & pave the way for community-led investment. The economic & communal design of the housing can provide the necessary financial equity, skills, & experience for investment. When particular attention is paid to resident involvement, training, & support, this housing form can be designed as part of a strategy to reinvest in low-income communities.

Haimes, Erica V. (Dept Social Policy U Newcastle upon Tyne, NE1 7RU England (tel/fax: 191-222-7487/7497; e-mail: erica.haimes@ncl.ac.uk)), **Knowing and Representing the Child in Assisted Conception: Old Ideas and New Challenges?**

¶ Explores the possibilities for understanding both the notion of the child & the social relationships filtered through the process of infertility treatment. Throughout the history of infertility treatment, the child has been constituted as a domain in which the discourses of others (clinicians, social workers, parents, policymakers, social scientists) have been propounded, constructing the child in its own image, eg, as a successful outcome of treatment, a vulnerable being in need of welfare & protection, & as expression of certain family values. Examination of this history provides valuable insights into the processes of the social construction of childhood. However, it reveals as much about understanding of the mundane world of childhood in general as it does its "exotic" culture in assisted conception because they are mutually constitutive.

Haji Omar, Abdul Hafidz (Faculty Health Queensland U Technology, Brisbane Q4059 Australia (tel/fax: 07-32550697/38643980; e-mail: a.hajiomar@student.qut.edu.au)), **The Influence of Culture and Post-Colonialism on Muslim Athletes: A Case Study of Elite Malaysian Muslim Commonwealth Games 1998 Athletes.**

¶ In an analysis of the influence of culture & postcolonialism on Muslim athletes, a review of the literature indicates that the Holy Quran, Hadith, & Sunnah, which act as the main references for Muslims, encourage them to be involved in sport competitions. However, studies by Sfier (1985) & others demonstrate contradictory values faced by Muslim athletes in sports. To clarify this issue, a qualitative case study was conducted on 32 elite Malaysian Muslim Commonwealth Games 1998 athletes (16 males & 16 females), accompanied by a historical analysis of sport in the precolonial, colonial, & postcolonial eras. Islam was utilized as the theoretical basis of the research in conjunction with the Quran, Hadith, & Sunnah. Focus is on the cultural elements in sport that can lead to issues that are contradictory from an Islamic perspective (eg, rules of the game, social interaction in sport, sport as a commercial product, contact sport, violence, deviance). Results indicate that these athletes faced problems, particularly when they went overseas for training & competition, which affected their performance. Guidelines & recommendations for future Muslim athletes are developed.

Haldemann, Verena (U Moncton, New Brunswick E1A 3E9 (tel/fax: 506-858-4527/4508; e-mail: haldemv@umoncton.ca)), **Social Link, Autonomy, and Aging.**

¶ The social exchange approach to aging rests on the premise that the rules of exchange are very much the same through all markets: ie, the exchange of things of equal value between independent partners in a perfect market structure. Here, ideal-typical circuits of social exchange with specific rules are postulated: (1) the marketplace, where things are valued in terms of exchange; (2) in trade, where things are valued in terms of use; (3) the gift circuit, where things are valued in terms of social link; & (4) the state-sponsored circuit, where things are valued by their link to citizenship. It is proposed that elderly individuals, within the limits of time & space (context), make decisions & tend to exchange their resources in those circuits that they see as most adequate to their situation. Strategies of help-seeking of the elderly reveal strategies of autonomy that can be understood in this conceptual framework, which admits various kinds of reciprocating & does not impose balanced exchange as a dominant criterion for autonomy. The argument is based on analysis of 180 tape-recorded interviews discussing help seeking in a specific critical situation, conducted with individuals, ages 65-90, in Moncton, New Brunswick, & Montreal, Quebec.

Halford, Susan J. & Leonard, Pauline C. (Dept Sociology & Social Policy U Southampton, Highfield S017 1BJ England [tel: 01252-592572; fax: 01703-593859; e-mail: sjh3@soci.soton.ac.uk]), **New Hospitals, New Work, New People? Identity, Gender and Profession in a Changing Health Service.**

¶ Presents ongoing research that interrogates processes of organizational change in National Health Service hospitals in the UK, & how these articulate with gender & individual identities. Focus is on the relationship between changing cultural identity of hospitals as organizations & changes in the personal identities of doctors & nurses. The role of gender in relation to these changes is highlighted. Broader theoretical debates are outlined, methodology is elaborated, & preliminary conclusions from the data are offered.

98S34526 / ISA / 1998 / 11767

Halfpenny, Peter (Centre Applied Social Research U Manchester, M13 9PL England [tel/fax: 44-161-275-2493/2514; e-mail: Peter.Halfpenny@man.ac.uk]), **Modelling the Questionnaire Design Process.**

¶ Describes a long-term project that developed a computer-based system to support the questionnaire designer. Called a questionnaire writing environment, the system will provide context-sensitive interactive assistance to the human designer planning & writing a questionnaire, which will be better because the system will monitor unfolding designs &, by assessing them against models of the questionnaire design process, will offer continuous informed feedback. A precondition of developing the system is to model the questionnaire design process in such a way that it can be embodied in a computer system. Challenges faced in producing such a model are described. It is argued that a rule-based expert system is unachievable, but a writing environment is a realistic goal, provided the knowledge base is modeled & deployed in a flexible & open-textured manner.

Hall, Edward C. (Open U, Milton Keynes Buckinghamshire MK7 6AA England [tel/fax: 044-1908-654497/4488; e-mail: e.c.hall@open.ac.uk]), **Embodying Employment: Process in Employment, Process in the Body.**

¶ The rise in part-time working, temporary working, & insecure contract employment in the UK has been associated with the rise in importance of presentation & personal skills & the culture of employee self-management. Here, it is argued that what is of greatest interest now is what happens in the employment process rather than whether a person is employed. Contending that the body can be thought of as a process, rather than as a representational form, an evolving material entity, the site of everyday social & biological practices & processes, & the focus of a person's self-identity, employment is reconceptualized as embodied, ie, the involvement of a person's bodily process in the process of employment. Drawing on interviews & nonparticipatory observation with employees in sites of a major British retailer, it is shown how thinking of employment as embodied can develop a better understanding of the realities of flexible employment in the 1990s UK. It is claimed that employment is an inherently cultural practice, & theories of embodiment are a productive way of accessing this practice.

Hall, Robert T. (West Virginia State Coll, Institute 25112 [tel/fax: 304-766-3047/5186; e-mail: hall@oscar.wvsc.edu]), **The Sociological Critique of Ethics: The Science of Morality and the Search for the Good Society.**

¶ Draws on Durkheim, Wundt, Schmolter, Hobhouse, Westermarck, Sumner, Boas, & Levy-Bruhl to examine the critique of ethics developed by the so-called "sociological school of moral science" at the beginning

of the 20th century that precipitated the break between sociology & philosophy. The sociological critique charged that philosophers had conceived ethics as a deductive from which a whole system of moral judgments could be drawn. In opposition, the sociological school conceived of morality as a historically evolving set of social norms, implying that morality would have to be treated as a social institution, & the method of deduction would have to be replaced by an acknowledgment of moral pluralism. The classic philosophical critique of the sociological school was G. E. Moore's argument that one could not derive moral judgments ("ought" statements) from assertions of fact ("is" statements). The sociological perspective was subsequently charged with relativism—a condemnation around which philosophers have rallied for the better part of the century.

Hall, Tom & Chase-Dunn, Christopher K. (Dept Sociology DePauw U, Greencastle IN 46135-0037 [tel: 812-339-6496; e-mail: thall@depauw.edu]), **Paradigms Bridged: Institutional Materialism and World-Systemic Evolution.**

¶ Despite the postmodern disparaging of totalizing theories, many social scientists continue the effort to construct & test theoretical explanations of long-term, large-scale social evolution. The authors (1977) have recently contributed to this literature by formulating a theoretical research program based on a reconceptualization of the world-systems perspective for the purposes of comparing the contemporary global system with earlier regional intersocietal systems. It is contended that world-systems, not single societies, have always been the relevant units in which processes of structural reproduction & transformation have occurred; thus, a single model has been formulated for explaining the changing scale & nature of world-systems over the past 12,000 years. The different major strands of social science that were brought together in the authors' theoretical formulation are discussed, & the problem of how institutional inventions, especially the emergence of states & capitalism, altered the operation of the basic model is revisited.

98S34531 / ISA / 1998 / 11772

Hall-Martin-Lewis, Walter (Values Technology, 2924 Conifer Ct Napa CA 94558 [tel/fax: 707-257-8158/8318; e-mail: martin@values.com]), **Systems Thinking and Human Values: Towards Understanding the Chaos in Organizations.**

¶ Examines how human values measurement & systems thinking principles can become a part of a sociocybernetic system for understanding chaos in organizations. How tools & methodologies might be used to help make sense out of the complexity in the modern organization is discussed. Core issues include decision making, organizational culture, & the usefulness of effective values measurement techniques & their applicability in a sociocybernetic framework. Links are made between values & organizational structure & process. Discussion is centered around how to specifically & practically use both individual & organizational values to transform organizations toward a more effective & efficient reality.

98S34532 / ISA / 1998 / 11773

Halldén, Gunilla (Dept Child Studies Linköping U, S-58183 Sweden [tel/fax: 46-13-284074/282900; e-mail: gunha@tema.liu.se]), **'To Be, or Not to Be': Absurd and Humouristic Descriptions as a Strategy to Avoid Idyllic Life Stories, Boys Write about Family Life.**

¶ Draws on a study of 141 pupils, ages 13-14, who wrote & made drawings on their future family, focusing on the boys' stories. Their narratives are seen as reflecting the boys' ways of exploring a male identity through their main character. Most took the opportunity to write about dreams of an adult life with freedom, competencies, & personal resources, but also with relationships & obligations for family members. Narratives of boys who wrote about odd or egocentric persons & used absurd ingredients & elements of the science-fiction genre are analyzed, & it is argued that the detached & humorous style allows for writing about maleness without entering into familiarity. Humor is the organizing principle in the lives of young men in school, distancing themselves from women & teachers & joining the escapist macho world or the eccentric culture of the dropout.

98S34533 / ISA / 1998 / 11774

Hallebone, Erica L. (Dept Social Science & Social Work Royal Melbourne Instit Technology, Victoria 3001 Australia [tel/fax: 03-9660-3151/1087; e-mail: erica@rmit.edu.au]), **The New Gambling Culture and Gender: A Case Study in the Australian Leisure Experience.**

¶ Describes a qualitative sociological study on the personal meanings of

h

female gamblers in Melbourne, Australia, focusing on non-English-speaking women & analyzing their work, leisure, & gambling experiences in a context of community, traditional beliefs, gender pressures, & personal identity construction processes. It is set against a structural theoretical background comprising recent considerations of the conditions of modernity & postmodernity: eg, Anthony Giddens's reflexivity, ontological insecurity, & threat of personal meaninglessness of individuals; Jürgen Habermas's insight into the need for integration or partnership of system & lifeworld rationalities; & Ulrich Beck's perception of risk distribution inversely related to social class.

Hallowell, Nina (Centre Family Research U Cambridge, CB2 3RF England (tel/fax: 01223-334510/330574; e-mail: nh113@cam.ac.uk)), **Genetic Risks and Responsibilities, or How the Neutrality of Genetic Counselling Is Compromised.**

¶ Following the Nuffield (England) Council on Bioethics' (1993) recommendations, genetic counseling will be provided for all individuals prior to mutation testing to provide information about genetic risks, available risk management options, & costs & benefits of gene testing in both a neutral & nondirective manner. It is argued here that, as a result of its reliance on risk discourse, the neutrality of genetic counseling is unavoidably compromised. Building on the work of M. Douglas (1992) & Deborah Lupton (1993 (see abstract 9404645)), it is argued that risk is a value-laden concept that has come to be associated with certain socially defined obligations. Thus, individuals confirmed as potential gene carriers—the at-risk—may not only perceive themselves to be in danger, but also under a moral obligation to their kin to act in particular ways. This argument is illustrated with data from a prospective interview study of women attending genetic counseling for hereditary breast &/or ovarian cancer. It is contended that these women perceive themselves to be under an obligation to others (the living, the dead, & future generations) not only to determine, but to take control of, their genetic risks. These obligations are emphasized during genetic consultations, insofar as the discourse of the clinic not only reinforces the view that genetic risk is manageable, but that individuals should act to manage their risks.

Halman, Loek & Pettersson, Thorleif (Tilburg U, NL-5000 LE Netherlands (tel/fax: 31-13-466-2015/2053; e-mail: Loek.Halman@kub.nl)), **The Religious Factor in Contemporary Europe.**

¶ Explores the relationships between values in the religious domain & values in other societal spheres. With processes of modernization, including differentiation, rationalization, & individualization, the traditional functions of churches have become less important, & religion is assumed to have lost its dominant & imposing position in contemporary society. Here, it is considered whether religious decline is more evident in the public vs private spheres, & whether the impact of religion varies across regions in Europe because of differences in the degree & speed of processes of secularization & modernization. These questions are empirically tested in four regions, using the data from the 1990 European Values Studies.

Halvorsen, Knut (Oslo Coll, N-0957 Norway (tel/fax: 47-22-45-3500/3600; e-mail: knut.halvorsen@oks.hioslo.no)), **Labour Force**

Status of Married/Cohabiting Couples in Norway: Associations and Explanations of (Un)Employment Homogamy.

¶ Examines the interrelationship between unemployment of married/cohabiting persons in Norway, & the working situation of the "spouse," using a 1995 cross-sectional data set of the Gallup type. Theoretical explanations for (un)employment homogamy—ie, spouse selection & shared restrictions, mutual influencing, the discouraged worker effect, additional worker effect (additional job-seeker effect), & unobserved heterogeneity—are considered. The data demonstrate a substantial gap in labor force participation rate (employment shortfall) of spouse between employed & unemployed males as well as females. Multivariate analyses demonstrate that even when controlling for all relevant independent variables, the observed unemployment homogamy found in bivariate analyses still remains. These findings confirm those obtained in other countries: ie, a social polarization is evident between dual-earner households & households where both spouses periodically are unemployed &/or outside the labor force. Shortcomings in the available data make it difficult to identify the main mechanisms behind unemployment homogamy; however, the additional job-seeker effect seems to be of significance, implying that the wife or husband of an unemployed registers with the unemployment office for financial reasons as a consequence of the spouse being unemployed.

Halvorsen, Rune & Hvinden, Bjorn (Dept Sociology & Political Science Norwegian U Science & Technology, N-7055 Dragvoll (tel/fax: 47-7359-1704/1564; e-mail: runeh@sv.ntnu.no)), **The Welfare State from Below: Social Mobilisation by the Disadvantaged as Means of Visibility, Voice and Integration.**

¶ The perceived or de facto overload of the welfare state raises the issue of whether there is a need for new actors & new means to social integration. By exploring the meanings of social movement or interest organizations among the socially excluded, insight is provided into the dominant & the dominated cultural schemata. An analytical framework is presented for studying the concrete patterns of relationships that such organizations may develop with better-positioned actors & for assessing their role in giving visibility & voice in the political process, & their potential impact on integration. An analysis is conducted of a set of comparative qualitative data on the relationships between better-positioned actors & emerging social movement organizations of two inferiorized categories: (1) organizations of people in economic hardship &/or who live on public cash benefits; & (2) organizations of travelers. Two sets of dyadic aggregates are compared to analyze how authority & legitimacy relations affect organizational efforts. Differences in cultural tools & available repertoire & in reactions from others lead to differences in the social mobilization. Nevertheless, the organizational efforts seem to have common traits that refer to structural parallels or homology between their social positions. The development, characteristics, success, & failures of such organizations in question are related to the practical logic of welfare regimes.

Hamel, Jacques, Ellefsen, Bjerk & Wilkins, Maxime (Dépt sociologie U Montréal, Quebec H3C 3J7 (tel/fax: 514-343-7159/5522; e-mail: hamelja@ere.umontreal.ca)), **La Jeunesse et la sociologie canadienne d'expression française, influences et contribution** (Youth and Francophone Canadian Sociology, Influences and Contribution). (FRE)

¶ Overviews the work of Canada's francophone sociologists on the theme of youth. An attempt is made to identify theoretical influences in this material that form the basis for multivariate description as well as analysis of the status of youth in terms of school, work migration, etc. Key concepts are inventoried, arguing that the application of those concepts reflects the originality of the sociology of francophone Canadian youth.

98S34540 / ISA / 1998 / 11781

Hamel, Pierre (Instit urbanisme U Montréal, Quebec H3C 3J7 (tel/fax: 514-343-5971/2338; e-mail: hamelp@ere.umontreal.ca)), **Public Consultation and Urban Issues in Montreal: Experiencing the Limits of New Participatory Mechanisms.**

¶ At the end of the 1980s, Montreal, Quebec, implemented a policy of public consultation to improve citizen involvement in planning decisions. On the one hand, this choice can be related to institutional innovations linked to the new role played by municipalities in the management of local development & urban policies. On the other hand, it corresponds to requests made by citizens concerning the democratization of local policy

making. Here, several questions are addressed. What was the impact of this policy with regard to the management of conflicts at the local & societal levels? To what extent has this policy increased the municipal capacity to meet the requirements of local democracy in the face of new challenges brought on by social change, globalization forces & state restructuring? From the point of view of social movements & with respect to their demands of democratizing public life, what was the relevance of these mechanisms? Examples of public consultations regarding different urban projects in Montreal over the last 15 years are compared, & several types of rationalities elaborated by the multiple categories of involved actors—elected officials, public & private professionals, promoters, community groups, & citizens—are examined. Addressed is the issue of relations between communities & societies that are more complex & more conflictual than ever. Moreover, political conflicts—with relation to cultural, technical, & ethical components of action—that surfaced on these occasions can be seen as mirrors of collective values, which are distinctive markers of local social life.

Hampton, Keith N. (Dept Sociology U Toronto, Ontario M5S 2G8 [tel/fax: 416-978-0250/7162; e-mail: khampton@chass.utoronto.ca]), **New Sociological Research Technologies: Toronto's "Wired Suburb" Project.**

¶ The "Wired Suburb" project, currently in progress at the U of Toronto (Ontario), involves an investigation of a wired residential community currently being built in suburban Toronto. This neighborhood is unique in that it has been equipped with a series of new in-home communication & information technologies that include high speed Internet access & a local community network. The investigation's data-gathering plans required a two-wave in-depth survey of all adults of the approximately 450 households & of a similar control group in a nonwired community. For those respondents with Internet access, the premove survey was administered over the World Wide Web. For those with a PC but without Internet access, the survey was administered through Disk-by-Mail interviewing. Those without a PC were delivered a laptop that was used to complete the survey over the necessary time period. Results of the premove survey are used to explore both the benefits & pitfalls of the computer-interviewing methods used, including problems encountered during data collection, coding, & analysis. To further examine survey bias that may result from computer-assisted interviewing techniques, results from both the wired & control samples are compared with existing survey results from other studies using more traditional survey methods.

Hanna, Judith Lynne (Urban Studies & Planning Program U Maryland College Park, Bethesda 20817 [tel/fax: 301-365-5683; e-mail: jhanna@bss2.umd.edu]), **Exotic Dance and Cultural Conflict in American Society.**

¶ Exotic dance (eg, stripping) is a lightning rod for cultural conflicts in US society. In 85+ US localities, groups are at loggerheads over the First Amendment, debating (1) whether exotic dance is artistic expression & moral & (2) the economic/crime impact of exotic dance clubs. The resulting not-in-my-backyard social drama pits certain outspoken religious & feminist groups & other "conservatives" in the community against exotic dance stakeholders. Propelled by political activists, local officials try to subvert the Constitution, passing regulations & creating public policies designed to close or tightly control exotic dance clubs. Described here is personal scholarly & legal work in a First Amendment case, in which the paradigm of the semiotics of dance was applied to exotic dancing. The resulting testimonies as an expert court witness in various states have been about how local ordinances regulating the distance between the dancer & patron, club illumination, nudity, & "obscenity" affect the message the dancer tries to convey. Data related to adult entertainment clubs from across the US & Canada are also presented, including interviews with dancers, customers, club owners, managers & staff members, opponents to the clubs, & First Amendment lawyers. Videotapes of exotic dance performances involved in obscenity cases have been analyzed, along with the literature on exotic dance by scholars, journalists, photographers, & current or former dancers, & other published material.

Harden, Jeni (Dept Applied Social Science U Stirling, FK9 4LA Scotland [tel: 01786-467977; e-mail: j.a.harden@stir.ac.uk]), **The Neglected Profession: Doctors in Post Communist Russia.**

¶ The health sector in Russia remains one of the most neglected areas of the economy, & the conditions for those working in it have deteriorated

significantly. The work of the medical profession came under attack in the *perestroika* years & is now being further challenged with organizational changes & increasingly inadequate resources & pay. On the one hand, there is a shift away from collective state responsibility to individual responsibility for health care, seen clearly through the transition to insurance medicine; doctors are now individually responsible for their own health & also for that of their patients. On the other hand, doctors are faced with material resources inadequate to fulfill this responsibility. Based on 1996 research with female doctors in Voronezh, Russia, their attitudes toward pay, working conditions, & organizational changes are examined in the wider context of the relationship between the medical profession & the state. The majority of Russian doctors are women, thus, their experiences must be understood in this gendered context.

Harris, Hugh (U Illinois, Springfield 62794-9243 [tel/fax: 217-786-6646/7279; e-mail: harris.hugh@uis.edu]), **Ethnocultural Conflicts: The African Context.**

¶ Since the end of the Cold War, instruments of ethnocultural conflicts within nations such as terrorism, genocide, ethnic cleansing, & separatism have claimed scores of lives, caused casualties, & created refugees in the millions. The spillover effects of these conflicts, in addition to the human tragedies, are potentially the fuse for wider wars between neighboring countries. This reemergence of ethnocultural conflicts within nations along cleavages of ethnicity, language, culture, & religion is a growing post-Cold War phenomenon that is not delimited to any specific continent. It is a global phenomenon, but it is more acute in developing than developed democracies. Examined here are the prospects for peace & democracy in African countries that have been, or are, embroiled in ethnocultural conflicts, hypothesizing that these prospects are likely to hinge not on the suppression of assimilation, but the management of ethnocultural pluralism. Ethnocultural power sharing, or consociational federalism, represents the best prospect for the management of ethnocultural conflicts.

Harris, Janet C., Dewar, Robert M., Kwon, Sun Yong & Clifton, Robert T. (Dept Exercise & Sport Science U North Carolina, Greensboro 27412 [tel/fax: 910-334-3031/904-334-3238; e-mail: jcharris@uncg.edu]), **NFL Football on Television: Glimpses of American Hegemonic Masculinity.**

¶ Textual analyses of televised NFL (National Football League) games point to a variety of themes focusing primarily on hegemonic masculinity: male bodies as tools, weapons, & objects of gaze (Trujillo, 1995); clothing & gear that accentuate an ideal male physique (Jirousek, 1996); objectification of male bodies through instant replay (Morse, 1983); competitiveness, asceticism, success (winning), aggression, violence, superiority to women, & respect for/compliance with male authority (Sabo & Panepinto, 1990); brute force, violence, & machismo (Duncan & Brummett, 1993); & preferred readings centered around monopoly capitalism & militarism in a text made polysemic partially by discursive counterpoints about offense & defense (Lalvani, 1994). Additional themes found in TV portrayals of other male sports serve to broaden these insights. Here, analyses of four 1993/94 NFL games revealed the following themes tied primarily to hegemonic masculinity & bound together within the overall theme of striving to win & winning: performance excellence; bodily excellence; rough physicality, violence, pain, & injury; objectification; affiliation; & expressiveness. Ways in which these support & extend the findings of earlier research are examined.

Harrison, J. Richard (U Texas Dallas, Richardson 75083-0688 [tel/fax: 972-883-2569/2799; e-mail: harrison@utdallas.edu]), **The Concept of Simulation in Organizational Sociology.**

¶ Examines computer simulation research by considering how this methodology has been used in organizational sociology. Simulation requires the researcher to explicitly model how a system changes over time, focusing on key system elements & processes as a simplifying heuristic. It imposes the theoretical rigor of formal mathematical modeling & is analogous to mathematical proof, in that simulation outcomes are inevitable consequences of the model's assumptions. Simulation is appropriate for (1) examining the behavior of complex systems (involving the interaction of multiple processes) when empirical studies are not feasible because of observation or measurement problems or protracted processual time scales & (2) assessing the implications of complex theoretical models that are analytically intractable. Preferably, simulation models are either based on empirical research or produce testable predictions. Examples of simulations of organizational cultural transmission, organizational political dynamics, organizational decision making, organizational growth, top management team demography, industry strategic group emergence, & competition between populations of organizations illustrate.

Harrison, Michael I. (Dept Sociology & Anthropology Bar-Ilan U, 52 100 Ramat-Gan Israel [tel/fax: 972-3-5341133/5355991; e-mail: harrim@mail.biu.ac.il]), **Can Exposure to Competition Transform Public Organizations? European Attempts to Revitalize Hospitals through Market Mechanisms.**

¶ Assesses attempts to transform public hospitals in GB & Sweden by exposing them to market competition. In both nations, political, organizational, occupational, & technical forces ultimately combined to thwart the attempts of governmental policymakers to generate vigorous competition among care providers. Where limited competition did emerge, it helped enhance responsiveness to client concerns but failed to produce most of other anticipated effects. Moreover, introduction of competition had unanticipated consequences, deemed undesirable by stakeholders.

98S34550 / ISA / 1998 / 11791

Harrison, Michael I. (Dept Sociology & Anthropology Bar-Ilan U, Ramat-Gan IL-52900 Israel [tel/fax: 972-3-5318691/6350995; e-mail: harrim@mail.biu.ac.il]), **Professional Power and Health System Reform: Hospital Physicians in Germany and the Netherlands.**

¶ Employs an institutional approach to account for the effects of (1986-1996) national health system reforms on the professional privileges of hospital physicians in the Netherlands & the Federal Republic of Germany. Initially focusing on cost containment, the reforms gradually broadened to envision far-reaching strategic transformations of the organizations responsible for providing health care. Impacts of these top-down reforms on physicians depended on both the substantive policy thrusts of the reforms & on the ability of physicians & other policy actors to influence implementation. Substantial differences appeared between countries in the capacities of physicians to resist or divert those strategic changes that threatened their professional privileges. Examined are forces that help account for these differences in professional power: outcomes of past struggles between physicians & the state; physician alliances with political parties & other political actors; professional organization & differentiation; professional mobilization at the national, sectoral, & local levels; terms of employment; legal & normative support for open resistance to governmental mandates; & physician control over the flow of information to governmental regulators.

Hartmann, Jürgen E. (Dept Tourism Dalarna U, BorLaenge Sweden S-78188 [tel/fax: 46-23-778934/050; e-mail: jha@du.se]), **Leisure and Work: From Antagonism to Symbiosis.**

¶ In line with classical sociological theories, work & leisure have been perceived as antagonistic patterns of human life. The formal structures of working life, taxations systems, & society, as well as the value system, have been based on the productive but alienating role of work, while leisure was seen as a compensating force that allowed for a free disposition of time & activities by the individual. Recent observation of the changing roles of work & leisure in postindustrial societies shows an increasing trend to combine work & leisure activities whenever possible. Data from longitudinal study among young Swedes are offered as illustration. Sociological theories of Norbert Elias (individualization), Niklas Luhmann (complexity), & Anthony Giddens (social practice) support a growing diversification in the relation of work & leisure in contemporary societies.

Hartmann, Petra (Instit Soziologie Christian-Albrechts-U Kiel, D-24118 Federal Republic Germany [tel/fax: 431-880-4377/3467; e-mail: hartmann@soziologie.uni-kiel.de]), **Panel Mortality and Research Validity.**

¶ Panel designs, essential in theory testing, are made problematic by panel mortality. To the extent that panel mortality relates to demographic characteristics, it affects the representativeness of a sample for description purposes. If panel mortality relates to substantive variables of a study, it may also affect the results of hypothesis testing. First-wave panel samples can be assumed to obey the same selection mechanisms as cross-sectional samples, if standard representative sampling procedures are employed. This is not true for consecutive waves, because participating in the first wave provides the respondent with detailed information about the topic of the study & the time required for participation, thereby introducing an additional selectivity. Election studies are quite suitable for research on panel mortality because they often employ a panel design, & usually incorporate the same concepts. Here, behavioral information about participation in later waves is used to study panel mortality based on secondary analyses of first-wave respondents of German election studies, highlighting the effects of mortality on substantial variables, their interrelations, & the validity of empirical results.

98S34555 / ISA / 1998 / 11796

Hartmann, Petra (Institut Soziologie Christian-Albrechts-Universität Kiel, D-24118 Federal Republic Germany [tel/fax: 431-880-4377/3467; e-mail: hartmann@soziologie.uni-kiel.de]), **Rationality and Panel Mortality in Election Research.**

Although rational choice theory allows for a straightforward development of a dynamic explanatory model, its empirical test with panel data may produce rather misleading results. Here, secondary analyses of data from German election studies are used to show that such a model might be seriously affected by panel mortality: as the number of waves in which respondents participate rises, the intention to vote increases, while associations with some of its predictors decrease. An explanation can be found in the theoretical framework. Elections & election surveys are characterized by the fact that the individual impact of one's participation is almost nonexistent. Persons perceiving their subjective influence as low as it objectively is are rather likely to abstain from both. Thus, empirical tests of dynamic models employing long-term survivors of election panel studies are probably relying basically on those for which the model is least valid.

98S34556 / ISA / 1998 / 11797

Hartmann-Tews, Ilse (Institut Sportsoziologie German Sport U, D-50927 Cologne [tel/fax: 49-0221-4982-377/819; e-mail: I.Hartmann@hrz.dshs-koeln.de]), **Professionalisation and Gender Hierarchies.**

According to gender-sensitive labor market studies, processes of professionalization & social closure, in relation to women, are closely connected. Here, mail questionnaire data from 763 graduates of the German Sport U in Cologne are drawn on to (1) characterize the various careers of university graduates in sport sciences, & (2) determine if there is a genderized vertical &/or horizontal segregation of the careers & the labor market. Results indicate that only about 50% of the graduates managed to find employment in the field of sport. As expected, gender segregation of fields of employment & hierarchies were found, & only partly attributable to different aspirations & choices of specialization in terms of studies.

98S34557 / ISA / 1998 / 11798

Hartmut, Rosa (Friedrich-Schiller-Universität Jena, D-07745 Federal Republic Germany [tel/fax: 03641-945514/945512; e-mail: rosa@soziologie.uni-jena.de]), **Theory as a Practice-Practice as Theory: A Constructivist Approach on Theory and Interpretation.**

After the "linguistic turn" in philosophy & the social sciences, it has become commonplace to understand theory as a particular kind of social practice. By conceptualizing the social world & its phenomena, they are reconstructed. Whereas the ensuing analysis of the "social languages" embodied in texts & institutions alike has opened promising new routes for better understanding of the activity of theory, there has not yet been a corresponding modification of the concept of practice. If the consequences of the linguistic turn are to be taken seriously, what is needed now is a dialectical inversion of its insights in the form of a "socioeconomic/-political return," accepting that social practices & institutions must be analyzed & understood as sedimented, embodied, & solidified forms of theory that have taken on their own dynamics. Hence, there are no practices or institutions resistant to a modifying & reconstituting theoretical grasp, although understanding of the ideas & theoretical fragments constitutively interwoven with a particular practice or institution might not be adequately understood. Therefore a new ideological (or "idea-logical") analysis of the theoretical, cultural, & normative patterns that underlie the developments & practices of contemporary economies & societies might be the predominant task of social theory. In this way, a new concept of the double-reflexivity of theory & practice develops: they are two interdependent levels of a social reality constituted by interpretative construction.

Haslam-McKenzie, Fiona M. (Edith Cowan U, Churchlands Western Australia 6018 [fax: 61-8-92738254; e-mail: F.McKenzie@COWAN.EDU.AU]), **The Nature of Rural Community Infrastructure and the Interrelationship between Social and Economic Viability of the Central Wheatbelt in Western Australia.**

Examines whether community infrastructure influences the social & economic viability of specific parts of the central wheatbelt of Western Australia, drawing on a research project conducted with the assistance of the Rural Industries Research & Development Corp of the Australian Federal Government Dept of Primary Industries & Energy. Increasing capitalization & technological advances together with economic rationalist government policies have led to major shifts in the way the business of farming is conducted in Australia. Little has been documented of the social & environmental implications & interrelationships of these changes & how these might influence productivity on farms. Further, much of the Australian research has concentrated on the experience of agricultural industries in the eastern states. Unlike these states, however, Western Australia has few regional centers with a small rural population scattered over a large geographic area. The research has indicated that farmers are making business choices based on the availability of infrastructure & that the social fabric of the industry has the potential to influence the long-term health & viability of the sheep & wheat industry.

Havens, Betty, Hall, Madelyn & Chipperfield, Judith (U Manitoba, Winnipeg R3E 0W3 [tel/fax: 204-789-3427/3905; e-mail: havens@umanitoba.ca]), **Changes in Structures of Families in Their Later Years.**

Data from the 25-year Aging in Manitoba Longitudinal Study are used to identify the family & household structures of aging Manitobans as they relate to health status & functioning. Results indicate that those who were married in 1971 were the most capable, ie, capable of performing 11-13 activities of daily living (ADLs). The widowed were capable of performing 4-10 ADLs, while the never married were the least capable (less than 4 ADLs). In 1983 & 1990, the same pattern was observed only at the highest level of functioning; however, 1996 shows a return to the same pattern as 1971. There was little difference in capabilities in 1971 for those who lived alone or with others. By 1996, however, those who

h

were most capable were likely to live with others, while those who were least capable were more likely to live alone, including those who resided in nursing homes. In contrast, those who were single in 1971 reported they were capable of a greater number of independent ADLs (IADLs) than the widowed, & the widowed reported more capabilities than the married. IADLs showed little relationship to marital status in 1983, but, by the 1990 & 1996 follow-ups, those who were married reported more capabilities. The least capable in 1971 in terms of IADLs were 3-9 times more likely to live with others, whereas the most capable were twice as likely to be living alone. Those in the 1983 cross-section were three times more likely to be living with others, regardless of level of ability. Further, those who were most IADL capable were more likely to live with others, while the distribution of the least capable favored living alone. By 1990 & 1996, the most capable were twice as likely to live with others, while those who were capable of only 2-3 activities predominately lived alone (including those in nursing homes). In regard to chronic conditions, there was only minimal distinction over the years among marital status, but only those in the later samples with the fewest number of conditions were likely to live alone. Overall, a substantial number of individuals continued to rate their health as excellent or good, regardless of marital status or household composition, while less than 10% in each year rated their health as poor or bad.

Havens, Betty, Hall, Madelyn & Shapiro, Evelyn (U Manitoba, Winnipeg R3E 0W3 (tel/fax: 204-789-3427/3905; e-mail: havens@umanitoba.ca)), **Self-Care, Informal Care, and Formal Care in the Face of Aging and Health Reform.**

¶ Interview data from three cross-sectional & three panel studies (N = nearly 9,000 older Manitobans) are used to explore the type of care received (self, informal, & formal care) with activities of daily living (ADLs) & instrumental activities of daily living (IADLs). Over the years, those who received no care (ie, cared for themselves) were more likely to perceive their health as good, while those who received informal & formal care were more likely to perceive their health as fair or poor. In looking at an example of ADLs for the oldest sample (median age 81), it was found that those who were able to wash & bath themselves were nine times more likely to perceive their health as good rather than poor; while those who received formal care for washing & bathing had only a two times greater likelihood of rating their own health as good. Regarding IADLs for the same group, those able to manage their own finances, for instance, were again nine times more likely to perceive their health as good rather than poor; while those who received informal services to help manage finances were less than three times more likely to rate their health as good than poor, & those who received formal services were only four times more likely to rate their health as good than poor. The type of care received was also found to be reflected in the amount & type of formal care services (physician visits, hospitalizations, & nursing home placement) consumed in the year before & the year after each interview. Results evidence an initial upward trend to more formal types of care with a reversal to less formal types of care following the inception of health reform measures begun in the early 1990s. Preliminary analyses indicate, for example, that earlier trends, which evidenced an increasing need for & use of resources with the aging of the population during a period of ample resources, have changed, suggesting that this period was followed by one of scarce resources & continued population aging. This shift, then, appears to account, at least in part, for the downward trend in the use of formal services.

Hayashi, Haruo (Disaster Prevention Research Instit Kyoto U, Japan (tel/fax: 81-774-38-4280/31-8294; e-mail: hhayashi@drs.dpri.kyoto-u.ac.jp)), **Individual Mitigation and Organizational Preparedness.**

¶ Two important lessons were learned from the Kobe, Japan, earthquake of 17 Jan 1995: one for response & one for recovery. It was obvious that Japanese society was not well-prepared for the devastating damage that occurred, resulting in insufficient emergency response. Thus, increasing emergency management capability became one of the most important issues for Japanese disaster management. As to the recovery support of earthquake victims who became homeless, both the Hyogo prefectural government & municipal governments, including Kobe City, have done everything they could to support the recovery processes of victims for the last 3 years, but there are still many victim complaints & resentment about the treatment they received. A review of recovery measures taken after the Kobe earthquake suggests that it be recognized that the losses

due to an urban earthquake disaster could be so large that no society could compensate all victims for all their losses. Thus, increasing awareness & knowledge about mitigation is an indispensable part of urban earthquake disaster management.

¶ Examines the social meaning given to culture in public interpretations. Culture is approached as a symbolic form of social power, including social meanings & routines, as theorized by Pierre Bourdieu, Williams, & Immanuel Wallerstein. The point of departure is that there is a division in cultural policy between mechanical apparatus & organic interpretative processes. The crucial questions deal with possibilities to interpret the recommendations, regulations, & applications in state-directed cultural policy. How do cultural meanings & values fluctuate in regional cultural policy? The analysis is aimed at the complicated cultural relation between the center & periphery. It is stated that cultural policy is a policy of intellectuals, who are intermediaries of values in society. A concept of hegemonic project, based on Antonio Gramsci, & reformed by Jessop, is applied to the comparisons that concern positions of hegemonic cultural political authorities & changing cultural attitudes. These notions are illustrated by empirical material drawn from Finnish documents collected at both the national & regional levels representing the field of cultural policy.

Heap, Ruby (Dept History U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5791/5994; e-mail: rheap@aixl.uottawa.ca)), **'Physiotherapists Should Never Be Mistaken for Technicians'. The State, the University and the Training of Ontario Physiotherapists, 1960-1980.**

¶ Archival data & official records are used to examine the 1960s-1970s struggle by Canadian national & provincial physiotherapy leaders against the proposal to train in Ontario a new category of workers referred to as "physiotherapy technicians." Influential elements in the political, medical, & educational communities believed this measure would help alleviate the problem of spiralling costs of Ontario health care services & ensure a sufficient pool of physiotherapists for the rapidly expanding health system. Discussed is how such a proposal represented a direct threat to the Canadian Physiotherapy Assoc's claim for professional status, which was largely based on the occupation's increasingly high educational standards, & how physiotherapy leaders not only prevented the creation of a subcategory of less qualified workers in Ontario, but also decided to impose stricter educational standards on all association members. This outcome is attributed largely to their tenacity & to improved lobbying & organizational skills.

Heaton, Lorna (Dept Communication & Journalism U New Mexico, Albuquerque 87131 (e-mail: lheaton@unm.edu)), **The Information Society in Japan: Evolution of an Idea.**

¶ Traces the development & promotion of the information society concept in Japan, & relates it to the historical & social context of its emergence & transformation. Content analysis of information society reports, late 1960s-mid-1990s, demonstrates the elasticity of the concept & identifies several key components that have become intertwined as the idea has matured. Rhetorically, information society has always been intimately associated with quality of life in Japan, but there has been wide variation in how this has been defined; as rhetorical tools information society documents are shown to provide important information on the ideals, values, & aspirations of the Japanese. In addition, links between the information society & industrial policy in Japan have been traditionally very strong. Explored is the close relationship between rhetoric & practice &

the ongoing translations between the two in this context. Illustrating the translation of information society reports into concrete government policies & initiatives, it is argued that, as policy documents, & to the extent to which their recommendations have been implemented, the reports have been influential in shaping the society the future of which they predict.

Heiskala, Risto (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-191-23912/23967; e-mail: risto.heiskala@helsinki.fi)), **Theorizing Power.**

¶ Attempts to develop a synthetic conception of power based on Max Weber's, Talcott Parsons's, & Michel Foucault's writings, first bridging the so-called resource theories of power (Weber, Parsons) & the structural approach (Foucault), & then doing this in the form of a conception that would be usable on macro- & microlevels. Four theories are discussed: (1) Weber's distributive approach, (2) Parsons's collective approach, (3) Foucault's structural approach, & (4) developed here, a neostructuralist approach. These approaches can be ordered on a scale on which the complexity of analysis increases as one moves from (1) through (2) & (3) to (4); the selection of an appropriate level of analysis in an empirical study is a practical issue relative to the aim of the study. The types of analyses characteristic of the more complex levels are illustrated via a discussion of the problem posed by big case comparison in historical sociology (level 3) & everyday conversation (level 4), including comments on phenomenological sociology & conversation analysis.

Heisler, Martin & Gagnon-Messier, Sebastien (Dept Government & Politics U Maryland, College Park 20742 (tel/fax: 301-405-4167/314-9690; e-mail: mheisler@bss2.und.edu)), **Theoretical and Practical Complexities of Migration and Citizenship: The European Future in Historical and Comparative Perspectives.**

¶ Argues that the recent literatures on immigration & citizenship suffer from decontextualization. Many writers tend to assume that they can hold one constant while they study variations in the other. Here, an attempt is made to describe, analyze, & explain the interplay of migration & citizenship, considering the emergence of something akin to a "security dilemma" in their relationships: Arguments about either migration or citizenship tend to elicit normatively-based defensive postures, militating against constructive dialogue in the migration-citizenship nexus. Migration & consideration of citizenship—especially, but not only in Europe—unfold in multiple, nesting contexts, including the localities where the impacts of migration are most evident; the state, which remains the principal focus of political activity & the conceptual & legal framework for citizenship; the European Union, which is evolving a legal, administrative, & identitive character that pertains to both citizenship & migration; & broader regional & global economic & normative processes. This broader context points to the need to study the ways in which transnational migration has stimulated the rise of transnational communities that challenge conventional identities, notions of belonging, rights, & responsibilities. The development & implications of transnational communities based on migration are explored, focusing on the European Union. Comparisons with North American patterns of migration & their effects on identity, social, political, & economic structures & de facto citizenship are provided, as are allusions to historical patterns. While focus is on the ramifications of the emergence of transnational communities on

the interplay of migration & citizenship, broader perspectives in social & political theory are also incorporated, building on Antje Wiener's European citizenship practice; Michael Kearney's work on transnational communities; & some of the normative & institutional concerns raised by Marco Martiniello.

Heitlinger, Alena (Trent U, Peterborough Ontario K9J 7B5 (tel/fax: 705-748-1221/1213; e-mail: aheitlinger@trentu.ca)), **Nurses and Nursing: A Comparative Perspective.**

¶ Various meanings of the term nurse & nursing are deconstructed & reconfigured to deal in the subtleties of different circumstances under which nurses train, obtain licensing, provide patient care, secure their specific niche(s) in the health care division of labor, compare &/or cooperate with other health care providers, & negotiate their wages & workloads. The specifics of nursing are examined both historically & cross-nationally, drawing on comparative data from three countries with very different political & health care systems: communist Czechoslovakia, the postcommunist Czech Republic, & Canada. An attempt is made to develop a broader sociological perspective on nursing that is not limited to the market economies of Western liberal democracies. Such a perspective takes issue with several unexamined assumptions of both Western sociology of the professions & the "semi professions" & the prevailing feminist approaches to caring work.

Heller, Frank (Centre Decision Making Studies Tavistock Instit, 30 Tabernacle St London England EC2A 4DD (tel/fax: 44-0-171-417-0407/0566; e-mail: heller@tavistock.org)), **Group Feed-Back Analysis and Participation.**

¶ In a discussion of participatory research methods, it is noted that some methods involve a degree of participation greater than that used in questionnaires, tests, or even standard interviews, eg, participant observation, case studies, & action research. The involvement of subjects has a number of objectives & hypothesized advantages. In general, participation improves the quality of research. These two approaches are distinct, although action research provides a bridge between them. Group feedback analysis is described here as a special form of action research called "research action" (Heller, 1997). Group feedback analysis consists of three stages; several advantages are highlighted: validation through the judgment & experience of the client system, supplementing quantitative data with ethnographic material, & learning about the dynamic aspects of a previously static area of research (from synchronic to diachronic). The method is illustrated with a research program on organizational participation that started with an inquiry into the nature of senior management decision making & has continued over 2 decades to include the extent of influence sharing among all levels of employees.

Helman, Sara (Dept Behavioral Sciences Ben Gurion U Negev, Beer-sheva IL-84015 Israel (tel/fax: 972-7-6472-054/932; e-mail: sarith@bgumail.bgu.ac.il)), **Jewish-Palestinian Inter-Group Dialogue and the Strengthening of National Discourse.**

¶ Examines the terms of dialogue between Jewish & Palestinian citizens in Israel, arguing that their fundamental macrolevel, sociopolitical inequality cannot be overcome in a microlevel simulated environment of group dialogue. Based on interpretative analysis of observation & transcripts of dialogue among 8 Jewish & 8 Palestinian students in a university, it is demonstrated that, while the setting may be in the public sphere, it is by no means a free one. Discourse analysis reveals that power relations between Jews & Palestinians are replicated in the encounters. Jewish students tend to essentialize Palestinian identity, & this essential identity is seen as an obstacle to access into a univocal Israeliness promoted by Israeli Jews. Palestinian students are required to give up their national identity to access Israeliness in general & equal citizenship in particular. This process brings Israeli Jews to an awareness of national discourse & identity. Palestinian students try to de-essentialize Israeli identity & reformulate it on alternative grounds, eg, equal citizenship. The process of dialogue & negotiation over identity & recognition discloses difficulties in articulating identity vis-à-vis the majority & fears of losing uniqueness & particularity. It is concluded that, although personal friendships may be formed during the dialogue, the intergroup encounter does not create consensus or common interests, but rather, emphasizes each group's collective identity & different interests & goals.

Hermes-Hayes, Rick (U Waterloo, Ontario N2L 3G1 (tel/fax: 519-888-4567/746-7326; e-mail: rhh@waterloo.ca)), **Class Inequality in the Early Work of Everett C. Hughes: French Canada in Transition Re-Examined.**

¶ Everett Hughes's *French Canada in Transition* (1943) is an early classic of Canadian sociology generally considered an insightful study of the dynamics of ethnic relations & industrialization, specifically vis-à-vis Quebec in the 1930s. Here, it is argued that the work is equally important for its contribution to the study of social class. In the course of applying his interpretive institutional ecology theoretical frame of reference to the industrialization of Quebec in the 1930s, Hughes developed an approach to the study of class that, by focusing on the ownership & control of economic resources & power, presaged later developments in sociology, political economy, & dependency theory.

Helve, Helena (U Helsinki, SF-00014 Finland (tel/fax: 3589-191-23588/23591; e-mail: helve@cc.helsinki.fi)), **What Happened to 'Young Humanists,' 'Individualists' and 'Traditionalists'? A Comparative Study of Changing Value Worlds of Young People in the Framework of Postmodernity.**

¶ Investigates value changes among young people, based on quantitative & qualitative material gathered 1989/90 from 240 adolescents, ages 16-19, in Helsinki, & rural Ostrobothnia, Finland, a follow-up in 1992, & comparative data gathered in 1995 from 457 young adults. Differences in & essential features of the attitudes, attitude structures, & values of young Finns were investigated using attitude scales & factor analysis. Three main value dimensions were constructed: humanism, individualism, & traditionalism. Significant gender differences were found. Girls valued more environmental issues, boys more technics & science. Rural youths valued humanism & equality more than urban young people. The attitudes & values of the majority were, however, contradictory. Young people had a flexible value world. Results are discussed in the framework of postmodernity, enlarging Ronald Inglehart's materialistic & post-materialistic value framework, & are compared with Eurobarometer findings from other countries.

98S34577 / ISA / 1998 / 11818

Helve, Helena (U Helsinki, SF-00014 Finland (tel/fax: 3589-191-23588/23591; e-mail: helve@cc.helsinki.fi)), **Youth Policies and Youth Values.**

¶ Value shifts are occurring among Finnish young people that need to be addressed by youth policymakers. Values examined in 1989/90 studies of 240 adolescents, ages 16-19, in Helsinki & rural Ostrobothnia, with a follow-up in 1992, clustered around the dimensions of humanism, individualism, & traditionalism. Girls expressed more environmentalist attitudes, whereas boys' values were in accord with technology & science. Comparison with values determined in a European barometer survey revealed both similarities & differences. It is argued that value orientations revealed by the Finnish analysis point to the direction in which values under postmodernity are likely to go. Implications for youth policy & youth education are considered, in the sense that recognition of how young people view the modern world is an essential prerequisite both for finding ways to recruit them into the functions of modern citizenship & for providing the support they need in their transition to adulthood.

98S34578 / ISA / 1998 / 11819

Hendrickson, Mary, Raedeke, Andrew & Heffernan, William D. (U Missouri, Columbia 65221), **Market Power and the Global Food System: The Role of the Firm.**

¶ Operating from dominant power positions, transnational corporations (TNCs) have a global vision of the food & agriculture system & possess the ability to implement that vision across & within different commodities & sectors. An understanding of how TNCs have accumulated market power in several commodities &/or sectors, & how power shapes the participation of large numbers of actors in the food system allows dissatisfied groups greater opportunity to devise multiple alternatives. These tendencies of TNCs are explored by highlighting one firm, Archer Daniels Midland (ADM), a US-based transnational food corporation that has sought an increasing role on the international stage. In addition, ADM has expanded into different commodities, pursued shares or partnerships with different organizational forms, & increased its vertical integration.

Hennion, Antoine (CSI École Mines Paris, F-75006 France (tel/fax: 33-0-14-05-19191/35-45628; e-mail: hennion@csi.ensmp.fr)), **D'une histoire de la musique à une histoire de l'écoute (From a History of Music to a History of Hearing).** (FRE)

¶ The evolution of the musical concert since the 19th century is analyzed, contending that the corporal performance & collective event were at the heart of this social activity that centered on novelty & a sense of public participation that aided social cohesion. The way concerts of today have changed is considered, & it is argued that, even though the image of the concert remains active, one often does not hear the music being played because one has other versions of that music in one's head & attends the concert expecting a specific interpretation made familiar by recordings. The effect of the media & recordings on the hearing of concerts is said to be the centering of music on consumption & the irreversible transformation of how we expect to hear music played. These changes call for modification of the study of the history of music into the study of the history of the listener.

98S34581 / ISA / 1998 / 11822

Henriksen, Oeystein (Dept Social Science Bodoe Coll, N-8002 Norway (e-mail: Oeystein.Henriksen@hibo.no)), **Preventional Strategies and Social Integration.**

¶ Discusses strategies for prevention of adolescent alcohol & drug use in the context of social integration in modern society. Analyses are based on a participatory research project seeking to develop & evaluate a model for alcohol & drug prevention in secondary school founded parent participation. Prevention is conceptualized as an intended normative activity; a mediation of values where different forms of integration between generations, & in peer groups, have great significance. Because many preventional projects have underanalyzed different forms of integration, they have overestimated the significance of both mediation of knowledge & local communities/neighborhood. Traditional forms of structural, functional, & normative integration are declining in modern society. Preventional strategies are discussed in relation to three aspects: (1) institutionalization of children & youth in everyday life, especially through the increasing significance of school; (2) parental influence on youth interaction in the peer group & toward professionals; & (3) communication as a form of normative integration.

Hernández León, Rubén (Dept Humanidades U Monterrey, San Pedro Garza García 66238 Mexico (tel/fax: 52-8-338-5050/3135; e-mail: ac59242@umav04.udem.edu.mx)), **New Trends in Mexican Migration to the United States: Urban Origins and Political Outcomes.**

Mexican migration to the US has undergone a great transformation since the 1980s, including the participation of new social actors, the emergence of different origins & destinations, & the development of innovative strategies in the social organization of international migration. Analyzed here are two related dimensions of this transformation: the urban origins of recent migratory flows & the political aftermath of the Mexican state's involvement in the process of migration. Data from a study on migration of blue-collar households in Monterrey, Mexico's third largest city, show how urban origin flows are the result of processes of

industrial restructuring, a transformation that has greatly diversified the social & geographic composition of Mexican migration & has turned migrants & their communities at home & abroad into relevant political actors. Such political importance is reflected in the growing intervention of the Mexican state in the process of migration, eg, in terms of the passage of legislation allowing for dual nationality.

Hernandez, Donald J. (US Bureau Census, Washington DC 20233-8500 (tel/fax: 301-457-3231/3248; e-mail: Donald.J.Hernandez@cmail.census.gov)), **The Changing Lives of Immigrant and Nonimmigrant Families in the USA from 1910 to 1990.**

Between 1990 & 1995, the number of children in immigrant families in the US grew by 30%, compared to only 8% for children with native-born parents; by 1995, nearly 1 of every 8 children was the child of an immigrant. Today, the US fertility rate is near or below replacement level, & the baby-boom generation is moving beyond childbearing age. Therefore, future growth in the population will occur primarily through immigration & through births to immigrants & their descendants. Census projections indicate that the proportion of children under age 18 who are white non-Hispanic will decline steadily & rapidly, from about 69% in 1990 to only 50% in 2030. Conversely, the proportion of children who are Hispanic, black, Asian, or of another nonwhite race is expected to expand from 30% to 50%. Data from the 1910, 1960, & 1990 decennial censuses are used to analyze historical changes experienced by first-, second-, & later-generation children regarding (1) parental presence in the home, (2) number of siblings in the home, (3) parental literacy & educational attainments, (4) paternal & maternal labor force participation including part- & full-time work, (5) poverty & income inequality, & (6) overcrowded housing conditions. Analyses are also conducted for first- & second-generation children of changes in their countries of origin, language, parental language, citizenship, & state of residence. Children most at risk of harmful consequences are identified, & the role of race & ethnicity in influencing resources available to children & their future prospects is evaluated.

Hernandez-Leon, Ruben ((e-mail: ruherman@umav01.udem.edu.mx)), **New Origins and New Destination: Latin American International Migration to the United States.**

During the last 2 decades, Latin American migrations to North America have developed new origins in terms of both countries & regions within the sending subcontinent. Countries like Ecuador, Paraguay, & Brazil have become the source of recent flows directed toward the US. Explored here are social organizations of these international migratory streams, as well as the conditions, eg, structural adjustment & the impact of neoliberal policies, giving rise to these flows. At the same time, much older Latin American migrations have found new destinations in North America; this is particularly the case of Mexican migration to the US; new Mexican communities have emerged in areas other than the Southwest, areas themselves that are undergoing either rapid growth or processes of economic restructuring. Two cases in point are the South & the New York City metropolitan area. Causes, characteristics, & consequences of international migratory flows between Latin & North America are considered, focusing on new origins & new destinations.

