Lewkowicz, Bea (European Instit London School Economics & Political Science, WC2A 2AE England [tel: 0171-7942339; e-mail: BeaLewkowicz@Compuserve.Com]), **Speakers on High Volume: Discourses and Practices of Greekness among Salonikan Jews.**

¶ Examines the minority identity of Salonikan Jews in the Greek nation-state, arguing that, by looking at Jewish practices & discourses of Greekness, one can gain valuable insight into the general relationship between nationalism & ethnicity & the formulation of national & ethnic identities in the public & private realms. Fieldwork data are drawn on to show how Greek national symbols are used in Jewish communal events & celebrations & how individual Jews from different generations perceive their Greekness. In trying to understand how Jews in contemporary Thessaloniki make sense of their Greek identity, it is necessary to analyze the effects of the historical processes that have transformed the large & heterogeneous Jewish population group into a small & relatively homogeneous community.

Leydesdorff, Loet (Dept Science & Technology Dynamics, NL-1018 WV Amsterdam Netherlands [tel/fax: 31-20-525-6598/6579; e-mail: l.leydesdorff@mail.uva.nl]), **Luhmann, Habermas, and the Theory of Communication.**

¶ In his critique of Niklas Luhmann's sociology, Jürgen Habermas argued that individuation & socialization are possible on the basis of linguistic structures. This critique touches the blind spot of sociological systems theory as a metabiology. While the paradigm shift from action theory toward communication theory has been thoroughly reflected in Luhmann's sociology, social systems differ from biological by allowing for observation from within the system; ie, observers are able to participate both in variation & in selection. Human language can then be considered an evolutionary achievement that enables communication in both dimensions. The consequent communicative competences can be understood from the perspective of communication theory. Using language, the distinction between uncertainty & meaningful information can be communicated reflexively, & this relation can historically be changed without becoming confused. The second-order reflection on this relation legitimates the sociological project. The autopoietic model, however, is then in need of a nonbiological interpretation: expectations are to be made

central as distinct from observations. The dynamics of interacting dimensions of communication can be studied using entropy statistics, yet without idealistic assumptions.

Li, Yi & Yin, Jiafei (Dept Sociology U Illinois, Chicago 60607 [tel/fax: 312-996-4789/5104; e-mail: yli9@uic.edu]), **The Great Trend of China's Urbanization—Heritage, Challenges, and Perspectives.**

¶ Examines urbanization in the People's Republic of China, whose current city system basically comes from ancient China. The treaty ports did not enhance China's modernization & urbanization before 1949 because they were not controlled by China, but since then, they have been the seeds & pioneers of China's modernization & urbanization. China was forced to adhere to Russian ways of industrialization & urbanization, 1952-1957, which did not fit China. The famine after the Great Leap Forward made China's urbanization rate drop from 19% to 14%, which was maintained until 1978. These 20 years of stagnation did not result from the Great Cultural Revolution, but from the Third Line Establishment, 1965-1975. After 1978, the two most important obstacles to China's urbanization were *Houkou* (the household registration system) & *Danwei* (the work unit), which will be abolished in the next 10 years. The % of the urban population will be 40% by the year 2000, 50% by 2010, & 60% by about 2020. The pattern of China's urbanization is far from that of the US & near to that of Japan.

Licoppe, Christian (CNET, 38-40 rue Général Leclerc F-92794 Cedex 09 Issy-les-Mou France), **Gender Specific Use of the Telephone: The Impact of Sociability Networks and Status Mediated Interactions.**

¶ Presents results of a 1996 study dealing with the uses of telephony in 310 French homes, varied with respect to location (Paris, Lille, & Toulouse areas), number of people in the home, & position in the lifecycle. Detailed billing data were recorded over 4 months & compared with interviews concerning each regular user in the home in terms of correspondents, their relationships, & the motives for the calls (N = about 77,000). Focus is on the correlation between the observed call duration & the gender & status of callers & receivers. Analysis of telephone sociability networks shows how Ss are more prone to call persons of the same gender, especially in the case of women. This tendency is stable over standard sociological categories & nature of correspondents, whether family or friends. Data also show the gender-of-receiver-dependent duration of telephone calls. When a man calls a woman, the call lasts almost as long as when a woman calls a woman. In both cases, it lasts much longer than when a man calls a man or a woman calls a man, two combinations which also have similar lengths. This remains true in family or friendship networks alike, suggesting a form of gendered civility in which the call receiver manages the overall duration of the call. This notion is explored in relation to age or status differences between caller & receivers.

Liddon, Nicole & Lueschen, Guenther (Dept Sociology U Alabama, Birmingham 35294 [tel/fax: 205-934-0825/975-5614; e-mail: lueschen@SBS.SBS.UAB.EDU]), **Body Perception, Appearance and Sport Participation.**

¶ Uses survey data from 867 adults in the US Deep South to investigate patterns of body perception & value given appearance in their relationship to different forms of sport participation. While sociology of the body & lifestyle research have typically neglected sport, present results show a relationship between sport participation & personal body perception. Some 65% reported engagement with sport as physical activity, indicating that sport is a widely chosen lifestyle behavior. Of these, 50% claimed the health of their bodies as a major motivator for sport participation; 21% specifically cited weight loss as a major reason for participation. Detailed multivariate analyses further demonstrate a relationship between attitudes toward the body, value given appearance, & forms of sport participation.

Light, Donald W. (10 Adams Dr, Princeton NJ 08540 (tel: 609-924-9220; fax: 215-573-3036; e-mail: light@mail.med.upenn.edu)), **The Economic Sociology of Managed Competition: Good Sociological Reasons for "Bad" Economic Theory.**

¶ Analyzes central problems in the neoclassical theory of competition & why they make competition untenable in health care. These problems are purportedly solved by the economic theory known as managed competition, but in actuality, they are not. The argument then turns to good sociological reasons why this "bad" economic theory has become the predominant paradigm for transforming US health care into managed care systems. Fligstein's work on how leading firms develop conceptions of market structures in order to control them provides a persuasive explanation; a number of extensions to this concept are suggested, particularly concerning the implications of a given conception for the quality of life in a society. It is then shown how the sociological theory predicts actual behavior better than the economic theory. A plea is made for research to determine the degree to which managed competition, as a conception of control, is enabling executive teams to exploit their firms & the industry in ways that harm patients & benefit themselves.

Light, Ivan, Kim, Rebecca & Hum, Connie (Dept Sociology U California, Los Angeles 90024 (tel/fax: 310-825-4229/206-9838; e-mail: light@soc.ucla.edu)), **Globalization, Vacancy Chains, or Migration Networks? Immigrant Employment and Income in Greater Los Angeles, 1970-1990.**

¶ Restructuring theory explains immigration to world cities in terms of polarized income distributions that create demand for cheap labor. After a review of globalization literature & its critics, restructuring theory is tested against the experience of Greater Los Angeles, CA, 1970-1990. Although global restructuring massively affected this region, globalization has actually affected immigration to Greater Los Angeles less than supposed. The declining real & relative wages of immigrants suggest that demand-pull cannot explain the immigration. Instead, declining immigrant incomes suggest a spill-over migration in which declining incomes at the bottom end result from labor markets saturated by network-driven migration. Distinguishing globalization effects & network effects on incomes & employment, it is concluded that globalization triggered chain migrations whose effects, when fully matured in the 1980s, exceeded those of globalization.

Lillrank, Annika L. (Dept Social Policy U Helsinki, SF-00014 Finland (fax: 358-9-191-7764; e-mail: annika.lillrank@helsinki.fi)), **Parental Experiences of Finnish Health Care.**

¶ Parental management of extraordinarily demanding hospital & long-lasting outpatient treatments for children with cancer is discussed, drawing on 1990 in-depth interview data from 49 parents at the University Pediatric Clinic of Helsinki, Finland; the focus is on 25 two-parent families. Besides the structural organization of the health care system, perceptions of health care are practically experienced & interpreted through the ways that doctor-patient relationships are organized. Here, the doctor-patient relationship is characterized as a triad consisting of the doctor, child patient, & parents. Each child has an individually designed treat-

ment schedule with an individual length, type, & frequency of treatment consisting of hospital care & outpatient treatment. Parents perceived the health care received during the acute hospital care as good & trustworthy, though the frequently changing doctors during the outpatient care were less satisfactory.

Lippl, Bodo (Dept Social Sciences Humboldt U Berlin, D-10099 Federal Republic Germany (tel/fax: 0049-30-2093-4417/4430; e-mail: lippl@rz.hu-berlin.de)), **Justice Ideologies, Income-Justice, and the Welfare State: A Comparison of Justice Ideologies and the Perceived Justice of Income in the United States, West Germany, and the Netherlands.**

¶ In times of economic & political crisis, issues of justice gain importance, provoking people to ask questions about the social conditions they live in & the justness of society. Ideological preferences for distributive justice & the justice evaluation of income play an important role in this process. Following Mary Douglas (1996), justice ideologies are defined as convictions of how goods & burdens are to be distributed in a society assuming that these convictions are enduring reactions to the social environment of an individual. Douglas classifies social environments along the dimensions of hierarchy & social closure ("grid" & "group" in her terminology), distinguishing four types of environments that emerge from cross-tabulating these two forms of social organizations, & subsequently delineating four types of justice ideologies. Here, an attempt is made to combine theoretically this typology with the typology of welfare states suggested by Gøsta Esping-Andersen (1990). Welfare state regimes are characterized by particular modes of distributing goods & life chances & are thus likely to affect the justice beliefs of those who are ruled by these regimes. Building on the grid-group framework, hypotheses are developed of how particular welfare regimes will foster support for particular justice ideologies. Data from the 1991 International Social Justice Project are used to test these hypotheses for the US, the Federal Republic of Germany, & the Netherlands, focusing on the relative weight of respondents' characteristics vs welfare regimes in explaining the degree of preference of justice ideologies & the perception of income justice. Results suggest that liberal welfare states (US) foster an individualistic justice ideology, while socialist welfare states (Netherlands) evoke egalitarianism. In conservative welfare states (West Germany), people prefer individualistic as well as egalitarian justice ideologies. Though fatalism is generally high, it is expressed more in liberal & socialist, than conservative, welfare states. This result may point to a crisis of the political system & the welfare state.

Liquiong, Sha (U New South Wales, Summer Hill 2130 Australia (tel/fax: 61-2-9715-2209/2221; e-mail: l.sha@student.unsw.edu.au)), **A Feminist Reading of Chinese Characters with Female Radical.**

¶ Analyzes Chinese characters with the female radical from a feminist perspective by looking at how they are formed & their meaning is conveyed in the culture, emphasizing how language serves as a system of control over women. An important part of the Chinese written system, characters with the female radical are directly or indirectly related to females, especially with respect to marriage & family relationships. These characters are unique in expressiveness & suggestiveness in that they not only visually & ideologically depict images & positions of women in family & society as being inferior, subordinate, submissive, dangerous, & evil, but also reflect the relationship between cultural practices & social controls over women. They provide a concrete example of how women are devalued & deprived of their human rights. Against the self-complacency of urban women engendered by the success of the women's liberation movement, it is argued that, historically, social control over Chinese women in family & society as reflected in the language & culture has not changed much. Examples of such relations pertaining to the positioning & representation of women in the language of the culture are given.

Lista, Carlos A. (Facultad Derecho U Nacional Cordoba, 5000 Argentina (tel/fax: 54-51-527972/332066)), **Body Politics, Social Inequality, Religiosity and Public Opinion regarding Abortion.**

¶ The legal & social control of the female body is one major instrument for reproducing sex & gender inequality; & the criminalization of abortion remains as one of the most effective strategies for perpetuating this situation. Over the last 25 years in most developed democracies, the decriminalization of abortion has been at the center of many political debates focused on the right of women to make decisions regarding their own bodies & reproductive capacity. Despite its high level of incidence,

abortion remains largely criminalized & stigmatized in most Latin American countries &, consequently, remains a clandestine & depoliticized phenomenon. Analyzed here are trends in public opinion regarding the decriminalization of abortion in Argentina, a predominantly Catholic society where most grounds for abortion are criminalized. Several key questions are addressed: To what extent does the population favor the decriminalization of abortion based on the women's needs, desires, & interests? What factors explain attitudinal variations toward abortion? Analysis of data from a representative sample of 435 respondents residing in Córdoba City focuses on attitudinal consequences of the social position of individuals based on sex, age, socioeconomic status, education, & religiosity.

¶ A discussion of sociocybernetics describes the profile of a new citizen

(Homo digitalis). Aspects like the identity, the presence in cyberspace, the human dignity, & the freedom need to be defined as new species of sociological & philosophic problems. Examined are the values that rule the behavior in the space of virtual communication.

98S35067 / ISA / 1998 / 12308

Lo Presti, Alberto (Pontificia U San Tommaso, I-00184 Rome Italy (tel: 06-6702354)), **The Logical Exchange between Futures Studies and Social Sciences.**

¶ Advocates a more regular exchange of information & experiences between futures studies & the social sciences, on the grounds that this would be beneficial to both areas of investigation. The social sciences should explain, but also forecast, social events. For a variety of logical & methodological reasons, social sciences are often weak precisely in the forecasting phase. A first important task is therefore to establish the logic of forecasting, using the extensive empirical experience of futures studies. The terms of normativity & conditionality of futures research seem to favor the logical structure of the practical syllogism, & thus challenge the validity of the inferential nomological model for the explicative & predictive structure of sociology. The exchange is also necessary for futures studies. By not taking a definite position on the scientific or artistic nature of its system of research, futures studies seem to authorize all kinds of nonscientific productions to express themselves on its behalf. In this way the rigorously scientific foundations of futures research find justification in the epistemological foundations of sociology.

98S35068 / ISA / 1998 / 12309

Lobo, Francis (Edith Cowan U, Joodalup 6027 Western Australia (tel/fax: 61-8-9400-5750/5440; e-mail: F.Lobo@cowan.edu.au)), **Young People Unemployment and Urban Leisure.**

¶ Leisure behaviors of unemployed young people, ages 18-30, in Western Australia were examined to determine the type, frequency, process of, & adaptation to leisure participation. Analysis of quantitative & qualitative data collected through workshops & lifestyle interviews with young unemployed males & females reveals that those who were psychologically affected by unemployment tended to curtail customary leisure activities because of the lack of income. Those low in motivation & confidence levels had difficulty filling leisure time. Those less psychologically affected tried to keep active &, if activities were unaffordable, they substituted them with cheaper forms. Implications for the public provision of leisure for unemployed young people in market economies are examined & recommendations proposed.

Locklear, Sheri R. & Slomczynski, Kazimierz M. (Ohio State U, Columbus 43201 (tel/fax: 614-292-1294/6681; e-mail: locklear.2@osu.edu)), **Meritocratic Allocation and Meritocratic Attitudes: A Cross-National Examination.**

¶ A simple model of meritocratic allocation incorporates the principle according to which more educated persons do not have lower incomes than less educated ones. Using the 1992 International Social Survey Program, the variation in the degree to which a meritocracy is achieved in 18 countries & the degree to which people support such a system are demonstrated. The goal here is to examine the link between a context of societal meritocracy & individuals' attitudes toward it. Meritocratic attitudes are defined as general beliefs that education & its correlates—hard work, responsibility, & ambition—should determine personal economic outcomes. According to self-interest & rational choice theories, individuals with high educational attainment & personal income are expected to have strong meritocratic beliefs because meritocracy is in their best interest. At the same time, both modernization & postindustrial theories suggest that persons living in countries with a high degree of societal meritocracy are expected to hold stronger meritocratic beliefs than those in countries with a low degree of societal meritocracy. Results of multilevel regression analysis indicate that the effect of individuals' education & income on meritocratic attitude appears as theoretically predicted, but its strength varies nonlinearly by levels of societal meritocracy. It is also demonstrated that the relationship between the degree of societal meritocracy & the degree of support for such a system is U-shaped.

Loftman, Patrick (Built Environment Development Center U Central England, Perry Barr Birmingham B42 2SC (tel/fax: 0121-331-6233/6503; e-mail: patrick.loftman@uce.ac.uk)), **Who Wins and Who Loses? Sports and Pro-Growth Local Economic Development in Birmingham (UK).**

¶ In the context of the continued global restructuring of industry & the intensification of competition between urban centers for inward investment, jobs, & visitor expenditure, civic boosterism & place marketing initiatives have become prominent features of city economic development activities. An increasingly important element of progrowth local economic development strategies, adopted by major cities in the UK in the 1980s & 1990s, has been the development of sports-related complexes. Here, an overview is presented of the utilization of sports & stadiums as local economic development tools in the UK (focusing on the experience of Birmingham, England), in response to massive economic restructuring & intensification of interurban competition. However, the perceived economic development outcomes that sports complexes & events can deliver is questioned. To what extent are sports developments/events publicly financed? Does public sector investment result in the subsidization of private sector sports interests? What benefits/disbenefits accrue to disadvantaged groups from sports-oriented progrowth strategies? Some tentative comparisons with such practices in US cities are offered.

Loginova, Larisa V. (Woodrow Wilson Center Kennan Instit, 370 L'Enfant Promenade Southwest Ste 704 Washington DC 20024 (fax: 202-287-3772)), **Ethnopolitical Processes in Taymyr and Evenk Autonomous Okrugs of Krasnoyarsk Krai.**

¶ Since the fall of the USSR, new ethnopolitical problems have arisen in the autonomous regions of Russia. The Taymyr & Evenk autonomous okrugs have been given more elevated status, but many questions of legislative & legal planning remain. Native peoples in these regions are minorities, but their share has been increased, as Russians have left the northern territories. The aborigines have begun to play a role in regional administration & public movements. One reason for growing ethnic self-assertion is the region's very low standard of living. The exploitation of gas & oil deposits in northern Krasnoyarsk will have consequences for small northern nationalities, possibly spurring a movement for economic independence.

98S35072 / ISA / 1998 / 12313

Loiskandl, Helmut (Graduate School Tokiwa U Mito Miwa 1-430-1 310 Japan), **Time as Commodity and the Epiphany and Disappearance of the Sacred.**

¶ The usual sociological discussion is rarely aware of the fact that Max Weber saw the affinity between early capitalism & the Protestant ethics, especially in the shared appreciation of time, be it as commodity or instrument of discipline. His observation was that attitudes toward time created in a religious environment might keep their religiously established motivational power even if the influence of the religious matrix has grown weaker. But is this really a case of religion influencing social structure, as it is normally interpreted? One might have to add some qualifications, as the time discipline borrowed by John Calvin from Catholic monasteries can be traced back beyond the earliest stages of monastic time management to the time structures typical of the Roman army. For retired soldiers embracing the religious life, the order previously experienced gained qualities of an epiphany of the sacred & was reclaimed for their new lifestyle. Borders & boundaries, constructed in the process of building structures of domination, thus became integrated into a religious universe of meaning as places of "hierophanies." As the emotive strength of this placing carried them through changes in structured interaction, even the collapse of the religious universe at hand was survived by the structures thus empowered, turning them into seeds for new structures of domination. Consequently, the strict division between the sacred & the profane, a postulate so dear to Émile Durkheim, is very difficult to apply to phenomena that are constantly in the process of being "reappresented"—but is this not exactly the nature of "hierophanies"?

98S35073 / ISA / 1998 / 12314

Lomas, Jonathan (Canadian Health Services Research Foundation, 11 Holland Ave Ste 703 Ottawa Ontario K1Y 4S1 (tel/fax: 613-728-2238/3527; e-mail: lomasj. @chsr.ca)), **Linking Health Research with Health Care Decision-Making: Beyond the Sound of One Hand Clapping.**

¶ There is much rhetoric about evidence-based decision making in the health care sector, some directed at the need for decisionmakers to use research more & to make their findings more accessible. Most of the rhetoric focuses on research as a product & decision making as an event, & progress by either side beyond the rhetoric has been hard to document. It is argued here that the lack of progress is because research & decision

making are processes, not (respectively) products & events. Better relations between research & decision making require linkage of the two process on an ongoing basis. Examples of how this is being or might be done through new structures, human resources, & processes in Canada & internationally are offered.

98S35074 / ISA / 1998 / 12315

Long, Norman (Wageningen Agricultural U, NL-6700 HB Netherlands), *Agrarian Change and Social Values: Commoditization, Constrain, Agency, Perception and Practices*.

¶ Over the past 15 years, sociologists & anthropologists at Wageningen Agricultural U (Netherlands) have undertaken a wide range of empirical projects using social research methods that center on an actor-oriented & interface analysis of rural development. Such an approach is founded on a sociology of rural development that goes beyond generalized theories or models of agrarian transformation propelled by market integration, institutional incorporation, & state or international intervention. Considered is how to address different historical & cultural contexts, rural development interventions, & the materialization of livelihoods that are socially constructed through the interplay, contestation, & negotiation of values & interests within the reconstitution of a rurality that is becoming a specific domain & arena of social action. It is argued that the new rurality is a heterogeneous process involving multiple levels, values, & "realities," ranging from diverse local patterns of organization & management of resources to regional economic, political, & cultural phenomena; intervening state & nonstate institutions; development programs & representations; global markets; & political & cultural scenarios.

98S35075 / ISA / 1998 / 12316

Longuenesse, Elisabeth (GREMANO, 7 rue Roulin F-69007 Lyon France), *Le Chercheur et son objet au Méditerranée* (The Researcher and His Object in the Mediterranean). (FRE)

¶ For the generation that was age 20 in 1968, the Arab world was primarily Algeria, Palestine, & Arabia; they believed that Frantz Fanon & Abd El Kader fought for the liberation of their countries in battles against colonial domination. This generation, born after WWII, was raised in the era of the Cold War & decolonization, in a Western world experiencing a euphoric period of growth & reaffirming the values of democracy & consumption. Their childhood was impregnated with the grandeur & decadence of the colonial empire, since many had relatives working as administrators, functionaries, or missionaries in the colonies. The 1950s & 1960s were a time of rapid social change; time went by faster & faster, the past slipped away, & the media brought a new era.

98S35076 / ISA / 1998 / 12317

Longuenesse, Elisabeth (Maison Orient Méditerranéen Centre national recherche scientifique, 7 rue Raulin F-69007 Lyon France [tel/fax: 33-4-72715851/78580148; e-mail: elisabeth.longuenesse@mom.fr]), *Remarques sur la construction des professions en Egypte* (Remarks on the Construction of Professions in Egypt). (FRE)

¶ Interactionist & constructivist methods & recent developments in the sociology of professions are drawn on to show how, in Egypt, the recognition of the quality of "profession" for a supposed occupational group expresses a representation of society & relations of domination, real or symbolic, that characterize it. Explored are ideological constructions at stake & their influence on society.

98S35077 / ISA / 1998 / 12318

Looise, Jan C., De Leede, Jan & Veersma, Ulke (School Technology & Management U Twente, NL-7500 AE Enschede Netherlands [tel/fax: 31-53-489-3508/2159; e-mail: j.c.looise@sms.utwente.nl]), *The Effects of Changes in Organization and Work on Works Councils*.

¶ Explores the effects of new arrangements for labor (eg, external & internal flexibility, telework, etc), the development of new organizational forms (eg, task groups, teams, network & virtual organizations), & the ongoing internationalization of businesses (with changes in the governance structure) on the position of works councils in the Netherlands. The research has involved academics (from industrial relations as well as from labor law) of four universities (Amsterdam, Maastricht, Tilburg, & Twente), gathering data via a large general survey & in-depth studies, which is also compared with that of other countries. Developments in the Netherlands include decentralization of collective bargaining & labor law; internationalization & changes in corporate governance; flexibilization of labor & individualization of personnel management; & introduc-

tion of new forms of organization & worker influence. Manifestations & implications of these are considered. Conclusions are drawn on the expected changes with regard to the position & influence of works councils & the problems that are described. An attempt is made to trace future developments & give recommendations with respect to the improvement of works councils' position.

98S35078 / ISA / 1998 / 12319

Lopata, Helena Z. (Loyola U, Chicago IL 60626 [tel/fax: 773-508-3465/7099; e-mail: hlopata@luc.edu]), *Family Impacts on Death and Dying*.

¶ Based on 25 years of research on widowhood in metropolitan Chicago, IL, & analyses of reports of death the world over. Explored is the impact of families on the processes of dying & the events surrounding the death. Role theory forms the foundation of the analysis. Demographic statistics document the importance of health & longevity of the cultural & socio-economic situation of the larger society. Although people are living longer, & fewer die at young age from communicable diseases or childbirth, the distribution of such deaths is very uneven, not only across nations, but also across regions & areas of even more developed countries, eg, wealthy suburbs, ghettos, or retirement communities. Family lifestyle, in terms of diet, exercise, safety protection, medical care, & avoidance of destructive habits, is also important. Another aspect of family influence on dying & death concerns the circumstances during these events & the role relationships with the ill person. Both direct & extended families are important in determining how the body is disposed of & the rituals of funeral & mourning. What happens to the survivors of a death is often up to whichever family has the power to provide or withdraw supports. In short, families have an enormous effect on the health, dying, & death of their members, varied by composition; emotional & geographical closeness; the characteristics of members at risk; & the larger society & its different cultures, communities, & personal resources.

Lopez Mota, Rosalia (Instit Juan March Estudios Investigaciones, Castello 77 E-28006 Madrid Spain [tel/fax: 34-1-851-38-58; e-mail: rosalia@ceacs.march.es]), *Pension Reform in Spain*.

¶ Analyzes the distributive logic of old-age pension reform in Spain since the arrival of democracy & the political, social, & economic contexts that have surrounded leading reforms, including the pension law of 1997, a decree passed in 1989, & the law of 1997 (all in the domain of contributive pensions), & the 1990 law, which introduced noncontributive benefits for retirement & disability. A qualitative profile of old-age pension policy is proffered, taking into account the extent to which main stages in the development of democratic pension policy have been influenced by the principle of income security vs the principle of income adequacy. Leading pension reforms are analyzed according to their implications for the distributive dimensions that all pension systems contain: basis of entitlement, eligibility rules, level & structure of benefits, & pattern of indexation. It is argued that posttransition changes in the field of pensions have been driven by two contradictory & concurrent forces: (1) the need for cost containment, due to social security deficits & the impact of rising contributions in the maintenance of high unemployment rates & (2) the need for the fulfillment of social demands of universalization & improvement of the public system of old-age pensions. Factors that have influenced policy responses to this trade-off that democratic governments have had to face in pension politics are identified, focusing on political factors.

98S35080 / ISA / 1998 / 12321

¶ Analyzes the impact of the North American Free Trade Agreement (NAFTA) on the generation of employment in distinct social & economic regions of Mexico. It is concluded that the most developed regions &/or those linked to the US economy have been favored by the agreement.

98S35081 / ISA / 1998 / 12322

Lopez, Angela (Dept Psicología & Sociología Facultad Ciencias Economicas & Empresariales, E-50005 Zaragoza Spain [fax: 34-97-676-2003; e-mail: angela.lopez@posta.unizar.es]), *Local Democracy: Giving a Role to NTICS in the Construction of Citizenship*.

¶ Presents results of research carried out in Arnedo, Spain, one of four small European cities participating in the METASA project, which seeks

to provide citizens with a means of maintaining their present way of living through a public policy of telecommunication networks development. The METASA project takes as its starting point an analysis of user expectations, thereby making "citizen users" actors in the collaborative definition of multimedia services. Because the project is carried out in different geographic & cultural settings, efforts have been made to develop a common methodology to facilitate comparison across settings based on a sociodemographic, sociological, institutional, & politicoterritorial analysis of the involved cities. But because the social network is so important for the creation of an information network, a special methodology has been devised & employed to identify the different types of organization & socially constructed groups existing in different localities. Comparison between the towns reveals that the hierarchy of expectations varies in accordance with the local socioeconomic system. To limit exclusion, however, analyses suggest that responses to these expectations have to be accompanied by active & differentiated public policies. With care, the METASA project approach is transferable to other towns, the purpose being to develop a kind of "European numerical city model" that is not normative but rather exemplary of the social pull approach.

98S35082 / ISA / 1998 / 12323

Lopez-Segre, Francisco (UNESCO, Caracas Venezuela (tel/fax: 58-2-286-0555/2249; e-mail: uhfls@unesco.org)), **Globalization and Cultural Diversity.**

¶ Addresses the subject & problems inherent to displaced identities, starting from a growing process of globalization, which gives a new dimension to traditional geopolitical spaces. The vision presented of the world system, of the center & the periphery, highlights the dangers of globalization for identities & cultural diversity in the increasingly multicultural world. In confirmation of Enrique Dussel, it is argued that modernity is a European phenomenon, composed by a dialectical relation with a non-European alterity, which is its ultimate content. Modernity "appears when Europe proclaims itself as being the center of a world history which was inaugurated by the same Europe. The periphery that encircles this center is, consequently, part of its self-definition. The occlusion of this periphery (& of Spain & Portugal in the formation of the world modern system since the end of the 15th century to the mid-17th century) induces the main contemporary thinkers of the center to a euro-central fallacy with regard to their understanding of modernity." If this understanding of the genealogy of modernity is, then, partial & local, intends to elaborate a criticism or a defense of their theory seem also unilateral &, in part, false. Arguments of Dussel are traced further, & the debate is placed in the historical context of the 1914-1991 period, the urgency of a new ethnic in the international society & of a new social contract at global level is stressed. The historical & transdisciplinary vision cannot agree with the idea that the actual order is the end of history.

98S35083 / ISA / 1998 / 12324

Lorente, Santiago (Facultad Humanidades & Comunicación U Carlos III, E-28903 Madrid Spain (tel/fax: 34-1-624-9202/9211; e-mail: slorente@hum.uc3m.es)), **Information Technologies at Home: New Real Opportunities for Users.**

¶ In the term "information technology," automation technologies should also be included, because they process information, & technological devices communicate in a sort of multilayer way (eg, person to person, person to machine, & machine to machine). Industry takes into account the innovation process (invention, research, development, marketing, etc)—ie, technology push or technological supply—without considering the societal pull or technological demand—ie, the various & complex ways by which people adopt technologies in their lives. Empirical research shows that, eventually, it is the market, ie, society, that defines the pace & magnitude of technology diffusion. This evidence is adapted to the home sociological situation to illustrate that information, automation, & communication, managed with present-day technology, can address & meet real needs of users, which is what is really at stake; thus, emphasis is on an analysis of the pertinent needs of home dwellers. Sociology of the family shows that the family is a multifaceted phenomenon, so the technological demand has to be necessarily disaggregated in terms of these theoretical yet real types of family realities. It is argued that, to provide for real needs of people in the household, not only technology & society have to be put together, but also architecture, in terms of spatial issues.

98S35084 / ISA / 1998 / 12325

Los, Maria (Dept Criminology U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5800/5304; e-mail: marialos@uottawa.ca)), **Privatizing the Communist Legacy of Governance-through-Corruption.**

tizing the Communist Legacy of Governance-through-Corruption.

¶ Governance-through-corruption was a well-tested method of maintaining a precarious political & economic order in former Soviet bloc countries. It also enhanced the role & position of secret services operating through dense networks of secret informers. The postcommunist trends toward marketization, privatization, & globalization have deeply affected the seemingly petrified governing structures in these countries. Focusing on the specific example of Poland, it is shown how old practices of ruling through corruption & secret penetration have been freed from the totalitarian state structures & become a vital force in their privatization.

98S35085 / ISA / 1998 / 12326

Lourdes, Maria Dolabela Pereira de (Centro Estudos Urbanos U Federal Minas Gerais, 31270-010 Belo Horizonte MG Brazil (e-mail: eudimara@br.homesshopping.com.br)), **La administración urbana participativa y la rehabilitación integrada: reflexionando sobre los conceptos de patrimonio y ciudadanía** (Participative Urban Administration and Integrated Rehabilitation: Reflecting on Concepts of Patrimony and Citizenship). (SPA)

¶ Analyzes the physical, social, & cultural impacts of an urban rehabilitation program on the bairro of Lagoinha in Belo Horizonte, Brazil. The reconstruction is placed in context of collective actions, social identities & movements, & citizenship rights that have evolved under conditions of neoliberalism. Focus is on the compromises involved in this urban intervention as the history, collective memory, culture, & physical landscape of the bairro are somewhat sacrificed for the sake of improving the citizens' quality of life. Patrimonial attitudes, new forms of participative administration, & concepts of cultural democracy are discussed in terms of community actions, values, & memories.

98S35086 / ISA / 1998 / 12327

Lovesio, Beatriz T. (Grupo Estudios Condición Mujer Uruguay, Miguel del Corro 1474 Montevideo CP 11200 (tel/fax: 00-598-2-4014615/4016415; e-mail: blovesio@soltel.com.uy)), **Persistencia en el cambio: las relaciones de genero en el contexto del MERCOSUR** (Persistence on Change: Gender Relations within the Context of MERCOSUR). (SPA)

¶ Explores gender relations & labor process changes in the dairy industry in two countries of MERCOSUR, Brazil & Uruguay, combining gender studies & sociology of work & drawing on secondary data & guided interviews with management & women & men workers. Effects of technological innovations, working organization, & labor force production are analyzed to identify the most remarkable aspects of gender inequalities. Dairy industry restructuring, new managerial strategies, & new ways of organizing work (easing the use of labor force) maintain the gender hierarchy & makes women's work more "vulnerable" than men's. New ways of organizing & distributing work privilege the competitive advantages of men over the comparative advantages of women, re-creating discrimination in the industrial production. Although the transformation that takes place at macroeconomic levels, particularly in the work environment, modifies the way in which work gender inequalities appear to be, such inequalities continue because they are influenced by ideological & sociocultural processes that reproduce them.

Lowgrand, Frédérik (Faculté théologie & sciences religieuses U Laval, Quebec G1K 7P4 (tel: 418-686-0371; e-mail: aai262@agord.ulaval.ca)), **"Eating Animals, Making Conversion": Consumption Ceremonial as a Metaphoric Place of Social and Religious Transformation.**

¶ Compares two Inuit conversion rituals, the *siggitiq* from northern Baffin Island & the *plusinaqtuq* from northern Quebec, & investigates the symbolism surrounding both of them, which are mainly characterized by the consumption of specific animals. At a metaphoric level, it is argued

that this consumption enables participants to regain health & vitality as well as the appropriation of the new coming religion, ie, Christianity. Implications are discussed from a broader perspective. For the Inuit, it is proposed that, far from being distinct, sacred & profane are still coalescent or inseparable, while, at the same time, one who eats absorbs both the qualities of the meal & the intrinsic properties of the food itself. However, these rituals indicate that consumption ceremonies can often be closely linked to processes of social & religious transformation.

98S35089 / ISA / 1998 / 12330

Lu, Shu Hua (Dept Sociology Peking U, Hai Dian Beijing 100871 People's Republic China (tel/fax: 8610-62209568/62200567; yanyanm@public.fhnet.cn.net)), **All the Women around the Globe Develop Together—China is Assisting the Women in the Poor Areas out of Poverty.**

¶ Emphasizes the assistance given to women in poor areas of the People's Republic of China by the Women's Federation in cooperation with other organizations by (1) various forms of advocacy activities, eg, exhibition; mobile advocacy; consultation; explain knowledge on life, hygiene, & environment protection; & by opening illiteracy classes & training sessions to help them improve their abilities of making life; & (2) indirect assistance, eg, spreading various kinds of knowledge, techniques, & craft skills through women's educated children who have attended training programs, which is especially effective to those in scarcely populated areas. It is concluded that the Women's Federation has played a significant role by seeking support from administrative divisions & cooperating with other organizations to arouse natural, human, & intellectual resources.

Lu, Xiuyuan (Princeton U, NJ 08544 (tel/fax: 609-258-4537/1032; e-mail: xiulu@phoenix.princeton.edu)), **The Alternative Practices of New York World War 3 Artists and Their Endeavors in Building a Corresponding Art Organizational Network.**

¶ The authority of an artist to his/her work has long been challenged by many postmodern theories, especially Howard Becker's influential model of "art worlds," which emphasizes the relationship between an artistic innovation & its corresponding art organizational structure. The practices of World War 3 artists in New York City both support & challenge Becker's theory. As a group of activist artists based on the comic magazine, *World War 3 Illustrated*, World War 3 artists comment on various social issues in the daily life of Americans through their alternative comics & media. Moving beyond representation to participate in the community struggle of fighting gentrification in the Lower East Side of Manhattan, they have blurred the boundary between art & politics. However, instead of being a "loser" in a universal & transparent version of art history & the art world, World War 3 has self-consciously endeavored to develop an alternative self-supporting organizational & financial structure to support & empower itself since it was born in 1980 & now has won an organizational victory by creating around itself the apparatus of an art world throughout the years.

98S35091 / ISA / 1998 / 12332

Luber, Silvia & Leicht, René (Center European Social Research U Mannheim, D-68131 Federal Republic Germany (tel/fax: 0049-621-292-1756/1714; e-mail: Silvia.Luber@mzes.uni-mannheim.de)), **The Development of Self-Employment in Western Europe: Patterns of Entrepreneurship and Labour Market Trends.**

¶ The importance of self-employment has increased in absolute terms & as a proportion of total employment in almost all Western European countries since the 1980s, with the exception of Denmark. However, the growth experiences in these countries vary highly, regarding both the period & the intensity. Since unemployment is still increasing & small firms create a large proportion of jobs, start-up events & self-employment have become a significant labor market issue. Discussed here are the nature & characteristics of self-employment, comparing different national patterns, & the shape & trends in self-employment are examined in terms of principal labor market dimensions: its relative share of total employment, growth rate, industrial & occupational distributions, & demographic & social composition. Hypotheses usually put forward to explain self-employment growth are tested. On the one hand, the reemergence of self-employment is seen as a positive response to the market & as evidence for the importance of entrepreneurship in stimulating overall employment & economic growth. On the other hand, it involves an increasing proportion of nonprofessional self-employment, which provides lower income & is accompanied by lower quality of work, & therefore is interpreted as an increasing marginalization of the self-

employed. The goal is to determine which of these developments dominates.

98S35092 / ISA / 1998 / 12333

Lucas, Antonio (Faculty Information U Complutense Madrid, E-28040 Spain (tel/fax: 34-1-394-2154/2245; e-mail: lucas@ccinf.ucm.es)), **Professional Formation: New Technology and Opening to Participation.**

¶ In a general scheme of modernization & its tendency toward an informational society, where consideration of the growing importance of organizations & communication is fundamental, it is important to pay attention to the processes of formation, especially as it applies to professions. New technologies in information require new education & formation processes that transcend prior difficulties of time & space, & the adoption of processes of learning that are adjusted to individual & organizational demands. Some processes of innovative teaching—eg, simulation, which is very efficient in technical formation to acquire habits & reflexes—can be very useful in the broader field of professional formation. Aspects such as the acquisition of organizational culture operate in tandem with these processes. The theoretical integration of these experiences makes them easily attainable & integratable into the theory of the process of modernization.

98S35093 / ISA / 1998 / 12334

Lucas, Samuel R. (Dept Sociology U California, Berkeley 94720-1980 (fax: 510-643-8292; e-mail: Lucas@Skywalker.Berkeley.edu)), **Contesting Tournament Track Mobility in the United States.**

¶ Previous research has suggested that track mobility in school resembles a metaphorical tournament, in that students move down, but after moving down, very few move up (Rosenbaum, 1976). Drawing on High School & Beyond transcript data indicating US student placements over 3 academic years, & loglinear models, it is found that more students move down than up, but 20% who move down subsequently experience upward mobility. This % is approximately twice the proportion of native-born blacks in the US; as analysts would be unwilling to deny the existence of blacks in the US even though blacks are relatively rare, analysts need also be unwilling to downplay the prospects of upward mobility, even though it is relatively rare. Thus, analysts need affirm that downward mobility is more common than upward mobility, but need reject the even more severe implications of the tournament mobility metaphor.

98S35094 / ISA / 1998 / 12335

Lucas, Yvette (B7 ave Maurice Hauriou, Port-Garaud 3100 Toulouse France (tel/fax: 33-05-61-52-33-46/62-22-85)), **Métiers et/ou Professions** (Occupations and/or Professions). (FRE)

¶ Explores how current definitions of professions & occupations vary across countries. Focus is on changes in content of professions & occupations due to the generally increasing level of education & external constraints, on one hand, & multiple & complex changes occurring at the level of global employment & the decomposition/recomposition of various labor markets, on the other.

98S35095 / ISA / 1998 / 12336

Lucena, Hector (U Carabobo, Valencia 2002 Venezuela (tel/fax: 58-41-42-24-06; e-mail: hlucena@postgrado.cid.ve)), **Latin American Trade Unions in the Context of Globalization: Challenges and Perspectives.**

¶ The study of trade unions has been an important area of sociology of work in Latin America. Focus here is on recent significant changes in trade union action as a result of the industrial restructuring that has taken place in the different countries of the region in the context of globalization.

98S35096 / ISA / 1998 / 12337

Ludes, Peter (U Gesamthochschule Siegen, D-57068 Federal Republic Germany (tel/fax: 49-271-7404936/7404963; e-mail: ludes@sf6260.uni-siegen.de)), **Key Picture Analyses of US-American and German TV News.**

¶ The increasing importance of TV (& World Wide Web) audiovisual means of orientation & entertainment calls for a shift of all fields in the humanities: (1) The systematic perusal, inventory, analysis, & interpretation of audiovisual mass, group-specific, & individual communication media, subdivided according to media-specific genres & intramedia formats must be advanced. (2) Key pictures of the various audiovisual media can be interpreted as indicators of specific behavior standards & power presentation figurations. (3) The major TV news are the only

means of general orientation available at the same time for millions of people. Especially for short-term crises, they command the monopoly of (audiovisual) information & orientation; thereby TV news can be used as means of coordination. With hundreds of thousands of journalists worldwide professionally observing social developments, their products offer an underestimated resource for tracking of short-term behavior fluctuations as well as long-term behavior standards. Especially the major TV news allow for insights that surpass opinion surveys & the analyses of written documents. On the basis of a project financed by the German research foundation, 1989-1997, a sample of TV news from the US & West Germany, 1949-1995, & East Germany, 1949-1990, is analyzed, with focus on key pictures in politics, economy, culture, & sport. With attention on the presentation of state heads & common people, implications of key picture analyses for a media-specific reappraisal, critique, & transformation of key concepts of figurational sociology are shown & demonstrated by means of a video documentary.

98S35097 / ISA / 1998 / 12338

Luedemann, Christian (U Bremen, D-28334 Federal Republic Germany (fax: 49-421-218-7474)), **The Measurement of Thresholds: Possibilities and Problems.**

¶ Discusses two ways of measuring thresholds: (1) revealed preference strategies & (2) direct survey of respondents. A measurement procedure is applied in a survey of environmental behavior (N = 247 respondents) in which personal thresholds (for putting glass into a public container), costs, utilities, & expectations of outcomes of two discrete behavior alternatives (putting glass into a public container vs a garbage can) are examined. Hypotheses about determinants of individual thresholds are tested using two subgroups. It is shown how threshold models can be integrated into Coleman's well-known macro-/microlevel model.

98S35098 / ISA / 1998 / 12339

Luksha, Olesya Victor & Mansurov, Valery (Instit Sociology Russian Academy Sciences, Krzhizhanovskogo str 24/35 b5 117259 Moscow (tel/fax: 7-095-719-0971/0740; e-mail: valman@socio.msk.su)), **Ways to Private Medicine in Modern Russia.**

¶ In-depth informal & standardized qualitative interviews with physicians from state & nonstate institutions in Syktyvkar, Russia, supplemented by observations, quantitative methods, & analysis of the press were used to explore public health care reforms that made physicians take different paths. Some left medicine for other employment, while others chose commercial (ie, private) medicine. It may appear that the latter get a chance to advance scales of autonomy, authority, & pay. Physicians agree that there are too many financial obstacles to commercial medicine: (1) primary capital; (2) need for a great amount of references from the fire office, sanitary inspection, etc; & (3) heavy rent for the workplace. Further, there is a psychological impediment. Physician entrepreneurs are often considered both by former colleagues & patients to have forsaken former professional values for profit.

98S35099 / ISA / 1998 / 12340

Lundy, Patricia (School Social & Community Science U Ulster, Coleraine Londonderry BT52 ISA Northern Ireland (fax: 44-1232-368201)), **Jamaican NGOs and Environment.**

¶ International aid for conservation currently favors assisting projects promoting local-level solutions derived from community initiatives. Non-governmental organizations (NGOs) are fast becoming the preferred infrastructure through which such funding is channelled. An examination of the role of environmental NGOs in community-based conservation projects in Jamaica begins with an overview of the growth of the Jamaican environmental movement & its social base, followed by an analysis of key issues that pervade international donor conservation policy & practice. Concepts of participation, assumptions about "community" & issues of representation are explored. The central argument is that Jamaican environmental groups are, essentially, drawn from the middle classes & represent a narrow constituency. Those more likely to be affected by environmental degradation, the poor & marginalized, appear to be the least involved in environmental projects. It is suggested that the unrepresentative nature of the Jamaican environmental movement is a key constraint on achieving policy objectives & initiating genuine community-based conservation initiatives. Decades of experience in community development have shown that, without involvement of local people, projects are likely to fail. It is concluded that international donors & practitioners need to acknowledge these failures & endeavor to understand the impediments to community participation to make appropriate changes & adjustments to conservation programs.

98S35100 / ISA / 1998 / 12341

Lutzenhiser, Loren & Hackett, Bruce (Washington State U, Pullman 99164-4020 (tel/fax: 509-335-6707/6419; e-mail: llutz@WSU.EDU)), **Toward a Theory of Tools.**

¶ While Pierre Bourdieu's recovery of the notion of "habitus" from the Scholastics allows everyday lifestyles & consumptive social action to be situated in a richer context, he does not address in any detail the social workings of mundane artifacts, devices, & machines (the primary instruments of environmentally significant consumption). Here, to provide the needed perspective, another intellectual line of descent from the Scholastics, ie, American pragmatism—a tradition that gave birth to interactionist sociology—is drawn on. Its utility for consumption studies lies in a capacity to focus on action in artifact-rich environments & to conceive of that action as simultaneously & inseparably physical, mental, moral, & efficacious. This can be illustrated by the behaviors, identities, & artifact ensembles involved in some commonplace technologies (eg, refrigeration, laundering, heating & cooling, & automobility—all environmentally significant forms of consumption). Proposed is a theory of tools that offers a more satisfying account of materialized social action & a new analytic approach to shaping consumption & lifestyles along more ecologically sustainable lines.