Hertz, Rosanna & Ferguson, Faith (Wellesley Coll, MA 02181-8252 (tel: 617-566-4331; e-mail: Rhertz@Wellesley.edu)), **Unwed Mothers: Balancing Work and Family among Economically Self-Sufficient Women.**

Data obtained via in-depth interviews with 50 women, ages 22-50, in

h

eastern MA who have chosen to be single mothers are used to develop a typology demonstrating the factors leading to, & consequences of, differing combinations of economic & social support for such childbearing. Ensuring middle-class lives for their children is a central goal for the mothers that determines how & why mothers construct specific strategies to complement their "one pair of hands" based on resources they develop: some have financial resources & a deep network of support, others have one or the other or neither. Despite variation in resources, all the women seek ways to tip the balance of work & family in favor of mother-time &, in the process of developing individual solutions, activate broad kin & community networks.

Herz, Ruth (U-Gesamthochschule Siegen, D-57068 Federal Republic Germany), **Do Female Judges Change the Courtroom? A Case Study from Germany.**

¶ A case study examines whether women judges make a difference in the German courtroom, exploring how women might change the law's method, system, & language by relying on their own experiences. Do women understand & interpret laws differently from men? Changes in the definitions of rape & murder in German law suggest this. Do women listen to & hear other kinds of knowledge than men? Interrogations by female judges in courtrooms could suggest a shift in legal definitions on events of everyday life.

98S34593 / ISA / 1998 / 11834

Herzog, Hanna (Dept Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel [tel/fax: 972-3-549-4941/7842; e-mail: hherzog@spirit.tan.ac.il]), **Gendering the Social Agenda: Discourse in Alternative Voices.**

¶ The term post-Zionism, like postmodernism, has acquired a variety of definitions & uses; an attempt is made to unearth its genealogy. The point of departure is that, just as postmodernism does not construe the end of modernism, but refers to diagnoses of developments that have sprung from it (which include a radical critique of modernism), post-Zionism should be perceived through the same prism. Post-Zionism has adopted two key aspects of the postmodernist discourse: the end of the grand narratives & subversive insights. These two attitudes have opened a public space for critical voices from various quarters, including women's. Although some of the voices are anti-Zionist, others urge a different interpretation of Zionism. The central hypothesis is that, as the Zionist discourse is addressed, a range of women's voices arise. There is no single feminine voice, certainly not an organized, representative group of all women. The voices that are given expression seek to challenge the dominant order, but at the same time they compete with or criticize one another. From a modernist perspective, this absence of political cohesion has a disabling effect on the possibility of fomenting direct political change. It is argued here, however, that the plethora of voices has a cumulative impact that assails the dominant agenda from various angles, & this ultimately obligates the creation of a new & diversified agenda.

Hestbaek, Anne-Dorthe (Danish National Instit Social Research, Herluf Trollesgade 11 DK-1052 Copenhagen [tel/fax: 45-33-48-08-00/33; e-mail: adh@smsfi.dk]), **Parenthood in Scandinavia. Dual-Earner Parents between Tradition and Modernity.**

¶ Based on concepts from modernization & lifemode theory, data collected through qualitative in-depth interviews from dual-earner Scandinavian families with preschool children are drawn on to explore the degree to which they are marked by tradition vs modernity concerning parental roles. Results support the hypothesis on cultural diversity. Parents with the wage-earner lifemode are the least marked by modernity & most committed to tradition, while those having the career-oriented lifemode are the most committed to modernity. The self-employed cannot be conceived uniformly; some seem to be rather tradition bound, while others are as committed to modernity as career-oriented parents. Empirical & theoretical implications of finding latent traits of tradition in a society that fundamentally considers itself modern are discussed. Questions for further research include the following: (1) How do children experience growing up in tradition-bound modern families? (2) What are the long-term consequences of a modern/tradition-bound adolescence? (3) How does modernization theory explain the latent traits of tradition?

98S34595 / ISA / 1998 / 11836

Hettige, S. T. (U Colombo, Sri Lanka), **Economic Liberalism, Food Security and Rural Livelihoods: A Critical Analysis of the National**

Agricultural Policy of Sri Lanka.

¶ The current debate over the economic viability of small-scale agriculture in Sri Lanka alternates between liberal & interest group politics. While liberal economists argue that small producers do not deserve to survive unless they adapt to market forces, the defenders of small producers argue that they should be protected by the state as they are often the victims of powerful interest groups such as urban traders & transnational firms. The latest agricultural policy framework of the Sri Lankan government (1995) fails to transcend this polarity & is trapped between the two seemingly irreconcilable positions. Demonstrated here is how the problem of rural peasant agriculture can be resolved by moving beyond pure economic rationalism & locating it in a social market framework in which rural producers are treated not just as commercial agricultural producers, but also as citizens with equal rights & opportunities. This would enable the state to remove various handicaps & disadvantages so that rural producers could enjoy a reasonable standard of living independent of subsidies. Empowerment of rural inhabitants would enable them to effectively deal with public officials, trades, & urban services providers who often exploit them in diverse ways.

Heydebrand, Wolf (Dept Sociology New York U, NY 10003 [tel/fax: 212-998-8354/995-4140; e-mail: heydebrand@socgate.soc.nyu.edu]), **The Analytic Necessity of Social Networks for Theorizing Institutions.**

¶ Social networks are argued to be the analytical opposite of social institutions, such that one cannot be fully understood & theorized without the other. Processes of institutionalization & deinstitutionalization as well as deformalization & dedifferentiation require conceptual recourse to the emergent, relational, & transitional nature of network-like structures. Elements of social network theory thus become relevant to conceptions of evolutionary or revolutionary institutional change; processes of mergers & schisms in organizations or of decentralization & dissolution in strategic business networks; political theories of federations; & neoliberal or anarchist theories of associations or organizations. Strategic social networks range from governance & policy networks to interfirm strategic alliances & are also found in corruption & crime. Their current importance derives from their key role in the institutional transformation of markets, states, politics, & law. Here, pertinent examples from Eastern Europe, the European Union, & the US are explored.

98S34597 / ISA / 1998 / 11838

Hicks, D. Emily (San Diego State U, CA 92182 [tel: 619-702-9409; e-mail: marquesa@aznet.net]), **The State, the Citizen and Affective Labor in the Borderlands: Towards a New Theory of Value.**

¶ It is hypothesized that a new kind of use value can be found by analyzing transnational & *maquila* workers. In *Labor of Dionysus* (1994), Michael Hardt & Antonio Negri discuss the notion of "affective labor." Their argument is extended to speculation about the *maquila* worker. In an analysis of (1) theories of the state, (2) new definitions of citizenship, & (3) Hardt & Negri's concept of affective labor, focus is on three studies of the state: one informed by a feminist perspective, another that studies the state in relation to the nation in multiethnic societies, & the notion put forward by Hardt & Negri. It is concluded that (A) transnational workers, due to their bicultural lives, & technoscientific workers in nurturing fields can stimulate theorizing about a new theory of value; & (B) this new theory of value is seen in the community-building that is creating communities that do not respect national boundaries.

Himmelmann, Günther W., Prümper, Jochen, Hassenzahl, Marc, Schulz, Jan, Eberhardt, Winfried, Brückner, Gunter & Dubrow, Manfred (Institut Medical Biometry & Epidemiology U Marburg, D-35037 Federal Republic Germany (tel/fax: 49-172-6806069/6421-28-8921; e-mail: Himmelm@IBM.net)), **A General Health Information System in the Web: What Is Its Impact? The German Federal Health Information System IS-GBE as a Sociocybernetic Experience.**

¶ Examines the Federal Republic of Germany's IS-GBE as a general health & reporting system. Its main goals are to (1) address the general public, decision makers, politicians, & press; (2) provide free access via Internet to everybody; (3) deliver up-to-date information in the forms of freely combined texts, graphics, & numbers by OLAP; (4) provide interactive access by "data mining"; (5) combine with related publications; (6) allow downloading for further analyses; (7) support unprecise questioning; & (8) induce active client-provider communication. Here, the results of the sociocybernetic approach to providing information on health-related problems & resulting user reactions are described, measured by continuously questioning clients by standardized on-line questionnaires. Results suggest ways to deal with health care & how to integrate technical information systems into the ongoing systems processes of daily communication & life, both at the level of professionals & at large. The goal is to base decision making in health-related questions on facts & well-informed public support.

98S34602 / ISA / 1998 / 11843

Hinrichs, Karl (U Bremen, D-28209 Federal Republic Germany (tel/fax: 49-421-218-4063/4052; e-mail: HINRICHKS@zes.uni-bremen.de)), **Reforming the Public Pension Scheme in Germany: The End of the Traditional Consensus?**

¶ After the legislation of public pension reform in the Federal Republic of Germany in 1989, which became effective in 1992, it was assumed that no further structural reform should enter the political agenda during this century. Nevertheless, in 1997, another far-reaching reform proposal was addressed in the legislative process. Here, the background of the revived reform debate, the disputed elements of the reform proposals, & the process of compromise building are analyzed & contrasted with ongoing pension reform debates & attempts to cope with the consequences of societal aging in countries such as Sweden & the US. Special emphasis is given to the question of whether the ongoing & conflicting reform process indicates an end to the long-standing consensus between the large political parties, & between social partners, that has prevailed in German pension politics to date.

Hiom, Debra (Inst Learning & Research Technology U Bristol, BS8 1TN England (tel/fax: 44-117-928-8443/8478; e-mail: d.hiom@bristol.ac.uk)), **The Quest for Quality on the Web.**

¶ Although researcher information needs are being met increasingly from on-line sources provided by governments, fellow researchers, & commercial organizations, the sheer quantity of information available, together with a lack of coherent organization, has prevented many re-

searchers from maximizing the potential of the Internet in their work. Described here is the approach of SOSIG (Social Science Information Gateway) in helping researchers access high-quality information, drawing on European-funded research in developing standards & methods for resource discovery & description. A review of current progress in this area is provided.

98S34604 / ISA / 1998 / 11845

Hirata, Helena Sumiko (Centre national recherche scientifique, F-75794 Paris Cedex 16 France), **Industrial Restructuring, Sexual Division of Labour and Women's Social Movements.**

¶ Focuses on the lack of gender dimension in the social sciences, in particular, in the sociology of work, which has always based its theoretical constructions on a male model of worker. Taking gender relations into account reveals that the impact of flexible specialization & recent forms of work organization are not the same for women & men. Impacts of these changes are contradictory & complex: when new opportunities of more skilled jobs appear, sexual divisions & precariousness of the female labor force are reinforced. This development is situated in the context of the international debate about the end of work & the place of work in the society today. The strategic place of women's work at present is considered: part-timers & temporary female workers seem to prefigure the future of wage work. The discussion is founded on secondary empirical research & on findings of comparative research in Brazil, France, & Japan. Focus is on three aspects of industrial restructuring & gender: (1) the place of the concept of gender in the social sciences debate about flexible specialization & new production concepts; (2) the present trends of female employment & gendered organization of labor in a socioeconomic & institutional context deeply marked by a double & paradoxical transformation of work with regard to stability; & (3) the interest of widening the concept of work from a gendered point of view to contribute to the debate about the end of work. Discussed in conclusion are women's collective movements & actions—particularly in France today—in defense of their employment & their social & professional status.

98S34605 / ISA / 1998 / 11846

Hiremath, S. L. (Dept Sociology Gulbarga U, 585106 Karnataka India (tel/fax: 08472-24839/21632; e-mail: root@guluni.kar.nic.in)), **Professionalism among Indian Physicians.**

¶ Draws on scale data from 200 physicians in India to explore the degree to which professionalism is practiced. Findings indicate that, despite the scale's conservative nature, nearly 48% of physicians practice with a high degree of professionalism, challenging the general assumption regarding their lack of professionalism. Even regarding covariates of professionalism, results seem to negate common notions that physicians with urban backgrounds & those in private practice exhibit a higher degree of professionalism than their rural & public-sector counterparts. However, personal traits such as age, span of medical career, social origin, & educational attainments appear to be significantly associated with level of professionalism. Findings are discussed as functions of the general sociocultural & professional milieu in which physicians operate.

98S34606 / ISA / 1998 / 11847

Hiremath, S. L. (Dept Sociology Gulbarga U, 585106 Karnataka India (tel/fax: 8742-24839/21632; e-mail: root@guluni.kar.nic.in)), **Democracy in Indian Trade Unions.**

¶ Based on an empirical inquiry into the extent & determinants of democracy in Indian unions, an attempt is made to develop & operationalize indices of democracy in union organizations, keeping in view the indices employed in previous studies. Organizational & situational variables are tested for their implications for the extent of democracy in Indian unions in a study of 52 trade unions. Results reveal that the "iron law of oligarchy," assumed to be operating in unions, is not a universal rule; some 33% of unions are operating with a high degree of democracy, & another 33% with a moderate degree. Further analysis reveals that, outside leadership & politicization of union movement, the unique traits of Indian unionism have a dampening effect on the democratic tendencies in unions. In addition to the extent of democracy, the components of the scale of union democracy are also viewed in light of explanatory variables.

98S34607 / ISA / 1998 / 11848

Hiremath, S. L., Hiremath, Arathi & Kulkarni, Jayashree (Dept Sociology Gulbarga U, 585106 Karnataka India (tel/fax: 08472-24839/21632; e-mail: root@guluni.kar.nic.in)), **Women in Medical Profession: Work and Family Interface.**

h

¶ Explores the extent & correlates of professional-domestic role conflict experienced by Indian women in the medical profession, drawing on interview data from 110 female doctors in an urban setting. Findings suggest that, among women, the medical profession is still a monopoly of those from higher social origins & is looked on as adding to family & self-prestige. Further, contrary to what is widely lamented, the extent of role conflict experienced is moderate, with only about 10% finding it difficult to cope with professional & domestic roles simultaneously. However, findings also suggest that relief from domestic obligations could be of great help in improving their professional practice & efficiency. Further, variables generally assumed to be associated with role conflict, eg, marital status, age, & professional orientations, seem to be significant.

98S34608 / ISA / 1998 / 11849

Hiremath, S. L. & Shahida (Dept Sociology Gulbarga U, 585106 Karnataka India (tel/fax: 0-8472-24839/21632; e-mail: root@guluni.kar.nin.in)), **Women, Education and Fertility: An Indian Experience.**

¶ In developing countries like India, where traditional norms, values, & customs regulate individual behavior, women's education seems to play a vital role in changing demographic trends. Explored here are the linkages between the formal education of women & their reproductive behavior, based on empirical data from northern Karnataka. Analysis reveals that higher levels of formal education postpone the age at entry into sexual life (marriage), shorten the reproductive span, enhance the degree of autonomy & recourse to contraception, & thus, restrict fertility from reaching its maximum.

98S34609 / ISA / 1998 / 11850

Hiremath, S. L. & Somashekhar, C. (Dept Studies Sociology Gulbarga U, 585106 Karnataka India), **Professional Commitment among Indian Physicians.**

¶ Explores levels & determinants of professional commitment among 200 Indian physicians, based on scale data. Findings reveal a high level of commitment, with 66+ % of respondents being on the higher side of the scale. Level of commitment increases with age, span of career, & educational attainment, but varies independent of rural/urban background & social origin. However, it appears that those with ideological considerations exhibit higher levels of commitment than those who are instrumentally or intrinsically oriented. Age at career choice & family professional background are significantly associated with level of commitment. These phenomena are discussed in the context of general sociocultural milieus prevailing in Indian society.

98S34610 / ISA / 1998 / 11851

Hiremath, S. L. & Somashekhar, C. (Gulbarga U, 585106 Karnataka India (tel/fax: 8472-20971/21632; e-mail: root@guluni.kar.nic.in)), **Privatization of Medical Education and Professional Practice.**

¶ Examines the implications of privatization of medical education for professional practice among physicians, drawing on interview & scale data from 200 physicians in Bangalore, India. The findings indicate that the fear about menace of capitation & reservations against reservation so widely prevalent among policymakers & the public at large are rather unwarranted, because 80+ % of the physicians are offered admission on the basis of merit. Further analysis reveals that rural-urban background, social origin, & grades in medical education of the physicians vary significantly with the basis for medical education, but other important dimensions of professional practice, eg, professional orientation, commitment, competence, & degree of professionalism, appear to be independent of the bases for admission to medical education. The findings suggest that the implications of privatization through capitation for medical profession are not as detrimental as assumed.

98S34611 / ISA / 1998 / 11852

Hiremath, S. L. & Somashekhar, C. (Dept Studies Sociology Gulbarga U, Jnana Ganga 585106 Karnataka India (tel/fax: 08472-20971/21632; e-mail: root@guluni.kar.nic.in)), **Professional Competence: A Study of Indian Physicians.**

¶ Investigates the level & determinants of professional competence among 200 Indian physicians using a competence scale & an interview schedule. Findings suggest that, despite many landmark contributions to medical science, the overall level of competence of Indian doctors could be viewed as moderate. However, the competence scale is quite conservative, so those who score high could be considered comparable to the best in their respective fields; nearly 50% of the respondents would be viewed

as at least reasonably competent. The analysis further reveals that variables assumed to be correlated with professional competence—eg, age, rural/urban background, type of professional practice (private vs public), professional qualifications, & mode of admission to medical education—have minimal impact on competence levels. However, the social origin of physicians is positively associated with competence. Findings are analyzed in light of the general sociocultural milieu in which physicians practice their profession.

98S34612 / ISA / 1998 / 11853

Hisayoshi, Mitsuda (Dept Sociology Bukkyo U, Murasakino Kitaku Kyoto Japan 603 (tel/fax: 81-75-491-2141/493-9032; e-mail: mitsuda@bukkyo-u.ac.jp)), **To Trust or Not to Trust: Lesons from Twenty Years of the Shiretoko National Trust Movement in Japan, 1977-1997.**

¶ The hallmark of public land protection in many countries has been the management of rural areas by urbanites with little empathy for or faith in the conservation capabilities of rural inhabitants as management partners. Presented here is an inclusive approach to local residents as an enlightened way to achieve long-term conservation in harmony with protection of biodiversity & sustainable regional development in the Shiretoko National Park on Hokkaido Island, Japan. In two field studies, historical data & interview & questionnaire data were gathered from affected park communities & the members of Shiretoko National Trust Movement in 1987 & 1997, in the context of a conservation alliance between local people & urban environmentalists. Findings indicate the ambivalence of the potential role of local people as full partners in national park management of interests to exist between human welfare & ecological well-being, without the remedy of environmental elitism among urban environmentalism.

Hjerm, Mikael (Dept Sociology Umeå U, S-90187 Sweden (tel/fax: 46-90-786-7841; e-mail: mikael.hjerm@soc.umu.se)), **National Identity, National Pride and Xenophobia: Australia, Germany, U.K. and Sweden Compared.**

¶ The denigration of individuals or groups based on perceived differences, ie, xenophobia, is arguably a part of everyday life worldwide. Xenophobic attitudes or sentiments are not new, nor are they likely to disappear in the near future. Even if there is a discrepancy between racist actions & xenophobia, the latter is to be considered problematic, because it is the basis for both concrete racist actions & more subtle forms of exclusion hidden in the discourse of society. Scholars have invested considerable effort to scrutinize xenophobia, conducting research in the various social science disciplines—eg, Tajfel's social-psychological social identity approach, where xenophobia is the implacable result of individuals' categorization of their world, or of focusing on institutional arrangements as mediators of exclusion & xenophobia. Xenophobia has also been subjected to various efforts at quantitative measurement, while relationships between people's attachment to & pride in their nation-state & xenophobia have been widely theorized, though with little empirical research. An attempt is made here to fill that gap.

98S34614 / ISA / 1998 / 11855

Hjorthol, Randi & Berge, Guro (Institt Transport Economics, PO Box 6110 Etterstad N-0602 Oslo Norway (tel/fax: 47-2257-3800/0290; e-mail: randi.hjorthol@toi.no)), **Lifestyle, Transport and the Environment.**

¶ Examines the relation between passenger environmental attitudes & choice of modes of transportation in everyday life, drawing on interview data from 120 respondents, ages 18-60, in two urban areas in Norway. The supply of public transport is good in the areas where the respondents live. The respondents were asked about their environmental attitudes in general, & about their attitudes toward use of transport modes & of transport policy measurements. The attitudinal variables are seen in relation to behavioral variables concerning choice of transport modes & locational choice for various activities. Travel mode & perception of environmental problems & attitudes toward transport policy measures are related. Car users see road traffic as less serious for the environment than people using other transport modes. They are also less positive toward measures that benefit public transport, & walking & cycling. Some 50+ % of the car users can use alternative transport modes. They choose the car because it is more convenient, it saves time, & they think the alternatives are bothersome. A relation is found between environmentally friendly behavior on the transport area & other areas of everyday life.

Hoecker-Drysdale, Susan (Dept Sociology/Anthropology Concordia U, Montreal Quebec H4B 1R6 (tel/fax: 514-489-9640/848-4548; e-mail: hoecker@alcor.concordia.ca)), **Harriet Martineau and the Positivism of Auguste Comte.**

¶ In 1853, Harriet Martineau brought the sociological positivism of Auguste Comte to the English-speaking world with her two-volume translation & condensation of Comte's *Cours de Philosophie Positive* (1830-1842). Martineau's active concern with sociology began with her essays (1820s) on scientific thinking & her introduction to the ideas of Saint-Simon in 1830. Martineau, enthusiastic about the presumptive promise of Comtean positivism, nevertheless, rejected a number of Comte's premises. In particular, she was repelled by the ideas of a total social system, a dominating & static language, & a unitary culture & opinion. Martineau's dedication, objectivity, & care in producing this foundational version of Comte's sociological magnum opus contrasts with her restraint regarding public critique of Comte. More importantly, this instance leads to a clearer understanding of Martineau's position on positivism. She was committed to sociological knowledge based on empirical investigation & fact as well as to the critical role of theoretical interpretation. Here, Martineau's epistemology, particularly in relation to 19th-century positivism is outlined.

Hoffman, Lily M. (Dept Sociology City U New York, NY 10031 (tel/fax: 212-866-8058/0138; e-mail: L.Hoffman@email.gc.cuny.ab)), **Bringing Professions In: Medicine and Welfare State Restructuring.**

¶ Takes a new approach to welfare state restructuring by focusing on professions—a key instrumentality of the welfare state—and by looking sociologically at health care, a major sector of welfare state service provision. It is argued that there has been a major change in occupational control in the health sector as evidenced by changes in the social function & status of physicians. This change has occurred despite & because of the failure of privatization to contain costs, & has made physicians—a major provider of health care in the welfare state—an agency of cost control & retrenchment. The analysis draws on an ongoing study of the medical profession/health care in the Czech Republic, noting how this trajectory fits larger trends in the US & Western Europe.

Hoggart, Keith (Dept Geography King's Coll London, WC2R 2LS England (tel/fax: 44-171-873-2713/2287; e-mail: keith.hoggart@kcl.ac.uk)), **The Decline of Urban Government and Rise of Quasi-Government: Social Housing in London 1988-1998.**

¶ The 1980s & 1990s have seen a significant reduction in the fiscal & regulative powers of local governments in the UK, with contributions to the delivery of many services having been curtailed by legislation & financial restrictions. Housing provision is a clear example of this. Examining the situation in the boroughs of London, England, explored is how ideological commitments under the Conservative governments of the 1980s & early 1990s led to utilization of nonprofit quasi-governmental

organizations as alternative social housing providers. Problems associated with this form of provision, which have been heightened by fiscal restraint & growing problems of housing shortage, are examined. The pressures this has placed on providers point toward the emergence of new forms of deprivation on social housing estates in the future.

Höijer, Rolf (Nuffield Coll Oxford U, OX1 1NF Engand (tel/fax: 44-01865-554569/278557; e-mail: rolf.hoijer@nuf.ox.ac.uk)), **The Altruist's Dilemma.**

¶ Refutes the "assurance game solution" to problems of public goods provisioning, where altruistic preferences allegedly make actors willing to contribute to the provision of public goods. A benevolent world is modeled that is populated solely by altruists who can invest in a finite set of altruistic projects, which result in the provision of public goods. The set of investment opportunities open to the altruists of this world is not, however, exhaustive. To use scarce resources to do the maximum good for others, the individual rational altruist will invest only in altruistic projects that other altruists will not cover. Since the benevolent world does not exhaust every altruistic investment opportunity, each altruist hopes that other altruists will finance all the investments available in the benevolent world, & saves his or her own resources to invest in altruistic projects that do not form part of the benevolent world's set of investment opportunities. Investments made by other altruists are public goods, on which the individual rational altruist will attempt to ride free. The provision problem will therefore be a chicken game. Accordingly, it is concluded that, even in a world populated solely by altruists, it is unlikely that sufficient contributions will be made for the provision of public goods.

Hola, Richard C. & Jackson, Cynthia (Dept Political Science Michigan State U, East Lansing 48823 (tel/fax: 517-353-1686/432-1041; e-mail: Rhola@Pilot.msu.Edu)), **The Political Role of Nonprofits in an Urban Community.**

¶ Explores two critical aspects of regime formation: the roles of race & nonprofit organizations. If broad governing coalitions are to be created in large US cities, they will almost certainly need to be multiracial in nature. Formal political leadership is often in the hands of minority politicians, but economic leadership remains firmly in the hands of whites. However, the role of race is much more complex than this division would suggest. Race (at least its sociological & political significance) is often an important divide in the minority community itself. African American mayors continually struggle with balancing the demands of low-income minority constituents (who elected them) & white economic elites (who are critical coalition partners). The process by which minority mayors deal with this conflict is discussed in terms of nonprofit organization impact on efforts to build functioning, governing coalitions. Some claim that nonprofit organizations can provide a framework on which political leaders can build a multiracial governing coalition. The validity of this claim is investigated via the examples of two large nonprofit organizations, New Detroit & Detroit Renaissance (MI). Created in the aftermath of severe civil unrest in the city in the late 1960s, they have the overt mission of aggregating local resources to meeting the problems of the city. As such, they provide important insights as to the potential & limits of nonprofit organizations in local governance.

Holdsworth, Clare M. (Cathie Marsh Centre Census & Survey Research U Manchester, M13 9PL England (tel/fax: 0161-275-4744/4722; e-mail: c.holdsworth@manchester.ac.uk)), **Working Mothers in Great Britain and Spain: Family Strategies and Social Policy.**

¶ Data from the Spanish Sociodemographic Survey for 1991 & the National Child Development Survey for GB are drawn on to examine how women combine work & family & the extent to which family policies facilitate working mothers, focusing on the relationship between family formation & economic independence & how family & household strategies are adopted to provide child care support for working mothers. The experience of a cohort of women in their early 30s in 1991 are compared with reference to the timing of family formation & its relationship with women's employment history, & current employment position is related to family formation & household strategies, modeled as an ordered multinomial logistic regression with three categories in the response variable: full-time work (independent), casual or part-time work (dependent), or no paid work (dependent). Analysis takes into account parental characteristics, whether either parent is currently living in the respondent's household, educational qualifications, age of leaving home, age at first childbirth, marital status, & the presence of a partner in paid work. Comparisons reveal how culturally defined gender roles influence women's employment opportunities in two contrasting European contexts.

Hollinshead, Keith (Dept Recreation/Park/Tourism Sciences Texas A&M U, College Station 77843-2261 [tel/fax: 409-845-9392/0446; e-mail: khollins@rpts.tamu.edu]), **Tourism and the Halfway Populations: A Dialectical Critique.**

¶ Inspects the projection of cultural difference in tourism, particularly in terms of the sheer numbers of the world's people whom Bhabha, in his landmark work, *The Location of Culture*, suggests are living in interstitial spaces, as "halfway populations" existing in between cultures. Bhabha's examination of the difficult psychic condition faced by such restless, interstitial people is probed to shed light on the large role that tourism plays in the Othering of such peoples in the ethnocentric positioning of places & pasts. In noting the inventive & essentializing force of so much representational activity in the everyday of mundane images/projections/languages of tourism, dialectical insights are provided into the petty & quotidian fashions by which the discourse & practice of tourism management (& tourism research) helps significantly misinterpret the hybridity, ambiguity, & temporal pluridimensionality of so much postcolonial/postmodern life.

98S34625 / ISA / 1998 / 11866

Horne, John (Moray House Instit, Cramond Rd North Edinburgh EH4 6JD Scotland [tel/fax: 0131-312-6001/6335; e-mail: johnh@mhie.ac.uk]), **Structuration Theory, Sport and Power.**

¶ Considers the contribution of structuration theory, primarily derived from the writings of Anthony Giddens, to understanding sport in society. Focus is on the conception of power in Giddens's recent work on modernity & the self. Central ideas such as "runaway world," "risk society," & "globalization," understood not as a particular sphere of action in the economic, political, or cultural realm, but as the late-modern condition itself, are critically evaluated. The notion of "life politics" & Giddens's conception of lifestyle are also appraised for their potential contribution to a "past-modern" sociology of sport.

98S34626 / ISA / 1998 / 11867

Hornung, Bernd R. (Instit Medical Informatics Marburg U, D-35032 Federal Republic Germany [tel/fax: 6421-28-6206/3599; e-mail: Hornung@mail.uni-marburg.de]), **Data Protection and New IT in Sustainable Social Systems—Sociocybernetic Aspects of Recent Developments in IT.**

¶ The information society puts information at an ever more central place in the lives of people, organizations, & societies. This creates new risks & vulnerabilities & provokes a quest for the protection of human rights & liberties, including data protection. The latter must be viewed in the larger societal context & in terms of its ultimate ends. It is argued that a concept from ecological research, sustainability, could constitute an adequate point of departure for societal analysis & technology assessment, replacing less convincing general goals. An example from health care exemplifies how data protection at the organizational level can be integrated into such a framework & how a multitude of aspects from different disciplines have to be taken into account. Data protection, eg, in a hospital, has to cope with the risks & potentials of worldwide information traffic, automatic medical & administrative data exchange, hackers, & computer viruses, as well as with the needs of doctors for fast & authentic medical information & with patients' demands for adequate treatment, privacy, & confidentiality. The answer proposed to this challenge is a mix of up-to-date technical solutions, cryptology (smart cards & electronic signature), organizational measures, & training & motivation.

98S34627 / ISA / 1998 / 11868

Hornung, Bernd R. & Hornung, Charo (Instit Medical Informatics

Marburg U, D-35032 Federal Republic Germany [tel/fax: 6421-28-6206/3599; e-mail: Hornung@mail.uni-marburg.de]), **Implications of Autopoiesis and Cognitive Mapping for a Methodology of Comparative Cross-Cultural Research—Unity of Science and the Ethics-Emics Controversy.**

¶ Evident key categories of sociocybernetics are social systems, societies, social actors, & their actions. Less evident, but intrinsically linked to these, are culture, personality, & psychology, including cognition. Sociocybernetics & the cognitive mapping approach propose methodological tools to integrate concepts such as culture & personality with the notion of social systems. In the age of globalization, this revives the danger of ethnocentrism & the urgent need for cross-cultural studies, along with an appropriate methodology. Empirical studies, eg, in psychology & anthropology, involving aspects of personality & cognitive systems rapidly encounter practical methodological problems that lead to questions originally posed by cultural relativists. These problems have seen a certain revival in the methodological controversy on etic & emic approaches in psychology & anthropology. This is illustrated with a cross-cultural study on androgyny carried out in the Federal Republic of Germany & Peru. Implications of autopoietic theory & cognitive mapping are explored regarding this problem. An evolutionary sociocybernetic view is proposed as a basis for a methodology for cross-cultural research.

Horwich, George (Purdue U, West Lafayette IN 47907-1310 [tel/fax: 765-494-4443/496-1505; e-mail: ghorwich@mgmt.purdue.edu]), **Economic Lessons of the Kobe Earthquake.**

¶ The impact, response, & recovery from the 1995 earthquake that devastated the metropolitan area of Kobe, Japan, are analyzed from an economics perspective. To a large degree, an economy's safety level & resilience to disasters are the outcome of endogenous market forces that vary positively with income. Japan, a wealthy, market-oriented country, embodies a great deal of resilience, but suffers from protectionist regulations that constrain its markets, its general level of income, & associated level of safety. Telecommunications, property insurance, & self-insurance through personal saving are examples of services that contribute to disaster resilience, but are below their potential because of Japan's protectionism & income shortfall. In spite of these constraints, the Kobe-area economy recovered relatively quickly, which is attributed both to market forces & the country's rich endowment of human capital. As a general policy, however, Japan should massively deregulate & open its economy. In any future disaster, public authorities should play an overseer role, allowing the private sector to undertake whatever initiatives it will. Government's proactive functions, including emergency response & its coordination, should be privatized to the maximum degree possible.

Houtman, Dick (Erasmus U Rotterdam, NL-3000 DR Netherlands [tel/fax: 31-10-4082118/4525870; e-mail: houtman@soc.fsw.eur.nl]), **Cultural Capital and Cultural Conservatism: An Empirical-Theoretical Critique of Kohn and Inglehart.**

¶ Both Kohn & Ronald Inglehart claim that the value one attaches to individual liberty can be explained from one's economic position. According to Kohn, occupational self-direction entails a nonauthoritarian outlook, & according to Inglehart, growing up under conditions of affluence leads to an appreciation of individual liberty & self-attainment (post-materialism). Analysis of data from a representative sample from the Dutch population leads to a rejection of both hypotheses. It is demonstrated that (1) postmaterialism & authoritarianism can, in fact, both be conceived of as indicators of a more general concept of cultural conservatism; & (2) neither can be explained from one's economic position. Strongest postmaterialism & weakest authoritarianism/cultural conservatism are not found among certain economic categories, but among highly educated, culturally interested, nonreligious young people. Theoretical implications for sociological debates about modernity & modernization are briefly discussed.

Hovden, Jorid (Finnmark Coll, N-9500 Alta Norway [tel/fax: 47-78450250/34438; e-mail: jordi@hifm.no]), **Why Important Men and Young Women? Selection Mechanisms for Elected Positions in Norwegian Sport Organizations.**

¶ Previous investigations into the recruiting processes for elected positions in sport organizations indicate a strong social selection of volunteers. Senior positions on boards are often occupied by middle-aged,

highly educated males who have well-paid, full-time jobs. The selection mechanisms seem to support a certain group of males to assume the positions of power, & oblige women & other social groups to lower positions. Here, in ethnographic case studies of three organizational units within a volunteer umbrella organization called the Norwegian Confederation of Sports, a strong correlation between gender & age is found: female members are about 15 years younger than their male counterparts. Focusing on the selection mechanisms by which this occurs, explored are (1) What kinds of criteria are used in the selection of candidates? (2) Who are the gatekeepers & who has power to define the qualifications for holding senior board positions? (3) What kind of power relations & procedures seem to predict the outcome?

Huang, Hui (Rowan U, Glassboro NJ 08028 (tel/fax: 609-256-4500/4921; e-mail: hhuang@rowan.edu)), **Social Transformation and Cultural Production: The Case of Modern China.**

¶ Social transformation in the People's Republic of China exhibits a complex interplay of cultural struggles & class conflicts & has been marked by both a ruthless search for cultural visions & radical changes in social practice. Contrary to the Marxian premise that culture reflects practice, the Chinese case reveals that cultural production not only guides, but also legitimizes, social practice before it is actually put into action. The appropriation of Western culture by different social groups in China contributed to the disintegration of the traditional state & a restructuration of the Chinese society in the Western model. Meanwhile, as a result of the radicalism in the search for a solution to Chinese problems, modern China has been tortured by decisions to choose among different versions of Western culture & make swift changes from one model to another.

¶ The People's Republic of China has experienced an exciting & fast economic development; & the standards of material & cultural life have greatly improved since the 1980s. During the course of modernization, many kinds of deviant consumption have emerged in the younger generation. How to avoid deviant consumption & develop reasonable consumer lifestyles is a new issue for China's maturing socialism & youths.

98S34634 / ISA / 1998 / 11875

Huggins, Martha K. (Dept Sociology Union Coll, Schenectady NY 12308 (tel/fax: 518-388-6008/374-1508; e-mail: Hugginsm@union.edu)), **Brazilian Police Violence: Legacies of Authoritarianism in Police Professionalism—A Study of Torturers and Murderers.**

¶ Interviews with 14 police torturers &/or murderers from Brazil's military period (1964-1985) disclosed three types of arguments in their discourse justifying past violence: (1) citing professional demands of policing; (2) blaming individuals, either perpetrators or victims; & (3) diffusing responsibility onto vague sociocultural "situations" or seeing it as necessary in a general all-encompassing "just war." In these categories, respondents (Rs) advanced an implicit moral calculus about different torture situations: acceptable; excusable, but not wholly acceptable; & unacceptable. Torture was morally "acceptable" when carried out by

trained & rational (ie, "professional") police under the direction of a "rational" superior &/or with a clear knowledge of torture limits. Under such circumstances, torture could be used for fighting a "just cause" or interrogating "bad" victims. Torture was "unacceptable" if carried out for pleasure, without self-control, or for dishonest &/or illegal reasons. In the moral middle ground—where "bad cops," or the "system," or "society" demand torture—were the police with no option but to carry out such violence. Rs' discourse helps make past behavior—legitimated by Brazil's war against internal subversion—compatible with new postauthoritarian ideological, legal, & organizational realities. Thus, Rs' accounts are negotiated syntheses between past violence, the social & political situation that supported it, & the present sociolegal context in which an account is judged. In postauthoritarian Brazil, where Cold War internal subversion ideologies no longer legitimate large-scale security force violence in a democratizing society, new ideologies about police professionalism explain & disguise past & present police abuse of power. Seen as the other side of unreason & unpredictability, professionalism is thought to increase rational action & reduce police violence. Yet, when attached to war-against-crime ideologies & a continued militarization of policing, professionalism provides a secular morality that rules out any recognition of inappropriate police action in professional domains. Professionalism thus becomes its own justification for police violence. Discourse that decouples police violence from professionalism, as part of the process of justifying & perpetuating such violence, mediates future police action. Therefore, while police discourse about torture & murder has changed, police autonomy to commit gross human rights violations has continued.

98S34635 / ISA / 1998 / 11876

Humphrey, Michael (U New South Wales, Kensington 2052 Australia (e-mail: M.Humphrey@unsw.edu.au)), **Truth, Identity and the Abject: Nationalising Fragmented Identities through National Reconciliation.**

¶ Explores the relationship between identity, abjection, & the project of reconstructing national space & identity, focusing on the cultural legacy of political violence; fragmentation & polarization of identities as ethnic, sectarian, & racial; & strategies to reconstitute national space as inclusive. The movement from silence to voice & the implications for realizing national social reattachment & identification are examined, taking the example of truth commissions as a forum to create an adjusted national narrative identity through testimony. It is argued that there are inherent tensions in this process that oscillate between confession & testimony—between revealing & creating truth. In this context, also considered is the extent to which aspirations for reimagining national space & identity can be translated into viable political projects that transcend the lived realities of contemporary identity. Because contingencies of recognition & social transience have led to highly fragmented experiences of identity & the constant sense of living identity as an exilic performance, it is questioned whether national identities can be reconstructed in these projects for national reconciliation, or whether a postnation state lies ahead.

98S34636 / ISA / 1998 / 11877

Hungerbühler, William, Breckner, Roswitha & Olk, Thomas (Instit Pedagogy Martin-Luther-U Halle-Wittenberg, D-06110 Halle/Saale Federal Republic Germany (tel/fax: 49-345-552-3825/7062; e-mail: hungerbuehler@paedagogik.uni-halle.de)), **Agents of Their Own Cause. Active Actors and Persisting Problems.**

¶ The current discussion of social inequality & social policy in the reunified Federal Republic of Germany reflects three major conceptual shifts: (1) from macro (structural) to micro (interactional) levels of society & inequality, with a new focus on actors' perspectives, orientations, & strategies; (2) from static to dynamic aspects of social inequality; ie, from vertical class structures & horizontal life style differences to a biographical perspective; & (3) from individuals seen as victims of structural inequality, trapped in vicious circles of marginalization or exclusion, to active & resourceful actors. Immediate consequences for social policy include a new awareness of the range & individual diversity of social situations with regard to inequality & a concern for the individual's potential. Relevant findings of the European Union project Sosstris are presented, drawing on detailed case material from narrative-biographical interviews conducted in eastern Germany. A specific aspect of societal transformation in eastern Germany can be seen in the gap between biographically acquired orientations & the newly established social & political system. It is shown how, in a specific type of case, this leads individuals to engage in lines of action which remain unsuccessful in the context now prevailing. Findings are discussed with regard to processes of biographical reorientation as means of social change & conceptual & practical consequences for social policy.

Hunter, James A. (Dept Economics/Politics Nottingham Trent U, NG1 4BU England (tel/fax: 44-115-9418418/9486823; e-mail: James.Hunter@ntu.ac.uk)), **Estimating the Size of Local Homeless Populations: Alternative Estimates of Homelessness Levels in the Welsh Districts.**

¶ In light of the lack of valid estimates of the scale & character of local homeless populations, methodological issues surrounding the measurement of homelessness are examined, & two alternative estimates provided of the scale of homelessness across the Welsh Districts, 1981-1993. The first estimate is based on a technique devised by B. Davies (1968), which uses the socioeconomic & personal characteristics of known homeless households to estimate the incidence of homelessness among all households in the same locality possessing these same characteristics. The second estimate uses multivariate analysis to examine the relationship between structural & behavioral causes of homelessness & the level of homeless applications & utilizes the predicted level of homelessness generated by the statistical model to provide a new estimate of homelessness levels in each locality. The size & spatial distribution of homelessness in Wales based on official homeless statistics vs the alternative homelessness estimates are compared. The new estimates indicate that both size & spatial distribution of the homeless population in Wales is significantly different to that portrayed by the official homeless statistics.

98S34639 / ISA / 1998 / 11880

Hurtado, Samuel (U Central Venezuela, Caracas 1051 (tel/fax: 6621370/6931054; e-mail: garciae@camelot.rect.ucv.ve)), **Reciprocity and Matrilineal Logic in the Venezuelan Family.**

¶ In Venezuela, the question "What use is a husband?" must be answered taking into account the matrilineal logic of family relations. In general, the husband-wife relationship is characterized by a positive valoration of the woman & a negative one of the man. The matrilineal thesis suggests that the sister is attributed even greater importance than the wife, & implies a particular family relationship in which the stability of marriage is absent, but the family is not in crisis. The function of the woman is to fulfill the sexual role, & that of the man is to provide the family sustenance. The husband receives the wife as concession, not as property. The offspring provide evidence of machismo & expression of maternity. The husband does not form part of the filiation or of the hard family structure, but only of the descent or of the peripheral family structure. When a sister is given to a man as his wife, she is not altogether lost. If the husband does not fulfil his obligations, she can be recovered & given to another husband-concessionary. The corollary is that if the sister is not altogether lost, then the status of wife is not complete. The core of the family comprises of a group of women with the man marginalized. However, the man has multiple diffuse & often clandestine family relationships (connected marginally to various families). This leads not to family crisis, but reinforces the maternal structure in which all of "my women" are "my mothers."

Husain, Fatima & O'Brien, Margaret (Faculty Environmental & Social Studies U North London, N5 2AD England (tel/fax: 171-607-2789/753-5763; e-mail: f.husain@unl.ac.uk)), **South Asian Muslims in Britain: Faith, Family and Community.**

¶ With increased movement across national boundaries, fundamental problems have surfaced in the construction of society & the structuring of families. In the context of Pakistanis in GB, the importance of faith, family, & community continues to be a challenge in a secular & highly individualistic society. Migration, initially of men & then of women & children, ended to some extent the influence of the extended family in structuring family affairs. Economic hardship led to fewer resources being sent home to Pakistan & a concentration on creating family structure & community in GB. The difficult economic situation also led to the entry of women into the workforce, & a reevaluation of their role in society. In the attempt to create a community in GB, a renewed emphasis has been placed on religion, encouraged by an aspiration to create a global homogeneous Muslim community by politicoreligious groups. At a social level, the new definition of British Muslim increases the focus on families, & particularly on issues surrounding women & children. Family relationships, with a particular focus on female behavior, have been modified, highlighting the plight of women & children in a secular context that places no emphasis on religious values & codes of moral conduct. It is argued that the creation of a single Muslim identity is dangerous, in that it ignores minority groups in Islam. This fixing of identity, faith, & family values according to a certain Muslim perspective silences dialogue & removes all elements of regional cultures.

Hussain, Tarek Mahmud, Dharmalingam, A. & Smith, John F. (Health Development & Policy Program U Waikato, Hamilton 2001 New Zealand (tel/fax: 07-8583496/8562158; e-mail: tmh6@mail.senv.waikato.ac.nz)), **Incidence of Diseases among Children and Utilisation of Child Health Services in Bangladesh.**

¶ Data from the 1993/94 Bangladesh Demographic & Health Survey are used to investigate the determinants of child health & utilization of child health services, considering the effects of women's education & physical autonomy. Two types of childhood illness—diarrhea & fever with cough—& use of three types of child health services—medical services for diarrhea & fevers with coughs, & use of oral rehydration salt for diarrhea—are considered. Multivariate logistic regression shows that incidence of fevers with coughs (37%) was higher than diarrhea (12%) among children under age 3, of whom only 21% & 24% (respectively) received medical treatment; about 50% of the ill children with diarrhea were given oral rehydration saline. The major determinants for childhood morbidity were mothers' education, religion, & place of residence, & lower incidence for both illnesses was found among children of women with secondary or higher level education vs those with no education. Women's higher education & physical autonomy also had strong positive effects on the utilization of child services, though magnitude of these effects varied by the type of services used. It is interesting to note that few years of schooling (less than secondary) do not make women behave differently from women with no schooling at all.

¶ As globalism reduces the importance of national borders & intensifies competition, cities become progressively delocalized, producing a new urban paradigm that emphasizes global action, market awareness, & entrepreneurship. Four major conclusions emanate from the impact of globalism on cities in developed, rising, & less-developed economies. (1) Cities recognize that government can facilitate economic development by lending or gratuitously investing public money for the construction or modernization of their infrastructures. Government can also lure development capital from abroad by lowering the cost of private investment, as well as alerting domestic private enterprises to potential customers or business opportunities abroad. (2) Cities should capitalize on their natural advantages, which government can enhance through zoning, by establishing special districts & transportation linkages & by targeting public investment. (3) Because the most important component in city building is the human factor, labor unions, nonprofit organizations, & profit-oriented enterprises should collaborate with government in carrying out vocational & technical education. (4) Dissimilar types of cities should establish relationships to avoid destructive competition, create regional development banks & entrepreneurial & labor pools for the promotion of economic growth, & conduct & share research on public policy formation & evaluation.

Hwang, Jinlin (Dept Sociology Tunghai U, Taiwan (e-mail: hjl@s867.thu.edu.tw)), **The Power of the Grotesque and the New Life Movement, 1934-1937.**

¶ The New Life movement that launched Chiang Kai-shek in 1934 has been generally described as a mass campaign for national regeneration, an intentional & positive activity in the history of modern China. Here, employing Michel Foucault's idea of discourse & Mikhail Bakhtin's idea of grotesque body image, it is contended that the movement was initially an elusive & passive choice the Nanking regime made to counteract the existing crises that it faced. The movement was neither an anticommunist campaign nor resistance against Japan, as many historians have argued. A perusal of the movement's grotesque discourse reveals that the body had become not only an object of governmentality, but also a subject to assume social & political responsibilities. The discursive formation of the grotesque body not only helped dispense the Nanking regime from its responsibilities, but also made it the greatest defender of the New Life movement, as the latter was depicted as an act to create a progressive citizenry for China. Thus, painting a grotesque image of the body was important to New Life ideologues; they took the body as their prime target of attack throughout the movement.

¶ Anthony Giddens's structuration theory is understood as essentially a theory of social action; he claimed (1979) that "orthodox sociology lacked a theory of action." He defined (1984) structure as, essentially, the rules & resources of action as well as system reproduction & contended that structure also represented unacknowledged conditions & unintended consequences of action in structuration theory. Two points of criticism of structuration theory are put forth: (1) Because structuration theory is essentially a theory of action, the image of structure in it seems to be an auxiliary & obscure concept &, therefore, leads to a form of voluntarism. (2) Structuration theory emphasizes the cognitive aspect of action; therefore, the "knowledgeability" of agents is central to it. Other important concepts of this theory—eg, practical consciousness, discursive consciousness, mutual knowledge, & reflexive self-regulation—all involve knowledgeability or knowledge. The concept of desire is proposed as an intermediate concept between action & structure. Desires are seduced or stimulated by structures, & desires motivate or push action. The problematic of structure/desire/action in the context of consumer society is discussed.

margareta.hyden@socarbu.se)), **Parents and Social Workers Talking about New Family Forms and Parental Responsibilities.**

¶ In the modern Western industrialized world, the traditional relationship between having a family & being a parent is dissolved. The traditional nuclear family is no longer the only alternative for being a parent & raising children. Parents who divorce can reconstruct their way of being parents by finding new family forms (one-parent families, gay & lesbian families, etc), a situation that creates new problems, difficulties, & possibilities for both parents & children. Explored here is how divorced parents cope with problems that emerge in this new social situation & how social workers, as representatives of the state, intervene. Data are drawn from audiotape mediation conversations conducted by local social welfare administrations that focus on the definition of parental roles & responsibilities & conceptions of children's needs. How social workers intervene & define problems & solutions as legitimate is also explored.

Hynnen, Raija (Gyldenintie 8 B 40, SF-00200 Helsinki Finland (tel: 358-9-6927196; e-mail: raija.hynnen@megaband.fi)), **Towards More Equitable Partnerships Between Governmental and Non-Governmental Actors in Housing Development.**

¶ In the context of enablement in housing development, explored are the (1) mechanism of partnership establishment in terms of interests & roles of actor, & (2) assessment of the conditions of cooperation arrangements under which partnerships are realizable on a more equal basis than previous top-down arrangements. Examined are housing development partnerships in the Philippines, where government housing finance programs, in cooperation with private developers & nongovernmental organizations (NGOs), have managed to widen the scale of housing activities significantly. Interviews with representatives of housing agencies, local governments, private developers, & NGOs lead to the conclusion that, because of the specific characters & unequal nature of the partners, government action in the form of financial, institutional, & technical support is necessary to meet & balance the interests of the various actors. The process of establishment of these partnerships is demanding, & often not conscious; at different times, the emphasis of the importance of each actor varies. To sustain partnership arrangements, institutionalization of these practices is required.

Hyvärinen, Matti (Research Instit Social Sciences U Tampere, FIN-33101 Finland (tel/fax: 358-3-2156-999/502; e-mail: ytmahy@uta.fi)), **A Narrative Turn in Biographical Research.**

¶ Generalized talk about "narrative turn" & "narrativism" may conceal substantial varieties of the current methodological change. The linguistic theorization of narrative (Labov) has highlighted detailed reading of life stories & relevance of evaluation in contrast to sheer description. The narratological approach highlights either the active role of the narrator (voice, perspective, implied reader) or present narratives as repetition of deep or metanarratives. Reflecting these contrasting interpretations of narratology, narratives are recognized either as essentially good (MacIntyre, McAdams) or as a permanent source of suspicion (Bourdieu). Following Paul Ricoeur, emphasis is placed on the active role of emplotting, as a process of construction of one's story with all the recourses & limitations of tradition. Narrativity in biographical research concerns both the methods of interview & those of reading & writing. The fact remains that there is no genuinely sociological theory of narrative.

Iannelli, Cristina & Shavit, Yossi (Social & Political Science Dept European University Instit, I-50016 San Domenico di Fiesole Florence Italy), **Occupational Returns to Education in Italy: A Consider-**

ation of Rational Action Theory of University Attendance.

¶ The hypothesis that the low level of university completion is due to low occupational returns to university degree in Italy is tested. Also considered is the hypothesis, proposed by Breen & Goldthorpe (1997), that educational continuation choices are determined, in part, by subjective probabilities of success in the selected course of study. According to this theory, low graduation rates in Italy would result from class differences in the perceived probabilities of successful graduation & consequently, in the expected occupational returns of doing so. Data drawn from the 1985 Italian Mobility Survey are used to model the effects of attendance & completion of various educational levels on the occupational prestige score of first job. Consistent with previous research, it is found that university degrees yield high occupational returns. This, in & of itself, should have led to high, rather than low, rates of university attendance & completion by Italians. That it does not is probably due to the high risk that the academic route entails. For all but the top social classes, the probability of university success is found to be extremely low, & the expected occupational returns (computed as the product of the return of a degree & the probability of obtaining it) of a degree are very small. Therefore, for most people, university would not be a rational choice.

¶ **Ibrahim, Jibrin** (Institut Federalism, route d'Englisberg 7 CH1 763 Granges-Paccot Switzerland (tel/fax: 41-26-3008162/3009724)), **Militarism and Social Conflict in Nigeria.**

¶ Addresses the impact of militarism on Nigerian society, & in particular, how militarism has been breeding pathological forms of social conflict in the country. It is argued that military rule has impacted negatively on society by generalizing its authoritarian values, which are, in essence, antisocial & destructive of politics. Politics in this sense is understood as the art of negotiating conflicts related to the exercise of power. Militarism has succeeded in permeating civil society with its authoritarian & centralizing values associated with the formal military institution. More importantly, it has played a major role in spreading "lumpen" values of violence & brutality, the erosion of civility, & alcoholism & associated vices derived from "barracks culture" to much of urban Nigeria. The persistence of state-society violence has led to a significant increase of violence in the society. The result has been a marked decline in civil social relations & the escalation of violence & brutality in social interactions, especially on the ethnic, communal, & religious terrains. The dramatic escalation of violence & brutality in the various types of social relations in the country are reviewed. The breakdown of social relations in communities that have experienced a long history of peaceful relations before the 1980s is emphasized.

¶ **Ibsen, Bjarne** (Institut Sport U Copenhagen, DK-2200 Denmark (tel/fax: 45-35320861/870; e-mail: b.ibsen@dhl.dk)), **Sport and the Welfare Society: The Development of Sport between State, Market and Civil Society.**

¶ This analysis of the connection between sport & the development & nature of welfare society has its background in the theories regarding the division of welfare society between state, market, & civil society, each of which has certain rationales, functions, & dominating actors & resources (eg, Wolfe, 1989). In most of these theories, voluntary organizations, which are the dominating organizational form in sport, are part of civil society, but newer theories place the voluntary organizations in the space between state, market, & civil society (eg, Evers, 1990, & Pestoff, 1995). Analyses here are based on (1) historical studies of the institutional development of sport; (2) quantitative investigations of voluntary, municipal, & commercial sport organizations; & (3) quantitative investigations of children & adults in different types of municipalities in Denmark. Preliminary analyses reveal that (A) The organizational pattern in sport is increasingly a mixture of the three rationalities (with a growing number of municipal & commercial sport options). (B) The relations of sport with the public sector differ greatly from those of the social areas that are traditionally regarded as a public service in the Danish welfare model. (C) The development of a more heterogeneous organizational pattern is closely linked with the development of new styles, but simultaneously has a positive effect on the extension of sport to groups who formerly did not engage in sport.

¶ **Ilglic, Hajdeja & Rus, Veljko** (Faculty Social Sciences U Ljubljana, 1000 Slovenia (tel/fax: 386-61-1683-118/1682-339; e-mail: Hajdeja.Ilglic@guest.arnes.si)), **Privatization of Social Sciences: So-**

cial Networks and Coalition Formation in the Public and Private Health Care Sectors.

¶ Examines the effect of institutional change—the shift from redistribution to market—in altering the patterns of coalition formation. Coalitions are seen as a result of a political process in which various actors attempt to muster additional political power through cooperation, cooptation, & adoption of common strategies. The potential for such cooperation & coalition formation in the health care domain changes dramatically with privatization of health care services, which alters the social relations among major actors in the system—health care providers, patients, financial organizations, & the state. Focus is on three aspects of changing social relations among these actors: competition, dependency, & similarity of interests. A social network approach is used to study these relations, examining the egocentric networks of a random sample of 1,200 health care providers in Slovenia, working in either the public or the private sector, to see how they relate to other actors in the system & assess their potentials for cooperation & coalition formation.

¶ **Iijima, Nobuko** (Dept Sociology & Social Anthropology Tokyo Metropolitan U, Japan), **Environmental Deterioration and Interrelationships between Global and Local Inequalities: Perspectives from Asia and Australia.**

¶ Discusses environmental deterioration, drawing on two of the earliest schools of environmental sociological thought from the US & Japan. It is argued that environmental sociology needs to reflect the urgency of interrelated issues such as human rights, environmental justice, & environmental inequality. In terms of social structure, indigenous people, worldwide, are disproportionately represented among the victims of environmental inequality & injustice, primarily because they lack power & influence in modern society & have no voice—often quite literally, in that they do not speak mainstream languages. To explore this social phenomenon, the Ainu people of Japan & the Aborigines of Australia serve as case studies. It is concluded that it is not enough to solve environmental inequality at the global level, because smaller-scale inequalities will still exist. A comprehensive approach is advocated.

Ilmo, Massa (U Helsinki, FIN-00014 Finland [tel/fax: 358-9-191-7773/7764; e-mail: ilmo.massa@helsinki.fi]), **Ecological Modernization: An Ecohistorical Perspective.**

¶ Discussions on ecological modernization are put into ecohistorical perspective for assessing more realistically & comprehensively ecological modernization capacity of the industrial societies. The central concepts are "guiltiness barrier," risk economy, industrial failure, internal ecological colonialism, & ecological imperialism. Three main factions of environmental policies—ecological modernization of everyday life, welfare state, & world society—are reviewed & highlighted in ecohistorical perspective, using examples from Finland & other Nordic countries. Ecohistorical perspective is not sufficiently examined & taken into account in sociological & political debates on ecological modernization. The ideology of ecological modernization seems to be far too optimistic & at least too general & huge an issue to be swallowed in one. More interdisciplinary discussions about ecological modernization are needed.

98S34662 / ISA / 1998 / 11903

Ilmonen, Kaj (Dept Sociology U Jyväskylä, SF-40351 Finland [tel/fax: 358-14-602-922/921; e-mail: ilmonen@dodo.uyu.fi]), **Collectivism and Individualism. The Different Members of the Finnish Trade Union Movement.**

¶ Deals with the relationship of the members of the Finnish trade unions—the workers' SAK, the STTK (representing white-collar employees), & the AKAVA of academically educated people—with the trade union movement, drawing on inquiries carried out by the central organizations among their members, 1994/1995. It is shown that the members of the trade union movement are divided between two clearly different orientations, depending on whether the worker is employed in industry,

private services, or the public sector. Among the members of the SAK, older members clearly display a more collective orientation, while younger ones exhibit a strong individualistic orientation. Among the members of the STTK, age does not differentiate between collective & individualistic orientations, while among members of the AKAVA, the strongest collective orientation is found among young members, whereas older members have a more individualistic orientation. Female white-collar workers exhibit a more collective orientation than their male counterparts, while, in the SAK, the situation is the opposite. Further, in the case of the SAK & AKAVA, employment sector is an important factor in the collective orientation of the members. In all central organizations, marginalized workers (part-time workers & those with short-term employment contracts) & the unemployed have a stronger collective orientation than those in steady & full-time employment. On the one hand, individualization advances in areas where collectivism has, so far been dominant, eg, in the working class. On the other hand, the so-called new wage laborer groups, eg, different groups of white-collar workers, have only recently begun to experience those characteristics of paid labor that originally introduced collectivism into the working class.

Inheteven, Katharina (Institut Soziologie Johannes Gutenberg-U Mainz, D-55099 Federal Republic Germany [tel/fax: 49-6131-393833/393728; e-mail: inheteven@lehre.sowi.uni-mainz.de]), **Can Gender Equality Be Institutionalized?**

¶ Two questions are discussed on the basis of a comparative study on the introduction of quotation for gender equality in German & Norwegian party politics, drawing on qualitative interviews with parliamentarians from both countries: (1) How, when, & under what conditions are strategically planned institutions transformed into institutions fully taken for granted? (2) Does the process of politicization of institutional design prevent the issue under question from being taken for granted? The case studies show that the introduction of the procedure of "quotation" has become an issue of political struggle both in & between political parties. Whereas the procedure of quotation has succeeded in institutionalizing gender equality in Norway, it is still highly contested in the Federal Republic of Germany. Focus here is on explaining these differences & integrating the results of the empirical study into a broader theory on the paradoxes of political institutional design.

Inkeles, Alex (Hoover Instit Stanford U, CA 94305 [tel: 415-723-1687]), **One World Emerging? Convergence and Divergence in Industrial Societies.**

¶ The process of globalization is frequently countered by evidence of regional differentiation, national uniqueness, cultural persistence, & massive resistance to & even rejection of the modernization & incorporation processes in a homogenized world civilization. Curiously, both perspectives are correct, & both lines of argument rest on sound data. Resolution of this debate requires specification of the general dimensions of social structure at issue & the particular institutions & precise practices under examination. In addition, it is essential that there be greater historical & durational specificity of the presumed changes & continuities. Here, this more differentiated mode of analysis is illustrated via reference to the stability & change in family & marriage patterns in Asia & an examination of the changing & unchanging content of national constitutions over the last 100 years. A model of social change is proposed to capture the main dynamics governing continuity of advanced industrial societies in the late 20th-early 21st centuries.

98S34665 / ISA / 1998 / 11906

Inoguchi, Hiromitsu (U Wisconsin, Madison 53705), **The Education Movement of Korean Residents in Allied Occupied Japan: Repression and Resistance, 1945-1952.**

¶ The Allied occupation of Japan was a transitional period during which the Japanese nation was redefined. Because of Korea's independence from Japan, the meaning of "Koreans in Japan" also was redefined. The political actors of the period, The newly reestablished Japanese "racial state" (ie, the government & occupational forces), Japanese leftists, Choryon, Mindan, & others held different discourses on who Koreans in Japan should be. These differences eventually caused a severe clash, within which a certain articulation of discourses eventually led some consolidation of the meaning of "Koreans in Japan." Here, the configuration of various discourses on Koreans in Japan articulated in the particular historical moment of the occupation is identified. Primarily examined are the trajectories of the occupational forces/Japanese government policy

discourses toward Korean residents & discourses of Korean residents in their ethnic education movement, with focus on the 24 Apr 1948 "Han-shin Education Struggle," perhaps the most serious clash, which occurred when the Japanese government ordered the closing of ethnic schools. The discursive configuration of this event is compared with that of the mid-1980s "Fingerprinting Rejection Movement," & the changes in the relationship between Japanese society & Korean residents are discussed.

Introna, Lucas D. (London School Economics & Political Science, WC2A 2AE England (tel/fax: 44-171-955-6032/7385; e-mail: l.introna@lse.ac.uk)), **Social Systems, Autopoiesis, and Language.**

¶ Defends the hypothesis that the philosophy of language of Ludwig Wittgenstein & Martin Heidegger, through the notion of form of life, can provide an adequate description of social systems as autopoietic. It is contended that social systems are autopoietic, & as such, the key question becomes the unity of social autopoiesis. It is further supposed that the path to understanding this is through language. It is argued that the expressive view of language is primordial & that the designative role of language presupposes the former. From an expressive point of view, the Wittgensteinian notion of "form of life" becomes the focal point for understanding social systems as autopoietic. In & through languaging, a very subtle & intricate interwovenness between human interlocutors come about, a structural coupling that is the fundamental condition for existentially meaningful social interaction. It is argued that languaging forms of life become complex & sophisticated landscapes of socially significant meanings or linguistic practices that are shaped & reshaped in & through everyday conversations: conversations that "fold" me/us into the form of life, but also, at every point, (re)form it.

Ioannidi, Elizabeth N. (Sextant Co, Akteoy 9 A GR-11851 Athens 118-51 Greece (tel/fax: 01-346-1742/9070; e-mail: sextant@acropolis.gr)), **Biography and Unemployment: Perspectives on Graduate Unemployment in Greece.**

¶ In the context of the SOSTRIS research, biographical methods were used to examine unemployed technical college & university graduates. Many aspects of graduate unemployment appeared identical in Southern European countries, specifically the relationship to the labor market & the family that appeared in the narrations of graduates. Three main issues that appeared to determine unemployed status in Greece are outlined: the family, labor market attitudes & values, & career selection. Family ambitions & strategies for their children have to be understood as a critical background to the behavior of young people in the labor market, with the value placed on education not being linked to career development, but being seen as an achievement conferring social status in itself—hence the creation of increasing numbers of highly qualified graduates with no work experience who wait for a socially commensurate job

while being supported by their families. While the Greek family appears to be a supportive nest for its members, illustrated by the fact that graduates did not express emotional stress arising from their unemployed status, it can also be the trap that inhibits its members from achieving independence & individuation.

Iphofen, Ron (U Wales, Bangor LL13 7YP (tel/fax: 0044-0-1978-316-311/311-154; e-mail: ron.iphofen@bangor.ac.uk)), **Sociology in Health Professional Education.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Examines problems with the educational delivery of sociology in the context of training for health care professionals. To confront these problems, notice must be taken of occupational insecurity, topical relevance, conceptual & theoretical clarity, & background philosophical & methodological assumptions. Exercises that encourage student participation & offer practical demonstrations of sociological applications to health care practice are illustrated & discussed.

98S34670 / ISA / 1998 / 11911

Ipola, Emilio de (Costa Rica 4652, Federal Capital 1414 Argentina), **Durkheim, cent ans plus tard: identités collectives et crise du lien social** (Durkheim, One Hundred Years Later: Collective Identities and Crisis of the Social Bond). (FRE)

¶ It is contended that sociology was born across the major works of Émile Durkheim, *La Division du travail social* ((The Division of Social Work) 1893), *Les Règles de la méthode sociologique* ((The Rules of Sociological Method) 1895), & *Le Suicide* ((Suicide) 1897), which addressed the 19th-century crisis over traditional forms of sociability & offered a practical & theoretical response to the crisis. It is discussed how, at the end of the 19th century, mechanisms that sustained the social bond & formed the basis of collective identities became exhausted. The view that these issues are newly relevant in today's society is considered, arguing that new social questions cannot be reduced to the recuperation of old problematics, because there are both similarities & differences among the two epochs, which are examined here.

Irwin, Alan & Simmons, Peter (Dept Human Sciences Brunel U, Uxbridge Middlesex UB8 3PH England (e-mail: Alan.Irwin@brunel.ac.uk)), **Living in the Risk Society? The Everyday Experience of Living with Technological Risk.**

¶ Ulrich Beck's work has presented risk as a defining characteristic of contemporary society. Risk, he claims, has displaced class as the focus of social conflict & the driver of social change. In Beck's analysis, risk constitutes the new ordering principle of society because it respects neither social nor geographical boundaries. It is argued here that Beck's suggestion in *Risk Society: Towards a New Modernity* (1992 (see abstract 93c01657)) that hazardous processes are exported to vulnerable Third World countries has an element of truth, but is too simplistic. Similarly, his suggestion that class is simply sidelined by the presence of risk does not ring true. Research in the UK found it difficult to identify communities with significant middle-class populations in the vicinity of major hazardous industrial sites. Despite these criticisms, Beck's arguments are important, for which reason they deserve a more critical examination in light of observable circumstances to explore their analytical value. A more measured assessment of the applicability of Beck's sociology of risk is needed, identifying areas of risk not covered & making the necessary modifications. To do this, empirical research recently carried out in GB, involving qualitative studies in communities living around a number of different hazardous installations, is drawn on to explore the relevance of Beck's analysis in light of people's experience of the presence of major technological risk in specific sociocultural & geographical contexts.

Isajiw, Sev (Dept Sociology U Toronto, Ontario M5T 1P9 (e-mail: isajiw@chass.utoronto.ca)), **Central Figures of the Early 20th Century Ukrainian Sociological Thought: 'Mesial Integralism' of Bohdan Kistakowsky and Viacheslav Lypynsky.**

¶ Ukrainian sociological thinkers of the early 20th century, while being influenced by issues & approaches raised in Western thought, developed their own approach to the nature of social order or the appropriate methodology of its study that can be characterized as "mesial integralism." Here, focus is on two different approaches to the central problems of so-

cial order, developed by two thinkers in basically different ways, yet sharing a concern with the question of nation building & a propensity for a unified view of society. Bohdan Kistiakowsky (1868-1920), educated in Kyiv; Berlin & Heidelberg, Germany; & Strasbourg, France, was influenced originally by Karl Marx, but changed his views studying under Simmel, Windelband, & Weber. Viacheslav Lypynsky (1882-1931) presents a completely different biographical picture. Educated in Kyiv; Krakow, Poland; & Geneva, Switzerland, Lypynsky's writings manifest an influence of Sorel, Pareto, & Le Bon. Kistiakowsky showed a strong interest in the methodological issues of social science; Lypynsky expressed little concern with methodology, but took pains to develop a sociopolitical theory that would have practical implications. However, a common historical, sociopolitical context is reflected in Kistiakowsky's concern with the possibility of maintaining human rights in the socialist context & Lypynsky's concern with the character of nation-building elites. Both thinkers left a legacy that only now can be more adequately discussed & evaluated.

Ishituka, Shoji (Tokoyo U Information Sciences, 265 Japan [tel/fax: 81-43-236-4675-7707/2601; e-mail: ishituka@rsch.tuis.ac.jp]), **A Thematization of the Postmodern Situation—Sociological Theory in a New Key.**

¶ On the societal level, a totally new tendency characterized by three ideas—feminism, ethnicity, & ecology—has emerged in today's real civil society. On the philosophical level, one can recognize the same situation by three concepts: desire, Other, & nature. Movements on both these levels suggest the postmodern situation, a novel comprehensive conceptualization that allows one to grasp a wholly new orientation in the worldly real civil society, in contrast to the modernist idea of modern society. To understand this situation, one should focus on a pair of basic ideas—information & consumption. Asserting the need for fundamental modification in sociological theory, outlined are (1) eight theses on the end of modernity; (2) a schema of the postmodern situation; & (3) a theory on information & consumption. The aim is to restructure, in a radical way, a modernist-oriented sociological theory into a genuinely contemporary one that corresponds to present-day worldly real civil society.

Ismagilova, Roza N. (Instit African Studies Russian Academy Sciences, 30/1 Spiridonovka St 103001 Moscow [tel/fax: 7-095-291-41-19/202-07-86]), **The Impact of Traditional Structures and Institutions on Interethnic Relations—Some Reflections on the Situation in the Former USSR and African Countries.**

¶ Observations in Russia, Kazakhstan, Uzbekistan, & Georgia & field research & observations in 21 African countries underpin a discussion of how traditional social structures (eg, chieftancy, professional castes, domestic slavery, clan hierarchy) continue to influence interethnic relations & political stability. Almost all ethnic groups in different regions of the former USSR retained their traditional ethnic cultures & institutions, despite 70 years of Soviet rule. The growing feeling of ethnic identity & a tendency to maintain ethnic specificity increased significantly, & ethnonationalism acquired more aggressive forms. Revival of nationalism leads to an ever-growing ethnic awareness. Many multiethnic states consider ethnocultural factors in the formulation & implementation of the principles of national policy, & multiculturalism has become more popular.

98S34679 / ISA / 1998 / 11920

Itani, Alice (U Estadual Paulista, Rio Claro Brazil 13500 [tel/fax: 55-19-11-255-9756]), **The Invisible Work: The Transportation Service Labour.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ In the transportation service, technological transformations in the workplace allow the labor to be accomplished with gestures that are not visible. This new topology is discussed, drawing on 1985-1994 survey data from transportation service workers. The long-term experience of the worker has been characterized by a lack of materiality of the work product. His work is not only unproductive, but has become virtual, & now, invisible. Service is analyzed by trying to "look at" these invisibilities; the gestures as well as the conditions.

Izquierdo, A. Javier (Facultad Sociología U Madrid, E-28006 Spain [tel/fax: 91-398-7057/7634; e-mail: jizquier@sn.uned.es]), **Corporaciones globales, mercados integrados y regulación estatal: el caso de la banca universal** (Global Corporations, Integrated Markets and State Regulation: The Case of Universal Banking). (SPA)

¶ Analyzes the recent rise to prominence of universal banks as one core social actor in contemporary global capital markets. The set of organizational & technological innovations—from mortgage securitization to junk bonds, interest rate swaps or foreign exchange options—copyrighted during the last 20 years by such firms as Deutsche Bank, Citicorp, ABN Amro, or Crédite Agricole, has reshaped economic competition & political regulation in financial markets. Recent neoclassical financial economics has characterized universal banks as business organizations integrating three of the several distinctive economic functions performed by financial systems in modern capitalist economies: (1) transforming deposits into loans (the terrain of traditional commercial banking); (2) pooling credit resources to finance corporate capital investments (the business of traditional investment banking); (3) providing liquidity insurance for risky stock investments (the area of stock exchange specialists & brokers). It is suggested here, however, that universal banks can be studied in an alternative sociological framework in which, instead of ahi-

historical functional substitutes for natural laws of utility maximization, financial institutions are provisory historical results of the alliance between different styles of social action. In this light, universal banks emerge at the crossroads of very particular species of applied academic research, public policy reforms, & tactical elite adaptations.

Izzo, Francesca (Via Paolo Emilio 32, I-00192 Rotia Italy (tel/fax: 06-3215507/6711324)), **The Process of European Unification and Women's Citizenship.**

¶ Explores the historical achievement of Europe's political unification & the construction of supranational, social, economic, & political institutions. Such institutions are the only ones capable of democratically governing the new globalization processes & of safeguarding, via innovation, the European civilization pattern. In this process, which witnesses the crisis of old statal/national forms & the growth of new institutions, gender citizenship constitutes an essential element. The ultimate decline of the patriarchal family & the distinction between public & domestic domains, with the concomitant "sexual contract" governing it, represents an important aspect of the modern statal/national sovereignty crisis. Demonstrated is how the full recognition of female citizenship, based on the equality-difference principle, constitutes a fundamental contribution to postnational democracy or "cosmopolitan governance."

Jacobs, Mark (George Mason U, Fairfax VA 22030), **Take Music for Example: A More Productive Move from Sociology to Cultural Studies.**

¶ The mutually wary move from sociology to cultural studies has generated more heat than light. Ambiguities surrounding core concepts relating to culture, which should serve as openings to expanded understanding, often act instead to reinforce ideological defenses. A fuller appreciation of the dialogic, metadisciplinary foundations of truly interdisciplinary research is needed to foster a more productive dialogue between sociologists of culture & scholars of cultural studies. With illustrative focus on the topic of music, an attempt is made to contextualize the move hoping to promote dialogue instead of disputation, cultural analysis instead of ideological dogmatism. Various theories as to how music helps shape identity are considered. These competing claims not only refer to different types of music, but also embody forms of argumentation framed by radically divergent sets of semantic presuppositions, reflecting different—but entirely plausible—choices of authorial voice, ontological perspective, method, & intention. By identifying these differences, a rhetorical basis is presented, not just for ordering these diverse claims, but for bringing them into dialogue with one another—refining areas of am-

biguity, & creating possibilities for reciprocal insight among proponents of opposed positions.

98S34685 / ISA / 1998 / 11926

Jacobs, Ronald N. (Dept Sociology State U New York, Albany 12222 (tel/fax: 518-442-3839/4936; e-mail: rjacobs@csc.albany.edu)), **Race, Media, and the Crisis of Civil Society.**

¶ Theoretical debates about civil society have turned to the concept of multiple public spheres as a way to recognize the oversights & omissions inherent in those debates that assumed the existence of a single public sphere. Presented here is a critical intervention into the debates that looks through the prism of racial crisis & the media, drawing on a larger project that compared news coverage of the Watts (Los Angeles, CA) crisis of 1965, the Rodney King crisis of 1991/92, & the O. J. Simpson affair & considered them in the context of the historical development of the African American & mass-circulation press. Two general findings are discussed: (1) The African American press was the strongest historically during the period of forced residential segregation & mainstream press neglect. (2) The mainstream press inclusion of more African American voices & issues has not altered the form in which racial crises become part of larger narratives of civil society & nation. Findings present challenges for single-public as well as multiple-public normative visions of civil society.

98S34686 / ISA / 1998 / 11927

Jacobson, Rodolfo (U Texas, San Antonio 78249-0653 (tel/fax: 972-226-0336; e-mail: jake4@airmail.net)), **Language Alternation: The Third Kind of Codeswitching Mechanism.**

¶ Recent studies suggest that some codeswitched utterances may not be analyzable on the basis of matrix & embedded language sentences because the two participating languages play equal roles in the unfolding of the message. Evidence from Spanish-English & Malay-English (Jacobson) & Moroccan Arabic-French (Bentahila, Davies) reveals that the potential balance between the two participating languages can occur at several levels, ie, the lexical, morphosyntactic, discourse, & interactive levels. If the notion of equality can be shown to exist also in other language pairs, it might be worth formalizing this occurrence of language alternation as a third kind of mechanism used by bilinguals with a high level of proficiency in both languages in the sense that one may determine how this mechanism varies from the other two strategies in which Language A functions as matrix language & Language B as embedded language, or vice versa. New evidence gained from Malay-English data illustrates not only the equality between the two languages in mixed discourse, but also the sociocultural implications for this kind of language balance in situations where a new national language joins hands with an international language in the conveyance of messages.

98S34687 / ISA / 1998 / 11928

Jagodzinski, Wolfgang (Institut Applied Social Research U Cologne, Greinstr 2 D-50939 Federal Republic Germany (tel/fax: 49-221-470-4508/5169; e-mail: jagodzinski@wiso.uni-koeln.de)), **The Determinants of Institutional Trust in Advanced Democracies.**

¶ The empirical findings on institutional trust in advanced democracies are ambiguous. It has been consistently shown that institutional trust in established & stable democracies is much higher than in former socialist countries or new democratic systems. The findings suggest that trust in general, & institutional trust in particular, are essential for the functioning of democratic institutions. From this perspective, the more or less steady long-term decline of institutional trust in many advanced societies must appear as a symptom of a crisis. Here, however, it is argued that this interpretation in many instances is inadequate. There are no general causes for the decline of institutional trust. Rather, changes in trust are caused by institutional performance, the changing definitions of the roles & functions of the institutions in contemporary societies, changes in clientele & memberships, among other reasons. An attempt is made to indirectly test these assumptions empirically by means of comparative survey data.

James, Allison, Christensen, Pia & Jenks, Chris (Centre Social Study Childhood U Hull, HU6 7RX England (tel/fax: 0044-1482-46-5713/6366; e-mail: a.james@cas.hull.ac.uk)), **Problems and Perspectives for the Temporality of Childhood: The Case of School Transition.**

¶ Explores issues in & around childhood as a life-course category through consideration of how children experience time passing in their everyday lives at home & school, particularly how different issues of time arise in relation to spatial movement between different sites of socialization & social experience. Focus is on children (age 11) in England undergoing the transition between primary & secondary schools when, it is argued, issues about time take on a particular poignancy. It is suggested that the move from one school to another, with its new temporal demands, instigates corresponding changes in other social spheres (eg, home & leisure sites). Examined is how children's time use reflects & refracts notions of their changing competence & maturity & the extent to which strategies of successful time management in other social spheres play a part in facilitating successful school transition, which, as noted in the literature, is often conceived & experienced by children as a time of stress. Ethnographic data on children living in urban & rural areas are used to investigate differences in temporal practices during school across social & geographical locations, emphasizing the relationship between age & social competence through its marking out of the different skills that children of similar age display in their strategies for & organization of time. In turn, this relates to broader theoretical conceptions that posit a plurality of childhoods over the life course.

Janicka, Krystyna (Instit Philosophy & Sociology Polish Academy Sciences, PL-00330 Warsaw (tel/fax: 48-22-826-9948/7823)), **The Social Inequality: Old and New Traits of Poverty. A Case of Poland.**

¶ Examines the process of pauperization in Poland, which has gained new dimensions as a result of systemic transformation & threatens members of various social categories. The indices of poverty in contemporary Poland are presented to address the question of opportunity, its unequal distribution as well as its social & psychological determinants. Drawing on nationwide urban surveys supplemented with data from a representative sample of a metropolitan city, it is argued that pauperization as an important dimension of the social condition is not merely relevant to underdeveloped countries, but also for societies undergoing systemic transformation. It is recommended that traditional approaches to the study of social stratification include pauperization as an integral element.

98S34692 / ISA / 1998 / 11933

Janssen, Jacques P. G., De Graaf, Paul M. & Kalmijn, Matthijs (Dept Sociology U Nijmegen, NL-6500 HE Netherlands (tel/fax: 024-361-3028/2399; e-mail: J.Janssen@mailbox.kun.nl)), **Religious Homogamy and Divorce in the Netherlands, 1974-1994.**

¶ Addresses whether a religiously mixed marriage is less stable & has a greater probability to end in divorce than a homogenous marriage. Statistical data on all official marriages & divorces in the Netherlands, 1974-1994, are analyzed to ascertain whether & when a marriage ended

in divorce. Besides the question of whether religiously mixed marriages have higher divorce rates, investigated is whether this differs between marriages in their initial phase & those of 5+ years duration. Also explored is whether religious denomination of either spouse has an impact on likelihood of divorce.

98S34693 / ISA / 1998 / 11934

Janssen, Susanne (Dept Art & Culture Studies Erasmus U Rotterdam, NL-3000 DR Netherlands (tel/fax: 31-10-408-2443/453-2922; e-mail: janssen@kcw.fhk.eur.nl)), **The Making and Mediation of Cultural Classifications: An Analysis of the Coverage of the Arts in the Dutch Press 1965-1995.**

¶ Even though systems of cultural classification present themselves as enduring, they are products of human action, continually subject to selection & change. At a given time, certain categories of cultural goods tend to be regarded as highly legitimate; they are assigned a place in the curricula of educational institutions, become the subject of national cultural policy, & receive extensive news media coverage. Other categories may go further down or gradually rise on the cultural ladder. Since the 1960s, such a rise can be observed for film, photography, & pop music. An important role in the process of cultural classification is played by critics & other agents whose job it is to make (quality) assessments with respect to the supply of cultural products. Considered here is the classification of varying kinds of aesthetic products & practices by critics & other agents involved in the daily press, drawing on a large database regarding the coverage of the arts in Dutch newspapers, 1965-1995. To gain a further understanding of the process of cultural classification & the coverage received by various cultural goods & activities since the 1960s, attention is paid to changing patterns of cultural consumption in the Netherlands & to changes in the social characteristics of the readerships served by the newspapers involved.

Jasso, Guillermina (Dept Sociology New York U, NY 10003-0831 (tel/fax: 212-998-8368/995-4140; e-mail: jasso@is3.nyu.edu)), **Immigration Criteria, Immigrant Selectivity, and Adjustment Dynamics: Evidence from the U.S. New Immigrant Survey.**

¶ Explores some unanswered questions concerning US immigrants & immigration, including changes in the skill composition of entry cohorts over time, how many immigrants return to their home country, the transition between legal & illegal statuses, the effects of current immigration flows on future immigration entitlements through family reunification provisions, the contributions of immigrants to the economy, & their adaptation. Preliminary findings are reported from the New Immigrant Survey pilot study based on baseline & follow-up interviews of immigrants admitted to permanent residence status in 1996 (July & Aug). The pilot study is the first step in a multicohort longitudinal survey of new legal immigrants to the US & their children based on probability samples of Immigration & Naturalization Service administrative records. Cost-effectiveness issues of the survey's design are discussed.

Jasso, Guillermina (Dept Sociology New York U, NY 10003-0831 (e-mail: jasso@is3.nyu.edu)), **Constructing a Justice Index: Framework and Two Indexes, with Theoretical and Empirical Illustration.**

¶ Develops a framework for constructing justice indexes, measures that quantify the amount of perceived injustice in a society & thus enable comparisons of the amount of injustice across societies & over time. Two families of justice indexes are presented: The first distinguishes between unjust underreward & unjust overreward. The second combines both underreward & overreward into a single type of injustice. The two may be characterized along two dimensions: whether the justice index counts the injustice assessments of all members of a society, & whether it counts only injustice assessments made by individuals about their own situation (reflexive justice assessments) or also assessments made about others' situations (nonreflexive justice assessments). Empirical illustrations present estimates of reflexive versions of the two indexes in a large, 13-country microdata set that provides information on respondents' assessments about the justice of their own earnings in 1991/92. The main findings are (1) perceived injustice was markedly greater in societies undergoing the post-1989 economic transition than in the West; (2) Western countries were more similar to each other than were Eastern countries, suggesting variability among the latter in stage of economic & political development; (3) perceived injustice was mean-led in all countries; & (4) inequality was too high, relative to inequality in the just income distribution, in only 5 of the 13 countries.

Jdanko, Alexis V. (Etsel St 6/1, Jerusalem IL-97854 Israel (tel/fax: 972-225814120; e-mail: aljdanko2@luckynet.co.il)), **Principles of Evolutionary Sociocybernetics: Theoretical and Methodological Analysis.**

¶ Describes general ideas that characterize an "evolutionary" version of sociocybernetics that takes into consideration (1) the struggle of society against entropy; (2) both statics (structures & functions) of society & its dynamics, ie, socioevolution conceived as antientropic development that makes it possible to understand better also the social statics from the same angle of fighting against entropy; & (3) not only humans (& other biological elements of society), but also technology as a necessary non-biological component & a new means of society's struggle against entropy. This new theory demands that any social scientific research be founded on the general methodological principle that the most profound interpretation of any social phenomenon (at least, sufficiently essential) has to explain its direct or indirect role in the struggle of society (and any of its subsystem of any extent) against entropy. From this general principle may be inferred others, ie, an evolutionary (antistatistical) approach & antianthropocentrism, which negates an identification of society with humans, & vice versa, & social relationships with human relations.

Jegade, Ayodele Samuel (U Ibadan, Oyo State Nigeria (tel: 0234-2-8104485; e-mail: Library@Ibadan.ac.ng)), **Whose Opinion Matters Most on Adolescents' Substance Use in Nigeria.**

¶ To examine the role of significant others on adolescent substance use in Ibadan (Nigeria), interviews were conducted with 500 students in 10 secondary schools. Peer group influence was the major factor pushing most adolescents into substance use, followed by pornographic films, comic novels, & magazines. Most parents of substance users are not aware of their children's use, even at the crisis stage. Substance use is more

common among children of long-distance traders, artisans, & commercial drivers than of those engaged in other occupations. They organize themselves into cliques of occultism. Males use substances more than females, & female users are usually friends of male users. Children of parents with stable jobs receive better parental care than those without stable jobs &, thus, are less likely to use drugs. There is a need to enlighten parents to monitor the activities of their children more carefully.

Jegade, Ayodele Samuel (U Ibadan, Oyo State Nigeria (tel: 0234-2-8104485; e-mail: Library@Ibadan.ac.ng)), **The Notion of 'Were' in Yoruba Conception of Mental Illness.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Yoruba conceptions of mental illness are narrower in focus than Western conceptions. The notion of *were* refers to the manifestation of mental disorder, & defines mental illness from the terminal point of view. This has implications for both help-seeking behavior & social interaction. Data are drawn from 10 key informants, all traditional healers, living in Ibadan, the capital city of Oyo State (Nigeria) or in a Yoruba community. Results show that the Yoruba classify mental illness into three categories—*Were Amutorunwa*, *Were Iran*, & *Were Afise*. Onset of mental illness is usually observed in the patients' wild behavior, & help seeking commences at this crisis stage. Usually, mental illness has a negative stigma, as *were* is a derogatory concept of abuse. There is need for appropriate mental health education, help with mental health-related problems, better diagnoses, & prevention efforts to avoid the terminal stage of *were*.

Jenkins, Thomas H. (U Cincinnati, OH 45221-0378 (tel/fax: 513-556-4700/0057)), **Systems Theory, Social Science, and Planning: A Retrospective and Contemporary Comparison of Literature.**

¶ Analysis of relevant literature suggests that systems theory has enjoyed longevity in the social sciences, though often unacknowledged. Following its heyday in sociology, economics, political science, & related subdisciplines in the 1940s & 1950s, & linked through regional science (1950s & 1960s), the systems idea was inherited by planning & urban design in the 1960s & 1970s. The overlapping of structural-functionalism, structuralism, functionalism, neofunctionalism, & system across disciplines is recognized. Comparative analysis of key concepts includes equilibrium, maximization-minimization, activity/interest, lattice matrix, semilattice structure & systemic planning. It is concluded that the once-dishonored systems thinking persists in sociology (environmental sociology, risk assessment), & continues as heritage in planning (transportation, urban health services); accordingly, systems is a sociology-planning connection bridge.

Jensen, An-Magritt (Dept Sociology & Political Science Norwegian U Science & Technology, N-7055 Dragvoll (tel/fax: 47-73-59-0267/1564; e-mail: anmagritt.jensen@sv.ntnu.no)), **Children's Families: Consensual Unions and the Invisibilization of Parental Break-Up.**

¶ Per Norwegian public statistics, 50% of children are born outside of marriage, of which 11% are born to single mothers. However, statistics have difficulties in registering consensual unions, both at the onset (when the child is born) & at parental breakup. The 1996 Children's Families survey revealed that about 5% of children are born to a single mother; when combined with the 1988 Children's Families survey, family changes can be followed, employing children as the unit of observation, from the 1970s. This implies that consensual unions can be followed from their very start. The surveys reveal a two-three times higher risk of parental dissolution among children born in consensual unions vs those born in marriage. Further, while divorce accounted for almost all parental dissolution in the 1970s, 60% of children born in the 1990s who experienced parental dissolution were born in consensual unions. As a result, divorce statistics cover a decreasing share of total family dissolutions that children experience; ie, an invisibilization of family dissolution, an important living condition for children, is occurring. Research in these matters is confronted with two challenges: (1) in privileging parental living arrangement over marital status, family dissolution is ignored; & (2) focusing on divorce & assuming that it represents all family dissolutions, on the other hand, denies differences between children born in marriage & consensual unions.

Jensen, Bente (Royal Danish High School Educational Studies, Copenhagen (tel/fax: 45-396-96633/92415; e-mail: Bente_J@dhl.dh.dk)), **Children and Youth in Competitive Sport: Influence of the Conditions of Sport on Perceived Competence and Motivation, with Special Emphasis on Context and the Role of the Coach.**

Results of a survey of children, ages 11-15, in four sports—tennis, team handball, swimming, & gymnastics—are used to explore the conditions of competitive sport & the consequences for the development of children's identity & competence, both personal & social. The analysis draws on a sociocultural understanding of the significance of sport in the postmodern era & utilizes the method of hermeneutics along with a social constructionist approach. A total of 1,700 children & parents received a questionnaire; case studies were added with 80+ children's accounts. Results show that elite children have generally more positive self-evaluations than nonelite children. In addition, sport-specific & social differences indicate that elite children from certain social groups gravitate to certain sports: eg, there is a tendency for tennis-playing children to come from social groups with a higher educational level than do children participating in other sports. This tendency also affects the experience of self-confidence & competence in several areas. Children justify their choices of sport under the influence of idols, the media, & the overall importance of sport in society. In contrast, permanent participation is influenced by the immediate environment. It is concluded that environment & context have significant influence on child motivation. Hence, performance & level of well-being are linked to a visible coach role, which transmits to the children a combination of the sport's qualification-relevant values as well as human & democratic values. Unfortunate consequences linked to the absence of relationships with a coach can be reduced levels of motivation & dropping out, which, at the macrolevel, has consequences for sport ethics.

98S34705 / ISA / 1998 / 11946

Jensen, Joli (U Tulsa, OK 74104), **Social Salvation through the Arts: The Contradictory Dreams of American Cultural Critics, 1910-1950.**

Explores US cultural criticism in the early 20th century to illuminate a heritage of assumptions about the arts, intellectuals, & social power, comparing the assumptions of four groups of US intellectuals—new humanists eg, Irving Babbitt & Paul Elmer More; young US critics, eg, Randolph Bourne, Waldo Frank, Van Wyck Brooks, & Lewis Mumford; US-Marxist critics of the 1930s, eg, Mike Gold & Joseph Freeman; & *Partisan Review* writers Philip Rahv & William Phillips. It is argued that contradictory beliefs about the social powers of art & the social role of intellectuals, coalesce into still compelling notions of intellectuals as heroic guardians of good culture & necessary subverters of the status quo. The consequences of this position are critiqued, suggesting that early-20th-century debates about the arts in society offer a valuable conceptual heritage, a cautionary tale about the roles of intellectuals, & a self-defeating rhetorical position on arts funding.

Jensen, Mette (National Environmental Research Instit, DK-4000 Roskilde Denmark (tel/fax: 4630-1234/1212; e-mail: MJE@dmu.dk)), **Passion and Heart in Transportation. A Sociological Analysis on Transport Behaviour.**

The environmental problems originating from the transport sector are huge, & little progress has been made toward reducing them. The use of private cars is still increasing & has become an integrated part of modern society, not only as a means of transportation, but also in cultural & social life. One must understand this whole picture to solve the environmental problems in the transport sector. Presented here are both qualitative & quantitative research results from ALTRANS (alternative transportsystems), a project addressing environmental issues deriving from the transport sector. Data from in-depth interviews & other sources are used to develop six mobility types: passionate, daily life, & leisure time car drivers & cyclists/public transport users of heart, convenience, & necessity. The six types analyzed & quantified. ALTRANS focuses on (1) how transportation (ie, the car) has been part of everyday life, (2) transport behavior, (3) attitudes toward transport, (4) environmental consciousness, & (5) transportation as integrated in modern culture. Contradictions between motoring & environmentalism are analyzed, & possibilities for change in transport behavior are discussed.

Jenson, Jane (Dépt science politique U Montréal, H3C 3J7 Québec (tel/fax: 514-343-2079/2360; e-mail: jensonj@ere.uomontreal.ca)),

Changing the Canadian Citizenship Regime: Two Models for the Future?

Post-1945 federal government efforts in Ottawa, Ontario, to establish a single, pan-Canadian citizenship regime—in which individuals would have a direct relationship with the federal government, despite the fact that constitutional responsibility for social policy belonged to the provincial governments—have died. Following a number of decisions by the government to retreat from involvement in the social policy realm, new space has opened for the provinces to experiment with their own regimes of social rights. Here, two such experiments are compared: (1) The government of Quebec seeks to reorganize access to income security & work in ways that recognize the importance of the third sector, or nonprofit social provision. (2) The government of Ontario's politics privilege for-profit & market forms of social provision, as well as voluntary action. Whether either of these models will prosper remains an open question. Nonetheless, they each provide evidence that the former citizenship regime no longer exists, & the future is one of competition about different ways of organizing relations among states, markets, & communities.

Jerome, Joseph (Indian Instit Management, Vastrapur Ahmedabad 38015 Gujarat (tel/fax: 91-79-407-241/642-7896; e-mail: jerome@iimahd.ernet.in)), **Towards an Alienation Theory of Industrial Relations Management.**

Examines modalities of industrial relations management in terms of inherent contradictions in employer-employee relations & the praxis of the direct producers. The interpretation of praxis in terms of historical dialectic phases can be taken as a basis for conceptualizing the management of industrial relations from a humanist perspective, which can be conceptualized as a function of three interrelated processes: the praxis of (1) alienation of direct producers, (2) disalienation, & (3) humanized patterns of socioeconomic organizations. The praxis of alienation has two conceptually distinguishable elements—macro- & micropraxis. The macropraxis of alienation includes the socioeconomic formation in a given context & the concomitant industrial relations processes in which trade unions & management live. The micropraxis of alienation is conceptually divided into the manner in which work itself is organized to generate surplus value (alienation-of-work) & the manner in which direct producers experience alienation from work (alienation-in-work). Determined by the praxes of alienation & disalienation of direct producers, the objective of industrial relations management would be to orient its structures & processes to the praxis of humanized patterns of socioeconomic organizations.

Jiménez Saldaña, Anamaria (Pontificia U Católica Chile, Santiago (tel: 56-2-3346521; e-mail: ajimenes@puc.cl)), **Inserción educacional postsecundaria en Chile: inequidades y sacrificio social** (Postsecondary Educational Insertion in Chile: Inequities and Social Sacrifice). (SPA)

The inequities & social sacrifice experienced around the issue of postsecondary educational insertion are described, compared, & explained, based on a study conducted at the Pontifical Catholic U of Chile, 1996-1998. The analysis is both synchronic & diachronic & utilizes the theory of social sacrifice (Parades, 1974). The problem is to deduce whether the causes of unease are basically socioeconomic or sociocultural. A situation of restlessness has emerged from (1) demands imposed by the model of productive transformation with equity; (2) the devaluation of education that has occurred because of the relation between rising salaries & the level of education achieved; & (3) empirical antecedents that show unease in postsecondary educational insertion. The current educational system suffers from a double segmentation & has become the focal point of existing inequalities.

Jiménez-López, Elohim (Schlossgasse 6/16, A-3512 Mautern a.d. Donau Austria (tel: 43-0-2732-75096)), **Learning to Renew Our Cultural Values while Trying to Grasp What Causes the World-Wide Crisis.**

Human attitudes have been changing according to the qualitative features of the knowledge acquired of more & more natural & man-made things employed to improve life. However, until today, acquisition of such knowledge & the related technological development have been oriented toward the evolution of an extended utilitarianism, disregarding natural & human dynamics. Many human intentions are, in fact, narrow-minded or shortsighted, because decision makers conceive, design, &

implement them in accordance with profit-making policies, claiming that such actions will increase welfare everywhere, though not caring whether such increases occurs. Most managers, scientists, practitioners, & business people, believing that these kind of affairs ought to be the main source of changes in human life, organize their respective performances according to business trends, failing to recognize the emergence of rather large & undesirable side effects generated by technological actions. It is necessary now to use creatively the social knowledge of the cultural heritage to conceive & implement actions that challenge the controversies of civilization, bearing in mind that it might require renewing many cultural assumptions or even to reject cultural incongruities, toward building a cultural humanism, ethically, ecologically, & ethologically oriented.

98S34711 / ISA / 1998 / 11952

Jiménez-López, Elohim (Schlossgasse 6/16, A-3512 Mautern a.d. Donau Austria (tel/fax: 43-0-2732-75096)), **Social Knowledge May Lead toward Better Prospects for Humanity in Today's Global Uncertainty.**

¶ Research on the future of particular groups of people is increasingly difficult because of the impact of side effects generated unconsciously by two kinds of human actions: (1) independent technological advances in the domains of transportation, communication, & data processing; & (2) evolvement of successful financial & economic business toward globalization of local & national economies, which is leading to the interdependence of all strata. Humankind's survival prospects at the dawn of the third millennium appear catastrophic: more than one billion humans live in miserable conditions; several species have become extinct because of pollution or destruction of their habitats; many living beings are members of endangered species; & the health of Earth seems to be increasingly affected. It is argued that the future of life on Earth is in danger of being seriously altered because of actions conceived & put into practice since the end of WWII, when powerful & rich governments decided to improve their economies through research & development policies aiming toward export of technological facilities. Such policies have been unilaterally conceived, but carelessly implemented, failing to take into account ethical, ecological, & ethnological considerations. The social knowledge of this worldwide problem may eventually lead to a proper orientation to actions that recognizes how every stratum might integrate its respective performance for increasing the possibility in the future of an accomplishment of humanitarian aims to get humane results, despite the growing uncertainty engendered by selfish human attitudes.

98S34712 / ISA / 1998 / 11953

Jiménez-López, Elohim (Schlossgasse 6/16, A-3512 Mautern a.d. Donau Austria (tel/fax: 43-0-2732-75096)), **Autonomous Communities Globally Minded Might Be the Best (Unique) Option for the Evolvement of Humankind.**

¶ Western expansion & conquest have made possible social transformations conceived in terms of industrialization, urbanization, modernization through automation technology, postindustrial prospects determined by human-centered technologies, postmodernism based on information technology, etc. This processes has perpetuated human power over nature, as well as socially & economically. Many economic, social, & cultural actions aim at attaining anything through production & marketing, supported by policies of full productivity, total quality, holistic efficiency, etc., & based on the assumption (illusions) that related demands & profits will be unlimited by virtue of population growth. Civilization pretends to evolve according to economic & financial achievements of rich countries that consider themselves developed without realizing that the dynamics of their unilateral progress is unsustainable for the whole planet because its result is globalization of misery & ecological harm.

98S34713 / ISA / 1998 / 11954

Jiménez-López, Elohim (Schlossgasse 6/16, A-3513 Mautern a.d. Donau Austria (tel/fax: 43-0-2732-75096; e-mail: elohimil@fbh.tuwien.ac.at)), **What Kind of Values Are Needed Today for the Healthy Emergence of the World Society.**

¶ The World Society has arisen recently as most human societies have become obliged to perform closer to each other in an increasingly interdependent way. This interdependence is the main consequence of technological advances that have increased the speed of transportation, communication, & data processing. This world society, however, has given insufficient attention to the effects of technological facilities on the environment & the sustainability of the world's resources. For the world society to evolve ecologically, ethologically, & ethically, its members must develop their intellectual capabilities & affective attitudes, ie, their intelli-

gence, as a necessary condition for learning to (1) recognize how the trends of the prevailing civilization have become risky factors for the presence of many living species—humans included—on Earth; (2) consistently address the paradoxical features of technological civilization & to create humanitarian circumstances for increasing the feasibility of its healthy evolution; & (3) contribute systematically to congruous stimulation of the self-organizing potentiality of Gaia in relation to the self-organizing possibilities of everyone of its "living cells" (species), which may allow each of them synergistically & all of them harmoniously to discover or invent how to continue surviving through cooperative evolution.

98S34714 / ISA / 1998 / 11955

Jiménez-López, Elohim (Schlossgasse 6/16, A-3512 Mautern a.d. Donau Austria (tel/fax: 43-0-2732-75096)), **We Need to Engage Professions in Interdisciplinary Actions Globally Minded.**

¶ Western expansion in terms of the evolution of societal systems has determined the trajectory of prevailing civilization, which has fostered a worldwide crisis comprising (1) globalization of misery, though elites claim that the future of humankind ought to be the outcome of the global economy; (2) destruction of conditions needed by Gaia for increasing & improving biodiversity, though "successful" entrepreneurs argue that priority should be given to investment in technologies to solve all previous troubles & increase their profits faster; & (3) extinction of flora & fauna, which is disregarded before the "magnificent" perspectives that offer the assumed advances of biotechnology. Aspects of civilization, already under the influence of such globalization, are now "evolving" rather paradoxically, because the dynamics rarely account for ecological, ethological, & ethical values. Here, it is contended that alternatives for a successful globalization should be founded on developmental paths based on bio- & cultural diversity, making it possible to build a green, blue, & humane economy in every community. Such a goal can be reached if most professionals learn to perform locally while being globally minded & if they are motivated to develop & support innovative actions through multidisciplinary involvement.

98S34715 / ISA / 1998 / 11956

Joas, Hans (John F. Kennedy Instit Free U Berlin, D-14195 Federal Republic Germany (tel/fax: 49-30-838-2702; e-mail: hjoas@zedat.fu-berlin.de)), **Decline of Community in Germany and the U.S.?**

¶ Explores community decline & communitarianism by comparing the US & the Federal Republic of Germany at (1) the semantic level of different meanings & connotations of the term "community" in the two cultural traditions; (2) the level of sociological theorizing, on which can be identified national differences in conceptualizing processes of community decline; & (3) the empirical level, for which data are presented from a comparison of Robert Putnam's US study with the German situation.

98S34716 / ISA / 1998 / 11957

Joas, Hans (John F. Kennedy Instit Free U Berlin, D-14195 Federal Republic Germany (tel/fax: 49-30-838-2702; e-mail: hjoas@zedat.fu-berlin.de)), **Pragmatism—Its Inspiration and Heritage.**

¶ Delineates the importance of the US philosophical school of pragmatism for the sociological tradition in the US & Europe. Whereas it is easy to show clear traces of the influence of pragmatism in the Chicago school & in symbolic interactionism in the US, it is more difficult to describe & explain the attractiveness of pragmatism for social theory & sociology in Europe. Such an explanation is provided, based in part on experience.

98S34717 / ISA / 1998 / 11958

Joas, Hans (John F. Kennedy Instit Free U Berlin, D-14195 Federal Republic Germany (tel/fax: 49-30-838-2702; e-mail: hjoas@fu-berlin.de)), **Democracy and Differentiation.**

¶ Will democracy fall prey to the ongoing processes of functional differentiation? Or should these processes be seen as a necessary prerequisite for the survival of democracy? Can the direction & character of differentiation processes be democratized? Whereas the idea of a democratization of differentiation was developed in Joas's "The Creativity of Action" (1996 [see abstract 9706225]), here, insights are incorporated from a pragmatist perspective on technology to better understand the problem of democracy today.

98S34718 / ISA / 1998 / 11959

Jobert, Annette & Simonyi, Agnes (Center national recherche scientifique U Paris X, F-92000 Nanterre France (tel/fax: 33-1-40977133; e-mail: annette.jobert@u-paris10.fr)), **Universities and Their Relationship with Labour Markets and Local Communities.**

¶ In the context of labor market pressure, unemployment, & rising higher education costs in Europe, evaluation methods of & approaches to the education-employment relation are explored, using the experiences of a research project, EVALUE. Introduction of new diplomas, didactic reforms, closer cooperation with local economic actors in research & curriculum development are all signs of more intensive cooperation between universities & employers. Student organizations often take initiatives to track the careers of their universities' graduates. Further, universities are generating demand in different segments (mostly in services) of their local labor markets, & in underdeveloped regions, important factors of social & cultural development are at work. The multiplicity of actors (eg, employers, unions, labor market services, & representatives of local politics) interested in closer cooperation with universities is examined.

Johansson, Magnus (Dept Technology & Social Change Linköping U, S-58183 Sweden (tel/fax: 46-0-13-282954/284461; e-mail: magjo@tema.liu.se)), **Information Society Rhetorics in Sweden.**

¶ By studying the development of "computing rhetorics" in Sweden, it becomes clear that arguments directed toward extended use of information & knowledge to propagate the information society in the 1990s are very similar to the arguments used to computerize the Swedish state administration in the 1960s. But in the hyped 1990s debate, there are certain traits that question whether information technology has become a new faith or ism. The high symbolic value tied to computers & information technology has made the rhetoric used to sell these very explicit. Here, this discourse, the language & arguments used, is explored, focusing on implications for the formulation of a "rhetoric of technology".

98S34722 / ISA / 1998 / 11963

Johansson, Stina N. (Tema Instit Linköping U, S-58183 Sweden (tel/fax: 46-13-282818/281843; e-mail: stjio@tema.liu.se)), **The Gendered Physiotherapy—A Swedish Case-Study.**

¶ In the context of the flip-flopping gender domination of Swedish physiotherapy, mail questionnaires were sent to around 1,100 physiotherapists (77.5% response rate) in 1996 seeking male-female differences in professional strategies, focusing on two questions regarding power structure in the workplace & relation to the professional knowledge base. Arguments for both tendencies toward masculinization & feminization

will be discussed, along with vertical vs horizontal strategies used to reach profession autonomy. Some findings support the idea of a male-female difference; there is some conflict between gender & vertical & horizontal cooperation strategies. The state—which is an important actor in Scandinavian societies—and the health care system as a whole are discussed.

Johansson, Sune (Dept Political Science & Public Management Odense U, DK-5230 M Denmark (tel/fax: 45-65572215/66192577; e-mail: sjo@busieco.ou.dk)), **Life between Actor and Structure.**

¶ Explores the social construction of technology, or rather its political construction. Discussed are implications for the SCOT theory, as developed by Wiebe E. Bijker, when applied to the study of the use (& implementation) of information technology in Danish municipalities, arguing that the SCOT theory is unable to stand alone as the conceptual framework regarding processes (identified in the interplay between actors) of developing & introducing a given technology. Elements of new institutionalism in the fields of political science & sociology are suggested as theoretical solutions to the paradox presented by Bijker (1995), ie, a wish to enhance democratic control of technology while knowing that it is impossible to control technological development because of complex & ever-shifting power relations at play when technology is constructed.

Johnson, Berit (Norwegian U Sport & Physical Education, N-0806 Oslo (tel/fax: 47-22-18-57-51/23-42-20; e-mail: Beritj@brage.idrettsks.no)), **Some Epistemological and Methodological Issues Related to Being a Female Researcher in a Male Prison.**

¶ Epistemological & methodological issues concerning being a female researcher studying men in a male-dominated setting are discussed in the context of conducting a qualitative study, involving fieldwork & in-depth interviewing, of male prisoners' experiences with physical exercise in a prison. The analysis is localized in the genre of critical studies of men, which are feminist/profeminist, on men, explicitly gendered, & can be done by men & women, separately or collaboratively. A female researcher in this genre is researching & writing in relation to another object, ie, men. Her study on men will differ from a male researcher's study on men, because the male researcher is doing a study in relation to a similar object (Hearn, 1997). Epistemologically, in the context of a male prison, this raises the question of whether it is possible for a female researcher to produce knowledge about incarcerated men & their relationship to sport. Methodologically, it raises the question of how gender relations between the female researcher & male prisoners influence the research setting & process.

Johnston, Corrine W. (Hamilton-Wentworth District Health Council, 10 George St Ste 301 Ontario L8P 1C3 (tel/fax: 905-570-1441/1202; e-mail: johnston@hwdhc.mcmaster.ca)), **Community-Based vs Professionally-Based Health Care: History, Politics, and Alternative Paradigms in Ontario.**

¶ Ontario's community health centers are community-based organizations that provide primary health care using interdisciplinary teams. Health is considered in a broad social context, & services emphasize health promotion & illness prevention. Staff, including physicians, are salaried, & all centers are governed by incorporated, nonprofit, community boards. Throughout their history, the role of such centers in Ontario's health care systems has been variously perceived by different groups. Government interest in the alternative arose as a consequence of their potential cost-saving features. Consumer groups have viewed them as an opportunity for active participation in health delivery & a vehicle for comprehensive & integrated health care. In contrast, physicians have conceptualized them as alternative models of funding & organizing health care that directly challenge their entrepreneurial privileges & autonomy. The development of community health centers in Ontario is chronicled here as an outcome of these competing interests.

Johnston, Hank & Aarelaid-Tart, Aili (Dept Sociology San Diego State U, CA 92182-4423 (tel/fax: 619-594-1323/673-8402; e-mail: hank.johnston@sdsu.edu)), **Organizational Opportunities, Generational Identities, and the Development of the Estonian National Opposition.**

¶ Estonia's "Singing Revolution" represents an important case of how a national community collectively opposes state (USSR) policies to dilute

& exclude national aspirations from political discourse. It is argued here that the actions of Estonian citizens & citizen groups should not be analyzed through the lens of Western collective action theory. These were not "activists" nor "members of oppositional movements" in the widely understood sense of the terms. Repertoires of contention in repressive regimes take different forms, often subterranean, duplicitous, & derivative of a very different organization of daily social life & civil society, the split between public & private life, & the restriction of opportunities for success & advancement outside the party-state. The development of Estonian national opposition is examined by tracing the expansion of groups within the contours of civil society permitted by the Soviet state. Focus is on different experiences of political generations regarding personal & organizational opportunities for the expression of national identity & preservation of national culture. Analysis is based on 80 in-depth biographical interviews conducted with a sample of nationalist & cultural activists in Estonia that spans the 50 years of Soviet occupation & represents age cohorts that faced variable opportunities & constraints. The national movement did not emerge into forms recognizable to Western social movement theorists until the mid-1980s. Emphasis is on patterns of opposition as they were expressed by the organization of civil society & quotidian social life prior to mass mobilization.