Lyman, Stanford M. (Florida Atlantic U, Boca Raton 33431-0991 (tel/fax: 561-297-3296/2752; e-mail: slyman@fau.edu)), **Postmodernism and a Sociology of the Absurd.**

¶ Postmodernism, poststructuralism, & deconstructionism are interrelated aspects of the newest theoretical development in sociology & the social sciences. The basic themes & issues explored are the allegation that modernity has defaulted on the promise of the Enlightenment; the question of whether the rational basis for knowledge & action is still valid; the controversy over the place of metanarratives & macrosociological outlooks; & newer concerns over race, gender, sexual preferences, the self, & the "Other." Empirically based & historically specific analyses of the relation of the race question to the problem of Otherness & to the legal construction of racial identity in US court proceedings are presented. Focusing on the issues of citizenship affecting European, Middle Eastern, & Asian immigrants; African Americans; & the special cases of Chinese & Native Americans, major public problems are related to the modern as well as the postmodern perspectives on justice. The debate over assimilation & multiculturalism, the dynamics of gender-specific emotions as expressed in 6 decades of Hollywood films, & the postmodern approach to deviance are each examined. Proposals for a social science attuned to, but critical of, postmodernism & poststructuralism are offered. Such a sociology might offer a perspective that treats the drama of social relations in the routine as well as the remarkable aspects of everyday life.

Lyon, David (Dept Sociology Queen's U, Kingston K7L 3N6 Canada (tel/fax: 613-545-2163/2871; e-mail: lyond@post.queensu.ca)), **Time and Space, Style and Suffering in the Postmodern.**

¶ Time-space compression has created new social & cultural configurations, in which consumerism features prominently. Postmodernity, characterized by the commodification of everyday life, obscures & reveals its shortcomings & contradictions. Style, seen in postmodern systems of distinction, veils the suffering of those without freedom of choice in globally distributed spaces of wealth/poverty. Tightly structured time-spaces of modernity give way to open travel in a continuous present. Lack of commitment is endemic, uncertainty is structural. For sufferers, the future is fixed, not fluid, & movement is limited & local. Within these "spaces of flows" & "timeless time," Manuel Castells theorizes the network as the new social unit, operating according to a cultural code that is incorrigibly ephemeral. Zygmunt Bauman, observing the same phenomena, articulates a postmodern ethics that connects micro- & macrolevels. Sur-

prisingly, each neglects religious dimensions of the postmodern, despite the time-honoured ethics-religion link. Moreover, while religion today is stronger as a cultural resource than a social institution, its concerns with time, space, & ethics are undiminished, & speak precisely to the mutually dependent oppositions of style & suffering characteristic of the postmodern.

Lyon, E. Stina (South Bank U, London SE1 0AA England (tel/fax: 0171-815-5867/5799; e-mail: lyones@sbu.ac.uk)), **Modernity, Rationality and Educational Engineering: The Myrdals and the Swedish Model of School Reform.**

¶ Explores the intellectual & political impact of Alva & Gunnar Myrdal on school reforms in postwar Sweden. Their work on the development of the concept of the welfare state reflected a strong faith in the transformative power of progressive modernity & in the role of experts in it. Two aspects of their theoretical impact on educational reform & Alva Myrdal's chairing of one of the key reform commissions are discussed: (1) the concept of "social engineering" & the role of social scientists in the creation of modern participatory & productive citizenry & (2) the influence of their combined US experience on perceptions of communitarianism & educational progressivism. Comparisons are made with GB where, despite a strong postwar commitment to the welfare state, the use of school as a "rational" tool for the transformation of society & its citizens never gained the same intellectual & political legitimacy.

98S35105 / ISA / 1998 / 12346

Mabbett, Jason (U Auckland, I New Zealand), **Capitalist Development in the New Zealand Wine Industry.**

¶ It is generally recognized that there are two forms of agricultural production under capitalism: capitalist, based on wage labor; & petty commodity production, based on incorporation of the family farm into the capitalist mode of production. Marxist explanations have usually been characterized as arguing that the family farm is destined for extinction, as a result of the overwhelming forces of concentration & centralization of capital. Recently, the work of Karl Kautsky has been disinterred, & the saliency of his analysis recognized. Kautsky has shown how the existence of two distinct forms of production can be explained using Marx's distinction between formal & real subsumption. In doing this, it can be shown that petty commodity production is an integral part of the capitalist mode of production—not its negation. In particular, two aspects of the development of the New Zealand wine industry are highlighted: incorporation of Dalmatian petty commodity producers & the advent of contract farming relations in the industry. The distinction between formal & real subsumption thus shows how capitalism penetrates agriculture slowly & in extremely varied forms.

98S35106 / ISA / 1998 / 12347

Mabbett, Jason (U Auckland, I New Zealand), **Globalization, Decentralization and the Wine Industry.**

¶ Discusses whether national-level politics are declining in importance, with reference to the globalization of legislation affecting agricultural products & intellectual property rights. Specific reference is made to the wine industry & the adoption of laws pertaining to geographical indications (appellations). These laws serve the dual purpose of allowing producers access to the European Union & to protect their own names. This implicitly acknowledges the distinctiveness of local & regional products. Globalization of such artisan-based principles counters the standardization of products normally considered to be the outcome of the internationalization of agrofood industries.

MacGregor, Sherilyn (Faculty Environmental Studies York U, North York Ontario M3J 1P3 (tel: 416-653-2697; e-mail: shermac@yorku.ca)), **Women in the Eco-City: Gender Implications of "Urban Sustainability".**

¶ Drawing on recent developments in urban environmental & feminist scholarship, the concept of "urban sustainability" & its potential implications for gender equity in North American cities are critically analyzed. Interrelated elements of the so-called sustainable city advanced by urban environmentalists (certain greens who have not abandoned the city for more bucolic settings) are outlined, eg, higher urban density, mixed land use, increased opportunities for communal living & home working/telecommuting, limited automobile use, & comprehensive waste reduction & recycling programs. These elements are examined from a feminist perspective, taking into account their implications for a diversity of ur-

ban women. It is argued that, while many aspects of urban sustainability may dovetail nicely into feminist visions of a nonsexist city, others have the potential to further intensify gender inequality—particularly those that have overlooked the gender dimensions of global economic restructuring or have taken for granted the persistent gender division of domestic labor. Examples of this potential scenario are discussed. A more inculcive understanding of urban sustainability, one that effectively integrates feminist & environmental concerns, is advocated.

¶ Experts on the transition of postcommunist systems are ever more inclined to claim that this unusual historical process is not only a transition from totalitarianism to a pluralist democracy & civil legal state, or from a planned to a market economy. Modern citizenship is possible only if people are willing to become free & creative citizens. Markets & political pluralism are inevitable objective prerequisites for modern citizenship. However, unless these objective factors are transposed into personal systems of values & activities compatible with these values, the project of transformation & modernization may fail. Issues of the citizen, citizenship, & civil society in the transformation & modernization of postcommunist societies are addressed here, attempting to explain the structure of the civil potential that would be compatible with the renewal of civil society. Examined in light of this analysis is the case of youth unemployment & self-employment in four transitional countries—Poland, Hungary, Bulgaria, & Slovakia—based on research by Ken Roberts on 800 unemployed & 400 self-employed young people, ages 18-30. Long-term answers are sought for a number of contemporary questions & problems, focusing on the relation between economic development & the development of citizenship. It is concluded that the social positions of the unemployed & business people have a substantial impact on their civil potential.

Machado, Nora (Dept Sociology Uppsala U, S-75108 Sweden (tel/fax: 46-18-471-1180/1170)), **Engineering Death and Life: The Social Dilemmas of Organ Transplantation.**

¶ Examines a major type of body engineering, the transplantation of solid organs for therapeutic purposes, identifying several related social, legal, & moral conflicts. This life-saving surgical technique—organized as a national & international sociotechnical system of organ retrieval, exchange, & allocation—has led to a fundamental alteration of what, until recently, were regarded as natural parameters, entailing changes in the concepts of living & dead. The concept of death has been transformed from the classical irreversible cessation of respiratory & circulatory function to the irreversible failure of all brain functions, a precondition for current large-scale organ transplantation based on organs harvested from brain-dead donors. The transplantation process has led to the clinical-level creation of an intermediate bodily state between living & fully dead, where people are declared dead but their organs are alive. Ambiguous states have emerged, eg, when a pregnant dead body can be maintained for months to preserve the life of a fetus or cases of veritable chimeras created through xenotransplantation (resulting in a mixture of human & animal tissue). These developments have led to a number of cultural-cognitive, legal, & ethical problems, because they involve changes in areas of substantial moral & legal significance: the human body (whether its state of being or a chimeric state) & matters of death & life (in particular, undermining established concepts of death & many of the rules & practices associated with appropriate treatment of the dead). Reasons why such problems arise & some of the responses to them are considered. The general approach outlined here is deemed applicable to a systematic & critical analysis of the potential development of human genetic engineering.

Machimura, Takashi (Faculty Social Sciences Hitotsubashi U, Tokyo 186-8601 Japan [tel/fax: 81-42-580-8642; e-mail: cs00035@srv.cc.hit-u.ac.jp]), **Building a "Global City" through the Politics of the Spectacle: The Cases of Osaka and Aichi-Nagoya in Japan.**

¶ World spectacles such as the Olympic Games or world expositions provide major opportunities for "wannabe" global cities to establish a link between globalization & local economic growth. Here, the local politics of globalization is investigated by comparing two examples of bidding process for world events in Japan: Osaka's Olympic Games & Aichi-Nagoya's World Exposition. The politics of spectacle is expected to have dual functions in local processes: one is to seek for "place" marketing in a global context, while the other is more locally or nationally oriented. The symbolic significance of such global events expands a local government's chance to obtain national grants in more comparative situations. Great spectacles have a political effect that can contribute to establishment of a local coalition among more diverse actors in post-Fordist industrial cities. An ideological effect often emerges, resulting in making social & cultural cleavage invisible. The global spectacle, however, is often thrown into a battleground of local politics, because it cannot be separated from environmental or growth-control politics. It is important not to ignore the fact that a global process has its own location & is (re) produced in a relatively autonomous local setting.

Maciel, Maria Lucia (Dept Sociologia U Brasília, 70910-900 DF Brazil [tel/fax: 5561-273-6571/347-3663; e-mail: lmaciel@guarany.unb.br]), **Innovation and Cultural Environments: Limits and Possibilities for the Development of a Triple Helix in Brazil.**

¶ Presents a study of the development of academic-industry relations in Brazil, showing how specific characteristics of innovation derive from their cultural, historical, & political environments. Taking knowledge as the nuclear issue indispensable to any innovation process, an attempt is made to examine it in terms of a Third World (emerging) society, decomposing its role into three processes that correspond to the main agents of the Triple Helix: (1) accumulation & distribution of knowledge (universities & research institutes); (2) institutional, geographic, & social deconcentration & decentralization of knowledge production & appropriation (public administration, local & federal government); & (3) democratization of knowledge & of decision making as a basis of productive modernization (industry) leading to social innovation & economic development. Concentrating principally on the third axis, the research investigates small businesses in Brazil & how they react to external stimuli & competitive pressures by emphasizing knowledge as a productive force according to the cultural & institutional environment in which they develop. This perspective implies not only a theoretical contribution but also a political proposition. The aim here is to provide better instruments for the analysis, diagnosis, & prognosis of innovation potential in developing countries. The political proposition intends to identify perspectives

& strategies pertinent to economic & social innovation.

Magdalenic, Sanja (Dept Sociology Stockholm U, S-10691 Sweden [tel/fax: 46-8-162236/6125580; e-mail: magdalen@sociology.su.se]), **Introducing Gender into Sociology in Sweden.**

¶ Uses statistical data, secondary sources, & interviews to examine challenges to professional knowledge & organization presented by the introduction of gender considerations in Swedish sociology. It is argued that individual & collective efforts made by Swedish sociologists to bring gender issues into the academic curriculum & to increase awareness of the significance of gender for intraprofessional differentiation can be explained by a combination of the following factors: (1) the paradigm shift & structural changes in sociology in Sweden that occurred during the late 1960s; (2) pressures brought about by social movements; & (3) other broad societal changes, eg, labor market shifts & demand for sociological expertise. Findings indicate variation among major sociological departments in the way they have handled the task of introducing gender into the discipline.

Magun, Vladimir S. (Instit Sociology Russian Academy Sciences, U1 Krzhizhanovskogo Moscow 117258 (tel/fax: 7095-186-7689/719-074; e-mail: maghome@glasnet.ru)), **The Revolution of Aspirations and the Changes in Life Strategies of Russian and Ukrainian Youth: 1985-1995.**

¶ The opening of the former USSR to the West, which began with Mikhail Gorbachev's perestroika, introduced to a country committed to minimal consumption & achievement standards new patterns of consumption & a more meritocratic system of job remuneration. This transition was studied through the subjective perspectives of urban youth, ages 16-17, in Moscow, Kiev, & a few provincial towns, 1985-1995. Data demonstrated a steep rise in both consumption & power aspirations, a trend that appeared stable across capitals & provincial towns. More than 90% of the respondents now want to have a car & a second house. On average, the number of rooms in the flat is now expected to be equal to the number of family members plus one. Young people now seek higher positions in the hierarchy of power & are increasingly unwilling to take jobs with bad working conditions. They will however, accept other hardships in work if it helps to build their human capital. This attitude toward work has been stable over time & may be strengthening.

98S35123 / ISA / 1998 / 12364

Mahmud, Faleh A. (Dept Politics & Sociology Birkbeck Coll U London, WC1E 7HX England (tel/fax: 44-181-5788301; e-mail: 106066.526@compuserve.com)), **Changing Phases and Fundamentalism. Responsive Social Movements in Sunni Islam.**

¶ The question of whether Islamism, or fundamentalism, is a continuing or mutating phenomena is explored, taking a comparative sociological approach that challenges the essentialist reductionism & suggests new multiple/classificatory criteria to distinguish the existence of various movements. It is argued that various forms of Islamism came into being in three successive waves: (1) the 19th century; (2) 1930-1960; & (3) 1970-present. These had different social origins & political settings, were triggered by different catalysts, & produced different theological & cultural thought, but they also have some common features. A comparative look at the reformation movements (Islamism proper), the salafiya (fundamentalism proper), or the sufi movements of the 19th century stresses the difference. Each current would influence the coming waves of the early 20th century, interacting in an Arab world that is, by dint of modern communication, becoming a cultural zone, albeit of diverse elements: animism vs sufism, medieval theology vs low-popular religiosity, rational vs traditional fatalist theology. Social actors form a multitude of desert warriors, medieval theologians, modernizing doctors of religion, sayyid status groups, sufi leaders—all facing ultimate decline or mutation. Only in the second half of the 20th century do the new offshoots of the modern middle & lower classes appear on the stage to form neo-Islamism. Ideologies range from sufi traditionalism, to liberal rationalism, to cultural nationalism with populist traits. With few exceptions, a challenge to the encroaching West was always a focal stimulus. Modernization of Islam stands in bold contrast to Islamization of modernity, or protecting the "authentic" traditional forms in a globalizing world & in national politics shifting from corporate/command to market economies.

98S35124 / ISA / 1998 / 12365

Mahon, James E., Jr. (Dept Political Science Williams Coll, Williamstown MA 01267 (e-mail: James.E.Mahon@williams.edu)), **Political Science and Ordinary Language: Why We Don't Have Conferences on "Polyarchization".**

¶ Explores the importance of ordinary political language, & the study of language in use, for discussions about concepts in the study of politics. Two opposed but mutually reinforcing responses to problems of conceptual ambiguity—a flight to & from science—overstate the degree to which words of everyday politics are inadequate as a basis for sustained inquiry. One, typified by Giovanni Sartori, overstates the role of ordinary language (vs social science itself) in creating conceptual confusion; the other, represented by William Connolly, exaggerates the depth of conceptual contestation. The latter position is contended to rightly depict the arguments as moral ones; this helps explain why ambiguous ordinary-language concepts such as "democracy" have not been replaced in political science by better-behaved concepts. Regarding ordinary language, the usefulness & limit of cognitive linguistic analysis of political speech is investigated, arguing that the linguistic turn can aid the search for problematic ambiguity but it cannot settle disputes over politically resonant words.

Maiteny, Paul & Reed, Bruce (Grubb Instit Behavioural Studies, Clouesley St London N1 England (tel/fax: 44171278-8061/0728; e-mail: grubbuk@aol.com)), **Oscillation: A Meaning And Values-Centered Approach to the Sustainability of Human Systems.**

¶ Outlines a framework for systemic understanding of behavior in & between human systems based on the relationship between meanings, values, & actions. Termed oscillation theory (Reed, 1978 & 1995), it has been developed over 20+ years' experience of organizational consultancy. A healthy oscillation between meaningfulness (termed identification phase) & expressive action (realization phase) has been found to be essential in human systems if they are to remain functional & sustainable. The need for meaningful identification is driven by human yearnings for satisfaction. It underlies creativity & the formation of communities. Attempts have to be made to realize the meaning & purpose of the identification phase through action & engagement with other "meaning communities" in the system's environment. Otherwise identification becomes dysfunctional. Conversely, action has to be informed by meaningful purpose. Oscillation therefore entails a feedback process between meaning & action, which helps in understanding problems in human systems as emergent properties of incongruities between psychosocial representations (maps) of reality & actual relations in the world. Having tested oscillation theory in organizations, the next step is to apply it to problems of sustainability in societal & socioecological relations.

Major, Wayne F. (Dept Leisure Studies U Nevada, Las Vegas 89154-3035 (tel/fax: 702-895-1297/4870; e-mail: majorw@nevada.edu)), **The Benefits and Costs of Serious Running.**

¶ To determine the benefits & costs of serious running, in-depth interview data were collected from 12 female (F) & 12 male (M) runners with a wide range of demographic characteristics who entered & completed at least three 5K road races. The results indicate that, although people run for a variety of reasons, a sense of accomplishment is most important; it is viewed as a substantial benefit & a source of extended meaning. Health & fitness, as well as social affiliation, were also important for both initial & ongoing participation & for the meaning that running held in their lives. Costs included injuries, "letting oneself down," & concern for one's safety, which was salient for all F runners. F runners considered "fear of being attacked" a cost that influenced when, how, & with whom they ran. Fs' running careers were negatively affected as a result of concern for safety. This issue did not emerge with M runners. Further research is needed to provide a more comprehensive understanding of the notion of power & control for Fs generally &, more specifically, for Fs in the exercise domain.

Majundar, Margaret (U Glamorgan, Pontypridd CF37 1DL UK), **La Méditerranée: identité et discours** (The Mediterranean: Identity and Discourse). (FRE)

¶ The modern Mediterranean identity of the North African coast is examined, noting that it has become supranational at some level & is influenced by issues of both colonization & decolonization. It is held that these nationalisms correspond to two different assessments of the Mediterranean: that of the Maghrebins, who regained & defend their territory, & that of the French, particularly the Algerian French, for whom "the Mediterranean crosses France like the Seine crosses Paris." The modern notion of a shared Mediterranean identity is discussed with respect to the evolution of discourse on European supranational identity & with regard to economic & other policies implemented by European institutions.

Makarovič, Jan (Faculty Social Sciences U Ljubljana, 61000 Slovenia (tel/fax: 386-61-1681-461/1685-330)), **Globalization of Technology-Localization of Society?**

¶ The impacts of information technology lead integration & homogenization; nevertheless, information per se is qualitative & unique, not quantitative & serial. As a consequence, information technology simultaneously promotes the assertion of national, regional, local, & individual particularities. Moreover, the limitations of human psychophysical capacities have to be taken into account. People cannot act globally in the same way as technology, although they can avail themselves of it. Their contacts are thus restricted to specific places, social groups, etc. Therefore, a progressive separation of the technological-global & the social-local spheres may be anticipated in the future. This division corresponds to that between telecommunications & personal contacts, between "high tech" & "high touch," exchange & "prosumerism," the market & the social sphere of the economy, etc. This new localism is different from the traditional, in that it is actively involved in the global technological system. In the place of traditional localisms that blend in the melting pot of globalization, strong local communities that make use of contemporary

global technologies for their own purposes are expected to develop.

Mäkinen, Tiina (Dept Social Policy U Turku, SF-20500 Finland), **Contradicting Findings-Conflicting Results? Connection between Structural Factors, Income Transfers and Poverty in OECD Countries.**

¶ Examines the impact of different structural factors, ie, changes in economy, employment, & demography, on poverty & income transfers, comparing Organization for Economic Cooperation & Development (OECD) countries representing different welfare state models. Analysis shows that, in reference to the impact of structural factors on poverty, the % of people under age 15 increases poverty, while the rate of persons ages 65+ decreases it. If the dependent variable is income transfers, the result is opposite. This can be explained by the fact that social policy has primarily been pension policy, which has improved the situation of old people. In many countries, the development of family policy is just beginning, & now poverty is a threat to new society groups, eg, single parents & families with children.

Makler, Harry M. (Dept Sociology Stanford U, CA 94306 (tel/fax: 650-424-0171/0172; e-mail: makler@leland.stanford.edu)), **Studies in Patrimonial Capitalism: Banking Sector Transformation and Privatization in Brazil.**

¶ Identifies socioeconomic factors that have impeded the Brazilian government's attempts to privatize its banking sector in a privatizing global economy. Based on a systematic survey & case studies of Brazilian private & public financial conglomerates & analysis of archival & statistical reports, it is argued that the persistence of subnational claims (*regionalismo*), an ambiguous regulatory policy, & a globally oriented financial market embed patrimonial capitalism & the state as a financial entrepreneur. Among other actors, the roles of corporatist organizations (trade associations), local political elites, the federal & state legislature, & the federal executive are examined. Whether corporatism influences the Brazilian banking system in its transition is a main focus.

Malabotta, Melita Richter (Centre International Ethics Political Research, via Franca 2 I-34123 Trieste Italy (tel/fax: 40-302011/311284)), **Language and National Integration-The Case of Former Yugoslavia.**

¶ The new state-nations based on strong national homogenization need a different interpretation of the past & reestablishment of values. This historic moment is dangerous for culture, because it is expected to serve national interests, which often means use of black-&-white logic, the glorification of "us," the demonization of "others" & the need of an enemy. The image of the enemy is transmitted also to the domain of culture. As new divisions & borders are set on a national basis, culture becomes balkanized, narrowed down from a wider multicultural & multilingual space to a one-dimensional, exclusive, national one. In this context language, language identity, & linguistic policy become elements in the power game & instruments for exercising authority of new political national centers. The connection between language & reality is quite complex & often reflects the life of society. It creates deep emotional feelings of belonging. But if it ignores the complexities of life & becomes an ideology, intolerance, aggressiveness, & boundary setting will prevail. Some examples of the balkanization of culture in the sphere of the language are provided.

Malaska, Pentti (Finland Futures Research Center PO Box 110 FIN-20521 Turku (tel/fax: 358-2-3383529/2330755; e-mail: malaska@utu.fi)), **Work Development and the Late-Industrial Transition.**

¶ Long-term unemployment, unbalance between supply & demand of knowledge & service skills, emerging new infrastructure of network markets & environmental stress caused by economic growth, & demands of sustainable development are signs of the fundamental transition of the world community. The recent recession of the 1990s is not only a traditional economic decline, but a transitional phenomena of multiple structural changes that are superimposed by short-range fluctuations. A theoretical framework of dynamic transformation through the transient period is developed & applied. Since the 1960s, the size of the labor force in manufacturing has been declining in most industrialized countries. The industrial period is in a turbulent late-industrial transition, which will continue for the coming decades. While production of goods will employ

fewer workers, its production will grow. More will be produced by fewer workers through intensive use of knowledge, new technology, & smarter ways of working. The present transient stage of development encompasses both threats & opportunities for human intentions. The phenomena of transient change are examined both perceptually & empirically, based on labor force data for the US, 1870-1990s, & for Finland, 1910-1990s.

Malenfant, Romaine & De Koninck, Maria (Centre santé publique Québec Equipe RIPOST, 2400 d'Estimauville Beauport G1E 7G9 (fax: 418-666-06-84)), **Le Droit au travail des femmes et le droit à la santé dans un contexte de transformations du travail** (Women's Right to Work and the Right to Health in the Context of Work Transformations). (FRE)

¶ It is asserted that the working world has gone through some significant changes in the areas of labor power, modes of production, & markets. How the globalization of economic competition has stimulated commercial exchanges & technological advances is discussed, as is a new flexibility apparent in work organization & management. It is held that, even in this context, certain characteristics of the working world maintain their stability & appear to transcend space & time, eg, those leading to precariousness of employment. The increased number of women in the workforce is addressed, with attention to the effect this has had on the relationship between the sexes & health care in the workplace. Research & interviews conducted in Quebec, 1994-1998, that centered on the working conditions of pregnant women, the participation of women in traditionally masculine professions, & sporadic employment, are reviewed. The social mechanisms & forms of logic that underlie precariousness in the work environment are identified.

Mallmann, Carlos A. & Lemarchand, Guillermo A. (Centro Estudios Avanzados U Buenos Aires, 1114 Argentina (fax: 0054-1-963-6962; e-mail: pemar@seti.edu.ar)), **A Generational Explanation of Long-Term Billow-Like Dynamics of Societal Processes**.

¶ An increasing amount of empirical evidence has been accumulating showing the existence of several kinds of long-term societal processes. Particular attention was given to the 50- to 60-year billows, usually related with economic & technological processes (Kondratieff cycles). These studies generated a large set of different theories—intrinsic to the economy & technology—that tried to explain the recurrent process origin. Since last century, several scholars have also identified even longer societal billows, usually related with long-term political processes (hegemonic & Ferrari cycles). The paradigm of long-term societal processes was not always accepted due to the lack of a consistent theoretical framework that could explain it. Introduced here is a partially formalized version of that framework that contains only one to-be-determined constant: ie, a generational time lag. It is shown that this time constant is equal to the life lapse of human beings in which they are mainly motivated to interact with their contextual, social, & habitual processes. This constant "tau" is called societal historic generation, & it is concluded—using theoretical & empirical arguments—that its length is 39 (+/- 4) years. A mathematical model of the societal temporal diffusion of those motivational concerns that is in agreement with all the empirically determined characteristics of the long-term billow-like processes is presented. The basis of this model has anthropo-psycho-epigenetic human roots that allow the emergence of collective societal behavior patterns with the appearance of long-term billows in economic & political indicators. An interpretation & discussion of the main characteristics of the societal moods as well as other research lines to test the model are presented.

98S35137 / ISA / 1998 / 12378

Maloutas, Thomas (Dept Regional Planning & Development U Thessaly, GR-38334 Volos Greece (tel/fax: 30-421-69781/63793; e-mail: maloutas@uth.gr)), **Social Polarisation and Segregation in Athens**.

¶ According to the dual city thesis, social polarization seems the unavoidable future for all cities of the Western world, & segregation its spatial corollary. Focus here is on issues of social polarization & segregation at a lower echelon of the globalizing urbanity, examining the supposedly direct link between economic restructuring, social polarization, & urban segregation. The social structure of 1980s & early-1990s Athens, Greece, is found to be depolarizing both in terms of socioprofessional changes & revenue distribution. This is attributed to the different mix of expanding services, the non-middle-class/middle-range revenue of declining jobs in industry, & the family-centered forms regulating social reproduction. Depolarization, however, is followed by increasing segregation, showing that the latter is produced by social inequality combined with the appropriate mechanisms of land & housing allocation; polarization can enhance segregation if these mechanisms are present, but will not produce it otherwise, & its absence will not prevent it.

Malpass, Peter (U West England, Bristol BS1 61QY (tel/fax: 0117-976-3853/3895; e-mail: P-Malpass@uwe.ac.uk)), **The New Governance of Social Housing in Britain: The Role of Not-for-Profit Organizations in the Restructured Welfare State**.

¶ Draws on 3 years of research on the historical development of housing associations & housing policy in GB to reflect on how voluntary organizations have been brought into a much closer relationship with central & local government. The main aim is to show how the fragmentation of the British welfare state has increased the degree of control exercised by the state over nominally private organizations. New models of social housing organizations are shaped mainly by politics & finance. Attention is drawn to the contrast between the ease with which groups of concerned individuals used to start new housing associations & build them into large organizations & the great difficulty in doing so now. Today's new organizations emerge from the public sector.

98S35139 / ISA / 1998 / 12380

Mamimine, Patric (Dept Sociology U Harare, Zimbabwe (e-mail: mamimine@social.uz.zw)), **Generation Gap and Alienation in Ethnic Tourism: A Case Study of Stone Sculpture and Dancing in Harare**.

¶ Argues that, while ethnic tourism is a discourse of subverting symbols of modernity or replacing modern values with those of an earlier or lesser form of civilization, the individual consciousness of the hosts, compelled by economic rationality to pretend to live on the margins of modernity, when in fact they are part & parcel of it, result in a mental dissonance that alienates the hosts. Explored here is how some stone carvers & traditional dancers in Harare, Zimbabwe, perceived the expected role of playing the primitive for the sake of meeting the demands of ethnic tourists, drawing on interview data thematically analyzed according to content & age. Findings indicated that there was a generation gap in terms of host perception of such role playing. The reasonably well-educated & young artists were highly critical of being made to parade as primitives when in actual fact they were the tourist's fellow modern man. They saw the business of ethnic tourism as an attempt to encourage the black man to take pride in being less civilized & discourage the development of values that enabled one to cope with the daily demands of challenges of a changing world. In contrast, less-educated, elderly artists expressed great pleasure in being made animateurs of the old or past life of the Shona people. They saw their role as noble in that it enhanced the preservation of Shona tradition. The young generation was more alienated than the older generation.

98S35141 / ISA / 1998 / 12382

Mandal, Kalyan Sankar (Indian Instit Management, Vastrapur Ahmedabad 380015), **'Corporate' and 'Cooperative' Forms of Modernization of Edible Oil Production in India.**

¶ Analyzes two forms of modernization of edible oil production in India. Traditionally, a caste group of oil pressers (known as Talu or Teli) produced oil, mainly for the village, with simple technology; they suffered from various types of inefficiency. Later, trading communities entered into edible oil production on a slightly bigger scale. With the emergence of a corporate sector, tremendous transformations took place; an example of a multinational company—ITC Limited—is provided. Another unique type of modernization took place under the initiative of the government through the National Dairy Development Board, which had already efficiently modernized milk production by successfully organizing cooperative societies. Its successful approach to the organization of edible oil production in India is outlined, & compared to that of ITC.

Mandle, Jay R. & Mandle, Joan D. (Colgate U, Oakland CA 94605 (tel/fax: 510-382-9787/9685; e-mail: Jaymandle@aol.com)), **Justice and Cooperation in Professional Team Sport.**

¶ After summarizing why David Best is believed to be right when he argues that sport is not an art form, it is nevertheless argued that sport, like art, produces dramatic representations of important aspects of life. Two of these representations concern goal attainment in a context of justice, & the value of cooperative behavior. In light of that understanding of sport, comments are offered on the critique of sport made by Christopher Lasch &, more recently, that by William J. Morgan. Discussed in conclusion is the concern that the system of compensation currently employed in professional team sports in the US might undermine the cooperative nature of sport & thereby damage one of the pillars of sport's strength.

Manigart, Philippe (Dept Sociology Royal Military Academy, Ave de la Renaissance B-1000 Brussels Belgium (tel/fax: 32-2737-6240/6047; e-mail: philippe.manigart@ssoc.rma.ac.be)), **Morale Research in the Belgian Armed Forces.**

¶ Briefly discusses how morale is defined in the Belgian armed forces & analyzes how sociological & psychological variables enter into the definition of this multidimensional concept. Empirical research that bears on the concept of morale is reviewed, along with related concepts, eg, job satisfaction & group cohesion.

98S35144 / ISA / 1998 / 12385

Manley, John F. (Stanford U, CA 94305 (tel: 650-856-9881)), **Classes and Elites: Applying the Brake to American Democracy.**

¶ Seymour Martin Lipset calls "class" in the US a "theoretical construct," which means it does not really exist. Alan Ryan, Warden of New Coll (Oxford, England) in reviewing a biography of Sidney Hook, says "Revolution has never been on the American agenda in the 20th century, & American trade unions have only rarely departed from Samuel Gompers's aims for the American Federation of Labor: that the workers should have more of capitalism's golden eggs but never threaten the life of the goose that laid them." Here, both views are challenged. Classes in the US, as Karl Marx knew, are split into conflicting fractions, requiring for their explanation both class & elite analyses. In particular, class conflict & the threat of revolution are essential to understanding Progressive reform, US labor history, the Industrial Workers of the World, the National Civic Federation, & the presidencies of Theodore Roosevelt & Woodrow Wilson. Reform & repression, in the US no less than in Europe, were the capitalist state's answers to the threat class conflict posed to the capitalist system.

98S35145 / ISA / 1998 / 12386

Manna, Samita (Dept Sociology U Kalyani, West Bengal India 741235 (tel/fax: 91-33-827332/828460; e-mail: klyuniv@giacsl01.vsnl.net.in)), **Deviant Youngsters—A Scene of Social Pathology.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Developing countries like India provide many illegitimate opportunities for people as they fail to conform to moral trust. Consequently, a number of deviant groups originating from deviant associates are increasing in diverse forms & functions. Gradually, through the process of

identification & isolation, these groups become partly or completely estranged from conventional associations & become part of the deviant subculture. Here, interview data collected from boys & girls at various railroad stations are drawn on to explore how poor socioeconomic conditions, lack of parental affection & emotional attachment, family disintegration, & inadequate scope & opportunity offered by society slowly alienate young people from their normal social life, disrupting the whole fabric of social control & societal consensus. It is shown how these groups develop their own subcultural traits—specialized languages, various symbols for interaction, group morale, norms, skills, & codes by which they begin to strengthen their identity. With the passage of time, these youngsters gradually undergo a process of change for the worse & become members of deviant associations that lead them into antisocial activities & eventually turn them into hardened criminals.

98S35146 / ISA / 1998 / 12387

Manna, Samita (Dept Sociology U Kalyani, Nadia West Bengal 741235 India (fax: 91-3162-824392)), **In Search of Social Identity: A Migrant Community in Frontier Bengal.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The border areas of Bengal have attracted migrants throughout history because of the extra opportunities they provide. Here, an attempt is made to show how the uprooted community known as "Sahis," or caretaker of the horses, had faced the problem of their identity in a new uncertain world. The Sahis community came to the border region of Bengal during the Maratha invasion to look after the horses of the Maratha kings. After the Marathas left, the members of the Sahis community remained in this frontier zone. Consequently, they had to accept new, similar occupations of that region & were merged gradually with the greater society in terms of social identity. The process was neither drastic nor smooth & easy; rather, it was a painful story of negligence & tolerance, conflict & compromise.

98S35147 / ISA / 1998 / 12388

Manning, Emily Susan (Johns Hopkins U, Baltimore MD 21218 (tel: 410-662-6521; e-mail: esm@jhu.edu)), **Finance Capital and Dependency: Revised Modes of Control in the Contemporary Global Economy.**

¶ Previous work on capital dependency has focused on the relationship between direct foreign investment & underdevelopment, arguing that the detrimental effect of foreign investment dependence derives from the direct control exercised by transnational corporations over Third World economies. By implication, since portfolio investment is defined by the absence of direct control or conditionality, its effect on developing countries should be neutral or unrelated to issues of power & control. Counter to this postulate, two arguments are advanced: (1) Portfolio investment dependence, like direct investment dependence, grants control of host economies to foreign actors, primarily at the level of government macroeconomic policy making. (2) In a context of capital dependence, control by host country actors (ie, their ability to effectively predict & plan economic outcomes) should be conceived in absolute as well as relative terms. Volatility of capital inflows poses a potent threat to the absolute control potential of an economy, & portfolio flows are notably more volatile than direct investment flows. For these reasons, portfolio investment dependence, like direct investment dependence, should have a negative effect on Third World development. This hypothesis is tested with a longitudinal cross-national analysis of World Bank & International Monetary Fund data.

98S35148 / ISA / 1998 / 12389

Mante-Meijer, Enid A. & Van der Loo, Hans (KPN Research, ITB St. Paulusstraat 4 Postbus 421 NL-2260 AK Leidschendam Netherlands (tel/fax: 31-70332-3525/9508; e-mail: mante@research.kpn.com)), **Blurring of Life Spheres. Flexibility and Teleworking.**

¶ Acceptance of information & communication technologies differs widely between persons & between countries & regions, both in the use of technologies in general & in the number of people who use them. After examining the characteristics of information & communication technologies, their propensity to reduce temporal & spatial boundaries—between here & there, now & then, public & private, home & workplace—is explored, focusing on the case of teleworking. This blurring phenomenon is enhanced by changes in society, especially by technological, economic, & sociocultural trends that influence the daily & working life of the indi-

vidual. On the one hand, this means disorganization of standard ways of working & organizing, but, on the other hand, it makes new choices & recombinations possible. People cope with the blurring of home & work spheres by accepting the blurring & setting new boundaries according to their lifestyle & life situation & perceived obligations to the social systems they are a part of. This coping & acceptance process are viewed from several different angles, eg, technological systems, social systems, lifestyle & group culture, the home-work relation, & stages of the life cycle. These define the dilemmas & paradoxes that confront the individual when information & communication technologies intrude into the private world of the home sphere in the shape of telework.

Marantzidis, Nicos (U Macedonia, GR-54006 Thessaloniki Greece (tel: 3031-891-470; e-mail: nmarantz@esas.edu.gr)), **Clientelisme politique et exclusion sociale: le cas de tsigans en Grèce** (Political Clientelism and Social Exclusion: The Case of Gypsies in Greece). (FRE)

¶ Draws on research carried out in Gypsy communities in Greece to examine the kind & degree of the development of political clientelist relations in these socially excluded groups. Examined are (1) the extent to which the socially excluded groups in Greece form political clientelist relations, (2) the type of clientelist relations they develop & their particularities in comparison with other types of clientelist relations, & (3) whether these relations help the excluded groups to integrate into the society or intensify their social exclusion.

98S35153 / ISA / 1998 / 12394

Marchak, Patricia (Dept Anthropology & Sociology U British Columbia, Vancouver V6T 1Z1), **The Future: Work in a Different Context.**

¶ Human labor is becoming obsolete for industrial & service production. Neither of the two general approaches to the future of work—a return to feudalism vs reorganization of social arrangements & redistribution of wealth, to enjoy leisurely lives—is convincing in the context of environmental pressures & political regroupings. Feudalism needed labor & land, not so the corporations that are expected to establish the arrangement of the equivalent of a very small aristocracy & a very large peasant-

ry. A glorious & peaceful future seems equally unlikely in a world that might well wage (computerized?) wars over water & displace nation-states & civic nationalism with ethnic enclaves. It is argued that the future of work is not necessarily grim, but that discussions about the future of work need to be placed in the context of environmental issues & the political & economic changes they will bring about. These linkages between the environmental/political contexts & the problem of work are addressed.

Marcuello, Chaime (Dept Sociología U Zaragoza, E-50005 Spain (tel/fax: 34-976-76-1995/2003; e-mail: chaime@posta.unizar.es)), **Internet Yes, but People First: Popular Server of Electronic Information** (SPIE, Servidor Popular Aragonés de Información Electrónica).

¶ Presents a case study analysis of the relationship between information technologies, eg, the Internet & World Wide Web, & social movements in Zaragoza, Spain. In 1995, 10 nongovernmental organizations worked together to build an Internet website. The proposal was to put people first & to construct inside the world's square, the Internet, a place to include people, radical ideas, & alternative readings about our planet. This was a social movement emerging from citizenship. Today, there are 24 groups managing something like a "freenet" from different points of view, & using technologies of information as an integrative, ecological, & "eutoptic" mean. A short history about the SPIE (Servidor Popular Aragonés de Información Electrónica (Popular Server of Electronic Information)) is presented, & the struggles between fears & hopes, expectations & difficulties, are discussed. Social actors & their roles & the conquests, mistakes, & next steps outlined by the protagonists are analyzed. The cultural change created inside social movements because of new systems of information & communication, eg, e-mail, & the methodology of investigation are also discussed.

98S35155 / ISA / 1998 / 12396

Marcus, Tessa Shein (Community Agency Social Enquiry, Suite 210 Postnet X9118 Pietermaritzburg 3201 KwaZulu-Natal South Africa (tel/fax: 331-426-414/419; e-mail: casepmb@wn.apc.org)), **Perceptions and Experiences from Childhood—A KwaZulu-Natal Case Study.**

¶ Explores contemporary childhoods in & around Pietermaritzburg, KwaZulu-Natal, South Africa, focusing on the context of children's experiences, expectations, & perceptions of social differences & drawing on original first-round findings from the 1997 CRG Research Programme "Consciousness and Social Change in Transition." Focus is on the complexities of class, race, & gender identity formation & consciousness of first-generation school-goers in grades 1 & 4 in the new 10-year compulsory schooling system.

98S35156 / ISA / 1998 / 12397

Marcus, Tessa Shein (Community Agency Social Enquiry, Suite 210 Postnet X9118 Pietermaritzburg 3201 KwaZulu-Natal South Africa (tel/fax: 0331-426-414/419; e-mail: casepmb@wn.apc.org)), **The Distribution of Wealth and Material Inequality: A Comparison of School-Goers in Pietermaritzburg South Africa.**

¶ South African society is characterized by considerable inequality in wealth & material well-being, which is becoming increasingly more complex because of changes in what signifies material well-being, repositioning of racial & gender stratifiers, & the significance that can be attached to locality. Material & wealth differences in 1,486 students of 10 primary & secondary schools near Pietermaritzburg, KwaZulu-Natal, are described, & their implications for social mobility & reduction of social inequality considered, based on findings of the first wave of fieldwork conducted in 1997. The schools have historically served black & white, urban, rural, & farm communities, as well as the private & state sectors.

Mare, Robert D. & MacLean, Alair (Dept Sociology U California, Los Angeles 90095-1551 (e-mail: mare@ucla.edu)), **Immigration, Fertility, Intergenerational Mobility, and Trends in Educational Attainment.**

¶ Examines trends in educational attainment in the US as a whole & in CA, focusing on the plateau & possible decline in attainment over cohorts that have recently entered adulthood. Four interpretations of this trend are considered: (1) later ages of college attendance by more recent cohorts making their average attainment levels appear lower than they will eventually be; (2) artificially high estimates of educational attainment for older cohorts produced by reporting errors; (3) recent immigra-

m

tion of persons with low levels of educational attainment; & (4) a genuine leveling-off in educational growth. The third of these interpretations is of particular interest in view of recent high levels of Latin American immigrants. Some have suggested that current & future levels of attainment will be depressed, because immigrant mothers have low levels of educational attainment & relatively high fertility. Further, disadvantaged immigrant family backgrounds will result in a lower average attainment level for the population as a whole. By combining data from the 1940-1990 US Censuses, the 1995-1997 Current Population Surveys, & 1980-1995 birth certificates with estimates of the effects of maternal schooling on offspring's schooling, the likely future trajectory of educational attainment & the potential effects of alternative patterns of education-specific immigration & fertility are shown.

Maricic, Tatjana Lukic (Research School Social Sciences Australian National U, Canberra ACT 0200 [tel/fax: 06-279-85-60/249-21-14; e-mail: tatjana@coombs.anu.edu.au]), **Inequality or Not: Ethnicity and Status Attainment in Former Yugoslavia.**

¶ Examines educational & occupational attainment processes among nine main ethnic groups in former Yugoslavia, drawing on 1987 Class Structure of Yugoslav Society data (N = 15,976). The ordinary least squares regression technique is used to estimate two models. (1) A core model to assess whether occupational rewards to education are equal between different ethnic groups in a range of countries estimates the effects of education & labor force experience, controlled for age & sex, separately for Albanians, Montenegrins, Croats, Yugoslavs, Macedonians, Muslims, Slovenes, Serbs, & other grouped minor ethnic groups. (2) A country-specific model involves some special circumstances & mechanisms relevant to status attainment in the former Yugoslavia, eg, rural/urban origin, party membership, minority/majority status in a residential republic, & residence in a developed or undeveloped republic.

98S35159 / ISA / 1998 / 12400

Markarian, Edward S. (Instit Philosophy & Law Armenian Academy Sciences, Yerevan), **Social Sciences through the Prism of the Survival-Development Strategic Imperatives.**

¶ Describes the present disintegrated state of theory in social sciences as the decisive element of the cognitive trap in which human beings live, & substantiates the possible crucial role of integrative sociocultural theory to meet survival-development strategic imperatives. The cognitive trap is a result of the discrepancy between traditional priorities & modes of production & use knowledge & specialists that split the scientific consciousness & unusual global problems generated by planetary crisis. These priorities & modes are products of the evolutionary blunder committed in the course of the previous development of industrial civilization. An attempt is made to (1) prove that the priorities of contemporary civilization have created a managerial culture that has approximately the same pathological nature; (2) discuss ways of developing the integrative potentials of social sciences through theoretical penetration to the level of fundamental laws & elementary mechanisms of evolutionary self-organization of human social life; & (3) share experience of how to use elaborating integrative principles to reveal & remove the basic sources of the planetary crisis. Some ideas of Markarian's *Capacity for World Strategic Management. The Forthcoming Reform of the UN System through the Prism of Evolutionary Strategic Imperatives* (1998) are developed.

Markoff, John (Sociology/History/Political Science U Pittsburgh, PA 15260 [tel/fax: 412-648-7570/2799; e-mail: JM2avms.cis.pitt.edu]), **Globalization and the Future of Democracy.**

¶ The late 18th century was a critical moment in the history of modern democracy. In Western Europe, the increasing transfer of power from local arenas to national ones provoked (& was provoked by) a transformation of popular political action from challenges to local elites to long-term campaigns to influence distant national governments. One consequence was a democratic breakthrough, in which new models of governance that claimed the legitimization of popular assent, on the one hand, & social movements with their distinctive tactics & organizational forms, on the other, were born together. The histories of democratic government & of social movements have continued to be intertwined. Out of many movement-elite dialogues in many places the specific institutions of modern democracy were developed. At the end of the 20th century another epochal moment may be approaching in which another reconfiguration of power reshapes the forms of political action. As power pass-

es from the national states to a variety of transnational decision-making structures—some formally constituted & some hidden—the adequacy of modes of political action from the past are again being called into question in several ways: (1) Accountability of national governments to national citizens is less adequate a vehicle for popular control over decision-makers when those decisionmakers are increasingly outside of those national governments. (2) The well-developed strategies, tactics, & organizational forms developed by social movements, so important in the democratization of the states, seem far less likely to be effective in the transnational arena. It is questioned whether globalization, while threatening the meaningfulness of the democratization of the states, is also opening up new ways of challenging power, presenting the possibility of a more democratized world.