98S34727 / ISA / 1998 / 11968

Johnston, Hank & Mueller, Carol (Dept Sociology San Diego State U, CA 92182-4423 [tel/fax: 619-673-0376/8402; e-mail: hank.johnston@sdsu.edu]), **Collective Action Repertoires in Repressive States.**

¶ To explore the repression-mobilization nexus, forms of collective action in repressive states are reviewed, focusing on East German & Estonian interview data to propose that different collective action repertoires exist in repressive political contexts. Examined are alternative forms of collective action, eg, (1) the creation of "free spaces" carved out of official organizations; (2) "oppositional speech situations" created according to the interlocutors, topics, & relations of trust; & (3) more diffuse phenomena such as mass emigration, rumor, vandalism, sabotage, & cross-national communication. These are all essential elements of oppositional challenge in repressive regimes but remain undertheorized, because they are less relevant in Western democracies.

Johnston, Josée (U Alberta, Edmonton T6G 2M7 [tel/fax: 403-488-5447/492-7196; e-mail: josee@compusmort.ob.ca]), **Labelling the Zapatista Uprising "Postmodern": Playful Theorizing or Covert Orientalism?**

¶ Examines implications of journalists & academics labeling the Zapatista rebels & Subcomandante Marcos "postmodern." Does this label bring greater understanding of indigenous struggles in Chiapas, Mexico, or does it provide validation of Western theoretical concepts without offering substantive analysis of the situation? It certainly might be tempting to label the Zapatista uprising postmodern; for those jaded by unsuccessful socialist models of change, the term suggests the presence of something new, different, & exciting. However, it is argued that labeling the EZLN uprising postmodern implies a normative evaluation; in reality, the label makes covert, uninformed judgments that substitute for rigorous empirical & historical analysis. It is contended that calling the EZLN postmodern is, at best, an example of sloppy empirical work &, at worst, indicative of Orientalism packaged in a new, more sophisticated postmodern bottle.

Johnston, Sean F. (U York, Heslington YO1 5DD England [tel/fax:

44-1904-432963/432986; e-mail: sfj2@york.ac.uk]), **Professionalising the Chemical Engineer in Britain.**

¶ According to Andrew Abbott (1988), dynamics of professions hinge on jurisdictional disputes between occupational groups; interprofessional claims over professional tasks motivate & shape subsequent organizational developments, & survival is promoted by tactics adopted by practitioners to strengthen their claims to authority. The case of chemical engineering, which became one of the "big four" engineering professions after WWII, supports Abbott's key claims while illustrating the importance of the local context on historical development. The full complexity of professional life was to be found in the workplace, rather than in the legal or public domains. Rivalries were played out at chemical plants & drafting offices between chemical engineers, industrial chemists, & chemical technologists, in universities, between faculties of chemistry & engineering, & on government allocation boards during WWII, where chemical engineers were threatened with extinction by nonclassification. Here, drawing on archival research & interviews, survival strategies of British chemical engineers as professionals are explored, & their continuing need for repositioning in an evolving ecology of professions is discussed.

Jokinen, Pekka (Dept Sociology U Turku, FIN-20014 Finland [tel/fax: 358-2-3336320/3335080; e-mail: pekka.jokinen@utu.fi]), **The Discourses and Practices of Ecological Modernisation. The Case of Finnish Agri-Environmental Policy-Making.**

¶ Basic features of ecological modernization are identified, eg, assumed synergy between environmental protection & economic development, change in techniques of environmental policy making, & opening up of policy-making practices. Focusing on environmental policy & politics, the Finnish agrienvironmental issue is analyzed in terms of ecological modernization. Examined is whether the internationalizing forces of environmental politics, eg, the European Union, have affected integration of national agricultural & environmental policies. Also investigated is whether new models & instruments of agrienvironmental policy making have transformed & restructured traditional interest coalitions of policy making. Based on analysis of interviews with environmental policy-makers & documentary material, it is found that the Europeanization process has strongly affected the position of agricultural policy actors in Finland, producing a policy reorientation as well. However, agricultural & environmental policy discourses still seem to contradict each other in several respects. Implications for the applicability of the ecological modernization & policy network approaches are discussed.

Jokisch, Rodrigo (U Iberoamericana Mexico [tel/fax: 49-30-852-6544/85963067; e-mail: rjokisch@compuserve.com]), **The Form of Society-From the Point of View of the Theory of Distinctions. Towards an Integration of the Concepts 'Action', 'Communication' and 'Decision' as an Example for One Form of Society.**

¶ In the production of sociological theories, a tendency exists to prefer a single sociological category to observe society. Three main categories play an important role as regulative observational directrices: action, communication, & decision. As a theoretical mode of sociological observation, the concept of action is held explicitly by Talcott Parsons & his adherents. The same concept occupies a high rank in social theory. The concept of communication is especially emphasized by Niklas Luhmann & his followers, though Jürgen Habermas & his adherents also use it. The concept of decision has its exponents in the theoretical position called rational choice. It is shown that, at the level of sociological theory, there must be one concept that represents the area of sociological research, its so-called identity. There must be also a distinctional research area where the different abstractional levels can be brought into relation with each other. As an example of a form of society, it is shown that concepts such as action, communications, & decision belong to the distinctional area of sociological research, whereas what is often called meaning belongs to its identity.

Jokisch, Rodrigo (U Iberoamericana Mexico City, Mexico DF 01012 [tel/fax: 43-30-852-65-44/96-30-67; e-mail: rjokisch@compuserve.com]), **Some Problems with Niklas Luhmann's Theory of Social Systems. Observations from the Point of View of the Theory of Distinctions.**

¶ Examines problems with Niklas Luhmann's theory of social systems. First, it is suggested that the "theoretical maneuver" of Luhmann's

"asymmetrical" use of George Spencer Brown's logical-mathematical theory is not sufficiently complex to explain the constitution of social systems. Proposed is adding a symmetrically formed distinction to such asymmetrical distinction. A second problem is Luhmann's use of the semantics of action: for Luhmann, action is actually a form of social communication. It is suggested that the semantics of action be taken in a more operational sense. Luhmann asserts that the "human being" does not belong to society. It is proposed here that the human being should be seen as the "starter" of what, in the end, becomes society. Also questioned is Luhmann's understanding of communication as either, spoken &/or written. It is contended that the communication processed in society is foremost nonverbal &/or nonwritten.

Jones, Gill & Jamieson, Lynn (Centre Family Research U Cambridge, CB2 3RF England [tel/fax: 01223-334512/0574; e-mail: gj201@cam.ac.uk]), **Families Paving the Way? Transfer of Cultural and Other Forms of Capital to Young Migrants.**

¶ Many young people leave rural areas where they grew up to take advantage of the greater opportunities for education & employment afforded by larger cities. It is argued that outmigration is not only a response to rural disadvantage, but often follows intergenerational patterns of migration. Families, mainly in the middle class, with a history of migration are better able to transfer cultural capital to migrant children than are families with more stable & localized histories. Focus here is on access to both cultural & other forms of capital for young people leaving a rural area of Scotland vs those who stay in the area, considering the effects on young people whose migration paths are not paved with family support. Data are from the Scottish Young People's Survey & follow-up in-depth interviews in 1995 with young people who had been in secondary school in the Scottish Borders, & further interviews in 1996 with some of their parents.

Jorge, Wirley Jerson (UNESP, Jaboticabal Brazil), **Evaluation of the Rural Credit Programme for the Brazilian Agrarian Reform—'Procera'—Period 1986-1995.**

¶ Rural credit has a prominent position in agrarian reform in Brazil. It can be deduced from the government account to the PROCERA institution exigencies in regard to operational norms & specific credit resources to ensure effective implantation of settlement projects. Within these parameters, the PROCERA has a remarkable educational character. It became one of the main tools in the economic & social development of settlements, 1986-1995. Reported here are studies conducted in settlements located in 10 different Brazilian states; socioeconomic evaluation of the program & investigation of technical & productive peculiarities of each region, attempting to coordinate their objectives with technical, administrative, & bureaucratic practices that could be more efficient, flexible, & directed toward emancipation of rural settlements through increasing production & productivity.

98S34739 / ISA / 1998 / 11980

Jost, Gerhard (U Economics & Business Administration Vienna, A-1090 Austria [tel/fax: 43-1-31336-4743/707; e-mail: Gerhard.Jost@wu-wien.ac.at]), **Biographies of Managers: Signs of a Postmodern Self?**

¶ Latent structures of sense were investigated in 11 managers (born 1938-1949) by analyzing occupational biographical interviews using reconstructive procedures, especially strategies of objective hermeneutics (Oevermann, Ulrich) & phenomenologically oriented biographical analysis (Rosenthal, Gabriele). The managers worked in top positions or on the second management level of large- & middle-scale enterprises. One important conclusion is that managerial careers are governed by the interplay of (self-)discipline & flexibility. In light of the emergence of symptoms of the postmodern subject, postmodern discourse is used to discuss, apart from epistemological assumptions & the debate about (anti-)realism, how far generalized descriptions & different constructions of the postmodern self are applicable to the biographies of the managers studied.

98S34740 / ISA / 1998 / 11981

Jouravlev, Irina (Instit Sociology Russian Academy Sciences, Leninsky Prospekt 14 117259 Moscow [tel/fax: 095-719-0940/0740]), **Environmental Attitudes of Russian Youth.**

¶ Examines environmental attitudes of Russian youth via two studies, drawing on survey data from 1,931 adults, ages 18-64, & 1,104 students, ages 14-16 (1996). Analysis revealed that youths (under age 30) were more willing than older people (ages 50+) to take part in ecological action in the form of tax hikes & other financial support, sacrifice of comfort, & personal responsibility. As to ecological behavior, 82% of teenagers gave an affirmative answer to a question regarding litter. However, only 3% take part in ecological organization activity; but this index shows only real diffusion of ecological organizations. The results suggest that Russian students have directions for ecological action but realization seems inhibited by problems in the family, school education, & mass media activity.

98S34741 / ISA / 1998 / 11982

Julian-Reynier, Claire & Bouchard, Louise, et al (INSERM U379-Instit Paolli-Calmettes, 232 blvd Sainte-Marguerite F-13009 Marseille France [tel/fax: 33-04-9122-3503/3504; e-mail: cjulian@marseille.inserm.fr]), **Predictive Testing for Breast Cancer Susceptibility. Cultural Differences between Marseille, Manchester and Montreal.**

¶ The recent discovery of BRCA1 & BRCA2 genes & the subsequent development of molecular tests for breast cancer susceptibility have already found some applications in clinical practice, despite uncertainties with respect to the impact of these tests to the optimal management strategies of mutation carriers. Here, the social acceptability of these predictive tests & of the available preventive measures (mammography, chemoprevention, prophylactic ovariectomy, mastectomy) is evaluated, based on a multicentric survey conducted in Marseille, France; Manchester, England; & Montreal, Quebec, of women (Ns = 147, 92, & 54, respectively) consulting to learn about their risk of breast cancer. Focus is

on subjects' (Ss') perception of the theoretical acceptability of the various preventive measures. The highest acceptability was observed for mammography; 87.9% of Ss would find this examination acceptable before age 40, when chemoprevention would be favored by 58.5%. In the case of preventive surgery, ovariectomy would be accepted by 18.5% of Ss before age 40, & 43.8% would find it acceptable at ages 40 or 50. Preventive mastectomy may be a favored option for 15.7% by age 40 & by 17.2% at ages 40 or 50 only. Prophylactic surgery would be considered profoundly unacceptable for 17% of the respondents for ovariectomy & for 37% for mastectomy. Overall, the French consultees seem to be the most reluctant to prophylactic surgery. Cultural specificities are clearly evident.

Jureidini, Ray (Dept Sociology Monash U, Clayton Victoria 3168 Australia (tel/fax: 61-3-9905-2971/2993; e-mail: Ray.Jureidini@arts.monash.edu.au)), **Palestinian Labour, Border Closures and the Peace Process.**

¶ **Closures & restrictions on Palestinian labor between the Palestinian Territories & Israel, as a means of collective punishment for extremist violence, has serious effects for all involved. For Palestinians, closures mean serious hardship with the decline in per capita income & unemployment, which has resulted in deployment of international aid funds toward job creation schemes, rather than projects for real economic development. For Israel, it has meant a need to import foreign labor from Africa, Asia, & Eastern Europe, which has created internal dilemmas of racial & religious diversity; some arrangements in Israel resemble indentured labor. Here, these issues are discussed & tentative conclusions about current & future prospects for the Palestinian labor force are drawn.**

98S34744 / ISA / 1998 / 11985

Jussaume, Raymond A., Jr. (Washington State U, Pullman 99164), **Variations in Food Consumption Patterns in Urban China.**

¶ **One key element in the development of regional & global food production systems is the corresponding change in food consumption patterns. The output of integrated food production systems must be marketable if the system is to be profitable. Thus, the modernization of food consumption patterns is encouraged, particularly if this pattern of modernization can be done in a way that minimizes cultural differences. Ideally, the best way to study how these changes are taking place, & the degree to which consumers engage in practices that preserve culturally distinct food consumption patterns, is time-series analysis. However, such studies involve time & monetary constraints. One limited proxy is to compare food consumption patterns by age & income, as well as other household characteristics, to determine if more modern food consumption patterns are more likely to be evidenced by one group than another. Analyzed here are data obtained in a food consumption survey in metropolitan Qingdao, People's Republic of China.**

Kabele, Jiri (Faculty Social Sciences Charles U, XR-11000 Prague 1 Czech Republic (tel/fax: 4202-24491498/24227950; e-mail: kabele@s.fsv.cuni.cz)), **A General Interpretation of Transition in the Czech Republic (1989-1993).**

¶ **The fundamental change in the Czech Republic since Nov 1989 are shown as a transition brought about by the interplay of the drama of the erosion of the old regime with that of the birth of a new order. The old order was partly dismantled, & society found itself in a transitional anomie, which made it possible to gradually build a new order. This transi-tological view sees transition as a provisional state constructed by many different acting persons (individuals, groups, communities & organizations) & characterized by a rich dynamics of social problems, together with an unbalanced & changing distribution of gains & losses. Resulting conflicts become part of the universe of myth where these conflicts are considered a series of crises-tests that push the society indirectly from the old order to the new. The originally open transition comes to a close when the participants cease to see the current events as provisional. The main task then becomes consolidation or normalization of the new order, enforcement of its regime, & coping with the formerly provisional arrangements, which were, in many ways, "justified" by the apparent anomie.**

¶ **Sociology has been taught at the Greek Military Academy since 1960. Today, teaching sociology is even more necessary than ever before for the following reasons: (1) In 1997, Greece ratified the Treaty of Schengen & has participated as a full member; for the Greek Army, this means the Greek frontier is also a European frontier. (2) Since 1993, women have been accepted in the Greek Military Academy. (3) After the collapse of the socialist bloc, the humanitarian & social role of the Greek Army has been strengthened with its presence in the Balkans. (4) The humanitarian role of the Greek Army has widened with its participation in UN peacekeeping forces. (5) In Greece, nonmilitary use of the army is very important (eg, extinguishing fires & providing relief services for earthquakes & other natural disasters). All these points enforce the argument that the teaching of sociology in the Greek Military Academy is more vital because of the broader social role future officers will be playing.**

Kahane, Reuven (Dept Sociology & Anthropology Hebrew U, Mount

Scopus Jerusalem IL-91905 Israel (tel/fax: 972-2-5882300/5828076; e-mail: mstruman@pluto.mscc.huji.ac.il), **The Chaotic Future and Meaningful Life.**

¶ Due to the increasing complexity, rapidity of social change, institutional differentiation, & pluralism in modern society, the future world is often perceived as a chaotic universe, ie, one characterized by high uncertainty, improvisation, an explosion of knowledge & information, cultural vagueness, & structural antinomy. Consequently, modern people have a high degree of choice regarding opportunities & are confused about their realization. Social responses to this situation have been to counter with a formal red-tape order—a response that leads to alienation & meaninglessness. The postmodern response, however, is an informal one, congruent with a chaotic universe. It appears that a more meaningful life is emerging, in which freedom & spontaneity are institutionalized to a degree never thought of previously. To understand this development, various informal agencies among youth (eg, youth movements & pop cultures) are analyzed & compared with informal frameworks in the economy (eg, high-tech enterprises), politics (eg, voluntary associations), & education (eg, some boarding schools & universities). The ideas of these informal frameworks are tested according to a specific code of informality. The general thesis is that the greater the number of informal agents, the greater the sustained development of the economy & civic culture, & the deeper the significance of life.

98S34750 / ISA / 1998 / 11991

Kahane, Reuven (Hebrew U Jerusalem, Mount Scopus IL-91905 Israel (tel/fax: 972-2-5882300/5828076)), **Post-Modern Youthfulness in Third World Countries.**

¶ In contemporary postcolonial societies characterized by rapid urbanization & industrialization, it is argued that young people are becoming a unique age group that undergoes dual processes of passage. On the microlevel, young people pass from childhood to adulthood; on the macrolevel, they experience rapid sociocultural change & transitional processes more intensely than any other group in society. This situation is complicated by the fact that significant elements of these transformation processes take Western forms often differing from the indigenous ethos. Consequently, ambiguous patterns of passage are likely to develop. In particular, though the actual status of young people has strengthened because of their adjustment to social change, their normative position has often remained subordinate, & they are often perceived, both by themselves & by adults, as largely reliant on the decisions of their parents. Complicating the situation still further is the shortage of youth associations or mechanisms to institutionalize their new position. As a result, young people often face a high degree of tension without possessing coping mechanisms.

Kainulainen, Sakari (P.B. 1627, Kuopio Finland SF-70201 (tel: 09-347-4584; fax: 017-162523; e-mail: ky-sk@helsinki.fi)), **Negative Life Events and Subjective Welfare in Different Social Classes in Finland.**

¶ Investigates how the economic recession has been connected with everyday life in different social classes & how these events are connected with subjective welfare, drawing on 1991 & 1996 survey data from Finland (N = 1,280 & 1,402 respondents, respectively). Subjective welfare was measured as satisfaction with life, & negative life events were studied in several spheres of life. Economic & social security problems were more common in 1996 than they were in 1991; problems decreased only in the sphere of housing. Most negative life events were experienced by the lower-white-collar & working-class respondents. Negative life events were most infrequent in students. Many negative life events were correlated with level of life satisfaction, but in terms of social class, no clear differences could be verified.

Kalberg, Stephen (Dept Sociology Boston U, MA 02215 (tel/fax: 617-353-2591/4837; e-mail: grdask@bu.edu)), **The Centrality of 'Societal Orders' in Max Weber's Works: A Challenge from Werner Sombart?**

¶ An abbreviated discussion of "societal orders" appears in a crucial passage of Max Weber's *Die protestantische Ethik und der Geist des Kapitalismus* (The Protestant Ethic and the Spirit of Capitalism). Weber is here reacting directly against Werner Sombart, who argued that the various orders of life (eg, religion, economy, & law) developed historically in a parallel manner & roughly at the same pace. According to this argument, Weber notes, a "spirit of capitalism" for Sombart would

be nothing more than "part of the development of rationalism as a whole." Weber's rejection of this position is important not only for the Protestant ethic thesis, but also for the underlying organization of, in particular, two pivotal later writings: *Wirtschaft und Gesellschaft* & "Zwischenbetrachtung." Examined here is Sombart's position, asking whether the challenge it presented to Weber played a major role in the formulation of the Protestant ethic thesis & the aforementioned later writings. The centrality of "life orders" in Weber's sociology as a whole is noted.

Kalekin-Fishman, Devorah (Faculty Education U Haifa, Mount Carmel IL-31905 Israel (tel/fax: 972-4-864-2032/824-0911; e-mail: dkalekin@construct.haifa.ac.il)), **Unraveling Alienation: From an Omen of Doom to a Celebration of Diversity.**

¶ In spite of its critics, the construct of alienation is currently used extensively in contexts of research, theory, & praxis. Alienation theories have come to serve as many-faceted tools for analyzing arrays of social, psychological, & cultural phenomena in refined detail. The outcome is an enhancement of the potential for a sociological understanding of the experienced world & of the dynamic essence of what it means to be human. In the postmodern era, the study of alienation has become a highly appropriate means of access to characterizing the inevitability of diversity. The argument is based on a survey of the uses of alienation as a central concept in empirical studies & in practical contexts.

Kaliappan, K. V. (Dept Psychology U Madras-Chennai, 600005 India (tel/fax: 91-44-566-988/693; e-mail: arulkali@unimad.ernet.in)), **Personality Development as Deviance and Social Control.**

¶ Governing oneself & others effectively is a process for personality development. Self-management consists of self-awareness, self-confidence, stress coping, emotional control, social concern, & emphasis on human values & culture, which will, in turn, facilitate governing others by developing skills in leadership, assertiveness, interpersonal relationship, & communication. Recounted here is the application of self-management to several groups in India over the past decade. Delinquent boys (N = 35) were able to reduce their aggression & negative attitude toward self, family, & society following 4 months of behavior therapy consisting of relaxation & systematic desensitization. In addition, personality development occurred in terms of reduction in social maladjustment, value orientation, autism, alienation, withdrawal, & social anxiety. After training in yoga & behavior modification techniques, 200 adolescent deviant boys reduced their social deviance & disruptive behavior, which resulted in improved academic performance. National Service Scheme volunteers (N = 150 undergraduates) trained in personality development through 10-day camps over a period of 2 years improved in their value systems, appreciation of Indian culture, & concern for the larger society. Finally, the practice of transcendental meditation & relaxation therapy for 1 year by 79 murderers incarcerated for life showed a decrease in self-ideal/self-incongruity, field dependence, locus of control, & risk-taking behavior. Exercising social control by individuals precedes reduction of social deviance & development of emotional control & social skills.

Kaltenborn, Karl-Franz (Medical Center Methodology & Health Research Philipps U, Marburg D35032 Federal Republic Germany [tel: 49-6421-31600; e-mail: Kaltenbo@mail.uni-marburg.de]), **Internet and the Open Society—A Case Study of the Impact of the Internet on Legal Reforms (Kindschaftsrecht, Children Act) and Family Systems.**

¶ Analyzing the role of the Internet for the legal reform of the *Kindschaftsrecht* (Children Act) in the Federal Republic of Germany, explored is its impact on democratic institutions (eg, legislative procedures) & societal reality. Examination of Internet information material concerning the Children Act reform & interviews with information providers reveals the Internet to be (1) an unlimited information & knowledge space & (2) a medium for communication & organizational purposes of institutions, political parties, & interest groups. Actors on the Internet do not represent the diversity of the societal spectrum engaged in the discussion of the Children Act reform, but rather, demonstrate the prevalence of male interest groups & the predominance of political power; information offered is selective & filtered by their interests. While the impact of the Internet on the legislative process should be regarded as just one influential factor in the complex scenario of legislation, information may contribute to the development & change of social norms & values concerning divorce, familial role, child participation & protection in parental separation or divorce. Although, from a technical perspective, the Internet could improve information dissemination & democratic processes by building a forum for equal communication & participation, in fact, findings indicate that it reflects societal inequality.

98S34758 / ISA / 1998 / 11999

Kalugina, Zemfira (Instit Economics, Novosibirsk Russia), **Paradoxes of the Agrarian Reform in Russia.**

¶ Considers the main directions, results, & causes of the failures of agrarian reform in Russia, based on sociological surveys conducted in Siberia, 1990-1997, & a literature review. Attention is drawn to paradoxes of reformation: expansion of small commodity production, destruction of work motivation, & failure of agrarian economy capitalization. Focus is on three segments of the Russian agrarian economy in the current period of reforms: collective, private, & part-time. The reorganization of collective farms is assessed on the basis of economic & social criteria. In the segment of privately run farms, explored are trends & factors as well as the farms' social bases, constraints, & causes of slow growth. Part-time farming as a specific segment of the agrarian economy is based on cooperative use of resources & labor & cooperation with collective farms. Detected are factors facilitating or impeding further development of part-time farms & their transformation to privately run full-time farms. In conclusion, a vision of the Russian model of agrarian relations is proposed, based on national traditions, historical experience of the country, & real assessment of the legislative, social, & economic bases that predetermine rates, scales, & depth of agrarian transformations.

Kamenetzky, Mario (PO Box 352530, Palm Coast FL 32135 [tel/fax: 904-446-9727; e-mail: mkamen@aol.com]), **Religion as Seen from the Perspective of Consciousness Studies.**

¶ Jean Gebser, the German-Swiss cultural philosopher & consciousness studies scholar found that humankind is moving beyond rationality to a more integrative, harmonizing consciousness. Under these new structures, humankind is slowly trying to reunite what the rational structures have divided, transforming conflicting antinomies into useful polarities. It is an attempt to bring together instinct & reason, feelings & intellect, individual & family, the economy of societies & the economy of nature's environments. Under these emerging structures, religion is trying to re-link humans & nature, but at a much more evolved level than the oneness that existed under the archaic consciousness, or the ways of dealing with nature of magic & mythic societies. Under new structures, religion will use the magic & myths of the past to bring poetry to the necessary rationality of everyday life. Rituals will facilitate people's understanding of the unity of the human race & its oneness with nature beyond the diversity of cultures & natural environments. Religious books will be seen as descriptions of the path that humankind followed, not as commands for walking to the future. Religion will rely less on outside controlling institutions & much more on inner spiritual work. Teilhard de Chardin anticipated this religious transformation & some modern theologians (eg, Christian Matthew Fox, Buddhist Dalai Lama, & Jewish Arthur Waskow) are already discussing pathways to a religion adjusted to new integrative, harmonizing structures of consciousness.

98S34761 / ISA / 1998 / 12002

Kamenetzky, Mario (PO Box 352530, Palm Coast FL 32135 [tel/fax: 904-446-9727; e-mail: mkamen@aol.com]), **Consciousness and Cultural Diversity.**

¶ Culture may be defined as the set of values, beliefs, & behavioral patterns recorded by a society in the subconscious of its members' consciousness. Seminal studies by the cultural philosopher Jean Gebser (1905-1973) & his followers show how this set affects the works of the conscious mind, influencing perception of nature & society, decisions on how to act on them, & how to reconcile the diversified social commands with universal & invariant human needs. Initially, humans were guided solely by nature, slowly moving to wakefulness through the magic, mythical, & rational stages of consciousness evolution. In the process, a multiplicity of cultures were created, & the sense of unity & oneness with nature were lost. Humans are now transiting through a new evolutionary stage, gradually & often chaotically moving to a new structure of consciousness that Gebser described as "integrative." These new structures of consciousness are leading to rediscovery of unity & oneness at a refined level of reasoning, while they were only instinctively & intuitively felt at human (Gebser's ever-present) origin. This emerging integral view of human nature is bound to produce changes in the organization & management of households, enterprises, & economies.

Kane, Anne E. (U Texas, Austin 78712 [tel/fax: 512-471-1122/4886]), **Identity Construction and Nationalism: Cultural Theory and Method in Explaining the Nexus in Ireland.**

¶ Explores how the process of identity construction contributes to processes of nationalism: the drive for independence, symbolic struggles over the meaning of the nation & who belongs, & nationalization of the state according to the claims of a core national group. Comparative-historical work on nationalism, theoretical work on identity, & the author's work on the late-19th-century Irish Land War strongly suggest that identity construction in a major social group has a decisive influence on the broader processes of national identity formation & nationalism. Explained is how the Irish tenant farmers became Ireland's "nation-forming class" by explicating how the identity structure, which they began to construct during the Land War, became so socially diffused as to define, in a major way, the course of Irish nationalism & nation building. Connected both theoretically & empirically through ritual, narrative, myth, & discursive competition is a process of agrarian identity construction on the Irish independence movement, the symbolic struggle over what nation meant to people in Ireland, how that struggle produced a particular structure of nationalist meaning, & how a particular symbolic configuration of nationalism that emerged in the late 19th century, heavily influenced by a reconstructed agrarian identity, informed 20th-century free state policy.

Kangas, Olli E. (Dept Social Policy U Turku, SF-20014 Finland [tel/fax: 358-2-333-5643/5093; e-mail: olli.kangas@utu.fi]), **The Ants and the Grasshopper: Popular Attitudes on Deservingness in Australian and Finnish Social Policy.**

¶ Data from representative mail surveys conducted in 1995 in Australia & Finland (Ns = 1,600 & 1,300 respondents, respectively) are drawn on to analyze the extent to which public opinion is impacted by the "ant & the grasshopper" effect as described in Aesop's fable; ie, to what extent is the general public willing to give social benefits to busy & hardworking ants vs the lazier grasshoppers (representing the deserving & undeserving poor, respectively). Results show that respondents in both countries are willing to give substantially higher social protection to ants, ie, unemployed through no fault of their own vs grasshoppers (unemployed who voluntarily quit their job). Data indicate that there are certain differences in the legitimacy of merits/social security benefits. Those benefits attached to hard work & contributions paid are more popular than benefits related to income & wealth. In Australia, 85% of the respondents accept benefits diversified according to number of years worked & 83% according to contributions paid, while not more than 50% favor benefits related to claimant income. In Finland, the figures are 83%, 73%, & 45%, respectively. Moreover, those who have never had the possibility to enter the labor market (because of handicap) are regarded to have a right to social benefits that are significantly higher than entitlements to pure grasshoppers. It is concluded that, though the ants are seen as deserving more than the grasshoppers, the general public will not let the grasshoppers starve either.

Kangas, Olli E. & Palme, Joakim S. (Dept Social Policy U Turku, SF-20014 Finland [tel/fax: 358-2-333-5643/5093; e-mail: olli.kangas@utu.fi]), **Does Social Policy Matter? A Study of Poverty Cycles in OECD-Countries.**

¶ In his turn-of-the-century study on poverty in York (England), Seebohm Rowntree (1901) observed that poverty is cyclically linked to people's stages of life. An attempt is made here to determine the extent to which Rowntree's poverty cycles are still apparent in different OECD (Organization for Economic Cooperation & Development) countries, combining income data from the Luxembourg Income Study & the Social Citizenship Indicators Project to investigate changes since the mid-1960s in single countries & to compare trends between nations. Focus is on the success of various sociopolitical solutions, particularly family policy & pension security, in eliminating poverty at different stages of life. Finland & Sweden are representatives of the so-called Nordic welfare states; the Federal Republic of Germany & the Netherlands represent the Central European countries; & Australia, Canada, GB, & the US represent the so-called liberal welfare state regime. Analysis demonstrates that improved social policies in all countries have had effects on poverty cycles. In most countries, the young have replaced the old as the lowest income group. Persistent poverty of the latter years is gone, while passing poverty of early adulthood has arrived. In many countries, the cycle of poverty has flattened out, & the life stages are no longer significantly different. Some systematic differences, however, remain between countries. High poverty rates among families with children continue to be an Anglo American problem & improvements in this area have been only marginal.

Kaplan, Howard B. (Dept Sociology Texas A&M U, College Station 77843-4351 [tel/fax: 409-845-2411/8368; e-mail: R466hk@tamvm1.tamu.edu]), **Intergenerational Parallelism and Intragenerational Stability and Change over the Life Course in Self-**

Rejection and Deviant Adaptations.

¶ Theoretically informed models are estimated to specify intragenerational stability & change as mediating intergenerational parallelism in self-rejection & deviant adaptations. Intragenerational stability is explained in terms of mechanisms that mediate (in)stability over the life course, causal factors that remain stable over the life course & affect phenomena of interest at each stage of the life course, & constructs that moderate the degree of (in)stability over the life course. Models are estimated using the multigroup options for linear structural relations programs. The data are provided by a panel study of first-generation subjects tested up to three times during adolescence, once in the 3rd decade of life, & once in the later part of the 4th decade of life, & second-generation subjects (children of the cohort) who were tested twice during adolescence. Results indicate that the mediating role of intragenerational stability, stable within-wave causal factors, & moderating variables contribute to the explanation of intergenerational parallelism. Further, intragenerational stability (as a mediating explanation for intergenerational parallelism) itself varies according to intervening mechanisms, stability of stage-specific causal factors, & moderating variables.

Karnik, Neela (41 Barner Rd, Aundh India), **The Role of Museums in India and the Shaping of a National Culture and Taste.**

¶ The establishment of tribal museums in western India & the shaping of a national culture & taste are discussed. Focus is on the "museumizing of the tribal" & the "ethnic chic" of fashion design & decorative arts. The role of the state in the preservation of tribal culture is also addressed.

98S34768 / ISA / 1998 / 12009

Karttunen, Sari (Unit Media & Culture Statistics Finland, FIN-00022 Helsinki [tel/fax: 358-9-1734-2963/3264; e-mail: sari.karttunen@stat.fi]), **Professionalisation through Social Closure in the Arts.**

¶ Building on the idea of artists as workers & art as collective action, the artist is seen as a normal socioeconomic actor who aims to improve his or her position through occupational politics. Focus is on attempts at social closure in the arts, eg, the use of formal qualifications or union membership as barriers of entry. The possibility & desirability of professionalizing the arts in the manner of law or medicine are discussed. It is argued that closure is difficult to achieve in the arts, depending on the art form & the cultural-political context. Certain questions are also raised regarding its effects on the quality or variability of artistic production. The analysis makes use of various theories of social closure, including Pierre Bourdieu's theory of social fields, & draws on data from a project on the status of artists in Finland.

98S34769 / ISA / 1998 / 12010

Kashio, Naoki (Group sociologie religions & laïcité, 56-61 rue Pouchet F-7589 Paris Cedex 17 France [tel: 33-1-40-25-10-94; e-mail: kashio@iresco.fr]), **Japanese New Religious Movements and Sect Policy in France: Two Case Studies on Sukyo-Mahikari and Soka-Gakkai.**

¶ The interaction of sect/religion policy with two new Japanese religious movements—Sukyo-Mahikari & Soka-Gakkai—in France is analyzed to explain the transformation of the doctrine, practices, & beliefs of such movements, ie, tendencies to change the quality of the sacred & spirituality in this different sociopoliticocultural context. Conclusions reveal (1) a decrease in proselytism, & (2) a tendency toward the closed internalization of beliefs through the interaction of governmental policy & culture. Details of these changes are provided.

98S34770 / ISA / 1998 / 12011

Kasimis, Charalambos, Papadopoulos, Apostolos G. & Stravoravdis, Spyros (Inst Urban & Rural Sociology National Centre Social Research, 14-18 Mesogeion Ave PO Box 142 32 GR-11527 Athens Greece [tel/fax: 30-1-7489141/7489143; e-mail: ckasimis@dy.eke.gr]), **Farm Family Labour and Pluriactivity: Rural Labour Markets and the New Physiognomy of Greek Farming (1987-1996).**

¶ Greek agriculture has been significantly characterized by both family labor & pluriactivity. The size of the rural population, which, in Greece, is predominately employed in agriculture, has declined, 1961-1991. However, during the last 5-year period, it seems to have stabilized with the elimination of employment opportunities outside rural areas & the development of new activities (in the service sector) that secure complementary employment for the rural labor force. The preservation of the

k

rural population is linked to the deagriculturalization of their employment & an enlarging tendency toward unemployment, underemployment, flexible employment, & combination between agricultural & non-agricultural employment. Consequently, the construction of a healthy sociodemographic situation of Greek countryside has had significant impact on family farming & rural/peripheral labor markets, & is evident in changing family roles, shifts in the gender division of labor, increasing flexibility of family labor, use of external cheap nonfamily labour, & farm restructuring. The newly formulated characteristics of employment in rural areas, in general, & family farm employment, in particular, in Greece is examined, drawing on sociodemographic data from the Population & Agricultural Censuses as well as the Agricultural & Labour Surveys. The effects of the European integration processes & the increasing incorporation of peripheral labor markets into the wider economy are considered.

98S34771 / ISA / 1998 / 12012

Kaspersen, Lars Bo (Dept Political Science Aarhus U, DK-8000 C Denmark (tel: 45-89-42-12-88)), **How a State Became Democratic as an Unintended Consequence of Warfare and Military Reforms: The Case of Denmark.**

¶ Denmark offers an interesting case of state-formation or nation-building processes in Europe, demonstrating a direct relationship between violence, war, & the rise of democracy. It is argued that the development of democracy & the introduction of a liberal constitution in Denmark must be seen in close connection to Denmark's geopolitical situation & a number of "cold" & "hot" wars during the 17th-19th centuries. As a result of external threats, a struggle took place between the king & the landed gentry during the late 18th century, which led to a new military reform that allowed the king to conscript peasants to create a larger, more efficient army. To conscript the peasant, he had to accept peasants as freeholders with certain civil & political rights. The last step was the introduction of the general conscription with the liberal constitution of 1849, which paved the way for a general set of rights & obligations to all men. Wars & threats of wars were decisive aspects of the development of the democracy in Denmark. Inspired by Carl Schmitt it is demonstrated how a "state of expectation" (warfare) resulted in a democratic outcome, but as an unintended consequence of a reorganization of the state & the military to maintain the domain of sovereignty.

98S34772 / ISA / 1998 / 12013

Katsumata, Masanao (Coll Nursing Nagoya City U, 466-0811 Japan (tel/fax: 81-52-852-4641; e-mail: gp9m-ktmt@asahi-net.or.jp)), **Re-Reading Max Weber's "Collected Essays on the Sociology of Religion".**

¶ Max Weber's essays, "The Economic Ethic of the World Religions," which critically studied the Orient, have been conventionally read from the standpoint of a prior reading of "The Protestant Ethic & the Spirit of Capitalism." As a result, these articles have been considered as circumstantial evidence for the Protestant Ethic thesis. This approach identifies a serious omission in the Protestant Ethic, ie, any reference to the political domain. Judging from a note to the first edition of the "Protestant Ethic" (1904), the "missing" political focus must be found in George Jellinek's (1895) study, "The Declaration of the Rights of Man and of Citizens." If Jellinek's & Weber's studies of Protestantism are read together, the influence of Protestantism on the formation of civil society can be discerned from the two sides of economy & politics. Further, they can now properly be compared with the articles in "The Economic Ethic." Utilizing this approach, it is concluded that these papers can be read as a criticism of Oriental patrimonialism, & that Weber developed a critique of the German Empire & investigated the possibility of the creation of a real civil society in Germany.

Kattakayam, Jacob John (Dept Sociology U Kerala, Trivandrum 695581 India (tel/fax: 471-448502)), **Support System for the Elderly—An Intergenerational Study in Kerala, India.**

¶ Analyzes the support system of the elderly in Kerala, India, in the context of changing social circumstances. Primary data collected in Thiruvananthapuram identify three types of support for the elderly: (1) primary—family & peer groups; (2) secondary—other relatives & neighbors; & (3) tertiary—religious & medical systems. It also inferred that support systems are culturally conditioned. Results are interpreted using the theories of Cumings & Henry, Alfred R. Radcliffe-Brown, & Talcott Parsons to understand the concept of support system relative to the elderly population.

Katz, Cindi (Dept Environment & Psychology City U New York, NY 10036 (tel: 212-642-2568; e-mail: ckatzs@email.gc.cuny.edu)), **Social Reproduction in an Expanded Field: Globalization and Everyday Life.**

¶ Reflects on nearly 2 decades of research on social reproduction in rural Sudan, drawing on biographies of several young people with whom the author has worked since 1980, when they were children. An attempt is made to unravel the permeations & percolations of global economic restructuring, national development policies, & increased local cosmopolitanism as they change the courses of everyday life, identify formation, & the making of place. Traversing these scales—global, national, local—and their intersections in the lives of young people, the analysis uses social reproduction & its derailments as a way of calling into question facile notions of globalization, the policies & processes associated with development, & the variability of practices of resistance in contemporary Sudan. By making explicit connections between the struggles for social reproduction in disparate geographical locations within & outside of Sudan, an attempt is made to puncture encapsulated notions of the local &, at the same time, demonstrate the importance of particular understandings of the global.

Katz, Ruth & Ben-David, Amit (Haifa U, Mount-Carmel IL-31905 Israel (tel/fax: 972-4-8251947/8240819; e-mail: ruth@soc.haifa.ac.il)), **Families in a Multicultural Society: The Case of Israel.**

¶ In its 50 years of existence, Israel has absorbed 50+% of its population through immigration. Here, a qualitative survey instrument consisting of a vignette portraying a typical scene at the end of a typical day in a typical family was completed by 4 different groups, including two veteran groups—Israeli Jews & Israeli Arabs—and two groups of recent immigrants—Ethiopians & Russians—to investigate (1) what happens to these immigrants when they encounter the different racial/ethnic composition of Israeli society; (2) in an era of postmodernist social constructionism, how they construct ideas about the families they want to live in, after having contact with families from other cultures; & (3) how they bridge their culture & history with the present. Analysis showed that participant narratives focused on four areas: (A) love & intimacy; (B) family & work; (C) parent-child relationships; & (D) divorce. Findings are discussed in terms of the significance of similarities & differences among the groups & association with the past, migratory process, & families in a state of transition.

98S34777 / ISA / 1998 / 12018

Katz-Gerro, Tally (Dept Sociology U California, Berkeley 94720 (fax: 510-642-0659; e-mail: tkatz@socrates.berkeley.edu)), **Leisure Activities and Cultural Tastes as Lifestyle Indicators: A Comparative Analysis of Germany, Sweden, Italy, Israel, & the USA.**

¶ Lifestyles are associated with identity, patterns of groupness, & social location & causality, & differentiation is considered one of the sources of new conflicts, identities, & social movements. Cultural "tribes" that crystallize on the basis of lifestyles are described as a new form of sociality. Postmodern society is characterized by a shift from contractual groups to affectual tribes & from class-organized arrangements to status-conventional social arrangements. Here, the components & different definitions of lifestyles are explored, drawing on survey data to examine a set of lifestyle items that integrate participation in various leisure activities & cultural tastes in music & reading in the Federal Republic of Germany, Italy, Sweden, Israel, & the US. Identified is a consolidation of lifestyle types that groups people according to particular leisure activities & cultural tastes. Although the cases represent different social ambi-

ances in their economic, social, & political orders, they manifest similar lifestyle types. In addition to usual lifestyle types, eg, highbrow & popular, found are cultural fields associated with religion, rurality & urbanity, youth, & family.

Katz-Gerro, Tally & Bihagen, Erik (Dept Sociology U California, Berkeley 94720 (tel/fax: 1-510-704-0997/642-0659; e-mail: tkatz@socrates.berkeley.edu)), **Cultural Consumption, Class and Gender in a Changed Welfare State: The Case of Sweden.**

¶ Gender differences in cultural consumption in Sweden are examined, employing an extensive set of cultural consumption items to offer a sensitive measurement of differences in cultural tastes. Two different kinds of explanations for these differences are tested: (1) those that focus on the link between gender & class & maintain that gender differences are, in fact, class differences; & (2) those that grant an autonomous role to gender. The effects of both class position & gender on cultural consumption & the extent to which these factors are independent of each other are investigated, based on data from a 1993 national survey in Sweden. Previous studies conducted in the framework of class analysis assumed the primacy of class in determining cultural consumption & tastes. It is interesting to see how the association between class, gender, & cultural consumption is organized in a society with high class mobility rates, a relatively egalitarian economy, & high rates of female labor force participation.

Kaupaitė, Algita, Kavaliauskas, Saulius & Porvaneckaitė, Egidija (Dept Social Sciences Lithuanian Instit Physical Education, 3029 Kaunas (tel/fax: 370-7-20-39-62/45-15; e-mail: skaval@kki.lt)), **The Sport Information Structure in Lithuanian Media.**

¶ The Lithuanian mass media system was formed late compared to other West European countries: the first Lithuanian newspaper was released in 1873, national radio was aired from 1926, & national TV was broadcast from 1957. In the same slow manner, the national sport system was formed in the 1930s. As in many other countries, specialized sport media began in Lithuania in the interwar period. In the Lithuanian media structure, specialized sport news was available on radio as well as on TV. In recent years, the sports media in Lithuania have formed their own original structure, which can be separated into coverage on (1) national & local sport events; (2) professional athletes working in North American & European sports markets; & (3) main world sports events. Here, the sport information in Lithuanian media for Feb & March 1997 is analyzed based on a survey of three newspapers (a national & a regional daily, & a specialized sport newspaper), two TV companies (one state-owned & one private), & the national radio. Results show that information on Lithuanian sports events predominates the sport information presented by the Lithuanian media. Information on main sports events in the world is in second place, followed by information on professional athletes playing in foreign countries. In terms of sports, priority is given to information on basketball, football, Formula One car racing, & handball. This survey was repeated in summer 1997, & also examined sport information on men's & women's sport. Additional research is also investigating the place of sport in the broadcasts of the four greatest Lithuanian TV companies during 1997.

Kauranen, Ralf (Dept Sociology Åbo Akademi U, Gezeliusgatan 2 FIN-20500 Finland (tel: 358-2-2322129; e-mail: rkaurane@abo.fi)), **The Legitimation of Comics as Art—Questions of Cultural Value.**

¶ Addresses questions about cultural value, especially on the dichotomy of high & low culture, based on results of a study on the legitimization of newspaper comics in two Finnish newspapers, 1994/95, analyzed qualitatively in a theoretical frame of discourse analysis. Comics traditionally have been considered as part of low culture, though contemporary texts about comics can be interpreted as containing a discourse that constructs comics as a legitimate art form. This discourse consists of subdiscourses that represent different ways of constructing the relation between comics & legitimate culture. It may be stated that comics are legitimized in accordance with the classical economy of cultural value, but this is not the sole ground for the construction of comics' value. A reversed economy of value is also present, indicated by the existence of a discourse of low-cultural aesthetics in which traditional low culture is seen as the positive pole in the bipolar disposition of high & low. Both types of discourse are working within the same economy; eg, the structure of the economy of value or the rules of the field are not questioned.

Kavaliauskas, Saulius, Cingiene, Vilma & Kardelis, Kestutis (Dept Social Sciences Lithuanian Instit Physical Education, 3029 Kaunas (tel/fax: 370-7-20-39-62/45-15; e-mail: skaval@kki.lt)), **Development of the Physical Education and Sport Subsystem in the Lithuanian Education System.**

¶ In Lithuania, the national physical education & sport subsystem was formed when (1) physical education was recorded into school programs as a compulsory discipline; (2) educational institutions created physical preparation standards that were often ideologized & had military tones; (2) an independent system designed to train physical education & sport specialists was formed in the higher education system. The first two characteristics became evident immediately after the restoration of Lithuanian independence (1920-1924), when the national education system was formed. The independent training of physical education specialists started when higher courses of physical education were set up (1934). During the Soviet period (1940-1990), the following stages regarding the development of a physical education subsystem in the education system can be distinguished: (A) in the 1950s, the creation of a public sport schools network with the aim of a positive engagement of pupils & the preparation of a sport reserve; (B) in the 1960-1970s, the establishment of a physical education subsystem infrastructure—approximately 80% of all secondary schools have their own sport halls & stadiums; (3) in the early 1980s, the establishment of compulsory physical preparation normatives in the graduating classes; & (D) in the late 1980s, the filling up of the subsystem with qualified physical education specialists—92% of physical education teachers & 75% of coaches have higher education diplomas in physical education. During the 1990s, many social changes took place in Lithuania. Two main aspects of the subsystem modernization process are identified: (a) extensive, which is when compulsory social interactions are being extended; eg, the Lithuanian Physical Education & Sport Law foresees three compulsory physical education activities in all educational institutions; & (b) intensive, which is defined by the internal differentiation of the subsystem.

Kay, Joanne (U Montreal, Quebec H3C 3J7 (tel/fax: 514-931-2122; e-mail: kayj@MAGELLAN.UMontreal.CA)), **Extreme Sport, Gender and Risk.**

- ¶ Theoretically examines the notion of risk in extreme sport & the implications that it represents for gendered participation. The developing extreme sports now appear to constitute a male sports culture reminiscent of that of earlier traditional sport. This new realm, which seeks to counter the norms & values of traditional sport, extols the values of anticompetition, cooperation, egalitarianism, self-expression, creativity, & individuality. Some of these values have been attributed to feminine conceptions of physical activity & have been thereby set in opposition to the competitive, aggressive, & violent nature of masculine contact sports. It seems that the common denominator of extreme sports is risk, however, which perhaps might limit female participation in much the same way that competition has in the past. However, as can be seen by women's modern-day participation in traditional sport culture, competitive sport no longer poses a barrier to women's involvement. Recently, it has appeared that a limited number of (primarily adolescent) girls have begun participating in extreme sports. Given this apparent attraction of adolescent girls to extreme sport despite its masculine bias, & given the recent history of women's incursion into traditional sport & appropriation of male sport culture, women may be following a similar trajectory as in the past. The possibility of women's appropriation of risk sport culture is explored in light of their participation in competitive sport culture, raising questions for the essentialist assumptions that regard female & male sport cultures as inherently different. It is hypothesized that, in postmodernity, gender stratification of sport will be less significant than age stratification. Thus, the notion of risk is considered a condition of participation in extreme sports & more a product of youth sport culture than of male sport culture.

Kazakevitch, Olga A. (Instit Linguistics Russian Academy Sciences, Moscow 103009 (tel/fax: 7-095-290-5268/0528; e-mail: kazak@iling.msk.su)), **Northern Selkups, Their Language and Identity.**

- ¶ The Selkups, an indigenous minority people of Russia numbering 3,612 persons according to the 1989 Census, are dispersed over a large area of Western Siberia between the Ob & Yenisei Rivers. Selkup is the only living representative of the southern subgroup of the Samoyed branch of

the Uralic language family. Its southern dialects are slowly disappearing & are now spoken only by some elderly. The situation with the northern dialect is much better, but still no cause for rejoicing. Described here is an expedition to the Krasnoselkup district, where the majority of the northern Selkups live, organized in 1996. To assess the linguistic situation, 1 month was spent gathering data, recording folklore texts, interviewing people using a questionnaire to obtain information on mother tongue & second language, attitude toward children learning & using the ethnic language, evaluation of native-language competence, & sociodemographic attributes. Practically all the Selkups in the Krasnoselkup district recognized Selkup as their mother tongue, though not all of them really speak it; in many cases, such recognition is just a badge of identity. The language situation differs from settlement to settlement. In small villages where Selkups constitute the majority of the population, Selkup is still widely used, whereas, in larger villages with the bulk of the population formed by newcomers from different parts of Russia, Selkup is rarely spoken even in purely Selkup families. All Selkup-speaking Selkups are bilingual, with Russian as their second language. In Selkup speech of all generations, code switching & mixing are quite common.

Kazmierska, Kaja (Instytut Sociologii U Łódź, PL-90131 Poland (tel/fax: 48-42-56-26-05; e-mail: kajakaz@kryslia.uni.lodz.pl)), **Migration Experiences and Changes of Identity. The Analysis of Narration.**

- ¶ Analysis of a narrative interview with a Turkish woman living in the Federal Republic of Germany is used to examine the process of identity changes influenced by the narrator's migration experiences. The process has at least two contexts. One refers to the cultural roots of the narrator; new experiences have changed her self-image of being a woman. The other is connected with the narrator's life course; the narration shows how a naive girl has become an adult & independent woman. Being a woman is defined with the help of categories belonging to Western culture. Therefore, the process of migration is connected with losing culturally influenced ways of describing narrator identity. As a result, the Turkish woman has become a stranger in her homeland. She also remains a stranger in the country of migration. The narrator's biographical work on this problem is analyzed.

98S34789 / ISA / 1998 / 12030

Keating, Tom P. (La Trobe U Albury/Wodonga Campus, Victoria Australia 3690 (tel/fax: 0260583-783/777; e-mail: T.Keating@aw.latrobe.edu.au)), **The Role of Leadership in the Management of Post Disaster Recovery.**

- ¶ Contemporary approaches to recovery following disaster stress the importance of community management of recovery processes. While this approach has been critical in the reformulation of the approach to disaster management in the state of Victoria, Australia, & has led to a dramatic improvement in recovery outcomes, it masks the real difficulties associated with the provision of leadership to communities facing significant dislocation. Results of interviews with 10 individuals responsible for the management of aspects of significant disaster events are used to develop a model for leadership of community recovery that is contingent on the scale of the disaster, the degree of dislocation of community infrastructure, & the time in which critical decisions must be taken.

Keil, Roger (Faculty Environmental Studies York U, Toronto Ontario M3J 1P3 (tel/fax: 416-736-2100/5679; e-mail: rkeil@yorku.ca)), **Governance Restructuring in the New City: Berlin (1989), Los Angeles (1992) and Toronto (1997).**

- ¶ A conceptual exploration of governance restructuring in three large world cities as a consequence of globalization & specific local events asks how local governance changed in (1) Berlin (Federal Republic of Germany), after the fall of the Wall in 1989; (2) Los Angeles (CA), after the 1992 riots/uprising & subsequent "rebuilding"; & (3) Toronto (Ontario), after the provincial government's megacity restructuring in 1997 & the current transition process. It is argued that world city politics is concerned with the governance of complexity, much of which derives from the articulation of different spatial scales. The central problem of local governance under these conditions of complexity is the temporary stabilization of everyday actions & transactions of individuals, collectives, & institutions. It is proposed that understandings of regime-, regulation-, & discourse-theoretical approaches be merged critically & selectively into a theory of local governance. Through this comprehensive approach, it seems possible to do justice to the governance of complexity, which is present particularly in the formation & regulation of world cities.

98S34791 / ISA / 1998 / 12032

Keister, Lisa (U North Carolina, Chapel Hill 27599 [tel/fax: 919-966-1450/7568; e-mail: Lisa-Keister@UNC.EDU]), **Resource Control, Path Dependence and the Emergence of Social Structure.**

¶ In transition economies, the structure of intercorporate relations—and thus, the very nature of social structure—that will predominate posttransition emerges as repeated dyadic resource exchange relations between organizations. Resource dependence theory proposes that exchange relations will develop where uncertainty is high, & organizations with access to scarce resources will assume powerful positions in these relations. However, research on organizational inertia demonstrates that path dependence also matters; interorganizational relations are also a product of the prior experiences of organizations & path-dependent characteristics of organizational environments. Using 1988-1990 panel data on the People's Republic of China's 40 largest business groups & their 535 member firms, relative importance of current resource control & path dependence in the emergence of resource exchange relations is analyzed. Results of uncertainty & sources of power are partitioned into those resulting from current conditions & those deriving from path dependence. Findings demonstrate an inverted U-shaped relationship between environmental uncertainty & the strength of path dependence in determining the structure of exchange relations. Further, the nature of the resource being exchanged mediates the role of resource control & path dependence in the development of interorganizational resource-exchange ties.

Kelley, Jonathan & Sikora, Joanna (Research School Social Sciences Australian National U, Canberra ACT 2601 [tel/fax: 61-6-297-2937; e-mail: Kelley@international-survey.org]), **Class and Attitudes to Private and Public Ownership in Economy in Free Market and 'Transforming' Countries.**

¶ Explores whether society's economic goals—particularly income security, economic growth, & satisfying employment—are better served by government or private ownership of the means of production, drawing on data from the International Survey of Economic Attitudes regarding attitudes toward government ownership of a wide range of industries, using exactly comparable measurement instruments & large representative national samples from two long-established market economies, Australia & Finland, & from Poland during its transition from communism. Cross-national similarities & differences in the impact of class position on economic ideology are investigated using ordinary least squares regression models. It is found that high occupational standing & high educational qualifications lead people to support the free market & oppose government ownership. The impact of these aspects of class position is broadly similar in all three societies, but the impact of supervisory position, income, employment sector, & age vary between societies. Altogether, the impact of class position on economic ideology is stronger than its impact on political preferences. It is suspected that the basis of political conflict in many nations may be shifting over time, from an emphasis on voters' objective class position early in the century to a current emphasis on ideology.