98S35161 / ISA / 1998 / 12402

Marontate, Jan L. A. (Dept Sociology Acadia U, Wolfville Nova Scotia B0P 1X0 [tel/fax: 902-542-9418/585-1074; e-mail: tom.archibald@acadiau.ca]), **The "Service Areas" of Art: Situating Fabricators, Assistants and Other Technical Support Workers in Theories of Artistic Practice.**

¶ Examines the theoretical implications of modern & contemporary art-making practices in high culture artforms for studies of cultural workers, focusing on the activities of people involved with technical aspects of art-making (eg, fabricators, assistants, & various technical experts). Art technical workers occupy an uneasy space in discourse about art. Not only are sharp distinctions drawn between the practice of art & manual (or instrumental) aspects of making art, but, as Paul Feyerabend has said, "the idea that theory surpasses observation & practical skills is widespread," invoking philosophical debates that suggest that theories are related to truth whereas observations & skills are not. Historically, these distinctions may be seen in the context of efforts to raise the social position of the artist by clearly differentiating artists from manual laborers. Social theorists have observed that painters working in mainstream European traditions deliberately abandoned the status of artisan by insisting that their work fell within the definition of "learned culture" as a mode of abstract thinking. Trends in the early 20th century challenged conventions about what exactly constituted techniques & materials in the fine arts, adding new dimensions of ambiguity to art-technical practices & discourse about it. Somewhat paradoxically, there was an upsurge of art-technical writing in mid-20th-century US at a time when dominant artistic discourse in avant-garde circles was reaching an unprecedented level of abstraction that overtly deemphasized technical skills. Beginning in the 1940s, authorities prescribed & described artmaking processes & materials in technical advice columns when concentrated art-technical instruction was well on its way to becoming taboo in art schools. For several decades the "do-it-yourself" model of artmaking prevailed in artistic discourse, but by the last quarter of the 20th century, new artforms, eg, large installations & ephemeral works that require fabrication, have spawned new forms of collaborative practices.

98S35162 / ISA / 1998 / 12403

Maroy, Christian & Doray, Pierre (Unité sociologique U Catholique Louvain, B-1348 Louvain-la-Neuve Belgium [tel/fax: 32010-47-3924/4603; e-mail: maroy@usoc.ucl.ac.be]), **The Construction of Relationships between Economy and Education: Part-Time Training in Belgium and Quebec.**

¶ Examines processes of rapprochement between the educational system, particularly vocational training institutions, & the economic field in French communities of Belgium & Quebec. Focus is on part-time training courses (sandwich courses) or programs shared by the schools & companies that host young people during practical training. The nature of the work carried out is described, noting the symbolic & organizational adjustments required to effect such collaboration. Also analyzed are levels of social action, ie, the political, organizational, & operational, with attention to the interrelationship of levels, identifying how each level produces rules & modalities for liaison between the two worlds. Considered is whether school/business relations are realized around the same symbolic stakes & set in motion the same types of organizational adjustments.

98S35163 / ISA / 1998 / 12404

Marques, Ana Paula & Veiga, Carlos Veloso (Dept Sociology & Anthropology U Minho, PR-4700 Braga Portugal [tel/fax: 053-676-038/966; e-mail: amarques@ci.uminho.pt]), **Padrões de participação organizacional a partir de uma realidade comunitária urbana** (Patterns of Organizational Participation from an Urban Com-

munity Reality). (POR)

¶ Seeks to identify the characteristics & specific processes of families in urban communities to define patterns of organizational participation, ie, in cultural, recreative, religious, political, & syndical organizations. To better understand patterns of participation, a priori dimensions pertinent in this definition are analyzed. A group of material, organizational, & symbolic characteristics of the families was mobilized to construct relevant indicators to distinguish participation patterns. Family structure, relation with work, mobility flux, resources, & surrounding perceptions are some of the factors analyzed.

98S35164 / ISA / 1998 / 12405

Marrero Rodriguez, J. Rosa (Dept Sociologia U Laguna, E-38071 Tenerife Canary Islands Spain (tel/fax: 34-22-317177/253742; e-mail: jrmarrero@ull.es)), **Empresas y núcleos turísticos canarios: sus efectos sobre el territorio, la calidad del servicio y la organización del trabajo** (Companies and Tourist Kernels: Effects on the Territory, the Quality of Service and the Organization of the Work in the Canary Islands). (SPA)

¶ Draws on an investigation of the labor markets in the south of Grand Canary Island, Spain, in the early 1990s to analyze some characteristics of "tourist kernels," which emerged in the 1960s in light of new European leisure demands, state support, & the initiative of the local middle class. Tourist operators' activities & contributions are described. Many of these kernels are open year-round & provide an important source of income. The constant increase in demand until the mid-1980s, & the growing imbalance between supply & demand in the 1990s, are chronicled, highlighting the strategies of the tourist companies & their effects on the territory, the quality of service, the organization of work, & the types of mutual relationships maintained. Companies have opted for a tourism based on quantity, for maintaining competitive relationships, & for confronting demand & seeking improved benefits through construction increases. This has led to an extensive expansion of activity & a certain carelessness about quality, the workforce, & the environment. On the other hand, supply & demand are not growing at the same pace, provoking a crisis in the late 1980s, & a subsequent internal reorganization of work & an increase of labor flexibilities; impacts on service quality & the environment are discussed.

98S35165 / ISA / 1998 / 12406

Marroquin, Carlos (U Leipzig, D-04109 Federal Republic Germany (tel/fax: 0341-9737163/9737169)), **Les Positions théoriques sur le mythe dans L'Année sociologique (première série)** (Theoretical Positions on Myth in the *Année Sociologique* (First Series)). (FRE)

¶ The first detailed statement by Marcel Mauss concerning a theory of myth dates from 1903 & was published in Volume 6 of the journal *L'Année sociologique*. According to Mauss & Hubert, it was, above all, important to set the preconditions for a sociological theory of myth. Among those conditions, they considered it necessary to (1) demonstrate that myth is neither fiction nor just a literary category, but a social phenomenon; (2) outline the mental mechanisms that transfer collective imaginations into myth; & (3) define the very religious element within mythology. In his introduction to Chantepie de la Saussaye's *Manuel d'histoire des religions* (1904), Hubert broadened the sociological perspective of the *Année sociologique* by stressing the utilitarian character of the belief in myth. How the next generation of French sociologists further developed this theoretical & methodological approach into modern 20th-century interpretation of mythology is addressed.

98S35166 / ISA / 1998 / 12407

Marry, Catherine & Gadea, Charles (IRESCO Centre national recherche scientifique, 59-61 rue Pouchet F-75017 Paris France (tel/fax: 33-01-40-25-10-25/12-97)), **French title not provided** (Women's Career and Family Life in Technical Work: Engineer Women in France). (FRE)

¶ Survey data from the Conseil national des ingénieurs & scientifiques de France are used to (1) assess women's place in the engineering profession & the main features of their education, employment, & career; & (2) situate current generations in comparison with the pioneers of the 1960s. Career inequalities are examined in terms of income level (their evolution according to age), job task, & hierarchical level of women & men. A discussion of explanatory factors addresses the effects of family & conjugal roles. With this aim, data about professional & family life of men & women in this elite position are compared to check François de Singly's hypothesis maintaining that marriage & motherhood hinder women in their career but favor men.

98S35167 / ISA / 1998 / 12408

Marsden, Terry (U Wales, Cardiff CF1 3NS), **Spacing the Rural Sociology of Food: Re-Conceptualising the Provision of Foods.**

¶ Explores ways of incorporating rural space & conceptions of rural space into the rural sociology of food. Thus far, food studies have paid too little attention to the spatially embedded nature of food production & consumption. In improving the knowledge base of global changes in food production & consumption, & in incorporating a more sociological approach to food, it is argued that spatial dimensions are critical. A framework is outlined for this incorporation, while it is argued that the rural sociology of food is still largely in its infancy. Despite this slow progress, it is increasingly clear that the social significance of food in everyday life & social practice is more profound than ever. Reconceptualization becomes therefore a necessity.

98S35168 / ISA / 1998 / 12409

Marshak, Arkadiy Lvovich & Kvachova, Polina Ivanovna (Moscow State Social U, Russia 107150 (tel/fax: 7-095-169-78-60/81-32)), **The Cultural Status of an Individual in a Civil Society.**

¶ Argues that, with habitual cultural images losing their meanings in postsocialist systems, civil society formation plays a key role in the changing cultural status of individuals. Drawing on 1997 research in the Russian Federation, it is shown that economic & political standards in cultural development correlate with the development of certain structures of civil society. The leading role is given to the factor of "getting civilized" (Ferguson), & economic performance provides advantages in market relations between an individual & society. Political factors & the legal & juridical system also play parts. This structure reflects sociological aspects of the civil culture in Russia & determines the cultural status of an individual.

98S35169 / ISA / 1998 / 12410

Marshall, Barbara L. (Trent U, Peterborough Ontario K9J 7B8 (tel/fax: 705-748-1334/1630; e-mail: bmarshall@trentu.ca)), **Re-framing Identity Politics: The Case of "Gender".**

¶ Argues that, like progressive political movements, neoconservatives have been active in identity politics. This is explored in the Canadian context through debates about the legitimacy of gender as a theoretical & political category. In particular, discourses of political correctness & economic restructuring are examined to demonstrate the erosion of grounds on which rights can be claimed on behalf of women (or any other group designated as special interest counterposed to some assumed general interest). It is contended that these discourses reconfigure connections between identity, difference, & rights & reflect both the ontological & political crises of categorical identities, of which gender might be taken as an exemplary case. More attention should be paid to practices that create & sustain these categories, even as they deny them political saliency. Not acknowledging gender as a politically constituted identity, because, as a theoretical category, it is unstable & untenable, risks missing its significance as a social, political, & economic marker.

98S35170 / ISA / 1998 / 12411

Marshall, Ronald & Tang, Anthony (Dept Behavioral Science U West Indies, Saint Augustine Trinidad (tel/fax: 809-662-2002)), **The Correspondence between Alcoholism and Mental Health Problems: What Are the Implications for Productivity.**

¶ Increased awareness of drinking problems in Trinidad & Tobago & the wider world & its increased misuse in the workplace have brought about increased pressures to institute employee assistance programs. However, many of these programs do not take into consideration that those who drink excessively may be mentally unstable, an aspect reflected in their inability to deal with social problems. Further, in this instance, officials may be using the wrong measurement to assess a unique phenomenon; & productivity in such cases remains the same or becomes an unattainable goal. Analysis of data from 300 firms throughout Trinidad & Tobago may show consistency of the alcoholic scale with the mental illness scale, & that mental health problems might be responsible for employee assistance program failure. Findings' potential use in predicting alcohol-related & mental health problems in Trinidad & Tobago is considered.

Martel, Angéline (Télé-Université U Québec, Montreal H2L 4L5 (tel/fax: 514-522-3540/3608; e-mail: amartel@teluq.quebec.ca)), **Plurilingualism and Pluriculturalism as Loci of Scientific Development.**

¶ Examines whether, in a dialectic of diversity & homogenizing forces, pluricultural sociolinguistics is possible, ie, in knowledge creation & distribution & in community counseling. The issue is examined through two international scientific experiences: (1) the Universal Declaration of Linguistic Rights movement as an attempt to provide global measures for linguistic freedom, & (2) scientific publishing in *La Francophonie* with a common language but numerous cultural contexts.

98S35173 / ISA / 1998 / 12414

Martel, Angéline (Télé-Université U Québec, Montreal H2L 4L5 (tel/fax: 514-522-3540/3608; e-mail: amartel@teluq.quebec.ca)), **French as Language of Science and Modernisation. Whose Science? Whose Culture? Whose Language?**

¶ Reviews individual & collective issues in the process of policy drafting for French as a language of science in Quebec, France, Belgium, & Switzerland. Presented is a case study of policies & resources put in place by Quebec since 1993. Through an analysis of some subsequent salient events & practices, how the issue of collective & individual advancement interplay in concrete situations is examined. Particular attention is given to the notion of perspectives, ie, those of scientists, institutions, & states.

98S35174 / ISA / 1998 / 12415

Martel, Joane (Dept Sociology U Alberta, Edmonton T6G 2H4 (tel/fax: 403-492-3547/7196; e-mail: joane.martel@ualberta.ca)), **Segregating Women in Canadian Prisons: Revisiting the Practice in Light of the Women-Centered Correctional Philosophy.**

¶ Since 1990, the Canadian government has promoted, in all prisons for women, a correctional philosophy based on women-centered principles emphasizing empowerment, responsible choices, respect, & dignity. Explored here is the extent to which segregation-isolating inmates from the general prison population for punitive or protective purposes-is congruent with such principles. Semidirected interviews with segregated women in two provincial & three federal prisons, in two provinces, reveal that several segregated women suffer most from the loss of contact-sometimes permanent-with their respective support networks. Segregation is also perceived by many women as a welcomed time-out period to recover inner balance. This finding is thought provoking, as it raises the possibility of investigating in greater depth the apparent contradiction between marginalization reinforcement through segregation & its use by women as a form of resistance to the oppressive nature of incarceration; ie, does segregation hinder the empowerment of women while conversely allowing them momentary control over their imprisoned condition?

98S35175 / ISA / 1998 / 12416

Martel, Laurent & Légaré, Jacques (Statistics Canada, Ottawa Ontario K1A 0T6 (tel/fax: 613-951-3418/2848; e-mail: martlau@statcan.ca)), **L'Aide reçue et l'aide fournie par les personnes âgées selon leur entourage: le cas du Québec** (Support Received and Support Provided by the Elderly according to Their Informal Network: The Case of Quebec). (FRE)

¶ Describes the direction & type of support received & provided by the elderly in Quebec, drawing on data from the 1991 Autonomy & Independence Survey (N = 1,702 individuals, ages 65+, living in private households). Descriptive & multivariate analyses show that 66% received support when ages 65+. The need for support is not related here to disability

or handicaps; thus, 66+% of elderly provide support to others, proving that they are an important actor in their own informal support network. Old people living alone or having a small kinship receive less support than others. Results of the logistic regression show that the existence of an important kinship, & not only living arrangements, is an important predictor of the probability to receive support when aged.

Martens, Lydia (Dept Applied Social Science U Stirling, FK9 4LA Scotland (tel/fax: 1786-467984/467689; e-mail: l.d.martens@stirling.ac.uk)), **Last Suppers: On Menus and Meals Eaten Out in Britain.**

¶ Reviews arguments on food consumption trends in contemporary Western societies, focusing on whether food tastes & meal contexts are becoming more varied or more uniform. Findings are presented on the very last main meal eaten out by diners, based on data obtained via in-depth interviews & a survey of 1,001 people in three British cities concerning food consumption outside the home. Discussion addresses what was eaten during last suppers, identifying patterns in main courses eaten & course structure & composition. Comments are also offered on accompanying drinks. The importance of the mode of meal provision (whether the meal was provided commercially, by family, or by friends) & the meal context is examined. Findings shed light on the relevance of neophilia & conservatism & indulgence & control as tendencies shaping food tastes. The relationship between variety, consumer reception, & the organization of provision, & on the relationship between public & domestic cooking are also considered.

98S35177 / ISA / 1998 / 12418

Martens, Lydia (Dept Applied Social Science U Stirling, FK9 4LA Scotland (tel/fax: 1786-467984-467689; e-mail: l.d.martens@stirling.ac.uk)), **Dining Out in Domestic Settings.**

¶ Rudiments of a sociology of eating & dining at the homes of friends & extended family, under a system of reciprocity, are developed, drawing on findings from a study involving in-depth interviews & a survey of 1,001 people in three British cities concerning food consumption outside the home. Discussion addresses the frequency of entertaining & being entertained; characteristics of guests & the meal event; degree of satisfaction expressed with aspects of meals; the notion of proper entertaining & to what extent this model of entertaining is followed in practice, & organization of the work of hospitality & perceptions on reciprocity. Theoretical & conceptual issues regarding the social relations of hospitality work are considered, including the voluntary agreement to work in "free" time, obligations to reciprocate, & the comparison between different modes of provision. Issues such as social distance & proximity, cultural pluralism, pleasure, & sociability are also noted.

98S35178 / ISA / 1998 / 12419

Martin, Randy (200 Willoughby Ave Brooklyn NY 11205), **Power Talks: Listening for the Public on the Cuban Stage.**

¶ Cuban arts provide an occasion to reflect on the direction of society. With theater as a site where publics gather, this reflexive, self-critical process is significantly amplified. Under a revised cultural policy, Cuban theater is establishing its own version of a mixed economy & a hybrid global/local identity. Government subsidies cover but a portion of costs, & touring abroad provides needed foreign currency. Theater is especially popular among youth, who treat the critical & transgressive performances as central to their own political culture; & as such, theater is a useful indicator of what the meaning of "transition" is in Cuba for those who have come of age under dramatically different circumstances than the ones into which they were born. Two recent productions, viewed at the Oct 1997 Havana Theater Festival, explore with particular acuity the implications of the public in questions of political power. One is a Caribbeanized version of Shakespeare's *Tempest*, & the other a sexually charged rendering of Camus's *Caligula*. Each production plays with the relation between an attribution of power to a leader & the insinuation of the public in a certain culture of power. These productions are analyzed for the public dialogue they presuppose & the current conjuncture in political culture that they make legible on the stage. Theater, in this regard, is a key mediating link between participation in everyday cultural affairs & more formal circuits of power.

98S35179 / ISA / 1998 / 12420

Martínez Quintana, Violante (U Nacional Educación Distancia, E-28040 Madrid Spain (tel/fax: 91-398-7025/7653; e-mail: vmartin@sr.uned.es)), **Educación, formación profesional y**

formación continua: alternativas para el empleo en el Mercado Europeo (Education, Professional Formation and Continuing Education: Alternatives for Employment in the European Market). (SPA)

¶ One principal problem of society is unemployment, which has grown since the 1980s as a consequence of economic reconstruction & technological innovation. Group action has developed based on concern with unemployment. In a society of technological consumers, marginal sectors have become an object of analysis & reflection. Specifically manufactured for the European market is the White Book of Education & Formation: "To Teach & to Learn. Towards a Society of Knowledge," which addresses the roles that education & formation represent for Europe in a changing economic context. Related to this are the impacts of information on society & of globalization on employment & education. The mechanisms of preparation for today's world are analyzed, as well as the institutional answers of various countries.

98S35180 / ISA / 1998 / 12421

Martinez Quintana, Violante (U Nacional Educación Distancia, E-28040 Madrid Spain [tel/fax: 91-398-7025/7653; e-mail: vmartin@sr.uned.es]), **El trabajo de la mujer y su futuro** (Women's Work and Its Future). (SPA)

¶ The development of a feminine workforce is one of the most important events of this century, & it has essentially changed women's way of life & behavior, which will carry on into the 21st century with different values, rules, & customs, without women losing traditional roles. Women have always worked in the private sphere in female tasks; the difference is their massive incorporation in the paid labor market, in addition to the daily routines of taking care of children, the sick, the elderly, & housework. Analyzed in this light are reasons for women's absenteeism at work, going back to work, recycling of jobs, taking part-time jobs, & other alternatives for working mothers with children. Thus, while advances have been made in work conditions, training programs, etc., it is shown that female employment conditions & perspectives for the future are subject to the rhythms & cycles that an advanced technological society imposes.

Martinez, Gilardo (Escuela Sociología U Zulía, Maracaibo Venezuela [tel: 58-61-222058; e-mail: gilmar@ven.net]), **Los estudios de futuro y la teoría sociológica: una relación simbiótica?** (Futures Studies and Sociological Theory: A Symbiotic Relationship?). (SPA)

¶ Recent technological changes are not only transforming societies & people, but changing how they think about themselves. Focus here is on (1) what sociological theory is confronting to understand the new kinds of societies & social relationships emerging through the Internet & cyberspace; & (2) how futures studies & reflections about the future are something that sociology must incorporate to understand the radical acceleration of changes produced by communication & information technologies. Here are some questions that sociologists must answer to avoid Jean Baudrillard's reconversion of history: (A) Does society exist in cyberspace? (B) If so, what kind of social classes are there? (C) What sociological basic concepts should be used to explain this society—perhaps new ones?

98S35182 / ISA / 1998 / 12423

Martiniello, Marco (Faculté droit U Liège, B-4000 Belgium [tel/fax: 32-4-366-30-40/45-57; e-mail: M.Martiniello@ulg.ac.be]), **What's Transnational in Transnational Communities?**

¶ Examines to what extent new migration patterns imply new forms of migrant communities, often called transnational, & to what extent new forms of belongings & membership emerge that are referred to in terms of postnationalism. The argument is that new communication technologies (eg, the Internet), & new facilities to travel (eg, cheap flights) have an impact on the perception both of national borders & geographical distance between individuals & groups. This goes for migrants as well as for nonmigrants. In other words, migrants, groups of migrants, diasporas, etc., around the world can maintain social & economic networks more easily than a few decades ago. Their scope of action & social relations are clearly transnational; they constitute transnational nonterritorial communities. In terms of belonging, identification, & membership, however, they are not necessarily characterized by a postnational or transnational identity. These transnational communities may often be cemented by ethnic ties that go deeper than the formal membership of their members in the country in which they live. Thus, while transnational communities are deterritorialized, they nevertheless reproduce a traditional ethnic identity in a global world.

98S35183 / ISA / 1998 / 12424

Martinovski, Bilyana (Dept Linguistics U Gothenburg, S-41124 Sweden [tel: 46-31-7734627; e-mail: biljana@ling.gu.se]), **Interactive Mechanisms in Courtrooms.**

¶ A comparison of speech communication features & mechanisms characteristic of courtroom settings in Sweden & Bulgaria hypothesizes that differences in communicative patterns may depend not only on the type of violation of law or the social characteristics & roles of the main actors, but also on the national & linguistic cultures they represent. Both countries hold to a European inquisitorial system based on Roman Law, while the role of the authority & the level of democracy differ. After outlining a systematic approach to courtroom discourse analysis formulated as active-based communication analysis, it is combined with the concept of multiparty interaction using a method of feature co-occurrences analysis. Empirical data are drawn from audiorecordings of Swedish trials & videorecordings of Bulgarian trials. Special attention is paid to differences in expressions of power & emotional attitudes with respect to the interaction between communicative acts & turn-taking, as well as to the importance of analyzing nonverbal information.

98S35184 / ISA / 1998 / 12425

Martins, Angela Maria (Fundação Carlos Chagas, av Francisco Moratto 1565 05513-900 São Paulo SP Brazil [tel/fax: 55-011-813-45-11/813-1059; e-mail: amartins@fcc.org.br]), **Conocimiento, educación y directrices internacionales: breve discusión** (Knowledge, Education and International Directorships: A Brief Discussion). (SPA)

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Themes surrounding international educational reforms developed at the international level are discussed, focusing on arguments that politically & economically sustain a new paradigm of knowledge. Such a paradigm has been considered the core of educational policies recommended by international agencies. Historical & cultural issues that establish the bases for international institutions' recommendations are examined.

98S35185 / ISA / 1998 / 12426

Martins, Paulo Roberto (Instut Technological Research, R. Pinheiros 1285-ap 7 Caixa Postal 41 682 CEP 05422-970 São Paulo Brazil [tel/fax: 5511-212-9954; e-mail: marpaulo@ruralsp.com.br]), **Ecological Reconstruction of the Industrial Society.**

¶ Explores the construction of an ecological-industrial policy that could become a public instrument to achieve a sustainable society. Relations between the environment, industrial policy, & development are discussed, along with the relationship between environment & competitiveness, addressing a related environment policy. Environmental issues are related to technological issues in terms of opportunities. Sustainable society & its importance to humanity are considered. Ecological restructuring of industrial society by means of an ecological-industrial policy is examined in the context of the environment relationship. A synthesis of means to constructing a sustainable society is suggested.

98S35186 / ISA / 1998 / 12427

Martz, John D. (Pennsylvania State U, University Park 16802 [tel/fax: 814-865-7515/863-8979]), **Party Elites and Democratization: Contemporary Latin America.**

¶ Discusses the role of political parties in democratization processes in Latin America, with focus on the views & actions of party elites. Analysis is based on a comparison of the experience of party elites in the three Gran Colombian nations: Venezuela, Colombia, & Ecuador. After a brief historical overview tracing the genesis & birth of modern political systems, attention is directed at the major actors within each of the three party systems. Factors addressed include: (1) the structure of leadership within the parties; (2) the exercise of authority by the respective elites; & (3) approaches to electoral politics & the quest for national power.

98S35187 / ISA / 1998 / 12428

Maruyama, Chieko (Ochanomizu U, 2-1-1 Otsuka Bunkyo-ku Tokyo Japan [tel/fax: 81-3-5351-4937/4938; e-mail: KN793142@copernicus.a.jp]), **Emotion and the Postmodern Situation.**

¶ Discusses the degree of recognition of emotion in the contemporary informatization & computerization society & its potential role in sociological theory of postmodernity. It is difficult, however, to acknowledge emotion, especially shame, because denial of interdependence & shame is

m

deeply institutionalized in modern societies. It is suggested here that shame & pride are two sides of the same coin: shame & pride play an equal part with solidarity & alienation in determining the degree of social integration in a society. It is argued that a relationship between individuals & between groups consists of the balance of solidarity & alienation, & that it is determined with the degree of respect for the other's emotions, which seems to derive from respect for oneself.

98S35188 / ISA / 1998 / 12429

Maruyama, Magoroh (Aomori Koritsu Daigaku, Goushizawa Yamazaki 153-4 Aomori City 030-01 Japan (tel/fax: 81-17764-1667)), **Heterogeneistique: types individuels qui sont transculturels, transtemporaux et transaspectifs** (Heterogenistics: Individual Types That Are Transcultural, Transtemporal and Transaspectual). (FRE)

¶ Challenges the common assumption that individual types are subcultural variations, drawing on case studies from the US, France, the Federal Republic of Germany, Sweden, Denmark, & Japan, & heterogram analysis, which examines transcultural individual clusters in factor spaces, using data from Belgium, Japan, Hungary, Russia, & Germany. Analysis & statistical data indicate that (1) many individual epistemological types exist in each socially or culturally pure population; (2) any individual type found in a population can be found in other populations that are sufficiently large; (3) cultural, social, or historical differences consist in the way some type becomes dominant & suppresses, influences, ignores, or utilizes other types; & (4) each individual type is expressed consistently in many aspects of life including social interaction, knowledge structure, aesthetic preferences, learning method, & choice of theories. Discussion also covers (A) individual self-heterogenization, composing individual ego identity with heterogeneous (including foreign) elements compatible with one's own epistemological type; & (B) outbreeding, ie, going out from one's own inbreeding niche to other niches for contextual experience in these niches & becoming productive there.

98S35189 / ISA / 1998 / 12430

Maruyama, Magoroh (Aomori Koritsu Daigaku, Goushizawa Yamazaki 153-4 Aomori City 030-01 Japan (fax: 81-17764-1667)), **Causal Metatypes and Heterogram Analysis**.

¶ An overview of causal metatypes applicable in sociology: (1) causality without causal loops; (2) independent-event theories; (3) change-counteracting causal loop theories; & (4) change-amplifying, pattern-generating, & heterogeneity-creating causal loop theories. The first is the most commonly used metatype in social sciences, while the third & fourth are used mainly in cybernetics. The newest development based on cybernetic metatypes is the heterogram analysis, which replaces the methods used in 1 & 2 based on the assumption of normal distribution, which holds only if fluctuations are independent of one another & random. Since social events are neither independent nor random, but interactive with causal loops, it is illogical to expect normal distribution. It is shown how old data collected on the assumption of normal distribution can be reanalyzed with heterogram analysis, which consists in placing individuals in factor spaces to examine clusters, each of which may include individuals from many social or cultural groups, ie, many individual types are transcultural, contrary to the widely held assumption that they are subcultural.

98S35190 / ISA / 1998 / 12431

Maruyama, Magoroh (Aomori Koritsu Daigaku, Goushizawa Yamazaki 153-4 Aomori City 030-01 Japan (fax: 81-17764-1667)), **Use of Individual Heterogeneity in Multicultural Management**.

¶ Experienced managers of international business know that they can discover any desired individual type beneath the surface of cultural stereotypes, as individual epistemological types are transcultural. Some tests for detecting aspects of epistemological types are reviewed, arguing that, for management purposes, the most efficient methods are behavior observation & semidirected conversation. A person's epistemological type manifests itself in all aspects of his/her life, including social activities, spatial organization, aesthetic preferences, etc, which can be observed. For semidirected conversation, it is more important to ask "Why?" than "What?"; eg, in the same stimulus picture, some may see opposition, but others may see mutual support, interpenetration, or flow. When the epistemological types of employees are identified, a way to combine different types for mutual benefit must be devised. Each individual should be given opportunities to be combined in many different ways with other types. After such an experience, they eventually form informal networks for interactive creativity.

98S35191 / ISA / 1998 / 12432

Maruyama, Magoroh (Aomori Koritsu Daigaku, Goushizawa Yamazaki 153-4 Aomori City 030-01 Japan (tel/fax: 81-17764-1667)), **Limitations of the Concept of Homogeneity in Sociology**.

¶ The fallacy of symbolic interactionism in sociology, constructionism in psychology, & functionalism in anthropology was that they ended up with ingroup homogeneity as well as distanciation & the impossibility of communication between groups, despite the fact that they rebelled against global universalism & homogenism. The same fallacy is perpetuated if one divides each group into subgroups. The remedy consists in recognizing that individual epistemological types are transcultural & transtemporal instead of subcultural. Any individual epistemological type found in a culture or historical period is also found in other cultures & historical periods. Differences between cultures or between historical periods manifest in the way some type becomes dominant & suppresses, influences, ignores, or utilizes other types. Parallel to the theories of ingroup homogeneity & intergroup distanciation of symbolic interactionism & constructionism were social movements in the past half century toward ethnic ingroup homogenization & political separatism. Meanwhile, individuals are increasingly designing their ego identity as the composition of heterogeneous elements that include outgroup elements compatible with their own respective epistemological types.

98S35192 / ISA / 1998 / 12433

Maruyama, Magoroh (Aomori Koritsu Daigaku, Aomori City Japan 030-01 (fax: 17764-1667)), **Knowledge Inbreeding, Failure of Interbreeding, and Remedy by Outbreeding**.

¶ During the second half of the 20th century, inbreeding of knowledge inside each disciplinary & subdisciplinary niche became rampant. Culprits for inbreeding include requirement of in-niche references in research publications & rejection of manuscripts whose contents surpass the disciplinary or subdisciplinary boundary. Remedial attempts of interdisciplinary programs resulted in either a haphazard collage or bazaar shopping for filtered ideas that fit what was inbred in the home niche of each participant. Thus interbreeding failed. A solution is outbreeding. It is necessary to leave the ingroup niche, immerse oneself in other niches, & become productive in these niches as well as in one's own. Examples of successful outbreeding by several researchers are provided. How to remove institutional obstacles to outbreeding is discussed.

98S35193 / ISA / 1998 / 12434

Maruyama, Magoroh (Aomori Koritsu Daigaku, Aomori City Japan 030-01 (tel: 17764-1667)), **Historical Origins and Functions of Bribing in Various Cultures**.

¶ Many cultures have practiced forms of mutual exchange of gifts or services, or upward flow of symbolic or material items to obtain permissions or favor. Under many circumstances, bribing had no economic value, but was part of mutual obligation, hierarchical symbolism, or functional lubrication. Because of social changes, however, the practice became distorted or anachronistic. There are also different types of gift giving. In Indonesia, a standardized amount of money is given to an official to speed up paperwork. The small sum does not stay in the pocket of the receiving official, but is distributed through the channel of paper processing & might be called an "express fee." In some Central & South American countries, however, the money given to an official for a favor goes into the pocket of the official, & the amount is large & not standardized. In Japanese history, individuals had no rights, per se, therefore everything required permission, granted for a gift. Vestiges of this practice still exist. Examples are given of how such traditional practices have become subverted to corruption with social changes.

98S35194 / ISA / 1998 / 12435

Maruyama, Magoroh (Aomori Koritsu Daigaku, Goushizawa Yamazaki 153-4 Aomori City Japan 030-01 (fax: 17764-1667)), **Revival of Contextual Experiencing**.

¶ In the second half of the 20th century, social science methodologies became increasingly mechanized. The methodological ideology of controlled variables nurtured the practice of ignoring the wider context. Formalized & standardized methods of data collection & analysis, made easier by computer programs, fostered blind faith in & reliance on the "magic box" computer, & many researchers lost direct touch with raw experience, not trusting their own contextual observation & accepting only the measurements through instruments, as well as losing the habit to use their brain to think, analyze, or interpret the data directly, or to raise questions regarding the nature & applicability of the computer programs they used. It is argued here that sharpening of one's own skills in contextual experiencing & relational analysis by brain must be revived. Recent innovative results obtained by contextual experiencing are described.

98S35195 / ISA / 1998 / 12436

Masdeu, Josep, Elboj, Carmen, Oliver, Esther & Sordé, Teresa (Center Research Adult Education U Barcelona, E-08007 Spain (tel/fax: 0034-3-403-5099/5171; e-mail: crea@d5.ub.es)), **Participation and Non-Participation in Adult Education.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

† The emergence of the information society has generated new needs in education & transformed all lifeworld spheres. An explosion in adult education participation has occurred, but it has been unequally distributed, resulting in a social dualization between culturally privileged social groups & those excluded & marginalized. Policy making is oriented to the promotion of participation among those who already participate, favoring social stereotypes & increasing the exclusion of those who are already excluded. A qualitative methodology demonstrates that adult education must be designed from the perspective of participants' own interests & motivations. Further, adult education must try to increase participation of nontraditional groups by integrating their own voice & taking into account their cultural rights.

98S35196 / ISA / 1998 / 12437

Masini, Eleonora Barbieri (Faculty Social Sciences Gregorian U, I-00197 Rome Italy (tel/fax: 39-6-8072529; e-mail: fmasini@pelagus.it)), **Futures Studies and Sociocybernetics.**

† Sociocybernetics is of interest to futures studies as second-order cybernetics, given the importance in the latter of the subject-observer interaction. Futures studies has recently expressed an affinity to value sensitivity in terms of research &, particularly, of variables indicators of change leading to possible alternative futures. Possible alternatives are many but slowly become fewer in the search for probability, feasibility, & desirability. Thus, there is a growing sense of relatedness between subject matter of future study & observer values & choices. A second element of relatedness between sociocybernetics & futures studies is the importance of the growing complexity of society & related sciences.

98S35197 / ISA / 1998 / 12438

Masino, Giovanni, Maggi, Bruno & de Terssac, Gilbert (Dipt discipline economico-aziendale U Bologna, I-40126 Italy (tel/fax: 39-51-258095/237265; e-mail: g.masino@mbbox.queen.it)), **Decision Levels, Autonomy and Discretion: Changes in Work Processes.**

† Explores the concept of autonomy & the characterization of decision domains, making analytical distinctions, supported by empirical evidence. Autonomy is defined as "self-regulation" vs the concept of heteronomy as "heteroregulation." From this starting point, discretion & autonomy are distinguished, where the former is to be understood as a possibility of choice in a regulated domain. The analytical added value of these conceptual distinctions should be related to the widespread use of those terms as synonymous, in those approaches treating discretion as an always positive aspect of work. These distinctions are useful for the analysis of work processes regulation, where the exercise of discretion produces a continuous negotiation between control & execution levels, generating new, local, transitory, & complementary rules. Further, the development of competencies is also crucial for the regulation process. Regulation of work is viewed as the ever-changing order given to a chain of decisions, metadecisions, actions, & decision premises, generating a variable set of decisional constraints—limits to future regulation & outcome of a regulation process—which characterize the decision domains of actors, defining different situations of autonomy/heteronomy, related to different implied decision levels. Research concerning work organization changes—from highly automated work situations to computer-aided design activities—provides empirical support for the analytical framework.

98S35198 / ISA / 1998 / 12439

Mason, Jan, Falloon, Jan & Marsden, Andrew (U Western Sydney, Macarthur Campbelltown 2560 Australia (tel/fax: 61-2-977-29255/30019; e-mail: Jan.Mason@uws.edu.au)), **Exploring Some Issues around Children and Young People Contributing to Policy Making Forums.**

† Considers some of the issues for researchers assisting young people to contribute their perspectives to knowledge for policy making. Strategies for researching with children & young people in a collaborative, empowering way are explored, drawing on two qualitative studies designed to gain young perspectives on child abuse & gambling. Issues that emerged in developing strategies included ways of accessing children & young people, roles of adults as gatekeepers & as interviewers, the participation

consent dilemma, & challenges to facilitating collaborative research relationships with young people. Parallels can be made between young people & other structurally disadvantaged groups for whom research has been an important tool in assisting them to have a voice. However, analysis reveals difficulties, inherent in the status of childhood, when applying standpoint theory for purposes of facilitating their contributions to policy-making forums.

98S35199 / ISA / 1998 / 12440

Massa, Ilmo (Dept Social Policy U Helsinki, SF-00014 Finland (e-mail: MASSA@valt.helsinki.fi)), **The Risk Economy: Conceptualizing Ecological Modernization in a Global Risk Society.**

† The problem of reconciling ecology & the economy reflects the divisions & inconsistencies characteristic of environmental economics as a field, as illustrated via Werner Sombart's 1920s idealization of the distinction between economics of control, organization, & interpretation. It is suggested that only the economics of interpretation can provide sufficiently deep & historically grounded knowledge of the nature of the economy in relation to the biosphere, leading to new concepts & theoretical frameworks, eg, the model of risk economy. It is in this context that environmental & social policies should be developed to halt the destruction of nature, a factor that permeates economic development.

98S35200 / ISA / 1998 / 12441

Massad, Rodrigo Fraga (Dept Sociologia U Brasilia, 70910-900 DF Brazil (tel/fax: 061-3482389/3433663)), **Ethics and Rupture of Control in Brazilian Soccer.**

† Focuses on soccer in Brazil, examining sport socialization & related moral & ethical formation, the influence of Brazilian culture & stereotypes, the loss of control by players & technicians, & the perceived legitimacy of some transgressors' acts. Several premises are outlined before formulating three hypotheses related to (1) the existing relationship among cultural factors, (2) taking advantage of some rules, & (3) the practice of a sport governed by norms & rigid rules. Sometimes, to achieve goals, soccer players use certain strategies—some of them legitimated by Brazilian culture—that are in contradiction with other codes of behavior (eg, religious). However, all of these elements are part of Brazilian culture, which features changes in players & fans that result in the paradoxical legitimacy of some acts of transgression.

98S35201 / ISA / 1998 / 12442

Mateo Diaz, Mercedes Maria (U Catholique Louvain, B-1348 Louvain-la-Neuve Belgium (tel/fax: 010-45-07-85/47-34-90; e-mail: m.mateodiaz@student.pol.ucl.ac.be)), **Mouvements sociaux et classes sociales. Le Mouvement de femmes et les nouvelles formes d'action politique** (Social Movements and Social Classes. The Women's Movement and New Forms of Political Action). (FRE)

† The women's movement has changed how modernity is constructed in terms of relationships between men & women in both the public & private spheres. Attention is given here to new forms of social & political action with regard to women's movements, looking at the construction of new identities & the change in actors' strategies toward forms that could be labeled informal. The present is described as a transitory period leading to transformations in political & participative usages. Five prospective levels are identified: the construction of new identities, citizenship & the relationships between the public & private, mechanisms of traditional political participation & alternative forms of participation, the exercise of democracy & the evolution of the political system, & political culture & the potential transformations within them. It is argued that these levels are articulated across three axes of analysis: the relationships entertained between the democratic system & actors, new social movements, & the concept of political culture.

98S35202 / ISA / 1998 / 12443

Matsubara, Toyohiko (Ritsumeikan U, Kyoto 603 Japan), **Transnational Agribusiness Corporations in Canada's Grain Industry: Its Growing Influence under the Canada-U.S. Free Trade Agreement.**

† Attempts to show the growing influence of transnational agribusiness corporations in Canada's grain industry since 1989 & to examine implications of their behavior & motivation. It is also contended that transnational integration of the grain industry between Canada & the US has increased the pressure to dismantle the monopolistic power of the Canadian Wheat Board in grain marketing. The mid-1980s saw considerable influence of transnational agribusiness corporations in Canada's grain industry, mainly in the handling, marketing, & processing sector. The Canadian Wheat Board had been the sole marketing organization of

m

wheat, barley, & oats in domestic & international markets, but the grain industry in Canada has since changed rapidly. Since the Canada-US Free Trade Agreement came into effect Jan 1989, transnational agribusiness corporations have taken over Canadian companies & participated in enterprises evolving the grain industry. As a result, transnational business corporations dominate the grain-processing sector. After first examining the theoretical framework for analyzing the corporations' movement & transnational integration of grain industry, their growing influence in Canada's grain industry is shown. In conclusion, implications of transnational business corporations' activity are considered in relation with the Canada-US Free Trade Agreement & the growing pressure to dismantle the Canadian Wheat Board.

Matthews, David Ralph & Kidd, Lisa Ann (Dept Anthropology & Sociology U British Columbia, Vancouver V6T 1Z1 [tel/fax: 604-822-4346/990-6656; e-mail: ralphm@unix.ubc.ca]), **Environmental Risk and Trust in Relation to Perceptions of Health Risk from Environmental Degradation.**

¶ Examines the relationship between risk & trust in the context of the extent to which individuals associate environmental degradation with health risk. Data from the Ecowsie Social Survey (N = 1,652 residents of the Hamilton Harbor watershed area of Lake Ontario [Ontario]) indicate, contrary to most theory dealing with risk under conditions of reflexivity in postmodern society, relatively weak relationships between perceptions of environmental risk & declining trust in scientific experts or governmental agencies. This may be attributed to the widespread trust in the management qualities of government in Canadian society. However, further analysis shows that the level of distrust in local scientific experts & government agencies is strongly correlated with opinions concerning health risks from environmental pollution. This relationship remains strongly significant even after controlling for the effects of sociodemographic factors, personal knowledge bases, & dimensions of environmental commitment. It is concluded that perceptions of health risk, rather than environmental risk generally, are critically important in influencing the extent to which there is distrust in governmental agencies & scientific experts. Further, this finding raises important conceptual issues about how to define & measure the relationship between risk & trust in a community/society.

98S35204 / ISA / 1998 / 12445

Matulionis, Arvydas Virgilijus (Lithuanian Instit Philosophy & Sociology, Saltonisklu 58 Vilnius [tel/fax: 22-751-898]), **Attitude of Officials towards Global Relations during Transformation Period (Lithuania's Example).**

¶ During the transformation period, politicians & officials of different ranks unanimously declared the role of global relations both to the state & the institution they represent. This attitude, however, is accepted on the cognitive level. Involved in real projects & programs, it is not unusual for officials to seek benefits not for the state or the institution, but for themselves, hence the paradoxical rejection of different country & international organizational support. Thus, there exists an attitude of "double thinking," when one thing is being done & another is being thought of, formed in developing the so-called socialist society.

98S35205 / ISA / 1998 / 12446

Maurais, Jacques (Conseil langue française Québec, 800 Place d'Youville 13 etage Quebec G1R 3P4 [tel/fax: 418-644-9938/7654; e-mail: j.maurais@clf.gouv.qc.ca]), **La Politique linguistique des Pays baltes: un point de vue québécois** (Language Policy in the Baltic States: The Quebecois Perspective). (FRE)

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ In an analysis of the language policies of the Baltic states, from a Canadian perspective, initial focus is on the process that led to passing language bills; in Canada decisions were made on the basis of large sociolinguistic surveys, but this was not the case in the Baltic states. Also examined is the concept of *aménagement linguistique*, which refers to both planning & management of language. *Aménagement* can be implemented according to a flexible action plan directing the social evolution of the policy, while demanding adhesion & participation from the general public. This conception is in contrast to the Baltic conception of language policy, which is more akin to the Catalan concept of normalization, implying that the actual linguistic situation is abnormal & should be brought back to normality. Some conclusions pertaining to the general

theory of language planning are drawn from the Quebec & Baltic experiences; emphasis is on the role of the time factor in language planning. The issue of linguistic human rights is briefly discussed in conclusion.

98S35206 / ISA / 1998 / 12447

Maxera, Lylia, Díaz, Christina, Bifarello, Mónica, Nari, Patricia, Reyna, María Julia, Campostrini, Adela & Grandinetti, Rita (Facultad Ciencia Política & RR II U Nacional Rosario, 2000 Argentina [tel/fax: 41-212214/828470; e-mail: lmaxera@fcpolit.unr.edu.ar]), **Innovación política y espacio local: la gestión municipal actual de la ciudad de Rosario** (Political Innovation and Local Space: Current Municipal Management of the City of Rosario). (SPA)

¶ Explores current municipal management innovations & the relationship between administrative leaders who enact them & citizens of the city of Rosario, Argentina. These innovative transformations, which promote socioeconomic connections between citizens & public administrators, draw from diverse disciplines & theories, from various international organizational programs, & from experiments in other cities around the world. Three challenges facing Rosario's public transformation are identified: (1) the implementation of new models of organizational design in technological management; (2) the management of local production & job creation; & (3) the management of social politics. The tension & balance between local & national politics, which are sometimes oppositional, are also discussed.

98S35207 / ISA / 1998 / 12448

Maximov, Boris (Instit Sociology Russian Academy Sciences, Ismaylovskiy 14 Sankt-Petersburg 198005 [tel/fax: 812-112-67-04/316-29-29; e-mail: inso@ego.spb.su]), **Participation and Attitude to Changes.**

¶ Research on participation in & attitudes toward change is particularly relevant for societies in transformation, eg, contemporary Russia. Participation in this context is significant for effecting organizational change in the workplace & society at large. Reorganization from the top without participation from below is unlikely to be successful, or even comprehensible. It may even lead to opposition. It is important to involve as many participants as possible.