Kelly, John R. (U Illinois, Urbana 61821 [tel/fax: 217-352-3801/244-1935; e-mail: jr-kelly@uiuc.edu]), **Generations: Has Leisure Studies Entered a New Age?**

¶ Analyzes current shifts in the social science study of leisure through three metaphors of scientific succession: (1) building on the past, what Robert Merton called "standing on the shoulders of giants"; (2) radical new beginnings & foundations; & (3) ecology of natural succession, involving a continued process of species die-off & emergence. Disagreement on the most applicable metaphor is more than a matter of perspective, although emerging generations are most likely to see their work as

a sea change or even a scientific revolution. Since 1970, sociologists studying leisure have been immersed in this process of change, sometimes discovering that their new approaches were reconstructions of earlier work. In some cases, the old ideas needed rediscovery or the frameworks required deconstructing & reframing, but some new approaches were simply new vocabularies for old concepts. Overall, there may have been a recognition that no single perspective answers all important questions, that every line of research excludes as well as includes; eg, while women were not ignored in previous research, feminists are right that the issues raised from women's viewpoints were seldom addressed. Similarly, cultural studies focused on the resistance of youth cultures in ways omitted by an earlier focus on normative & mass cultures. Both feminist & cultural studies tacitly or explicitly incorporated conflict models of power differentials in societies with nonfunctional divisions. It is argued that, although new perspectives may be revolutionary & required major changes in the premises of a field, such paradigm shifts do not invalidate all previous work. Some new developments in leisure sociology are complementary to what went before; some are conflicting. However, any field grows by generations; eg, in the ecology model, succession involves both death & transformation.

Kemo Keimbo, David-Claude (U sciences humaines Strasbourg, F-67200 Cedex France [fax: 333-88-41-74-77; e-mail: kemo@monza.u-strasbg.fr]), **The Impact of Globalization on National Sport Policies in Black Africa: Cameroon's Case.**

¶ The phenomenon of globalization is not new in Africa. Indeed, after independence occurred for most Black African countries (in 1960), they massively joined the UN & the International Olympic Committee, giving them access to the international recognition they lacked. However, the latter step was matched with the necessity to respect requirements with regard to the establishment of sport structures & policies. The aim here is to show that, with an internationalization of sport (characterized by a hierarchy such that the US becomes the foundation of the world sporting pyramid), & with the increased commercialization of sporting events & their associated global mediatization, African countries will be further marginalized since they will be unable to follow such trends. In this situation, these countries' strategic reaction will be not unlike that when they gained independence: they will develop an elite sport—a showcase & ideological instrument—to the detriment of mass sport, which would favor values such as health promotion, the civic training of citizens, & national unity.

Kemple, Thomas M. (Dept Anthropology & Sociology U British Columbia, Vancouver V6T 1Z1 [tel/fax: 604-822-3579/6161; e-mail: Kemple@unixg.ubc.ca]), **A Rational Analytics of Power: Nietzschean Themes in Max Weber's Concept of Domination.**

¶ Shows how Max Weber drew from a number of Nietzschean sources (broadly conceived) to conceptualize the nonrational bases for social order in will, sentiment, & force. By criticizing & qualifying the assertions of immediate predecessors & contemporaries, eg, Ferdinand Toennies, Rudolf von Ihering, & Georg Simmel, Weber was able to extend Niccolò Machiavelli's model of sovereign-power-based instrumentally rational action to account for the strategic deployment of knowledge/power through various mechanisms of consent & coercion, discipline, & resistance. In light of recent scholarship exploring some of these connections, emphasized is Weber's use of the narrative thematics of Friedrich Nietzsche's *Thus Spoke Zarathustra* (1961) in "Science as a Vocation" & "Politics as a Vocation" (1946). In particular, it is argued that, by staging a tragic confrontation between "the resentment of the last men" & the "will to power of the charismatic overman," Weber tries to articulate the transvaluation of the Enlightenment values of reason & freedom.

98S34797 / ISA / 1998 / 12038

Kenny, Bridget (Sociology Work Unit U Witwatersrand, Johannesburg 2050 South Africa [tel/fax: 27-11-716-2908/3781; e-mail: 029Bkenn@muse.arts.wits.ac.za]), **The South African Labour Market in Transition: Flexibility and the Changing Nature of Work.**

¶ Findings from the first large-scale research of South African labor market flexibility practices in enterprises showed that the actual number of employees engaged in nonstandard employment was relatively low; however, detailed case studies confirmed that atypical employment is growing. Drawing on ongoing survey research & two case studies of the growth of casualization & subcontracting in the retail & mining sectors, & focusing on the neglected supply side of the labor market via examina-

k

tion of how households cope with these changes, it is suggested here that conventional approaches to flexibilization of labor markets are not useful in understanding current restructuring. It is argued that the combination of high unemployment & the legacy of a sharply racially segmented labor market under apartheid is reinforcing a dual labor market. An increasingly polarized labor market is emerging, consisting of a growing number of marginalized workers, side by side with a core workforce consisting of black & white workers in firms able to adjust to the changing imperatives of an increasingly globalized economy. Policy initiatives being taken by South Africa's first democratic government & its social partners to deal with the consequences of such structural trends are examined.

98S34798 / ISA / 1998 / 12039

Kentor, Jeffrey (John Hopkins U, Baltimore MD 21218), **Military Participation, Inequality and Economic Growth: Andreski Was Right.**

¶ In 1954, Stanislaw Andreski hypothesized that relatively high per capita levels of military participation (military participation ratio) would have a negative effect on inequality. This argument is tested with an empirical cross-national examination of the effect of the per capita level of military participation on inequality, 1930-1990. It is found that a relatively high military participation rate has a negative effect on inequality, but a positive effect on economic growth, though it is partially mediated by the negative effect of inequality on economic growth. It is argued that these effects of increased military participation are the result of increased income & educational opportunities afforded to military personnel.

98S34799 / ISA / 1998 / 12040

Kernic, Franz (National Defense Academy, Stiftsgasse Za A-1070 Vienna Austria (tel/fax: 43-1-52161-40423/17105; e-mail: a8003858@unet.univie.ac.at)), **The Austrian Experience in Preparing Warriors for Peace.**

¶ Focuses on the Austrian experience in preparing soldiers for UN peacekeeping operations in the former Yugoslavia, drawing on survey data from Austrian UN soldiers compiled 1996/97 before & during deployment to that area. The main issues addressed are (1) the organizational culture of the Austrian contingent; (2) the preparation of the soldiers for the mission from a sociological point of view (negotiation skills, intercultural communication, cultural appreciation); & (3) the soldiers' experiences in this complex cultural environment.

98S34800 / ISA / 1998 / 12041

Kersting, Norbert & Sperberg, Jaime (Inst Politikkwissenschaft, D-35032 Marburg Federal Republic Germany (tel/fax: 49-6421-284490/8991; e-mail: kersting@mail.uni-marburg.de)), **Urban Citizenship and Poverty in the Third World.**

¶ Questions of local political identity, political legitimacy, & limitations of the rising expectations among the urban poor in developing countries are explored, drawing on a comparative survey regarding local politics in metropolitan & smaller urban areas in Brazil, Chile, Ivory Coast, & Kenya. Analysis of participation in urban social movements & neighborhood groups shows that aspects of subsidiarity & communitarianism are existent even among the urban poor. Assessment of local self-help depends on the specific values of the urban poor, their resources, & the local political-institutional background of each country. Under what, on the whole, are very precarious living conditions, there exists a generally high level of local self-help initiatives among the majority of respondents. Contrary to prevailing pessimism, findings indicate a realistic limitation of the aspirations & democratic, mostly local, government-oriented political actions of the urban poor in the Third World.

98S34801 / ISA / 1998 / 12042

Kester, Gérard (Global Participation Development Programme, 15 Schutterhoeftlaan NL-3832 GP Leusden Netherlands (tel/fax: 33-494-7147/2217)), **"Participatory Social Research Has Surplus Value"...A Plea for More Trade Union-University Cooperation.**

¶ Discusses participatory research as social research conducted jointly, in all phases of the research process, by independent academic researchers & (representatives of) the social structures concerned. The main postulate is that participatory research, apart from increasing practical relevance, can also increase the validity & reliability of scientific social research, & thus, its theoretical relevance. Reference is made to a long-term international comparative research project on the development of democratic worker participation in Africa, conducted in the framework of intense trade union-university cooperation. Research validity was en-

hanced through systematic involvement of trade union policymakers & educators in the elaboration of research questions & subsequent conceptualization & operationalization. Reliability was increased by the active role trade unionists played in carrying out the research (eg, access to workplaces, greater employee confidence). The practical value for policy making, for education of different target groups, & for action, appears to be formidable, & the theoretical "surplus" value of such participatory research can be demonstrated also. In conclusion, a plea is made to increase participatory social research, which, apart from its practical impact, can add scientific value.

98S34802 / ISA / 1998 / 12043

Keyser, Barbara (Queen's U, Kingston Ontario K7L 3N6), **Chemists, Conservators, and Creators: The Changing Role of Conservators in Advising Artists.**

¶ Discusses the line of continuity from industrial science & technology to the conservation scientist who adapts materials & processes to conservation (& sometimes to artists' materials manufacturers) & thence to conservators, who come into contact with artists & art instructors. In the past, there was a tendency to condemn artists for using unconventional materials. Now the trend is for conservators to actively collaborate with artists in arriving at more permanent ways of realizing artists' vision, however unconventional that might be. This is especially true of artists who are asked to execute public commissions.

98S34803 / ISA / 1998 / 12044

Khamdohova, Janna (Kabardino-Balkarian State U, Nalchik Russia (tel/fax: 007-86622-73650/73492; e-mail: jane@pluton.kblib.nalchik.su)), **The Dynamics of Way of Life and Interaction of Neighbour Cultures.**

¶ It is hypothesized that, when destroyed & devaluated political ideological & economical regulators ruin once-favorable interethnic relationships, relationships formed as a result of long-interacting neighbor cultures act as a stabilizing social factor. Evidence is drawn from the experience of preventing an interethnic conflict in Kabardino-Balkarian Republic, situated in one of the potentially most explosive regions of Russia.

Khan, Masood Ali (Indian Council Social Science Research Osmania U Library, Hyderabad 500007 Andhra Pradesh India (tel: 91-40-7018756)), **The Hyderabad and Malayalee Migration to Middle East-Cultural and Economic Dimension.**

¶ Compares the influence of migration on people in Hyderabad (Andhra Pradesh), & Kerala, India. In recent past, these two states have experienced the diaspora of people who migrate to Gulf countries for employment. Discussed here are the socioeconomic effects of this diaspora & the Gulf oil boom both in India & abroad. An attempt is made to identify factors that prompted people in both states to migrate. Focus is on the influences of migration on the development of economy & society of Hyderabad & Kerala.

98S34805 / ISA / 1998 / 12046

Kharchenko, Irina I. (Inst Economics/Industrial Engineering, 17 Lavrentiev Prospect Novosibirsk 630090 Russia (tel/fax: 7-3832-35-4425/5580; e-mail: kharchen@ieie.nsc.ru)), **High School Students Plan Their Future: Changes in the 1990s in Western Siberia.**

¶ The introduction of market relations in Russia changed drastically the social conditions in which young people make occupational & educational post-high-school plans. Examined here are changes in high school students' educational & occupational aspirations, value orientations, & motives of choice, based on two sociological surveys of school leavers (in grades 9 & 11) in Novosibirsk oblast, western Siberia. Responses of 1,680 students in 1990 & 800 in 1996 show that most decided to continue full-time study right after graduation, but not to find a job. The differentiation in students' intentions depended on the community of residence; more urban respondents planned to attend college or university, & aspired to professions prestigious in a market economy. Occupational choice was motivated more by opportunity for individual success. Rural students were generally less ambitious in their plans than their urban contemporaries, but in comparison with 1990, a growing number of rural school leavers in 1996 aspired to white-collar occupations & wanted to live in urban places.

98S34806 / ISA / 1998 / 12047

Khashan, Hilal (PSPA Dept American U Beirut, Lebanon (e-mail: hilkhash@aub.edu.lb)), **Islamic Revival and Modernity.**

¶ Aims to demonstrate that Islamic revival represents a natural, almost spontaneous, reaction to conditions of underdevelopment, based on data from a random sample of 1,000 Muslims in Lebanon. The notion is advanced that Islamic revival is primarily benign, & that radicalism is an erratic, unrepresentative trend of Islam today. The failure of the secular model for development in the Arab world has paved the way for the emergence of religious groups. It is contended that Islamic groups (1) are reform oriented; (2) aim at reasserting Islam as a source of identity; (3) are decisively nonpolitical & can work well with the government; & (4) are not anti-Western.

98S34807 / ISA / 1998 / 12048

Khashan, Hilal (PSPA Dept American U Beirut, 850 3rd Ave New York NY 10022-6297 (e-mail: hilkhash@aub.edu.lb)), **Western Fears and Muslim Grievances.**

¶ The spectacular rise of political Islam in recent years has caused unprecedented fears in Western societies, mainly European, about potentialities of radical Islamic movements for subversive activities in their societies. Westerners seem more inclined to contain political Islam than to account for reasons behind its genesis. Radical Islamic groups are essentially the product of underdevelopment, the legacy of Western colonialism, & a general societal malaise, as is demonstrated here. Understanding the underlying factors behind the rise of political Islam & rectifying them with Western help will preserve Western societies' stability & peace & lay out the basis for mutually rewarding transactions between them & their Muslim neighbors.

98S34808 / ISA / 1998 / 12049

Khathar, R. U., Malik, P. S. & Malik, Saroj (Chaudhary Charan Singh Haryana Agricultural U, Hisar 125004 India (tel: 091-01662-31171-73; fax: 091-01662-34952; e-mail: hau@hau.ren.nic.in)), **Socio-Economic Causes and Consequences of Child Labour in India—An Unequal Development.**

¶ Based on 1996/97 primary data from 30 child laborers in Hisar, Haryana, India, it was observed that about 97% belonged to scheduled & backward castes, & 90% were ages 10-15; the majority of their parents were below the poverty line. About 70% of their parents were just literate, & none well educated. Factors leading to child labor were reported as low parental income, unemployment, paternal alcoholic addiction, & lack of permanent income sources. Major reasons behind school dropouts included study-labor involvement conflict, no tutorial support at home, dubious peers for males, & sibling care responsibilities for girls. The wages of female child laborers were lower than their male counterparts; the majority were underpaid & worked 10+ hours a day. It is argued that education should be compulsory for all children; their parents should be provided with gainful employment; family planning & female literacy should be & encouraged equally among families of all castes & religious communities; & government agencies, nongovernmental organizations, & cooperatives should help identify, rehabilitate, & educate child laborers.

98S34809 / ISA / 1998 / 12050

Khelfaoui, Hocine (CREAD, Cité Ibn Khaldoun 35B8 Boumerdes Algeria (tel/fax: 213-2-82-03-85/81-17-97)), **Effet de la fonction étatique sur la construction de l'identité professionnelle des ingénieurs en Algérie** (The Effect of State Functions on the Construction of Engineers' Professional Identity in Algeria). (FRE)

¶ Recently & linked to state policies of education & recruitment started at independence, Algerian engineers showed signs of strong dependence on the public centralized action. This influence was present in the constitution as a professional group until the emergence of the enterprise as economic autonomous actor. Since then, the engineer is confronted with the choice of being an agent of the state or of the enterprise, two functions not always easy to reconcile. Analyzed is the impact of state functions vs enterprise functions on the construction of the professional identity of Algerian engineers.

98S34810 / ISA / 1998 / 12051

Khmelko, Valeriy Yevhenovych (Mohyla Academy U Kiev, Ukraine 254070 (tel/fax: 380-44-263-3568/3458; e-mail: khmelko@kiis.kiev.ua)), **Regional Ethnocultural and Political Cleavages in Ukraine.**

¶ In 1994, the first parliamentary elections in independent Ukraine demonstrated sharply contrasting patterns of regional support for the left- & right-wing parties in the east & west of the country. An even more marked manifestation of political polarization between the east & west

came in the second round of the 1994 presidential elections. Data from official electoral bodies & 1993, 1994 & 1997 national representative surveys of the Kiev International Inst of Sociology (Ns = 1,737, 2,711, & 3,482 adults, respectively) are used to explore the relationships between an electoral polarization, political orientations, & ethnocultural cleavages along territorial lines. Analysis of regional-level data shows that there are the strongest relationships between supporting of the left- (or right-) wing parties & the definite national-political orientation of voters, & between the national-political orientation of voters & their ethno-linguistic identity as Ukrainian-speaking Ukrainians, Russian-speaking Ukrainians, or Russian-speaking Russians.

Khondker, Habibul H. (Dept Sociology National U Singapore, Singapore 119260 (tel/fax: 65-874-6110/775-5593)), **Bangladeshi Labor Migration to Singapore: A Sociological Analysis.**

¶ It is estimated that there are about 50,000 Bangladeshi migrant workers in Singapore. Considered here is the politicoeconomic background of this labor migration & the current conditions of the migrant workers, various aspects of their everyday life, their adjustment, & the role of informal groups as a support system. Data are drawn primarily from interviews with Bangladeshi workers in Singapore.

98S34812 / ISA / 1998 / 12053

Khondker, Habibul H. (Dept Sociology National U Singapore, 119260 Singapore (tel/fax: 65-874-6110/777-9579; e-mail: Habib@nus.edu.sg)), **Democracy and Well-Being in Selected Asian Countries.**

¶ Unstructured interviews & discussions are drawn on to examine conceptual issues concerning the quality of life, particularly well-being, in Bangladesh & Singapore, arguing that well-being could be understood in the context of both social capital & democracy. Following Robert Putnam's proposition that declining social capital undermines democracy, it is posited that social capital, in turn, is being weakened by a variety of politicoeconomic forces in the developing world, & the weakening of social bonds affects the quality of life adversely. The viability & sustainability of democracy is also affected by declining social capital, thus undermining general well-being. Also, how different societies respond to these challenges is explored.

98S34813 / ISA / 1998 / 12054

Khondker, Habibul H. (Dept Sociology National U Singapore, 0511 Singapore (e-mail: Habib@nus.edu.sg)), **Role of Science Policy in Singapore's Development.**

¶ Argues that appropriate science policy can play a catalytic role in the development of countries trying to catch up with the developed nations. Drawing on the experience of Singapore's development, it is argued that forward-looking leadership & a rational policy framework with regard to the development of appropriate science & technology in Singapore played a crucial role in its development. Careful planning & successful implementation of various strategies paid off in terms of a viable science-technology structure that secures Singapore's development even in times of regional uncertainties. A relevant issue is sociological knowledge on policy & processes.

98S34814 / ISA / 1998 / 12055

Khondker, Habibul H. (Dept Sociology National U, Singapore 119260 (e-mail: habib@nus.edu.sg)), **Between Globalization and Marginalization: Predicament of the Emigre Sociologists.**

¶ Argues that émigré sociologists are faced with double marginalization by (1) the host country because of their immigrant/outsider status & (2) their country of origin because of their expatriate status, particularly the longer they remain away. As a result, it is argued that émigré sociologists feel comfortable proposing sociological theories with close affinity to theories of globalization, globalism, etc; ie, their own dislocation is often mirrored in their theoretical choices. Émigré sociologists are products of the processes of globalization, which, in turn, becomes the object of their study.

98S34815 / ISA / 1998 / 12056

Kidd, Bruce (U Toronto, Ontario M5S 2W6 (tel/fax: 416-978-7943/4384; e-mail: kidd@phe.utoronto.ca)), **Human Rights in Sport.**

¶ The year 1998 marks the 50th anniversary of the proclamation of the Universal Declaration of Human Rights by the UN. In the field of sport, governments & influential nongovernmental organizations, eg, the International Olympic Committee, have applied the ideals of the Universal

k

Declaration to their activities, grafting them onto the traditional moral claims of sport (ie, the "level playing field") in such documents as the UNESCO International Charter of Physical Education & Sport & various statements of athletes'/participants' rights & social equity. Here, the nature of campaigns for human rights in sports & progress toward their realization are assessed in the context of intensifying globalization & commercialization, the activism of athletes & social movements, the transformation of international politics in the wake of the fall of the Soviet model of state socialism, & other recent social changes/interventions, drawing on the insights of recent scholarship.

98S34816 / ISA / 1998 / 12057

Kiku, Koichi (Dept Sport Science Nara Women's U, Nara City 630 Japan (tel/fax: 742-20-3347; e-mail: kiku.ko@cc.nara-wu.ac.jp)), **The Changing Sociological Knowledges of Sport in Japan.**

¶ Discusses future topics in sport sociology from the viewpoint of the sociology of knowledge, while clarifying the post-WWII trends in sport sociology in Japan & their relationship with the social structure. Historically, sport sociology in Japan has been influenced by the sociology of physical education. The study of physical education & sport sociology describes the influences of politics, economics, & society on physical education & sport. From the viewpoint of the sociology of knowledge, this came about due to the mass production of university graduates & scholars who majored in physical education because that subject has been compulsory in the universities since WWII. In general, these individuals had little interest in theoretical perspectives. With physical education no longer a compulsory subject in 1991, however, the establishment of a theoretical & methodological approach to sport sociology began to appear. In addition, the Japan Society of Sport Sociology was founded in 1991 & has been contributing to the development of sport sociology. For sport sociology to develop in the future, it will be necessary to bring together the subtle differences in methodology & approaches of the physical education scholars & the new theory-oriented scholars.

Kim, Byung-Kwan (Dept Sociology Ajou U, Suwon 442-749 South Korea (tel/fax: 82-331-219-2781/2195; e-mail: bkkim@madang.ajou.ac.kr)), **Social Inequality and Perception of the Quality of Life in Korea.**

¶ Addresses the relationship between the degree of social inequality & perception of quality of life in Korea, discussing patterns & degrees of social inequality during the period of rapid industrialization & its impact on quality of life. Data from a 1996 national survey are used to examine the relationship among the objective position in the map of social inequality—measured by social class location—subjective perception of social inequality, & perception of quality of life in global, domain-specific measurement. Findings indicate that objective & subjective aspects of social inequality strongly affect perception of quality of life in Korea.

98S34818 / ISA / 1998 / 12059

Kim, Hyun Sook (Dept Sociology/Anthropology Wheaton Coll, Norton MA 02766 (tel/fax: 508-286-3657/3640; e-mail: hkim@wheatonma.edu)), **Sexualized and Ethnicized Body Politics in the Transnational Era.**

¶ The global economy creates solidarities & conflicts that cross ethnic & national boundaries. Transnational & regional migration, activated by the capitalist economy, challenge existing notions of national identities; labor migration also produces sub- & supranational identity formations. Here, ethnographic research on workers in Thailand & Korea are incorporated into an interdisciplinary framework to theorize the formation & disruption of social relations embedded in categories: national/foreigner, male/female, material/spiritual, local/migrant, etc. Explored are the linkages between nationalism, gender, & ethnicity, focusing on the sexualization & ethnicization processes of national body politics. Social relations & identities that are created & contested situationally in the transnational context are examined.

98S34819 / ISA / 1998 / 12060

Kim, Joung-Im (Dept Communication U Hawaii Manoa, Honolulu 96822 (tel/fax: 808-956-3340/5589; e-mail: joungim@hawaii.edu)), **Strength of Ties and Network Accessibility.**

¶ Network data collected in India in 1985 as part of a UN-sponsored pilot study on the role of community communication networks on the acceptance & continuance of family planning practice, & from graduate students in two different departments in a US university, are drawn on to (1) discuss the importance of the concept of network accessibility

(Kim, 1986) in elaborating Mark Granovetter's (1973) strength of weak ties argument at the dyad level; (2) examine the empirical relationship between two different measures of tie strength—closeness & frequency of communication; & (3) determine whether any empirical distinctions can be made between these measures in their relationships with network accessibility for testing the strength of weak ties hypothesis at the dyad level. Network accessibility is characterized by the structure of the personal networks of dyadic partners (or dyadic personal networks), especially their nonoverlapping parts. For each dyad, network accessibility can be measured from both directions; ie, the network accessibility provides important theoretical linkages in the strength of weak ties theory by giving a rationale for the negative relationship between tie strength & instrumentality.

98S34820 / ISA / 1998 / 12061

Kim, Keong-il (Academy Korean Studies, Songnam-si Kyonggi-do 463791 Korea (tel/fax: 82-342-709-7563/2246; e-mail: keongil@aks.co.kr)), **The Universal/Particular and the Time/Space in Colonial Knowledge.**

¶ Considers such issues as how history & social sciences, if they exist, were formed during the colonial period of Korea, what impact Japanese knowledge had on the shaping of colonial knowledge, & how the broad range of academic movements emerged, especially after the 1930s, in colonial Korea. Several trends of, or inclinations toward, both extremes of the universal/particular could be discerned in attempts to establish modern knowledge in the colonial period; eg, nationalist thought & Marxism. These cases, show how the attempt to synthesize the universal/particular was frustrated in colonial situations & what repercussions this dilemma has had for the time/space issue. The heritage of colonial knowledge is still deeply felt in Korea's contemporary social sciences. Their effort to achieve "the middle" & their ultimate frustration under colonial domination indicate the need for caution in temptations of both universalism & particularism & for serious analysis of the problem of time & space.

98S34821 / ISA / 1998 / 12062

Kim, Myung-Soo (U California, Los Angeles 90024 (tel/fax: 310-208-5205; e-mail: mskim@han.org)), **Ethnic Stratification in Japan.**

¶ Explores ethnic stratification in Japan, comparing 1995 data from the Social Stratification & Social Conscious Survey about Koreans in Japan & Social Stratification & Social Mobility Survey in Japan. Via orthodox socioeconomic achievement models, a latent structure on ethnic inequality is revealed, underpinning a hypothetical proposition: Koreans in Japan have faced educational meritocracy, & maximizing family & informal intraethnic network resources, they have achieved equal status as Japanese.

98S34822 / ISA / 1998 / 12063

Kimmel, Michael (State U New York, Stony Brook 11794 (tel/fax: 516-632-7708/8203; e-mail: mkimmel@datalab2.sles.sunysb.edu)), **The Invisibility of Masculinity in Classical Sociological Theory.**

¶ Examines several key canonical passages from several sociologists in the pantheon of classical sociological theory & subjects them to a feminist analysis. It is argued that, because gender is a structure of power, masculinity remains invisible as a mechanism of privilege. Thus, although the works in the canon seem to be about people—the falsely generic man—they are, in fact, deeply gendered works; ie, those such as Karl Marx, Max Weber, Émile Durkheim, & Alexis de Tocqueville were writing about what happens to men under certain historical circumstances: capitalism, bureaucracy, industrialization, democracy. Also explored are ways in which these theorists viewed women's subjectivity as a problem to be explained away—by reference to a lack of rationality, intentionality, or subjectivity itself—& thus maintained women's exclusion from the public sphere. Considered is the work of a few exemplary classical theorists, eg, Charlotte Perkins Gilman, W. E. B. Du Bois, & Georg Simmel, who saw through the false generic man to develop theoretical foundations for a critique of masculinist social theory at the turn of the century.

98S34823 / ISA / 1998 / 12064

Kinealy, Christine (Instit Irish Studies U Liverpool, L69 BBX England (tel/fax: 01704-549169/01695-579997)), **Parsimony and Providentialism: The Response of the British Government to the Irish Famine.**

¶ Explores the actions & policies of the British government during the Irish Famine (1845-1852) in terms of how a disaster of this magnitude could have taken place in the jurisdiction of the wealthiest empire in world, in a country neighboring the imperial center. The question of entitlement to food & other forms of relief is also examined. Comparisons are drawn with the official response to food shortages elsewhere in the British Empire.

98S34824 / ISA / 1998 / 12065

King, Anthony D. (State U New York, Binghamton 13901-6000 [tel/fax: 607-724-6638/777-4466; e-mail: adking@binghamton.edu]), **Writing Transnational Space: Fantasy, Imagination, and Reality in the (Non-Resident) Suburbs of India.**

¶ Exploring the architectural, urban, & spatial forms in which new, transnational & global regimes are represented & constituted, (mobile) transnational cultures & their relation to (fixed) transnational spaces are conceptually examined. The latter are understood as comprising various components, ie, their discursive construction & representation, the realm of the real, the spaces of writers constructing representations, etc. The diasporic culture of the nonresident Indian exemplifies a transitional culture. Material from the magazine, *India Today*, are drawn on to examine representations of "international," "world-class" residential property constructed in the suburbs of Indian cities in the name of nonresidents. It is argued, inter alia, that, while concepts of transnational culture & space are legitimate categories, how they are produced, represented, & consumed is to be understood only in relation to historically site- & culture-specific spatial conditions.

98S34825 / ISA / 1998 / 12066

Kipfer, Stefan (Dept Political Science York U, North York Ontario M3J 1P3 [tel: 416-499-1703; e-mail: kipfer@yorku.ca]), **On the Possibilities of the Urban: Rereading Henri Lefebvre's Open and Integral Marxism.**

¶ The work of Henri Lefebvre has long exercised a strong, if often indirect influence over the development of radical geography & critical urban sociology in the Anglo American world. The major interpretations & applications of Lefebvre's ideas represent an access point to the major currents & shifts in critical urban studies. The multiplying references to Lefebvre's work after the English translation of the "Production of Space" thus shed light on the state of contemporary urban theory as well. While the growing interest in Lefebvre has enriched urban studies invaluablely, it may also have the effect of reducing Lefebvre's work to an object of academic convention. Here, to guard against such a regression into fashion, a few observations are made about current conditions of critical academic practice, & the difficulties of actualizing & translating Lefebvre's insights in this intellectual context are highlighted. In contrast to interpretations that read Lefebvre for purposes of political economy or readings that claim Lefebvre as a "latent" postmodernist, Lefebvre's critical but persistent commitment to a heterodox (open & integral) Marxism is highlighted. Lefebvre's conception of the urban as a mediation & a revolutionary promise is a key access point to his unorthodox Marxism, if it is read in conjunction with his writings on everyday life, space, the state, & self-management. With reference to a number of contemporary debates in urban studies, ways of actualizing Lefebvre's urban Marxism for the purposes of urban research & action at the end of the 1990s are demonstrated.

98S34826 / ISA / 1998 / 12067

Kirchberg, Volker (Basica Research Instit, D-20095 Hamburg Federal Republic Germany), **Museums and Their Audiences—Different Research Approaches in American and European Studies.**

¶ Discusses the US's cumulative approach & Europe's segmenting life-style approach to cultural consumption, & highlights differences between them, drawing on a 1995 representative survey of 17,000 respondents in the Federal Republic of Germany. The independent variables are socioeconomic status, cultural preferences, & lifestyles, & the dependent variable is visits to four types of museums in Germany. Statistical analysis reveals that European/German cultural consumption patterns are more differentiated & more hierarchic than US patterns. Borders between patterns are more universally acknowledged & observed in Europe. By means of cultural consumption, the role structure in the Old World is more consolidated & has more prestigious quality than the role structure in the New World.

98S34827 / ISA / 1998 / 12068

Kiser, Edgar & Eaton, April (Dept Sociology U Washington, Seattle 98115 [tel/fax: 206-543-7290/2416; e-mail: kiser@u.washington.edu]), **Causes and Consequences of the Growth of the State: War, Revolt, and Taxation in Early Modern France.**

¶ It is now widely accepted that war was the primary cause of the growth of the state in early modern Europe, & that the increasing taxation required to pay for it often triggered revolts that affected the timing & form of the development of the state. Although the general contours of the relationships between war, taxation, & revolt are fairly clear, & sev-

eral impressive qualitative studies have documented aspects of the causal dynamics in particular cases, a systematic quantitative analysis of these central components of early modern state making is still lacking. To help fill this gap, a quantitative analysis is provided of the relationship between war, taxation, & revolt in France, 1514-1789.

Kittel, Bernhard & Traxler, Franz (Inst Socology U Vienna, A-1210 Austria [tel/fax: 43-1-29128-546/544; e-mail: kittel@soc.bwl.univie.ac.at]), **Tripartite Concertation and Wage Policy.**

¶ Presents a quantitative analysis of the role of tripartite concertation in wage regulation, drawing on data from 20 Organization for Economic Cooperation & Development countries, 1970-1990. Focus is on whether & how changes in the functional requirements of state regulation, which are usually conceived as a shift from demand- to supply-side policies, have affected the relevance of tripartite concertation as a means of wage regulation. The incidence of tripartite concertation & its change over time are explored, & the determinants of the observed changes are examined in terms of two alternative hypotheses on the development of wage regulation: (1) the disorganization thesis, which predicts a general delay of tripartism; & (2) the path-dependency hypothesis, which argues that regulation in society is contingent on a country's established institutions & traditions. Since these contingent settings differ across countries, the second thesis expects wage regulation to diverge—in contrast to the disorganization thesis, which makes a convergence argument. Also examined is the economic performance of tripartite wage concertation in comparison to alternative forms of wage regulation, including whether effective tripartite concertation requires certain supportive institutional arrangements that enhance its governance capacity.

Kivinen, Osmo & Ahola, Sakari (Research Unit Sociology Education U Turku, Hämeenkatu 1 FIN-20014 Finland [tel/fax: 358-2-333-5878/6524; e-mail: oskivi@utu.fi]), **Transition from School to Work—Tightening Bond—Broadening Perspectives.**

¶ In an era of expanding provision of higher education & rapid economic change, the social status of the credentials provided by universities has become problematic. On both the educational & labor markets, there are problems of mismatch between demand & supply. Current policies of education & employment in European & Nordic countries are linking schools to work. Both the education & the labor market are crowded by consultative agencies & experts collecting & transmitting information, testing potential employees, & acting as brokers of open positions. They operate within the public labor market rhetorics, emphasizing flexible & low organization & new industries that are supposed to solve the graduate employment problem. Here, it is assessed how well this rhetoric corresponds to the realities of working life. The functioning of the system encompassing the transition process is described, with attention to the correspondence between formal certificates & titles & the formal hierarchies & division of labor, & the relationship between the various knowledge & skill requirements of the work process & what is learned in the school. Also considered is the role of the state as the legitimator of the educational titles & the responsibility of the institutions of higher education for the actual employment of their graduates.

Kivinen, Osmo & Ahola, Sakari (Research Unit Sociology Education U Turku, FIN-20014 Finland [tel: 358-2-3335878; e-mail:

k

oskivi@utu.fi)), **Pathways to Success and Failure. The Role of Education in Social Mobility.**

¶ Traditional modeling of mobility tables is extended by introducing an extensive data set from the Finnish Longitudinal Census, which is used to analyze how certain well-known effects, such as the origin-occupation inheritance effect or the education-occupation merit-selection effect, are actually produced in different social fields. To locate the paths to success & failure, differences between different fields of education & gender differences in the educational choices are examined. A conceptual framework adapted from Raymond Boudon treats mobility as a part of the process whereby social opportunities are produced & reproduced. According to the model, inequality of social opportunity is a function of inequality of educational opportunity, social inheritance, & merit selection. In the educational system, social background is effective through a series of eliminating processes. Those from the working class, eg, who have managed to climb up the educational ladders, have gained a surplus of cultural capital that guarantees them relatively good standing in the processes of merit selection & allocation of social positions. The role of social inheritance plays only a minor part in the formation of the inequality of social opportunity, although it is significant in relative terms.

Kjellman, Arne (Dept Information Technology Mid-Sweden U, Fack S-85170 Sunpöjvall (tel: 46-60-148678; e-mail: arne.kjellman@ite.mb.se)), **Is Reality Nothing Else but a Useful Model?**

¶ The materialistic postulate that there is one "external world of things" of common access to all humans sometimes leads science astray. The subjectivistic epistemological approach, on the other hand, does not need such a daring & possibly misleading postulate. Instead, starting from the truly subjectivistic knowledge of conscious experience—which intuitively is very obvious to any human being—it is possible to show that we should replace the notion of an "outside materialistic reality" by the hypothesis that there might be some "external common grounding," which merely suggests its existence by inferred "messages from outside." These messages—which, in the materialistic approach, are juxtaposed to the impact of sensations occurring to a cognitive system—are truly private creations, thereby "painting a private picture of an imaginary outside world." In spite of this perceptual privacy, it is possible to show that different observers discover through communication that they can establish a correspondence between their subjective entities & reach a collective agreement on objective knowledge without any postulation of an "external world" in the physical materialistic sense. Such an approach also shows that all there is, in human consciousness, a private comprehension about "universe," ie, the *priverse*. This interpretation opens up the way to a neat comprehension of conscious experience, as being the center of perceptions & inner experience. In this setting, it is pointless to assign states to the objects of the world. What possibly could be assigned states when using the state space approach are model entities—& nothing else. In this approach, terms like properties, objects, systems, truth, & universe lose their objectivity; they reduce to collective common agreements—bare paradigms in the Kuhnian sense—& natural & social sciences conflate. Measurements, perceptual imprints & inner feelings are nothing more than subjective facts to be treated at the same level of experience; it is just the choice of concepts, tools, & measuring sticks that make the difference.

Klein, Juan-Luis, Fontan, Jean-Marc & Tremblay, Diane-Gabrielle (U Québec, Montreal H3C 3P8 (tel/fax: 514-987-3000/6784; e-mail: Klein.Juan-Luis@uqam.ca)), **Territory and Innovation in the Urban**

Environment: The Case of Montreal.

¶ As the result of two important factors—economic globalization & local community mobilization—Montreal, Quebec, has experienced important socioeconomic transformations. Focus here is on spatial & industrial patterns that have emerged from these transformations since 1980. After first introducing economic & demographic data on the Montreal region, discussed is the notion of a "donut effect," which characterizes recent North American metropolitan development. Focus then shifts to the rise of high-technology & related industries in suburban areas & the fall of low-technology & unskilled manpower-based industrial sectors in the inner city. The community-based reaction to the structural dualization caused by these processes in some central districts is examined. Community mobilization is creating a bottom-up socioeconomic development approach. A conceptual frame analysis is proposed to understand the role of community global development; it is based on important notions such as identity, territorial consciousness, partnership, & sociospatial capital. Globally, the case of Montreal shows the possibilities & the limits of some of the new North American metropolitan restructuring strategies in a world shaped by postmodernity & post-Fordism.

Klein, Uta (Instit Soziologie U Münster, D-4400 Federal Republic Germany (tel/fax: 0049-251-8323191/8323193; e-mail: uklein@uni-muenster.de)), **"Our Best Boys." Military and Gender in Israeli Society.**

¶ It is contended that the military is the main agent of Israeli society shaping gender roles, constructing masculinity as a military masculinity & thus, being the main source of maintaining gender inequality. A case study of Israeli society is presented to examine how militarism & war affect women & men differently. Both men & women are conscripted, making Israel unique. This uniqueness not only has led to the myth of the woman soldier fighting shoulder to shoulder with her male comrade, but also has served as a role model for several armies around the world. Focus is on showing how national duties are gendered in times of conflict & war & how times of conflict sharpen the split between gender. After presenting the historical roots of the centrality of the military discourse (Zionist movement & masculinity) & the Israeli-Arab conflict as an actual source, military service is described as a rite of passage to masculinity in Israeli society. The impact on gender roles in both the private & public sphere is analyzed in conclusion.

Kling, Joseph (Saint Lawrence U, Canton NY 13617 (tel/fax: 315-229-5279/5819; e-mail: jkli@music.stlawu.edu)), **Social Narratives and Social Movement Formation: Implications for Collective Action in the Era of High Modernity.**

¶ Reasoned conjecture as to the future direction of social movements must draw on some extant theory of their formation & decline. Both the theory of social frames & the phenomenological study of everyday life are considered as entry points into the practices through which persons face choices, forge identities, & create social movements. These conceptual approaches are attached to the case study method. Exploring relations between particular social movements in particular historical eras, the question is raised of what these relations might mean under the contemporary conditions of high modernity. Whatever the historical sources of their development, social movements are constructed from the interweaving of personal & social biographies—from the narratives people rehearse to themselves about the nature of their lives & about the social orders through which those lives are cast. Because the construction of social narrative is, by definition, both contingent & open, the specific forms that social movements take can never be projected with precision. Yet parameters might be proposed, & possible formations identified. Through brief examination of the millenarian movements of early modernity, & the artisan movements of early industrialism, suggestions are offered as to what social movement forms & narratives might emerge under the fragmenting/globalizing conditions of postindustrial society.

Kloze, Jan Willem Te (Centre Recreation & Tourism Studies Wageningen Agricultural U, NL-6703 B Netherlands [tel/fax: 31-317-482762/482166; e-mail: jan_willem.tekloze@recr.rpv.wau.nl]), **Leisure Activities and Integration of Turkish Families in Two Cities in the Netherlands.**

¶ Data on the leisure behavior of Turkish families in Arnhem & Enschede, Netherlands, are used to investigate how these ethnic minority families spend their free time & how they use the available facilities. Also explored is the extent to which Turkish families adopt cultural elements of Dutch society in their leisure behavior. Most Dutch families indicated that they seek integration in Dutch society at a local level. After three generations, however, Turkish people appear to remain predominantly oriented toward their own cultural group. Leisure of Turkish families is strongly related to gender differences. Although respondents express a need for more social contact in the community, they experience inhospitable behavior from their Dutch neighbors. It is remarkable to notice that the sociospatial differences between Arnhem & Enschede hardly differentiate the Turkish experiences. The availability of some leisure & recreational facilities (eg, a park, playground, or Turkish coffeehouse) make some difference.

98S34839 / ISA / 1998 / 12080

Kloze, Jan Willem Te & Hoog, Kees De (Centre Recreation & Tourism Studies Wageningen Agricultural U NL-6703 B Netherlands [tel/fax: 31-317-482762/482166; e-mail: jan_willem.tekloze@recr.rpv.wau.nl]), **Between Freedom and Commitment: The Post-Modern Family Discovered. Sociological Research into the Typologies of Family and Leisure Domains.**

¶ Explores the family, upbringing, & leisure in the Netherlands, drawing on structured interview data from 331 mothers with at least one child, age 0-18, in the southern towns of Arkel & Kedichem. Research is compared to studies conducted in 1960 & 1972. Findings indicate the existence of three family types in rural areas: the modern Western (contemporary: traditional), transitional, & postmodern, with its subtle leaning toward the value of leisure. The general family typology demonstrates that, in the late 1980s & early 1990s, 21% of the families were characterized as modern Western (traditional), 64% as transitional, & 15% as postmodern. Viewed from the family leisure typology angle these % show up as 54%, 34%, & 12%, respectively, because the family leisure typology scores are more conservative than the general family typology. The themes under the general family sociological denominator deal with opinions on sex-specific task division, independence in the marriage relation, the marriage institution, & motherhood. In terms of leisure opinions were sought about task division in leisure time, definition of leisure time, togetherness in leisure time, freedom given to the partner, sex-specific leisure time upbringing, importance of TV & games, & child autonomy during free time. Results are examined against the background of individualization, emancipation, & technological advancement & discussed in terms of moral responsibility, pure relationship, the morphogenetic vs the morphostatic family, & the associative vs the hyperindividualistic family.

Klüver, Jürgen & Schmidt, Jörn (U Gesamthochschule Essen, Federal Republic Germany 45117 [tel/fax: 0201/183-3241/3240; e-mail: juergen.kluver@uni-essen.de]), **The Geometry and Dimensions of Social Systems.**

¶ In sociology, geometrical concepts are mainly used metaphorically, yet it is possible to apply the mathematical concepts of geometrical space & dimensions to social fields. Demonstrated here is that the concept of mathematical dimensions can be introduced into social systems theory: The dimensions of social systems, ie, societies, are defined as the different levels of social differentiation, ie, social segments, social strata, & functional social subsystems. A computer model is constructed to analyze the consequences of social differentiation in a space of three dimensions. The model is a (stochastic) cellular automaton that is changed by a genetic algorithm. Three findings are outlined: (1) Social evolution of different levels of social structures is very improbable because a lot of different parameter values must be combined at the same time, explaining the fact that the evolution of the different social levels happened only very seldomly in human history. (2) The more different levels a system contains, the more sensitive the system is to external perturbations & the more difficult it becomes for the system to reach & maintain simple attractor states, as is known about modern societies. (3) Social relations on one level are disturbed & partly dissolved when the system evolves to the

next levels of differentiation. It is concluded that there may be mathematical reasons for the fact that, in modern societies, traditional relations are permanently changed & dissolved.

98S34841 / ISA / 1998 / 12082

Knezevic, Ivanka (Dept Sociology U Toronto, Ontario M5S 1A1 [e-mail: knezevic@chass.utoronto.ca]), **Cookbook Urbanism as an Element of Cookbook Capitalism: Applicability of Urban Sociological Theory on Eastern Europe.**

¶ Examines the applicability of existing urban sociological theory to & its policy ramifications on recent changes in postsocialist countries, based on the "transformation thesis" about general social & political changes in these countries. Like other fields, urban sociology must acknowledge that the present continues to reproduce some systemic traits of socialism, & changes in diverse areas of social life are not perfectly coordinated. Interrelated reasons for reproduction of socialist relationships in urban policy, planning, & housing are elite interests, institutional & cultural lag, pursuance of social justice goals, & redistribution of social policy priorities. The neoclassical economy approach, based on demand-driven explanation of exchange values, is not useful in the analysis of postsocialist urban processes; state intervention & the paramount importance of use values—unavoidable in a situation of extreme housing shortage & equal entitlement to residential space—are outside its scope. Housing shortage explains the failure of residential privatization in Russia, which was predicated on tenets of neoliberal capitalism. Logan & Molotch's structuration-modified approach emerges as suitable for postsocialist studies. Its understanding of "urban" can be modified for the understanding of processes, wherein the "urban growth machine" operates at the national, rather than the municipal, level. At the level of urban policy making, the influence of recent municipal policy models from the West (born mostly out of fiscal stress) is examined. The initial low level of urban services, to which these models were applied, caused a rapid decline in the urban quality of life. It is concluded that the semblance of a theoretical vacuum in postsocialist urban research is due to an ideological, ie, teleological, concept of transition toward a specified capitalist model.

98S34842 / ISA / 1998 / 12083

Knoll, Thomas L. (Dept Social Science Halmstad U, S-30118 Sweden [tel/fax: 46-35-16-7100/7264; e-mail: Thomas.Knoll@isb.hh.se]), **The Stigmatization of Unwed Motherhood: An Anomaly of Late Modernity.**

¶ Voluntarily single-parenting women deserve to be appreciated as pioneers of late-modern family life, but instead, they & their children are not only driven into poverty, but are constructed as a social problem in a way designed to elicit popular disapproval. As a sociological phenomenon, the discrimination & disparagement of single mothers in a late-modern environment appears as a manifestation of countermodernity bordering on perversion. In reality, it hurts millions of women & children. The single-parenting woman is at the focal intersection of a cluster of apparently insoluble contradictions resulting from late-modern individualization on all personal & social levels, & such women accomplish the impossible inventing workable solutions of these very contradictions. Here, utilizing empirical research & recent sociological theory on late modernity, an attempt is made to understand the stigmatization & socioeconomic discrimination of female heads of household as manifestations of a complex countermodern inability to appreciate & support their creative innovations. Explanations are sought in two related areas: (1) frustration over the psychological & social price of individualization that late-modern society exacts from its members, particularly when freedom of choice is enforced rather than chosen, & (2) class-related interests (part of which are euphemized as market requirements).

98S34843 / ISA / 1998 / 12084

Knottnerus, J. David & Berry, Phyllis (Dept Sociology Oklahoma State U, Stillwater 74078-4062 [e-mail: jdk2307@mvs.ucc.okstate.edu]), **Spartan Society: Structural Ritualization in an Ancient Social System.**

¶ Various historical sources are drawn on to examine the social processes involved with the preparation & training of male youth (& young adults) for adult citizenship in Spartan society, 600-371 BC. A theory of structural ritualization focusing on group dynamics, ritualization, & multilevel structural processes is utilized to explain how dominant ritualized practices & structural arrangements of Spartan society were reproduced in these youthful actors (Knottnerus, 1997). Classical Sparta possessed a unique structure in the Greek world; it was a state-run social system dedicated to the development of all free male citizens as military warriors.

k

Contributing to the *eunomia* (good order or, more generally speaking, way of life) was the condition of *homoioi*, which referred to the equal (peer) status of citizen warriors, especially their common way of life. The core attributes characterizing these actors (& Spartan social arrangements) were (1) social harmony, unity, & homogeneity (equality) of group members; (2) hierarchical distinctions & disciplined obedience to authorities & the state; (3) deceptiveness, secretiveness, & an opportunistic orientation (especially in regard to techniques of domination, militaristic activities, & propaganda); & (4) aggressiveness, competitiveness, & a militaristic bearing. The training system in which youth were embedded at age 7 exposed them to an array of ritualized practices that fostered the development of these Spartan qualities. By full adulthood, these attributes had become routinized aspects of their personal & social lives. It is concluded that four factors—salience, repetitiveness, homologousness, & resources—played a key role in the ritualization processes that generated actions, relations, & structures similar to those occurring in the larger social milieu. Results provide the basis for a subsequent comparative analysis of structural ritualization in the Greek city-state of Athens during the same time period.

98S34844 / ISA / 1998 / 12085

Knowles, Caroline (U Concordia, Montreal Quebec H3C 1M8 (fax: 514-848-4539; e-mail: Knowles@vax2.concordia.ca)), **Personal and Public Maps of Empire.**

¶ Explores the racialization of whiteness, specifically, the tensions between home & away in narratives of Englishness sustaining those whose mobile lives were organized by empire business. The maps of both personal & territorial expansion in empire service play a strategic role in the making of Englishness.

98S34845 / ISA / 1998 / 12086

Kobayashi, Karen Midori (Dept Sociology & Anthropology Simon Fraser U, Burnaby British Columbia V5A 1S6 (tel/fax: 604-291-3146/5799; e-mail: kkobayas@sfu.ca)), **The Nature of Support in Older Parent-Adult Child Relationships in Japanese Canadian Families.**

¶ Explores intergenerational support systems in later life by examining the factors, particularly the value of *oya koh koh* (filial obligation), affecting the nature of support from adult children to older parents in Japanese Canadian families, using semistructured, face-to-face interviews from a random sample of 100 older *nisei* (second-generation) parent-adult *sansei* (third-generation) child dyads. Focus is on the provision of emotional, service, & financial support. Results of the logistic regression analyses indicate that *oya koh koh* has a significant effect on children's provision & frequency of emotional support but no effect on financial or service support. Parent's health & socioeconomic status however, are found to have significant effects on financial & service support provision. Child's availability is also a major determinant of financial support. Findings are discussed in terms of the Asian Canadian ideal family myth & the changing contract across generations.

98S34846 / ISA / 1998 / 12087

Koc, Mustafa (Ryerson Polytechnic U, Toronto Ontario M5B 2K3), **From National Monopsony to Transnational Oligopsony: The Restructuring of Tobacco Economy in Turkey.**

¶ Compares three regulatory regimes in the tobacco economy in Turkey since 1862, arguing that changes in tobacco regularities reflect changes in the perceived role of the state in the economy, as well as changing patterns of integration of the Turkish economy into global markets. The period, 1862-1925, was of peripheral integration, where the tobacco economy was controlled by the *Regie Cointeresse de tabacs de l'Empire Ottoman*, a consortium controlled by various foreign banks. The period, 1925-1980, was the era of nation-state formation & import substitution industrialization, during which the Turkish state monopolies were the sole regulatory agency. The tobacco economy grew through state subsidies, while merchant capital continued to serve as the suppliers of foreign tobacco manufacturers in the export market. The post-1980 period, especially after 1986, was the era of neoliberalism, export promotion industrialization, & intensification of global integration. The national monopoly in tobacco was abolished & the transnational corporations began to produce foreign cigarette brands in Turkey. Different patterns of concentration & differentiation among producers & corresponding changes in the dominant forms of production & integration to the markets are examined in conclusion.

98S34847 / ISA / 1998 / 12088

Koch, Christian (Inst Technology & Social Science Technical U Denmark, DK-2800 Lyngby (tel/fax: 45-45-25-60-70/88-20-14; e-mail: ck@its.dtu.dk)), **Controversy or Silent Consent? Participation and Social Influence on Information Technology in Distributed Organisations.**

¶ Examines the organization as a framework for participation with focus on possibilities for employees to impact the development of integrative information technology. Information technology systems integrate functions in & outside the traditional organization. Case studies of Danish industry indicate that the organization is a poor unit of operation for participation & influence efforts related to integrative information technology. It is proposed, rather, to use a set of distributed organizations as the unit for participation & influence. Such a set can consist of geographically connected organizations & information technology suppliers. This new unit is needed to develop an appropriate employee answer to the challenges of distributed organizations, but is difficult to realize. The necessary revival of the Scandinavian union-based strategy of collective resources is discussed, arguing for other societal strategies breaking the "single company" paradigm. Case studies in Danish & German industry show that the planned developments from management coalitions consisted of cross-organizational linking, implementation of information technology, & outsourcing. Shop stewards' response was heavily linked to restricted pieces of the total distributed organization.

98S34848 / ISA / 1998 / 12089

Kofler, Angelika & Giorgi, Liana (Interdisciplinary Centre Comparative Research, Hamburgerstr 14/20 A-1050 Vienna Austria (tel/fax: 43-1-5873973/587397310; e-mail: ak@iccr.co.at)), **Sex and Money: An Analysis of the Role of the "Wicked Stepmother" in Contemporary Family Systems.**

¶ Synthesizes two family-related topics—the stepmother & family systems—to address the issue of chronic transition, which encompasses overlapping family systems, & the role of the stepmother in this context, showing the development of her role over time in perception & everyday life. Investigated are the reasons for the traditionally negative perception of stepmothers from their & other family system members' perspectives. Two motivational domains are identified: the dyadic relationship & economic considerations. It is found that chronic transitions are one of the most important characteristics of contemporary & future family life, & the stable perception of the role of stepmothers exemplifies the unchanging presence of archaic elements in contemporary changing societies.

Kohli, Martin (Free U Berlin, D-10715 Federal Republic Germany (tel/fax: 49-30-85002-210/205; e-mail: kohli@zedat.fu-berlin.de)), **The Generational Contract—Public and Private.**

¶ In recent years, a growing body of research has demonstrated the existence & importance of transfers between adult generations in the family. The relation between transfers in the family & those through the public generational contract of old-age pensions has traditionally been seen as one of substitution (or "crowding out"). The new evidence shows, however, that there is a net flow of private resources from older to younger generations, ie, in the opposite direction of the public transfers. What are the links between public & private transfers? To what extent do the private transfers from older to younger generations in the family depend on public transfers through old-age pensions? These & related questions are addressed, based on the new German Aging Survey & datasets from other countries.

98S34850 / ISA / 1998 / 12091

Kohvakka, Rauli J. J. (Statistics Finland, SF-00022 Helsinki (tel/fax: 358-9-1734-3448/3264; e-mail: rauli.kohvakka@stat.fi)), **On the Road to Director's Chair; Young Film Directors and the Field of Film Production in Finland.**

¶ Presents results of a study in Finland on the situation of young film directors. After describing characteristics of the field & what young directors actually do, explored is how directors get to sit in the director's chair, ie, how they make it in this field. Questions related to young directors' professional identity are also discussed: how they see their own work as part of the field; what directing is; how they see their own films; how they see the other professionals they work with; & how being a director of the youngest generation is reflected in their collaboration patterns. Gender differences are noted.