98S35208 / ISA / 1998 / 12449

Maximov, Boris (Instit Sociology Russian Academy Sciences, Leninsky Prospekt 14 198005 Saint Petersburg [tel/fax: 812-112-67-04/316-29-29; e-mail: inso@ego.spb.su]), **Significance of Special Features of Society for the Working Class and Trade Union Movement.**

¶ Explores the relevance of stable & situational features to society for working-class & trade union movement, using Russia as an example. The Russian case reveals that some special features of the society greatly modify such movements. Past features act as social inertia, creating the ideology of working-class & trade union, imputing to them inadequate functions, a lack of experience of real actions, estrangement, & social passivity. Current significant features are an economic crisis, reduction of general social activity, collapse of working-class ideology, differentiation & aggravation of worker conditions, & degradation of their complement. As a result, trade unions cannot assimilate adequate long-term functions; they are split between two subjects: protest & buffer. Workers are not distinguished as a special social group, are not aware of their prolonged interests, do not manifest solidarity, feel dread, are depressed, expect that somebody will organize them yet are estranged from the trade union, & use mainly isolated forms of protest. It is important to note that some temporary features & their consequence become constant.

98S35209 / ISA / 1998 / 12450

May, Tim P. (Dept Sociology & Social Policy U Durham, DH1 3JT England [tel/fax: 0191-374-2320/4743; e-mail: t.p.may@durham.ac.uk]), **Reflexivity: History and Practice.**

¶ The terms endogenous & referential reflexivity are defined, & calls to reflexivity in research in several traditions are examined: the works of Max Weber, Alfred Schütz, & Alvin Gouldner; & ethnomethodology; standpoint feminisms; & postmodernism. It is argued that such calls tended to prioritize endogenous over referential reflexivity via an overemphasis on the process of social research compared to what is learned about social relations. As a result, interactions with the social world are not adequately understood, & both the vitality & relevance of the social sciences to the study of social life are underestimated.

98S35210 / ISA / 1998 / 12451

Mayall, Berry (Social Science Research Unit, 18 Woburn Sq London WC1H 0NS England (tel/fax: 0044-0-171-612-63-92/64-00; e-mail: B.Mayall@ioe.ac.uk)), **The Impact of UK Educational Policy on Children as Actors at School.**

¶ Uses data from two small-scale qualitative studies of children's daily lives at home & school carried out before & after major changes in UK educational policy for primary schools (1991 & 1997). Compared to earlier years, when children's own learning activity was part of the school agenda, the introduction of a fact-based national curriculum & testing at ages 7 & 11 have produced a changed educational environment. Findings suggest that children bring to their school actions knowledge contextualized through gender & ethnicity, & their ability to negotiate school days has changed in response to changes in educational ideology & practice.

Mayer, Margit (John F. Kennedy Instit Free U Berlin, D-14195 Federal Republic Germany (tel/fax: 030-848-2875/2642; e-mail: mayer@zedat.fu-berlin.de)), **Changes in Politics and Political Action in the City.**

¶ State intervention with regard to rising unemployment rates & increasing urban poverty in First World metropolises has recently shifted toward three distinct but related strategies: workfare, microenterprise, & targeted forms of sociospatial marginalization. Social movements & political action for & by the newly marginalized groups are impacted by this shift, confront funding structures that force them to develop innovative job creation & entrepreneurial practices, & are rewarded for projects connecting social with labor market goals. On the basis of recent experience of community groups & social economy initiatives in Berlin, Federal Republic of Germany, the limits & potentials of these new forms of local politics & political action appropriate to contemporary changes in urban political economy are explored.

98S35212 / ISA / 1998 / 12453

Mazalková, Ivana (Dept Sociology Charles U, XR-11636 Prague 1 Czech Republic (fax: 0042-2-24812166; e-mail: ivana.mazalkova@ff.cuni.cz)), **Labor Relations, Participation and Democracy in the Czech Industrial Enterprises.**

¶ A three-level analysis is used to show that little progress has been made in institutionalization of participation at the firm level in the Czech Republic: (1) analysis of popular participation in the purchase of vouchers to become the shareholders; (2) institutional analysis of trade unions focused on changes in their organizational structure, national tripartite negotiations, & emerging divisions in worker loyalties to their firms & unions; & (3) given the limited participatory opportunities through vouchers & national trade unions structure, analysis of how industrial relations & direct employee participation have been reshaped at the workplace. Data was obtained from expert questioning, 1996-1998; secondary analysis of qualitative research in the Czech enterprises, focused on conflict & consensus in the process of large-scale privatization in 1993/94 & on local institutions of human resources development in 1994/95; & research review. Findings on Czech industrial enterprises show that the most important aspects of the superior/subordinate relation manifest themselves in the field of payment (wages, salaries), employment security, & participation. Despite the fact that the union membership remains relatively high, firm-level participation appears weak. Workers appear preoccupied with securing employment & adequate wages.

Mazlumyanova, N. Ya. (Instit Sociology Russian Academy Science, Krehizhanovskogo 24/35 b.5 117259 Moscow (tel: 095-313-4441)), **The Problem Social Situation and Environment.**

¶ An individual problem life situation occurs during interaction between people & their vital environment (having physical, social, & symbolic components). Individual problem situations of people living in the same territory form the social problem situation of the area. A model of the individual problem life situation is offered; it has three dimensions, corresponding to its real, reflected, & desirable state. Each state includes components of the environment involved in individuals' life sphere, their personal characteristics, & characteristics of the individual-environment interaction. A model of the regional problem situation is also constructed, based on individuals' socially significant & territorial problems. A tension degree index of a problem life situation is constructed based on problem characteristics such as its significance for the individual respondent, & amount of effort necessary for resolving the problem. A special kind of social-environmental selection of respondents is elaborated, based on

ecological conditions, housing conditions, transportation accessibility, social infrastructure, & social-demographic characteristics of residents. Several surveys were conducted in different districts of Moscow, Russia, investigating means of settling individual & social problem situations.

Mazur, Allan (Public Affairs Program Syracuse U, NY 13244 (tel: 315-443-9310; e-mail: amazur@mailbox.syr.edu)), **Does Risk Perception Depend More on Characteristics of the Hazard or on Its Coverage in the Media?**

¶ Some theories of risk perception emphasize characteristics of a hazard (eg, dread, unknown character, involuntariness) as the most important determinants of fears & concerns. Other theories deemphasize hazard characteristics, emphasizing instead the malleability of risk perceptions & pointing to variability of news coverage as the major determinant of fluctuating perceptions. Changes in polling data over time are examined to assess the variability of risk perceptions about given hazards. Perceptions variability is compared to media coverage variability about given hazards. Results are used to assess the relative importance of characteristics vs media coverage in affecting risk perception.

McAll, Christopher (Dept Sociology U Montreal, Quebec H3C 3J7 (tel/fax: 514-343-6331/5722; e-mail: mcalle@ere.umontreal.ca)), **"Culture" and "Nature" in Contemporary Debates on Welfare in North America: More than Just Echoes of the Past?**

¶ In current debates on welfare in Canada & the US, welfare recipients are frequently portrayed as being either culturally deficient or naturally incapable. They also tend to be blamed not only for their own situation (worklessness) but also for everybody else's (as producers of budget deficits or, in the case of single mothers, of young male deviants). Explored here are the connections between these contemporary debates & practices in which culture & nature play a preeminent role in the attempt to explain class & gender inequalities & the main tenets of the two principal currents in late-19th & early-20th-century racism: the cultural & the biological. Also discussed are the links between current discourse & practice in relation to welfare & the positions of the early-mid-20th-century eugenics movement. This movement, which was at the heart of biological racism from the outset, had as one of its focuses the threat posed to racial purity by the marginal poor. Have current discourses, practice, & policy initiatives in North America moved on from the cultural & biological racisms of the past or are they merely reproducing them—in suitably modified language?

98S35216 / ISA / 1998 / 12457

McAll, Christopher, Tremblay, Louise, Montgomery, Catherine & Teixeira, Carl (Dept Sociology U Montreal, Quebec H3C 3J7 (tel/fax: 514-343-6331/5722; e-mail: mcalle@ere.umontreal.ca)), **Language and Territory: The Use of French and English in the Montreal Aerospace Industry.**

¶ Looks at the use of French & English among production workers, supervisors, technicians, & engineers in the Montreal, Quebec, aerospace industry. Traditionally, French speakers have been underrepresented among management & white-collar workers in the private sector. Many such workplaces have been marked, historically, by English-speaking managers communicating (or not communicating) with French-speaking production workers through bilingual intermediaries. Private sector workplaces have thus constituted central sites in which representatives of the two language communities confronted each other across a key social frontier linked to the division of production labor. Such sites have played (& still play) an important role in the overall structuring of relations between the two communities. Paradoxically, in spite of the overall decline in the proportion of English speakers in the population, & the gradual increase of French-speaking managers & white-collar workers, the use of English in the upper echelons of the private sector seems to remain fairly constant. Received knowledge suggests that this just reflects the increasing predominance of English as an international language. On the basis of the reconstructed workdays of 50 engineers, technicians, supervisors, & production workers in the aerospace industry, it is suggested that there are other factors involved—linked to language use & the control of territory in the workplaces.

98S35217 / ISA / 1998 / 12458

McAllister, Jim (Central Queensland U, Rockhampton 4702 Australia), **Transformation of the Agricultural Labour Force in Sugar Production in Australia; Class and Locality.**

m

¶ Sugar production is the most important primary industry of the Australian state of Queensland. During the manual harvesting era, growers employed large seasonal harvest labor forces & fewer permanent workers. As machines became more efficient, they replaced harvest labor until, by Dec 1977, all reference to manual cane cutters was deleted from the Sugar Industry Award. To achieve an understanding of changes in workplace relationships over time, class is used as an entry point. Farm tasks are performed by farmers & their families & by farm hands, contractors, & harvest laborers; & some growers seem to contract all their farm work. But categories of the workforce are distinct only at a conceptual level; individuals may encapsulate a number of roles—appearing to occupy contradictory class positions. Data are drawn from historical records, industry-contracted research in the Mackay area, a study of small farmers in the Bundaberg region, an industry-wide survey, & discussions with industry leaders. Changes in the labor process make new demands in terms of work schedules & disrupts social & family lives. Today, most workers live locally, in country towns, but the classes of farmers hold social preeminence, & the “reputation” that workers develop is a part of the social control expressed through a dominant local culture. This is articulated with the political process & the wage price-fixing institutions to create a new dynamic of social classes.

McBeth, Sally (Dept Anthropology U Northern Colorado, Greeley 80629 (tel/fax: 970-351-1746/3163; e-mail: sjmcbet@bentley.unco.edu)), **Essie's Story: An Exploration of the Partnership Method in Life History Research.**

¶ Discusses the methods used to collect, edit, & publish a life history of & with a Shoshone elder, Esther Burnett Horne. *Essie's Story: The Life and Legacy of a Shoshone Teacher* (1998) is coauthored by Horne & McBeth. Current ethnographic writing is seeking new ways to adequately represent the authority of informants & to explore methodologies that more accurately legitimize the expertise of the members of the culture being investigated. Collaboration with members of the culture offers a solution to the problems encountered in the attempt to generate an honest cultural representation of those one seeks to understand. Issues such as cultural representation, transition from spoken word to narrative text, interference &/or romanticization by the researcher, power-laden relationships of ethnographic writings, the intended audience, & self-reflection by both researcher & subject are examined.

98S35219 / ISA / 1998 / 12460

McCamish, Elizabeth Anne ((tel/fax: 03-58-290406/407; e-mail: annemc@shepparton.not.au)), **The Role of Community Recovery Workers in Community Development following a Disaster.**

¶ The appointment of community recovery workers in situations where a disaster has occurred is a recent feature of response & recovery plans in Australia. Confident that, in addition to the aid provided to individual survivors, communities need support to recover, the Dept of Health & Community Services appointed 11 recovery workers to work in two rural municipalities affected by the flooding of northern Victoria in Oct 1993. The documented experience & recommendations from their innovative move provide useful indicators in terms of future response & recovery efforts, as well as reason to expect that a carefully managed recovery may encourage community development to the long-term advantage of the affected community. A properly conducted recovery effort drawing on the long-term presence & support of recovery workers may actually result in developments of such social, political, & economic significance as to strengthen & enhance the community. Despite the initial & intermediate-term loss of essential services & security, the eventual outcome can be a better place to live, the result of a number of empowering programs & experiences initiated by survivors & supported by the workers in an effective recovery phase. The role of the recovery worker as a development officer is essential to this process & one that must be understood & agreed on by the community itself.

McClure, Erica (U Illinois, Urbana 61820-6990 (tel/fax: 217-333-8518/244-7620; e-mail: gato@uiuc.edu)), **Oral and Written Assyrian-English Codeswitching: Nationalism versus Assimilation.**

¶ Since the seminal article by J.-P. Blom & John J. Gumperz (1972), numerous studies of code-switching have appeared, but relatively little attention has been accorded to the differences between oral & written code-switching, the relationship between language attrition & code-switching, or the effects of the social & political context of multilingual communities on the syntax & functions of their code-switching. Here, af-

ter describing the patterns of code-switching between Assyrian, a neo-Aramaic language, & English found in US Assyrian communities, examined is the extent to which the code-switching patterns found may be accounted for by current syntactic & functional models. Also evaluated is the extent to which the opposing forces of language attrition & language loyalty extant in the US Assyrian community may account for the ways in which the code-switching patterns described here differ from those commonly described in the literature. Data were collected over nearly 2 years, primarily in a large community in the Midwest, & supplemented with data from natural conversations; Assyrian radio broadcasts, newspapers & newsmagazines; & Assyrian Internet news groups & chat rooms. Analysis indicates that (1) the patterns of oral & written code-switching differ in both form & function, & (2) both the form & function of code-switching are affected by levels of proficiency in English & Assyrian, national origin, & commitment to Assyrian nationalism. Neither the syntax nor the pragmatics of Assyrian-English code-switching appear to be adequately accounted for by current models. In large part, these findings appear to be due to the fact that this code-switching takes place against a background of conflicting forces—language attrition accompanying assimilation & mother tongue usage as a marker of nationalism.

McDaniel, Susan A. (U Alberta, Edmonton T6G 2H4 (tel/fax: 403-492-0470/7196; e-mail: cursoc@gpu.srv.ualberta.ca)), **Current Sociology: A New Era.**

¶ *Current Sociology*, an International Sociological Assoc journal since 1952, is one of the oldest & most widely cited sociology journals in the world. Until now, *Current Sociology* has published trend reports in all areas of sociology, including theories, methods, concepts, substantive research, & national & regional developments. The journal's aim has been to analyze ongoing controversies & new tendencies, sketch desirable lines of future work, & provide extensive bibliographies. On 1 Sept 1997, when McDaniel took over as Editor, *Current Sociology* was relaunched as an anonymous peer-reviewed quarterly. In addition to continuation of the popular trend reports, *Current Sociology* is soliciting shorter articles reviewing emergent & challenging issues. Its interest will be specifically in developments & controversies in fields & areas of sociological inquiry.

98S35222 / ISA / 1998 / 12463

McDaniel, Susan A. (Dept Sociology U Alberta, Edmonton T6G 2H4 (tel/fax: 403-492-0488/7196; e-mail: Susan.McDaniel@ualberta.ca)), **Shifting Self and Social Knowledge Identities among Older Unemployed Workers in Canada in the 1990s: Parallels with the Industrial Revolution.**

¶ The connecting cords that bring sweeping, large-scale transitions in economies, knowledge, power & interdependencies, hegemonies, & socioeconomic polarizations, together with identities—concepts of self in relation to changing social knowledge—are often difficult to discern sociologically. Sociohistorical studies of the Industrial Revolution have revealed the engagement of people with wide social changes in a coping/choice calculus. Similar processes are found to be operative, based on intensive interviews, among a sample of older unemployed workers in Canada in the 1990s.

McDonald, Ian (Centre Sport Development Research Roehampton Instit, London SW15 3SN England (tel/fax: 0181-392-3537/3749; e-mail: I.Mcdonald@roehampton.ac.uk)), **The Politics of Sporting Nationalism in Contemporary India: A Case Study of the Rashtriya Swayamsavek Sangh.**

¶ Explores the ideology & role of sport within the extreme Hindu nationalist movement in contemporary India, focusing on the Rashtriya Swayamsavek Sangh, a militant Hindu organization with fascistic traits. The Rashtriya Swayamsavek Sangh sits at the core of a group of Hindu nationalist organizations, known collectively as the Sangh Combine. Sport has been an important site of contestation for the Sangh Combine in promoting their distinct brand of Hindu nationalism. Data obtained via interviews with key Rashtriya Swayamsavek Sangh sport ideologues & fieldwork conducted at a Rashtriya Swayamsavek Sangh training camp are drawn on to examine Rashtriya Swayamsavek Sangh ideologies of physical culture & the body, their particular relationship to sporting practices, & their strategies for using sport as a vehicle for the promotion of Hindu nationalism. The relationship between globalization, sport, & postcolonial nationalism is theorized, highlighting the ways in which the chronic social crisis in contemporary India is fueling the development of aggressive, masculinist, & chauvinistic forms of national sporting identity.

McDonald, Lynn (Dept Sociology U Guelph, Ontario N1G 2W1 (tel/fax: 519-824-4120/837-9561)), **Florence Nightingale and Harriet Martineau: Their Collaboration and Its Results.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Draws on original manuscripts gathered from many archives in connection with the ongoing production & editing of the *Collected Works of Florence Nightingale* (forthcoming) to explore the collaboration between Nightingale & Harriet Martineau, focusing on how each influenced the other. Working against their common approach methodologically (each was a committed empiricist) were quite different positions on concurrent women's movement & religion. Martineau was an eminent author & journalist when Nightingale, yet more famous as the heroine of the Crimean War, recruited Martineau to publicize the findings of the Royal Commission on the Sanitary Condition of the Army in the East & agitate for implementation of its recommendations. The result was Martineau's *England and Her Soldiers* (1859), which used Nightingale's material, eg, printer's plates of pioneer charts, & several leading articles in the *Daily News* of London, England. Nightingale's reforms, via Martineau, were later brought to the US during the Civil War. Subsequently, the two also collaborated on promoting the nursing profession, reforms in India, & joint opposition to the Contagious Diseases Acts.

98S35226 / ISA / 1998 / 12467

McDonald, Mary G. & Birrell, Susan (Dept Physical Education/Health/Sport Studies Miami U, Oxford OH 45056 (tel/fax: 513-529-2724/5006; e-mail: mcdonamg@muohio.edu)), **Reading Sport Critically.**

¶ In theorizing the complex interactions of gender, race, class, & sexuality in sport & popular culture, many scholarly models & public discourse are limited by theoretical perspectives that focus on only one axis of power as a privileged point of analytical access. Yet, structures of dominance expressed around what are called the "power lines" of race, class, gender, & sexuality do not work independently from one another, & thus, cannot be understood in isolation from one another. Moreover, because they operate in historically specific ways with identifiable consequences, theoretically grounded methodological practices capable of capturing that complexity & specificity must be developed. Here, feminist criticism, critical race relations theories, & cultural studies are drawn on to offer strategies for understanding unique articulations of power, & thus, for reading sport critically.

98S35227 / ISA / 1998 / 12468

McElwee, Michael (Emergent Dynamics, 7 Darnby Ct Orinda CA 94563 (tel: 510-376-6064; e-mail: mmcelwee@ix.netcom.com)), **Chaos Theory and Complexity as Fountainheads for Design of an Organization Theory Building Workshop.**

¶ Discusses a workshop created to test the feasibility of grounding an organization theory project in chaos theory & recent studies of complexity. The aim of anticipated research was to demonstrate the presence in organizations of phenomena identical to that described in the literature of applicable physical sciences to express the potential for situating chaos theory in the organizational milieu in a literal rather than metaphorical way. Presented are principles that guided the design & conduct of the workshop, which succeeded far beyond expectations, as well as some of its findings.

98S35228 / ISA / 1998 / 12469

McElwee, Michael (Emergent Dynamics, 7 Darnby Ct Orinda CA 94563 (tel: 510-376-6064; e-mail: mmcelwee@ix.netcom.com)), **Chaos and Culture: Sensitive Dependence on Initial Conditions in Organizations.**

¶ Explores the literal (vs metaphorical) presence & operation of deterministic chaos, marked by the phenomenon known as sensitive dependence on initial conditions in the organizational milieu. By illuminating the presence of sensitive dependence on initial conditions in the organizational culture, the membership of organizations in the class of dynamic systems can be supported, enabling & legitimizing development of a theory or organizations as dynamic systems. This implies the presence of a gap in theories of organizations as systems &, with respect to system theory, poses serious questions as to the importance of the external environment & how the system boundary is defined. Further, leadership should be viewed as a form of systemic influence subject to many constraints but available to everyone in every organization. Using an exploratory & foundational approach with qualitative methods, a new view of organizational culture is provided, & areas for further analysis are indicated.

98S35229 / ISA / 1998 / 12470

McFadden, Patricia (Southern African Regional Instit Policy Studies, 4 Deary Ave Box MP 111 Mount Pleasant Harare Zimbabwe (tel/fax: 263-4-727875/732735; e-mail: sapes@africaonline.co.zw)), **Globalization and Its Meaning for the African Women's Movement.**

¶ Although the discourse about globalization & its impact on women has been occurring for some time, especially through the development of new fields of analysis within economics & political economy (feminist economics being the newest challenge), the impact of globalization on the thinking & activist work of African feminists has tended to remain subsumed within the South &/or poor women in general. Examined here are the political & ideological underpinnings of globalization as a macroeconomic & political system within a historical (feminist) perspective, attempting to show the links between macroeconomic policies, national policies toward women's rights (reproductive, sociopolitical, economic, & cultural), & the consequences of restructuring the public & private spaces & notion of who the African woman is or can be. Consequences for the political character & directions of the African women's movement & for feminist politics within this very contested space are addressed.

McFall, Elizabeth R. (Open U, Milton Keynes MK7 6AA Buckinghamshire England (tel/fax: 044-1908-65-4409/4488; e-mail: E.R.McFall@open.ac.uk)), **Towards an Ethnographic Study of Advertising Practice: A Review of Semiotic and Post Semiotic Methodologies in the Study of Advertising.**

¶ Semiotic & postsemiotic methodologies as they have been applied to the study of advertising are reviewed to establish the need for an alternative methodological approach. Underlying this aim is the contention that these methodologies are characterized by a tendency to frame the research agenda in terms of the ongoing debate in critical theory about the nature of the relationship between subject & object, culture & economy. In tackling this debate, both methodologies have tended to rely on specific & provisional abstractions about the nature of meaning, texts, subjects, & objects. Approaches taken to the study of advertising by Roland Barthes (1977); J. Williamson (1976); W. Leiss, S. Kline, & S. Jhally (1990); & A. Wernick (1991 (see abstract 92c01622)) are explored to make the case for a methodology targeted at practice rather than texts.

98S35231 / ISA / 1998 / 12472

McIntyre, Janet Judy (School International Studies U South Australia, Magill 5072 (tel/fax: 08-830-24-793/714; e-mail: janet.j.mcintyre@unisa.edu.au)), **Paradigm Dialogue: Tools for Ethical Thinking and Caring.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Uses short vignettes to show how, for a community development action researcher, the implications of different theoretical & methodological options have ethical implications for the different stakeholders involved. An attempt is made to explain how using tools for ethical thinking & caring tries to help practitioners interpolated across theoretical & methodological options to find their "liberative potential" (Gouldner, Alvin W., 1971). This involves discussing the tools that aid the process. We are

m

faced with social & environmental risks that can only be addressed through problem-solving approaches that address multiple variables & paradigms. The assumption that truth is dialogue leads to a realization that if global knowledge is to be a goal of research & problem solving, then the tension between local diversity & common denominators, based on common humanity & a common environment, is a valid goal. Defining what these may mean requires recognizing the tensions involved in discussing our "sharedness." People need respect for diversity & the capacity to engage in contextual learning that is not rooted in boxed categories, plus the will to strive for the creation of shared meanings. Holistic systems thinking interpolates within & across the ontological & epistemological maps of the industrialized world & the so-called more traditional economies.

98S35232 / ISA / 1998 / 12473

McKay, Deirdre (Dept Geography U British Columbia, Vancouver V6T 1Z2 (e-mail: bugan@unixg.ubc.ca)), **Marketing Imperialist Nostalgia: Tourism, Postcards and Identities on the Philippine Cordillera Central.**

¶ Beginning with images of ethnicity produced during the US colonial era & commodified as postcards, colonial tropes of ethnicity are traced to their reinscription in current popular representations of Igorots in the Philippines. The politics of primitivism & authenticity emerging from a discourse of tourism situated in particular sites & though specific technologies of sighting are explored. Using Rosaldo's (1989) notion of imperialist nostalgia, analysis reveals how these commercial images & concomitant identities are constituted, & continue to work as, negotiable signifiers in changing articulations between concepts of nation, citizen, & national patrimony. A nostalgic version of indigenous identity is authenticated by tourist consumption & becomes important for, & partially defined by, an emergent nationalist resistance to globalization in the Philippines.

98S35233 / ISA / 1998 / 12474

McKay, Ian G. (Dept History Queen's U, Kingston Ontario K7L 3A4 (tel: 613-546-4309; mac@kos.net)), **Rethinking the Early Twentieth-Century History of Canadian Sociology: Spencer, the Proletarian Autodidacts, and a "Working-Class Culture".**

¶ Most previous scholarship has focused exclusively on sociology as an academic discipline, & has consequently missed the extent to which sociological discussion was a broadly based intellectual activity in Canada well before the institutionalization of the discipline in the universities. Drawing on archival sources, utilizing historical analysis, & working from core data drawn from the writings of contemporary socialists & from the daily press, it is argued that a broader definition of sociology would change the narratives of sociology's significance in Canadian society generally. Reanalysis of the debates that circulated around the work of Herbert Spencer &, more specifically, of the use Marxists made of Spencer's ideas, suggests that preprofessional sociologists in Canada constructed frameworks of understanding that can valuably raise interpretive issues & questions for contemporary social analysis.

98S35234 / ISA / 1998 / 12475

McKendrick, John, Fielder, Anna & Bradford, Michael (Dept Social Sciences Glasgow Caledonian U, G4 0BA Scotland (tel/fax: 44-141-331-3492/3439; e-mail: j.mckendrick@gcal.ac.uk)), **Children's Space and the Geography of Childhood: Towards a Child-Centred Conceptual Geography and Praxis.**

¶ Argues that, because engagement with the environmental context of children's lives coincides with geography's (re)discovery of the child as a unit of analysis, it is timely to consider the conceptual map used by theorists to comprehend children's environments. Current practice is problematized, & it is contended that there is a need to establish a child-centered conceptual geography; this rethinking has far-reaching implications for praxis.

98S35235 / ISA / 1998 / 12476

McKeon, Kathleen Lewis, Kreps, Gary A. & Bosworth, Susan Lovegren (Coll William & Mary, Williamsburg VA 23187-8795 (tel/fax: 757-221-1284/1007; e-mail: gary@provot.wm.edu)), **Analytical Induction and Role Performance during Disaster.**

¶ The research method of analytic induction is used to study role performance during disasters, with the goal of deriving more complete & powerful descriptions & explanations of this construct. In general, analytic induction is used to make a qualitative analysis of cases using the most in-depth descriptions available. The goal of this research method is to de-

velop a universal definition & explanation of role performance. In Bosworth & Kreps's research program (1986, 1993, 1994), role performance is defined as having two general forms: conventional or improvised. Beginning with their definitions, & following Lendessmith's (1947) guidelines for analytic induction, interviews with people responding to a flood are analyzed to form a conception of improvised vs conventional role performance. Consistent with analytic induction, definition & explanation of role performance are hypothesized, & each detailed interview is examined to see if it conforms to that definition & explanation, or if the conceptualization must be altered. This strategy contributes to understanding of role performance & lays the groundwork for future studies.

98S35236 / ISA / 1998 / 12477

McMullan, John L. & Perrier, David C. (Saint Mary's U, Halifax Nova Scotia B3H 3C3 (tel/fax: 902-420-5885/5121)), **Poaching and Social Control.**

¶ Examines the myriad patterns of relationships that make up poaching in the lobster fishery in Nova Scotia. The scope of illegal fishing, place of organized poaching, & historical sense of piscatorial crime in Atlantic Canada are discussed. The social organization of poaching activities proper are explored, focusing on it as an activity rationally geared to confronting technical problems of social order, eg, managing social control, routinizing illegal fishing acts, establishing a *modus vivendi* with others, & managing the law. Communal, outlaw, & business poaching are argued to be embedded in an ever-changing, larger social ensemble involving other fishers, violators, community members, law enforcement officers, fish buyers, etc. Poaching's complex relationship with the structure of law enforcement is considered in terms of opportunities for illegalities, preventive capabilities, modes of detection & surveillance, & prosecution & penalties. Conclusions suggest that poaching groups are an integral part of maritime community life.

McMullin, Julie Ann (U Western Ontario, London N6A 5C2 (tel/fax: 519-661-2111/3200; e-mail: mcmullin@sscl.uwo.ca)), **The Theoretical Coalescence of Gender, Age, Class and Ethnic Relations: A Conceptual Framework.**

¶ Since the 1970s, scholars have questioned the neglect of older women as subjects of feminist scholarship & have called for more feminist research on them & age relations. Yet, a survey of all of the volumes of *Gender and Society* & *Signs*, two of the leading US feminist journals, produced only five articles that dealt with older women & none that specifically considered age relations. The neglect of age relations in feminist theory would not necessarily be a problem if, in the aging literature, gender relations, as well as ethnic & class relations, were adequately theorized & examined. However, with very few exceptions, this is not the case. Here, it is shown that key aging theories of social inequality are limiting, because they either ignore one or more gender, ethnic, class, or age relations; or they fall short in their specific conceptualizations of them. This critique & feminist theory are drawn on to develop a conceptual framework that considers the coalescence of gender, age, class, & ethnic relations.

McMylor, Peter, Mellor, Rosemary & Barkhatova, Nonna (Dept Sociology U Manchester, M13 9PL England (tel/fax: 161-275-2492/2514; e-mail: Peter.McMylor@man.ac.uk)), **New Family Businesses in Russia: The Emergence of the Paternalist Entrepreneur.**

¶ Presents the preliminary results of a research project in Novosibirsk, Russia, on the role of familial relationships in both the emergence & sustaining of new family businesses. Elements of innovation & continuity in the new social environment are established. It is revealed that extended familial relations are critical to the establishment of social networks of information & trust, both internally & externally, to the business & critical to the pattern of employment relations in them. It is argued that the emergence of new family businesses is, in part, an attempt to stabilize the risk & uncertainty in the period of transition to a market society & reveals a marked tendency to reconstitute patterns of paternalist authority & communal provision in the new economic forms.

McNamara, Dennis L. (Georgetown U, Washington DC 20057 (tel/fax: 202-687-3603/7326; e-mail: mcnamard@gunet.georgetown.edu)), **Trust and Industrial Transformation in Korean Textiles.**

¶ The transition in textiles stretching across years of industry formation

(1948-1960), growth (1961-1979), & maturity (1980-present) provides evidence of a syncretic interplay of various interest representations in relations between private capital & the state. To introduce the theory of syncretic capitalism in the textile transition, features, forms, & functions of three patterns of interest representation—clientelism, corporatism, & contract—are considered. Their bases in the history of the industry itself are discussed, citing firm familism, market opportunity structure, state partnership, & international market constraints. The interplay of the three patterns are examined, focusing on the prominence of clientelist networks during industry formation, state corporatism, & currently, contract as the industry moves to maturity & adjustment. It is argued that the patterns of interest exchange fostered multiple bases for trust in volatile periods of industry formation, rapid growth, & fundamental adjustment in the absence of credible market institutions. More significantly, the interplay, termed syncretic capitalism, helped reduce high transaction costs of corporatist collusion, clientelist corruption, or excessive competition.

McPhee, Debra (School Social Work Barry U, Miami Shores FL 33161-6695 (tel/fax: 305-899-3196/3934; e-mail: mcphee@BU4080.BARRY.EDU)), **Medicine and the Professionalization of Social Work Practice and Intervention.**

¶ Examines the historical development of the profession of social work & social welfare practice, focusing on the relationship between the field of medicine; the medical model perspective; & development of professional social work values, philosophies, & strategies for intervention. Social work's desire & pursuit of professional legitimacy has meant that the acceptance of the medical model perspective has in effect defined professional social work practice since the 1960s. The acceptance of this borrowed perspective has meant that professional assessment & intervention attention is directed primarily to the microlevel of the individual, while attention to larger structural, social, & political factors influencing social problems are minimized. Historically, professional medical/social work research & practice has concentrated on the development of specialized intervention methods & the refinement of treatment expertise as the primary strategy for addressing myriad visible problems. Further, the social work profession's acceptance of individual & family dysfunction as the prism through which to view the nature of existing & emerging social problems has seriously influenced & in many ways, limited options for professional intervention.

Means, Robin L. (Faculty Health & Social Care U West England, Bristol B516 1DD (tel/fax: 44-117-975-8425/8443; e-mail: r-means@upg.uwe.ac.uk)), **User Empowerment or Elder Abuse? Historical Reflections on the Experience of Older People on Long Stay Care in the UK.**

¶ In the context of discourse on the difficulty of ensuring empowerment & rights in systems based on a mixed economy of care, challenged is a view that links the inadequacies of long-term care for older people to the providing sector, arguing that the core problem is not the mixed economy. The experiences of older people with long-term care in the UK, from the breakup of the poor law to the purchaser-provider reforms of the 1990s, are examined, & it is shown that much long-term care has been consistently inadequate in terms of overall quality, & numerous examples of elder abuse by staff can be traced throughout the period. It is contended that this will remain the case until there is a fundamental challenge to the low status of both the older people who live in long-term care & the majority of staff.

Mechtcherkina, Elena Y. (Instit Sociology Russian Academy Sci-

ences, ul Krzhizhanovskogo 24/35 117259 Moscow (tel/fax: 007-095-128-7907/719-0740; e-mail: elena@rodes.msk.ru)), **Notes on the Biographical Analysis of an Interview with a Turkish Migrant Woman.**

¶ Contributes to the discussion (see abstracts of related papers) by participants of the session, "Doing Biographical Research," of an autobiographical narrative interview with a Turkish woman (Hülya), a migrant worker in the Federal Republic of Germany. The events & experiences in Hülya's narrative can be described as potential phenomena of exclusion, inclusion, participation, borderlines, & normalization, through which are created the basic units for developing constructs to understand the changes of identity of this woman. The different social institutions with which Hülya communicates during her life course give her the opportunity to gain new experiences that initiate change. These new experiences enable her to develop totally new patterns of her own typification in German society, which differ from the Turkish patterns familiar to her. The spectrum of differences ranges from labor legislation to gender roles. Her marginal identity remains between two cultural worlds.

Mechtcherkina, Elena Y. (Instit Sociology Russian Academy Sciences, Krzyzanovskogo 25/35 117259 Moscow (tel/fax: 007-095-128-7907/719-0740; e-mail: elena@rodes.msk.ru)), **Family Budget in Biographies: An Assymetry of Gender Relations?**

¶ Distribution of resources, including money, is regarded in different cultural traditions as a sort of power. Viewed in this light, the person bringing money into the family has a decisive opinion on its spending. However, data from 1995/96 research on the Russian family (by the Instit of Socio-Economic Studies of Population in Moscow (Russia) & U of Cincinnati (OH)), show that most husbands are passing this power to their wives. Biographical reconstruction of this cultural phenomenon, based on in-depth interviews, demonstrates the following: (1) In the Soviet economy, the epoch of high deficiency, Russian women attained budget competence, learning how to do without scarce resources (rational aspect) & acquiring skills in obtaining needed goods (active aspect). (2) Husbands were reluctant to acquire such budget competence. (3) After perestroika, women who earned good money continued to support the husband's breadwinner position & his role as main provider of the family, & so regarded the money they earned as for their personal benefit. (4) In the emancipation rhetoric, such everyday practices can be interpreted as a diffusion of the traditional women's role, on one side, & partly the establishment of masculine patterns of behavior, on the other.

Melasuo, Tuomo (Tapri U Tampere, SF-33101 Finland), **De la polarité périphérique à la Méditerranée des réseaux** (From Peripheral Polarity to a Mediterranean of Networks). (FRE)

¶ While, from a polar global perspective, it may seem that the situation of the Mediterranean has shifted several times between the center & the periphery, 15th-20th centuries, in today's global society, such an interpretation must be discarded; peripheralization will affect the interior of every society. Because the center no longer exists, different structural networks will fill in the void. Here, suggestions on enhancing the development of the Mediterranean world are provided. The resource-rich Mediterranean region is more capable of profiting from its wealth, because it has more experience in cooperation between civil societies. Social networks can effectively counterbalance the peripheralization of the Mediterranean.

Melucci, Alberto (U Milano, I-20122 Italy (tel/fax: 39-2-76074351/15104)), **Identity and Difference in a Planetary Society**.

¶ Dramatic social changes have revealed the limits of the modern definition of democracy & the inadequacy of political institutional responses to the planetarization of the world system. It is argued that today's democracy requires conditions for enhancing the recognition & autonomy of individual & collective signifying processes in everyday life. Contemporary societies based on information allocate specific resources to individuals who use them to become autonomous subjects of action; but maintenance systems extend their control over the deep-lying sources of action & the construction of its meaning. Different forms of postnational, postmodern identities are seen as responses to a search for meaning in societies that are unable to provide forms of membership & identification to meet the needs of individuals for self-realization, communicative interaction, & recognition. Through different ways of belonging, contemporary individuals are acting on the borders of different systems, & they need permeable identities. A self-limiting notion of rationality must be applied to social life when power is based on the manipulation of cultural codes & social actors are increasingly involved in conflicts for the construction of meaning. Any new definition of citizenship must consider the necessary elements of diversity & uncertainty in basic social relations

& include a measure of respect for aspects of human experience that are not reducible to modern rationality. Inclusion & exclusion are redefined according to new forms of inequality that relate to the production & distribution of resources for individualization; becoming a person is a matter of unequally shared capacities, rights, & responsibilities.

Memoli, Rosanna (Facoltà scienze statistiche U Roma 'La Sapienza', I-00185 Italy (tel/fax: 0039-6-4453828/49910720; e-mail: mc9333@mcink.it)), **Social Networks as a Resource in the Elites Reproduction: A Comparative Research in 27 Countries**.

¶ Discusses the applicability of network analysis to social stratification, particularly, the mechanism of recruitment & behavior of elites. Resources make up a framework to describe the opportunity of access to the upper classes & the opportunity to be, over time, stable in a strata. Through network analysis, it is possible to create a structure, using structural equation, formed by a system of relations among variables. Network analysis can be seen from both a theoretical & an empirical point of view, though a continuum does not necessarily exist between these two dimensions. Often, theoretical characteristics cannot be operationalized, & relational techniques do not have a strong theoretical background. Methodological problems, linked to the network approach in social research, are discussed, with reference to comparative research on leadership. Focus is on the cultural differences among countries when models of careers are seen within three different fields, eg, political, bureaucratic, & business organizations. Data from a global sample of 1,739 top managers are used to test the hypothesis of the role played by formal & informal relations, considered as a combination of resources, to explain the access to & attainment of professional positions.

Menanteau-Horta, Dario (Center Rural Sociology U Minnesota, Saint Paul 55108 (tel/fax: 612-625-8798/636-7249; e-mail: menan001@maroon.tc.umn.edu)), **Income Distribution and Social Well-Being as Indicators of Social Performance**.

¶ In a market-driven economy, income distribution represents the most visible mechanisms by which a social system shares its resources & rewards among society members. Income distribution therefore also may be a powerful indicator of performance of a social system if such distribution permits the satisfaction of public needs. In contemporary society, however, problems of income distribution & conditions of poverty appear to go together in systems characterized by uneven development among regions & communities. Some theoretical & axiological issues related to various explanations for causes of income inequality are discussed, including social processes such as demographic changes, welfare programs, family structure, & industry changes, as well as those perspectives emphasizing economic factors such as economic growth, unemployment, & inflation. Also measured is income inequality for counties in a midwestern state & the levels of performance of the economic system in reference to an Index of Social Well-Being estimated for counties are determined.

Mendoza, Carlos (U Complutense Madrid, E-28001 Spain (tel/fax: 34-1-432-1415/578-2797; e-mail: laudem@laudem.es)), **The Socio-Integrated Balance of Management: A Business Contribution to Social Performance of Social Systems**.

¶ The winning of profits by companies produces internal imbalances & disturbances both in the social fabric & in the conservation of nature. A recent survey confirmed that profit is the primary value for most Spanish companies, followed by market share & cutting costs. This situation leads to behavior that is anxious & barely scrupulous with regard to other values, even ethical standards, & tends toward the creation of aggressive & pragmatic business tactics having the single goal of economic profit. But, if the predominant value of the company is its strategy, the growth that is achieved, though slower, will be balanced & in harmony with the evolution of the company. The strategy would be to involve all components of the company in setting targets & devising means of achieving them. To draw up the strategy correctly, the company needs to take into account & listen to all its members, if they are to become integrated in the company. It is necessary to obtain information using social performances indicators in an integrated social system such as the modern company. A tool is proposed for controlling management & information: the sociointegrated balance of strategic management.

Menendez-Alarcon, Antonio V. (Butler U, Indianapolis IN 46208

(fax: 317-940-9487; e-mail: amenende@thomas.butler.edu)), **National Identity in France and the Process of European Integration.**

¶ Analyzes how national myths & symbols are reinvented in French people's interaction with the supranational European Union (EU), interpreting the meaning of support or rejection in terms of intergovernmental or supranational perspectives. Analysis takes two complementary approaches: (1) top-down, examining discourse on the nation-state & the EU offered by the political, union, & economic elites; & (2) bottom-up, considering how lay people negotiate their perceptions of the EU in relation to their nation-state. Ethnographic research demonstrates that a plurality of perceptions characterize French relations with the EU, dividing even the main political parties & the unions. Contrary to suggestions of certain scholars, identification with the nation-state still offers an appealing "grand narrative" to most French people. By contrast, the idea of a European culture is still vague & confused.

Menger, Pierre-Michel (École hautes études sciences sociales, F-75006 Paris France [tel/fax: 33-1-45-49-76-38/01]), **Multiactivité, polyvalence, mobilité sectorielle. La Démultiplication de soi dans les professions artistiques. Le Cas des comédiens** (Occupational Versatility and Between-Sector Mobility. The Demultiplication of Self in the Artistic Professions. The Case of Actors). (FRE)

¶ The combination of several occupations is common in the arts, & each art world offers resources that add to the possibilities of combinations. Each art world is made of several sectors, between which the artist may move. Working in several different environments or jobs provides the benefit of variety, means to improve one's experience & gain new abilities, a way to establish one's reputation, & a form of insurance against the instability & hazards associated with the trade. Whereas the success & greatness of an artist's career is a matter of well-managed & chosen mobility, inflicted mobility is a mark of hardship, eg, of small or menial jobs that do not form an orderly career path & whose artistic benefits are small to none. Occupational versatility has, therefore, very different meanings: success, precariousness, professional integration, retraining, etc. To be fully understood, it has to be finely observed & considered within the dynamics of the artists' activities & careers. These ideas are illustrated with data from a recent survey of a probabilistic sample of 1,000 actors professionally active in France.

Compared Study of Organisational and Technical Impacts in France and in Mexico.**

¶ Explores total quality control as a tool used by management & the shop floor in terms of its organizational & technical consequences. Comparative analysis of France & Mexico explores elements of change & their territorial specificity.

98S35262 / ISA / 1998 / 12503

Merda, Stacey S. & Moen, Phyllis (Cornell U, Ithaca NY 14853 [tel/fax: 607-255-4751/254-2903; e-mail: ssm3@cornell.edu]), **Time Hierarchies.**

¶ Marks (1977), in his discussion of role strain, argues that, individuals' time commitments should be studied as a system in which they are assessing the value or importance of a given role or group of activities in relation to their other roles or activity clusters. He argues that individuals choose to spend more of their time in certain activities than others based on culturally patterned systems of commitment. The result of this system is that individuals will place more time in more highly valued activities, to the detriment of less-valued activities. Marks argues that individuals under this system are primarily oriented toward paid work. Here, interview data from 116 managers & professionals in central NY are used to investigate whether individuals are prioritizing their time according to Marks's theory & whether systems of prioritization vary by gender & position in the life course.

98S35263 / ISA / 1998 / 12504

Mergy, Jennifer, T. (U Paris IX [Dauphine], F-75775 Cedex 16 France [tel/fax: 33-1-44-05-43-17/18; jmergy@dp-fr.fr]), **Notes critiques and Année Sociologique: Crossroads for Politics and Sociology.**

¶ Explores participation by authors of *Année sociologique* in *Notes critiques-sciences sociales* via analysis of historical & political factors that explain this collaboration & a comparative study of the texts. Lucien Herr & François Simiand put together in *Notes critiques*, 1900-1906, a rare caliber of intellectuals, political figures, & social scientists, eg, Léon Blum, Émile Durkheim, Arthur Fontaine, Lucien Lévy-Bruhl, Charles Rist, Charles Seignobos, & Albert Thomas, to provide an annotated bibliography summarizing the subject, method, & scientific value of emergent literature in the social sciences through a positivistic, experimental, & sociological method of evaluation. Further, *Notes* was to draw on this method to study socialist doctrines & movements & their possible application to society & politics. Whereas *Année* was to be dedicated to relatively longer developments on social science publications & act as an instrument to define & promote Durkheimian sociology, *Notes* combined sociological theory & practice. It is argued that this division reflects Durkheim's distinction between the goals & status of sociology & political science, determining if this conceptual division of labor appeared in the texts. Analysis is limited to texts in *Notes* written by Durkheim, Marcel Mauss, François Simiand, & Maurice Halbwachs. Texts of the neglected *Notes* that have not been republished elsewhere but are deemed of interest to scholars concerned with the political feature of Durkheimian sociology are highlighted.

Meshkova, Elena G. (Instit Technology Russian Academy Sciences,

m

Krzyszczanovskogo 24/35 6.5 117218 Moscow (tel/fax: 011-7-095-719-0940/0740)), **The Changing Role of Women in Modernising Russia.**

- ¶ The early 1990s in Russia were characterized by a transformation in history. A kaleidoscopic mixture of value systems has evolved: those inherited from socialism & those related to a market-oriented society. The urgency of reconsidering the system of value & the political & cultural changes in Russian society that could lead women to the position they deserve is obvious. Women constitute a special group within which transformations take place that can largely determine the principal trends in modern society's development. It is women who bear the main responsibility for families' adjustment to & survival in the new conditions. Recent research, however, indicates that the socioeconomic transformations in Russia have brought marked discrimination against women in all spheres of public life. However, trends toward modernization are emerging, & public awareness that women can hold leadership positions is growing. Trends in the women's movement speak to the fact that women are striving to obtain a standing equal to that of men, actively change their social status, expand their possibilities in the employment sphere, & fortify their role in society. These processes, however, must overcome considerable inertia in the current alignment of forces in society.