98S34851 / ISA / 1998 / 12092

Koivusalo, Meri Tuulikki & Ollila, Eeva (Globalism & Social Policies Programme STAKES, PO Box 220 Helsinki Finland SF-00531 [tel/fax: 358-9-3967-2304/2485; e-mail: meri.koivusalo@stakes.fi]), **International Actors and the Shaping of Global Health Policy.**

¶ Though the locus of global health policies has been set by the World Health Organization in the 1980s & 1990s, more international actors introduced their own emphases & agendas that have not necessarily been compatible with the global strategy of health for all. In addition, an increasing shift toward policies "by default" can be observed. Actors such as the World Trade Organization & Organization for Economic Cooperation & Development influence policies through their internationally negotiated agreements in other fields, but they rarely discuss their implications in the context of health & social policy. Thus, the scene of global health policies needs to be seen as one with multiple actors & varying agendas, necessitating elaboration of the implicit assumptions & values involved. While economic & trade policies are legitimized by the expected gains in health & well-being, it is necessary to evaluate the extent to which the current global means for economic growth influence the preconditions for healthy public policies & provision of health services for all at national & local levels.

98S34852 / ISA / 1998 / 12093

Kojemiakina, Valentina Alexeevna (Instit Linguistics Russian Academy Sciences, Moscow 103009 [tel/fax: 07095-290-52-68/05-28]), **Linguistic Situation in Republic of Kalmykia.**

¶ In the Republic of Kalmykia, both Russian & Kalmyck are recognized as state languages. The complicated history of Kalmyck language development can be divided into several stages, the beginning of the last one dating to 1917. Since then, the internal development of the language has been supplemented by abundant borrowings from Russian, & later, from other European languages. The Kalmyck alphabet had been subject to reforms until 1941, when the sixth alphabet (based on Cyrillic) was introduced; it continues to be used. In 1943, Kalmycks were deported to the eastern regions of the USSR & settled in the midst of the Russian-speaking population. Thus, the characteristic feature of the linguistic situation in present-day Kalmykia is that Kalmycks have an inadequate command of their native language, whereas their command of Russian is good. The Kalmyck language is now undergoing a revival, however, & in 1991, the government adopted a long-term program to further its development, including practical measures to promote its implementation.

Kojima, Hiroshi (National Instit Population & Social Security Research, 1-2-3 Kasumigaseki Chiyoda-ku Tokyo 100 Japan [tel/fax: 81-3-3595-2987/3591-4821; e-mail: h-kojima@so.ipss.go.jp]), **Determinants of Middle-Aged Couples' Coresidence with Their Older Mother in Japan.**

¶ Explores demographic, economic, housing, & geographic determinants of middle-aged couples' coresidence with their mother in Japan, applying the multinomial logit model to 1989 national household survey data. Focus is on the sibling configuration of middle-aged couples that constrains the availability of children to live with an older mother. Results show that age & eldest-status of middle-aged husbands have large positive effects on coresidence with their mother, while their wives' eldest daughter status (being the oldest among daughters without brothers) has a negative effect. A higher income (expenditure) level, nonowned housing, & living in the Tokyo metropolitan area tend to discourage coresidence with the husbands' mother, while larger housing & living in rural areas tend to encourage it. A larger house & living in the Kyushu area tend to encourage living with the wives' mother, while a smaller house & living in a small or medium-sized city tend to discourage it. The effects of husbands' eldest-son status & wives' eldest-daughter status suggest that the primogeniture custom, in exchange for care & support of older parents, still remains in contemporary Japan. However, there are some indications of a new trend for older parents to seek care & support from a daughter rather than a daughter-in-law as reflected in the effects of other sibling configuration variables of each spouse. This may be partly due to the significant change in the sibling configuration of the middle-aged generation caused by the rapid fertility decline after the short postwar baby boom. This result suggests that (1) the intergenerationally extended households may not be relied on too much any more as a source of care & support for older persons because of the changing demographic & other constraints; & (2) social policy measures, aiming at intergenerational solidarity & gender equality, should be strengthened in response to these changes.

98S34854 / ISA / 1998 / 12095

Kojima, Hiroshi (National Instit Population & Social Security Research, 1-2-3 Kasumigaseki Chiyoda-ku Tokyo 100-0013 Japan [tel/fax: 81-3-3595-2987/3591-4821; e-mail: h-kojima@so.ipss.go.jp]), **The Effects of Sibling Configuration on Education and Labor Supply in Japan.**

¶ Examines the effects of sibling configuration on education & labor supply among Japanese single youths, applying the multinomial logit model to the data from the single samples of the 1992 National Fertility Survey. According to a preliminary analysis, the probability of finishing only junior high school (including dropping out from senior high school) increases, & the probability of completing college decreases, as sibship size increases among male single youths. Eldest sons are more likely to have unstable employment. However, among female single youths, sibship size does not have any significant effects, but having older sisters decreases the probability of finishing college. Sibling configuration does not have any effects on employment. Some of these results can be explained in terms of the human capital approach, taking into account the Japanese socioeconomic & cultural context.

Koku, Emmanuel & Wellman, Barry (U Toronto, Ontario M5S 2G8 [tel: 416-978-0250; e-mail: ekoku@chass.utoronto.ca]), **The Emergence of a Scholarly Network.**

¶ Attempts to explain the emergence, persistence, & dissolution of a scholarly network, arguing that its emergence is in response to the marginalization of members' research interests in their individual departments, faculties, & institutes. In a bid to develop their research interests, members find it expedient to join & form collaborative ties with others sharing mutual interests. The extent of returns & benefits in the network is partly a function of each member's location in the network as well as their investment of time & resources. The scholarly network is composed of heterogeneous scholars & professionals, with varying interests & departmental/institutional affiliations. Membership is largely voluntary, with no direct financial benefits. Members in ScolNet are united by their research interests in human computer interaction as well as human-centered design of knowledge artifacts & tools, & their effects on human interaction. Members meet in several forums—including seminars, retreats, & conferences—to exchange ideas. Results are presented of preliminary interviews conducted with the members of ScolNet regarding perceived benefits & costs of joining ScolNet, & extent & frequency of each member's interaction & communication with others in the network, supplemented by observations of interactions among members of ScolNet.

Kolesnik, Natalia Grigorievna (Instit Linguistics Russian Academy Sciences, Moscow 103009 [tel/fax: 07095-290-52-68/05-28]), **The Linguistic Situation in the North Caucasus.**

¶ In Russia, the indigenous nations of the North Caucasus speak languages belonging to different language groups & interact in complicated ways. The languages function in different spheres of communication, eg, education, mass media, literature, theater, & administration, & are used in monoethnic speakers' groups during unofficial communication. Russian is used in all of these spheres, functioning as a means of interethnic communication across the region. Rather acute problems concern "non-title" nations (ie, the Abasins & Nogays) that are dissatisfied with the lower functional level of their languages as compared to "title" nation languages (eg, Karachay, Cherkessian, Kabardinian). Close relations between some peoples—the Karachays/Balkars & the

k

Cherkess/Kabardins—who use the same languages in different republics, increases the number of speakers for their languages & improves their functional positions. There are 11 official languages (including the “new literary”) in Daghestan, where the linguistic situation also has some peculiarities. Analysis of language life of the North Caucasus may help to understand some aspects of the vitality of ethnic minority languages.

Kolstad, Arnulf (Dept Psychology Norwegian U Science & Technology, N-7055 Dragvoll Trondheim (tel/fax: 47-73-59-19-79/20; e-mail: arnulf.kolstad@sv.ntnu.no)), **Do the Olympic Games Promote Mutual Understanding and Internationalism or Ethnocentrism and Nationalism?**

¶ Semistructured questionnaire data from 3,081 respondents are drawn on to measure the impact of the Games on the degree of ethnocentrism & nationalism among residents of Lillehammer, Norway, which hosted the XVII Olympic Winter Games in 1994, & in the general Norwegian population from 1989 to after the Games. Given the goals of the Olympic Games & the values they are said to promote, one would expect a reduction in ethnocentrism & increased tolerance toward people from other cultures. However, the results here showed a short-term effect in the opposite direction. The population in the host city became more ethnocentric than they had been in the years before. The spectators visiting the events were significantly more ethnocentric than the general Norwegian population. The Olympic Games seem to promote nationalism instead of mutual understanding.

Kolstad, Arnulf & Bjørnsen, Petter (Dept Psychology Norwegian U Science & Technology, N-7055 Dragvoll (tel/fax: 47-73-59-19-79; e-mail: arnulf.kolstad@sv.ntnu.no)), **Sport Spectators and Their Value Systems.**

¶ Sport spectators' value systems & attitudes toward sports were compared with those of people not interested in sports (total N = 3,700), drawing on questionnaire survey data. It was predicted that sports spectators, assessed through a two-item index, would identify more with their respective in-group & would give more preference to the values that foster & maintain group cohesiveness than would those not interested in sports. The results support the hypothesis. Sports spectators gave higher priority to values like good manners, politeness, obedience, honesty, & loyalty. Those not interested in sports valued more tolerance, unselfishness, & imagination. Further, sports spectators rated attributes like popularity, sense of humor, high income, & fame as primarily important for people as individuals, & they were more positive toward competition, were more ethnocentric, & valued more their membership of the in-group.

98S34860 / ISA / 1998 / 12101

Kolstad, Arnulf & Bjørnsen, Petter (Dept Psychology Norwegian U Science & Technology, N-7055 Dragvoll Trondheim (tel/fax: 47-73-59-19-79/20; e-mail: arnulf.kolstad@sv.ntnu.no)), **Consequences of the Olympic Games on the Host City Residents' Value Systems.**

¶ A questionnaire survey of attitudes toward sport & the 1994 Olympic Games in Lillehammer, Norway, has been carried out annually since 1989 to measure values in the host city population. Compared here are the values of those in favor of & those against the Winter Olympics. Changes in the value hierarchies that resulted from holding the Games are also analyzed, drawing on semistructured questionnaire data from a random sample of 1,672 residents. Those in favor of the games gave higher priority to more traditional, conservative, & authoritarian values. Holding the XVII Winter Olympic Games produced no significant changes in overall value hierarchies. The ideals expressed in the Olympic Charter did not influence the values of the host city residents.

Kompanichenko, Vladimir N. & Devezas, Tesselano C. (Complex Analysis Regional Problems Instit, Birobijan 682200 Russia (e-mail: shamov@ivep.khabarovsk.su)), **Global Cycle of Human Civilization: Qualitative and Quantitative Basis.**

¶ Presents an estimation of the most probable normal duration of human civilization existence, drawing on qualitative & quantitative approaches. The following principles form the base of both approaches: (1) the starting point of civilization development is the beginning of the Neolithic Age, i.e., about 10,000 years ago & (2) currently, mankind is at the end of the growth stage, so the further significant increase in human population is perspective impossible. The qualitative approach used analogies

between two cooperative systems of different ranks—a man cell's community & mankind (people community). Four stages each occupy about 25% of human life cycle's duration: growth (ages 0-18), inner development (ages 18-36), fixed stage (ages 36-54), & aging (ages 54-72). The duration of the growth stage of human civilization is about 10,000 years so, for the whole cycle, it follows that humans will exist for a total of 40,000 years. To prove that the most likely timing for the growth phase is about 10,000 years, a mathematical method using logistic curves was applied, resulting in the final conclusion that we are, in fact, at the end of the growth phase. This preliminary estimation points to the colossal potential of humankind & the reality of overcoming the approaching global crisis, typical of transitions between phases.

König, Claus-Dieter H. R. & Happe, Barbara (Institut Political Science Philipps U, D-35032 Marburg Federal Republic Germany (tel/fax: 49-6421-63631)), **The Effects of Democracy in Latin America and Africa—Kenya and Brazil Viewed from the Perspectives of the Urban Poor.**

¶ Presents the results of fieldwork carried out in four marginal settlements each in Brazil & Kenya. Data were collected via quantitative methods of political culture research as well as qualitative in-depth interviews with local leaders. In spite of all the differences between Brazil & Kenya, & despite the democratization, clientelist patterns of action remain the most rewarding for the urban poor in both countries. In Brazil, democratic structures of interest representation have become institutionalized. However, it is found that effectiveness in voicing the interests of the urban poor is limited. In neither country has democratization effected a substantial change in political participation of the urban poor. Dissatisfaction with politics & political institutions does not transform into protest actions. The urban poor choose their courses of action according to what they believe may be efficient in the short or medium term. As a result, they prefer clientelist exchange patterns. Democracy is not a value to the urban poor; they expect an outcome from it. If an outcome can be achieved more successfully by clientelist structures, those prevail.

Konopasek, Zdenek (Institut Sociological Studies Charles U, XR-11636 Prague 1 Czech Republic (tel/fax: 420-2-24-49-14-89/22-79-50; e-mail: konopas@s.fsv.cuni.cz)), **Towards Biographical Research of State Socialism: Some Notes on Methodology and Theory.**

¶ Addresses methodological & theoretical problems related to biographical studies on state socialism, arguing that such research tends to promote a view of state socialism that constructs ordinary people as those oppressed by, coping with, & resisting a political regime, which is constructed as something that intervenes in ordinary life. Biographical researchers studying the world of informal networks & private relationship under the surface of the official institutional order, however, often speak of this as the true reality of state socialism. State socialism is thus presented as a regime based on person-to-person relationships that remove impersonal rules & public institutions. Thus, it is shown that biographies can reveal different views of state socialism. In this light, a research project was conducted, based on a combination of the biographical approach & so-called actor-network theory. In this project, communist power is viewed not as something that intervenes in ordinary people's lives, but rather, something that is (re)produced by & through ordinary people's lives. It is not something that explains, but rather, something to be explained. Biographical accounts provide rich & interesting empirical data for such a purpose.

Kooistra, Daphne H. (Dept Human Geography Nijmegen U, NL-6500 HK Netherlands (tel/fax: 31-24-361-3054/1841; e-mail: d.kooistra@BW.KUN.NL)), **Using Place Attachment to Explain Col-**

lective Behavior in Growth Coalitions and Industrial Districts.

¶ Two research topics, the urban growth coalition & the industrial district, having respectively dominated the fields of urban politics & industrial economics during the past 20 years, are discussed jointly as examples of the new of governing in the public & private sectors, respectively. This new way stresses cooperation instead of competition & has resulted in collective behavior. In the urban growth coalition, public & private parties are cooperating to formulate & implement a local economic development policy, whereas in the industrial district, entrepreneurs & business people join forces to innovate & remain competitive in the global market. To be able to explain & possibly to influence the development of these highly successful & industrial instruments, it is important to understand the actors' motivation behind participation. After discussing the conceptual frameworks of the urban growth coalition & the industrial district & the problems related to collective behavior, focus shifts to another factor that they have in common—their regional character. In both cases, collective behavior is characterized by a strong regional or even local bias. To look into this geographical aspect, the concepts of "embeddedness" & "place attachment," drawn from the fields of socioeconomics & economic sociology, are examined. It is hypothesized that a person's place attachment—ie, rational, normative, or affective relationship with the physical, cultural, or social aspects of the immediate surroundings—will influence willingness to participate in an urban growth coalition or industrial district.

98S34866 / ISA / 1998 / 12107

Kooistra, Daphne H. (Faculty Policy Sciences Nijmegen U, NL-6500 HK Netherlands (tel/fax: 31-24-361-30-54/18-41; e-mail: d.kooistra@bw.kun.nl)), **Place Attachment in Industrial Districts: Its Importance for Innovation and Economic Growth.**

¶ Industrial districts, tightly knit & integrated networks of regional production, are characterized by a high level of innovation & flexibility of production. They are also highly localized: ie, production & innovation take place in a region usually specialized in a limited number of products. Here it is explored whether geographical particularities of the districts have influenced the development of this type of regional specialization, & the motivation of private actors to develop this type of collective behavior. After describing the characteristics & advantages of production & innovation in an industrial district in the so-called "third Italy," discussion shifts to the role of "place attachment," & its importance in explaining collective behavior. It is hypothesized that a person's place attachment—ie, rational, normative &/or affective relationship with the physical, cultural, &/or social aspects of immediate surroundings—will influence his or her willingness to participate in the industrial district. Understanding the geographical aspect, or in this case, the place attachment of local private actors, also gives insight into whether the concept is transferable.

Koser, Khalid (School African & Asian Studies U Sussex, Falmer Brighton BN1 9QN England (tel/fax: 441273606755/620662; e-mail: K.Koser@sussex.ac.uk)), **Experiencing Migration Control: 32 Iranian Asylum Seekers in the Netherlands.**

¶ Data obtained during in-depth interviews with 32 Iranian asylum seekers in the Netherlands are drawn on to examine how migration control is experienced by contemporary migrants. Following the construction of a typology of current asylum policies in Europe, & classification of their impacts on migrants, three themes common to the experiences of asylum seekers are explored: (1) loss of control over the migration process, highlighting the role of smugglers in the decision to migrate & the choice of destination & adaptation in the host society; (2) the experience of migrating out of a social context, & the way that many asylum seekers are isolated from potentially supportive social networks; & (3) the identity crisis experienced by many asylum seekers, associated particularly with their criminalization.

98S34871 / ISA / 1998 / 12112

Koski, Leena (Dept Sociology U Joensuu, SF-80101 Finland (fax: 358-13-251-2714; e-mail: leena.koski@joensuu.fi)), **Changes in the Divinity of the "Inner Me" in the Educational Morality in Finland.**

¶ Examines the ideals of morally competent individuals in Finnish education, focusing on the historically changing core of the human being & how it is & has been constructed in pedagogic thought during this century. In the 1960s, traditional Lutheran Christian morality was withdrawn from its place as a legitimate moral order of judging individual morality. The new moral ideals were attached to an order of harmonious social relations (friendship, mutual understanding, tolerance, etc), the ideals of a modern welfare state. Consequently, the "inner me" in education was not defined or considered to exist as a meaningful entity; moral competency was seen as social competency. A shift toward constructivist pedagogy has taken place in educational thought. In the process of developing new curricula, rethinking basic aims & morality in education was held as a primary concern. The interpretation of constructivism applied to education gives a new definition of a human being to be created within the educational process. The ideal individual consists of some traditional Lutheran ideas, applied to (post)modern sociality. The concept of the "inner me" is rediscovered, created from ideas consistent with New Age ideology. The relative character of knowledge & morality creates a new relation between an individual, knowledge, morality, & the knowing self. The image of effective & purposeful education is simultaneously self-directed & cooperative. Moral competence is connected with good self-esteem, which realizes the "inner me," placed in the center of the moral order, where, in Lutheran Christianity, God used to be. The social bindings & consequences of this new sacred core are compared with Lutheran Christian ideas, based on a review of pedagogical literature, research reports, elementary readers, & other texts.

98S34872 / ISA / 1998 / 12113

Koski, Pasi & Heikkala, Juha (Dept Social Sciences U Jyväskylä, FIN-40351 Finland (tel/fax: 358-14-602-037/301; e-mail:

k

koski@pallo.jyu.fi)), **Towards a Centerless Physical Culture: The Case of Finnish Sports Federations and Associations.**

¶ Fundamental societal & cultural changes have led to the reorganization of Finnish physical culture. The 1990s have marked a transition from (neo)corporatist arrangements to a centerless physical culture. The operative space of Finnish sports federations & associations—ie, the relations between various organizations & the conception concerning these relations—has changed. The most significant feature of these changes is the power vacuum. When the former central sports federations were united, the new Finnish Sports Federation took a whole new role in Finnish physical culture: that of a service organization. Thus, there is no clear & hierarchical center of power & control, & the actors & organizations in Finnish physical culture have to learn new ways of interacting with one another. Here, based on empirical data, & a review of the writings of Jürgen Habermas, Niklas Luhmann, & Helmut Willkie, it is argued that the most important new way of interacting is communicative action: even if & because the various federations & associations in Finnish physical culture have differentiating organizational structures & operative logics, the need for communicative coordination of various activities is imperative. Because there is no single hierarchical formula to operate in Finnish physical culture, the only way to maintain a more or less coherent organizational structure & a corresponding identity is to communicate, ie, to have numerous meetings & negotiations, formal & informal. However, it is noted that, in a centerless physical culture, the maintaining of a coherent organizational structure is a constant interplay between integrative & disintegrative forces.

Kosminsky, Ethel Volfzon (R. D. Antonia de Queiroz 532/91, São Paulo 01307-010 Brazil (tel/fax: 55-11-2599267)), **"This Is a Tree. This Is the Sun, the Moon. This Is a Lot of War." The Use of Children's Designs in Sociology.**

¶ Examines poor children, ages 9-12, who are interned in public & religious institutions in São Paulo & Marília, Brazil, drawing on interviews with them & institutional reports to verify if children's designs of their families & homes, combined with reports about their designs, might reveal their opinions about their families & the institutions where they live. Findings reveal that some children, who refused to draw families because they had suffered family violence, designed houses as a means to express their problems, others who had suffered street violence drew violent scenes, & some drew ideal families to fulfill their dreams. The family was important to all the children; they wanted to be adopted, or to return to their own families, although they often acknowledged that living in the institutions provided food & shelter that were otherwise lacking. The family ideal was shared by social workers & the religious staff who cared for the children.

Kosyaeva, Tatyana Yu. (Novosibirsk State Academy Economics & Management, 56 Kamenskaya St Russia 630016 (tel/fax: 314-862-6395/2470; e-mail: kosyaeva@wuecona.wustl.edu)), **The Formation of the Social Group of Entrepreneurs in Russia: Institutional-Dynamic Aspect.**

¶ Attempts to characterize the process of formation of a social group of entrepreneurs in Russia, 1986-1997, based on the following qualitative methods: (1) participant observation, involving interviews with entrepreneurs & local government officials in Novosibirsk & Nizhny Novgorod, 1992-1997; (2) content analysis of mass media materials, official documents, & federal & regional laws & regulations; & (3) content analysis of primary & secondary interviews & surveys conducted with entrepreneurs in Moscow & other Russian cities, 1987-1997. It is concluded that the transformation of social institutions (eg, private property, criminal social institutions, institutions of small business support) defines stages of the process of interest, because it dictates how the status of entrepreneur is achieved, which influences prevalent ways of obtaining initial capital &, therefore, defines the mix of the types of initial capital at every stage. The basis for differentiation among entrepreneurs is the method by which the status of entrepreneur was achieved; this method depends on the individual's status in the Soviet/post-Soviet etakratic corporative system of social institutions.

98S34877 / ISA / 1998 / 12118

Kotani, Kanji (Faculty Information Science Kure U, Japan 724-0701 (e-mail: kotani@ondo.kure-u.ac.jp)), **E-Boat Movement as a Social Experiment for Green Sports.**

¶ Describes the E-boat movement as a social experiment in Japan, exploring its meanings & possibilities. E-boat is the abbreviation for Exchange-boat; the "E" also stands for ecology, enjoyment, earth, & education. E-boat came from a practical use of dam lakes by the people living near or around these lakes in 1988. They gathered, argued, proposed hypotheses, did some experiments, & tried to reach some consensus. They then developed their original boat as a tool for reactivation of farm or mountain villages, exchange between upper & lower reaches of the rivers, & learning about the natural environment. They named this E-boat & attached much meaning to it. Now, everywhere in Japan, national E-boat meets have been held, many people, regardless of age & ability/disability, are enjoying E-boat. Through E-boat, participants find festivity, own culture, originality, & nature, aspects once lost through modernization & industrialization. This new type of sports is termed "green sports."

Koultyguine, Vladimir P. (Instit Social & Political Studies Russian Academy Sciences, 12-1-32 Moldagulovoy St Moscow 111395 (tel/fax: 095-373-4728/932-8873; e-mail: klem@cs.msu.su)), **Emerging of Publisitic Sociology in Russia as Realization of Opposition to the Tzarism.**

¶ The emergence of sociological science had given Russian intellectuals an opportunity to define actual social problems & to propose alternative solutions. Since its appearance in Russia in the 1860s, Russian sociology has been developing into two major fields: academic sociology was born at universities, whereas "publisitic" sociology was formed on the pages of journals & magazines. It happened that the latter gained the greatest influence on processes of shaping Russian public opinion.

Kovach, Imre (Hungarian Academy Sciences, H-1051 Budapest), **Failure of Agriculture, Rural Exclusion and the European Integration.**

¶ The failure of agriculture plays an important role in rural exclusion in Western & Eastern European countries. In the European Union (EU), the proportion of the agricultural labor force shrank to under 5% in the early modernized countries & under 10% in other regions. Rural problems can no longer be taken as solely agricultural. However, EU member states' rural regions face new challenges as the consequences of globalization of food industries, new agricultural migration, decreasing rural populations, ruralization & urban migration to villages, alternative forms of rural activities, pollution, & preservation of rural tradition & landscape. The EU does not have an effective regional or rural policy, &

one consequence is that the rural population has been segmented, & the lower social classes have started to be excluded & will not be able to join the postmodern or informal society. The exclusion of the postsocialist rural population & the agricultural transformation will be a more dramatic feature than in the EU member states. In East-Central Europe, 150 million people live in rural settlements, 25%-40% of the population. Privatization & restitution, as well as the spread of family farming, are taking place under unbalanced conditions of the development of parliamentary democracy & in the midst of an overall economic recession. Since 1989, gross agricultural production has decreased by 20%-30%, & this failure has resulted in new segmentation of agricultural & rural society. Analysis focuses on the consequences of rural exclusion in agricultural production, the agricultural labor force, & food consumption in the time of the formation of new European integration.

Kovács, László & Árpád, Antal (Babes-Bolyai U, Budapest H-1202 Hungary), **The Shift of Ethnic Proportions in the Transylvanian Towns.**

¶ Presents migration data from the 1910-1992 Censuses of the 10 largest cities in Transylvania, highlighting its potential reasons, consequences, & future perspectives. Focus is on ethnicity in the multicultural Transylvania that is now part of Romania, but formerly belonged to Hungary or was an independent principality. The effects of the readjustment of frontiers, industrialization, & the increasing globalized society on the ethnic % of migrants are assessed. Analysis indicates that the % of Germans, Jews, & Hungarians decreased drastically; this is attributed to (1) emigration to their homeland; (2) assimilation policy during communism; (3) lower inclination of raising children reported to the Romanian majority; & (4) powerful inner migrations after WWII from the villages & other regions of Romania. In spite of the migration process's slowing down & emigration's moderation, Transylvania is about to lose its multicultural character, which would be a big loss for Europe.

Kovatcheva, Siyka K. (Paissii Hilendarski U Plovdiv, BG-4000 Bulgaria (tel/fax: 359-32-44-88-90/43-35-18; e-mail: siyka@ulcc.uni-plovdiv.bg)), **The East European Transition in the Life Experiences of the First Post-Communist Generation.**

¶ Explores youth transitions in transitioning societies, drawing on comparative survey data from young unemployed & self-employed in four East European countries. Both groups are products of the social transformation of the region, representing successes & failures of reforms. How is the transition reflected in their life experiences, & what are their perspectives on it? Both have similar family & educational backgrounds but already distinctive labor market careers. The self-employed have established their companies & are heading toward financial & professional success. The unemployed prefer to wait for a friendlier labor market rather than settle in available unfulfilling jobs. Support comes from such traditional institutions as families & friendship circles rather than from modern agencies, eg, the state & nongovernment organizations.

Kovitz, Marcia R. (Concordia U, Montreal Quebec H3G 1M8 (tel/fax: 514-457-6610/4730; e-mail: m-kovitz@alcor.concordia.ca)), **Military Technology, Masculinity, Power and Women's Resistance.**

¶ Presents the theoretical underpinnings & salient findings of an interdisciplinary study into gender transformations in the Canadian Forces at the end of the millennium. It is demonstrated that novel insights can be gained by studying the military as a gendered technological system of orchestrated, lethal violence, by setting this system into comparative perspectives that examine the interconnections between the social organization of bellicosity & gender construction in small-scale societies & in those of the "civilized" past. These cross-cultural & historical comparisons lead to expanding the usual gender focus of oppositions—between men & women—to include the contradictions between the unity of masculinity as fostered by the military & the disparities in power between men in arms. These comparisons also lead to problematizing the structural mechanisms & processes of engendering & sustaining bellicosity in Canadian Forces combatants, both of which echo the authoritarianism of an archaic past at odds with contemporary conditions of democracy. Considered in conclusion are ideological & practical reasons why women soldiers are more likely to resist military authoritarianism than their male counterparts.

98S34883 / ISA / 1998 / 12124

Kovitz, Marcia R. (Concordia U, Montreal Quebec H3G 1M8 (tel/fax: 514-457-6610/4730; e-mail: m.kovitz@alcor.concordia.ca)), **Western Military Organization in Cross-Cultural Relief.**

¶ Presents salient findings of an interdisciplinary study that draws on comparisons of how the organization of bellicosity interacts with gender constructs in nonstate & state societies. Such comparisons throw into relief certain time-honored features of military organization in a state society such as Canada—eg, rank, discipline, obedience, self-sacrifice, & the masculinity of combat—& lead us to investigate their historic origins, including their ideological & structural premises. The results of these comparisons also suggest reasons for the difficulties faced by military organizations & women in attempts to achieve varying degrees of gender integration.

Koyano, Wataru (U Hokkaido, 061-02 Japan (tel/fax: 81-1332-3-1532; e-mail: WataruKoyano@msn.com)), **Quality of Life of the Japanese Middle-Old: Social Relationships and Life Satisfaction.**

¶ Explores interrelationships among quality-of-life indicators & the effects of background variables, for 1,227 randomly selected community residents, ages 75-79, in metropolitan Tokyo, Japan, drawing on 1995 interviews. Controlling for the effects of age, gender, educational attainment, marital status, living arrangement, & area of residence, covariance structure analysis revealed significant direct positive effects of functional health status on emotional closeness & life satisfaction; significant direct effects of emotional closeness on social support & life satisfaction; & significant positive effects of educational attainment on functional health status.

98S34885 / ISA / 1998 / 12126

Koyano, Wataru, Ando, Takatoshi, Asakawa, Tatsuko & Kodama, Yoshinobu (Health Science U Hokkaido, Tokyo 166 Japan (tel: 81-3-3336-4208; e-mail: WataruKoyano@msn.com)), **Characteristics of Friends and Neighbors of the Japanese Elderly.**

¶ The characteristics of friends & neighbors of 883 Japanese senior citizens, ages 65-79, living in a metropolitan area of Tokyo & a local city, were examined by asking the subjects (Ss) to name all family members, all children & children-in-law, up to five relatives, friends, & neighbors, & to report social relationships with them. Information on characteristics of 12,384 others surrounding the Ss, as well as information on interactions with them, was obtained. Among the persons listed, 4,264 were friends or neighbors. Compared with coresident family members & children, friends & neighbors were a less dependable source of support. Nevertheless, 50% were indicated as "intimate" others. The overwhelming majority of friends & neighbors were ages 60+ & the same gender. The same-gender dyad was more commonly found for women & those who lived in the local city, & for friends & "intimate" others. The results show that Japanese seniors prefer to select age & gender peers for their network members.

Kramer, John M. (Political Science Dept Mary Washington Coll, Fredericksburg VA 22401-5358 (tel/fax: 540-654-1495/1482; e-mail: jkramer@mwccgw.mwc.edu)), **Political Corruption in Post-Communist Russia: The Corrosion of Public Trust.**

¶ Pervasive political corruption in Russia has had a corrosive effect on public trust in the honesty & integrity of government officials in general, & of those elected to lead the polity in particular. For example, public opinion polling data indicate that only 9% of Russians believe that honesty is a characteristic attribute of president Boris Yeltsin, & only 11% attribute honesty to Prime Minister Viktor Chernomyrdin. Such attitudes enormously complicate Russia's quest to establish a democratic polity based on the rule of law & the principle that public officials exist to implement vox populi & not to engage in self-aggrandizement. Here, based on analysis of personal interviews, a comprehensive review of the relevant Russian- & foreign-language literature & public opinion polling data, political corruption in Russia is examined in terms of scale, types, & causes, as well as efforts to combat it. It is concluded that political democratization & economic marketization, while surely constituting no panacea to eradicate official venality, represent the sine qua non for effectively combating political corruption.

Krasilschikov, Victor (Russian Independent Instit Social & National Problems, Moscow), **Russia after Systemic Change: Negative or Posi-**

k

tive?.

1 Efforts for achieving a social transformation from a centralized & enforced homogenized socialist system to the Western neomarket economic system, without passing through a proper social democracy, have dominated the transition process of the society & economy of the disintegrated Russian Federation. Former rigid communism in the name of socialism, neonominalism, & neomarket capitalism are the three important trends functioning & countering each other in the ongoing process. This transition will last at least 2 decades more, into the 21st century, & no one can be sure which trend will be accepted eventually. However, whichever trend does succeed in exercising more influence on the society & economy will undoubtedly adopt principles & elements from the other two. Focus here is on the path of the transition process in contemporary Russian society.

Krättli, Inga (Coll Humanum Switzerland, Im Planggli CH-8867 Niederurnen (tel/fax: 0041-55-610-28-44/11-35; e-mail: docuSwiss@spectraweb.ch)), **Communication, Cybernetic Management and Virtual Dynamics in a Globalized Society—Multidimensional Controlling and the Impact on Corporate Culture.**

1 Studies communication, cyberspace, & social theory, attempting to theorize the available observations on digital technologies, cyberspace, & virtual realities so that resulting knowledge could be applied to controlling socioeconomic systems. Avatars, indirect communication, pseudoscience masquerading, simulation, & pseudoreality are keywords that require a distinctive definition & application to human time-space-oriented social reality. Cyberspace worlds raise a catalogue of questions on the organizational multilevel hierarchy of human beings. An individual's consciousness & capability to memorize is challenged by digital immortality; human memory is no longer identical & in synchronicity with its digital storage capacities. Thus, a phenomenon is subjected to different ontological layers of perception, striving to recognize the umbrella system. Systems sciences are challenged to provide the analytical tools for complex problem solving, ie, survival in an increasingly abstract scenario. The possibilities that are offered by cybernetic management are evaluated as a globalized method of networking in the mind age & controlling an organization's functions.

98S34889 / ISA / 1998 / 12130

Krättli, Inga (Coll Humanum, CH-8867 Niederurnen Switzerland (tel/fax: 0041-55-610-28-44/11-35; e-mail: docuSwiss@spectraweb.ch)), **The Role and Power of Ritual in the Evolution of Social Movements.**

1 Presents an anatomy of ritual & its relevance with regard to the enactment of social movements in a cross-cultural historical context. Ritual is the physical activation of a symbolically experienced reality that permeates individual lives & society: humans interact with the environment through ritually structured expressions. Ritual works through symbols, & symbol-making capacity specifically marks humanity. In the course of social evolution, all cultures have used ritual & symbolization to deal with the unpredictability of life. Originally cultic ceremonies in primitive cultures, rituals served as outlets or enactment of mutual actions, closing the gap between the unknown & reality, thus providing a bridge between the human psyche & body. Repetitive displayed behavior patterns with the purpose of aligning intense emotions lead to enactment & broad acceptance of value systems. Due to its manipulative nature, rituals serve to exert power & control. Various forms of ritual are used to foster attention—eg, rhythmic, repetitive stimuli generate a high degree of sensation by coordinating & synchronizing physical & mental processes—and to generate a sense of personal bonding, unity, & oneness with a group.

98S34890 / ISA / 1998 / 12131

Krättli, Inga (Collegium Humanum, Im Planggli CH-8867 Niederurnen Switzerland (tel/fax: 0041-55-610-2844/1135; e-mail: docuSwiss@spectraweb.ch)), **Cybernetic Management and Virtual Dynamics in a Globalized Society: Multidimensional Controlling and the Impact on Corporate Psychology.**

1 Current studies on cyberspace & social theory are drawn on to apply knowledge about digital technologies, cyberspace, & virtual realities to controlling socioeconomic systems. Avatars, indirect communication, pseudoscience masquerading, simulation, & pseudoreality have become keywords that require a distinctive definition & application to human time-/space-oriented social reality. Virilio's "aesthetics of disappearance" & the "negative horizon," Bachelard's "poetics of space," & Michi Kaku's "hyperspace" raise questions on the organizational mul-

tilevel hierarchy of humans. An individual's consciousness & capability to memorize is challenged by digital immortality. While Gutenberg's invention of the printing press took the dimension of time from human memory, digital technologies bereave this memory of its spatial reference. Human memory is no longer identical or in synchronicity with its digital storage capacities. Thus, one phenomenon is subjected to different ontological layers of perception. As each scientific discovery opens the door to new questions & each theory is merely one further step in the continuity of change, systems sciences are challenged to provide the analytical tools for complex solving, ie, survival in more & more abstract scenarios. Evaluated here are the possibilities offered by cybernetic management as a globalized method of networking in the mind, age, creating identity, & controlling organizations' as well as individuals' functions.

Kravchenko, Nikolay S. (Instit Tectonics & Geophysics, Kim Yu Chen 65 Khabarovsk 680021 Russia (tel/fax: 4212-33-26-65/76-84; e-mail: tectonic@itig.khabarovsk.su)), **Ways of Search for Invariant of Social Systems' Evolution Forecast.**

1 A modern stage of research processes in social systems has been acquiring new features mainly as a result of two circumstances: (1) The conception with more recognition is capable of explaining the emergent character of evolution in all systems, including social ones—the theory of dissipative structures by I. Prigogine. (2) Social systems of dynamic nonlinear systems are far from equilibrium. After outlining his theory, it is acknowledged that Prigogine's conclusion on the predictability of the state of the system after passing the point of bifurcation is evidently true in connection with the time of reaching the point of bifurcation & the system choice of either destruction or origination of the dissipative structure; however, it is not true concerning the possibility of predicting the character of newly arising structures. This possibility is offered by the universal principle of symmetry dissymmetry by P. Curie, which had been incorrectly interpreted by Prigogine. Also discussed is the possibility of forecasting the social systems' evolution. The condition of forecast is the creation of methods of description & the complete description of the elements of symmetry of the systems & unbalanced processes that influence them.

Kravchenko, Sergei (Moscow State U International Relations, Russia (tel/fax: 7-095-1371004/4349066)), **The Influence of Cross-Cultural Interactions in Russia through Tourism.**

1 As international tourism develops in Russia, cultural differences cause conflicts & confusion at two levels: (1) Because of the gap in understanding Russian, tourists make many mistakes in communication & lose opportunities in business. (2) The worst case is that they simplify the structures & functions of institutions based on market-governed values & ignore the borderlines between high & primitive patterns of behavior; liberal humanism; & ambitious egoism, rational conformism, & businesslike nonconformism. As a result, they unwillingly cause alien mutations in Russia's culture today. Here, cross-cultural interaction is examined from postclassical sociological perspectives, eg, Anthony Giddens's structuration theory & M. Archer & P. Szotompa's theory of agency & structures. These social theories adopt combined criteria & macro-micro approaches that can be used for identifying natural or alien mutations in culture, investigating behavioral preparedness of intelligentsia, managers, & workers to act in political & economic structures in the situation of institutional risks & individual responsibility. Russia's renovation is impossible without cross-cultural interactions, which include the development of international tourism. However, finding sociocultural adaptation strategies is critical.

Krch, František, David (Psychiatric Clinic Charles U, XR-12000 Prague 2 Czech Republic (tel/fax: 2-24914120/0577)), **Modernization and the Life Styles—Life Style of the Czech Adolescents.**

1 The process of modernization can be seen as a process of changes in lifestyles, both positive & negative connotations. These aspects are discussed in the context of a study conducted of 1,253 students from randomly chosen secondary schools in Prague & České Budějovice, Czech Republic. As far as changes of lifestyles are concerned, adolescents more easily adapt to risky, socially attractive, & manifest models of attitudes & behavior. On the one hand, young women often showed extreme care for their body, but on the other, 25% of respondents smoked, 20% reported serious problems with alcohol, 25% already had some experience with drugs, 33% of young men & 25% of young women reported regular con-

sumption of alcohol, & 6.5% of men & 3.6% of women regularly smoked marijuana or hashish. For the majority, life conditions & conformity seem to play a more important role than sense of active choice & responsibility for one's own life. Adolescents also showed relatively strong conformity with authoritarian & conservative tendencies & low tolerance of differences.

¶ From the perspective of biographical narrators, & through analysis of their family histories & dynamics, transcending a single lifetime, demonstrated are (1) how closely individual & family histories are interwoven; & (2) how the dialectic between the individual, familial, & wider socio-historical realms is reflected in the process through which meaning is created in the family dialogue. Inspired by the life stories of 3 East German women—grandmother (age 77), mother (age 49), & daughter (age 28)—psychological & sociological concepts are combined in discovering patterns & themes of this specific family system. The continuation of a family (hi)story beyond each generation—formed by telling, retelling, & keeping secret select family experiences—is shown to be the process through which generational characteristics are transmitted. The inner dynamic of this process, however, cannot be equated with its outward manifestations. Creation of meaning generations happens far from voluntariness or accident by connecting systematically past, present, & future to shape an individual life story embedded in a transgenerational family (hi)story.

✓ **Krinsky, John** (Dept Sociology Columbia U, New York NY 10027 (tel: 212-932-1098; e-mail: jdk21@columbia.edu)), **Election Affinities: Union Symbolism and Organization in the Fight against Workfare in New York City.**

¶ In late 1995, New York City expanded its workfare program to put 30,000+ welfare recipients to work in a variety of jobs in municipal, state, & nonprofit agencies. The poor working conditions & harsh discipline to which workfare workers were often subjected prompted several nonprofit community organizations to begin to organize them. From the beginning of these efforts in mid-1996, these organizations have emphasized the importance of considering workfare workers as workers & not as welfare recipients. They have also used tactics that recall union activism, though organized labor has been, generally speaking, slow to actively support or organize workfare workers. Using a recent election for

workfare workers held by one of the organizations as a lens, the use of union-like performances by community organizations is examined. Drawing on new institutionalist organizational theory, as well as on David Stark's concept of "recombinant property" & various iterations of Charles Tilly's metaphor of "repertoires," it is suggested that union-style organizing tactics, when combined with community organization tactics, act (1) mimetically, to gesture toward organizational forms associated with the legitimate workers' struggle; (2) as a normative strategy, to consolidate union support & to challenge existing unions that are quietly suffering damage from workfare's expansion; & (3) as a way of building power vis-à-vis both the city & other organizations that are organizing workfare workers. Taken together, the recombination of union & community organizing in the struggle against workfare is an attempt to rhetorically align workfare workers' identity with the identity of other workers, & to build on the ambiguity of their identity that the expanded workfare program has instigated.

98S34901 / ISA / 1998 / 12142

✓ **Kristiansen, Soren** (Dept Social Science & Organization Aalborg U, DK-9220 Denmark (tel/fax: 459-6358140/8157575; e-mail: Ginnerup@socsci.auc.dk)), **Interaction Processes in a Community Care Setting.**

¶ A discussion of the interaction processes among mental patients in a Danish community care setting seeks to (1) develop a practical method of research from the standpoint of direct observation & participation in the activities of the setting & (2) describe & analyze the interaction patterns in light of existing sociological investigations to guide a further study. Interviews with clients & staff from a pilot study based on 2 months in a community care setting suggest that interaction processes among mental patients in community care settings are structured by certain social norms, & social interaction seems to take place on different levels; these norms & levels are tentatively discussed.

98S34902 / ISA / 1998 / 12143

✓ **Krogstrup, Hanne Kathrine** (Aalborg U, DK-9220 Denmark (tel/fax: 459-6358135/8157575; e-mail: hanneK@socsci.auc.dk)), **Community Care—From Exclusion to Involvement and Participation.**

¶ Concerns regarding the marginalization & lifestyles of people with enduring mental health problems have increased recognition of the need to create conditions in which mental health patients are given access to social relationships in a way that promotes their positive interaction with the environment & helps them establish a distinct social identity. In 1991, the Danish government funded the development of housing & leisure facilities & employment services for psychiatric patients in the community. A qualitative sociological study undertaken to monitor utilization of this investment was based on a model that empowered service users to have an active role in the research as triggers for learning. The User Participation in Quality Assessment model emphasizes an approach based on socially & action-oriented bottom-up service evaluation as an alternative to the top-down-oriented management models developed in the private sector. The study's major aims were to clarify users' perspectives of the services offered & their attitudes toward the professional mental health staff involved. Results showed that the mental health staff tended to be caught between the stressors generated by the needs & goals of the civil servants & politicians, on the one hand, the needs & wishes of the service users, on the other.

✓ **Krupinski, Jerzy & Burrows, Graham D.** (Health & Healthcare Consultancy, 33 Campbell St Bentleigh 3204 Australia (tel/fax: 61-3-9557-5956; e-mail: gdb@austin.unimelb.edu.au)), **Mental Health Promotion: Aims and Strategies.**

¶ The objectives of mental health promotion differ somewhat from primary prevention of mental illness. Mental health promotion constitutes part of general health promotion & aims at enhancement of assertiveness, self-confidence, communication, & general coping skills, through relations & stress management. In contrast, primary prevention of mental illness concentrates on identification & alleviation factors leading to higher incidence of psychiatric illness, high-risk situations, & groups at risk; coping with specific adverse factors & situations; & support for those at risk. It is impractical to promote better mental health through advocating profound changes in the society. However, improvement of mental health can be achieved by strategies aimed at the general population; employees of large enterprises; & secondary, tertiary, & special population groups, eg, helping professionals. This will require organization & funding mental health promotion activities at local, regional, state, & federal levels, as well as training & providing personal & material resources to front line workers. Effectiveness of mental health promotion programs can be evaluated only on a long-term basis, which should not preclude their implementation. Ongoing evaluation should assess progress, outreach, & cost of various activities & their acceptance by those at whom they are aimed.

✓ **Kryuchkova, Tatjana Borisovna** (Instit Linguistics Russian Academy Sciences, Moscow 103009 (tel/fax: 07095-290-52-68/05-28)), **Age-Related Differences in the Contemporary Russian Language.**

¶ The Russian-language speech of the older generation has always been marked by stronger conservatism & strict compliance with norms, compared to that of the younger generation, which is full of innovations & somewhat negligent toward norms. However, the socioeconomic changes that have taken place during the last 10 years have brought changes in the language behavior of all generation groups, along with ideological

variations. Age-related & ideological differences exhibit obvious isomorphism due to the fact that older & middle-aged groups both had difficulties in adapting to the new economic order. Their nostalgic sentiments for the past account for the fact that their political vocabulary is reminiscent of the language of the former ruling ideology. Youth, who more easily absorb new social values, have adopted a new ideological vocabulary. Based on the transformation of the society from a gerontocratic to a juvenocratic orientation, language reference groups have also changed. Representatives of older age groups, including public politicians & TV commentators, make extensive use of youth jargon.

Ku, Agnes (Dept Applied Social Studies Hong Kong Polytechnic U, Kowloon (fax: 011-852-773-6558; e-mail: sssmku@polyu.edu.hk)), **The Imagined "Public" in the Public Sphere—Cultural Dynamics in Citizenship Struggles in Hong Kong.**

¶ Analyzes the interplay between politics, culture, & discursive form in the public sphere, arguing that at the heart of the public sphere is a cultural force of the symbolic "public" that both shapes & is shaped through political practices. As a political category, the public is a claim about a community of citizens; as a cultural concept, moreover, it underlines a realm of symbolic reference about the community's lived experiences & imaginations embedded in specific narratives. In politics, the public is often invoked as a claim about the narrative experiences, cultural imaginations, & moral values of the community of citizens at specific times. Drawing on an emergent body of work in cultural sociology, it is proposed here that public sphere be conceived as a field of contestations through competing narrative constructions about the community of citizens. In particular, under the force of the symbolic public, a process of moral characterizations will take place to imbue social relationships with moral & narrative meanings in the public sphere. This proposed analytical framework is illustrated with a case study on recent political & cultural dynamics in the Hong Kong public sphere.

Kubiak, Anna (Inst Philosophy & Sociology Polish Academy Sciences, ul Nowy Swiat 72 Pa'ac Staszica PL-00330 Warsaw (tel/fax: 48-22-826-99-48/71-81; e-mail: akubiak@ifispan.waw.pl)), **New Spiritualities in Late Modernity.**

¶ Religiosity in New Age circles is explored, showing the different forms & dimensions of this new spirituality. The very notion of spirituality is used for more ambiguous, fragmentary, relative, & implicit forms of religion. Examples are provided, mainly from Poland & the UK, following modern & postmodern trajectories in this popular religiosity. Questions are raised about categories of *sacrum* & *profanum*, & about consequences of detraditionalization. The radical changes in categories of space & time are analyzed in light of cultural globalization. Changes in new religiosity are interpreted in the context of the sociological debate on religion & late modernity/postmodernity. The notion of implicit religion is discussed with reference to the data presented.

Kuenzi, Jeffrey J. (Office Institutional Research Smith Coll, Northampton MA 01063 [tel: 413-585-3045; e-mail: jkuenzi@sophia.smith.edu]), **Self-Selection and Location Choice among Puerto Rican Migrants in the United States and Puerto Rico.**

¶ Offers original empirical & methodological contributions to the study of migrant self-selection with a conditional logistic regression model of location choice among Puerto Rican migrants. Data from the 1990 US Census reveal a substantial amount of human capital selectivity across migrant destinations. These data are brought to bear on two approaches to migrant self-selection prominent in the economic & sociological literature over the past decade. The former, based on labor market reward structures, is shown to have little explanatory power with regard to selectivity, while the latter approach, which emphasizes social networks of migration, receives strong support. It is concluded that these networks encourage negative selectivity with respect to migrants' educational attainment.

Kugel, Samuel A. & Lysova, M. Yu. (Natural Science & Technology History Inst Russian Academy Science, Universitetskaya nab. 5 St. Petersburg 190034 Russia [tel/fax: 812-3126454/5508676; e-mail: root@kugel.spb.su]), **Russian University Science in a Changing Society.**

¶ Basic scientific research in the USSR was performed mostly in the Academy of Sciences, but also in universities, applied sectoral research institutes, & industrial enterprises. Universities possessed laboratories, & the largest universities had research institutes. Under conditions of societal change, accompanied by industrial decline & a rapid shortening of state financing, some positive institutional changes occurred: (1) a net of scientific foundations was established; (2) Russian science entered the world scientific community; & (3) the process of integration of universities & the Academy of Sciences was started. Nevertheless, there were a series of negative changes that suggest a deinstitutionalization of science, especially in higher education institutes. As a result, scientific institution staff is decreasing, participation of processors in research is getting scarcer, & a significant number of active researchers are leaving science for commerce or emigration. This process is not homogeneous, however. The largest universities, especially those that collaborate with foreign partners, survive. The situation in social & economic sciences is less acute than that in natural sciences, which need expensive devices. Restoration of university science will be a must for the future. The government is planning to reform higher education. A sociological monitoring of science & university research conditions is needed.

Kulakin, Gennady K. (Instit Economic Forecasting Russian Academy Sciences, Nakhimovskiy Prospekt 47 117418 Moscow [tel/fax: 095-1293733/3107071; e-mail: kulgk@mail.ecfor.rssi.ru]), **An Adaptation Problem of a Spectrum of Sociocultural Norms of Life Activity for Social Processes Globalization.**

¶ The growth of information transparency of the fields of knowledge & cultures & the expansion of behavior models from the epicenters of technological civilization generates the problem of global change: keeping the variety of a spectrum of sociocultural patterns of life activity. The carriers of knowledge (eg, social groups, technologies, technocoenoses, & technopolities) being generated by social interactions function to develop consciousness & transmission of new elements of knowledge between social groups, generations of people, & cultures. With the aim of sustainable development, the knowledge carriers' duration of life must correspond to the period of knowledge interiorization, immersing them in the structures of consciousness. If the resonance of the structures of the natural & artificial character is the condition of dynamic tuning of the life flow on the changes of a situation, then the characteristics of biocoenoses & technocoenoses (situation-tuning instruments) should be similar. Data on the similarity of these objects' structural characteristics have been obtained by a number of investigators. Thus, new opportunities are opened to investigate the future of the interrelations between natural, social, & technical realities.

Kuliyev, Rufat (Dept Sociology Baku Social Management & Polity Inst, Prospect Stroitel'nyy kvartal 581 house 9 apt 3 370065 Azerbaijan [tel/fax: 99412-927590/972934; e-mail: bahar@beic.baku.az]), **Social Conflict in Transforming Azerbaijanian Society.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Transition from totalitarianism to freedom & democracy in Azerbaijan is accompanied by an increase in the number & intensity of social conflicts. Recent empirical data show how the struggle for status & resources, rights, & influence of different social subjects, eg, regions & industrial branches, entrepreneurs & workers, trade unions, political parties & social movements, ethnic & social groups, & personalities is sharpening. Conflict of opposed sides are often acute, accompanied by social outbursts & violence, quick changes in moods & behavior of large masses of people, & internal splits of social movements & institutions that were recently the symbols of solidity & unity. Here, surveys are used to explore the nature & essence of social conflicts occurring in transforming Azerbaijanian society, their functions & mechanisms, their origins & their prevention. Exposure & practical use of appropriateness of development & main factors affecting escalation & deescalation of conflicts, possibilities of their prediction, & their solution are investigated. Findings suggest social technologies for solution of social conflicts that are adequate to their internal nature, peculiarities of expansion in current social environment, & specificity of personal & group behavior of sides participating in conflict.

Kumalaningsih, Sri (Brawijaya U, Malang East Java Indonesia 65146 (tel/fax: 62341-355010/361675)), **Model for Women Empowerment to Support the Development of Agro-Industry in East Java: Facing Globalization.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Like other Assoc of Southeast Asian Nations members, Indonesia is anticipating a greater role for agroindustries in contributing to foreign exchange earnings & minimizing unemployment. Agroindustrial development will require establishment of sound small-scale industries supported by skilled human resources. Women in Indonesia have been involved in agroindustry since ancient times, & many products processed as home industry could enter the international market. However, problems in scaling up the production capacity must be addressed. The starting point is the empowerment of human resources using participatory methods in each stage of production. In an integrated delegation control, improved manufacturing practices were established within 1 month. After 2 years, production capacity could improve from 10 to 60 tons per year & could boost the export market. A model for the empowerment of women & transfer of technology is introduced. Practice principles & integrated sustainable social development, particularly for women, are reviewed.

Kümmel, Gerhard & Klein, Paul (German Armed Forces Instit Social Research, Proetzeler Chaussee D-15344 Strausberg (tel/fax: 49-3341-58-4087/4068)), **The Multinationalization of Armed Forces and Its Impact upon Morale in the Bundeswehr: The Case of the Dutch-German Corps.**

¶ It may be argued that the processes of democratization, individualization, & atomization within society pose a substantial threat to armed forces & their morale insofar as they are increasingly in conflict with the military principles of discipline, order, & obedience. This is especially true for conscription armies, as is the case in the Federal Republic of Germany, leading to a debate on the timeliness of conscription. In the Dutch case, this has already resulted in the substitution of an army based on conscription with all-volunteer forces. Findings of a survey conducted within the Dutch-German corps (established in Aug 1995) are drawn on to discuss the impact of multi- or, rather, binational joint military cooperation on morale. Results indicate that military multinationalization may enhance morale.

98S34919 / ISA / 1998 / 12160

Kümmel, Gerhard, Klein, Paul & Huber, Axel Rosendahl (German Armed Forces Instit Social Research, Proetzeler Chaussee D-15344 Strausberg (tel/fax: 49-3341-58-4087/4068)), **The Consequences of Bi-National Military Cooperation: The Dutch-German Corps.**

¶ The Dutch & German defense departments have authorized an empirical study of the impact of the joint military cooperation in the Dutch-German corps (established Aug 1995) on the armed forces of both countries in terms of their mutual perceptions & images, experiences, career expectations, & difficulties & the problems emanating from military co-

operation beyond the nation-state. Analysis of 1995 & 1997 survey data from 1,200 soldiers indicates that binational military cooperation is not only possible, but also efficient; it helps to reduce mutual prejudices & to build an—at least rudimentary—common identity.

Kupferberg, Feiwei (Aalborg U, DK-9270 Denmark (tel/fax: 45-96-35-80-80/98-15-32-98; e-mail: fk@i4.auc.dk)), **The Nursing Profession in Denmark. Professionalization and Individualization.**

¶ The dominating strategy of Danish nursing leaders—to accomplish the full recognition of nursing as a profession in the sense of monopolizing a particular “esoteric knowledge”—has been accepted, if not by society at large, then by student nurses, who enter their work roles expecting to be respected as the professionals they believe themselves to be. This professionalized view of nursing fits individualization trends of late modern societies in the sense that patients are no longer defined as mere objects for medical treatment but as active subjects, partly responsible for their own health careers. However, nurses also insist on being treated as individuals with their own lives, rejecting a reduction to their occupational role. This creates a strong tension between the “common” nurse & nursing leaders who feel their professionalization strategies to be undermined by these less than fully committed nurses. Here, this issue is investigated via biographical interviews with young nurses in northern Jutland in cooperation with the regional trade union for nurses.

Kurasawa, Fuyuki (LaTrobe U, Victoria 3083 Australia (tel/fax: 61-3-9479-2690/2705; e-mail: FKurasawa@latrobe.edu.au)), **In the Shadow of the Other: Durkheim on the Modern and the Primitive.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The interplay of primitiveness & modernity in Émile Durkheim's thought is examined, focusing on the operations of the anthropological imaginary in European social theory. To accomplish this, four key themes in Durkheim's writings are analyzed: the emergence of sociology, industrialization, individuation, & secularization, all of which are set in the context of a perceived moral crisis afflicting modern Europe. Concern is not so much with the accuracy of Durkheim's portrayals of indigenous societies, but rather with what appears to be a more fruitful question: Why has primitiveness been constructed & represented by Durkheim in certain ways, & how does this influence his understanding of European society? These issues are related to Durkheim's anxious modernism, arguing that he relies on the symbolic image of the primitive to arrive at an interpretation of the modern condition in late-19th- & early-20th-century Europe.

98S34926 / ISA / 1998 / 12167

Kurasawa, Fuyuki (Dept Sociology & Anthropology La Trobe U, Bundoora Victoria 3083 Australia (tel/fax: 613-9479-2690/2705; e-mail: f.kurasawa@latrobe.edu.au)), **Primitiveness and the Death of the Sacred: The French School of Sociology and the Parisian Avant-Garde.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Traces an intellectual thread running from Émile Durkheim, Marcel Mauss, & Lucien Lévy-Bruhl to the avant-garde circles that formed in Paris during the interwar period (Araud, Bataille, Breton, & Caillois). It stems from the widely shared anxiety in late-19th- & early-20th-century Europe about the crisis & decline of modernity, brought about by the murdering of the sacred in society. A fully desacralized European modernity is overwhelmingly experienced as loss, impoverishment, & exhaustion vis-à-vis what precedes it or lies beyond its borders. In turn, this prompts a quest for the primitive, the non-European Other, which still lives in an enchanted world. These ideas are pursued along three axes that represent diagnoses of modern Europe held in common by this disparate group of thinkers: growing rationalization produces demagification, which in turn results in anomie. Throughout, the interplay of civilized & primitive is underlined, arguing that the fascination with the sacred in primitivism is coupled with a critique of modernity, or a desire to flee a disenchanting modernity for an enchanted condition of primitiveness.

98S34927 / ISA / 1998 / 12168

Kusa, Zuzana (Instit Sociologie, Klemensova 19 81364 Bratislava Slovak Republic (tel/fax: 07-326-321; e-mail: sociolog@sou.savba.sk)), **Extraordinary and Ordinary in Life History Narratives (Social Construction of Exceptionality).**

¶ Presents a comparative analysis of life-history narratives from members of economically & socially marginalized families collected in the Social History of Poverty project in Hungary, Poland, & Slovakia. Analysis focuses on the narrative construction of the categories of “ordinary” & “extraordinary” & using them in self-description (or identity construction). Emphasis is on an analysis of common beliefs (or collective representations) used in this process. The underlying hypothesis that collected life-history narratives can be seen as a trial to prove one's inclusion into social majority & distance oneself (& one's family) from the “deviant” label is discussed.

98S34928 / ISA / 1998 / 12169

Kusakabe, Kyoko (Asian Instit Technology, Bangkok 10501 Thailand (tel/fax: 66-2-524-5671/6166; e-mail: hsp59468@ait.ac.th)), **Women's Participation in the Market: A Case of Women Entrepreneurs in the Changing Economy of Cambodia.**

¶ Cambodia has experienced two periods of economic liberalization: (1) in 1979, when it ended its rule by the Democratic Kampuchea, during which time no private property on market activities were allowed & (2) after 1989, when the transition to a market economy began in earnest. Interview data gathered in 1997 on the lives & perceptions of 254 women retailers during this critical period attempts to determine whether & how this transition affected them. Secondary focus is on these women's sense of success & factors leading to that sense. It was found that the existence of the market itself gave these women the opportunity to support themselves & their families. Their feeling of success stemmed from being a major supporter of the family. For some, however, the rapid opening of the economy to large foreign capital forced them into the market, thus threatening their sense of success.

98S34929 / ISA / 1998 / 12170

Kusein, Isaevich (Bishkek Humanities U, Kyrgyzstan 7200044 (tel/fax: 8-3312-48-42-25/54-14-05; e-mail: srcenter@imfiko.bishkek.su)), **Osobennosti mestnogo upravlenisa v Kirgizstanie** (The Peculiarities of Local Government in Kyrgyzstan). (RUS)

¶ Examines post-Soviet Kyrgyzstan's attempt to introduce a principle of local self-management as a democratic form of national management. There are legal-organizational bases of establishing & developing local self-management; it is the constitutional principle, developed & accepted as a special rule. The basic organizations of local self-management & the program of state support of local self-management are organized associations of local self-management. Self-management in Kyrgyzstan comprises democratic development of its territories, perfection of the person, & construction of an open civil society; local self-management is the history of the Kyrgyz people. Its nomadic civilization & moral organization of tribal structure laid the principles of self-management and democracy, which were lost during colonial dependence. Modern self-management in Kyrgyzstan is characterized by restoration of national management principles; revival of traditions; & enrichment of their achievements in world practice in accordance with economic, social, & cultural development at all levels of the republic. The success of democracy, market relations, & open society will speed the revival of national self-management principles, enabling expression of individual & state interests & the public will.

Kutsar, Dagmar (Unit Family Studies U Tartu, EE-2400 Estonia (tel/fax: 3727-465-929/956; e-mail: urmas@psych.ut.ee)), **Discussing Childhood Poverty in a Post-Socialist Country: A Case of Estonia.**

¶ In the context of the cost of reforms in postsocialist Estonia (in terms of human & cultural capital loss), 1997 survey data from 1,568 students, ages 13-14, revealed that about 6% have suffered severe economic setback. For the prior 6 months, 3% of respondents reported sudden worsening of their economic situation, & 5% experienced parental loss of a job. Lack of money has impacted the hobbies of 15%, & 7% often leave their purchasing needs unspoken. However, childhood poverty has yet to acquire needed public attention in Estonia.

Kutsenko, Olga (Sociological Dept Kharkiv State U, Ukraine 310002 (tel/fax: 380-572-658-042; e-mail: ok@kharkov.com)), **Restructuring**

of Post-Soviet Social Space: Peculiarities Compared to Social Transformations in the West.

¶ Investigates particularities of the Eastern Europe social transformation, focusing on the Ukrainian experience & drawing on 1990s empirical data on changes in urban class structure. Comparison of East-West social situations illuminates general meanings of global processes, clearly distinguishes contrasts, & possibly, allows revision of the degree of such contrasts. Transformation hastened post-Soviet societies' move away from "false modernity," converging general civilizational tendencies that structure modern social spaces. The general civilizational process cultivates sociocultural factors for social differentiation; but simultaneously, it is unique. Compared to the West, transformation of social space in Ukraine is characterized by spontaneity & is unbalanced & contradictory. Criteria of social stratification are analyzed, eg, property ownership & employment.

98S34932 / ISA / 1998 / 12173

La Porte, Todd M. & Van Eeten, Michel (Faculty Technology/Policy/Management Delft U Technology, NL-2600 GA Netherlands [fax: 31-15-278-6439; e-mail: T.M.LaPorte@sepa.tudelft.nl]), **Information Society Plans and Critiques: Governments and Parliaments in Arenas of Rhetoric.**

¶ Takes as a starting point government plans for the information society in the UK, Federal Republic of Germany, France, the Netherlands, Denmark, Finland, & the US & evaluations of these plans by technology assessment units attached to parliaments. Demonstrated are the underlying institutional, political, economic, & cultural elements that influence the rhetoric associated with the plans & affect parliamentary evaluations of it. Thus, the connection between rhetoric & policy making is revealed, & a view of government & parliamentary debate in forging national policy outcomes about the information society is privileged.

Laaksonen, Helena Tuulikki (U Tampere, SF-33101 Finland [tel/fax: 358-3-215-6950/6080; e-mail: hl38094@uta.fi]), **Economically Inactive Population in Analysis of Social Stratification. Social Class, Exclusion and Underclass.**

¶ Addresses a growing problem in analyzing societal stratification: the position of economically inactive people. Traditional class analysis views the economically inactive population's position by their former position or by relation to some family member who is economically active. However, their position & life chances differ from that of their proxy classes. The main argument follows Weberian concepts: life chances, social closure, & exclusion. The underclass debate is viewed as a form of social closure. To analyze the position of economically inactives, they should be allocated to groups according to their social status, which is dependent on their relation to the means of social security & on their relation to the labor market. Economically inactive people can be divided into three subgroups: students, retired, & unemployed. Compared to each other, these groups are, obviously, in a different status situation in relation to social security & the labor market. Research in this field should analyze these situations & identify possible subgroups.

Laaksonen, Helena Tuulikki (Dept Sociology & Social Psychology U Tampere, FIN-33101 Finland [e-mail: hl38094@uta.fi]), **Age as a Stratification Factor in Society-Excursion to Exclusive Practices, Citizenship, and Age Structure. Finnish Case.**

¶ Taking age, rather than social class, as a starting point, it is shown that the greatest number of economically inactive people are under age 25. Finland serves as a case in point, but the problem of youth unemployment is not unfamiliar to other countries. Focus is on changes in social citizenship rights, which are currently under attack. Comparisons are made to other age groups & to changes that have taken place in Sweden. The main thesis is that youth is used as an excuse to cut off welfare & to use forceful measures to make people earn their citizenship rights. Official statistics & legislative materials support the analysis.

Labelle, Micheline (Dépt sociologie U Québec, Montreal H3C 3P8 [tel/fax: 514-987-4385/4638; e-mail: labelle.m@uqam.ca]), **Les Nouvelles Dimensions de la citoyenneté: une lecture transnationale de l'expérience de l'immigration** (The New Dimensions of Citizenship: A Transnational Reading of the Experience of Immigration). (FRE)

¶ The dismemberment of traditional political units in Western societies is examined, addressing questions about the authorization of public space

& the roles of the diverse categories of individuals & groups within this space. Globalization has generated a dynamic in which immigrants are made into political & cultural actors in multiple systems, a dynamic that is manifested in associative actions undertaken by minority groups in urban environments. The transformation of cities into new postcolonial spaces is discussed, as are the immigrant goals of integration, recognition, representation, & human rights. The creation of new symbolic transnational spaces by immigrants is examined, focusing on the Haitian diaspora in North America.

98S34936 / ISA / 1998 / 12177

Labelle, Micheline & Salee, Daniel (U Québec, Montreal H3C 3P8 [tel/fax: 514-987-3000/4638; e-mail: labelle.m@uqam.ca]), **La Citoyenneté en question: enjeux et défis du multiculturalisme au Québec et au Canada** (Citizenship in Question: Stakes and Challenges of Multiculturalism in Quebec and in Canada). (FRE)

¶ Globalization, continental integration, multiculturalism, & new transnational politics bring a particular resonance to challenges of citizenship & moral & social contracts in both Canada & Quebec. Indeed, they tend to make the tensions that have traditionally characterized the relations between Quebec & Canada more complex & difficult to manage; ie, immigration & pluriethnicity are creating a relatively new political dynamics that is forcing Canadians & Quebecers to reimagine their shared & respective civic space & reconsider the very notion of citizenship. Offered here is a comparative analysis of discourses & policies pertaining to immigration, ethnicity, & citizenship formulated by the Canadian & Quebec governments. A clearer understanding of how Quebec & Canada have dealt with immigration & diversity will shed light on the sense & extent of the ideology of citizenship in the global Canadian context. Such an analysis should also help to clarify their strategies regarding the unavoidable redefinition of their social & moral contracts.

Laberge, Danielle, Landerville, P., Casavant, L. & Morin, D. (U Québec, Montreal H3C 3P8 [tel/fax: 514-987-3000/4638; e-mail: laberge.danielle@uqam.ca]), **Homelessness, Extreme Poverty and Social Control.**

¶ Homelessness & extreme poverty have mainly been described in terms of "problematic characteristics of individuals": mental illness, alcoholism & other addictive behaviors, & social incompetence. These descriptions, appropriate in some instances, divert the attention from a more sociological perspective. The homeless can be seen as the extreme case of the underclass whose interaction with social control agents is largely defined through risk assessment. Here, based on in-depth examination of police encounters, court appearances, & imprisonment, the shift from individualized assessment to global class treatment of the homeless is examined.

Laberge, Suzanne & Moreau, Isabelle (U Montreal, Quebec H3C 3J7 [tel/fax: 514-343-7934/2181; e-mail: laberge@ere.umontreal.ca]), **Social Logics and the Construction of Gender Identity: Resistance to Sport Involvement and to Healthy Lifestyles among Adolescent Girls.**

¶ Reports on a pilot study exploring the relevance of Pierre Bourdieu's conceptualization of social logic, habitus, & lifestyles in understanding why adolescent girls cease to be physically active & start smoking as well as adopt nonhealthy eating habits. The discussion is based on four focus groups (of 7-8 participants each) conducted with adolescents, ages 13-15,

in two different social milieus (high & low economic status), one group being involved in organized sport, & the other not being physically active. Main results show social class differences in the logic underlying quitting physical activity as well as in maintaining participation in physical activities. Quitting sport, starting tobacco use, & having bad eating habits also appeared to be a means of constructing gender & social identity.

Labib, Tahar (Arab Sociological Assoc, BP 152 1013 Menzeh 9 Tunis Tunisia (tel/fax: 216-1-8867-82/22)), **Islam d'ici-bas (Islam of This World).** (FRE)

¶ The cultural practice of Islam is not marked by the well-known opposition sacred/profane, which the social sciences have taken from Western tradition. Speaking in terms of sacred & profane—terms without clear equivalents in Islam—this practice would, rather, be marked by sacralizing the profane & above all, by profaning the sacred. Contrary to a substantialistic vision, the emergence & development of Islam in societies that are inheritants of Oriental cultures—in which the Muslims had to negotiate, for practical reasons, the sociopolitical stakes & lead a this-worldly life, & not one of theologians—lead to the fact that Islam, in terms of cultural practice, is a "laic" religion. That is why the terms referred to by the West as Islamism, fundamentalism, or integrism—terms also without precise Muslim reference—are designated in the Arab world as extremism or *tatarrof*, implying a deviation.

Laborie, Françoise (GEDISST/IRESO Centre national recherche scientifique, 59 Rue Pouchet Paris F-75017 France), **Corps, sexes et embryons dans les technologies de la reproduction humaine** (Body, Sexes and Embryos in Technologies of Human Reproduction). (FRE)

¶ Explores the socioethical dimensions of new reproduction technologies from a feminist perspective. Sexual differentiation, with its social consequences, is often masked in scientific discourse & publications of practitioners, as well as in official reports of regulatory bodies. While the physical & social impact of technologies is gender distinct, the women subject is obliterated & replaced by nongendered entities, eg, "couple," "embryo," or "Man." The social organization of technological procedures, eg, ovocyte donation, is recast on the model of sperm donations, neglecting the disproportionate intervention risks posed by the different collection procedures. Although the success rate for these new techniques is low, & the discourse on ex-vivo embryos often centers on women's rights to abortion, many arguments for these technologies suggest (wrongly) that women's free choices are maximized.

Lac, Cyril (Groupe recherche innovations & sociétés U Rouen, F-76130 Mont-Saint-Aignan Cedex France (tel/fax:

02-35-14-61-05/04)), **Les Cadres à temps partagé: de l'hétérogénéité dans l'hétérogénéité** (Time-Sharing Management: Heterogeneity in Heterogeneity). (FRE)

¶ The "managing group" was born from the engineering management group & is an undefined French specificity. The function of management implies a range of different & complementary activities. Among this already heterogeneous population, new groups seem to emerge. Since the 1980s, in the context of unemployment, such terms as "exclusion," "social death," & "imposed precariousness" were applied to managing groups. Full-time & lifelong jobs tend to disappear for the benefit of a multicareer with various work redistribution networks, statuses, & resources. Because time sharing refers to time spent between several employers, it involves new objective institutions & subjective aspirations that demand attention. Whereas the managing group used to be traditionally attached to its wage-earner status, time-sharing managers divide themselves in a contradictory wage-earned professional worker relationship. Time sharing, because of its plural shape, can induce a paradigm change. Robert Castel (1995) uses the term of "destabilization of the stable ones" as a source of analysis for changes in the wage-earning society. For managers, time sharing is a source of explanation for this disintegration process, & this reorganization transforms management functions such that managers seem to lose qualification. The problem is to know if their status, career, & even identity reproduce or transform themselves, or if, on the contrary, elements formerly used as references have clashed for the benefit of a totally new status. Yet, this rapprochement &/or rupture can be perceived as being part of a destroying/building process of identity, in which intermixing the two forms of work through time sharing would be a transitory phase of social & working status, of identity. Time sharing implies a new building of the manager's representation toward the company but also of the company toward the manager; management is being replaced by expertise.

Lacourse, Eric (U Montréal, Quebec H3T 1G9), **Adaptation sociale, musique et risque suicidaire chez les adolescents** (Social Adaptation, Music and Adolescent Suicidal Risk). (FRE)

¶ Describes a study of 275 adolescents, ages 14-18, that focused on the connections between social adaptation, music, & suicidal behavior. Suicidal subjects (Ss) (14% of the boys, 25% of the girls) were compared to nonsuicidal Ss on such variables as integration & social adaptation, family relationships, the idolization of musicians, & musical preferences. It was found that suicidal boys felt they had poor relationships with their parents & experienced alienation; neither the idolization of musicians nor musical preference were salient variables. Among girls, however, the quality of the father-daughter relationship, feelings of alienation, an absence of norms, preference for "underground" music, & idolization behavior differentiated suicidal from nonsuicidal Ss. Results are discussed, with attention to the variables' possible interrelatedness.

Laerke, Anna (Dept Anthropology School Oriental & African Studies U London, WC1 0XG England (tel/fax: 0171-637-2388/436-3844)), **(Re)Turning to the Children: On the Methods of a Fieldwork with Children in England.**

¶ Demonstrates how ethnographic fieldwork with children, ages 5-6, raised vital methodological questions in relation to child studies & more generally. The author attempted to destabilize her position as an adult authority & engage directly with children (rather than with adult perspectives on children). Being physically repositioned onto the children's level, or the "floor level," questions of how children were constructed as "small" & "below" & how the author was being constructed as "child-like" among adults were pursued. The experience of being at the center of ongoing exchanges of domination & subordination between children

& adults revealed the practices by which age-based distinctions were produced. It also resulted in a revisiting of practical & methodological implications of the new childhood approaches & their focus on children's peer culture. Is it possible to avoid an exclusive (& thus, from an anthropological perspective, misleading) focus on children when one works in an environment in which child-adult distinctions are continuously produced as key identity markers? Further, the process of recollecting a personal (body- vs intellectually oriented) history worked as the primary methodological tool, opening up routes to sensations & practices that brought a clearer understanding of what it might be like to be a child. It is argued, however, that this "remembering method" rests on an illusory notion of childhood experience being universal or "natural," which feeds on a more general (modern Western) notion of the child as a decontextualized or presocial being.

Lafrance, Mélisse & Rail, Geneviève (School Human Kinetics U Ottawa, Ontario K1N 6N5 [tel/fax: 613-562-5800/5149; e-mail: railway@cyberus.ca]), **Colonizing the Feminine: Nike's Intersections of Postfeminism and Hyperconsumption.**

¶ It is argued that Nike's corporate colonization of the female body has both articulated & accompanied the postfeminist, neoconservative, & nostalgically liberal ideological moments in the "American" imaginary. Deconstruction of two important 1997 Nike advertisements—one profiling the "If you let me play" social philosophy, & the other promoting the Nike P. L. A. Y. initiative—illustrates how Nike came to dominate both the "American" postmodern's semiotic & social, while critically assessing the contextual implication of such domination. These ads are linked to Nike's global strategies, proposing that any hypothetical benefits derived by upper-class US women from Nike products are inevitably obtained at the expense of Third World women, thus defeating & attesting to the paradoxical nature of Nike's social concern. Ways that the neoconservative American imaginary has enabled Nike to position itself as a producer of not only shoes, but also discourses of truth, deviance, & normalization, are also delineated.

Lahelma, Eero, Arber, Sara, Martikainen, Pekka, Rahkonen, Ossi & Silventoinen, Karri (Dept Public Health U Helsinki, SF-00014 Finland [tel/fax: 358-9-191-27554/27540; e-mail: Eero.Lahelma@Helsinki.fi]), **Making Sense of Gender Differences in Health across the Life Course: Comparing Finland and Britain in the 1990s.**

¶ Gender differences in health are examined using 1994 data from the Finnish Survey on Living Conditions & the British General Household Survey. Differences were analyzed across a number of health indicators, with special reference to differences over the life course. Several potential determinants of these differences, eg, socioeconomic status, marital status, parental status, & region of residence, were included. Logistic regression analysis revealed that, in both countries, women's health tended to be poorer than that of men, but usually the differences were small. For some health indicators, there was no female excess. Health perceptions limiting long-standing illness showed different gender patterns in the two countries: British women perceived their health as slightly poorer than men, whereas Finnish women perceived their health as slightly better. In contrast, Finnish women were more likely than men to report a limiting long-standing illness, whereas the gender difference in GB was negligible. The social determinants included in the analysis did not have any significant effect on observed gender differences. Further analyses showed that gender differences in health vary across the life course in broadly similar ways in the two countries, but gender differences in GB & Finland show partly contrasting patterns for different health domains. While a female excess can be found for many health indicators, for older people, a male excess is likely for more severe health problems, but not for disability.

Lahogue, Tina B. (Inst Polit Science U Copenhagen, DK-1130 K Denmark [tel: 45-3532-3434; e-mail: tl@its.ku.dk]), **The Politicized Concepts of "the Strangers".**

¶ Argues that words in everyday languages matter & words in use ought to play a bigger role in the study of society & people. Through an analysis of words & concepts of "the stranger," WWII-present, it is contended that they continuously change in terms of content &/or reference, & undergo processes of being politicized & de- & repoliticized. It makes the most sense to work in everyday language (as it is within & through lan-

guage that society takes place) vs developing a scientific language that would be a parallel constructed reality with its own set of concepts, words, & semantic fields. An academic fixation on the meaning of words & concepts to achieve clarity will always be at the cost of historical knowledge, because it fixes the debate in time; so, although language is the medium by which the social can be understood, language in use cannot be made transparent. Reinhard Koselleck's conceptual history is proposed as a daring—in opposing more traditional analysis of concepts—& pragmatic—in avoiding airy philosophical considerations of what is real & what is not, etc.—approach.

Lai, Chienping Faith (Dept Psychology U Idaho, Moscow 83844-3043 [tel/fax: 208-885-6324/7710; e-mail: faithlai@uidaho.edu]), **A Social Psychological Explanation of International Migration Decision Making.**

¶ Modern migration theory has attached importance to the decision making of individuals & households as they attempt to improve their standard of living. Here, an attempt is made to extend the application of the satisfaction-balance model to international migration decision making. Through comparison of different demographic approaches in migration decision making, human decision rules for international migration are specified. The cost-benefit migration model assumes that migration is usually purposive behavior. Macrolevel data using country as the unit of analysis suggests that people's migration decisions should be based on the ratio of the relative value of moving abroad to the relative value of staying. Also discussed is how emotions, values, beliefs, preferences, &/or social norms affect international migration decision-making behavior.

98S34952 / ISA / 1998 / 12193

Lai, Ming-yan (Women's Studies Program Purdue U, West Lafayette IN 47907 [tel/fax: 765-496-1680/494-3660; e-mail: mylai@omni.cc.purdue.edu]), **Of Rural Mothers and Urban Whores: The Nationalist Discourse of Homeland Literature in Taiwan.**

¶ Explores the relation between nationalism & the hierarchical ordering of gendered & sexualized bodies through an analysis of the production & ideological construction of nationalist discourse in the "homeland/native place literature" of early-1970s Taiwan. Situating the production of this discourse in the socioeconomic context of Taiwan's integration into the global capitalist system with the establishment of the world's first export processing zone in Kao-hsiung & the entry of multinational corporations into the country, examined is how understanding economic integration as Taiwanese neocolonial development generates a nationalist discourse grounded in a hierarchical ordering of rural & urban spaces mapped onto gendered & sexualized bodies. Representing rural spaces of the neocolonial nation in this discourse is the overworked, sacrificing mother whose body is exhausted by her sons' demands for her to support their Westernized urban lifestyles. Representing urban spaces is the Westernized woman working with foreign corporations, whose sexualized body signifies the corruption, decadence, & immorality of Western materialism. With such an ordering of gendered bodies representing the domination & exploitation suffered under neocolonial development, the homeland literature advances a nationalism that invests power in the reversal of this order with a return to Chinese moral traditions. The "restored" order of the nation places at the top of the moral-political hierarchy benevolent family patriarchs who take care of sacrificing mothers in the rural hometown & maintain control over sexualized & Westernized bodies of urban women. It is argued that such an order constitutes an ideological resolution of the perceived threat to masculine authority in modernity as loss of national control under neocolonial development.

Laitinen, Ahti (U Turku, SF-20500 Finland [tel/fax: 358-2-333-5512/6570; e-mail: laitinen@utu.fi]), **Business Risks and the Role of the State in an Internationalizing World.**

¶ Argues that it is unreasonable to separate business security from security in the rest of society. Survey data & personal experiences dealing with private security firms are drawn on to examine the security problems of enterprises & their protection against different threats. Also considered are the risk experiences of enterprises, especially crime experiences.

98S34954 / ISA / 1998 / 12195

Lakshmy, Devi K. R. & Pillai, P. P. (Dept Economics U Calicut, Trichur 680618 Kerala India), **Globalization and International Migration of Women Immigrants in the Middle East: The Unforeseen Chal-**

Challenges with Special Reference to the Indian Immigrants in the Middle East.

¶ Migration has always been an important economic & social safety valve allowing labor to relocate in areas where it was more scarce. Globalization has intensified this; during the past 20 years, about 20 million workers, mostly from Asia & Africa, have migrated to the Middle East in pursuit of work. Personal interviews are drawn on to give a complete picture of immigrant women workers in eight host countries—their living & survival strategies & the socioeconomic impact of female migration on the existing patriarchal system. The hardships & hazards associated with working in domestic services in an alien country are outlined. To challenge the forces of globalization effectively, a rethinking of women's ability to work in a global environment is essential. A reshaping of policy initiatives at the national & international levels alone would ensure the safety & rights of women migrants.

Lal, Barbara Ballis (Dept Sociology U California, Los Angeles 90095-1551 [tel/fax: 310-825-7989/206-9838; e-mail: lal@ucla.edu]), **The Politics of Identity and the Repudiation of the Social Self: Implications for Perspectives on Race and Ethnicity.**

¶ Compares the politics of identity & an earlier theory of the social self developed by George Herbert Mead & other Chicago school scholars. Chicago school of sociology. The social self envisions the possibility & desirability of publics in which communication spans putative differences & in which collective political action & social change are the outcome of negotiation, emergent collective representations, & definitions of the situation. The politics of identity, by way of contrast, celebrates difference, but also contests the possibility & desirability of transcending limitations of experience, cultural meanings, & interests that membership in groups defined by race, ethnicity, gender, or sexual orientation are believed to impose. The politics of identity, while an aspect of postmodernist discourse of the 1980s & 1990s, is also a response to consciousness raising, liberation movements of the 1960s in which largely middle-class intellectuals attempted to find solutions to the problems of racism, patriarchy, & a collapse in the normative structure of capitalist US society.

98S34956 / ISA / 1998 / 12197

Lalloo, Kiran (School Urban Planning & Development U Southern California, Los Angeles 90089 [tel/fax: 213-624-4571/740-1160; e-mail: lalloo@usc.edu]), **Urban Citizenship, Community and Place: Recent Struggles in District Six, South Africa.**

¶ In noting the timelessness, sense of coherence, & specificity that the idea of place lends to community & citizenship, examined are the struggles in District Six in Cape Town, South Africa, from the perspective of contested citizenship, drawing on literature surveys; interviews with community leaders, politicians, planners, & state officials; & newspaper & archival searches. A brief outline of the early history is followed by more detailed discussion about the postapartheid redevelopment process to trace emerging trends in the patterns of urban citizenship in postapartheid South Africa. To this end, investigated are (1) how the rights to urban citizenship are being asserted; (2) how democratic institutions have been structured to deal with these rights in the context of social & political change; & (3) how effective these institutions have been in recognizing, accommodating, & promoting these rights.

98S34957 / ISA / 1998 / 12198

Lam, Alice (Canterbury Business School U Kent, CT2 7PE England [tel: 44-1227764000; e-mail: a.c.l.lam@ukc.ac.uk]), **Knowledge, Firm Capabilities and Innovation: A Societal Analysis.**

¶ Develops a societal approach to analyze the knowledge/competence base of the firm, & discusses the issue of national specificity in patterns of firm organization & innovation. The framework proposed attempts to explain how the nature of the knowledge of the firm & its configuration are closely interconnected with how work is organized & coordinated, which, in turn, is shaped by different societal models of education & training, employment systems, & occupational norms. It is further shown that the relative importance of tacit vs codified knowledge & the role of each in innovation can vary greatly between firms in different societal settings. The main argument is that the innovative capability of the firm cannot be fully understood without a close analysis of its knowledge structures & the dynamics of organizational learning. The analysis draws on comparative evidence from GB & Japan, with specific focus on the nature of engineering knowledge & technological innovation.

98S34958 / ISA / 1998 / 12199

Lambert, Robert Vincent (Dept Organisational & Labour Studies U Western Australia, Nedlands 6907 [tel/fax: 61-8-380-2934/1055; e-mail: rlambert@ecel.uwa.edu.au]), **Asian Labour and the Erosion of Class Compromise in the West.**

¶ Argues that the erosion of historically achieved class compromise in industrialized societies can be partially explained by the absence of such compromise in Asia's newly industrializing nations, drawing on field research conducted on labor relations in southern People's Republic of China, Indonesia, & Australia. Authoritarian statism in China & Indonesia are characterized by the will to advance the interests of international & domestic capital, while seeking to control working-class aspirations. This is achieved through unilateral labor market interventions that deny recognition of basic associational & collective bargaining rights. These states have constructed authoritarian labor market institutions while creating investment incentives through the establishment of export processing zones. The radical deregulation of the Australian economy in the late 1980s has meant that these incentives & authoritarian interventions have had a direct economic & political impact. While the union movement sought to meet the challenge through the promotion of new strategic alliances with capital, conservative forces campaigned for an end to a 100-year class compromise that recognized the associational rights of workers. This has now been realized through the institution of a system of individual contracts that is creating a battleground as unions resist the individualization of class relations & the demands for new flexibilities in wages & working-time arrangements. Asian export processing zones' corporate tax-break incentives have led to a reduction of corporate tax rates in Australia, which has undermined the social welfare dimensions of the historic compromise. This situation is not static; contradictions are emerging in the system of authoritarian class relations in Asia. The prospects of the emergent independent labor movements that are challenging unilateral interventions are analyzed. The international links that these new movements are forming & the new strategies that are evolving are evaluated in the light of their potential to consolidate working-class power in the region. Erik Olin Wright's contention that globalization & technological change make it hard to be optimistic regarding the prospects for working-class struggles over associational power for class compromises needs to be qualified. It is concluded that the impact of globalization is contradictory in this regard. Certainly, the points Wright raises in *Working Class Power, Capitalist Class Interests, and Class Compromise* (forthcoming) reflect significant structural change. However, his focus on technological change, growing heterogeneity, inequality, deepening dualism of labor markets, & the increasing vulnerability of all workers to job loss reflects the impact of globalization in the developed economies. Large-scale mass production in the newly industrializing societies of Asia has created objective conditions conducive to solidarity in the employed workforce. Further, the vulnerability that Wright refers to has become the motor for change in trade union strategy as union leaderships in the developed nations begin to explore new global strategies focused on the transnational link of unions in shipping, airlines, & communications systems in campaigns against attacks on trade union power. These strategies have already met with success in Australia.

Lambert, Yves (GSRL-Centre national recherche scientifique, 59 rue Pouchet F-75849 Paris Cedex 17 France [tel/fax: 33-1-40-25-1094/1235; e-mail: ylambert@univ-rennes1.fr]), **Modernity, Secularization and New Religious Paradigms.**

¶ Proposes a general model of analysis of relations between religion & modernity in terms of axial turn, where modernity appears to have four principal types of religious effects: declines, adaptations & reinterpretations, conservative reactions, & innovations. Modernity produces new religious paradigms, in particular: worldliness, unity of (or bringing nearer) the human & the divine, self-spirituality, parascientificity, pluralism, & mobility. Two thresholds of secularization are defined: (1) an autonomization in relation to a religious institution, & (2) an abandonment of any religious symbol or interpretation. It is concluded that the first threshold was largely crossed, but not the second one, except in some domains (science, economics) or for a minority of the population. This is because of the adaptation of great religions to modernity, of fundamentalist reactions, & of the spread of new religious paradigms.

98S34960 / ISA / 1998 / 12201

Lamberti, Raffaella, Kamal, Zahira & Chazan, Naomi (Centro ricerca & documentazione delle donne, via Galliera 8 I-41100 Bologna Italy [tel/fax: 0039-51-233863/263460; e-mail:

cddbo@orlando.women.it)), **"The Broken Middle." Women Mediations in Conflicts. The Cases of Palestine and Former Yugoslavia Reconsidered through the Reflections of Gillian Rose and Hannah Arendt.**

¶ During the conflicts in Palestine & the former Yugoslavia, women experienced a particular activism in conflict resolution. Their presence, though well recognized in wartime, was soon forgotten after formal peace agreements were signed. Focus here is on main characteristics of feminist mediations, in particular, those taking place after the peace declarations, & on the particular kind of contribution women can make in conflict resolutions. More general conclusions are drawn on the basis of reflections contained in Hanna Arendt's & Gillian Rose's extensive writings on the interpretation of conflicts, discussing how these interpretations can enlighten concrete cases.

Lammi-Taskula, Johanna (National Research & Development Centre Welfare & Health, PO Box 220 SF-00531 Helsinki Finland (tel/fax: 358-9-3967-2066/2201; e-mail: johanna.lammi@stakes.fi)), **Time for Work, Time for Family: Young Fathers Combining Work and Family in Finland.**

¶ Survey data collected at 11 workplaces (N = 1,105 respondents), supplemented by qualitative interview data, are drawn on to analyze fatherhood in Finland on three levels: (1) how different patterns of fatherhood as forms of masculinities are constructed on the level of institutions, (2) workplace culture, & (3) individual men sharing time between work & family. The Finnish welfare state legislation gives fathers many opportunities to spend time with their young children, but many other institutions still enforce traditional masculinities. Labor market & workplaces are important in understanding why male gender roles have changed so little. Analysis reveals ambivalences & contradictions between men's & especially young father's attitudes, possibilities, & actual practices of combining work & family life. Attitudes toward combining work & family in general at different workplaces are quite positive & understanding. Men are, however, less secure than women about acceptance & support in taking family into account when negotiating work arrangements. Individual career compromises of men & fathers' participation in the family daily life are explored.

Lamprecht, Markus & Stamm, Hanspeter (Swiss Federal Institute Technology U Zurich, CH-8006 Switzerland (tel/fax: 260-67-60/61; e-mail: LSSFB@access.ch)), **Social Stratification and the Differentiation of Life Styles, Social Perceptions and Attitudes in Switzerland.**

¶ Discussed & tested is an extended model of social stratification that integrates conventional theories of stratification with perspectives on new inequalities on the basis of a core-periphery model. In spite of the multitude of conceivable combinations of social privileges & structural prejudices, the use of the core-periphery model renders possible the systematic identification & classification of groups of people in similar structural situations (characterized as either central or peripheral). Beyond the identification of objective positions, the model aims at explaining & predicting the living conditions, attitudes, perceptions, & value preferences of these groups. The test & identification of the interlinkages of conventional & new inequalities as well as their effects is performed on the basis of a comparative secondary analysis of recent survey data from Switzerland.

Lander, Edgardo (U Central Venezuela, Caracas 1051 (tel/fax: 58-2-263-6080; e-mail: elander@atheron.net)), **The Deconstruction of Colonial-Eurocentric Knowledge.**

¶ In contemporary social science & policy debates, it has been difficult to formulate alternatives to the total primacy of the market best represented by neoliberalism because neoliberalism is generally assumed to be an economic theory, when it should properly be understood as a civilizational model, ie, as a systematic synthesis of basic Western (liberal) assumptions & values about human nature, wealth, nature, history, progress, knowledge, & the good life. A critique of neoliberalism—the search for alternatives to current adjustment policies & development models—thus requires a radical critique of modern Western industrial civilization, including its colonial-imperial dimensions. Alternatives are not to be found in other economic theories, but in the monumental task of the deconstruction of the colonial-Eurocentric forms of knowledge & control known as modern social science. This is an extraordinarily vigorous & multifaceted, ongoing process with main contributions coming from feminist political theory, reinterpretations of world history, the "opening of the social sciences" (Immanuel Wallerstein), Orientalism, Indian & African academics, & postcolonial perspectives in North American & European universities. The search for non-Eurocentric perspectives also has a long tradition in Latin American social thought.

Landolt, Patricia (Dept Sociology Johns Hopkins U, Baltimore MD 21218 (tel: 410-889-6478; e-mail: martico@jhunix.hcf.jhu.edu)), **Entrepreneurs and Citizens: Salvadoran Transmigrants Transform the Nation.**

¶ In less than 2 decades, 20% of Salvadorans fled the violence & poverty of El Salvador's civil war. These refugees' continued economic & political engagement with their country of origin transformed El Salvador from a nation of labor migrants into a nation structurally vested in the perpetuation of migration. Here, data from 120 interviews conducted in Washington, DC; Los Angeles, CA; San Salvador; & San Miguel are drawn on to examine three processes associated with the proliferation of transnational practices linking El Salvador & Salvadoran settlements in the US, including (1) local & global conditions that combine to vest El Salvador in the perpetuation of migration & facilitate migrants' emergence as critical agents in the economy & policy of El Salvador; (2) specific economic & political transnational practices of Salvadoran immigrants residing in the US & the institutional responses these elicit from different sectors of Salvadoran society; & (3) possible long-term consequences of transnationalism for the Salvadoran nation-state & its migrant citizens. The contours of contemporary Salvadoran migration suggest that transnationalism is a dialectical process. Grassroots transnationalism—the struggle for economic, social, & political reinsertion by displaced populations—elicits an elite transnational response. Ultimately, the transnational engagement of grass roots & elites envelops the national community & leads to a redrawing of the boundaries of national membership.

Landreani, Nelida (Entre Rios National U, Parana 3100 Argentina (tel/fax: 54-043-230657/234162; e-mail: landrean@satlink.com)), **Prácticas escolares y exclusión social en las políticas educativas neoconservadoras** (School Practices and Social Exclusion in Neoconservative Educational Policies). (SPA)

¶ The renewal of capitalism sustains itself in the symbolic production of new cultural devices that stress the processes of social exclusion. The educational apparatus, playing a relevant role in ideological hegemony, is subject to neoconservative reforms, the application of which adopts particular shapes in poor countries. On the basis of this assumption, the contradictory character of educational reform implementation is analyzed, identifying three core meanings that reveal its excluding character: (1) Inversion of sense wherein the new pedagogical discourse creates the illusion of the democratization of knowledge while imposing new mechanisms of social discipline. (2) Old forms of discrimination incarnate in new processes of territorial appropriation of social duality; schools become nets of class division semiotization, being involuntary associates of social exclusion. (3) Teachers' work conditions forwarded by educational reforms contradict their ideological nature, causing exacerbation of mechanisms of alienation, which are frequently displaced by production of alternative sense.

Lang, Alice Beatriz da S. G. (Centro Estudos Rurais Urbanos, São Paulo, 05508-900 SP Brazil (tel/fax: 55-11-831-4332/818-3734)), **Family History and Identity in São Paulo, Brazil.**

¶ Examines the family not only as a real group, but also as a representation, based on oral history research exploring how people of different social classes represent family group & its role in Brazilian society. Life stories obtained from women of different social classes in São Paulo reveal the existence of particular lifestyles determined by social origin. Results show that upper-class women tend to base their personal identity on their extensive family, whose history is seen & cultivated as a myth. Those in the middle & lower classes, however, view the family as a nuclear one, whose history is built in the present; personal identity has its basis in the occupational trajectory of the individual. Changes in Brazilian society over recent decades are observed.

Langman, Lauren (Dept Sociology & Anthropology Loyola U, Chicago IL 60626 (tel/fax: 773-508-3463/7099; e-mail: llsnhms@luc.edu)), **In Praise of Folly: Fitting Humanistic Pegs in Cybernetic Holes.**

¶ One of the fundamental problematics of social theory has been the debate between humanistic & mechanistic approaches. A tradition from Karl Marx to Max Weber & interactionists, phenomenologists, & constructionists have defended agenic subjectivity, while structural, objectivist approaches have been advanced. The question of alienation as a consequence of wage labor & private property remains one of the most important aspects of the critique of late modernity. Others have tried to capture the meanings of alienation, often by analogy to biological or physical sciences. Émile Durkheim, the father of various antihumanistic structuralisms, attempted to reformulate alienation as anomie. Despite greater alienation, new paradigms have emerged that would embrace it in the latest theoretical fad. Sociocybernetic & system theories, even at their most sophisticated, do not originate from humanistic traditions nor can they speak to such issues. While they would attempt to capture Marx's insights, by definition they cannot locate themselves in the critique of domination. As Georg Lukács would suggest, bourgeois categories of understanding, with an inherent logic of domination & control, cannot put humanistic insights in cybernetic frameworks.

98S34971 / ISA / 1998 / 12212

Langman, Lauren (Dept Sociology Loyola U, Chicago IL 60626 (tel/fax: 773-508-3445/3646; e-mail: YLPSLL@cpua.it.luc.edu)), **Modern Fascism.**

¶ Classical fascism, rooted in 19th-century critiques of the shallowness of modernity, became a response to capitalist contradictions, immiseration, & alienation in the early 20th century. Fascism was a doctrine that valorized the complete control of a society by a political party, which not only controlled the judiciary, but maintained power through naked coercion. This power included control over commerce & production. In 1998, fascism seems a strange & remote legacy of the prewar world. But without changing the valence of the word too much, one could argue that fas-

cism endures, if in very different form. Specifically, absolute control of societies does not now come from the state, but from a globalized system of late capital. Today, the consumer culture & mass media of a universalized amusement society foster a migration of subjectivity from political economy to the myriad sites & moments of hedonistic self-indulgence provided by global capital. Late capital does not secure its hegemony through terror. Rather, in a McDonalidized world, its power is invisible, & this invisibility is maintained by indifference. Who needs a Gestapo when we have Ronald McDonald?

98S34972 / ISA / 1998 / 12213

Langman, Lauren (Loyola U Chicago, IL 60626 (tel/fax: 773-508-3463/7099; e-mail: llangma@luc.edu)), **Globalization and Cultural Identity.**

¶ Argues that, notwithstanding universalizing aspects of globalized capital, specific social meanings & expressions of consumption-based identities are always refracted through local social formations & expressed in particular sites & with their own unique social & historical legacies; eg, the nature of consumption in North & South America. Compared here are the Superbowl in the US & Carnival in Brazil, where cultural traditions intersect with global capital & spatial practices in radically different ways. Whereas the Superbowl is a product of modern consumerism, Carnival is rooted in Medieval Europe, & both have been transformed by globalized tourism.

Laó-Montes, Agustín G. (Fernand Braudel Center Binghamton U, NY 13902-6000 (tel/fax: 718-965-4509/3889; e-mail: agustin@global-action.com)), **New York City: Governmentality, Urban Regime, and 'Latino' Social Movements.**

¶ Discusses the specificity of the political regime & the dynamics of power struggles in the context of New York as a world city. Focus is on the relationship between the institutions of the urban polity & the social movements that have originated since the late 1960s, with an explicit purpose of empowering a constituency defined on the basis of ethnonational &/or panethnic identities defined as "Latino" &/or "Hispanic." Both social & political movements for racial justice, community control, & immigrants' rights are examined. In interpreting these movements, a general map is drawn of the power structures of the city in terms of the regime of governmentality, the ensembles of racial & class inequality, & the articulation of forms of citizenship (political, economic, cultural) with social & political identities. Analysis focuses on the particularity of New York as a political entity, at the same time that it is framed in its global, national, regional, & diasporic (ie, translocal) spatiotemporal coordinates & power matrix. Also, Latino/a social movements are problematized in relation to their ethnonational, generational, class, gender, locational, & ideological sources of difference.

98S34976 / ISA / 1998 / 12217

Lapante, Benoit & Bellavance, Guy (Culture & société Institut national recherche scientifique, 306 place D'Youville Bureau B-10 Montreal Quebec H2Y 2B6 (tel/fax: 514-841-4000/4015)), **Statut et fonctions de la formation artistique: l'autonomie de l'art à l'ère de l'éducation permanente et de la formation continue** (Status and Functions of Artistic Training: The Autonomy of Art in the Era of Continuing Education). (FRE)

¶ There is a new trend in Canada toward the formalization of continuing education for artists. Whereas the sole idea of formal training is already a breach in the image of the purely autonomous artist as an individual, the dynamics of this new trend seem to alter the autonomy of the art as a subsystem & involve arduous negotiations between artists' associations, government agencies, & art schools. Although widespread, formal training still hesitates between two models: vocational school & university. This ambiguity is related to the opposition between two different ideas about training for the art & art itself: art as a craft & training as the mastering of a set of technical abilities, & art as an intellectual venture & training as the development of conceptual & creative capacities. Still, in most cases, basic training is given in schools or departments that are usually controlled by artists & enjoys the relative independence historically conceded to higher education institutions. The formalization of continuing education for artists, however, seems to follow a model developed for workers, rather than for professionals. Public funding is not granted to individuals by their peers, based on the quality of the individual's work or project, but is available to associations if they justify that certain training will help a given number of their members to keep up with the employment market. Results from a survey of members of 11 artists' associations show that the needs or desires for additional training among artists cannot be addressed solely through such a model. The trend toward the formalization of continuing education for artists creates a situation in which the opposition between the two ideas about training for the arts are still at the center of the debate, except that the main proponent of the vocational model is the state, & artists do not seem to be able to rely on existing structures to control their training.

Larangeira, Sônia M. G. (U Federal Rio Grande do Sul, 91509-900

Porto Alegre RS Brazil (tel/fax: 00-55-51-316-6635/319-1400; e-mail: larangei@vortex.ufrgs.br)), **Democratization and Local Government: The Experience of Participative Budget in the Municipal Government in the City of Porto Alegre, Brazil-1989-1997.**

¶ Aims to describe & critically analyze the experience of the "participative budget" implemented by the municipal government of the city of Porto Alegre, Brazil, when the socialist Workers' Party first took office in 1989. Such an experience aimed to "revolutionize" the municipal government by creating a forum for participation of the poor layers of the population, where they would participate in the decision-making process, effectively influencing issues related to municipal planning. That experience is analyzed in spite of discussion on democracy & citizenship, approached as a critique of formal democracy, as a process of broadening the concept of citizenship—to the extent that it includes social actors previously excluded—as well as a process of decentralization, in the attempt to set out a new relationship between state & civil society. Examined here are some theoretical assumptions.

98S34980 / ISA / 1998 / 12221

Larangeira, Sonia M. G. (Rua eca de queiroz, 326/302 90 670 020 Porto Alegre Brazil (tel/fax: 55-51-316-66-35/319-14-00; e-mail: larangei@vortex.ufrgs.br)), **Local Power and Democracy: The Experience of Participative Budget in the City of Porto Alegre, Brazil-1989-1997.**

¶ Examines the experience of Participative Budget implemented in Porto Alegre, Brazil, by the socialist local government that took power in 1989. Such an experience was meant to revolutionize the local government by stimulating the direct political participation of the poor layers of the population. The objective was to extend democracy by overcoming the limits of representative democracy not only by incorporating social segments traditionally excluded from social, economic, & political participation, but also by broadening the nature of that participation, in the sense of integrating the popular sectors in the political-administrative decision-making process.

98S34981 / ISA / 1998 / 12222

Larif, Asma (Groupe Maghreb Méditerranée, 142 blvd Berthier F-75017 Paris France), **L'ASEAN: un exemple pour la Méditerranée (ASEAN: An Example for the Mediterranean).** (FRE)

¶ Before its decline, Southeast Asia had a highly prosperous period (1450-1680), attributed to a dense network of merchant communications. This network, which was exploited toward the end of the 19th century by foreign powers, is currently reemerging as a result of collective will to self-determination. The formation of the Assoc of Southeast Asian Nations (ASEAN) is described. As with the Mediterranean region, the labor-intensive regional rebirth must balance the divergent interests of the different countries in the region with those of the larger world powers (Japan, US, the People's Republic of China, & Russia). Because of its successes in growth & stabilization, Southeast Asia is being targeted by Japan, in spite of its record as an untrusting, disdainful ex-colonial power.

98S34982 / ISA / 1998 / 12223

Larkin, Gerry (Sheffield Hallam U, S10 2BP England (tel/fax: 0114-253-2374/2430; e-mail: G.V.Larkin@Shu.ac.uk)), **Professional Identities in Health Care: From Exclusion to Inclusion.**

¶ Explores the evolving range of professionalizing stratagems in health care & raises questions about their legacy. As governments increasingly review the costs & benefits of existing professional formations, it is argued that sociological analyses of past & present patterns may assist the further normative development of existing concepts of professional identity.

98S34983 / ISA / 1998 / 12224

Larrañaga, Isabel & Arregi, Begonia (Dept Sociology U Basque Country, E-48940 Leioa Spain (tel/fax: 34-43-412756/412701; e-mail: cjpargob@ehu.es)), **Patterns of Family Support among Aged People. The Case of Eibar, Spain.**

¶ Describes the availability of support among persons ages 65+ & variations in the patterns of support according to the elderly people's social network structure. The aging of the Basque population has been rapid over the last decade: those ages 65+ have increased by 47%, & the very elderly (ages 75+) have increased by 57%. Family size & structure have changed too. These changes have had a significant influence on intergenerational relations & policies of social resource allocation directed to the

elderly population, among whom the family represents a key social unit. A strong family-oriented support system is found among the Basque elders with a weaker nonkin helper role than those reported in other European countries. In many cases, the pattern of a "modified extended family" is also highly prevalent. On the whole, the prevalence of traditional cultural patterns helps to explain this family-oriented system of support; there is an established hierarchical preference starting with the spouse & following with the children, other relatives, friends, & formal social services. Patterns of support, which vary according to social network composition of the elderly & to a specific task specialization among network members, are analyzed via the hierarchical compensatory & task-specificity models. Results indicate that both models can contribute to the understanding of the functioning of social support.

98S34984 / ISA / 1998 / 12225

Larsen, Jørgen Elm (Dept Sociology U Copenhagen, DK-1361 K Denmark [tel/fax: 35323266/35323940; e-mail: joergen.elm.larsen@sociology.ku.dk]), **Lone Parents—How Do They Work and Care in Different Welfare State Regimes?**.

¶ Regarding lone parent research, one school is primarily focused on the increase in lone-parent families, their poverty risks, & policy responses toward them, while another (primarily dominated by feminist researchers) uses lone parents as a "boarder case" to outline how women generally are treated in different kinds of welfare state regimes. These approaches are combined here in an examination of how & why family patterns & gender roles have changed during the past 20-30 years in most Western countries. The concepts of risk society, reflexive modernization, & postmodern family are employed to circumscribe these changes. It is shown that lone parents' poverty rates are a combined effect of labor market participation, social benefits & services, & family obligations & support. Very different policy regimes seem to have similar effects on lone mothers' poverty rates & very similar policy regimes seem to have very different effects. However, it is possible to locate two poles consisting of the US, on the one hand, & the Scandinavian countries, on the other. The predominant ways of conceptualizing welfare state regimes in terms of "decommodification" or "male breadwinner" regimes are problematized & discussed, using lone parents boarder as a case to raise relevant questions about how welfare states are clustered into regime typologies.

LaRue, Andrée, Mercier, Lucie, Malenfant, Romaine & Vézina, Michel (Centre santé publique Québec, 2400 d'Estimauville Beauport G1E 7G9 [tel/fax: 418-666-7000/0684; e-mail: alarue@cspq.qc.ca]), **Temporary Workers: Meaning of Work and Mental Health**.

¶ Discourse analysis of 1997/98 data from about 60 temporary workers in the Quebec City region sheds some light on how people cope with this working condition. Among the dimensions covered are an analysis of the career path, amount of assumed responsibilities, & individual perceptions of state of health & social & financial support. Made explicit is the link between working conditions in which temporary workers find themselves & consequences on their personal, social, & professional lives. Highlighted are dynamics of variables that help or weaken individuals affected by temporary work, providing insight into the effects of an increasingly precarious job market on people.

98S34986 / ISA / 1998 / 12227

Laruelle, François (U Paris X, F-92001 Nanterre France), **La Méditerranée come problème épistémologique** (The Mediterranean as an Epistemological Problem). (FRE)

¶ It may seem natural to resort to descriptive & theoretical categories such as the center, the border, decentration, excentration, floods, basins, etc, when thinking of the Mediterranean, its historical evolution, & its development. It is argued, however, that this topology is perhaps too natural & obvious. The immediate descriptive value of these terms & their apparent relevance are discussed. The birth of modern philosophy along the rivers of the Mediterranean is noted, & questions are raised about the degree to which these categories are really capable of explaining, without vicious circles or petitions of principle, their objects, or whether they are possibly just sterile reflections of them. Whether these terms would be pertinent for describing the surface of the moon is discussed.

98S34987 / ISA / 1998 / 12228

Lasselain, Josée, Le Désert, D. & Ankri, J. (Faculté Pharmacie CREDEP, F-75270 Paris Cedex 06 France), **Relations professionnelles et profession pharmaceutique** (Professional Relationships and the

Pharmaceutical Profession). (FRE)

¶ French pharmacists' professional groups are very structured, with an ordinal organizational makeup & union representation. In recent years, a new professional structure has come into existence, leading, on the one hand, to groupings that are directly centered on relationships among pharmacists, & on the other, to networks organized in response to pathologies such as acquired immune deficiency syndrome &/or specific concerns such as drug abuse or preventive medicine. The varied membership of these groups is noted. A randomized sample of pharmacists was studied to examine their characterizations of the network(s) to which they belong, & what caused them to be actively interested in these groups. The essential features that motivate the organization of these networks are sought.