Mesjasz, Czesław (Academy Economics, ul.Rakowicka 27 PL-31510 Cracow Poland (tel/fax: 48-12-16-76-19/12-54-38; e-mail: Mesjasz@ae.krakow.pl)), **Equilibrium, Stability, Turbulence, Chaos, or Complexity: Predictive and Normative Concepts in Applications of Systems Approach in Theory of Social Organization.**

- ¶ Presents a preliminary survey of the applications of equilibrium, stability, turbulence, chaos, & complexity in economics, sociology, & international relations & social organization theory. Each systems idea is analyzed according to the following pattern: (1) initial meaning; (2) meaning dominating in particular disciplines, ie, neoclassical economics, & in institutional economy, sociology, international relations studies, & political science; (3) descriptive & explanative interpretations; (4) predictive interpretations; (5) normative interpretations; & (6) evolution of normative meaning in relevant disciplines. The prospects for descriptive, explanative, & normative applications of some of those analogies & metaphors in the studies of modern, information technology-dominated society are evaluated.

Mesnard, Philippe (UER sciences politiques U Paris VII Denis Diderot, F-75251 Cedex 05 France), **Les Tendances narratives de la sociologie et de l'histoire en France aujourd'hui** (The Narrative Tendencies of Sociology and History in France Today). (FRE)

- ¶ Whether French sociologists & historians borrow narrative styles more properly found in literature is examined, as is whether this tendency is more apparent in particular domains of contemporary sociology & history or shows up generally across both disciplines. The possibility that certain language relationships, independent from conceptual devices, bring sociology & history closer to literature is considered, looking at such categories as poetics, narration, viewpoint, subjectivity placement, citation usage, recourse to fiction, etc. A review of books & journals & interviews with sociologists & historians are used to explore these questions.

98S35267 / ISA / 1998 / 12508

Mesquita, Myriam (Post Graduate Program Social Service Children Teenagers Research Center, Ave Cons Rodrigues Alves N 457/11 04014-010 São Paulo Brazil (tel/fax: 5511-571-2273; e-mail: mymesquita@br2001.com.br)), **Impunity-Security and Justice. A Discussion about Impunity: The Construction of Impunity as a Process.**

- ¶ Discusses unequal rights absent from formal laws, but present in daily practices, & how this reality contributes to impunity as a process constructed in security & justice agencies. Data on child & teenager homicides in São Paulo, Brazil, 1990-1995, were used to quantify & qualify impunity in this type of crime & reflect on victimization & rights issues. Findings indicate that impunity built in security & justice agencies appears, in most cases, as a legal action in the form of intensive violence against children & teenagers. Related myths are considered, & a typology constructed to illustrate differences between homicide & extermination. Results show that criminal justice, through the action of security & justice agencies, supports (or collaborates) with impunity.

Meyner, Marian (Dept Education U Lund, S-22100 Sweden (tel/fax: 46-46-22-8726/4538)), **From Critical Theory to Postmodernism-Educational Theory and Practice with Reflections on Third World Issues.**

- ¶ Discusses theoretical & research issues that have developed from within critical school theory, noting continuities & discontinuities between modernist & postmodernist theory & the attendant influence on educational theory & practice in general, & in the Third World, in particular. Issues such as structure & consciousness, holism & individualism, & subjectivity & objectivity are addressed. The convergence established by critical school theorists between idealistic & dialectical critique, & the problem of society & individual is discussed. The Frankfurt school & contributions-ie, its critique of positivism & its developments in research practice-are considered. The topics examined in Marxist modernism on the use & effects of new technologies, art & mass culture, avant-garde experiments, & realist convention have continued to be relevant to the discussion of postmodernism, which accommodates a number of critical-political utopias with varying visions of liberation & emancipation. Postmodernism has become politicized with its increasing interest in feminism, multiculturalism, & social marginalization. Vital issues have been raised about communication rationality by both believers of the Enlightenment project & postmodernity (eg, Jürgen Habermas) & its opponents (eg, Jean-François Lyotard) that have pedagogical relevance. A history of educational theory with its critique of conditions of the Third World & postmodernism is developed. Critical postmodern pedagogy is discussed, with focus on the Indian situation.

Mezzana, Daniele (CERFE, via Monte Zebio 30 I-00195 Rome Italy (tel/fax: 06-3225747/1218; e-mail: cerfe@pronet.it)), **Micro-Dynamics of Collective Action. Remarks on a Processual Sociology of Subjects.**

- ¶ Contends that insufficient attention is given today to internal dynamics of different kinds of collective actors, ie, to the microdynamics of rules presiding over their existence & their changes (Giancarlo Quaranta). Such a microdynamics shows both cognitive & operational aspects & concerns the consistency of the actor (ie, its culture & identity, also on the side of resources) as well as its external projection (ie, agency & action). Analyzing these dimensions of subjects (as a rereading of Max Weber's studies on the Protestant ethic shows) could be useful for a better understanding of changes in social rules governing the control these actors exert over the surrounding environment. Empirical evidence concerning these aspects are drawn from recent research work in Europe & Africa.

Michau, Anina & Braun, Michael (ZUMA, D-68159 Mannheim Federal Republic Germany (tel/fax: 49-621-1246279/1246100; e-mail: mishau@zuma-mannheim.de)), **Democratization of Gender Relations by a Women's University.**

- ¶ In the domain of German university education, intensified attempts at reform have been observed: autonomy, efficiency, & evaluation are some of the catchwords of the mainly managerial-oriented debates & initiatives. Largely unnoticed by the public are several innovative reform approaches that target the democratization of gender relations in the areas of university education & science. One idea being considered is establishment of a women's university. Presented here are results of a research project that focuses on the acceptance of these reform initiatives & concepts. Several structured expert discussions were conducted to collect arguments of different focus groups (high school students, university students, university teachers, employers, professional organizations) both in favor & against a women's university. Focus is on (1) how the idea of a separation of the genders in university education is generally evaluated

& whether this presents an opportunity or a new barrier for women; (2) the role attributed to a women's university in the context of the reform of the system of university education at large; (3) the conditions under which the idea of a women's university might gain acceptance in society & how such a university should look; & (4) how to handle the notion of an elite constituent of this idea of a university.

Michaud, Jean & Johnson, Mark (Centre South-East Asian Studies U Hull, HU6 7RX England (tel/fax: 44-1482-465-758; e-mail: j.michaud@pol-as.hull.ac.uk)), **Imagining Tourism in Vietnam: Two Case Studies.**

¶ Explores cultural identities & identifications in the context of rapid social transformation, examining the development of, & discourses on, forms of cultural tourism in two developing tourist regions in Vietnam: the central coastal areas around Hue & Da Nang-Hoi An, & the northern highlands centred on Lao Cai on the Red River. At issue is how terms such as culture, ethnic minorities, heritage, & identity have been variously used & defined & to what extent changing discourses about culture & identity can be related to wider historical shifts in politics & economics. Also considered are (1) whether the commodification of culture taken by local people represents a downgrading of their heritage, & (2) what the celebration of forms of cultures previously labeled by the state as "feudal" signals in terms of the possibilities for inventing new traditions & reconceptualizing the future.

Michealson, William, Linden, Karin Palm & Wikstorm, Tomas (Center Urban & Community Studies, 455 Spadina Ave Toronto Ontario M5S 2G8 (tel/fax: 416-978-2072/7162; e-mail: michealson@chass.utoronto.ca)), **Telecommuting and the Meaning, Use, and Design of Residential Space: Forward to the Past.**

¶ Examines the diverse strategies that telecommuters use to cope with their objectives for home & work—what they do to integrate them & to avoid conflicts between them. Qualitative & quantitative data gathered 1995-1997 in Sweden, 1990/91 Swedish statistics, & 1992 Statistics Canada survey data indicate that, while daily behavioral patterns do not vary greatly between telecommuters & conventional workers, if only because telecommuters travel more than theoretically expected during the workday, telecommuters nonetheless have a different pattern of episodes constituting their day, as well as greater time devoted to home & family members. Cross-cutting gender differences suggest that telecommuting may represent a way to accomplish desired, traditional gender-based emphases in contemporary society. Notably lacking is evidence of greater activity in the local community or of extended leisure. Sweden & Canada show similar tendencies in virtually all respects. Four typical ways of organizing teleworking spatially & temporally in the home are described. Implications for room arrangements & furnishings are discussed.

Michel, A., Meshkova, H., Guseinov, A. & Kara, Z. (Instut Sociology Russian Academy Science, Krzhizhanovskogo 24/35 b.5 117218 Moscow (tel/fax: 719-0940/0740)), **Attitudes towards Environment of French, Russian, and Turkish People: A Cross-Cultural Approach.**

¶ Researchers from France, Russia, & Turkey compared questionnaire interview data (N = 500 adults in each country) collected on values & attitudes toward the environment in their respective countries. Results showed cross-country anxieties concerning air & water pollution & dangers of nuclear energy. Common attitudes were also found in favor of life protection & preservation of the environment. It should be noted that Russian respondents were very critical regarding the state of their regional environment & more tolerant toward the state of ecology in their own city. Also, some cross-country differences were observed in people's attitudes. Anxieties about forest fires were more frequent in France than in Russia because French people are more often exposed to fires. The French were also more often concerned about clean water supply. While further comparative analysis is needed, these findings support the hypothesis that European concerns about the environment are part of an interrelating national & international system of mutually accepted values.

Michelson, William (Dept Sociology U Toronto, Ontario M5S 2G8 (tel/fax: 416-978-4562/7162; e-mail: michel@chass.utoronto.ca)), **Home-Based Work: What Does Time-Use Indicate.**

¶ Time-use data serve at least two purposes in the study of home-based work. (1) They circumvent the difficulties of sampling representative

home-based workers by making it possible to identify such persons empirically from representative national time-use surveys. Though not sensitive to qualitative characteristics of the employment situation without additional data, time-use data enable the assessment of how many people in a cohort work at home & the creation of a sample of such people for more detailed analyses. (2) Time-use data then enable analysis of the behavioral characteristics of home-based workers, in contrast to conventional workers, across national borders, with respect to different styles of home-based work, & as examined by more traditional explanatory variables. Some special forms of analysis dealing with hypercodes, episode patterns, & subjective considerations enhance understanding of home-based work. These ideas are examined, based on national time-use data obtained in 1986 & 1992 by Statistics Canada & in 1990 & 1991 by Sweden's Central Statistical Office.

Midol, Nancy & Le Pogam, Yves (U Nice Sophia Antipolis, F-06205 Cedex 3 France (tel/fax: 33-92-29-65-00/49; e-mail: midol@unice.fr)), **Using Psycho-Analytical and Phenomenological Data in the Sociology of Contemporary Sport in France.**

¶ Although psychology & sociology have evolved along separate paths, both epistemologically & institutionally, certain research programs have shown that it is possible to combine what is separate. For instance, this is done by linking psychoanalysis to anthrosociology, as is the case with the notion of "double bind" introduced in the works of Norbert Elias or the ethnosychiatric approaches of Georges Devereux. This process of gemination in sociology (through concepts related to the "intimate") is presented, taking into consideration three important figures associated with the sociology of sport in France: Jean-Marie Brohm, Christian Pociello, & Pierre Sansot. Focus here is on understanding the theoretical bases of their three approaches: (1) Brohm imparts to the sociology of sport a critical attitude founded in Freudo-Marxist theories. (2) Pociello belongs to a movement close to the works of Pierre Bourdieu & includes in his research the notion of social imaginary. (3) Sansot uses a phenomenological approach & establishes a poetic anthroposociology of sport by giving importance to dreaming, emotions, & the senses—as many notions affecting individuals in their intimate sphere. In Brohm's critical theory of sport, the purpose is to unveil the mechanisms of the repressive economy of the body. Pociello's approach, the combination of the structural & phenomenological poles maximizes the cultural dimension of sports. Sansot's approach refers not only to the imaginary but also opens up to the senses. The richness of these hermeneutical approaches in the French sociology of sport is emphasized.

98S35277 / ISA / 1998 / 12518

Miele, Mara (U Pisa, I-56100 Italy), **Short Circuits. The Aesthetics of Food Consumption.**

¶ Food consumption in Italy after WWII went through great development &, by the 1990s, achieved a saturation level in terms of quantity & quality. The development of consumer culture, where standardization & imitation of food styles prevail, has been coupled with a substantial change of consumption models & a break of food traditionalism. The term "lifestyle" is currently in vogue for describing the proliferation of attitude towards food & the rise demand for new qualities of food. The concern with lifestyle suggests that the practices of consumption, the planning, purchase, & display of consumer goods & experiences in everyday life cannot be understood merely via conceptions of exchange value & instrumental rational calculation. On the contrary, the symbolic aspects of food gain new relevance as explanatory variables of diverse patterns of consumption. Recent works on consumer resistance strategies in the face of proliferating consumer culture describe active attempts by consumers to withstand or counteract such cultural forces. Strategies include consumer boycotts, cooperative movement, voluntary simplicity, market & advertising critiques, & the transformation of mass-produced objects into individualized possessions & experiences. The literature on postmodern consumption suggests that these strategies are adopted by actors who do not stick to a coherent & stable set of practices that define a fixed lifestyle, but rather, promote more heterogeneous & volatile clustering. In this line of interpretation is built a presentation of two very different case studies (in Italy & the US) that illustrate convergence of strategies & practices concerning food shopping for lifestyle & expressing a posttraditional & cosmopolitan food culture.

Mies, Marin (Hlumenstr 9, D-50670 Cologne Federal Republic Germany (tel/fax: 0049-221-135249/1391737)), **Globalization of the**

m

Economy and Violence against Women.

¶ Addresses the violence against woman that has accompanied the globalization of the economy, particularly in the Free Production Zones & maquiladoras of Asia & Central America. This violence is increasing dramatically—both within the factories, where up to 90% of workers are young women & girls, & in public & family life—and is of a more sadistic nature than ever known. The thesis is based on empirical findings from Bangladesh, Hong Kong, the People's Republic of China, Vietnam, & Mexico. The theoretical conclusion is that this patriarchal violence in the globalized economy is neither an accident nor the outcome of male sadism, but is a necessary component of a globalized economy based on the dogmas of permanent growth, competition, & the search for comparative advantages. Hence, it is not extraeconomic, but part & parcel of this economy.

Miethe, Ingrid (Free U Berlin, D-14195 Federal Republic Germany (tel/fax: 03341-312340/309998; e-mail: i.miethe@miregal.berlinet.de)), **East German Dissident Biographies in the Context of Family History.**

¶ The questions of what motivates people to join a dissident movement or, under different circumstances, withdraw completely, are most often addressed by examining processes of socialization, opportunity structures, or attitudes. Here, it is shown that decisions of this kind are rooted not only in personal experience, but also in older family legacies. Biographies from the East German women's peace movement serve as examples to illustrate how political activity starts at a time & a thematic point that correspond structurally with the family history in German's National Socialist period. Empirically based on hermeneutical case reconstructions of women in East German dissident movements, the study demonstrates the importance of widening the field of vision in understanding political action to include not only the individual biography, but also the dimension of family history.

Mignolo, Walter D. (Duke U, Durham NC 27708 (tel/fax: 919-660-3105/684-4029; e-mail: wmignolo@acpub.duke.edu)), **The Emergence of the "Western Hemisphere" in the Colonial Horizon of Modernity.**

¶ Identifies an urgent need for macronarratives from the perspective of coloniality, & especially for the introduction of geohistorical horizons of knowledge, instead of linear & chronological accumulation of posts. Within this framework, the emergence of the idea of the Western Hemisphere in the colonial horizon of modernity is examined. The emergence of this idea produced a displacement in the world order of the early modern/colonial period whose consequences are still at work today: (1) the new location of the Americas in the geopolitical distribution of planetary colonialisms &, consequently, its difference with Africa & Asia in its relation to Europe, which explains partly why postcolonial thinking is mainly a business linked to English & the British colonial legacies, while post-Orientalism has a more French colonial twist; & (2) the increasing separation of the two Americas as a consequence of the legacies of colonial conflicts in Europe & the increasing & ascending role of the US in the planetary scene (with 1848 & 1898 key dates in this story & in today's geopolitical & geohistorical reconfigurations). The need to think in terms of a post-Latinoamericanism & a post-Americanism that will transcend both subcontinental identity politics & the legacies of Orientalism & area studies is suggested. To think in such terms implies thinking in terms of post-Occidental categories (or "beyond Occidentalism" as in Coronil's expression).

Miguel, Juan Carlos (Facultad Ciencias Comunicación, Apartado 644 E-48080 Bilbao Spain (tel/fax: 34-4-4648-800/299; e-mail: cypmibuj@lg.ehu.es)), **La Guerre digital en Espagne** (The Digital War in Spain). (FRE)

¶ Examines conflicts arising from the arrival of digital platforms in Spain. These conflicts appear on the surface to be related to an economical fight between the two largest communication groups: Prisa & Telefónica. In fact, this turmoil has a political basis, because the government seeks its own communication group, which is centered in Telefónica. Hence, the government has launched a general front in different battlegrounds: (technological, legal, etc). It is argued that this policy shows a fundamental contradiction on the part of the conservative government—defense of free audiovisual markets vs tight control of this market. Implications are discussed, considering that communication, es-

pecially audiovisual communication, needs a mix of political considerations, eg, industrial, competition, & contents.

98S35282 / ISA / 1998 / 12523

Mikami, Shunji & Nakamura, Isao (Tokyo U, Bunkyo-ku 156 Japan (tel/fax: 03-3290-9631/5374-7224)), **Needs and Flows of Daily-Life Information at the Hanshin-Awaji Earthquake.**

¶ Leaflets, fax information service, & local newspapers played an important role after the Hanshin-Awaji earthquake in disseminating information to the suffering citizens in Hyogo Prefecture, Japan. Content analysis of the leaflet "Daily Needs" issued by a volunteer citizen group, shows that information about shops & stores available & medicare was most frequently distributed to the citizens of Nagata-ku, Kobe. Leaflets issued by the Sankei Newspaper Co disseminated daily-life information that played a complementary role to that of leaflets issued by volunteer groups. Content analysis of the two local newspapers after the earthquake showed that information on temporary housing, transportation, & various consulting services was most heavily disseminated, while there was little information on lifeline utilities or medical services.

98S35283 / ISA / 1998 / 12524

Mikhailchenko, Vida Youzovna (Instit Linguistics Russian Academy Sciences, Moscow 103009 (tel/fax: 07095-290-52-68/05-28)), **Social Linguistics in Russian Federation (Past, Present and Future).**

¶ Posits that the particular social need of language building in Russia, 1920-1930s, caused great interest in social linguistics & its theory, & resulted in the creation of writing systems for 50 previously unwritten languages as a result of clarification of the principles of creating writing systems, & choosing a dialect & graphic base. In the last decade, a revival of interest & care toward national cultures & languages is evident. The aspiration of different peoples to expand the social functions of their ethnic languages & to increase their role in the social life of different linguistic communities has begun to be realized. Studies of language policy & the national linguistic situation & works dealing with foreign experience in the development of languages are actively published. In this context, the problems of bi- & multilingualism, along with the problem of prevention of language conflicts as a significant component of national conflicts emerge as the most important for the multiethnic state. Significant advances in sociolinguistic research & publishing are reviewed, demonstrating that the field is gradually becoming an exact science with specific research methods & new technologies for data storage & processing.

98S35284 / ISA / 1998 / 12525

Mikheyeva, Anna R. (Instit Economics & Industrial Engineering, 17 Lavrentieva Prospect Novosibirsk 630090 Russia (tel/fax: 7-383-2331427/2355580; e-mail: annm@ieie.nsc.ru)), **Siberian Marriages and Families: Cohabitation, Non-Marital Births from a Modernity Perspective.**

¶ In Russia, the transformation of the basic system of marital-family values is of a steady nature & reflects the autonomy of the institution of marriage from short-term situational problems experienced by the larger society. The direction of this trajectory is from the single form of patriarchal (traditional) family to multiple marital & family forms, from domination of external social control to predominantly intrafamily, individual ways of solving the problems. Here, Siberian family formation & views on marriage, free unions, children, & family life are explored, drawing on 1997 survey data from random samples of women-nonmarital mothers (N = 50). Analysis reveals that such orientations are increasingly modern & manifest themselves in many aspects of marriage & family life. There is a relatively high frequency of cohabitation & nonmarital births, confirming that traditional, patriarchal family norms & patterns have been undermined.

98S35285 / ISA / 1998 / 12526

Mikheyeva, Anna R. (Instit Economics & Industrial Engineering, 17 Lavrentieva Prospect Novosibirsk 630090 Russia (tel/fax: 7-383-2331427/2355580; e-mail: annm@ieie.nsc.ru)), **Cohabitations and Out-of-Wedlock Births via Unmarried Mothers' Life Stories: The Case of Siberia.**

¶ Changes in marital reproductive behavior, eg, rise in extramarital couples & out-of-wedlock births, are argued to be a natural phenomena at the present stage of community evolution, a form of demographic adaptation to social changes. Offered here are results of investigations of the phenomena of cohabitation & out-of-wedlock births in Siberia, drawing on 50 interviews with unmarried (at the moment of birth) mothers. The

ways in which these groups of women with children were formed are outlined, showing how their alternative lifestyles were often determined by the attitudes of men (husbands, partners), parents, relatives, girlfriends, & doctors. Causes of out-of-wedlock births are explored through four biographical case studies. Women whose married life was formed, in a sense, under a contradictory influence of their parent family are described, noting the ambiguity of their sociocultural independence & simultaneous material dependence. The result of the clash in this mixture between cultural & personal values was most often the women's choice in favor of bearing the child (in 80%, the first & the only one), demonstrating that this choice has become socially, an increasingly more approved action. An attempt is made to link empirical findings with hypotheses about the causes of these current trends in the demographic & family spheres.

Milan, Anne M. (U New Brunswick, Saint John E2L 4L5 [tel/fax: 506-648-5590/5611; e-mail: milan@unbsj.ca]), **The Impact of Cohabiting on Kin Relations.**

¶ An exploratory analysis of the impact of cohabiting on kin relations, based on 1995 interviews with a nonrandom sample of 33 cohabitators in New Brunswick indicates that, as adult children establish an intimate relationship with another adult, they renegotiate relations with their own family of origin. However, because cohabitation is less institutionalized than marriage, kin relations can be far more problematic, because there are fewer guiding norms. Cohabitators from highly integrated families of origin, or those whose partner is from a close-knit family, tend to perceive good relations with their kin as important. In addition, female cohabitators are more concerned with the opinions of family members & more actively seek positive relations with their partner's family than do male cohabitators. Many cohabitators report an initial negative reaction from kin, especially parents, reflecting a negative stigma associated with this living arrangement.

Milgrom, Richard (Faculty Environmental Studies York U, North York Ontario M3J 1P3 [tel/fax: 416-736-5252/5679; e-mail: rmilgrom@yorku.ca]), **Participatory Design, Differential Space and the Production of Sustainable Cities.**

¶ Drawing on the concepts of Henri Lefebvre (1991), it is argued that participatory design processes are necessary for the production of sustainable cities. While urban populations are increasingly cosmopolitan, dominant development practices are becoming more homogeneous & alien to local conditions. Lefebvre suggests that the resulting "silence of the users" is a fundamental problem in realizing the production of differential space, space that would enhance & accommodate a broad range of meanings for the inhabitants. It is argued that this range of meanings is necessary in the production of sustainable cities. To support sustainable practices, urban dwellers must care to sustain their urban environments & must, therefore, find positive meanings in the spaces that they inhabit. These meanings cannot come from government regulation or the developers' marketing strategies, but must be produced within the everyday life of a diverse civil society. Seen in relationship to Lefebvre's conceptual triad, participatory design (as spatial practice) & the possibility of alternative & more diverse built forms (representation of space) would change the production of meaning (representational space) in the urban environment.

Milić, Andjelka (Dept Sociology U Belgrade, YU-11000 Serbia [tel/fax: 381-11-603-293/637-115; e-mail: amilic@f.bg.ac.yu]), **Work and Family in Life Course of Employed Mothers in Serbia.**

¶ Sociological & demographic approaches are combined, putting wives' life biography as the prime focus of family life & events, exploring how much family events are under the influence of women's critical transition points, eg, finishing her education, finding a job, etc. Data were collected in 1995 from a representative sample of 800 mothers in Serbia who bore children, 1986-1990. Results indicate a three-fold effect of maternal employment on family affairs: (1) Maternal employment affects age at first marriage, first & subsequent births, & first abortion (since abortion has become a very extensive means of birth control in Serbia). (2) Comparing the life course of employed with unemployed mothers, the former have a much denser life trajectory; this is also true in comparing employed women & their husbands.

Millar, Jane (Dept Social & Policy Sciences U Bath, Claverton Down BA2 7AY England [tel/fax: 44-1225-826141/826381; e-mail: j.i.millar@bath.ac.uk]), **Family Obligations and Social Policy: Attitudes, Behaviour and Policy Change.**

¶ Expectations & assumptions about how people do, & should, behave are important in structuring the nature & type of welfare benefits & services provided by the state. In many countries, these assumptions have reflected sex-stereotyped views of gender roles in the family, but chang-

m

ing family & employment patterns are creating potential gaps between policy expectations, behavior, & attitudes. Different countries have different expectations about the role of family & the balance between public & private support, & these assumptions are part of the defining features of different welfare systems. Explored here is the impact of changing views of family obligations on policy, focusing on the changing obligations surrounding partnering & parenting. Data are drawn from a recent study of the way family obligations are defined in law & policy in 16 European countries, & on an analysis of some recent policy changes in the UK, Australia, & the US.

98S35295 / ISA / 1998 / 12536

Miller, Abraham H. (Dept Political Science U Cincinnati, OH 45221-0375 [tel/fax: 513-556-3300/2314]), **Rethinking the Meaning of Political Violence in Democracies.**

¶ In the aftermath of the 1960s urban riots in the US, a great deal of intellectual energy was expended on trying to explain the surge in domestic violence. Scholars & informed observers frequently disagreed on what was & was not "political" in the various kinds of violent outbursts. Empiricists frequently solved the problem by dissecting all kinds of violence, showing how democratic societies differed in these forms from other societies. Despite the usefulness of such analyses, the problem of definition persists, & has its own set of theoretical consequences. Here, an attempt is made to link the prominent forms of 1960s-type violence to recent less-obvious but persistent manifestations. Whether these can be subsumed under similar definitional structures is discussed. If so, they should yield to similar explanations. The research draws heavily on Robert K. Merton's framework of social structure to show how seemingly disparate forms of violence might be definitionally similar &, thus, respond to complementary explanations lodged in the political structure. Cases & examples are largely from the US, but comparative data from the UK are also used.

Miller, Darlene R. (Johns Hopkins U, Baltimore MD 21218 [tel/fax: 410-516-7626/7590; e-mail: drml2@jhunix.hct.jhu.edu]), **South Africa in Africa: Changing Workforces in the New African Landscape.**

¶ The historical geography of labor in Africa is changing, with democratization in South Africa spurring what some call a "new scramble" by South African investors. Preliminary indications are that this investment will have a significant socioeconomic impact, despite its relatively small volume, as it is creating a new segment of wage workers in sub-Saharan Africa that is changing the regional social landscape & processes of working-class formation. Assessed here is whether any trends are emerging in forms of labor recruitment, wages, & conditions, composition of these workforces, & preliminary trade union responses. Primary & secondary data show how the historical geography of labor is being shaped by processes of capital accumulation inscribed with regional, gender, language, & the many other differences that make up a heterogeneous social reality. Particular patterns emerge among workforces in the phase of flexible accumulation driven not only by economic trends, but by the social environments into which they are inserted.

Miller, William L. (Dept Politics U Glasgow, G12 8RT Scotland [tel/fax: 44-141-330-4680/5071; e-mail: w.l.miller@socsci.gla.ac.uk]), **Ideology versus Autonomy: The Meaning of Public Support for Local Government Autonomy in Britain.**

¶ Argues that the apparent widespread public support in GB for locally elected & locally accountable local governance may be misleading. For many, support for local democracy begins & ends with support for elections. It does not imply support for locally elected bodies to have wide-ranging powers & functions, local discretion, or local accountability; ie, it is more electoral than democratic. Further, many of those who do appear to support local discretion & local accountability do so as a means to other ends, rather than as an end in itself. Much of the debate about local governance is simply the national ideological struggle between Left & Right disguised as a debate about local autonomy. Those who have lost in the arena of national politics try to recoup their losses by opening a second front in local politics. They demand autonomy, not so much for local government as against the central government they do not control. Their support for local autonomy is conditional, contingent, temporary, & tactical. To a considerable degree, the national ideological struggle dominates opinion on the question of local autonomy: national ideology is the first-order issue, & local autonomy no more than second order. Here, a multilevel survey of British public attitudes toward local governance is used to examine the extent to which these attitudes are dominated by changing fortunes in the arena of national politics.

Mills, Melinda C. (Population Research Center Rijks U Groningen, NL-9700 AV Netherlands [tel/fax: 31-50-363-3898/3901; e-mail: M.Mills@frw.rug.nl]), **The Relationship between Women and the Family in India and the Netherlands: An Event History Analysis of the Consequences of Autonomy.**

¶ The relationship between women's individual history & the family is examined in India & the Netherlands through an event-history analysis of data in the form of loglinear statistical methods. Data from the 1992/93 National Family Health Survey for Uttar Pradesh (N = 11,438 women) & the 1993 Family Formation Survey for the Netherlands (N = 3,705 women) are used to construct an index to compare women's autonomy from or interrelatedness with the family; data from women in different contexts & over 10-year birth cohorts are used to test differences in outcomes of individual life histories. The timing & sequencing of life transitions differ according to whether the family is positioned as a central institution or women participate in institutions outside the family. Results are discussed in relation to Anthony Giddens's (1984 [see abstract 91c01451]) structuration theory, focusing on the specific structure of rules & allocative & authoritative resources that both constrain & enable women in interaction. It is concluded that aspects of fertility (eg, contraceptive use & childbirth spacing) are positively associated with women's level of autonomy from the family.

Millward, Christine A. (Australian Instit Family Studies, Melbourne 3000 [tel/fax: 61-3-9214-7866/7839; e-mail: chrism@aifs.org.au]), **Predictors of Australian Family Network Dynamics.**

¶ Explores sociodemographic factors predicting family network availability & interaction among 8,836 Australian parents with at least one resident child under age 20, based on data from the 1991/92 Australian Living Standards Study. The main unit of analysis is the combined family resources of couples. Logistic regression analysis identifies predictors of family network proximity & interaction, testing residential locality type, family type, English-speaking status, occupational class, family life stage, gender, workforce commitments, & extent of friendship networks. The principal predictors of extended family availability to, & contact with, households were pre-school-age children, English-speaking background, outer-urban residence, working-class or lower-middle-class occupations, & large friendship network. Modeling family networks at a combined parental level had more explanatory power than modeling at the individual level & is recommended as the preferable method.

98S35302 / ISA / 1998 / 12543

Millward, Christine A. (Australian Instit Family Studies, 300 Queen St Melbourne Victoria 3000 [tel/fax: 61-3-9214-7866/7839; e-mail: chrism@aifs.org.au]), **Intergenerational Relations in Later Life: Effects of Marital Separation.**

¶ Examines relationships, contact, & actual or anticipated aid & exchange between 660 Australian later-life parents (ages 50-70) & their adult children. Data from the 1996 national Later Life Families study, are used to test the hypothesis that a history of parental marital separation diminishes later intergenerational aid. Logistic regression analysis tests sociodemographic factors & family structure, association, exchange, & emotional relationships & values to see which elements best predict intergenerational exchange. Parental marital separation was a significant negative predictor, implying limitations on younger-generation kinship resources, particularly for men approaching old age. Findings are pertinent to the debate about public-private responsibility for aging citizens in the present Australian political climate of reduction or privatization of government services. The notion of an intergenerational social contract & the gender inequality inherent in family care responsibilities are also discussed.

98S35303 / ISA / 1998 / 12544

Milner, Henry & Ladner, Andreas (Dépt science politique U Laval, Quebec G1K 7P4 [tel/fax: 514-731-8383/8256; e-mail: henry.milner@grig.ulaval.ca]), **Electoral Systems and Turnout in Local Elections. Are Political Parties the Missing Link?**

¶ Arguing that voting in local elections is a good indicator of what is popularly termed social capital, two related institutional factors that affect such turnout—electoral system & presence of political parties—are examined. It seems there is a link between the voting system used & the rate of political participation, & to prove this, survey data from secretaries of almost 3,000 Swiss communes are drawn on, controlling for cultural differences. Findings indicate that, overall, there is far higher turnout in proportional-system communes, especially those with less than 5,000 inhabitants. Further, in smaller towns (up to 2,000 inhabitants), proportional voting clearly leads to a higher number of parties, but not in the larger towns & cities. This finding is discussed in light of the literature on the effect of political parties on local political participation & comparable data from other countries, in particular, historical data from Norway during the transition to a proportional system.

Milstein, Diana J. & Mendes, Hector O. (U Nacional Comahue Argentina, 8324 Rio Negro [tel/fax: 0054-99-77-4511; e-mail: djmilste@uncoma.edu.ar]), **La concepción dominante de lo artístico en las prácticas cotidianas de los maestros** (Artistic Dominant Conception in Teachers' Everyday Practices). (SPA)

¶ Examines the artistic dominant conception in the reconstruction of meanings that orientate elementary school teachers' everyday practices in Argentina. The comprehension of these meanings is needed to explain difficulties in incorporating artistic education in elementary schools. The artistic dominant conception, as it is presented in teachers' common sense, is similar to idealistic aesthetic states from the 19th & 20th centuries, but cannot be considered just as a remainder of those. It is the result of embodied meanings that legitimate the social position in which people now live. The epistemological rupture with the idealistic prenotions during the 20th century since the rising of seminology & sociology of arts & culture have opened a new perspective. However, the appearance &

development of this view have not produced the disappearance of the dominant conception. Its persistence is related to the characteristics of the logic of common sense & to the socialization function ascribed to elementary school in the Western modern culture. An attempt is made to clear some central points of that dominant conception related to pedagogical practices: the "expressive" definition of artistic practice, the ahistorical & essential definition of artistic field, & above all, the unknown of many different aesthetic social practices in everyday life.

Mingers, John C. (Warwick U, Coventry CV4 7AL England [tel/fax: 1203-522475/524539; e-mail: j.mingers@warwick.ac.uk]), **Information, Meaning and Communication: An Autopoietic Approach.**

¶ In their early papers, Maturana & Varela were very skeptical of concepts such as "information" & "communication," & argued that, since organisms were structurally determined systems & the nervous system was organizationally closed, it was not possible for there to be "instructive interactions," ie, interactions (including linguistic ones) that determine the effect they will have on the receiver. This means that traditional ideas such as objective information & communication as the transmission of information from one person to another are not tenable. More recently, Niklas Luhmann has developed an autopoietically based social theory in which society consists of a network of communications that trigger further communications. In this theory, information becomes relative to the observer & is related to meaning. Here, concepts from Jürgen Habermas, Dretske, & semiotics are drawn on to address the question of information & meaning anew. Arguing for the existence of two separate domains: (1) information, existing objectively, & carried & transmitted by events & signs, but not directly accessible to humans; & (2) meaning, the interpretation & significance of information for individual subjects, generated through a process of embodied cognition. This interpretation & production of meaning at the individual level is linked to Luhmann's theory of communication at the social level.

Mino, Vianello (U Roma "La Sapienza," I-00185 Italy [tel/fax: 6-87181407/49910720; e-mail: vianello@uniroma1.it]), **Suggestions for a Journal of Sociology.**

¶ Discusses problems with editing a sociological journal, eg, knowing & understanding contributors & readers & their needs, & keeping the journal attached to history, economics, demography, political science, & psychology. The best approach is to appoint an editor for life, with the assistance & control of a small number of people with whom she or he should

m

share the main policy decisions. Rules about the organization of an international academic journal in sociology, as well as about how the editorial board should function practically, are discussed.

98S35310 / ISA / 1998 / 12551

Miranda, María Jesús & Barberet, Rosemary (U Complutense Madrid, E-28040 Spain), **Women in Prison in Spain.**

¶ The number of women in Spanish prisons has increased rapidly, 1985-1996. The main reason for this is the rise of drug use & trafficking in Spain; in 1996, 58% of women in prison were serving drug-related sentences. Over 30% are foreigners of South American & North African origin & are not generally drug users. Spanish women convicted of drug trafficking are usually gypsies—whose families are engaged in small-scale drug trafficking—& nongypsy drug users; property offenses are also frequently related to drug use. In the 1960s, the male-female ratio in Spanish prisons was the same as today, but the majority of women were sentenced for abortion, infanticide, or homicide (in the latter case, generally of husbands or other relatives). Presently, abortion is practically legal, divorce is possible, & there are services for battered women, so prison sentences for these acts have decreased. Legal changes have ensured that jailable offenses for women have changed from violent to drug & drug-related property offenses. Further, changes in migration patterns, drug trafficking routes, & social conditions of Third World women have helped produce a sizeable foreign female prison population in Spain. Here, to better inform prison policy regarding the treatment of women prisoners, interview & survey data from women prisoners & interviews of prison personnel who deal with women prisoners are used to identify the needs of women prisoners & whether the prison system is responding to these needs. All-female & predominantly male prisons & a mixed-sex module in operation in one prison are compared along with old & new prisons. Initial findings concur with the international literature: women have difficulty in maintaining family ties & frequently visit prison health services; they have psychological needs, especially for issues regarding preincarceration battering & abuse; & they have education & training needs.

Mirchandani, Kiran & Tancred, Peta (Dept Management Saint Mary's U, Halifax Nova Scotia B3H 3C3 [tel/fax: 902-420-5190/5119; e-mail: kmirchan@shark.stmarys.ca]), **The Web of 'Work': Insights from Women's Work.**

¶ Extends feminist theoretical tradition of looking to marginalized groups for insight into mainstream social formations to the sociology of work. The exclusion of women's work from traditional definitions of work is argued to have far-reaching consequences for the sociology of work itself, which has, through its failure to theorize women's work, impeded reflection into various dimensions of the life & work experiences of both women & men. Focus is on how understandings of women's work allows the rethinking & reconceptualization of notions of work. Based on an overview of the development of the category of women's work in social theory, it is contended that work can be conceptualized as a web of tasks (visible & invisible) rather than as a single activity.

Misheva, Vessela Ivanova (Dept Sociology Uppsala U, S-75108 Swe-

den [tel/fax: 46-18-471-76-81/11-70; e-mail: Vessela.Misheva@soc.uu.se]), **On the Question of Sociology's Identity: Thucydides, the Lost Father of Sociology.**

¶ Utilizing the theoretical means provided by systems theory in macrosociology, examines how sociology's current identity crisis can be connected with analogous problems experienced by history & philosophy. The latter, in turn, can be traced back to the mistaken classification of Thucydides's classical work as "contemporary history" & the meager existence of sociology in the framework of philosophy as an "alien resident" with the false consciousness of being philosophy's offspring. A comparative analysis of the current problems of history, philosophy, & sociology, as well as a discussion of "The History of the Peloponnesian War" as a new scientific genre different from both history & philosophy, aims to demonstrate that Thucydides should be regarded as the lost father of sociology.

98S35314 / ISA / 1998 / 12555

Misheva, Vessela Ivanova (Dept Sociology Uppsala U, S-75108 Sweden [tel/fax: 46-18-471-76-81/11-70; e-mail: Vessela.Misheva@soc.uu.se]), **Excommunication and the Concept of Total Alienation.**

¶ Discusses alienation in the framework of the theory of autopoietic systems in macrosociology. The importance of three systems peculiarities is emphasized: (1) The systems of politics, unlike other functional subsystems, have territorial bases for demarcating their communication boundaries, which make the latter objects of external control. (2) There is only one societal system, ie, the world system of society, & no social system can exist outside of it. (3) No system can interfere in the internal operations of an autopoietically closed system; however, this rule does not count for the societal system. It is hypothesized that the societal system may destroy the autopoiesis of its subsystems by redefining their boundaries from without or by excluding them from the communication process on the societal level. Such excommunication of a particular social subsystem from the world system of society reduces the system in question to the state of an external environment & gives rise to the feeling of total alienation on "mass social absence." The escalation of distrust is discussed as an important characteristic of the subsequent social crisis since trust is a basic precondition for the emergence of the process of communication.

98S35315 / ISA / 1998 / 12556

Mishra, Arima (Centre Study Administration Relief, N-19A Jangpura Extn New Delhi 110014 India [tel/fax: 91-11-431-8753/2805; e-mail: casar.rsami@gems.vsnl.net.in]), **'Dating' of Famine and the Problematic of Documenting Contemporary Famine: Some Anthropological Reflections.**

¶ Argues that, to overcome limitations in dating famines, ie, treating famines as events, thus denying them in the absence of mass-scale mortality, requires (1) collation of historical evidence to demonstrate the famine process in relation to famines in history that have resulted in mortality, & (2) documentation of famine situations that have not resulted in mortality. Focusing on the latter, perceptions of famine & starvation by the local community are explored, & the means to explain these reflections are elaborated, drawing on 1996/97 fieldwork in a Kandha tribal village in the Kalahandi district of Orissa, India. The Kandha's perceptions of famine are manifested in (A) practicing certain transactions, eg, *Kado Bikri* (an institutionalized practice of mortgage of land); (B) the association between denial of credit & notion of "hunger months"; (C) eating distress food items (which suppress hunger but have no nutritional value); & (D) population decline due to an increasing incidence of diarrhea-related deaths. A genealogical method, utilizing data on land holding, cultivation patterns, credit transactions, & food habits, enables a reconceptualization of famine as a long socioeconomic process & an understanding of why starvation & famine are persistent in a number of societies even without related mortality.

Mitchell, Barbara A., Wister, Andrew V. & Gee, Ellen M. (Gerontology Research Centre Simon Fraser U Vancouver British Columbia V6B 5K3 [tel/fax: 604-291-5234/5066; e-mail: mitchelo@sfu.ca]), **The Cultural Dimensions and Pathways of Returning Home among Canadian Young Adults.**

¶ Midlife parenthood often comprises extended periods of coresidence with adult children. The aim here is to investigate the cultural diversity of returning home (as measured by mother tongue) & cultural differences in pathways or reasons for leaving & returning to the parental

home. The main hypotheses are shaped by two major elements of life-course theory: the importance of recognizing variability in major life trajectories & the impact of earlier life-course paths for later life events. Descriptive & multivariate analyses of data from a subsample of young adults, ages 19-35, drawn from the 1995 Canadian General Social Survey reveal that mother tongue is significantly related to the probability of returning home & to the various pathways taken out of the parental home. A proportional hazards analysis supports the finding that young adults reporting English as their mother tongue are more likely to return home than those reporting either French or other languages, with the latter contrast exhibiting the stronger relationship. Also, leaving home for reasons of independence & for job-related reasons were also found to influence the propensity to return home. Support was revealed for several interaction effects between mother tongue & reasons for leaving home. Patterns of returning home were also affected by number of siblings, mother's education, & children's emotional closeness to their mothers. Implications for midlife parental roles & responsibilities, & for family socialization over the life course, are elaborated.

Miyano, Masaru (Dept Sociology Chuo U, Tokyo Japan 192-0393 [fax: 81-426-74-3853; e-mail: mmiyano@tamacc.chuo-u.ac.jp]), **Occupation and Party Affiliation 1955-1995: Class Politics in Japan.**

¶ Examines longitudinal change of relationship between occupation & party affiliation in Japan, 1955-1995, focusing on male Liberal Democratic Party support. It is found that the relationship between occupation & party affiliation has changed little longitudinally. In this respect, class politics has not declined in Japan. However, the occupational structure changed drastically during the period; eg, the number of farmers, formerly the strongest Liberal Democratic Party supporters, declined from 38% to 5% of the population. However, the Liberal Democratic Party did not lose support overall until 1991 when many new parties appeared. An explanation is explored. The larger share for other jobs without changing the levels of Liberal Democratic Party support means a larger number of supporters. In addition, Liberal Democratic Party support among construction-industry-related jobs increased significantly. From this & other bases, an industrial support model is proposed & tested via logistic regression; it may explain past & future Liberal Democratic Party policy choices. Although occupation still has strong explanatory power on party affiliation for males, many respondents lost their old ties after 1991.

Mizuno, Setsuo (Faculty Social Sciences Hosei U, Machida-Shi Tokyo Japan [tel: 0427-83-2389; e-mail: smizuo@mt.tama.hosei.ac.jp]), **Transformation Experiences of a Turkish Woman in Germany: A Case-Mediated Approach toward an Autobiographical Narrative Interview.**

¶ By making use of a case-mediated approach toward a particular text, major characteristics of transformative experiences of Hülya, a Turkish woman labor migrant living in a German city, are elucidated. The main analytical procedures of this approach consist of six interrelated activities: tracing/retracing, generating, expanding/linking, clarifying, checking, & reclarifying/reconfiguring. Through the tracing/retracing of the text in question, three particular dates & five periods are identified, & potentially important words, phrases, & expressions are listed. The main characteristics of State 1, meaning the state in which Hülya had been before coming to the Federal Republic of Germany, & those of State 2, ie, at the time of the interview, are contrasted. Taking into consideration such things as the encountered episodes, her conscious moves, & value & sickness factors, several phases of the transformation from State 1 to State 2 are suggested. Implications of her reflective ideas about what concerned her most at the time of the interview for the characterization of State 2 are also discussed.

Mizuta, Kazuo (Kyoto Sangyo U, Kita-ku 603 Japan [tel/fax: 075-701-2151/705-1887; e-mail: Kmizuta@cc.kyoto-su.ac.jp]), **Powerful Sunshine vs Deadly Meltdown: Global Culture-Cultural Paradigm Shift toward Sustainability.**

¶ Explores worldwide energy options in the context of contemporary environmental problems & resource limits. Most pollution is attributed to the use of crude oil; eg, Japan obtains about 58% of its total energy supply from oil, while the world depends on oil for about 40%. The important point in the futurist's eyes is that other natural energy resources are limited & will eventually be gone. In view of this, nuclear power plants were developed. The amount of electric energy they produce is about 33.4% in Japan, 76.1% in France, & 17% worldwide. It is argued that use of solar energy as a clean alternative energy is absolutely necessary in the future.

Mlinar, Zdravko (Faculty Social Sciences U Ljubljana, 61000 Slovenia [tel/fax: 386-61-1681-461/1685-330; zdravko.mlinar@unilj.si]), **Transformation of Multilevel Organization of Society: An Introductory Overview.**

¶ An overview of the transformation of multilevel social organizations addresses (1) binary thinking & multilevel analysis of sociospatial restructuring; (2) the treatment of levels & layers, spatial scales, & elements of territorial hierarchy; (3) expanding the range of & changing relationships between levels of territorial organization; (4) growing cross-level accessibility & its implications & the distinctiveness of levels & their hybridization; (5) territorial dehierarchization & multilevel power sharing & subnational autonomization & supranational integration; (6) predictability of changes in autonomy & distinctiveness at higher levels on the basis of historical developments at the lower levels; (7) the shift from mediated to direct linkages & the weakening of the intermediaries; (8) coalitions & global networks as a form of empowerment of local actors; (9) the shift from representation to direct participation in the global context; & (10) short- & long-term policy implications.

98S35322 / ISA / 1998 / 12563

Moallem, Minoo (San Francisco State U, CA 94132 [tel/fax: 415-338-1238/7030; e-mail: minoom@sfsu.edu]), **National Being and Sexed Corporeality.**

¶ The logic of nation-state building in the context of modernity is inextricably bound to the founding of politics—both as conceptual & practical possibility—on the basis of a binary dissociation of the public from the private, rights from needs, & reason from passion. Thus, politics in its modern sense becomes tied to a secularized theological-political notion of responsibility. Further, such binary concepts are implicated in those temporal & spatial metaphors that naturalize the spheres of family & civil society & distinguish them from the sphere of politics. These distinct spheres are essential to the construction of modern rational subjectivities & liberal citizenship. Here, using the case of Iran, the notion of the "civic body" is used to clarify the connection between sexed corporeality, cultural nationalism, & gendered citizenship. In light of a theoretical examination of the civic body as both a site of political citizenship & a field of ethno-religious sexual codification & recodification, historical & discursive constructions, eg, modernity, Orientalism, Westernization, cultural nationalism, transnationalism, masculinity, & femininity, will be set in motion.

Model, Suzanne (Dept Sociology U Massachusetts, Amherst 01003-7525 [e-mail: Model@Sadri.UMass.edu]), **Canadian but Not Christian: The Consequences for Earnings.**

¶ Explores the earnings effects of Canadians' membership in five non-Christian religions—Judaism, Buddhism, Islam, Hinduism, & Sikhism—drawing on 1991 census data. Using Christians as a benchmark, a preliminary analysis indicates that Jewish men & women have higher net earnings, & women of the other three faiths generally suffer no earnings penalty. It is possible that these women are a positively selected group. As for the men, Sikhs register no shortfall once human capital is controlled, & the Buddhist deficit appears associated with ethnicity, not religion. Hindu & Muslim men are consistently underpaid, however. Further work is needed to understand the dynamics responsible for this result.

Moelker, René (Royal Netherlands Military Academy, NL-4800 RG

m

Breda (tel/fax: 31-76-527-3245/3255; e-mail: r.moelker@kma.nl)), **Social Support and Military Families during Deployments. A Theory Based Research into the Effects of Social Support Networks on Problems due to Separation during Deployment of Soldiers from the Netherlands.**

- ¶ Dutch soldiers have participated in the peacekeeping operations in Bosnia since 1992. Each rotation of soldiers is deployed for 6 months, during which wives & families experience a period of separation & have to cope with additional problems that may accumulate. Social support from family, friends, military colleagues, or other battalion wives does make a difference. Explored here is which kind of support is most effective, the kind based on reciprocity & exchange or the kind that has the character of an offering (without the expectation of something in return). Hypotheses concerning the structure of the support network are tested using questionnaire data from 200+ wives of deployed soldiers.

Moen, Phyllis, Erickson, Mary Ann & Dempster-McClain, Donna (Dept Sociology Cornell U, Ithaca NY 14853 (e-mail: mae3@cornell.edu)), **Role Occupancy, Role Identity, and Role Satisfaction in a Continuing Care Retirement Community.**

- ¶ Examines role occupancy & role identities for a sample of 95 older adults (average age 77) living in a continuing care retirement community. Analysis reveals a high degree of congruence between role occupancy & role identity for the spouse role, but much less congruence for other roles (daughter/son, parent, worker, church or synagogue member, grandparent, & volunteer). Contrary to usual predictions from identity theory, men with children & grandchildren are more likely than their female counterparts to choose parent & grandparent role identities. Employed men & women are equally likely to identify with the role of worker. Parent & grandparent role identities are not predicted by contact with or proximity to children & grandchildren. In general, these role identities reflect the areas where these elders find the most satisfaction in life. However, compared to role identities & role satisfaction before moving to the retirement community, residents are less likely to identify themselves as a friend but are more likely to find the most satisfaction in life from friends, suggesting that roles & identities are still in flux.

98S35327 / ISA / 1998 / 12568

Moen, Phyllis & Yu, Yan (Employment & Family Careers Inst Cornell U, Ithaca NY 14853-4401 (tel/fax: 607-255-0838/254-2903; e-mail: pem3@cornell.edu)), **Divided Lives? Feeling Successful at Work, at Home, and in Balancing Both.**

- ¶ Analysis of data from the 1992 National Study of the Changing Workforce reveals that men's & women's interpretations of their success at both work & home, as well as their success in balancing both, is strongly related to life stage. Specifically, men & women in the "shifting gears" phase—i.e., those ages 50-65 who are married but with no children living at home—feel the most successful in their jobs & family/personal lives & in balancing both. Although significantly more workers see themselves as successful in their family/personal lives than at work, patterns in all three domains suggest the importance of work hours, coping, & balancing work & personal life for feeling successful. While occupational level is not related to success at home, very few feel they are successful at work who do not also feel successful in their family/personal lives.

Moens, Frédéric & Charlier, Jean-Émile (Facultés universitaires catholiques Mons, B-7000 Belgium (tel/fax: 32-65-32-33-44/65)),

Appropriation des pratiques religieuses. Le Cas de rituels catholiques dans une ville belge (Appropriation of Religious Practices. The Case of Catholic Rituals in a Belgian Town). (FRE)

- ¶ The phenomenon of de-Christianization is illustrated by a case study of the Belgian town, Charleroi, (200,000 inhabitants). Surprisingly, a range of popular practices remain (eg, blessing of houses), rituals conducted by agents of the church at people's request, even if they no longer attend church regularly. The institutional ritual & agent continue while the institution becomes less significant. One traditionalist & integrist priest, who keeps writings & ritual closely literal, is astonishingly well-known & followed, while at the edge of the institution, masses, rituals of purification, & exorcisms continue successfully. These two sides of contemporary urban religiosity point out an appropriation of instituted rites & symbols. As Catholicism is no longer cognitively controlled, it makes possible the reaggregation of Catholic composites within a popular belief. These dynamics & logic are examined on the basis of field anthropological observations & interviews with churchgoers & all priests in the town.

98S35329 / ISA / 1998 / 12570

Moghadam, Valentine M. (Illinois State U, Normal 61790-4660 (tel/fax: 309-483-5617/5104; e-mail: vmmogha@rs6000.cmp.ilstu.edu)), **Gender and Globalization: Female Labor and Women's Mobilizations.**

- ¶ Views globalization through a gender lens to expose its contradictory effects on women workers & on women's political participation, using data drawn from UN publications, country-based data, newsletters from women's organizations, & fieldwork. The various dimensions of globalization—economic, political, & cultural—are examined with a focus on their contradictory social-gender effects. These include inequalities in the global economy, the feminization of labor, the withering of the developmentalist/welfarist state, the rise of identity politics, the spread of concepts of human rights & women's rights, & the proliferation of women's organizations & transnational feminist networks. The implications of these trends for sociological theory & development studies are addressed. It is argued that, although globalization has had dire economic effects, the process has created a new constituency—working women & organizing women—who may herald a potent antisystemic movement.

98S35330 / ISA / 1998 / 12571

Moghadam, Valentine M. (Illinois State U, Normal 61790-4260 (tel/fax: 309-438-5617/5104; e-mail: vmmogha@rs6000.cmp.ilstu.edu)), **Women's Movements: Theories and Prospects.**

- ¶ Addresses (1) a Western bias & tendency to focus research on movements in Western countries; (2) a gender bias & tendency to ignore women's participation in social movements or theorize the gender dynamics of collective action; (3) a national bias & tendency to ignore global or world-systemic developments. It is argued that social movements are increasingly transnational & global, gendered, & link developed & developing countries; eg, the global women's movement, with transnational feminist networks purposively connecting women's groups in various countries & regions, providing support, & disseminating ideas & tactics. It is proposed that, in an era of globalization, there exist global political opportunity structures, transnational mobilizing structures, & supranational ideas, ideals, & strategies. Further, the global women's movement is criticizing & offering alternatives to both the hegemonic & particularistic tendencies of globalization. Data from feminist networks & women's organization documents, participant-observation in international & regional conferences on women since 1985, & secondary sources on social & women's movements underpin the discussion.

Mok, Ka-ho (Asian Pacific Social Development Centre City U Hong Kong, Kowloon (tel/fax: 852-2788-8929/8926)), **Marketizing Education in Post-Mao China.**

- ¶ In the post-Mao era, reformers in the People's Republic of China have taken significant steps to privatize social policy & social welfare services. After the adoption of a socialist market system in the 1990s, educational development has been affected by strong market forces. It is argued that the emergence of private educational institutions, the shift of state responsibility in educational provision to families & individuals, the prominence of fee-charging, as well as the introduction of internal competition among educational institutions, clearly suggest that China's education has been going through a process of marketization or privatization. The institutional origins of the policy change in education, with particular reference to the process & implications under the impact of marketization, are examined.

98S35332 / ISA / 1998 / 12573

Moksony, Ferenc (Dept Sociology U Economic Sciences, H-1093 Budapest Hungary (tel/fax: 36-1-2175-172; e-mail: szoc_moksony@pegasus.bke.hu)), **Cohort Size and Suicide in Hungary: Effects of Generational Crowding.**

¶ Tests Easterlin's theory on the effect of cohort size on suicide. According to Easterlin, members of large cohorts encounter bottlenecks as they pass through the life cycle: they attend schools that are more crowded; they face greater competition at the labor market; & they normally earn less than their fellows in smaller cohorts. These barriers may add up to a general sense of deprivation or anomie, which may make people more vulnerable to suicide. A case-control study compared people who committed suicide in 1993/94 in Budapest, Hungary, with a representative sample of nonsuicidal individuals. The main independent variable was a dummy that distinguished members of the large 1948-1955 cohorts from the rest of the population; to rule out possible life-cycle effects, age was included as a control variable. Results of logistic regression support Easterlin's idea that large generations are more vulnerable to self-destruction than are the younger ones. The odds of suicide was about 60% higher in the cohorts born 1948-1955 than in the rest of the sample, & this mortality surplus was statistically significant.

98S35333 / ISA / 1998 / 12574

Mol, Arthur P. J. & Spaargaren, Gert (Dept Environmental Sociology Wageningen Agricultural U, NL-6706 Netherlands (tel/fax: 31-317-484452/483990; e-mail: tuur.mol@alg.swg.wau.nl)), **Ecological Modernization Theory: A Reply to Its Critics.**

¶ The development of ecological modernization theory (on environmental deterioration & reform) started in the mid-1980s & has recently become popular among broad segments of environmental sociologists & practitioners in environmental policies & politics. This growing popularity parallels increasing criticism from both social theorists & radical environmentalists. Presented here is a systematic overview of the main lines of criticism against ecological modernization theory, an assessment of the validity of the disparate objections, & a formulation of the kind of research projects that have to be undertaken to meet these shortcomings.

98S35334 / ISA / 1998 / 12575

Møller, Valerie (Instit Social & Economic Research Rhodes U, Grahamstown 6140 South Africa (tel/fax: 27-46-603-8550/622-3948; e-mail: v.moller@ru.ac.za)), **Quality of Life Trends in South Africa: An Update.**

¶ Trend data from successive national sample surveys in South Africa suggest that the new set levels of life satisfaction & happiness may be rising among formerly disadvantaged groups in society but still fall short of the 1994 peak level (following the first open general elections). However, happiness & life satisfaction continue to decline among formerly advantaged groups. Discussion of the social dynamics underlying contemporary subjective quality-of-life trends refers to the new government's social policy to improve the living conditions of the poor, expectations & aspirations of the new electorate, & emergent social conflicts in the new democracy.

98S35335 / ISA / 1998 / 12576

Møller, Valerie & Sotshongaye, Ayanda (Instit Social & Economic Research Rhodes U, Grahamstown 6140 South Africa (tel/fax: 27-46-603-8550/622-3948; e-mail: v.moller@ru.ac.za)), **Contemporary Respect Relations among Zulu Grandmothers and Granddaughters.**

¶ In African society, respect relations are thought to have suffered because of factors such as rapid urbanization & modernization & the disruptive effects on family life of labor migration & harsh apartheid laws. Individual & group interviews with 80+ Zulu grandmothers & teenage granddaughters living in urban & rural areas, 1995/96, indicate that intergenerational respect is considered a central concern of socialization & family life. Although grandmothers & granddaughters reportedly observed the general behavioral codes, some facets of respect relations had changed in adaptation to changing social circumstances in South Africa.

98S35336 / ISA / 1998 / 12577

Molnar, Joseph J., Hoban, Thomas & Brant, Gail (Auburn U, AL 36849), **Passing the Cluck, Dodging Pullets: Environmental Responsibility, Contract Production, and the Poultry Industry.**

¶ Poultry production is concentrated in a few southern states where farmers are highly dependent on contract arrangements for income & livelihood. Industrialization took place first in the poultry industry, & the model of contract farming developed there has been emulated by other

animal industries. Technological change—genetics, nutrition, housing, & disease control—is rapid, as growers tend to lose about a day a year in the average growout period for a broiler chicken. Environmental standards are becoming increasingly stringent, & many farmers are faced with crossroads decisions about investments in dead & manure disposal facilities. The expanding industrialization of poultry production is explored in the context of a rising tide of environmental standards & compliance costs. In some areas, farmers, integrators, & regulatory agencies are engaged in a complex set of maneuvers over the way contract growers conduct their operations. Odor control has emerged as a central concern in all animal industries. Given the concentrated benefits of industrialized production facilities, & the widespread externalities imposed on surrounding residents, the NIMBY (not in my backyard) response dominates attempts to block new facilities. Recent outbreaks of *pfisteria* & other organisms that damage fish & have demonstrable human health impacts have been linked to excess nutrients emanating from concentrated broiler production areas. Based on fieldwork conducted in AL & NC, a framework for anticipating & understanding contract grower dilemmas & community responses to the establishment of new facilities is developed.

98S35337 / ISA / 1998 / 12578

Moncada, Alberto (Fundación Moncada, Martín de los Heros 39 E-28008 Madrid Spain (tel: 34-1-5470810; e-mail: alberto.moncada@compuserve.com)), **Media Wars in Spain.**

¶ With the 1995 arrival of the rightist government, the Popular Party, in Spain, the media wars started. The Popular Party was apparently persuaded by some media pundits that, to secure reelection, it needed a friendly media. They began to persecute Prisa, the largest owner of Spanish media, & allegedly more friendly to the Socialist Party, & began to build media of their own with Telefónica, the Spanish monopoly until 1998, which purchased one of the private TV stations & is attempting to widen its holdings. The wars first erupted about the broadcasting of soccer matches & the new business of digital TV, leading to business disputes & fights in the courts.

98S35338 / ISA / 1998 / 12579

Moniz, Antonio Brandao & Kovacs, Ilona (SACSA, U Nova Lisboa, P-2825 Monte de Caparica Portugal (tel/fax: 351-295-4464/4461; e-mail: abm@mail.fct.unl.pt)), **New Methodologies to Study and Renew Old Sectors: The Case of Fisheries Sector.**

¶ Presents the methodology of a research project on the future(s) of work & qualifications in the socioeconomic system related to fishing &/or maritime activities. The project counts on the cooperation of different scientific areas (biology, sociology, economy, demography, geography, & robotic engineering), as well as among researchers & social actors (unions, employers, research & education institutes, local authorities, industrialists). Interconnected ecological, economic, & social problems—eg, scarcity of marine (natural) resources, unbalancing ecosystems, technological overcapacity, lack of qualified & skilled people, unemployment, & social exclusion—plague the sector. At the same time, the sector is a stage for diversity & struggle among different interests. This complexity is distilled down to two methodological options: interdisciplinary research & research involvement of social actors. Interdisciplinarity refers to integration of disparate scientific fields, eg, marine biology, computer science, engineering, economy, sociology of work, etc. Involvement of actors focuses on problem identification, search for solutions, & elaboration of connected survey instruments for data collection.

98S35339 / ISA / 1998 / 12580

Monjardet, Dominique (Centre national recherche scientifique U Paris X, F-9200 Nanterre France (tel: 01-40-97-71-34)), **La Recherche et le changement dans les organisations policières** (Research and Change in Police Organizations). (FRE)

¶ Increasing urban crime & social changes that call into question the quality of police services are investigated, looking at their influence on how police organizations themselves are changing. In France, research has only played a secondary role in the elaboration of alternative solutions & means of organization, but it has contributed to the opening of a space for debate where traditional police tactics may be questioned. A comparative methodology is used to evaluate the pseudoevidence & pseudonecessities of the police routine. Attention is given to the controversy aroused by this research.

98S35340 / ISA / 1998 / 12581

Montanari, Arianna (Dipt studi politici U Roma 'La Sapienza', I-

m

00100 Italy (tel/fax: 39-6-4453-260/4991-0446; e-mail: montanaria@uniroma.it), **National Identities and Social Integration—The Role of Mass Media in the Construction of European National Stereotypes.**

¶ Analyzes myths, tales, novels, films, & TV to identify stereotypes used to define national identity in Italy, the Federal Republic of Germany, France, & GB, focusing on the role of mass media—particularly TV—in the formation of national stereotypes in the context of blurring spatial borders where communication plays a very important role. Self-Other issues are considered along with the crisis of identity that breeds xenophobia, nationalism, & localism. It is hypothesized that every culture aims at elaborating models of human behavior, represented in emblematic figures; ie, collective imagination deems human achievement a creative product of genius or hero & not as a result of a long, evolutionary process; thus, mass media can be read as an emblematic representation of models of behavior. It is argued that MacLuh's electronic-media-created global village is populated not by individuals, but by groups, that are known & recognized via stereotypes & measure of virtues & vices.

Montaño-Hirose, Luis (Dept Economía U Autónoma Metropolitana-Iztapalapa, 09340 Mexico DF (tel/fax: 724-4775/4768; e-mail: lmh@xanum.uam.mx)), **El estudio de las organizaciones en México. Evolución y desafíos** (The Study of Organizations in Mexico. Evolution and Challenges). (SPA)

¶ Gives an overview of current examinations of organizations in Mexico. A brief & simple typology is proposed, differentiating between the theory of organization, the sociology of organization, & organizational studies. The most influential institutional spheres concerning organizational investigations in the country are described, & the historical, economic, & recent revolutionary changes & challenges pertinent to organizational development are discussed.

98S35342 / ISA / 1998 / 12583

Montebello, Fabrice (8 rue Franz Liszt, L-1944 Luxembourg Luxembourg), **Pour une histoire sociale du spectacle cinématographique** (Toward a Social History of the Cinematographic Spectacle). (FRE)

¶ The aesthetic fascination of cinema & the belief in the power of its effects are considered with respect to the role of the researcher in perpetuating them. In the first case, semiology, aesthetics, & history reduce the cinematic phenomenon to film, which can be perceived as text, work, or archive. In the second case, attention is given to the audience, & the cinema is thought of as a mass phenomenon involving passive consumers whose interest in film is motivated by external constraints. Studies of the cinema distinguish producers from viewers, ignoring the roles of distributors, publicity agents, critics, etc; these roles are acknowledged here. A previous study conducted in France at the U Lumière-Lyon II, which looked at issues of the cinema in Lorraine, 1944-1960, is recalled. It is asserted that the love the audience brings to watching film should be seen as a measurement of popular pleasure, which allows the spectator to evaluate the quality of the spectacle & renders his or her point of view legitimate.

98S35343 / ISA / 1998 / 12584

Monteiro, Arlete Assumpção (Pontifícia U Católica São Paulo, 05508-900 SP Brazil (tel/fax: 011-818-3735/3784; e-mail: luguair@mandic.com.br)), **Herencia social: Portugal-Brasil. La realidad de vida y de trabajo de un pueblo** (Social Inheritance: Portugal-Brazil. The Reality of Life and Work of a Town). (SPA)

¶ Draws on observations made during years of residence in the small coastal fishing community of Praia do Araçá, Brazil, to investigate how a way of life, life perspectives, & work are passed from one generation to the next. The history of the coastal region, settled by the Portuguese beginning in 1818, is reviewed, showing how isolation & separatism are part of the community's heritage. Focus is on the youth as they learn life values, responsibilities, daily chores, how to read the sea, & the best times for fishing. Family relations & socialization with elders serve as the primary mediums for continuing social inheritance.

98S35344 / ISA / 1998 / 12585

Monteiro, Lois A. (Dept Community Health Brown U, Providence RI 02912), **Florence Nightingale and Harriet Martineau: Partners in the British Army Reform Movement, 1858-1863.**

¶ Florence Nightingale wrote to Harriet Martineau frequently, 1858-1871, regarding reform of the British Army. They employed each other

& each other's position to accomplish their political goals. To put pressure on Parliament, Nightingale utilized Martineau to sway public opinion through Martineau's numerous articles in the *Daily News* of London, England. In turn, Martineau obtained confidential facts & figures from Nightingale to use in her newspaper articles. In this way, Nightingale & Martineau acted as partners in the Army Reform Movement.

98S35345 / ISA / 1998 / 12586

Montes de Oca Zavala, Veronica (Instit Investigaciones Sociales U Nacional Autónoma Mexico, DF 04510 Mexico (tel/fax: 525-6-22-74-00/65-24-43; e-mail: monteso@servidor.unam.mx)), **Spanish title not provided** (Social Policy and Sociodemography of Old People in Mexico City). (SPA)

¶ Mortality & fertility declines in Mexico have impacted the age structure in several regions in terms of the social organization of rural & urban areas. In Mexico City, the social policy oriented to third-age people shows significant changes in its implementation. Governmental organizations are unable to face ever-increasing demands (qualitative & quantitative) posed by old people. In contrast, the nongovernmental organizations are increasing, with some for profit & others nonprofit. Explored here is social policy & welfare program planning for vulnerable old people in terms of difficulties encountered.

98S35346 / ISA / 1998 / 12587

Montes de Oca Zavala, Veronica (Instit Investigaciones Sociales U Nacional Autónoma Mexico, DF 04510 Mexico (tel/fax: 525-6-22-74-00/65-24-43; e-mail: monteso@servidor.unam.mx)), **Spanish title not provided** (Social Supports for Old People in Mexico). (SPA)

¶ Analyzes three types of elderly social supports in Mexico—institutional (formal institutions), intradomestic, & extradomestic (informal institutions)—& describes relations between them & the social construction of the aging stage. Their theoretical & analytical relevance are explored.

98S35347 / ISA / 1998 / 12588

Montes-Alcala, Cecilia (Dept Spanish & Portuguese U California, Santa Barbara 93106-4150 (tel/fax: 805-893-3161/8341; e-mail: montes@humanitas.ucsb.edu)), **Written Code-Switching: Powerful Bilingual Images.**

● **Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com**

¶ Code-switching has been largely studied in its oral production, & research has revealed specific regularities both at a grammatical (ie, syntactic constraints) & a pragmatic level (ie, sociopsychological functions). Examined here is what takes place in the written production, investigating whether (1) the same spontaneous &/or seemingly unconscious alternation appears, (2) the same pragmatic functions are fulfilled, & (3) it is subject to the same syntactic constraints. Analysis of the journal entries of a Spanish-English bilingual individual reveals the types of code-switching found, & identifies the sociopragmatic functions meets & the syntactic constraints it is subject to. Significant support is obtained for the claim that written code-switching is an idiosyncratic phenomenon governed by specific social & grammatical rules. A new paradigm for research into code-switching as written production is offered that allows for a more expanded study into other kinds of bilingual text, from personal testimonials to magazines, newspapers, & literature of bilingual communities.

Montulet, Bertrand (Dept Sociologie U Catholique Louvain, B-1348 Louvain-La-Nueve Belgium (tel/fax: 32-10-47-42-38/46-03; e-mail: montulet@ucl.usoc.ac.be)), **Social System and Networks.**

¶ Spatiotemporal theory is drawn on to show how Émile Durkheim's way of thinking about social relationships through the concept of "society" limits the notions of time & space to permanent & delimited or demarcated conceptions. On the other hand, the social bonds understood & analyzed through networks emphasize social relationships as taking part in a broad expanse of opportunities. Based on the view of Anthony Giddens's assertion that the collectif has to settle the spatial & temporal copresence of its members to exist as a collectif, examined is how specific social groups can be built either by valorization of ephemerality & opening or by permanence & social delimitations.

Moodley, Kogila (Faculty Education U British Columbia, Vancouver V6T 1Z1 (tel/fax: 604-822-4315/4244; e-mail: kmoodley@unixg.ubc.ca)), **Education and Racial Marginalisation.**

† Argues that the conventional notion that an educational system, shaped by dominant group hegemony, always reproduces rather than challenges minority inequality, but needs to be revised & refined in light of South African counterevidence. On the attitudinal level, ethnic socialization at apartheid universities resulted in the emergence of a critical black consciousness that paved the way for collective political resistance; eg, imposed dominant-language instruction led to the Soweto uprising of schoolchildren in 1976. This dialectic of marginalization contradicts many prevailing US notions. More significantly, at the behavioral level, even in the most repressive legalized racial system, certain minorities demonstrated remarkable success, despite a reactionary apartheid curriculum. Although held at the lowest rank of esteem among the four racialized groups & comparatively materially disadvantaged, Indian South Africans performed almost as well as ruling whites in standardized national matric tests. Similarly, the matric test results of black students were highest in some impoverished rural areas & certain township schools, despite the overall low performance rates of urban blacks, compared to other groups. Explored is the role of community cohesion, legitimacy of the school & local support received. Together with teacher preparation & parental expectations, these serve as contending factors to societal marginalization, differential resource allocation or the content curriculum. To what extent can the cultural capital of the home & school counteract racial & gender inequality as well as reinforce prevailing marginalization without its immunizing influence?

Mooers, Colin Peter (Dept Politics Ryerson Polytechnic U, Toronto Ontario M5B 2K3 (tel/fax: 416-979-5000/5289; e-mail: cmooers@acs.ryerson.ca)), **Can We Still Resist? Globalization, Commodification and Class Formation.**

† Globalization of capital & the rise of neoliberalism have led many to conclude that resistance to these trends is all but futile; resistance is consigned to the micropolitical margins of society. All that emancipatory struggles can hope to achieve is some version of radical democracy in the confines of global capitalism. Here, it is argued that globalization & the intensification of commodity relations that underpins it is likely to produce both new challenges & possibilities for emancipatory struggles. While globalization may indeed contribute to the further fragmentation of working-class & other social movements, it is also likely to promote conditions for renewed class formation. The intensification of commodity relations is seen as the link between the decline of old capitalist institutions & emergence of new forms of consciousness & culture. Practices & ideological regime associated with lean production have had a significant impact on working-class formation & consciousness in many of the advanced capitalist countries. The hegemony of neoliberalism can, in part, be explained by its success in fostering "structures of feeling" in subordinate groups; however, popular consciousness is not exhausted by the dominant ideology, intensification of commodity relations as a result of globalization is likely to produce contradictory responses among subordinate groups in three key areas of class formation: struggles over the (1) conditions of lean production in the workplaces; (2) conditions of consumption; & (3) meaning of citizenship rights where the latter are contracting or subject to strict limitations.

Moore, Marissa (Council Scientific & Industrial Research Policy Group U South Africa, Pretoria 0001 (tel/fax: 27-12-841-2276/4174; e-mail: MMoor@csir.co.za)), **Strengthening Innovation Systems through a Reconceptualization of Factors Influencing Technological Innovation.**

† To emphasize the necessity of viewing science & technology within a national system of innovation, the South African White Paper on Science & Technology poses an important challenge to social scientists—the reconceptualization of factors impacting on scientific & technological growth or change. Addressed here is one area of this challenge relating to a social network analysis of the factors that affect technological innovation, not only incorporating technical & economic factors, but also addressing the formal & informal social relationships that influence technological innovation. In taking this broader view of innovation, socioeconomic & sociotechnical interactions become more apparent & provide a greater understanding of how to support growth through science & technology. Based on case studies in South African firms, several analytical issues are raised, including the use of inanimate factors in social investigations, the use of socioeconomic concepts to explain economic behavior, & issues in dealing with complex analytical frameworks.

Moore, Nelwyn B. & Davidson, J. Kenneth, Sr. (Southwest Texas State U, San Marcos 78666 (tel/fax: 512-392-4383/0164)), **Perceptions of Adoption among Pregnant Unmarried Teens: A Profile of Adoption Placers.**

m

¶ Examines variables associated with adoption attitudes of unmarried, pregnant teenager during their decision-making process at 8 months of gestation, based on data from an anonymous questionnaire administered to volunteer respondents at a residential, nonsectarian center for pregnant, unmarried persons in a southwestern US metropolitan area. After delivery, data were supplied regarding placed/kept status. The cohort effect & family-of-origin factors significantly influenced respondent decisions to place for adoption. Of the placers, 66+% had a close friend who had become premaritally pregnant, of whom 33% had placed for adoption. Placers were primarily from intact families & had emotionally supportive parental figure(s) who believed that adoption was the best option. Results indicate that reference group theory is a neglected area of inquiry concerning adoption placement. If society's goal is to increase the number of placers among unmarried, pregnant teens, peer counseling models should be investigated.

Mora, Jorge A. (U Nacional Costa Rica, Heredia 86-3000 (tel/fax: 506-237-5255/7593; e-mail: jmora@una.ac.cr)), **Costa Rica: Political System Disarticulation and Social Demobilization in a Global Change Juncture.**

¶ The stable Costa Rican democracy was based on a development model that could remain autonomous from historical events in Latin America. The participation of the state & the presence of efficacy mechanisms of income resettlement propitiated equity & social integration, leading to a solid bipartisan system. In the context of global changes (economical, political, & cultural) & in the frame of market predominance & the economic aperture, the 1980s saw a definition of the political & economical development of the country. But modifications in the rules of the game changed the relations between state & civil society and led to a credibility loss for the political system. There are now 14 different parties for the presidential elections, & a great number of provincial & local parties, an unusual that clearly expresses the political system's disarray. Presented here is a sociological interpretation of this process, with systematic information handling of relevant variables & a rigorous characterization of a decisive historic period in the continuity of the Costa Rican democratic regimen, in the frame of Latin American development tendencies.

Moran-Ellis, Jo (Dept Sociology U Surrey, Guildford GU2 5XH England (tel/fax: 01483-300800/259551; e-mail: Jo.Moran-Ellis@soc.surrey.ac.uk)), **Documenting Children's Physical Development: A Methodology for Analysing the Textual Recording of Children's Bodies.**

¶ Explores a methodology for examining the apparatus through which children's bodies are constructed, read, & normalized. By analyzing textual practices involved in documenting the physical development of children, the embedded ideologies & assumptions that govern documentation & normalization of children's bodies can be examined. Further, it can be shown that there is a relationship between this textualization & the construction of an idealized childhood.

98S35359 / ISA / 1998 / 12600

Morawsra, Ewa (U Pennsylvania, Philadelphia 19104), **The Malleable Home Sovieticus: Post-Communist Entrepreneurs in Transnational Capitalism.**

¶ Focuses on the emerging upper stratum of postcommunist entrepreneurs whose success derives from the use of three resources in particular, two of which—treated here jointly as “network-supported informal entrepreneurship”—are built on skills outlooks developed by citizens of state-socialist societies to deal with the inefficient Soviet system that have retained their utility in the new circumstances. The remaining one—“transnationalism”—is a more recent development generated by post-1989 transformations. It is argued that the *homo sovieticus* syndrome has contained different situationally activated component-adaptors: where there existed state-socialist provisions (eg, guaranteed employment & minimal wages), they sustained expectations; where, instead, the state notoriously did not perform provision & distribution of consumer goods, inefficiency actually fostered entrepreneurial spirit in the citizenry, forcing it to use whatever means it could to make everyday life possible & deviant behavior the social norm. It was, however, a collective entrepreneurship, in that “working the system” required cooperation or networks of informal support that expanded, actually, into the institutional sphere. The emerging entrepreneurial elite make effective use of their transnational position as “shuttling” (co)residents of their East European (home) & Western (host) countries. The effective use by post-

communist entrepreneurs of the above resources has been facilitated, on the one hand, by the broader political, economic, & cultural circumstances in which this new group emerges & that represent (sub)processes of globalization or increased “systemness” or interrelatedness of different regions of the world &, on the other hand, by multiple loopholes & contradictions in the trade, fiscal, & labor policies of transforming East European societies. Post-1989 Polish & Confederation of Independent States Jewish transnational entrepreneurs are used as illustrations, based on empirical evidence on contemporary “pendel migrants” from Poland & the former USSR whose permanent or temporary homes abroad are in Berlin, Federal Republic of Germany, & Philadelphia, PA, & on secondary sources & interviews.

98S35360 / ISA / 1998 / 12601

Moreira, Manuel Belo (Technical U Lisbon, Portugal), **The Dynamics of the Global Capital and Its Consequences on Agriculture and in Rural Spaces.**

¶ Attempts to promote public discussion of the globalization process & its effects on agriculture & rural space by looking at this process as the result of the action of the main economic agents of globalization & of global finance capital. However, considering this process as the result of the drive to accumulate capital is unsatisfactory. It is necessary to look at the main components of global capital, since they do not act the same. Global finance capital is separated into three ideal types: producer-, commercial, & speculative-driven capital. Each of these ideal types has its logic & dynamic; thus, an attempt is made to understand the effects of their action as well as the possible reactions. This means considering not only agricultural activity, but also the impacts on rural space & society. The goal is to discern what is really new & can be considered as effects of the globalization process.

98S35361 / ISA / 1998 / 12602

Morel, Regina M. & Pessanha, Elina G. F. (U Federal Rio de Janeiro, 21941-590 RJ Brazil (tel/fax: 55-21-224-8965; e-mail: rmorel@ax.apc.org)), **State and Labour in Brazil: A Review. Institutional Patterns and Recent Trends.**

¶ Analyzes some current changes in the relations between the state & labor in Brazil, which, in the past, were characterized by a strong intervention & regulation by the state, with serious implications for the corporatist behavior of both the entrepreneurial & working classes. Democratic consolidation & neoliberal adjustments have led to ambivalent public policies as well as ambiguous responses by the social actors. The possibilities & consequences of the definition of a new pattern are discussed.

Moreno, William J. (Consejo Peruano Autogestion, Apurimac 224 Of. 506 Lima 100 Peru CP 1432 (tel/fax: 511-4289626/4274753; e-mail: coppa@mail.cosapidata.com.pe)), **Spanish title not provided** (Citizen Participation: Condition *sine qua non* for Sustainable Local Governments). (SPA)

¶ Local governments are now strongly influenced by globalization, argued to be an economic phenomenon politically guided to benefit only a few, in contrast with the globalization of solidarity as an answer for citizen participation. Cities' needs for strategic plans & programs to ensure their sustainable development is much more evident, & there is urgency to improve the capacity of management of local administrations to guide the march toward development. This will require collaboration between the different levels of central & local governments, but this would be a wrongly conceived strategy if citizen participation were not guaranteed. This concept guides the logic of this sociological study. Self-management experiences & literature about participation & its dynamic effects on new forms of work & citizen life, especially since the 1970s, in Peru & the rest of Latin America serve as a lesson to suggest to local governments that citizen participation is an expression of democracy & in support of sustainable development.

Morgan, Dan (Centre Sport & Leisure Management Bolton Instit, Deane Rd BL3 5AB England (tel/fax: 01204-903615/637; e-mail: dml@bolton.ac.uk)), **An Artificial Dilemma: A Consideration of Rock Climbing's Cultural Compromises.**

¶ Over the past 5 years, 30+ new commercially operated indoor climbing walls have been built in the UK to meet the demand for a growing population of rock climbers. This artificial medium has presented rock climbing with a different set of challenges & an arena for soul searching among climbers as to the nature of their sport. An ethos of conscious risk

in the form of adventure has guided the community for 100+ years. However, the past decade has seen a move toward a more conventional approach to climbing that conforms to the rational & embraces the notion of no risk. This approach, ie, sport climbing, has become established in the UK, challenging the dominant ideology in rock climbing. "Adventure climbing" occupies the high ground in terms of cultural ascendancy, is inhabited by the patricians of the sport, & calls on its intellectual, spiritual, & aesthetic superiority & 100+ years of tradition for support. Sport climbing focuses on the physical contest articulated through training & competition with a consequent conformity to mainstream sport. Professionalism, prizes, sponsorship, agents, & sports scientists have provided a different lexicon & a competing ideological basis for the sport. The rock climbing world has witnessed a struggle over the cultural imperatives of the sport; pressure on the adventure climbing ethos has occurred as sport climbing practice has insinuated the natural crags. Open hostility has been displayed at a number of rock climbing venues as cultures collide. Interviews with a number of commercial operators are drawn on to explore the role of artificial climbing walls in this cultural struggle, & to ascertain whether climbing wall operators are sensitive to the adventure climbing ethos underpinning the sport or whether they consciously or subconsciously nurture the sport climbing ethos.

Morgan, Glenn D. (Business School U Manchester, M13 6PB England [tel/fax: 44-0-161-275-6388/6598; e-mail: G.Morgan@fs2.mbs.ac.uk]), **Discourses, Organizations and Institutions: 'Why Japanese Companies Rarely Have Strategies' (According to Michael Porter).**

¶ Michael Porter (1996) stated that "Japanese companies rarely have strategies," they fail to "distinguish between operational effectiveness & strategy," & "differences in operational effectiveness were at the heart of the Japanese challenge to Western companies in the 1980s." Focus here is on the presuppositions of Porter's argument & his attempt to reestablish what has elsewhere been described as strategy discourse to chart a way of looking at the world that creates certain categories of measuring, acting, & being. These categories then become naturalized & universalized. Failure to embed these categories in the organization, its practices, & modes of governance becomes a signal to others of a failure to manage. Thus, it is possible to trace the gradual colonization of the Anglo American business world by strategy discourse over the last 30 years (eg, Knights, D., & Morgan, G., 1995). What Porter sees correctly, however, is that this colonization has not been as successful in other parts of the world, though he assumes that the reason lies in contingent factors related to what he terms the "productivity frontier," & that, once these contingent factors disappear (as he argues is now happening), Japanese companies will need to develop strategies. An opposite approach builds on linking discourse analysis to the historical roots & institutional settings of particular ways of looking at the world. Discussion focuses on what is meant by strategy in strategy discourse, how this relates to the specific institutional context of Anglo American capitalism, & what light can be thrown on this by the study of East Asian companies, thereby contributing to an understanding of East Asian organizations & the study of institutions, organizations, & discourses.

Morrell, Robert Graham (U Natal, Durban South Africa 4041 [tel/fax: 27-31-260-1127/2609; e-mail: morrell@mtb.und.ac.za]), **Class, Race or Gender? Single Sex Schooling in South Africa.**

¶ In South Africa, single-sex schools are historically associated with white educational privilege. Private, often church-run, schools were established in the 19th & early 20th centuries for the white middle classes. Coeducational schooling, in contrast, was most commonly provided for blacks. With the rise of Afrikaner nationalism & the advent of National Party rule, coeducational schools became the prescribed government norm for white & black schools. Currently, in South Africa, single-sex schools are still common in both the public & independent (private) spheres. In the last 20 years, however, they have become multiracial, though they are still primarily for the middle classes. It is argued here that an assessment of the educational worth of single-sex schools should be made in the context of a society in transition. In terms of racial integration, single-sex schools have been frontrunners, adopting a policy of desegregation long before government schools. In terms of class, single-sex schools have remained elite institutions & have gained in strength by the weakness of the public school sector, which has battled to implement policies of transformation & redress. In terms of gender, boys-only schools embrace a gender regime that does little to challenge hegemonic

gender values. On the contrary, the emphasis on sporting excellence promotes hegemonic masculinity. Girls-only schools appear to advantage students socially & academically. Also, there may be a case for the establishment of government girls-only schools where levels of sexual harassment & violence obstruct educational achievement.

Moschonas, Andreas (Dept Sociology U Crete, Rethimno 74100 [tel/fax: 0831-24070/54015]), **Greek Political Parties and European Integration: A Balance-Sheet of a Complex Relationship.**

¶ Outlines a balance sheet of Greek political party active participation in the process of European integration in terms of benefits from & contribution to the European Union (EU). Benefits from the EU include democratization of structures & processes, rationalization of policies, & political legitimization of roles. The contribution to the EU touches the sensitive issues of the social dimension of European integration & democratic organization of the EU.

98S35368 / ISA / 1998 / 12609

Mozère, Liane (Dept Sociology U Rouen, F-76821 Mont Saint Aignan France [tel/fax: 330145405023]), **The Child Minding Business in French Cities: Towards Informality and Growing Oppression?**

¶ Analyzes the impact of economic crisis on child minders in France, who care for working mothers' children. Registered child minders seek income, stability, & social recognition as professional workers. Informal child minders are primarily income-oriented. In both cases, these women are generally unskilled in terms of requirements of the general labor market, although some former working women switch to such an activity when they have children of their own. Research shows rising competition in this field because many women have lost their jobs due to the economic crisis. Concern is expressed that economic depression in France will lead to informalization of child care, with less qualified child minders, often migrants, offering lower prices, thus putting more qualified, registered child minders out of business. Informal child minding is a relevant issue to be considered in the relationship between gender, race, & ethnicity in the workplace.

98S35369 / ISA / 1998 / 12610

Mozgovaya, Alla Victorovna (Instit Sociology Russian Academy Sciences, Krzhizhanovskogo 24/355 117218 Moscow [tel/fax: 7095-1287651/7190740; e-mail: alla@mozgovay.msk.ru]), **Women under Long-Term Risk: The Case of Russia.**

¶ Field evidence is presented from a Russian region under long-term technological risk, describing the social consequences. Many such localities have become places of ecological disaster after years of disregarding environmental & social consequences of "dirty" technologies & inhumane social policy. The main hypothesis is the supposition that men & women create different life subcultures (social, physical, psychological) in situations with long-term risk. Empirical indicators of such differences are described & analyzed.

Mucha, Janusz Leszek (Instit Sociology Nicholas Copernicus U, PL-87100 Toruń Poland [tel/fax: 48-56-276-40/247-65; e-mail: jmuch@cc.uni.torun.pl]), **Institutionalization of Sociology.**

¶ Institutionalization of sociology is considered a process of establishing social facts (chairs, departments, periodicals, etc) that introduced the

m

field into the academic mainstream & shaped its boundaries & identity. The emergence of sociology in Western Europe is discussed, & the establishment of sociological institutions in the US, France, & the Federal Republic of Germany is examined along with the organization of sociological institutions in Italy, Austria, & England. The beginnings of sociology in Central & Eastern Europe at the end of the 19th century & its institutionalization during the interwar period are analyzed, comparing the situation in Central & Western Europe. The post-WWII globalization of sociology is addressed.

98S35371 / ISA / 1998 / 12612

Mucha, Janusz Leszek (Dept Sociology Copernicus U, Toruń Poland (tel/fax: 48-56-276-40/247-65; e-mail: jmuch@cc.uni.torun.pl)), **Perception of Exclusion. Cultural Domination in the Eyes of Minorities in Poland.**

¶ Following the introduction of the concepts of cultural domination, culturally dominant group, & cultural minorities, the perception of cultural domination by some cultural minorities in Poland during the recent period of democratization is analyzed, hypothesizing that the democratization processes open the cultural space for minority demands & claims, contributing to the decrease of "objective" exclusion &, at the same time, the increase of the subjective sense of exclusion. In-depth interview data from about 20 members from each of three ethnic minorities—a sub-cultural group of adolescents, a countercultural community, & a neighborhood characterized by the so-called culture of poverty—underpin a discussion of different strategies adopted by ethnic & other cultural minorities regarding the political democratization process in the framework of strong cultural domination.

98S35372 / ISA / 1998 / 12613

Mueller, Georg Peter (Dept Social Work U Fribourg, CH-1700 Switzerland (tel/fax: 41-26-300-7789/9715; e-mail: Georg.Mueller@unifr.ch)), **Early Warning Indicators for Predicting Performance Gaps of the Welfare State: The Case of Old Age Poverty in Switzerland.**

¶ Focuses on the construction of systems of leading social indicators that can be used to predict performance gaps of the welfare state, eg, insufficient old-age pensions causing poverty after retirement. Such predictions can be derived from the analysis of life courses, which are, in many cases, still highly institutionalized with foreseeable status transitions & changes of needs & resources. Hence, life-course analysis is proposed to construct macrostatistical indicators (eg, share of singles in an urban population as a predictor of future old-age poverty) of future performance gaps of the welfare state. Theoretical & methodological ideas are empirically tested by comparing ex-post predictions with cross-sectional historical data about regional old-age poverty in Switzerland.

Mukerji, Shourabh (Young Horizons School, 100-B Karaya Road Calcutta 700019 India), **Social Changes in the Grass-Root Horizon (at Community Level): Cause-Effect Analysis.**

¶ Social transformation at the grassroots level in each local or peripheral social unit level in every society is the mission & vision of the end of this century & beginning of the next. The horizon of this social change is inclusive & conclusive of the means & ends of satisfying basic social & human needs as well as value-oriented relevant & sustained development, where the main actor will be the local human resources. The principles & premises of village socialism or community development model of equity & equality needed at the grassroots levels in India, as well as in each global locality, are examined in a cause-effect analysis.