98S34988 / ISA / 1998 / 12229

Lasvergnas, Isabelle (Dept Sociology U Québec, Montreal H3C 3P8 [tel/fax: 514-987-3000/4638]), **L'Écoute psychanalytique peut-elle "s'appliquer" à une écoute de type sociologique ou anthropologique?** (Is a Psychoanalytical Understanding "Applicable" to a Sociological or Anthropological Understanding?). (FRE)

¶ To analyze historically recurrent types of social events, the clinical psychoanalysis approach is compared to a socioanthropological perspective. Some crucial discrepancies occur when the level of the inner & intrapsychic world of the subject is transposed (translated) to the level of cultural & ideological self-representation & meaning. Application & extent of pertinence of some Freudian concepts to collective situations are explored from an epistemological-methodological point of view. Crowd phenomena & mass transferences, eg, those following Princess Diana Spencer's death, in the context of a global, digitalized communications network, will permit a return to the concepts of identification, idealization, ego-ideal, & specular imagery.

98S34989 / ISA / 1998 / 12230

Lasvergnas, Isabelle & Gagné, Jean (Dept Sociology U Québec, Montreal H3C 3P8 [tel/fax: 514-987-3000/4638; e-mail: @]), **Généalogie et transformation de l'intervention communautaire au Québec dans le camp de la santé mentale et conceptions de la maladie mentale** (Genealogy and Transformation of Community Intervention in Quebec in the Area of Mental Health and Conceptions of Mental Illness). (FRE)

¶ The last 10 years have seen a mushrooming of so-called community-based mental health resources in Quebec in response to the extreme anomie of postmodern life. Chronic mentally ill, primarily psychotic, patients often engage in urban vagrancy & become street people, young drug addicts, & long-term unemployed. The community mental health movement appears to be an original & creative social structure designed to mediate between civil society & technocratic state agencies. The discourse & strategies of this alternative network promulgate a new form of social commitment & a holistic conception of social disaffiliation, which contrasts greatly with a technocratic & psychiatric understanding of madness.

Lauristin, Marju (Dept Journalism U Tartu, EE-2400 Estonia [tel/fax: 3727-465188/465440; e-mail: marjulau@ut.ee]), **Cultural Contradictions of Post-Communist Society**.

¶ Postcommunist culture represents three coexisting, but substantially contradictory, perspectives on social reality—traditional, modern, & postmodern—which might be viewed in value orientations of people, as in the character of images created by the media. The traditional perspective is embedded in historical memories & traditional elements of national culture; it is expressed in collective values referring to national identity. The meaning of transition in this perspective is restoration of the past. The modernist perspective on transition reflects economic & political realities in terms of Westernization; power relations, divisions of income, success in business, & opportunities for upward social mobility are central with a focus on winners & losers. The meaning of transition from this perspective is "catch-up of the West." The postmodern perspective is a result of rapid globalization, transmitted by contents & codes of the media. The key concepts of this approach are individual autonomy & freedom of self-expression. Indifference toward traditional norms, national values, or competitive ambitions are cultivated by this type of cultural content. The meaning of transition in this perspective is related to personal freedom & self-identity. While in the case of a normal cultural evolution, these three perspectives characterize different stages of historical development (traditional, industrial, & postindustrial societies), in postcommunist countries, all three cultural perspectives coexist as new approaches, creating inner conflicts & a contradictory, sometimes even absurd, picture of social reality.

98S34991 / ISA / 1998 / 12232

Law, Alain (Dept Sociology Trent U, Peterborough Ontario K9J 7B8 (tel/fax: 705-748-1064/1213; e-mail: alaw@trentu.ca)), **Surfing the Welfare Net: Constructing Surfing Sub-Cultures as 'Dole Bludgers'.**

¶ Traces the administrative & media construction of Australian youth surfing subcultures in the early 1970s as anti-working class. The work of Clause Offe on contradictions of the welfare state & that of Michel Foucault on technologies of moral discipline & liberal governance are used to interpret the history of the administrative categorization process used to discipline members of Australia's surfing subculture. Disciplinary discourse, enacted in administration of unemployment benefits & amplified in the press, created identities of deviance in contradiction to the unemployed working-class subject, morally idealized in administrative procedure. Not only were "surfers & hippies" an object of discipline, but working-class youths were made to police themselves at a time of high unemployment to serve the Australian state's liberal view of the labor market.

Lazarte, Rolando (U Federal Paraíba, 58000-000 João Pessoa PB Brazil (tel: 00-55-83-235-1864; e-mail: marfilha@openline.com.br)), **Ayer no mas: participación política popular en Argentina, 1973-1983** (Yesterday No More: Popular Political Participation in Argentina, 1973-1983). (SPA)

¶ Between 1973 & 1983, Argentina experienced both the highest & the lowest levels of popular participation in collective life—from social(ist) dream to fascist nightmare. These were accompanied by many changes on the social & individual levels, as well. An attempt is made to search for memories in relation to changing values, attitudes, beliefs, & senses, especially those related to the genocide in Argentina, & then the change from a military dictatorship to a formal democracy. It is necessary to recover the memories of sorrow to understand what happened to the dreams for brotherhood, justice, peace, & laughter.

Le Galès, Patrick, Fainstein, Susanne & McDowell, Linda (Centre national recherche scientifique, 10 rue de la Chaise F-75007 Paris France (tel: 33-1-4549-53-16; e-mail: patricklegales@compuserve.com)), **Urban Research and IJURR: Signposts for the Future.**

¶ Derived from an IJURR policy statement is an opportunity to start a debate on urban research. Some key questions are put forward: What does critical urban research mean today? How should links be made between some revised political economy tradition & some interesting avenues in postmodernist & cultural studies research? How are globalization & changes in capitalism in urban research analyzed, changing scales of collective regulations worked on, a critical social science understanding of new technologies & cities developed, & the restructuring of politics & policies worked on? IJURR will build on a more open, pluralist political economy perspective to engage in dialogue & address issues raised in other intellectual perspectives to understand cities. Urban & regional research has much to say to mainstream social sciences.

98S34994 / ISA / 1998 / 12235

Le Galès, Patrick & Goldsmith, Michael (CEVIPOF, 75007 Paris France (tel: 01-45-49-53-16; e-mail: patricklegales@compuserve.com)), **European Regions and Cities and Globalization.**

¶ Reviews some of the main trends of economic globalization affecting European regions & cities, as well as some of the impacts changing the nature of local politics as a result of the process of European integration. Responses of localities to these twin pressures for change are considered. Consequences of these changes, eg, conflicts likely to be felt in European cities & regions, are addressed.

98S34995 / ISA / 1998 / 12236

Le Goff, Jean-Louis (GRIS U Rouen, F-76130 Mont Saint Aignan France (tel/fax: 33-02-35-14-61-05/09; e-mail: legoff@epeiire.unio-rouen.fr)), **French title not provided** (Transfers of Technologies and Systems of Work—International Comparisons). (FRE)

¶ In light of rapid technical & technological transformations that stimulate new management possibilities, eg, production software systems of group work, international examples (in the nuclear, electronic, telecommunications, & automobile sectors) in Latin America & Eastern Europe are used to show the difficulties of new management in terms of technical & work culture changes. The process of integrating different systems is

analyzed with respect to the appropriation capacities of technical workers based on the ability to work together.

98S34996 / ISA / 1998 / 12237

le Grand, Carl & Tahlin, Michael (Dept Sociology Stockholm U, S-10691 Sweden (fax: 46-8-612-5580; e-mail: clegrand@sociology.su.se)), **Job Mobility and Earnings Careers.**

¶ Addresses variation in long-term pay-offs of job mobility in & between firms across different worker & firm categories via estimation of the impact of job-shift sequences on earnings careers in Sweden. Data on retrospective individual employment histories, 1951-1991, combined with tax register data on individual yearly earnings, permits modeling of the complex selection issues involved in the relationship between mobility & rewards. Standard theoretical notions of reward attainment over the life cycle are critically evaluated & rephrased.

98S34997 / ISA / 1998 / 12238

Ledeneva, Liudmila (Russian Academy Science, Nakhimovski Prospekt 47 117418 Moscow (tel/fax: 095-332-44-59/310-70-71; e-mail: Led@unix.econ.rssi.ru)), **Attitude to International Migration among Russia's Intellectuals.**

¶ In the late 1980s-1990s, international intellectual migration & the emigration of highly skilled young & middle-aged workers from Russia has become a steady process. Findings are presented from two questionnaire surveys of Russia's intellectuals conducted (1) in Russia (as a donor country) in 1992/93 among potential migrants; & (2) in France (as a Western recipient country) in 1995/96 among actual migrants. Judging from their migratory intentions none of the intellectual emigrants plans to return to Russia. Reasons for this unwillingness include professional considerations; the problem of psychological & professional readjustment in Russia after the change of its political & socioeconomic orientation; lack of affection for Russia; French or other foreign spouses; secondary & higher education obtained in France by children of the emigrants; & the higher comfort of living abroad.

98S34998 / ISA / 1998 / 12239

Lee, Aie-Rie (Dept Political Science Texas Tech U, Lubbock 79409 (tel/fax: 806-742-3121/0850; e-mail: uqlee@ttacs.ttu.edu)), **Stability and Change in Korean Values.**

¶ Uses 1982 & 1990 World Value Survey data from South Korea to investigate the extent to which social values persist &/or are changing & how they influence political attitudes. It is contended that the erosion of support for authoritarian political institutions & practices begins with changes in exposure to new (modern) ideas & ways of life; level of education in this process is the most powerful measure in explaining value changes. Yet, age is almost equally important in predicting value changes, because there has been a significant discontinuity in lifestyles between younger & older generations in Korea. Hypothesized is that both the generational cleavage & educational level increase so-called libertarian values, argued to be positively related to political interest & efficacy & negatively linked to institutional support. Further, libertarian values may be directly associated with higher levels of support for protest action & Left issue positions. It is found that authoritarian-libertarian values, albeit diminished in 1990, sharply partition Korean society largely along the lines of age & education, the former becoming more important in the later period; differences in these values are found to be strongly related to contrasting political action.

98S34999 / ISA / 1998 / 12240

Lee, Richard E. (Fernand Braudel Center Study Economics/ Historical Systems/Civilizations State U New York, Binghamton 13902-6000 (tel/fax: 607-777-2250/4315 e-mail: rlee@binghamton.edu)), **Imagining the Future: Constructing Social Knowledge after "Complexity Studies".**

¶ Suppressed opposition to the "two cultures" antinomy—the ordered/lawlike, factual/expository sciences vs the chaotic/anarchic, impressionistic/poetic humanities—has accompanied the development of the structures of knowledge over the past 500 years & been especially pronounced from the humanities pole at various times over the past 150 years. Developments in complexity studies at the science pole of the disciplinary hierarchy—especially, order-in-chaos (strange attractors), order-out-of-chaos (dissipative structures), pathological functions & natural forms exhibiting noninteger dimensions (fractal geometry)—have, since the 1960s, led to a fundamental questioning of the naturalized, taken-for-granted premises of legitimate knowledge, ie, objectivity, precision, prediction. In tandem with developments in the humanities, this has opened

up issues of what is & is not thinkable &, therefore, doable in the present conjuncture of crisis & instability. Choice really matter in reconceiving the relationship between knowledge production & politics, structure & agency, order & anarchy, necessity & chance, & truth & values. Resolution of these heretofore mutually exclusive, but tactically accepted, visions through negotiation & compromise cast within relations of power may now be rethought in terms of the ethical imperative of scholarly participation in the transformation of the social world, conceived as the active social event of imagining possible futures.

Lee, Sangmin (Dept Sociology U Texas, Austin 78712-1088 (tel: 512-471-8366/1748; e-mail: salee@mail.utexas.edu)), **Cross-National Comparability of Research Variables: A Comparative Study of Inter-corporate Relations in the U.S. and Korea.**

¶ Focuses on intercorporate relations in the US & Korea using interlocking directorates as an indicator. However, if the study is developed as a cross-national comparative study, a new situation is likely to be encountered; ie, if the indicator (interlocking directorates) cannot be reliably identified in a comparison country, the study will suffer from the comparability problem. For example, Korean corporations do not have a system of interlocking directorates, as they are recognized in the US. In this case, how does the researcher conduct cross-national comparative analyses of intercorporate relations? The need to introduce an alternative approach, if a new indicator appropriate for another party can be drawn, is illustrated. It is hypothesized that, if another important mechanism must exist in Korea, then that mechanism is kinship relations—intermarriage among business leaders or between political elites & business leaders. Results provide limited support for the fact that the mechanism of kinship relations in Korea serves the function of interlocking directorates as they exist in the US.

98S35001 / ISA / 1998 / 12242

Lee, See-Jae (Catholic U Korea, Seoul), **Global Environmental Regimes and Korea's Difficult Compliance.**

¶ Explored are difficulties faced by Korea's rapidly developing, semi-peripheral economy, now under direct attack from the world money market & global environmental regimes. Korea's compliance with the global environmental regime will seriously contradict its high economic growth policy. Its rapid economic growth could not have been achieved if it had to pay very much for environmental industries, eg, steel & iron, automobiles, shipbuilding, & petrochemical industries, which deplete resources & create pollution. Per the International Monetary Fund bailout, Korea also has to repay an immense amount of debt & interest every year, & it has to earn foreign currency by boosting exports again. For rapid industrialization, it is imperative for Korea to massively consume fossil fuels, compounding resource depletion/pollution problems. Consequences of these dual demands from the world market & the global environmental regime will be serious setbacks for the domestic environment & people's lives. Korea's strains on energy consumption can be mitigated to some extent through restructuring its industries to highly technological & knowledge-intensive ones, & restructuring institutions for education, communication, & science & technology development. However, a global response to these problems is needed, along with an alternative framework to explain global domination in environmental & economic terms.

98S35002 / ISA / 1998 / 12243

Lee, Su-Hsin (Feng Chia U, Taichung Taiwan (e-mail: shlee@fcu.edu.tw)), **The Leisure Experience of Chinese Theater Appreciation.**

¶ Traces the development of the three types of modern Chinese theater—traditional Chinese opera, folk opera, & modern drama. Drama, especially Western-style, is becoming one of the popular leisure experiences for Chinese people. Theater is a place where actors & audience can exchange their feelings & experiences. The leisure experience benefits of dramas are explored, drawing on structured questionnaire data from audiences to analyze the interrelationships among their social background, motivations to visit the theater, style of drama, & theater experiences. Results showed that the (1) experience of drama could give the audience compensatory, spillover, & pure relaxation along with aesthetic feelings; (2) benefits & experience differed according to audience social background; (3) audiences at traditional Chinese opera & modern drama showed significant differences in their theater experience.

98S35003 / ISA / 1998 / 12244

Lee, Suni (Ajou U, Suwon 442-749 South Korea (tel/fax: 82-2-401-2780/2195; e-mail: sunilee@madang.ajou.ac.kr)), **Marital Status, Gender, and the Quality of Life in Korea.**

¶ Explores the effects of marital status & gender on the subjective quality of life in Korea, drawing on national scale data from 955 married or single adults. Results indicate that gender is a stable predictor of the quality of life regardless of one's marital status; men are better off than women. Being married appears to affect the level of general happiness positively. Analyses with other measures of quality of life suggest, however, that the effect of marital status is moderated by gender; for men, being married negatively affects the quality of life, while the effect is positive for women. This latter finding is the opposite of what had been reported in some US studies. Results are highly indicative of inequality & the division of labor based on gender & changing expectations.

98S35004 / ISA / 1998 / 12245

Lee, William K. M. (Lingnan Coll, Tuen Mun Hong Kong (tel/fax: 852-26167202/8917940; e-mail: Leew@ln.edu.hk)), **Women's Employment in Colonial Hong Kong: Implication on Women's Role after 1997.**

¶ In Hong Kong, 1981 & 1991 census data show working women are disproportionately underrepresented in higher-status occupations; despite general improvement in educational attainment, women are still unequally paid. Their role in the workplace is still impeded by their familial role. Hong Kong women's continuous subordination in the workplace lies in the domination of the Chinese patriarchal family in industrial Hong Kong. Women experience institutional discrimination insofar as other institutions & the public at large subscribe to culturally entrenched prejudices & discriminatory practices against women, indicating a future status quo.

98S35005 / ISA / 1998 / 12246

Lee, Young-Hee (Science & Technology Policy Instit, 7-1509 Woon-sung Apt Daechi 1 Dong Kangnam-Ku Seoul South Korea (tel/fax: 82-2-250-3048/253-8678; e-mail: lyhee@stepimail.stepi.re.kr)), **Technological Development and Quality of Life in South Korea.**

¶ Analyzes the relationship between technological development & quality of life in Korea, arguing that Korea's rapid technological development, though impressive to observers, has not contributed much to the promotion of life quality, mainly because Korea's well-known "rush-to-development" model has subordinated science & technology policy to a subunit of economic competitiveness policy. It is contended that citizen participation in science & technology policy-making processes is one of the best ways to relate technological development to quality of life.

98S35006 / ISA / 1998 / 12247

Leeming, William (York U, Toronto Ontario M3J 1P3 (tel: 416-736-5013; e-mail: wleeming@yorku.ca)), **What's New in Health-Related Genetic Technology? Evaluation, Policy and Practice.**

¶ From a policymaker's perspective, scientists doing research in the area of genetics & heritable disease control appear poised to usher in a new era of medical science, ie, a scientific revolution à la Thomas S. Kuhn. The perception of revolutionary times actually reflects a subtle shift in the orientation of research away from the goals of preventive medicine toward more direct biomedical interventions. To assess policymakers' expectations, the broader sociological implications of this shift must be examined, along with how policy discussions fit into the mandates of national care systems. Here, research & technological innovations associated with genetic screening programs in Canada are offered in illustration. It is argued that, from a policy perspective, the logics of preventive medicine & biomedical intervention do not operate as two distinct & positive principles to address the problem of heritable disease, but function instead in jurisdictional settings that overlap only through the reciprocal limitation of highly specialized practices.

Lefevre, Cécile (Institut national statistique & études économiques, 18 blvd Adolphe Pinard F-75675 Paris Cedex 16 France (tel/fax: 33-1-41-17-52-86/68-49; e-mail: cecile.lefevre@DG75-D250.INSEE.ATLAS.FR)), **Le Rôle des statisticiens dans la définition et la catégorisation des professions et des métiers. Réflexion à partir de l'opération actuelle de rénovation de la nomenclature française des PCS (The Role of Statisticians in the Definition and Categorization of Professions and Occupations. Reflection on the Present Revision of the French Nomenclature of the PCS).**

(FRE)

¶ The revision of the French classification of professions & socioprofessional categories (PCS), which is being conducted by the Institut national de la statistique & des études économiques, allows study of how the statistical institution helps define frontiers between professions & assigns them a status. "Profession" is used in a broader sense than in the Anglo Saxon sociology of professions. It is a question of interaction between statistical classification & its social uses, not simply an issue of registration. For this revision, it was decided to conduct separate investigations on professions & categories of social groups. Examined are reasons that may explain this choice & the determining factors of the modifications: changes in the labor market, professions' status, job content, & international harmonization requirements, especially at the European level.

Lehr, Valerie D. (Gender Studies Program St. Lawrence U, Canton NY 13617 [tel/fax: 315-229-5909/5709; e-mail: vleh@music.stlawu.edu]), **Mobilizing Gen X: Social Movement Theory and Generational Change.**

¶ Generation (Gen) X, or the 13th Generation, is typically identified as less intelligent, less hard-working, less politically involved, & less likely to have ideological commitments than previous generations. At the same time, this generation is seen as highly involved in volunteer activities, committed to protecting those close to them, & able & willing to use communication technologies. Explored here are discussions of Gen X & how they fit with social movement theory to assess the contributions this generation will make to the development of social movements in the US. How will social movements change as Gen X becomes more central to political organizing? What should older generations who wish to draw from Gen X do to make social activism attractive? What difference does this generational change make for social movement theory?

98S35009 / ISA / 1998 / 12250

Lehrer, Ute Angelika (Dept Urban Planning U California, Los Angeles 90095 [tel/fax: 416-691-8297; e-mail: lehrer@ucla.edu]), **Globalization, Large-Scale Projects and the Identity of Cities.**

¶ Since the 1980s, massive private investment into the built environment has been taking place, interfered with only by the cyclical behavior of the property market. While this investment has both transformed inner cities & created new clusters in the urban periphery, it has also led to the increasing importance of large-scale projects in the redefinition of urban areas. It is argued here that large-scale projects, financed through private & corporate money, are increasingly used by cities to (re)define their identities. In this redefinition, one of the main strategies seems to be the spectacularization of the building process. Two case studies illustrate the argument: the Getty Center in Los Angeles (CA) & Potsdamer Platz in Berlin (Federal Republic Germany). The Getty Center & Potsdamer Platz are very specific examples of large-scale projects & have to be read within the interplay of local & global forces. It is hoped that this analysis makes a contribution to the better understanding of the role of large-scale projects in an era of a global economy & economic restructuring.

98S35010 / ISA / 1998 / 12251

Lei, Joy L. & Grant, Carl A. (U Wisconsin, Madison 53706 [tel/fax: 608-263-5856/9992; e-mail: jllei@students.wisc.edu]), **Seeing Colors in Black and White: Marking Dichotomies in U.S. Race Relations Research.**

¶ Critically reviews the research literature on race & race relations in US schools, specifically examining the dominant racial ideology & how it shapes the research processes & conclusions. It is argued that the existing educational research on race & race relations, while offering valuable information & analyses, is confined by a racial ideology based on a white-Other (nonwhite) dichotomy in which the Other is largely represented by the experiences of African Americans. This ideology embodies a system of representations & a number of assumptions that delimit how race & race relations are thought & talked about. Thus, there are significant voids in the existing research in relation to schools; the effects of these voids are considered. To gain a fuller & more complex understanding of race relations & how whiteness & racism are enacted in schools, it is deemed crucial for educational research to move beyond dichotomous representations.

98S35011 / ISA / 1998 / 12252

Leinenweber, Martine (U Strasbourg III, F-67100 Cedex France [tel: 33-3-89816619]), **The Status of Jerusalem and the Peace Process.**

¶ Explores interactions between the status of Jerusalem & the peace between Israel & the Palestinians. Jerusalem is viewed as potentially bearing an equity plan that might pave the way to dialogue, reconciliation, & cooperation among believers of the three religions: Judaism, Christianity, & Islam. The 1993 agreement between the Vatican & Israel & the Oslo (Norway) agreement are evidence. The coexistence of Israel & the Palestinian state seems to be the only way to build lasting peace in the Middle East. The problem has political, religious, & economic dimensions. Economic development is necessary to avert possible mass dissatisfaction & conflict in the region. Presented in conclusion is Shimon Peres's plea: "Make the River Jordan Valley a peace haven & a global regional cooperation axis."

98S35012 / ISA / 1998 / 12253

Leira, Arnlaug (Dept Sociology & Human Geography U Oslo, Blindern N-0317 Norway [tel: 47-22-85-8335]), **Changing the Gender Order-Do Family Policies Matter?**

¶ Discusses some strategies developed by welfare states in Scandinavia with the aim of changing what Robert Connell has termed the "gender order," focusing on policies that contribute to changing the gendered division of caregiving work & care for children in particular. Variations across Western Europe in terms of the state-family division of labor in care provision are documented, highlighting the construction of social rights, particularly in the social democratic welfare states of Scandinavia. The institution of caring-related rights taking is discussed in terms of three sets of policies aimed at parents of young children: policies instituting cash for child care schemes, state sponsoring of day care, & the right to parental leave from work. The impact on citizenship of caring-related rights, focusing on "daddy leave," is discussed.

98S35013 / ISA / 1998 / 12254

Lejter, Nelly C. (Instit Estudios Superiores Administración, San Bernardino 1011 Caracas, Venezuela [tel/fax: 582-52-1533/4247; e-mail: nlejter@iesa.edu.ve]), **Political Discourses of Italians and Jews in Buenos Aires and Caracas, 1940s-1990s: Between Exclusion and Privilege.**

¶ Presents a comparative-historical analysis of the political discourses that the Jewish & Italian immigrant & ethnic communities have developed in Buenos Aires, Argentina, & Caracas, Venezuela. The guiding question refers to what the political discourses of these four communities say about the insertion of the communities into the national society: Do the texts picture the communities as excluded or as privileged minorities? Content analysis of editorial texts in weekly periodicals, 1948-1994, is used to test the initial hypothesis that, in fact, ethnic newspaper editorials serve as a mechanism to detect the creation, & changes over time, of a specifically ethnic political discourse. Major themes identified are codified as politics (democracy/totalitarianism, participation, exclusion), identity (ethnic, religious), & community. Cognitive maps provide a way to look into how the themes previously identified as relevant are constructed & how they intertwine with other themes & subthemes across communities & over time. Discourse analysis is used to draw from the text additional insights into the complex dichotomy of exclusion-privilege. Conclusions point to the ambivalent political discourse of Italians & Jews in Argentina & Venezuela, oscillating between claims of exclusion & considerations on their privileged condition.

Leledaris, K. (E-Venizelou 20, GR-15773 Zografou Athens Greece), **On Political Identities: A Critique of Post-Structural/Post-Modern Theories.**

¶ Certain trends of contemporary political theory claim that, in contrast to Marxism, political identities can be formed & reformed freely, without any constraint from social origin or class, depending only on the operation of overall hegemonic projects. This line of argumentation is supported by an interpretation of Lacanian theory regarding the psychical functioning of identity & ideology in general. However, Jacques Lacan's lack of focus on the forms of permanent structuring of the psyche does not imply the incompatibility of his theory with the existence of such structuring, as explicitly theorized by other psychoanalytic approaches. Moreover, this structuring is, to a significant extent, a social one & cannot but influence the choice & possibility of identity formation. Thus, not any identity is possible for any subject, nor is any hegemonic project possible; this crucial insight has to be taken into account.

Lemberanskaya, Larisa M. (Center Scientific-Technological Re-

search American U Baku, Azerbaijan 370001 (tel/fax: 99412-92-8951; e-mail: llemb@amcenter.baku.az)), **The Structure of Social Values in Post-Communist Azerbaijan.**

¶ During the transition from a totalitarian communist regime to the social structure based on the principles of market economy, democracy, & legal society, basic changes in the system of social values are inevitable. Devaluation of communist ideology, the "openness" of postcommunist society, & the increasing influence of value systems from other countries have contributed to the transformation in value orientations. After describing these changes, their distinctive character in the structure of social values in postcommunist Azerbaijan is addressed. Described here is a study being conducted by the Center for Social Studies & Research at the American U in Baku to explore the situation in Azerbaijan, assess factors determining its distinctiveness, & analyze the basic tendencies of its evolution. This survey presupposes the analysis of orientations & attitudes among different social groups. On the one hand, as economic & political reforms have shaped the new type of social stratification, new social strata have emerged. On the other hand, the reforms have abruptly changed the conditions & mode of life of social groups differing in income, occupation, level of education, place of residence, age, gender, etc, which inevitably leads to corresponding changes in intragroup systems of social values. The structure of postcommunist values is an aggregate result of these processes.

Lemel, Yannick (Centre recherche économie & statistique Institut national statistique & études économiques, 3 Ave Pierre Larousse F-92245 Malakoff Cedex France (tel/fax: 01-41-17-57-40/55; e-mail: Lemel@ensae.fr)), **Income vs Direct Household Production. Does Household Production Change the Position of Households within the Stratification System?**

¶ Reports on the degree to which economic inequalities & social hierarchies are changed when nonmonetary aspects (eg, direct household production) are taken into account, based on a 1988/89 lifestyle survey of 6,807 households in France. It is found that importance & kinds of productive activities depend on social status & position in the life cycle, & these dimensions must be taken into account simultaneously. If economic inequalities between age strata are reduced when taking into account household production, volume & value of household productive activities are positively correlated with income. Direct household production does not substantially improve the situation of the poorest people by reference to others. Net effects appear mainly for the highest strata of income & educational level. Network contribution to household production varies in such a way that help widens the gap between income brackets. Household production is usually perceived as an extra resource to improve living standards. While results do not completely refute this perception, they argue for major qualifications when applying it to the population at large. Production of material goods & services by households are probably not undertaken mainly for the material returns they provide. Moreover, such production needs skills, knowledge, & equipment that are not equally accessible. Mutual help often resembles a sociability pattern where favors serve as a pretext for exchange & not the substance. These are possible reasons for which the economic inequalities are not substantially diminished or changed by economic nonmarket household activities.

LeNavenec, Caroline M. & Reimer, Marlene (U Calgary, Alberta T2N 1N4 (tel/fax: 403-220-6269/284-4803; e-mail: cllenave@acs.ucalgary.ca)), **Outcome Indicators of Quality of Life Changes for Adults with a Traumatic Brain Injury in a Community Rehabilitation Program.**

¶ One major challenge for researchers involved with social indicators studies is how to measure quality of life in a severely disabled population. Discussed here is the usefulness of the Critical Incident Technique (Flanagan, 1982) as a method to elicit descriptions of behavior change from which indicators can be identified. Data are drawn from 2 adults who have experienced a severe traumatic brain injury, their significant others (N = 40), & the staff & volunteers who work with them (N = 63) at a community rehabilitation center in Alberta. The guiding theoretical framework for this cross-sectional study is based on the work of Brown, Bayer, & MacFarlane (1989).

Lénel, Pierre (CNRS, 59-61 rue Pouchet F-75017 Paris France (tel/fax: 33-0-1-40-25-10-67/66; e-mail: fuze@iresco.fr)),

L'Institution de la sociologie de l'entreprise (The Institution of the Sociology of the Firm). (FRE)

¶ In France, since the early 1980s, some authors have tried to promote a sociology of the firm, but there is little consensus in the field of research. Culture, identity, & institution are the main concepts, but their definitions are exceedingly heterogeneous. The same is true for the status of this sociology: Is it a synthesis of sociology of work & sociology of organization, or just an extension of the latter? The numerous answers show the weak foundation of this sociology. Therefore, if sociology of organization (M. Crozier, R. Sainsaulieu) brought deciding results about the understanding of everyday microadjustments (socialization), it is essential to take conflicts of interests into account linked to the achievement of firm goals (legitimation). In this way, the sociology of the firm could support its thesis with a convincing definition of the institution.

Lengermann, Patricia Madoo & Niebrugge-Brantley, Jill (Dept Sociology George Washington U, Washington DC 20052 (tel/fax: 607-277-7396/315-364-3227; e-mail: PML4@Cornell.edu)), **Autobiography in Biography: A Feminist Reading of Marianne Weber's *Max Weber: A Life*.**

¶ Two modes of reading Marianne Weber's biography of her husband Max are contrasted: the conventional mode, which reads it as a factual & laudatory account by a devoted widow, & a feminist mode, which finds in it, through a trail of "clues in the margin," a portrait of Marianne Weber. It is suggested that there is a second life story in this biography—a partial autobiography of Marianne Weber—and reading the biography through the lens of this autobiography yields a feminist interpretation (if not critique) of Max Weber, gender relations in Germany, & German sociology in the classic period. Citations from the text illustrate Marianne Weber's feminist consciousness, awareness of her own worth, presentation of herself as often the hero of the marriage, & critical understanding of gender relations in her own time that framed both her marriage & the emerging discipline of sociology in Germany.

Lengermann, Patricia Madoo & Niebrugge-Brantley, Jill (Cornell U, Ithaca NY 14850 (tel: 607-277-7396; e-mail: pml4@cornell.edu)), **The Concept of Domination in Classical Feminist Sociology.**

¶ Explores domination as a concept in the sociology of Harriet Martineau, Jane Addams, Anna Julia Cooper, & Marianne Weber. These women discover & elaborate the concept in a movement between three points—lived gender experiences, theoretical reflections on society & sociology, & specific research undertakings. These are used to make a thematic statement about the feminist concept of a "matrix of domination." Examined in particular is Martineau's studies of US slavery & British domestic labor; Addams's analyses of philanthropists/reformers & socialization in the context of social class; Cooper's reflections on slavery & her application of it to contemporary US race relations & the problem of Haitian slavery for French revolutionaries; & Weber's debate with Max Weber's typologies of power & authority, her research on the legal history of marriage relations, & her contemporary analyses of women's economic dependency in marriage.

Lengermann, Patricia Madoo & Niebrugge-Brantley, Jill (Cornell U, Ithaca NY 14850 (tel: 607-277-7396; e-mail: pml@cornell.edu)), **Convergence: The Erasure of the Women Founders and the Turn to Scientific Sociology.**

¶ Claims that (1) women have always been significantly involved in creating sociological theory; (2) a central theme in their sociological theory is the realization of "the good society"; (3) women founders have been written out of the discipline's history as part of a politics of gender & knowledge; & (4) this politics of knowledge turned on a rejection of sociology as a moral science by a male-dominated profession moving toward a scientific formulation of the discipline. This thesis is developed primarily in terms of the way US sociology has constructed its history of the discipline, focusing in Harriet Martineau, Jane Addams, Charlotte Perkins Gilman, Anna Julia Cooper, Ida B. Wells-Barnett, & Beatrice Webb. Their sense of sociology is described as a moral science, & similarities in their formulations of the good society are identified. How these women, though well-known to their male contemporaries, were erased from sociology's canon as the discipline transformed itself into an academic, male-dominated discourse concerned with securing its place in the university by establishing itself as a value-neutral science is explored.

Lengkeek, Jaap (Centre Recreation & Tourism Studies Wageningen Agricultural U, NL-6703 BJ Netherlands (tel/fax: 31-317-483259/482166; e-mail: jaap.lengkeek@recr.wau.nl)), **Touristic Involvement of Evolution.**

¶ Explores methods to facilitate the development of tourism in the context of divergent local interests. The packaging of tourist products can lead to transformations of material & symbolic qualities that either mesh or conflict with values that local people place on their own environment & identity. The development of tourism in a region often parallels other large-scale developments, eg, the restructuring of agriculture & nature, the construction of infrastructure networks, or (sub)urbanization. These processes can be seen as exogenous from the perspective of the local situation & it is sometimes difficult to link them to the endogenous processes taking place at the local level. The local community is confronted with a situation in which it is dispossessed of its ownership, forfeiting the rights & control over what it had traditionally regarded as its own political, cultural, & physical territory. Although the involvement of the local community in tourist development is often presented as an option for securing a better integration of tourist growth in the local networks, the possibility of achieving a favorable balance between exogenous & endogenous interests seems caught in a cycle of government roles, power relationships, & divergent perceptions of reality. At issue is whether the involvement of local forces will lead to an optimal situation. Instead of evolution, there is the threat of involution, a closed process of increasingly detailed measures & reactions directed toward the outside world that does not favor any actual control over developments. Examined are interventions that can substantively affect the game played between administrations & exogenous & endogenous interest groups.

98S35023 / ISA / 1998 / 12264

Lengkeek, Jaap & Elands, Birgit (Centre Recreation & Tourism Studies Wageningen Agricultural U, NL-6703 BJ Netherlands (tel/fax: 31-317-483259/482166; e-mail: jaap.lengkeek@recr.rpv.wau.nl)), **Cohen's Modes of Experience as a Basis for Quality Management of Leisure Environments.**

¶ Adopts Erik Cohen's five modes of tourist experience as a theoretical base to base to conduct empirical research on categories of tourists. The theory is reconsidered to assess its utility for understanding leisure behavior & for empirical research & operationalized into questionnaire items that are tested according to different national & international situations & tourist activities. Factor analysis of questionnaire data shows coherent response categories that form the basis of a typology describing dominant experience values in specific tourist situations. Because this approach uses experience modes & environmental assessment, it permits the empirical identification of visitors & their dominant motives. Moreover, as a theory, it directly offers a frame of reference for policy making & management. Hence, the environment can be improved for the experimental or existential modes of experience—eg, an area can be reconstructed in a less accessible way; the general quality of quietness & desolation can be changed; "true stories" about the place can be made more difficult to obtain (exclusiveness); & only specific social groups can be encouraged to visit the area, adding to a feeling of being among their own kind. In this case, tourist marketing will be narrowly focused & low-key. But the reverse process is also possible, emphasizing the recreational & diversionary qualities of an area. The theory also helps to define the degree of one-sidedness or differentiation of the leisure environment to link the right environmental values to the dominant mode of experience. In short, the originally phenomenological approach of the tourist is transformed in a new technology of managing leisure environments.

Leon, Juan Salvador (Dept Sociologia U La Laguna, Spain (tel/fax: 34-22-153055/253742; e-mail: jsleomsa@ull.es)), **La movilización laboral. Metodología para el estudio de la construcción social del empleo** (Labor Mobilization. Methodology for Research on the Social Construction of Employment). (SPA)

¶ Explores the social construction of employment, using the theory of labor mobilization as a starting point. Investigating labor mobilization requires an approach to social structures based on Bourdieu's structural sociogenesis & an analysis of the structure of positions in employment as a technical network, to which actors are allocated according to their social network position. Studying the signs revealed in the labor contract through the semiotics of mobilization, based on Peirce's theory of the sign, enables identification of a potential worker social position that offers greater access to a determined position of employment. This propos-

al, as a theory of allocation, gives employment the character of a key social category because of its potential as a complete social phenomenon in explaining access to material & social resources in capitalist society.

Leroux, Nathalie (Laboratoire Georges Friedmann Conservatoire national arts & métiers, 2 rue Corté F-75003 Paris France (tel: 33-1-45-32-50-46)), **Du "métier de l'ombre" au métier institué: les agents de sécurité de la Régie autonome des transports parisiens (RATP)** (From "Shadow Trade" to Instituted Trade: The Security Agents of the Regie autonome des transports parisiens (RATP)). (FRE)

¶ Until 1989, security agents of the Regie autonome des transports parisiens (RATP) had been developing into a shadow trade based on implicit rules, which resulted from related identity strategy aimed at positioning & legitimizing the group in an organization & professional system. In 1989, the RATP created an instituted security trade (eg, with a diploma & qualification formalization). However, to the agents, this transformation (eg, uniform adoption & new mission statement) has not meant reconstructing a new professionalism; they feel dequalified & deprofessionalized; ie, previous principles of recognition of the "shadow trade" do not match the new institutional recognition of the group.

Leselbaun, Muriel (LSCI/IRESCO, 59 61 rue Pouchet F-75849 Paris Cedex 17 France (tel/fax: 01-40-251-067/066)), **Ressources et production collective de "l'action dirigeante": un réexamen empirique du "management à la française"** (Resources and Collective Production of "Directive Action": An Empirical Reexamination of "French-Style Management"). (FRE)

¶ Presents results of a 1993-1996 study in France on the management networks of two parapublic entities & based on continuous observation over several months of collectives in charge of projects or policies concerning quality, security, & the following of foreign subsidiaries. It is argued that this research reveals three models of action—voluntary, strategic-adaptive, & intervening—that structure the observed exchanges & can be viewed as resources mobilized by directing frameworks for planning & directing collective action. How this foundation allows empirical characterization of the components of the French model of management & the analysis of the implications for business, notably in terms of organization & social links, is examined. Oppositions & combinations that operate among the three models of action are discussed, & it is proposed that "directive action" be understood as a social production of these directing collectives in which the intercultural dimension (in the sense of professional & natural culture) plays a particularly important role.

Letamendia Belzunce, Francisco (Dept Políticas U País Vasco, Barrio Sarriena S/N E-48080 Bilbao Spain (tel/fax: 94-464-77-00/34-4-9-464-8299; e-mail: ziplebeg@lg.ehu.es)), **Neo-Regionalism and National Movements in the European Union.**

¶ The emergence in Western Europe of economic, political, & historical-cultural mesospaces ruled by a multilevel governance occurs in such varied forms in the states & their different territories that explanations based on the emergence of neoregionalism prove to be unsatisfactory. It is deemed necessary to add another axis of explanation—center-periphery conflict, with a historical tempo that is much older than that of neoregionalism. This conflict explains long-term phenomena such as the mode of state center formation & periphery reactions, ie, the regional & national movements of ethnic, linguistic, or religious groups to adapt to or resist the state. These movements transform political mesospaces generated by contemporary neoregionalism into coherent regional or, in some cases, national territories. The absence or presence of regionalist or nationalist movements &, where they are found, their different intensities, explains why the map of regional mesopower in the European Union is not at all homogeneous. With the exception of the Federal Republic of Germany, Belgium, Spain, & the historical nations Scotland & Wales, the regions still have weak elected governments & continue to suffer from a weak level of autonomy, resources, & legitimacy. Here, the two maps of regional institutionalization & national movements in the European Union are superimposed to explain reciprocal interaction of both processes.

98S35030 / ISA / 1998 / 12271

Letelier, Celinda Lilian (U Federal Paraíba, Brazil (e-mail: letelier@netwaybbs.com.br)), **Mapa e seguimento de la violencia ejercida contra la mujer en cinco estados do nordeste del Brasil** (Mapping and Analyzing Violence against Women in Five States of the Northeast of Brasil). (SPA)

¶ In the late 1980s, as a vindication brought about by feminist movements in northeastern Brazil, the institution of women representatives was established. Their institutional task was to hear women's claims against sexual violence & start legal processes, if the women so desired, through the Ministry of Justice & Police. Qualitative & quantitative data collected through joint work by the police & the university on violence against women are presented. Reflections are offered on violence, focusing on the social intersubjectivity that this particular kind of violence builds up & on the limits of its tolerance in the context of women citizenship & rights. Suggestions are made for public policy measures directed at limiting violence against women through institutional measures.

98S35031 / ISA / 1998 / 12272

Letelier, Celinda Lilian (U Federal Paraíba, 58059-900 João Pessoa PB Brazil (e-mail: letelier@netwaybbs.com.br)), **Recepcion de la plataforma en América Latina. Evaluación posible** (Reception of the Platform for Action in Latin America. Possible Evaluation). (SPA)

¶ During three international political meetings—the Latin American Feminist Encuentro in Chile in 1996, "Complexities and Difficulties of the Latin American Feminist Movement" in Uruguay in 1997, & National Feminist Encuentro in Brazil in 1997—the feminist movement has questioned how social policies from the Platform for Action are being implemented. Politically, the Platform for Action has not been accepted as a platform for change. Further, there is no coherence in government actions regarding the agreement. Epistemologically, neither universities nor academia have an interest in political participation or discussion. All this is happening in a context in which the legitimacy of nongovernmental organizations, which work with a gender perspective or self-define as feminist, is being questioned.

98S35032 / ISA / 1998 / 12273

Letor, Caroline (Facultad Educación Pontificia U Católica Chile, Santiago), **Les Représentations sociales: questions théorétiques et méthodologiques** (Social Representations: Theoretical and Methodological Questions). (FRE)

¶ Questions are raised about the phenomenon of social representation, particularly what happens when there is no social representation, the limits of social representation, the possible existence of nonsocial objects, & the role of the researcher's theoretical framework. The social representation is investigated as a social reality that is simultaneously symbolic & consensual. An effort is made to clarify common characteristics, linked to interaction & intersubjectivity. How consensus deals with opposition

& contradiction is discussed, as are the dialectical & historical aspects of social representations. The dichotomy between the collective & the individual is explored. It is asserted that the content of social representations should be studied as the simple sum of individual representations, not as intersections among them. The importance of recognizing differences between individual representations is stressed. It is held that social representation should not be seen as an object, but as a portrait of a group's collectivity defined by shared orientations & experience.

98S35033 / ISA / 1998 / 12274

Leveratto, Jean-Marc (Équipe recherche anthropologie & sociologie expertise U Metz, F-57070 France (tel/fax: 03-87-31-55-05/06; e-mail: leveratto@zeus.uni-fr)), **Cultural Action and Theatrical Production in Contemporary France.**

¶ New forms of cultural action are now expanding in France, with government help. Based on the personal commitment of the artist, they use the production of an artistic event (theater play, concert, dance performance, etc) as a tool for cultural qualification of stigmatized people (prisoners, disabled, aliens, etc) & places (poorer suburbs, industrial areas, rural localities, etc). Ethnographic observation of the making of a theater play is a way of understanding the anchoring of a work of art in the social & cultural context created by the people themselves, not just in the mind of the artist. Here, comparative study of the construction of a theatrical event in the suburbs of a mid-sized town & one in a rural eastern community allows identification of the contemporary political problems linked, in the French context, to the artistic use of local beings & objects. The tension, grounded in the cultural & political history of France, between "national" quality (related by the state to academic & professional ability) & "local" quality (related by the people to embodied attributes) can be recognized, which enlightens the specificity of the French professional theater, including its new artistic trends, in the multinational European theater.

98S35034 / ISA / 1998 / 12275

Leviatan, Uriel (U Haifa, Mount Carmel IL-31905 Israel (tel/fax: 972-4-824-9641/0819; e-mail: leviatan@soc.haifa.ac.il)), **Importance of Congruence between Organizational and Management Principles of Conduct in Work Organization and Those of the Community—The Case of Kibbutz Industries.**

¶ Industry is now the major business of Israeli kibbutzim, but since the beginning of the 1990s, the performance of kibbutz industries has deteriorated appreciably. This phenomenon cannot be explained by lack of investment capital or workers, nor is it the result of managerial quality decline. It is suggested here that a major reason for the decline in the effective functioning of kibbutz industries is due to the adoption of principles of management & organizational conduct that bring their organization into better fit with the external environment, thereby creating an incongruence that has led to deteriorating levels of motivation & commitment among workers (kibbutz members); indifference & lower level of involvement & care by the community in solving problems of its local industry; wasted energy & resources for solving conflicts with the community; loss of emphasis on the quality & commitment of their human resources; & an increase in noncontributive manpower overhead due to the changing organizational structure & bureaucratization. Research findings supportive of these explanations are presented.

98S35035 / ISA / 1998 / 12276

Leviatan, Uriel (Dept Sociology U Haifa, Mount Carmel IL-31999 Israel (tel/fax: 972-4824-0418/0819; e-mail: leviatan@soc.haifa.ac.il)), **Structural Changes in Israel Kibbutzim as Determinants of Reactions of Alienation among Their Members.**

¶ During the last decade, many kibbutzim in Israel went through major structural changes in their governing & management institutions; their definition of principles of equality; how contributions of members are related to remuneration; their relationship with the outside social environment; & the relationship between individual & community. Most of these changes made the kibbutzim more similar to the society around them. Examined here, in comparison with kibbutzim that did not experience these changes, are the effects of these changes on kibbutz members, especially in terms of alienation & psychological adjustment. Focus is on the social & economic conditions that determine the strength of the above relationships & how the relationships are affected by the demographic characteristics of members. Questionnaire surveys were conducted in 50 kibbutzim (about 8,000 respondents) regarding changes that occurred 1990-1997. Initial analyses show that changes in the governing institutions generally moved to the direction of less democracy & less

member participation in decision-making processes. This led not only to negative reactions of members to their life in the kibbutz, but also to strong expressions of more diffused general alienation, eg, powerlessness, meaninglessness, & anomie. These effects were experienced by all demographic groups, but in a differential intensity. The meaning of these findings for kibbutz society as a way of life, other cooperative institutions & communities, & for industrial society in general is considered, as is the significance of the findings from a theoretical point of view in terms of principles of conduct & determinants of individual reactions to life.

98S35036 / ISA / 1998 / 12277

Levin, Arkady (Russian Academy Sciences, 141200 Pushkino-1 Moscow [tel/fax: 7-095-938-00-70/719-02-61; e-mail: paulina@sovam.com]), **Nazi Genocide Survivors and Partisans in the USSR, 1941-1944.**

¶ The memoirs of 56 survivors of Nazi ghettos & extermination camps in the territory of the former USSR are drawn on to document their unique life experiences. Analysis shows the various threads, moral dilemmas, ways of survival, & individual resistance to genocide. Their involvement in armed struggles in different partisan units against annihilation is also chronicled, showing how individual & collective resistance was determined by their personal qualities, the turn of fate, & the assistance of sympathetic others.

Levin, Irene & Trost, Jan (Oslo Coll, N-0957 Norway [tel/fax: 47-22453517/3600; e-mail: irene.levin@oks.hioslo.no]), **Living Apart Together (LAT) and Living Together, Apart (LTA).**

¶ Traditionally, marriage has been the social institution for couples in the long run. Some decades ago, a new social institution appeared in the Western world—nonmarital cohabitation. Living apart together (LAT) relationships represent a third stage in the process of social change & may soon be another social institution alongside marriage & cohabitation. It should not be confused with commuting marriages, living together, apart (LTA). Data are presented on the frequency of LAT relationships in Sweden & Norway, & some varieties of the phenomenon, are identified. It is concluded that LAT relationships as a social institution could not exist without the preceding social institution of cohabitation. LTA relationships have always existed, but are becoming more frequent with the almost total disappearance of the social institution of housewifery.

Levine, Alissa H. (Sociology Dept McGill U, Montreal Quebec H3A 2T7 [tel: 514-598-7266; e-mail: bzsw@musicb.mcgill.ca]), **Psychoanalytic Influences of the Construction of the Concept of Female Sexual Response.**

¶ Early psychoanalytic theory has persisted in influencing contemporary perceptions & constructions of female sexual response. Confusion over the mechanics of sexual response is thus, in part, the legacy of foundational psychoanalytic theory, although many other societies untouched by Freudianism appear to maintain similar beliefs. Here, the most striking instance of community-wide gender construction, that of male, but especially female, circumcision, is explored. These ritual practices suggest that sexual identity is problematic, & some non-Western societies also believe that the mature female has no need for a clitoris. It is postulated that contemporary Western constructions of female sexuality are predicted on Freudian psychoanalytic theory, which explains the lack of awareness in much of the scientific & general populations regarding William H. Masters & Virginia E. Johnson's (1966) findings on female sexual response. The persistence among many individuals of a belief in a sexual response independent of the clitoris implies that the social construction of female sexuality is so powerful as to deny a basic physiological reality.

98S35039 / ISA / 1998 / 12280

Levine, Donald N. (Dept Sociology U Chicago, IL 60637 [tel/fax: 773-702-7917/834-0493; e-mail: dlok@midway.uchicago.edu]), **Putting Voluntarism into a Voluntaristic Theory of Action.**

¶ Austrian & British economists of the late 19th century constructed a paradigm of action as a process of maximizing individual marginal utility through calculations of instrumental rationality. The 20th century has seen considerable refinement of that model & its application to numerous substantive areas (eg, by Gary Becker & James Coleman). As an exclusive model of action, however, that paradigm has been subjected to a variety of trenchant critiques by figures such as Vilfredo Pareto, Georg

Simmel, Max Weber, John Dewey, Sigmund Freud, & Talcott Parsons. An audit of such criticisms makes reference to well-attested dimensions of action that are not rational (habit & impulse), not adaptive (unconscious self-destructiveness), not reducible to a fixed preference schedule (ambiguous or mutually exclusive utilities), or not individually based (custom or group contagion). Explored is another modality of action that does not fit the utilitarian model—one that regards actions undertaken for their own sake, without reference to the attainment of discrete ends. Adumbrations of this modality can be found in Plato, Aristotle, & Immanuel Kant; more proximately, in the work of Georg Simmel, Max Scheler, & Martin Buber; more recently still, in work by Mihalyi Csikszentmihalyi & Hans Joas. They include actions attuned to what actors perceive as a higher power. This mode of action is voluntaristic in a sense closer to Kant's *Wille* (will) & relatedly, to certain Eastern traditions, which is different from the sense of freedom as mere *Willkür* (arbitrariness) assumed by Weber & Parsons.

Levy, René (CESDIP Centre national recherche scientifique, Vauban Guyancourt F-78280 France [tel/fax: 33-1-34521702/34521717; e-mail: rlevy@ext.jussieu.fr]), **French title not provided** (Police and the Law: The Case of Controlled Deliveries of Drugs in France). (FRE)

¶ Tests a model delineating how new legal rules governing police powers legalize formerly illegal practices, using archival data on 1991 French legislation pertaining to controlled deliveries of drugs. The circumstances of this legislation are described, & the roles of various actors & interest groups in this process are analyzed. This research is based mainly on archival material from the French Ministry of Justice.

¶ Starting from a social-structural, institutional approach of the life course, a theory-driven exploration of gender differences in mobility & a theoretical elaboration in terms of master status are proposed, & family participation is shown to be an essential ingredient of men's & women's trajectories.

Levy, René (Institut anthropologie & sociologie U Lausanne, CH-1015 Switzerland [tel/fax: 21-692-30-86/85; e-mail: Rene.Levy@ias.unil.ch]), **Taking Another Look at Multidimensional Stratification: An Exploration of Positional Profiles in Swiss Society.**

¶ The structural location of persons in multidimensional stratification can be thought of in terms of their positional profile, as opposed to a mere set of multiple, but separate positions. Here, empirical clusters of simultaneous positions on education, professional position, & income in Swiss society are explored to appreciate the degree of their social consistency with respect to other aspects of inequality (eg, whether they correspond to socially meaningful grouping) & to the differential perception & evaluation of inequality.

Lew, Seok-Choon & Park, Hae-Kwang (Yonsei U, Seoul 120-749 South Korea [tel/fax: 82-2-361-2427/393-2040; e-mail: scleew@bubble.yonsei.ac.kr]), **Economic Development, Housing Standard, and Quality of Life in South Korea.**

¶ Explores how quantitative growth has changed quality of life in Korea by addressing (1) how economic development has changed people's housing conditions at the macrolevel, reviewing aggregated national data for the period of rapid industrialization; & (2) subjective perception of individual quality of life in housing, based on a 1996 national survey of 1,000 South Koreans. How objective & subjective quality of housing life are related to economic change is considered.

Lewinter, Myra (Dept Sociology U Copenhagen, DK-1361 K Denmark [tel/fax: 45-35-32-32-94/39-40; e-mail: Myra.Lewinter@sociology.ku.dk]), **Caregiving Networks in Home Care: The Relationship between Elderly, Their Family and Their Home Helper.**

¶ Explores the problems of caregiving from the elderly's point of view, drawing on in-depth interviews with a random sample of home help recipients, their informal caregiver, & home helper in Denmark (N = 43

caregiving networks). Three common priorities regarding formal care provision were found: regularity, reliability, & responsiveness. Further, there are direct relations between the elderly & the informal & formal caregivers, but an indirect relationship between the formal & informal caregiver. Examined is the structure of these caregiving networks, based on the context of Danish caregiving & in terms of the concept of triads. It is argued that these networks are examples of solidary triads in which there is a balance of power between participants. This structure provides the elderly with an important weak link in their network & gives them some sense of control over their own care. As long as basic home help priorities are met & the elderly person is not demented, the triad will function.

Lewis, Edward (U Illinois, Champaign IL 61820 [e-mail: lewis3@ux1.cso.mimc.edu]), **The Periodic Development of Physics as a Cause for Periodic Economic Depressions.**

¶ Examines the question of whether Kondratiev periodicity is systematic or just by chance & presents a resolution of the economic periodicity by a causal theory. The economic periodicity is an effect of a 80-year periodicity of the development of physics & the sciences that has been evident since at least the 1500s. The development of physics is marked by the replacement of fundamental physics premises at 80-year intervals. A theory is presented in which this 80-year periodicity is an outcome of the same few constraints to human learning & experiencing that each generation has faced for hundreds of years together with an impetus to physics development. Due to this periodicity of introduction of new physics genres or paradigms, a new labor force that apprehends novel, more powerful physics theory & technology have begun their careers. This has caused two very different types of economic depressionary periods that have alternated at about 40-year intervals: (1) The type occurring during times of high increases of labor productivity is due to automation, high debt levels, & consumer satiation. (2) The other type occurs at times of low productivity increase & technological transition is due to depletion of potential of prior theory, the shift to new industry & technology, & competition from follower economies.