Mukta, Parita (Dept Sociology U Warwick, Coventry CV4 7AL England (tel/fax: 01203-523-608/497; e-mail: parita.mukta@warwick.ac.uk)), **Social Identification of the Poor through Food.**

¶ Charts the transition in food patterns of the poor in Gujarat, western India, 19th century-present, drawing on historical documents, ethnographic studies, colonial records, & 1997 qualitative fieldwork data to map out the self-identification of the poor through the food they eat. Here, food acts as a cypher of social stratification & self-identification; the latter is argued to cut through other social categories of caste, religion, & community & act as a symbolic marker that articulates the social life & social reality of diverse sections of the poor. Examined is the struggle over social categorizations, social identifications, & food-as-a-resource by exploring the social, political, & cultural contestations that take place in specific social & historical contexts over the means of survival & the right to exist. It is contended that different social classes invoke food in their various attempts to wrest greater rights or privileges, making food central to the different social moralities articulated in the emerging configuration of social relationships. Self-identification of the poor through food makes for a significant shift in their social analysis & categorization of "the poor."

Muldoon, Jennifer Erin, Kreps, Gary A. & Bosworth, Susan Lovegren (Coll William & Mary, Williamsburg VA 23187-8795 (tel/fax: 757-221-1284/1007; e-mail: gary@provol.wm.edu)), **The Relational Dimension of Role Enactment in Disaster Research.**

¶ Addresses sampling & broader methodological issues related to studies of role enactment. In Bosworth & Kreps's (1986, 1993, 1994) disaster research program, data about role links are extracted from archival interviews with key participants in organized disaster responses. The original strategy of the Disaster Research Center for selecting these participants to interview was not systematic, & they were treated as informants rather than respondents. Based on the interviews, Bosworth & Kreps identified role links in terms of what each respondent reported. The project reported here applies & compares findings from an alternative approach to documenting links in archival interviews. The alternative strategy distinguishes role links that are reported by both parties from those that are reported by only one party. Reporting patterns are examined based on occupations, leadership statuses, & whether the link is contained within an organized response or outside of it. Results point to potential problems in sampling key participants in field studies of disasters & documenting links among them. This work also informs more general problems of name generation in studies of social networks.

Mulheron-Stinton, Anne (Faculty Nursing Sydney U, New South Wales 2006 Australia (tel/fax: 61-352-211-275; e-mail: annms@deakin.edu.au)), **Uncovering the Issues of Bodily Privacy for Older Women in Health Care Spaces.**

¶ Experiences of older women in health care settings, ie, exposure of their ill, vulnerable, & aging bodies & the loss of personal privacy, may result in feelings of humiliation, embarrassment, & erosion of control over invasion of both the object & subject body. Central to the concept of women's privacy in any health care place is the belief by many older women that removal of privacy denies them the right to the maintenance of intimate bodily functions & a healing-secure environment free from shame & embarrassment. A significant notion arises from the experi-

ences of both women & nurses, in that women seeking health care feel that their bodies & immediate spaces are invaded by members of the health care team frequently without regard for their privacy, dignity, & personal space. Infringements of basic privacy rights, ethical observance, & the dehumanizing effects of these issues appear not to be a consideration in the context of health care environments. Here, findings support the view that bodily & personal private space for women is an essential component of ethical care in any health care location.

Müller, Marion (Dept Sociology Ludwig-Maximilians-U Munich, 80538 Federal Republic Germany [tel/fax: 49-89-2178-3903/3905; e-mail: marion.mueller@lrz.uni-muenchen.de]), **Coping with the Cops—Resources and Restrictions for Agency of Homeless People in the Process of Criminalization.**

¶ Investigates the relationship between homelessness, criminality, & criminalization, focusing on the aspect of coping & circumstances that enhance or restrict the ability to interfere in the criminal process. Based on an analysis following Anselm Strauss's grounded theory methodology, data from 20 in-depth biographical interviews with homeless men in Munich, Federal Republic of Germany, are used to (1) paint a complex picture of how these men view the police, the process of prosecution, the courts, & prison; & (2) examine strategies they may deploy in dealing both with individuals in these institutions & restrictions formal institutions pose on individual agency. The task of avoiding the police, the courts, or, once charged, detrimental effects seems to be tremendous for homeless persons vs "normal" citizens.

Mulready, Patricia M. (10233 Capitol View Ave, Silver Spring MD 20910 [tel/fax: 301-589-6176/1438; e-mail: pmm@clark.net]), **Complementarity between Process, Symbolic Interaction, and Self-Concept Theorists in Explaining the Development of Fashion.**

¶ Symbolic interaction & process theories are similar in describing how individuals interact with social institutions whereby each influences the other, resulting in unexpected, cumulative changes. Norbert Elias's & George Herbert Mead's work is complementary in explaining how the modern self-concept is developed. Mead describes a process, but not where or how the process originated; conversely, Elias's psychogenesis & sociogenesis state the process of where & how, but are not adequate in explaining the mechanisms used to acquire self-concept. While Mead focused on language as the only significant symbol, Elias is more closely aligned with Cooley, Goffman, Stone, & Rosenberg in focusing on the importance of appearance & manner. Numerous ecological, structural, & cultural changes that took place during the Medieval period resulted in the development of a new concept of the self. Dress also changed, reflecting this new view. While many changes (eg, increasing interdependencies, foresight, etc) did not necessitate the introduction of fashion, when combined with the consequent individualism & preexisting cultural attributes of the Franks, they account for much of fashion (Blumer, Simmel, Rosecranz, König).

Munro, William (Dept Political Science Northwestern U, Evanston IL 60208 [tel/fax: 847-491-2628/8985; e-mail: wmunro@merle.acns.nwu.edu]), **Contested Communities: Ethnic Power, Flexible Production and the Politics of Place in KwaZulu Natal, South Africa.**

¶ Globalization has created new forms of community that subvert locality-based notions of political community & identity associated with the

politics of the nation-state. Diasporic senses of political identity reflect spatial & cultural tensions that highlight the role of locality in the construction of political communities. Further, in specific local settings, insertion of individuals into new global commodity flows can substantiate new relationships to locality that challenge conceptions of political community advanced by local political leaders. These relationships can heighten political conflict while securing new local cultures & attachments to place. Explored here are such tensions among rural communities of KwaZulu-Natal, South Africa, showing how political leaders seek to secure their party base by entrenching distinct cultural attachments to locale & ethnic identity that separate rural & urban constituencies. However, participation of rural communities in production for world markets in sugar, timber, & clothing industries has shaped new local cultures of work & association that challenge these attachments. New conceptions of community & identity have emerged to cut across the cultural claims of locality advanced by the party resulting in a cultural politics in which constructions of place have become a focus for conflict rather than community.

98S35383 / ISA / 1998 / 12624

Murphy, Raymond J. (Dept Sociology U Ottawa, Ontario K1N 6N5 [e-mail: rmurphy@ottawa.ca]), **The Enlightenment and the Triangle of Darkness. The Great 1998 Montreal Ice Storm.**

¶ Draws on the 1998 ice storm that struck the Montreal (Quebec) area to examine how the dynamic processes of nature overwhelm modern technology, social life, social structures, & cultural beliefs, highlighting the fragility of modern rationalization in the context of the forces of nature. The implication is that, if the risk of humanly produced global climate change is allowed to become an occurrence, the result could be sudden, brutish, & overpowering on a massive scale. Hence, demonstrated is the importance of studying the interaction between the processes of nature & social action, instead of treating social action as if it existed in a vacuum or examining only the effect of social action on the processes of nature.

98S35384 / ISA / 1998 / 12625

Murphy, Raymond J. (Dept Sociology U Ottawa, Ontario K1N 6N5 [tel/fax: 613-562-5800/5906; e-mail: rmurphy@uottawa.ca]), **Social Constructivism, Structural Constructivism, and the Human Redeployment of the Processes of Nature.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Argues that the social constructivism of Randall Collins has evolved into a new variant: structural constructivism. This version of constructivism debunks agency & reflexivity, & Collins used it in 1986 to predict the fall of the USSR. A critique of Collins's structural constructivism exposes its limits, eg, ambiguities in his predicted fall of communism, & explores the possibilities of such structural constructivism for the study of social action in context, ie, the context of the processes of nature. In particular, Collins's theory—that sudden episodes of restructuring can be provoked by geopolitical overextension that stresses & eventually breaks microlevel, taken-for-granted routines—is applied to the issue of environmental problems, opening new ways of looking at environmental issues.

Murray, Susan (Dept Education Oregon State U, Corvallis 97331-3703 [tel/fax: 503-377-6036/845-2875]), **Three Stories of Autistic Conflict at Lakewood University.**

¶ With sprawling grounds, old shade trees, & elegant ivy-covered buildings, Lakewood U presents a picturesque environment hinting of its roots as a pioneer school. Behind this peaceful exterior, problems were brewing at Lakewood; three different conflicts smoldered for years. Finally con-

m

lict erupted all over campus causing irreparable damage to professional reputations & personal self-esteem. In the aftermath, work relationships eroded & people were discredited; mental & physical illness occurred; lawsuits were filed. Conflict led to the demise of more than one administrator's career. The conflict destroyed friendships & inhibited the ability of groups to complete their work together. Here, an attempt is made to provide a portrait of people in conflict. Stories are told from participant points of view as well as from the perspective of people watching fearfully from the sidelines. The experiences of coworkers engaged in conflict, the observation of the researcher as she became part of their day-to-day work experience, & the standpoint of those watching the conflict from different levels of the university are recorded to offer a front-room view of how conflict escalated & what effect it had on people working together in higher education.

Mutschke, Peter (Informationszentrum Sozialwissenschaften, Lenestr 30 D-53113 Bonn Federal Republic Germany [tel/fax: 49-228-2281-135/120; e-mail: mutschke@bonn.iz-soz.de]), **Processing Network-Like Relationships in Bibliographic Social Science Databases.**

¶ In the field of information retrieval on bibliographic databases, the actors of scientific work are of special interest, particularly in evaluating experts for a certain subject or in deriving the relevance of documents from the relevance of their authors. Because of the document orientation of classical information retrieval systems, for the above purposes, a model is needed that deals with knowledge about the scientific structures in which documents, authors, or researchers are embedded. The major aim of the AKCESS project at the Social Science Information Centre in Bonn, Federal Republic of Germany, is to determine the relevance of scientists appearing in a database for a specific user-defined topic. The prototype of AKCESS allows a fuzzy pattern matching examining relationships between scientists & terms that co-occur in bibliographic documents. Moreover, a method has been formulated that recognizes the structure of the complete research landscape under study. Irrespective of a special query, this approach takes into consideration questions such as "Who is the most central scientist in sociology of family?" This method analyzes network-like relationships between persons in the database; including their semantic proximity, & derives their structural position (centrality, hierarchy) in these scientific contexts. As an expressive description of the world studied at an instantaneous point of time, the virtual relations produced by AKCESS can be used to draw inferences concerning the importance of scientists for a certain topic.

Mutti, Antonio (Dipt studi politici e sociali, Via Luino 12 I-27100 Pavia Italy [tel/fax: 0039-382-504806/21726; e-mail: mutti@ipv36.unipv.it]), **Particularism and the Modernization Process in Southern Italy.**

¶ The term "particularism" does not have a good reputation in the classi-

cal theory of modernization. It means social closure, as well as narrow & self-interested behavior, & is associated with traditional societies & premodern action. Its alter ego is universalism, the quintessence of modernity. It is claimed that a useful way to avoid dichotomous thinking is to analyze the interactions between particularism & universalism during the modernization process in order to distinguish forms of particularism that oppose themselves to modernity, coexist with modernity, or make specific positive contributions to the modernization process. On the basis of these suggestions, Italy's "southern question" is analyzed from a new perspective, which takes southern Italy's political & cultural tradition seriously, & defines the possibilities of an inner transformation of this tradition toward modernization. The problem can be synthesized as follows: How is it possible to extend social capital & generalize social trust in southern Italy starting from the existing levels of sociocultural & political particularism?

98S35391 / ISA / 1998 / 12632

Myles, John & Pierson, Paul (Florida State U, Tallahassee 32306 [tel: 850-644-3750; e-mail: jmyles@css.fsu.edu]), **Redesigning the Welfare State: Public Pension Reform in the OECD Countries.**

¶ Since the mid-1980s, almost all of the Organization for Economic Cooperation & Development (OECD) countries have legislated major reforms to their old-age security systems. Here, cross-national differences in patterns of reform & their determinants are identified. Emphasized is the role of existing programmatic design (path dependency) in determining the political feasibility of alternative options available to policymakers & the political actors mobilized by the reform process. National old-age security systems are being transformed, but the nature of the process makes eventual convergence around a common welfare state design unlikely.

98S35392 / ISA / 1998 / 12633

Nadeau, Sylvain (U Laval, Quebec G1K 7P4 [tel/fax: 418-883-4440/656-7861]), **French title not provided** (Normative Power and the Incorporation of Religious Values in the Public Space: The Quebec Case). (FRE)

¶ Since the Quiet Revolution, the Quebec bureaucratic state invested public space in education to try to evacuate the church & its values. Even though this order is incorporated into public law, the notion of legal pluralism brings out the fact that this insertion is fictitious. The transfer of the Catholic & Protestant Confessional Committees from the Public Instruction Council to those of the Superior Council of Education marks this stage of denominational bureaucratization. But organizational secularization has had no impact on value secularization. An attempt is made to identify these religious values by presenting an authority chain down from the Catholic & Protestant committees through rules, norms, & religious traditions, based on data from semistandardized interviews with members of the committees & related organizations.

Nahon, Sebastien & Charlier, Jean-Émile (Facultés universitaires Mons, B-7000 Belgium [tel/fax: 32-65-35-33-88/57-42]), **Les Églises catholiques: urbaines et sacrées** (Catholic Churches: Urban and Sacred). (FRE)

¶ Based on a year of observation in the Belgian city of Charleroi (200,000 inhabitants), a quantitative survey of 7,000 parishioners, & an ethnological survey involving 600 interviews, two popular meanings of churches are defined. According to the theory of conventions, they consist of two types of agreements or signals: spatial signs of belonging to a district in the urban area, & institutional marks of Christian practice. The parishioner survey revealed that their moving between the different agreements shapes churches into places of meetings & identity. The church, as the same object, suffers from all cognitive reappropriation: it is both a localization & an institution of membership, identity, & reference.

98S35396 / ISA / 1998 / 12637

Nakazawa, Hideo, Sung, Won-Cheol, Higuchi, Naoto, Mizusawa, Hiromitsu & Kado, Kazunori (Division Sociology U Tokyo, Bunkyo-ku 113-0033 Japan [tel: 81-03-3812-2111; e-mail: BYG00213@niftyserve.or.jp]), **Quantitative Analysis of Postwar Japanese Environmental Movement: Protest Waves from 1968 to 1982.**

¶ Tests the hypothesis that emerging social movement organizations & networks in Japan result from resident environmental movements in the 1970s, drawing on aggregate data on 3,000 protest events from several secondary sources. Refuted is the explanation that resident movements are the result of structural strain, ie, rapid urbanization or rapid economic growth caused by land development policy from 1962. Cross-sectional comparisons are used to test the hypothesis that patterns of interaction between social movements and political opportunity structure were transformed in the mid-1970s & current waves of social movements are characterized by this transformation.

98S35397 / ISA / 1998 / 12638

Nakazawa, Makoto, Saeki, Toshio, Mamiya, Toshio, Suzuki, Mamoru & Yajima, Masumi (Inst Health & Sport Sciences U Tsukuba, Ibaraki 305 Japan [tel/fax: 81-298-53-6375; e-mail: PXH01357@niftyserve.or.jp]), **The Status Preservation Strategy of Sport Events: A Case Study of the Masters Golf Tournament.**

¶ The Masters Golf Championship Tournament holds a prominent position in the major golf tournaments although it has the shortest history among them; it is one of the most prestigious sport events in the world. Focus here is on how it acquired & has preserved such high status. Major factors include the following: (1) for 60+ years, the site of the event has been the Augusta (GA) National Golf Club, a course laid out from the spectators' viewpoint, & maintained via constant readjustments; (2) spectators are composed of enthusiastic & supportive repeaters, most of them sophisticated in how they play a significant role as "prosumers" of the tournament; (3) though there are sponsors who financially contribute a great deal, the tournament is operated with as little commercialism as possible, giving the appearance of no sponsors; (4) the club members have a strong self-government & have been successful in organizing the tournament without an outside eventer; & (5) often called the "Golf Summit," the tournament also provides opportunities for VIPs of the golf world to meet & associate with one another. The significance of the tournament has surpassed the mere realm of sporting challenge. Though these are some major elements, it seems that the whole—which is irreducible to the element—makes the Masters Tournament a sacred place for both players & spectators.

Nalini, Bralini (Dept Sociology Madurai Kamaraj U, Palkalai Nagar Tamil Nadu 625021 India [tel/fax: 452-531762/859139]), **Social Stigma and Response to Disease with Special Reference to Leprosy.**

¶ The degree of social stigma attached to leprosy is greater than other diseases & disabilities by virtue of visible deformity, ulceration, & superstition, etc. Intellectual acceptance of scientific facts about leprosy is rejected even by educated people when seeing a patient affected by leprosy. Rude & dehumanizing reactions from others force patients to respond in a peculiar fashion. Investigated here are status of the families of patients, how patients experience the social stigma, & how social stigma affects their treatment process, drawing on interview data from 200 patients in Ramnad District, Tamil Nadu, India.

98S35399 / ISA / 1998 / 12640

Nalini, Bralini (Dept Sociology Madurai Kamaraj U, Palkalai Nagar Tamil Nadu 625021 India [tel/fax: 452-531762/859139]), **Midwifery in Rural India—Its Cultural and Medical Implications.**

¶ Explores the traditional practice of *dais* (midwives) in India in terms of its cultural, social, & medical implications. A case study of four villages in four districts of Tamil Nadu, investigates social background of the *dais*, pregnancy-related rituals & ceremonies, perinatal care & delivery modes, birth announcements, & breast-feeding.

98S35400 / ISA / 98 / 12641

Nalini, Bralini (Dept Sociology Madurai Kamaraj U, Tamil Nadu 625021 India [tel/fax: 0452-531762/859139]), **Sustainable Development and Family Relationship—Views of Two Generations.**

¶ The main aim of sustainability is to preserve & share equally the available resources among the current population & with future generations. Hence, sustainability can be regarded as an issue in intergenerational equity. The social side of sustainability refers to the fair distribution of basic needs so as to fulfill the objective of social peace. Investigated here is how the contemporary family holding two or three generations in itself, plans & administers for equitable sharing. Data from a random sample of 50 households in rural & urban India, including information from members of different generations, are drawn on to explore (1) sharing of space, finance, & health care; (2) the level of individual freedom & dependency behavior of two generations; & (3) the outlook of each generation with respect to the consumption & preservation of resources.

98S35401 / ISA / 1998 / 12642

Nalis, Gulengul (Dept Sociology U Bergen, Norway [fax: 47-55-58-91-99; e-mail: Gulengul.Nalis@sos.uib.no]), **Intermarriage in Norway: A Study of Gendered Ethnic Relations.**

¶ Explores intermarriage between Norwegians & non-Europeans through in-depth interviews conducted conjointly with 20 couples. Characteristics of intermarriage in Norway that differ from their counterparts in other countries where interracial & interethnic relations exist are discussed. Non-European spouses who are married to Norwegians are socialized in different societal contexts via different languages, coming to Norway usually after age 18, thus causing some communication problems for the spouses, at least initially. Mate selection preferences of Norwegian men & women differ with respect to geographical & cultural origin; eg, women from Southeast Asia constitute 62% of all non-European women in intermarriage, whereas the number of Southeast Asian men compose only 5% of all non-European men in intermarriage. Explanations for this pattern are considered in terms of dimensions & mechanisms of asymmetrical power relations both between the genders & in the same gender, ie, how inequalities between men & women are complicated by their membership in majority or minority ethnic groups. Intermarriages are analyzed as microlevel intimate relationships where the sociocultural construction of gender & ethnic identities are crafted. Addressed is whether gender & ethnic identities are made relevant in the everyday life of couples &, if so, how these identities are experienced & expressed by the spouses.

98S35402 / ISA / 1998 / 12643

Nambiar, Gleema (Stephen Leacock Bldg, Montreal Quebec H3A 2T7), **Using Identity Politics to Address Artworld Issues: A Case Study of the New Initiatives in Film Program at the National Film Board of Canada.**

¶ The Canadian government introduced its Multicultural & Employment Equity policies to induce federally controlled institutions to reflect the racial diversity of the population in their programs & workforces. Offered here is a case study of one institution's response to these policies: the implementation of the 6-year New Initiatives in Film (NIF) program begun in 1990 by the now-defunct women's filmmaking unit, Studio D of the National Film Board of Canada (NFB). The fault lines along which the goals of the NFB's various constituent parts clashed & meshed with the diverse goals of various parties in NIF's target communities (ie, "emergent aboriginal" & "of color" women filmmakers) are delineated. It is argued that, because the NIF program was structured according to the politics of identity ("race" in this case), artworld issues of unfair hiring & funding practices in the film industry became distorted & expressed as issues of identity. Obfuscating the professional dynamics in the world of filmmaking by using "race" as an organizing principle did not, in the longterm, assure the sustained inclusion of excluded groups within mainstream institutions. Data collected using participant observation, interviews, & document analysis suggest that effective strategy would have been for underrepresented groups to cultivate alliances with industry professionals based on concrete occupational, rather than hypothetical, race-based interests.

Nandi, Proshanta K. (U Illinois, Springfield 62794-9243 (tel/fax: 217-786-7584/7188; e-mail: nandi.proshanta@uis.edu)), **Fundamentalism—A Pursuit for the Ultimate Doctrine or an Exercise in Bigotry.**

¶ Passion for the literal pursuit of the faith or belief in recent times is viewed as inspired by the forces of fundamentalism, which appear to be on the rise. Explored from a Durkheimian perspective, fundamentalism is seen as emerging from sociopolitical exigency. Following a select account of fundamentalist upsurges through history, recent encounters are examined. It is contended that fundamentalism (1) is likely to grow in the wake of profound social & cultural changes perceived as threatening to the deeply held values; (2) is not, in & of itself, necessarily conflictual; & (3) is conflictual only when the protagonists champion their cause through a militant imposition of what they claim as the ultimate version of the "truth." Recent history provides examples of both kinds of fundamentalism—the kind that the faithful adhere to without denigrating, threatening, or imposing on others, & the militant kind, believed to be the only "truth" to which the adherents believe they alone have access & which must be championed at all cost. It is the latter kind that betrays bigotry & is likely to lead to confrontation.

Nandy, Ganesh (Instit Alternative Development Research, 358 Kampara Rd PO Chinsurah Dt. Hooghly West Bengal India), **Sociology of Change in the Social Formation in Dutch-Occupied Bengal: Premises and Elements with Reference to Chinsurah of West Bengal (1635-1800).**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Social formation & social change in an earlier colonized Third World territory & society, eg, Chinsurah, West Bengal (India), 1635-1800, can be characterized by both negative & positive experiences: negative in the sense of loss of sovereignty & being subjected to enforced suppression, & positive in the sense of mixture of the occupant & occupied cultures in the direction of the dynamicity of reciprocal expression & impression. In the case of Chinsurah, a positive convergence of culture & combination of the Eastern & Western administrative functional mechanism occurred, the bad effects of the political colonization are ignored. Here, the sociological behavioral pattern of the Dutch occupation of this area & its aftermath are analyzed. Some of the values evident in this period remain valid today.

Narayan, Sujata (Dept Urban & Regional Planning U Michigan, Ann Arbor 48109 (tel/fax: 313-764-1298/763-2322; e-mail: pduanlap@umich.edu)), **Cohousing as a Means of Fostering Sense of Community in American High-Rise Public Housing.**

¶ Asserts that the absence of sense of community among most residents of US high-rise public housing is due largely to the physical design of the buildings; inaccessibility of social services; & failure to involve residents in the planning process, consider their needs, & give them a choice of where to live. One alternative means of addressing the problems that have inhibited the creation of organic, tightly knit communities in such developments is the cohousing model. International & domestic case studies are used to explore how elements of the cohousing model—eg, design, collaborative planning process, & resident management—can be adapted to high-rise public housing to help foster a sense of community among residents. Topics discussed include gauging resident interest, reasons & procedures for converting high-rises, instituting resident management & shared responsibilities, financing creation & maintenance of the community, deciding on tenure forms, & providing social services. Measures that should be taken to overcome potential impediments & ensure the idea's success in the US context are considered.

Narayanan, V. K. (U Aveiro, 3810 Portugal (tel/fax: 351-34-370361/370215; e-mail: NARAYANAN@egi.ua.pt)), **The Role of Institutional Programs in Negotiating Science & Technology Policy: The Case of NASA's Space Station.**

¶ In technologically advanced countries science & technology policy is shaped by pivotal institutions, eg, the US's NASA (National Aeronautics & Space Administration). Such institutions serve as mechanisms for managing the social construction of policy, both as direct participant & facilitator. The formative stages of NASA's space station program

(1982-1986) illustrate the multilevel negotiations that underpinned the selling of the space station program to the president. Three key science & technology policy issues had to be managed: (1) the relative salience of science vs engineering, as represented in the debate between manned & unmanned space station proponents, (2) the decision to invite participation of international agencies as well as commercial interests, & (3) the economics of funding in a stringent fiscal climate. It is suggested that the organizational sociology of institutions such as NASA should serve as major theoretical lenses to explore & explain policy formation.

Narsimha Reddy, K. (Dept Sociology Osmania U, Hyderabad Andhra Pradesh India 500007 (tel/fax: 40-7802473/7019020)), **Internationalisation of Higher Education: An Indian Experience.**

¶ Examines the internationalization of higher education in India. Students, particularly those studying engineering, science, & technology, would like to seek higher education in other countries, though it involves higher academic expectations & investments. This tendency is reinforced by the presence of university delegations from Australia, the UK, Russia, etc, to recruit students. Discussed here are reasons why Indian students prefer educations in the US; eg, they will receive updated knowledge in their field of study, which would fetch them good jobs in the US & in India, & it improves their matrimonial choices. Also discussed are the benefits to the host country.

98S35408 / ISA / 1998 / 12649

Narsimha Reddy, K. (Dept Sociology Osmania U, Hyderabad Andhra Pradesh India 500007 (tel/fax: 040-7802473/7019020)), **From a Profession to an Occupation: An Indian Experience.**

¶ Explores teaching's shift from profession to occupation in India. In light of the lack of talent in the teaching profession, it is argued that pecuniary considerations, though important in the material world, do not seem to be the only criterion to attract worthy people to the calling. Entry into the teaching profession is much easier than into medicine, business, & industry. Further, the privilege of being in the profession has historically been monopolized by certain caste groups; to some, it means upward status mobility with a decent living. That the well-established teaching profession is becoming an occupation is being contested vehemently by competent & committed teachers. However, "nonteaching tribute" is increasing. The boundaries of this profession are blurred, & teachers, particularly black sheep, are looked down on compared to other professions; the respect a teacher commands is individualized rather than collective.

Nätti, Jouko (Dept Social Sciences U Jyväskylä, FIN-40351 Finland (tel/fax: 358-14-603-118/101; e-mail: natti@dodo.jyu.fi)), **Atypical Employment and Gender in Finland.**

¶ Examines part-time & temporary work as forms of atypical work in Finland, based on census & labor force survey data, 1975-1995. In Finland, 11% of female wage & salary earners work part time, & 20% are on temporary contracts; the corresponding figures for men are 5% & 14%. To ascertain whether atypical forms of employment appear precarious compared to standard employment relationships, job characteristics (union density, overlap between temporary & part-time work) & stability of employment were investigated. Results show temporary jobs tend to be more precarious than permanent full-time jobs. In most cases, part-time jobs seemed to be bridges rather than traps in the labor market. Motives in temporary work vary with business cycles, & temporary vs permanent workers have a higher risk of unemployment. However, shifting from temporary to permanent work occurs widely, especially among men.

Nätti, Jouko, Aho, Simo & Halme, Jukka (Dept Social Sciences & Philosophy Jyväskylä U, SF-40351 Finland (tel/fax: 358-14-603-118/101; e-mail: natti@dodo.jyu.fi)), **Does Labour Market Training and Subsidized Employment Reduce Unemployment? An Evaluation of Finnish Labour Market Policy 1990-91 and 1994-95.**

¶ In Finnish labor market policy, labor market training & subsidized employment are key. Here, their effectiveness is evaluated, 1990/91 & 1994/95 (N = 21,634 & 116,706 participants & controls, respectively), focusing on the individual unemployment impact at the microlevel. Regression analyses of individual-level information from various registers maintained by Statistics Finland & panel data for 1988-1995 indicate that participation in labor market training reduced, & participation in subsidized employment increased, the duration of unemployment during the subsequent year, after controlling background factors. In the subsidized employment, however, there was a large variation: start-up grants were more effective in reducing unemployment compared to subsidized employment schemes in the municipal & state sector. In addition, the effectiveness of labor market policy varied over time, reflecting changes in the business cycle & unemployment rate.

Nauck, Bernhard (Chemnitz U Technology, D-09107 Federal Republic Germany (tel/fax: 49-371-531-2402/2387; e-mail: Bernhard.Nauck@phil.tu-chemnik.de)), **Social Capital, Kinship Relationships and Social Incorporation of Immigrant Families.**

¶ The process of social incorporation of immigrant families in the Federal Republic of Germany is studied with new data on dyads of parents & adolescents, focusing on the social & cultural capital of immigrant families. The network approach distinguishes four different resources of social capital, related to family, kinship, minority, & majority. The cultural capital of immigrant families is measured by educational level & vocational training. Four possible outcomes of intercultural contact situations are distinguished: integration, assimilation, segregation, & marginalization. An explanatory model is proposed by relating these modes of incorporation into the receiving society systematically to the availability of social & cultural capital in migrant families & to intergenerative transmission processes. The outcomes of the culture contact are measured with several indicators of ethnic identification for both generations. Following the theoretical assumptions of Coleman on the transformation of families' social capital into the human capital of the offspring, a causal model for intergenerative transmission processes of social & cultural capital in migrant families is advanced. It is argued that only family- & kinship-related social capital & only minority- & majority-related social capital may substitute for each other, & the former two resources are of major significance for the resulting mode of social incorporation. The causal model is empirically tested using structural equation models for different migrant minorities, controlling for the respective opportunity structures of the immigrant context.

Navrotsky, Vyacheslav (Leninsky Prospekt 85 Kv 2, 236039 Kaliningrad Russia (tel/fax: 7-112-444-682/273-604; e-mail: Vyach@navr.koenig.su)), **Basic Characteristics of Social Systems.**

¶ It is suggested that a definition of a social system includes five parameters: content, structure, character of relationships between elements, & homeostatic & economic mechanisms. Such an approach allows clearer & stricter definition of the concepts of democratic & totalitarian types of a society. It is shown that, from the point of view of cybernetics, the democratic system makes it more stable. The proposed approach makes a formal description possible of the most important features of different historically formed societies. The analysis shows that, in most cases, economic & political changes occur in the course of evolution of one system. The death of the old system & the birth of the new one is a rare event. The alternation of smooth development & leaps is characteristic of the evolution of any open system, including social. However, human history shows that some nations experienced rapid radical changes much more often than others. As a concrete example, Russian history is considered. The difference between the collapse of Czarism in 1917 & crash of the communism in 1991 in Russia is analyzed.

Nayar, P. K. B. (Centre Gerontological Studies ASWATHI, Temple Road Ulloor Trivandrum 695011 India (tel/fax: 91-471-448502)), **Family and Intergenerational Relationships: Some Areas of Enquiry.**

¶ Arguing that the family is the best place for a person to spend the last years of life, & intergenerational harmony in interpersonal relationships is a sine qua non for the elderly to lead a peaceful life in the family, examined here are the major areas where intergenerational relationships are significant from the point of view of the elderly. Actual & ideal relationships between three generations living in an average family in traditional society are explored: the old, his/her children, & the grandchildren. It is shown that a major determinant of harmonious relationship between generations is economic, ie, the family's capacity to meet the minimum needs of the old &/or the old's capacity to have personal income support. Much intergenerational family conflict is due to lack of resources to meet the increasing cost of old age. A second factor guiding intergenerational relationships is the presence or absence of a caregiver in the family for the old—either a kin or a home nurse if the family can afford this. There is also the area of mutual adjustment to & toleration of each other's interests, demands, ego, & idiosyncrasies. Community organizations can act as catalysts & interventionists in matters requiring some outside support. This support can be in the form of material inputs (economic empowerment of the old) or services to the old & the family (counseling).

Nazar, Austreberta B., Rosales, Dolores M., Izaba, Benito S., Martelo, Emma Z. & Frisch, David H. (Carretera Panamericana & Periférico Sur Colegio Frontera Sur, CP 29290 San Cristobal de las Casas Chiapas Mexico (tel/fax: 52-967-8-1883/2322; e-mail: anazar@scle.ecosur.mx)), **Mediating Factors between Education and Non-Use of Contraceptives among Women of Low Socioeconomic Levels: The Case of the Border Region of Chiapas, Mexico.**

¶ Analyzes the relationship between women's formal education & the lack of contraceptive practices in the border region of Chiapas, Mexico, characterized by a low socioeconomic level. Although there is an intensive & widespread promotion of contraceptive methods, only 51.1% of women of fertile age use such methods. Results of a stepwise logistic regression analysis do not reveal a direct determining effect between schooling & the nonuse of contraceptive methods. Rather, the number of children that had died & other socioeconomic variables are important ex-

n

planatory variables. It is concluded that formal education (schooling) cannot be seen as just one isolated explanatory variable capable of modifying the level of contraceptive use &/or fertility through the greater incorporation of women into the formal education system. Although an increase in women's schooling levels is extremely important, a substantial change in reproductive behavior & levels of well-being as a result of increased education alone cannot be expected.

Nazer, Nancy & Wellman, Barry (U Toronto, Ontario M5S 2G8 [tel: 416-978-0250; e-mail: nnazer@chass.utoronto.ca]), **Scholarly Networks in a Loosely Coupled Organization.**

¶ Analyzes the structure & operation of a multidisciplinary group of 16 internationally dispersed scholars by focusing on the interplay between computer networks & the social networks that operate over them. These scholars collaborate on important & complex problems in the physical & human sciences. Their collaboration is examined using different types of computer-mediated communication technologies, as well as more traditional means of communication, eg, face-to-face meetings, phone, mail, fax. The development of relationships among the participants is traced, & the extent to which new ties are formed & whether these tend to be strong ties of collaboration or weaker ties of mutual awareness are considered. In addition, the association between different types of ties & content & flow of information & resources is examined. Focus is on how involvement in these computer-supported scholarly network groups affects (1) the composition, structure, & content of working & sociable relationships among scholars; & (2) knowledge transfer, information flows, mutual awareness, & scholarly productivity.

Neale, Bren & Smart, Carol (Dept Sociology & Social Policy U Leeds, LS2 9JT England [tel: 0113-233-4451; e-mail: b.neale@leeds.ac.uk]), **Theorizing Family Life after Separation or Divorce.**

¶ Explores how postdivorce parenthood is being conceptualized in legal & sociological discourse, & places these constructions in the context of postdivorce family life in the 1990s UK. The emergence of a new ideological construction of parenting & partnering in UK legal policy since the passing of the Children Act 1989 is examined, that of a conceptual shift from the notion of a reconstituted nuclear family based on the formation of "step" kin ties to the notion of a cross-household or binuclear family based on the preservation of biological kin ties. In this construction, parenting supersedes partnering as the bedrock of the family, & divorce becomes recast as a (nearly) normative stage in the newly extended family life course. New sociological perspectives are drawn on to offer alternative ways of conceptualizing family obligations, social change, & diversity, analyzing data from 60 separated parents to explore how parental care & authority are morally negotiated & renegotiated over time. Disparities between the complex realities of living postdivorce parenthood & the ideological constructions of postdivorce family life that are now guiding legal policy are discussed, suggesting the need to rethink the relationship between families & the state to develop grounded family theory to feed into this process.

Neale, Bren, Wade, Amanda & Smart, Carol (Dept Sociology & Social Policy U Leeds, LS2 9JT England [tel/fax: 0113-233-4451/4415; e-mail: b.neale@leeds.ac.uk]), **Agents or Dependents? Struggling to Listen to Children in Family Research and Family Law.**

¶ Explores two potentially conflicting ways of conceptualizing children: as agents of their own lives & as dependents in need of protection from harm. Tensions that arise in trying to reconcile these two modes of thinking are examined in terms of how they play out in two contexts in the UK: child participation in (1) research on family lives & (2) legal proceedings under the private law provisions of the Children Act (1989). Personal experience studying how children negotiate their relationships with existing & new kin in postdivorce families underpin a discussion of research design & practice used to maintain the epistemological position that children are social & moral agents while acknowledging the realities of children's dependency in their families & their potential vulnerability. Investigated is why it is that, in a legal context, despite legislative principles that accord children agency, children are still constructed as dependents whose needs must be determined for them. Implications of this analysis are considered, focusing on how different conceptualizations of children can produce varying research findings about them as well as different policy interventions in their lives; it is suggested that current im-

balances in how children are conceptualized need to be addressed both in family policy & research that informs this policy.

98S35421 / ISA / 1998 / 12662

Nebbia, Angel F. (U Autonoma Metropolitana Iztapalapa, 09340 Mexico DF [tel: 5-724-47-91; e-mail: nebbia@compuserve.com]), **The Problematic Aspects of Rationality in Action Theory.**

¶ Posits an action model as presented by Talcott Parsons, following Max Weber & redefined by Jürgen Habermas. Established for each action orientation is complementary support of the other two. In the case of the instrumental rational orientation, or formal, to use Weber's term, the emotional is supposed to mean confidence or emotional support; the value orientation is considered as related to the very process of selection among alternatives. The same procedure is presented in the case of the other two formal orientations. For each of the subsystems in the general action system by Parsons, a distinction is made among different dimensions of subjectivity at the personality structural level; intersubjectivity at the interpersonal or social level; & intrasubjectivity at the generalized action level. This general schema is applied to a macroanalysis to show the descriptive analytical power of the systematization presented.

98S35422 / ISA / 1998 / 12663

Nederveen Pieterse, Jan (Instit Social Studies, NL-2502 LT The Hague Netherlands [tel/fax: 31-70-6260-575/31-70-4260-799; e-mail: nederveen@iss.nl]), **Collective Action and Globalization: Theories and Prospects.**

¶ Focus is on forms of collective action that directly relate to globalization, emphasizing those that seek to shape or influence globalization. Two kinds of futures interact in this argument: futures of collective action & of globalization. Scenarios of globalization include (1) global apartheid, (2) triadic or G7 world management, (3) regional blocs, (4) asymmetric multilateralism, (5) symmetric multilateralism, & (6) global democratization (cosmopolitan democracy). The most likely scenarios of global development are asymmetric & symmetric multilateralism. At issue is the countervailing power at the global level. To what extent will international institutions such as the World Bank be conducive to collective actions that seek to steer them toward a more symmetric direction? Nongovernmental organizations are playing a growing role & are subject to questioning as to their legitimacy, organization, & accountability. They are alternately viewed both as articulating social demand & the great hope for the future, & as a form of subpolitics, the institutionalization of which may lead to a refeudalization of politics. Their role varies according to issues (environment, development, human rights, peace, security, women's rights), mode of organization, methods of intervention (media, lobbying), their willingness to cooperate with international institutions & North-South relations. Other relevant social forces are professional organizations (epistemic communities) & media.

Negus, Keith (U Puerto Rico, San Juan 0936-4985 [tel: 787-721-8662; e-mail: knegus@rrpac.upr.clu.edu]), **Re-Thinking Approaches to the Culture Industries.**

¶ The concept of a culture industry was first used by Theodor W. Adorno & Max Horkheimer during the 1940s & has continued to be drawn on by writers seeking to explain cultural production. It is argued that one cannot assume that there are simple correspondences between cultural industries such as film, TV, recorded music, or book publishing. There are many differences in aesthetic form, content, working practices, means of financing, & modes of reception. Drawing from empirical research on the music media, entertainment industry, & electronic technology production, the aim is to rethink the culture/industry issue by taking the above argument one step further: it is not simply that the culture industries are plural (from industry to industries) but that all industries are cultural. All industries are producing products or services that carry cultural meanings & require interpretation. At the same time, all industries are constituted within specific cultural contexts that shape how people think, feel, & act in organizations. In this sense, industries are producing culture, but culture is also producing a particular type of industry. It is misleading to draw a boundary around the culture industries as a media & arts entity artificially separated from nonculture industries. It is suggested that important insights into the relationship between economics & culture can be gained by connecting conventional approaches to cultural production with discussions of the broader cultures of production through which other industries are organized & constituted.

Neves, Delma Pessanha (U Federal Fluminense, 24220-000 Niterói RJ Brazil), **Forms of Integration of the Agriculture Producers under Rural Settlement.**

¶ The political visibility of the agricultural producer in a settlement is, for the most part, defined by the productive capacity & the acquisition of autonomy in the replication of the production presuppositions. Emphasized here is understanding the relationships inherent in various forms of commercial integration that correspond to different forms of conception of the producers' image. Methodological limits of analytical proposals that consider the unit of production & the market by discontinuities are also discussed.

98S35427 / ISA / 1998 / 12668

Neves, José P. (U Minho, P-4700 Braga Portugal [tel/fax: 351-53-615835/676966; e-mail: jpneves@ci.uminho.pt]), **The Paradoxes of Participation: The Perspectives of Michel Foucault and Gilles Deleuze.**

¶ The crisis in sociology, namely in the study of participation phenomena, opens the way for approaches from philosophy that might produce fruitful theoretical challenges. It is the case of Michel Foucault & Gilles Deleuze, when considering "soft" concepts that are open to the plural & indeterminate character of power relations. It is argued that their two approaches, while emphasizing the paradoxical character that crosses both the production of meaning & power relations, are complementary & simultaneously divergent: complementary because the two contributions were developed in the same historical context &, to a certain extent, in a long-distance dialogue; but divergent because Foucault, following Friedrich Nietzsche's philosophy, focusing on the omnipresent character of power relations & correlated strategies, suggests that we should think historically about the present & our process of subjectivation. However, Deleuze's heterodoxy suggests a perspective based on ourselves constructed as pieces of something that exceeds us, in a cosmic whole. In other words, while Foucault is suspicious regarding Western knowledge & the power that crosses us in our definition as subjects, Deleuze leads us to the territories of a heterodoxy where the social sciences can learn much from aesthetics, natural science, & other fields of human experience.

98S35428 / ISA / 1998 / 12669

Neves, José P. & Loureiro, Esmeralda C. (U Minho, P-4700 Braga

Portugal [tel/fax: 351-53-615835/676966; e-mail: jpneves@ci.uminho.pt]), **The Discourse of Participation in a Multinational Company: A Deconstruction Based on Michel Foucault's Theory of Power.**

¶ Presents a dialogue between two forms of looking at the phenomenon of participation in a multinational company. The first derives from a theoretical trajectory that criticizes the classic concepts of power & participation, stressing their limits, but also the importance of a close look at the microprocesses through which power is activated. The second is characterized as thought that seeks to find a reply to the complexity of the author's experience as an agent of a participation process. Therefore, this text is centered more on the perplexities, the paradoxical lines in a logic of multiplicity, rather than a hierarchic unification based on the reification of the subjects & on the use of fetish concepts, common in a traditional sociological thinking. Our critical position equally leads to suspicion of the usual procedures of social inquiry. Then, we can say that our purpose is to return to Michel Foucault's experience during the construction of his "soft" theory. In other words, we suggest another possibility of joining a theoretical sociology & an applied one, through what Foucault calls the "analytics of the actuality."

98S35429 / ISA / 1998 / 12670

Nevo, Iddo (Dept Political Science Hebrew U Jerusalem, IL-91905 Israel [tel/fax: 972-2-5663450/5881333; e-mail: msdahan@mscc.huji.ac.il]), **Sports Institutions and Ideology in Israel: The Development and Change of Israeli Sports.**

¶ Examines the establishment of political sports clubs institutionally affiliated with international associations of sport in Israel, mainly clubs affiliated with hegemonic Zionist-Socialism. Another instance of the political & ideological development in Israel can be identified in certain tones in the debate on the social functions of sports. While some of this debate has a particular Palestinian-Jewish context, other aspects are universal. During the 1960s & 1970s, this model of the political organization of sports was taken over gradually by a model of the public & nonparty organization of sports in society. This shift was first noticed among the more peripheral branches of sports, eg, bicycling & boxing, but later came to encompass the more crowd-attracting sports, & may be construed in purely political terms. In the 1980s, the more popular sports, ie, football & basketball, were privatized & rapidly commercialized. This process had a great influence on Israeli sports at many levels. The rapid change from political & public sport organizations to commercialized sports contributes to a better understanding of the Israeli case, in addition to serving as a laboratory for viewing the changes that have occurred in sport organizations in the 20th century, in general, & in highly ideological societies, in particular. The changes in Israeli society as reflected by the changes in sports organizations & the culture of sports are described, focusing primarily on the individualization of Israeli culture & society.

Newman, Peter & Thornley, Andy (School Built Environment U Westminster, London NH1 5LS England [tel/fax: 44-171-911-5000/5171; e-mail: newmanp@wmin.ac.uk]), **Governance, Urban Policy and Planning in London.**

¶ Examines the processes of institutional fragmentation & centralization in the governance of London, England. Since the abolition of metropolitan government in 1986, government institutions have fragmented, with the creation of numerous quangos & partnerships that play an active role in urban policy & planning decision making. At the same time, central government has exercised tight financial control over local government, overseen development & regeneration processes through detailed rule setting, & through appointments to the boards of new bodies. The new Labour government has already outlined the shape of a development agency to coordinate economic development policy & will publish details of proposed local government reform in spring 1998. These initiatives are reviewed, & their impacts on the already complex networks of governance in London assessed.

98S35431 / ISA / 1998 / 12672

Newton, Tim J. (Birkbeck Coll U London, WC1E 7HX England [tel/fax: 171-631-6751/750; e-mail: t.newton@org-psych.bbk.ac.uk]), **Power, Subjectivity and Industrial/Organizational Sociology: The Relevance of the Work of Norbert Elias.**

¶ Applies the studies of Norbert Elias to a reconsideration of approaches to power & subjectivity within industrial/organizational sociology,

n

showing how Elias's work reframes understanding of power & subjectivity through a stress on interdependencies & their asymmetry, the networked nature of agency, & the interwoven form of human & sociopolitical development. It argued that Eliasian analysis addresses many key difficulties encountered with dominant approaches to organizational sociology. For instance, his work retains the critical perspective apparent in labor process theory, yet abandons its economic determinism, intra-organizational focus, & ahistoricism in the treatment of subjectivity. Equally it maintains an interest in the Foucauldian sense of discursive practice, but underscores how the establishment of discursive practice needs to be related to figurational context. His emphasis on Homines aperti questions the overly individualized conception of the self apparent in much organizational literature, & so, furthers the stress on networked agency witnessed within actor network theory. At the same time, however, the Eliasian emphasis on asymmetry presents an interesting contrast to the actor network commitment to symmetry, while his figurational concerns can be used to question how actor network theory "black-boxes" human actors (Newton, T. J., 1996 [see abstract 9706729]). His work also remains of interest to other recent developments in industrial/organizational sociology: eg, his focus on feelings & the construction of civility furthers the growing attention to emotion in organizations (Newton, 1996 [see abstract 9611690]), while his exploration of individualization is relevant to current debates within industrial/organizational sociology concerning corporate & organizational culture as well as those relating to individualism and collectivism. In exploring these themes, also considered are (1) the extent to which Elias can be viewed from within a postmodern sensitivity, (2) the way in which his arguments can be applied to a reconsideration of early stages of capitalism and industrialization (Newton, 1997), & (3) limitations of Eliasian analysis.

Ng, Michele & Wong, Lloyd L. (Okanagan University Coll, British Columbia V1V 1V7 [tel/fax: 250-762-5445/470-6001; e-mail: lwong@okanagan.bc.ca]), **Transnationalism and Chinese Ethnic Entrepreneurship in Canada.**

¶ Examines the development of transnational business enclaves & transnational family networks by recent Chinese immigrant entrepreneurs in Canada, drawing on a longitudinal panel study of Chinese business immigrants who came to Canada in 1994 & live in or near Vancouver, British Columbia, & 1995 & 1997 case studies of approximately 10 Chinese entrepreneurs who participated in personal in-depth interviews. The main premise is that these transnational enclaves & networks are increasingly used by entrepreneurs as a form of ethnic resources to network capital as they attempt to compete & survive in the Canadian economy. This transnationalism has become increasingly utilized as an ethnic strategy in their ethnic business development.

98S35433 / ISA / 1998 / 12674

Ngan, Esther & Chow, Ling (Dept Sociology American U, Washington DC 20016 [tel/fax: 202-885-2475/2477; e-mail: echow@american.edu]), **Economic Reforms, Gendered Migration, and Employment of Migrant Workers in the Manufacturing Industries of Southern China.**

¶ Examines the effects of the Chinese state's economic reforms & open door policy on gendered migration from rural to urban areas, & considers how international migration as a family survival strategy has affected the nature & process of job search & labor force participation of migrant women as well as how their location in the manufacturing sector shapes their labor experience. The interlocking relationships among capitalism, patriarchy, & the state in constructing migration processes, & employment & wage consequences for workers, are demonstrated, focusing on whether women migrant workers have reaped the benefits of economic development. Policy implications of the state's economic reforms at different levels are addressed.

98S35434 / ISA / 1998 / 12675

Nguyen-Duy, Veronique (Dépt information & communication U Laval, Quebec G1K 7P4 [tel/fax: 418-656-2131/7807; e-mail: veronique.nguyen-duy@com.ulaval.ca]), **Le Complexe de Cendrillon. Évolution du statut du téléroman dans le discours de la presse écrite (1980-98)** (The Cinderella Complex. The Evolution of the Status of the Soap Opera in the Discourse of the Press (1980-98)). (FRE)

¶ Traditionally, soap operas have kept their storylines in the private sphere, but in recent years, some producers have begun to focus on themes of social character, as happened in the *Jasmine* series, which

looked at intercultural relationships, & in *Urgence*, which featured a storyline about the restructuring of the health care system. It is argued that, in basing their plots on controversial issues of the day, soap operas illustrate collective debates, but favor certain attitudes over others. The soap opera is overcoming its reputation as a simple source of entertainment & taking on new responsibilities as a vehicle of information or even a tool of popular education. It is proposed that this type of program be referred to as the "societal soap opera."

98S35435 / ISA / 1998 / 12676

Nicholson, Michael (Dept Politics U Sussex, Falmer Brighton BN1 9RH England [tel/fax: 01273-606755/673563]), **Preferences and Choices of Organizations.**

¶ Discusses the complications involved in the concept of preference as it applies to the analysis of choices by groups of people &, in particular, of organizations such as governments or bureaucracies. In much analysis, it is taken for granted that one can simply extend the conventional preference analysis to group decision making without any serious problems, except, perhaps, from the Condorcet paradox; eg, it is often assumed that states can be regarded as unitary actors. Even when the process is recognized to be more complex, it is common in the rational choice tradition to assume that there is some unproblematic way of amalgamating the individual preferences of decisionmakers (members of the government) to form an organizational preference. Scholars such as Elster, Sen, & Ainslie have queried the legitimacy of the simple concepts of preference as used in standard economic analysis. Their arguments apply primarily to individuals. It is shown here that they are compounded when applied to organizations. A particular concern is with the legitimacy of assuming that states have preferences & utility functions closely analogous to those of individuals, as is assumed in much analysis in international relations. The argument does not imply that rational choice analysis cannot be applied to states or other organizations. However, rational choice analysis should be used with caution & an awareness of the significant modifications that might be required.

98S35436 / ISA / 1998 / 12677

Nicholson, Michael W. & Gleditsch, Kristian S. (Instit Behavioral Science U Colorado, Boulder 80309-0487 [tel/fax: 303-492-3248/3609; e-mail: nicholso@colorado.edu]), **Globalization, Trade, and Conflict.**

¶ Explores hypotheses on the impact of globalization on the trade & interstate conflict nexus by clarifying its impact on levels & types of interdependence, using data on militarized interstate disputes as well as the directionality of economic relations between states. Implications of the notion that a greater extent of trade tends to integrate states in an interdependent community, thus increasing sensitivity & vulnerability to costs from conflict involvement through disruptive economic consequences, are tested. It is also examined whether globalization, despite increasing the absolute extent of trade involvement, decreases the relative bilateral trade interdependence & costs of conflict between given pairs of states given the associated internationalization & deterritorialization of economic relations. Consequences of different types of trade arising with globalization are explored: increasing trade involvement & greater degrees of specialization may have dramatically different implications for conflict between states depending on the type of trade involvement & production processes. Whereas more symmetric forms of trade involvement may serve as a force of integration among core states, highly unequal forms of differentiation through trade may be a force of polarization increasing the likelihood of interstate conflict.

98S35437 / ISA / 1998 / 12678

Nicolopoulos, Philip (U Crete, Perivolia Rethymno 74100 Greece [tel/fax: 01-7291710]), **Radical Political Organisations and the Dynamics of Social Change in a Complex Environment.**

¶ A complex environment (ie, society plus natural & built environment) includes an expanded chain of interrelations & interactions among particular specialized elements & entities (actors, groups, structures, & processes). It can be approached in parallel by both a static & a dynamic standpoint. It includes states on equilibrium & nonequilibrium, while the changes that happen in that are associated with many levels of its structures (multilevel approach of social changes). The effective activity of a radical political organization, ie, an organization that aims to overthrow or change the established sociopolitical structures & institutions, in such a complex environment, consists in finding its own right position in the concrete situation of the complex environment or more specifically, in the dynamics of its changes. Among radical political organizations, the

structural elements of the complex environment & its trends of change, a fluid dialectical game with many fluctuations is developed that corresponds to the more general dynamics between actors & structures. A radical political organization can apply the systems & sociocybernetic approach as it maps out its tactics & strategies in the process. In any case, application of this approach does not mean identification with a static perception of social & political things.

98S35438 / ISA / 1998 / 12679

Nieboer, Anna Petra (Dept Sociology ICS, Grote Rozenstr 31 NL-9712 TG Groningen Netherlands [tel/fax: 050-363-6250/6226; e-mail: A.P.Nieboer@ppsw.rug.nl]), **Life-Events and Well-Being: A Prospective Study on Changes in Well-Being of Elderly People Due to a Serious Illness Event or Death of the Spouse.**

¶ Examines the impact on well-being among elderly following a serious illness event or death of a spouse, based on data from the Groningen (Netherlands) Longitudinal Aging Study. Results reveal clear differences in the extent to which people's well-being deteriorates, as compared to their pre-event level of well-being. Moreover, their rate of adjustment also varies widely. Findings suggest that circumstances before & briefly after the events influence the impact as well as the adjustment process. Following the social production function theory, activities of people are seen as means for the production of well-being. Impact of & adjustment to the life event both depend on the degree to which these productive activities were dependent on the spouse who fell ill or died. The results support the notion that it is possible to explain something seemingly as private or psychological as dealing with a serious illness or death of a spouse with a theory about the joint (ie, social) production of individual well-being. Social production function theory appeared to be well-equipped to address interdependencies between family members & the effects these interdependencies have on the objective meaning of the event &, consequently, on short- & long-term changes in well-being.

98S35439 / ISA / 1998 / 12680

Nieboer, Anna Petra & Siegwart, Lindenberg (Dept Sociology Groningen U, NL-9712 TG Netherlands [tel/fax: 50-363-6250/6226; e-mail: A.P.Nieboer@ppsw.rug.nl]), **Social Indicators of Well-Being: Developing and Applying New Measurement Instruments.**

¶ In arguing that investigating alternative forms of social well-being is likely to play a significant role in detecting the existence of solidarity in different communities, an attempt is made to develop a theory-guided measurement instrument for social well-being that will be applied to a representative sample of the Dutch population. Theoretical & methodological issues are discussed.

Nielsen, Greg (Dept Sociology & Anthropology Concordia U, Montreal Quebec H3G 1M6 [e-mail: nielsen@vax2.concordia.ca]), **Looking Back on the Subject of Action: Mead, Scheler and Bakhtin on Empathy and Dialogue.**

¶ Part of a larger study that seeks to secure a place for the aesthetic & ethical theories of the late Russian culturologist, Mikhail Bakhtin, among the classics of the sociological tradition. A more limited comparative discussion of three approaches to the sociology of the subject is proposed. Each thinker is discussed in his own philosophical tradition, as well as his own object domain—symbolically mediated interaction for George Herbert Mead, social life for Max Scheler, & cultural products for Bakhtin. The Hegelian influence on Mead is reviewed briefly & contrasted with the neo-Kantian influences on Scheler & Bakhtin. Similarities & differences are compared for each approach to the subject & the subject of action & briefly situated in terms of the contrast with the earlier positions of Max Weber & Georg Simmel; attention is paid to comparing the notions of empathy & understanding that each develops. Focus is on Bakhtin's critique of pure empathy & how he moves beyond Scheler's influence in his revision of the 1929 version of *Dostoevsky's Poetics*. The twist for Bakhtin is that ethical social action is more than submitting to duty or an intersubjective communicative negotiation over norms & values; the act is both creative & answerable, composed of a two-sided answerability including reference to the uniqueness of subjects' struggle to become themselves & a more general reference that situates the act as an emotional-volitional orientation in the actor's life history—as a nonalibi in Being. The double dimension of creativity & answerability is familiar to yet reaches beyond, Mead's discussion of the development of the I & the Me. This latter comparison founds a renewed call for a dialogical definition of social action.

98S35441 / ISA / 1998 / 12682

Nieuwebeerta, Paul & Gijbels, Merve (Dept Sociology Utrecht U, NL-3508 TC Netherlands [tel/fax: 31-30-253-2101/4405; e-mail: p.nieuwebeerta@fsw.ruu.nl]), **Recent Left-Turns in Post-Communist Societies: Effects of Social Class and Norms on Income Inequality on Voting Behavior in Comparative Perspective.**

¶ In some parliamentary elections in postcommunist countries, communist governments were reelected. Examined here are the social causes of these recent "Left turns," drawing on data from Eastern & Western European studies. Comparison of postcommunist countries where Left turns took place, eg, Hungary & Bulgaria, with those where none appeared, eg, the Czech Republic & former East Germany, as well as with Western European stable democracies, show that societal Left turns are linked with individual-level data on voting behavior. Further, on the individual level, the effects of social class & inequality norms on voting behavior are determined, & the extent to which the relationship between social class & voting behavior is mediated by people's norms on income inequality is examined.

98S35442 / ISA / 1998 / 12683

Nigg, Joanne M., Geis, Donald E. & Briechele, Kendra J. (Disaster Research Center U Delaware, Newark 19716 [tel/fax: 302-831-6618/2091; e-mail: nigg@udel.edu]), **Mitigation Actions at the Local Level: A U.S. National Assessment.**

¶ Because of the continuing escalation of disaster recovery costs in the US, governmental interests in reducing disaster impacts have begun to increase. Local-level governments are beginning to think about the policies, practices, & programs necessary to transform their communities, not merely by responding more effectively once a disaster occurs, but by lessening the likelihood that natural hazard impacts will actually have disastrous consequences. A national survey was conducted of a random selection of 509 cities to determine the extent to which mitigation actions have been taken. Community officials were asked about their mitigation efforts for different natural hazards, as well as about the barriers & incentives that affected the level of mitigation they had achieved.

98S35443 / ISA / 1998 / 12684

Nikolić, Mihajlo J. (Tehnički Fakultet Zrenjanin, Yugoslavia [tel: 23-62248]), **The Culture as a Combination of Some Open and Closed Systems.**

¶ The combination of closed & open systems in the sphere of culture takes place because of differences between autonomous & heteronomous regulations, direct & indirect outputs, & close & distant effects of the creative work. A single creator may bring into accord the direct output with the input, but, in the course of transfer & implementation, results become related to other creations, so that a distant output is formed that can be regulated only from the inception point of an activity. Influential in this respect are spontaneous changes & regularities/laws; transformation & restructuring of the effect of any of the cultural parts takes place as well. Consequently, it is necessary to distinguish between corresponding initial & consecutive identities. While affecting social subjects, creating the subjective contents of social systems, & producing their artificial elements, culture regulates & gives rise to the relationship between the virtual & the real. However, every creator in the sphere of culture also produces those virtualities that evade control. The contribution of culture to the formation of social systems may be measured by the degree of the ability of subjects to activate & use cognitive, axiological, ethical, aesthetic, practical, organizational, technical & technological, economic, legal, & other ways of such transformation of the virtual into reality, by which a many-sided & integrated progress could be continuously achieved. To put into effect the favored trend, while discouraging obstruction, there is a process of stimulation of the support trend. In accordance to that, the hierarchical values vary, ie, information, propositions, models, projects, objects, etc.

98S35444 / ISA / 1998 / 12685

Nikolić, Mihajlo J. (Tehnički Fakultet Zrenjanin, Yugoslavia [tel: 23-62248]), **Culture as a Combination of Some Open and Closed Systems: Towards Measuring the Degree of Development.**

¶ The content of social systems depends on (1) the quality of artificial processes, (2) spontaneous changes, & (3) laws as objective necessities. Culture is most active in the first. Here, in the first aspect, cases in which culture is dominant & able to coordinate the output & input (a closed system) will be distinguished from those when it is subordinated & plays an auxiliary role (eg, in politics) & when it is not decisive in regulating subsequent consequences. In all such systems there exists a single (or sev-

n

eral, if they are of a composite nature) favored trend. For it to be realized, it is necessary to form a support trend & decrease or even eliminate the obstruction port trend. The values are taking place on the ground of that dependence. Every support trend consists of an affirmative trend & preventive obstruction trend (which represents the obstruction of obstruction). Values grow in relation to growth of suppression of obstruction port trend. In that light, it is possible to offer formulas of the value & of social development.

Nikutta-Wasmuht, Ulrike C. (German Armed Forces Instit Social Sciences, Proetzeler Chaussee D-15344 Strausberg (tel/fax: 03341-584064/584254)), **Der Koreg hat auch ein weibliches Gesicht. Über den Zusammenhang** (There Is Even a Female Face of War. Six Theses about the Interrelationship between Masculinity and War). (GER)

¶ Examines the overall societal enlacement of men & women in the preparation & waging of wars, arguing that war is a societal reality created & carried out by both men & women acting simultaneously as culprits, accomplices, & victims, although playing different roles & taking different responsibilities. Six theses are tested & supported with examples, concluding that there is a "female face" of war. Men alone cannot be blamed for acts & atrocities of war, assuming female "peacefulness" & innate male "bellicosity." Rather, entanglements of both men & women in the international war system must be considered to better comprehend the structure & the dynamics of the societal world of war & war cultures in times of peace.

98S35446 / ISA / 1998 / 12687

Nilsen, Ake (Dept Sociology U Lund, S-22100 Sweden (e-mail: ake.nilsen@soc.lu.se)), **Simulation and the Intersubjective Creation of Meaning.**

¶ In the information-society, the production of culture & meaning has reached a level of simulation as described by Jean Baudrillard. With the new technologies developed for the distribution of information (Internet, satellite TV, etc), this simulated culture & meaning confront the intersubjective creation of meaning in face-to-face interaction. The creation of meaning on an individual level is primarily founded on the senses, & is, by definition, subjective & not necessarily easy to communicate. On the intersubjective level, meaning is created through the spoken word & takes place in face-to-face interaction with an intimate relation to praxis. It is situational, with constant reference to a shared reality, & is constantly confronted with the production of culture & meaning in the information society. This production is, of course, aimed at consumers & is therefore produced to be significant. But as the globalization of culture increases, so does the distance between the producers & the consumers. There is no shared praxis to which this production refers. We have reached a level of simulation where production refers not to a shared reality, but to differently produced culture & meaning. This constant confrontation between the local intersubjective creation of meaning & the global production of culture & meaning is the field where the fruitful development of culture now takes place. We live in a constant flow, where our creation of meaning takes place under the influence of a global production of meaning.

98S35447 / ISA / 1998 / 12688

Ninomiya, Tetsuo (Faculty Letters Aichi Gakuin U, Nishin-shi Aichi-ken 470-0131 Japan (tel/fax: 05617-3-1111/4449)), **The Human Brain and Human Communities as Homologous Systems: A View from the Perspective of Complex Systems.**

¶ Suggesting that human beings can be described as possessing two brains—one interior & one exterior to the body—or as having "two communities," it is argued that the contents of the human brain can be known by studying the community &, conversely, creating a community based on the design of the brain will result in a society in which humanity can live comfortably. The brain & community are typically studied in the natural & social sciences domain, respectively, a boundary that should be removed. The idea that the brain & the community share a mutually homologous system is based on human actions occurring in each sphere: (1) using language & creating a culture, (2) working with their hands & using tools, (3) creating a historical society, & (4) creating & believing in a supreme being. It is contended that the brain enables humans to live & lead their lives in the manner they do, fostering desires conducive to living to the fullest. At the same time, it is only because humans live in a community—whether it is called a family, rural society, urban society, national society or even world society—that those desires can be fulfilled.

Niosi, Jorge (Dept Administrative Science U Quebec, Montreal H3C 4RC (tel/fax: 514-987-3000/3084; e-mail: niosi.jorge@uqam.ca)), **The Rise of Science-Based Industries. Theory, Measurements and Concepts.**

¶ In science-based industries, the inputs of scientific knowledge are key; thus, proper interaction between universities, government laboratories, & private firms is central. Higher education institutions & public laboratories usually provide the general understanding of a specific disciplinary area (eg, computer science, molecular biology), but they also supply the skilled personnel & sometimes prototypes & designs for industrial companies to proceed. Science-based industries are different from traditional ones in that the information content of their products is high, thus requiring educated consumers willing to invest in the learning of their use. Also, their markets are more prone to path-dependent processes with increasing returns to scale. New theories & concepts are required to understand them, including many coming from evolutionary theories (path dependency, lock-in, self-reinforcing mechanisms, tacit vs codified knowledge, etc). Official measurement of these new & awkward industries has been late to arrive; however, private estimates of their importance & development since the 1980s suggest that the new science-based industries are booming in all advanced countries, particularly in the US & Canada. Main theoretical & methodological issues related to these industries are considered.

98S35449 / ISA / 1998 / 12690

Nishimura, Akiyoshi & DuChesne, Alfred (Dept Legal Medicine Shiga U Medical Science, Ohtsu Japan 520-21 (tel/fax: 81-77-548-2202/2200; e-mail: akiyoshi@belle.shiga-med.ac.jp)), **Pattern of Causes of Human Deaths in the Great Hanshin-Awaji Earthquake and Comparison of Medical Examination Organization in Mass Disasters in Germany and Japan.**

¶ Explores human casualties of the Great Hanshin-Awaji Earthquake (17 Jan 1995) that struck the Japanese cities of Kobe & Nishinomiya. Medical examiners, forensic doctors, & other general clinical doctors examined 3,651 bodies; some statistical results of casualties by direct external forces are presented. It is argued that analysis of human casualties in mass disasters is extremely important for countermeasures against future disaster; though cause of death must be determined exactly, protecting the human rights of the dead. Consequently, only experienced doctors should take part in medical examinations following mass disasters. The present organization of medical examination & specialist systems in the Federal Republic of Germany & Japan is compared.

98S35450 / ISA / 1998 / 12691

Nixon, Paul (Faculty Social & Political Sciences U Cambridge, CB2 3RQ England (tel/fax: 44-1223-360938/740299; e-mail: pn203@cam.ac.uk)), **New Europe? Empirical and Theoretical Challenges in a Huge Transformation.**

¶ The collapse of authoritarian structures in Central & Eastern Europe has opened up extensive figurations for social research both within nation-state borders & transnationally. Examined here are idioms of investigative sociology or anthropology that might be explored in Romania, currently seeking admission to the European Union. After 1948, nonpoliticized data gathering was rare until the overthrow of communism in 1989. With reference to prewar research, together with work in the communist & postcommunist periods, demonstrated is how figurational sociology may be employed to illuminate changes & continuities, shifts in balances of power, problems of mutual identification, attitudes toward violence, & decivilizing processes at a time of intense local uncertainty.

98S35451 / ISA / 1998 / 12692

Nixon, Sean (U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel: 01206-872646; e-mail: snixon@essex.ac.uk)), **From Lads to Maverick Geniuses: Masculinity and Creative Identities in the UK Advertising Industry.**

¶ Creative functions in advertising agencies, ie, art director & copywriter, are overwhelmingly performed by men. Women who work in these jobs have often spoken of the assertive-sometimes misogynistic-forms of masculinity that are privileged in creative departments. The relationship between masculinity & creative functions is explored, attempting to open up the codes of masculinity lived by men who work as advertising creatives. Focus is on the public scripts available to these men in the fashioning of their gendered self at work. To this end, how the advertising trade press generalizes a set of privileged representations of creative identity is examined, showing a range of masculine identities.

titles from the laddish young creative or creative director to the maverick creative star. The trade representations also produce a certain gendering of creativity as a practice, whether this be through positioning the creative as artist or commercial technician.

98S35452 / ISA / 1998 / 12693

Noivo, Edite (U Montreal, Quebec H3C 3J7 [tel/fax: 343-6621/5722]), **Gender, Ethnicity, and Violence: Intergenerational Relations in Immigrant Families.**

¶ Explored here is how family & migration projects of social mobility, along with intergenerational pressures, generate chronic family tensions & violence in immigrant (ethnic) families. Empirical evidence shows that middle-aged women are the most victimized by the many contradictions & social injuries involved in those projects. They actually endure a nearly constant physical & psychological violence. The diversity & complexity of the enormous violence that husbands, children, & elderly parents direct at minority women are examined. Ethnocultural family ideologies & practices are discussed.

98S35453 / ISA / 1998 / 12694

Nolan, Brian & Whelan, Christopher T., **Trends in Cumulative Disadvantage and Urban Poverty in the Republic of Ireland.**

¶ Recent popular & policy debate on poverty in Ireland has construed poverty as increasingly concentrated in urban public sector housing. Implicit & explicit explanations have increasingly made reference to the creation of groups of cumulatively disadvantaged households, & causal argument has taken a distinctively "underclass" form. National household surveys conducted in 1987 & 1994 are drawn on to examine the nature of such change. Data indicate that social polarization exists, & that a significant process of residualization has taken place in the urban public housing sector without any evidence of an increase in the impact of context per se on the risk of household poverty. Implications of these findings for class & underclass explanations of urban poverty are considered.

98S35454 / ISA / 1998 / 12695

Noll, Heintz-Herbert (Social Indicators Dept ZUMA, Postfach 122155 D-68072 Mannheim Federal Republic Germany [tel/fax: 49-621-1246-241/100; e-mail: noll@zuma-mannheim.de]), **Towards a European System of Social Reporting and Welfare Measurement.**

¶ Describes EUREPORTING, a project funded by the European Commission to develop more sophisticated & comprehensive concepts & tools for science-based social reporting. Preliminary research focuses on three subprojects: two related to stocktaking activities in the field of comparative databases in survey research & official statistics relevant for social reporting, & a third that will focus on developing a European System of Social Indicators that will provide the scientific community-policy makers & other potential users—with a theoretically & methodologically grounded selection of measurement dimensions & indicators to continuously observe & analyze the development of welfare & quality of life & changes in the social structure. Aspects to pay particular attention to in such a system will be the coverage of the European dimension: eg, identity & cohesion; the incorporation of new dimensions of welfare & social change, social exclusion & sustainability; the search for new & better indicators in life domains covered; exploiting the best available databases; & ensuring comparability across nations. This work will also include efforts to construct synthetic, encompassing indices summarizing information on central dimensions of welfare & social development.

98S35455 / ISA / 1998 / 12696

Nordenmark, Mikael (Dept Sociology Umeå U, Sweden [tel/fax: 46-90-786-5541; e-mail: mikael.nordenmark@soc.umu.se]), **Unemployment and Family Life: The Relationship between Unemployment, Household Division of Labour and Well-Being.**

¶ Examines the relationship between unemployment, household division of labor, & well-being, based on data from a random sample of 3,500 unemployed people in Sweden. Analysis shows that the household division of labor is strongly affected by partner's labor market status. Both men & women do a greater share of domestic work when they are unemployed, compared to when they are employed, which indicates flexibility in gender roles. However, women are responsible for a greater share of the household tasks regardless of their husband's labor market status. Housework, especially among unemployed women, is not regarded as an alternative to employment. The great share of the work at home that women do, the more negative they are about their well-being & the lower their satisfaction with the relationship to their partner.

Nordenmark, Mikael & Stranclh, Mathias (Dept Sociology Umeå U, S-90187 Sweden [tel/fax: 46-907869513/4690786; e-mail: Mikael.Nordenmark@soc.umu.se]), **Towards a Sociological Understanding of Mental Well-Being among the Unemployed—The Role of Economic and Psycho-Social Factors.**

¶ Classic research on unemployment & mental health has focused on the functions of employment, which are seen as of equal importance for all unemployed. After reviewing critiques of this perspective, a model for understanding the differentiated mental consequence of unemployment is developed that, on the theoretical level, integrates both the structural restrictions of the unemployment situation & the agency of the individual. The model bases itself on previous findings indicating that mental well-being is dependent on the economic situation, on the one hand, & on the psychosocial value of employment, on the other hand. The model integrates both of these aspects & shows that the combined effect is of central importance for the differentiated mental well-being among the unemployed. The model is tested with data obtained during interviews with 3,500 unemployed Swedes.

Norell, Per Ove (Dept Political Science U Karlstad, 651 88 Sweden [tel/fax: 46-54-29-50-06/51-18; e-mail: p.o.norell@karlstad.se]), **Financial and Organizational Strategies under Changing Conditions. The Swedish Municipal Case during Three Electoral Periods.**

¶ Uses statistical & mail questionnaire data to explore how different local councils in Sweden coped with changing conditions that started in the early 1990s, focusing on three different electoral periods (1986-1988, 1989-1991, & 1992-1994) & the strategies they used, their choice of strategy, & the effect it has on financial situations, actor relations, & the next election. Financial strategies are widely defined to include taxes, charges, loans, growth, & program retrenchment (priorities) & total spending, administrative & organizational change, & personnel policies. Competing explanations are linked to the financial situation, needs, socioeconomic features, & politico-administrative climate or culture of the municipality. The politics factor is examined using local political trust, & the trend in latter elections is tested in terms of the relationship of role independence to ideological character of strategy choice. The characteristics of leading politicians, changes in the administrative leadership, etc., are also considered. Effort is put into finding typical socioeconomic patterns that cluster different factors—finances, services, party strength, relations between actors, etc.—& thus, focus is on a holistic understanding, ie, a local political systems analysis. A mixture of explanations is typical, where financial situation is influential on budget priorities & politico-administrative factors influence organizational change, personnel policies, etc, suggesting that politics does indeed matter.

Noriega Ureña, Fernando Antonio (U Nacional Autonoma Mexico, 04510 Mexico DF [tel/fax: 622-21-73/58; e-mail: noriegaf@economia01.economia.unam.mx]), **An Essay in Economic Theory International Trade and Income Distribution.**

¶ Neoclassical international trade theory has been considered to be related to real exchange rate & interest rate determination, & only under the classical or Marxian traditions has the problem of income distribution been shown to have analytical links with price theory. Here, an attempt is made to show that distribution & price determination can be treated as a simultaneous problem under competitive conditions in international trade, & to put in evidence that markets & price system imply redistributive phenomena, but not always. The model tests two hypotheses: (1) producers maximize the rate of profit instead of the traditional profit function; & (2) positive & completely flexible installation costs in the production function are required to redefine the concept of technology & its implications on factor demand functions.

Nübel, Christina (U Konstanz, D-78457 Federal Republic Germany (tel/fax: 49-7539-88-3705/2381; e-mail: christina.nuebel@uni-konstanz.de)), **Effectiveness of Means-Tested Transfers in Western Europe: Evidence from the Luxembourg Income Study**.

¶ Household data from the Luxembourg Income Study are drawn on to explore the effectiveness of means-tested programs in terms of poverty alleviation in GB, Federal Republic of Germany, & Sweden during the latter 1980s & 1990s. Analysis shows considerable variation in the poverty-alleviating impact of means-tested benefits. The British welfare state stands out, with a strong degree of effective poverty alleviation for the lower strata of the population, but there is some evidence that significantly less people were brought over the 50% poverty line in the 1990s than before. Germany & Sweden seem to be much less effective for the lower-income strata, with a less clear pattern of targeting. Aspects of the socioeconomic context, the institutional setting, & policy changes that could help explain these patterns are examined.

Nunes-Everardo, Duarte (FCM/UNICAMP, 13066-301 Campinas-Sao-Paulo Brazil (e-mail: RNUMES@correionet.com.br)), **Social Sciences in Health in Brazil: A Study about Its Course**.

¶ Outlines the origins & development of social sciences in health in Brazil, contextualizing the Brazilian situation in the Latin American arena by emphasizing the pedagogical dimension in its origins. Though there were some antecedents in the 1940s & 1950s, the inclusion of a more systematic means of approach to the social in health began in the 1960s, when criticism was levied against the teaching model in medical schools with regard to emphasis placed on biological sciences causing many schools to introduce the social into their great graduate courses. Criticism of the active theoretical model arose in the 1970s, especially of pedagogical practices based on functionalism, & political movements were fundamental in establishing lines of research & the viability of a far-reaching health project. The role of the Pan-American Health Organization in promoting seminars to encourage the social sciences in postgraduate courses at the master's & doctoral levels is underlined; associations that congregate professionals in collective health have also been formed. Growth in theoretical production has resulted mostly from the course models of sociology, especially historical materialism, along with the adoption of qualitative research methodologies.

Nyden, Philip (Center Urban Research & Learning Loyola U, Chicago IL 60611 (tel/fax: 312-915-7761/7770; e-mail: pnyden@luc.edu)), **University: Community Collaboration for Social Change**.

¶ Discusses the impact that collaborative university-community policy research activities have had on community-based social change in the Chicago (IL) metropolitan area. The Loyola U Center for Urban Research & Learning is grounded in a model of teaching & research that stresses a knowledge exchange between the university & community that builds capacity while drawing on both community & university strengths. In working closely with communities outside the university, the center recognizes the knowledge & experience of individuals & organizations in nonacademic settings. Strong emphasis is placed on the equal partnership in the formation of research issues, development of methodologies, analysis of data, & reporting of results: research leads to action & policy change at university, community, & government levels.

Examples of research & action projects discussed include reduction of violence in schools, community safety in low-income housing developments, & evaluation of the impact of welfare reform on immigrants.

Nyhoff, Pieter (Dept Sociology U Amsterdam, NL-7072 CE Netherlands (tel/fax: 3120-525-22430/2179; e-mail: pnyhoff@psc.w.uva.nl)), **Peaceful Coexistence as a Paralogical Move. On Zygmunt Bauman's Practice of Theory**.

¶ Focuses on a characteristic feature of Zygmunt Bauman's theoretical practice: his self-confessed inconsistency. For Bauman, the incongruities of life are best reflected in an analytical effort that oscillates between perspectives without forcing them into a synthesis. In fact, he claims the right to inconsistency; truth in judgment, reality in studies, & responsibility in practical affairs are attained by a constant movement between incongruous points of view. In his view, "the drive to synthesis is the major factor in producing endless bifurcations." In a paralogical move (drawn from Jean-François Lyotard), he attempts to disentangle sociology from this perpetual strife by proposing a peaceful coexistence of approaches.

98S35465 / ISA / 1998 / 12706

Nylander, Johan (Dept Sociology U Uppsala, S-75108 Sweden (tel/fax: 46-18-47-11177/11170; e-mail: johan.nylander@soc.uu.se)), **Rationality in Games and Networks**.

¶ Explores exchanges in which actors are constrained by the social structure, first outlining differences between network exchange theory & game theory, & then discussing problems of using rational choice in general, & game theory in particular, as a theory of action for network analysis. Two kinds of exchange theories are considered: game theory (core theory) & network exchange theory. Both are constructed within the rational choice framework, with the exception that one of the theories applies a network measure & makes use of a variety of action assumptions. Recent developments have synthesized network exchange & game theory, & some scholars argue that these two approaches benefit from integration. It is argued here that network analysis needs a theory of action; the question is whether rational choice (game theory) provides this theory of action for the explanation of exchange outcomes in networks. It is further argued that the principle of maximization of expected utility provides such a necessary mechanism for explanation of exchange outcomes. A more problematic finding is that the integration of a theory of games not only brings into network analysis game theoretic concepts & analytical power, but also difficulties concerning the solutions of games; eg, game theoretic solutions, such as the Nash equilibrium, provide predictions that differ significantly from experimental results. Further game theoretic experiments have illustrated how cooperation is possible in prisoners' dilemma games. A tentative explanation for why actors consistently defect in a strong-structure prisoners' dilemma games. It is suggested that rational choice is fruitful for explaining how actors resolve games & make exchanges. However using game theory for the solution of games & predicting exchange outcomes is more problematic.

98S35466 / ISA / 1998 / 12707

Nyman, Charlott E. (Dept Sociology Umeå U, S-90187 Sweden (tel/fax: 46-90-786-6007/6694; e-mail: charlott.nyman@soc.umu.se)), **Yours, Mine or Ours? Sharing Money and Consumption**.

¶ Interview data from 10 Swedish dual-earner married couples in their 30s with children are drawn on to analyze how individuals in a couple perceive the sharing of money & consumption. The point of departure is abandonment of the assumptions that members of families experience no conflicts of interests & that resources are shared equally. The way money & consumption are shared can be regarded as a reflection of the balance of power. Results reveal possible inequalities in material standards & power; both women & men agree that the women often spends less than her partner, yet seems satisfied with the situation. An attempt is made to understand the satisfaction women express about their relatively lower levels of consumption.

98S35467 / ISA / 1998 / 12708

Nyyssölä, Kari (Research Unit Sociology Education U Turku, FIN-20014 Finland (tel/fax: 358-2-333-6522/6524)), **Marginalisation in the Labour Market—Cause or Result? Changes in the Labour Market Status of Young People in the Years 1980-1993**.

¶ Follows the forked history of one age cohort of young Finnish people (N = 200,157, ages 18-24), 1980-1993, to investigate (1) how the experi-

ence of unemployment at a young age is linked with later work history & (2) how risk factors of exclusion from work are associated with a fragmented work history? Analysis of census data showed that up to 40% of young people who were unemployed in 1980 had subsequent difficulty in anchoring themselves to the labor market. However, it would be too simplistic to draw the conclusion that a spell of unemployment experienced at the early stages of a job career automatically reflects in one's later job career; poor success in the labor market is linked with many risk factors predicting exclusion from work; periods of unemployment are not direct causes of an unfavorable work history & career, but rather consequences of shortcomings in life control.

98S35468 / ISA / 1998 / 12709

O'Brien, Margaret, Jones, Deborah & Sloan, David (Faculty Environmental & Social Studies U London (North), Highbury Grove N5 2AD England (tel/fax: 0044-1717535-783/763; e-mail: m.m.obrien@unl.ac.uk)), **Children's Spaces in Cities: Negotiating Family and Urban Life.**

¶ Making space for children has been a complex & somewhat paradoxical process during the late 19th & 20th centuries. In developed, urbanized countries, the process has involved the loss of old spaces alongside the advent of new spaces. The loss of the street as a place to play & the loss of unstructured space free from regulation & supervision are significant transformations in children's lives. These changes, however, need to be set against new spatial opportunities. Throughout this century, specialized theaters, museums, adventure playgrounds, city farms, & leisure parks have been designed with children in mind.

98S35469 / ISA / 1998 / 12710

O'Neill, Brian (Dublin Insttit Technology Aungier St 2 Republic Ireland (tel: 353-1-402-3219; e-mail: boneil@dit.ie)), **Middlebrowism and Middle Class Audiences for the Arts in Ireland.**

¶ Examines the role that a middlebrow interpretive framework plays in arts reception among audiences for the arts in Ireland, based on a case study of audience reception for a national radio arts magazine program—*The Arts Show*. The presentation & coverage of the arts on the program was monitored for 1 year, & an audience panel was recruited to discuss, through focus groups & individual semistructured interviews, a range of issues concerning underlying assumptions about the arts. A qualitative approach drawing on discourse analysis &, in particular, the study of "interpretative repertoires" (Potter & Wetherell, 1987) is used to outline a map of the distinct discursive positions on the arts with an account of the different spaces in cultural consumption that elitist, populist, & middlebrow discourses occupy. Of particular importance to this program & its audience of mainly middle-class listeners is the relatively neglected category of middlebrow arts discourse. Middlebrowism is the distinctive features of a middlebrow approach as characterized by listeners' responses are discussed, eg, eclectic but predictable taste, conservative approaches to cultural value, appeal to the experiential benefits of the arts, & advocacy of a quasi-populist mode of arts participation. It is argued that the middlebrow approach to the arts has played a crucial role in consolidating Irish middle-class identity. Middlebrowism expresses the cultural confidence of a hegemonic social formation that has radically altered the social & cultural landscape of contemporary Ireland & is illustrated by the rapid expansion of the middle class & recruitment beyond the traditional bourgeoisie, the extensive investment in cultural capital by the middle class over 3 decades, & a significant change in public attitudes toward the arts in general. The middle ground of arts support, it is argued, ultimately seeks a type of cultural legitimation that a middlebrow eclectic, drawing from the resources of contemporary/popular & traditional/elite versions of culture, uniquely offers.

O'Reilly, Karen & Rose, David (U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel/fax: 44-1206-873540/151; e-mail: kareno@essex.ac.uk)), **Conceptualizing Social Divisions: The ESRC Review of UK Government Social Classifications, 1911-2001.**

¶ The Office for National Statistics is currently responsible on behalf of the UK government for two socioeconomic classifications—social class based on occupation & socioeconomic groups. These have been widely used both inside & outside government for many years, yet have been subjected to a variety of criticism, eg, for their lack of any clear conceptual base & their failure to deal adequately with individuals has not currently in employment. In 1994, the Office for National Statistics commissioned the Economic & Social Research Council (ESRC) to conduct a wide-ranging independent review of the classifications to assess the

need for a revised socioeconomic classifications & once that need was established, build & test the construct & criterion validity of a revised measure of social class for application in the 2001 census. This revised socioeconomic classifications attempts to improve on & combine the advantages of the existing classifications, while retaining sufficient similarities to facilitate time-series analyses. Related here is the history of the construction of the proposed revised socioeconomic classification, focusing on issues of concept operationalization & criterion validity. Following a brief history of social classifications in the UK, conceptual & operational issues relevant to the construction & validation of the proposed revised socioeconomic classifications are discussed.

98S35471 / ISA / 1998 / 12712

O'Sullivan, Sara L. (University Coll Dublin, Belfield 4 Ireland (tel/fax: 353-1-706-7007/1125; e-mail: sara.osullivan@ucd.ie)), **In Search of the Radio Audience(s): Participants, Fans, Listeners, and Irish Talk Radio.**

¶ Reports a qualitative case study of an Irish talk radio show, *The Gerry Ryan Show*, analyzing audience responses to & engagements with it. The audience can be divided into three groups—participants, fans, listeners—each having different points of identification with the show. Jürgen Habermas's concept of the public sphere is used to frame an analysis of interviews with 44 callers to the show, supplemented by interviews with 10 unsuccessful callers to demonstrate the role that cultural capital plays in the selection of who gets to speak on-air. Further interviews with 10 nonparticipating audience members who see themselves as fans are drawn on to analyze the "cult of Gerry Ryan." Analysis of the meaning of the show for these fans must go beyond seeing the show exclusively in terms of the public sphere. Also discussed are those who listen to the show regularly, but do not identify themselves as fans.

98S35472 / ISA / 1998 / 12713

Oberg, Peter T. G. (Dept Sociology Uppsala U, S-75108 Sweden (tel/fax: 46-18-181-196/170; e-mail: Peter.Oberg@soc.uu.se)), **Body Image among Men and Women during the Life Course.**

¶ Explores body image & appearance during the life course, based on mail survey data from 2,002 Swedes, ages 20-85. Compared to men, women value appearance more & are more worried about bodily changes as they grow older; but the majority are content with their bodies. Results challenge the expectation that messages with constant warnings for visible aging effects, especially for women, would make them more discontent with their bodies as they grow older. One interpretation is that gerontophobic images in media create worries about prospective age-related changes, worries that do not correspond to people's present experience of their aging bodies.

98S35473 / ISA / 1998 / 12714

Oberschall, Anthony (U North Carolina, Chapel Hill 27599-3210 (e-mail: tonob@email.unc.edu)), **Polarization Dynamics in Ethno-National Conflict: Croatia and Bosnia.**

¶ Based on documents, newspaper content analysis, & fieldwork in Croatia & Bosnia, the dynamics of ethnic polarization & escalation are traced. The pivotal idea is that, before major collective violence starts & attracts world attention, moderates in all ethnic groups are in the majority & in charge of governance. But they are intimidated into silence & exile, eventually overthrown by armed extremists in their own ethnic group. After extremists have seized power, interethnic collective violence escalates to civil war. Should this dynamic be confirmed for 1990/91, there are lessons for early warning & early intervention in ethnic conflicts beyond the former Yugoslavia.

98S35474 / ISA / 1998 / 12715

Oberschall, Anthony (U North Carolina, Chapel Hill NC 27599-3210 (tel/fax: 919-962-7564/7568; e-mail: tunob@email.unc.edu)), **Cooperation and Conflict: Encounters of Europeans and Non-Europeans.**

¶ Tests key hypotheses from the theory of cooperation & expands its scope, using historical data from journals describing the first encounters of European explorers, traders, conquerors, & missionaries with indigenous peoples, 15th-19th centuries. Content analysis of encounters from 30 voyages & encounters reveals cooperative transactions (trade, altruist, ceremonial, & information) & noncooperative transactions (theft, threats, unilateral aggression, & sanctions) in a prisoner's dilemma paradigm. European & non-European attributes are coded, & hypotheses are tested with respect to the following variables: prevalence & robustness of tit for tat; repetition of transacting; normative restraint; expedition pur-

pose; cognitive frame; power disparity; mutual knowledge; communications obstacles; uncertainty, & others. Many can be tested with a before/after design when attributes & explanatory variables change in the course of an encounter or during the life of an expedition. Human transactors are not only unitary players but may be part of a complex social unit with agency problems. They possess moral sentiments & cognitive frames that matter in addition to gain maximization. They operate in an uncertain environment with limited knowledge.

98S35475 / ISA / 1998 / 12716

Oeij, Peter R. A., Fruytier, Ben & Broek, Inge Van Den (Inst Social Research Tilburg U, NL-5000 LE Netherlands (tel/fax: 0031-13-466-2681/2959; e-mail: praaoeij@kub.nl)), **The Quality of Work in the Netherlands in the Nineties.**

¶ Seeking to ascertain what developments have occurred in research on the quality of work in the Netherlands, research articles published in two leading Dutch specialist journals, 1990/91, were subjected to content analysis using a framework constructed on the basis of four research themes—employment & division of functions, organizational change, development of functions, & health & well-being—and four types of research—theoretical-explanatory, descriptive, action, & evaluation. One theme stands out, health & well-being, as does one type, descriptive. Four conclusions are reached: (1) Research into the relationship between employment & quality of work is lacking. (2) Evaluation research is almost totally lacking. (3) There is almost no theoretical work in organizational change. (4) Research into the quality of work is dominated by management & psychological perspectives; the sociological perspective is lacking.

98S35476 / ISA / 1998 / 12717

Ohl, Fabien (UFRSTAPS-U Strasbourg II, F-67084 Cedex France (tel/fax: 03-88-15-72-40/41-74-75; e-mail: ohl@ushs.u-strasbg.fr)), **Newspapers Sport as a Comment on Everyday Life.**

¶ Draws on the axiomatics of Pierre Bourdieu & the problematics of Erving Goffman to examine narrative dimensions of the sport culture, via analysis of a sample of 950 newspaper articles dealing with different sporting events. Both quantitative (eg, frequency of words & expressions) & qualitative analyses of some articles' contents were performed. The results show a wide range of topics beside war & heroic themes. The comments & their emotional components appear according to where newspapers & sport, respectively, stand in the journalistic & sports fields. Sports characteristics & the regularity of sporting events give to sports comments a capacity to act as references to & metaphors of everyday life. Indeed, the media propose stories of sporting events that include a wide range of behaviors & suggest legitimate ways of behaving. Discourses on sporting events make the actors' behaviors intelligible, affirm social identities (individual & collective), & remind us about the social rules of everyday interactions.

98S35477 / ISA / 1998 / 12718

Ohly, H. Peter (Social Science Information Center, Lennéstr 30 D-53113 Bonn Federal Republic Germany (tel/fax: 49-2281-142/120; e-mail: oh@bonn.iz.soz.de)), **Browsing in Social Science Sections of Clearinghouses, Catalogues and Virtual Libraries.**

¶ Existing systematic ways of access to the Internet via searching machines, browsing services, & clearinghouses (eg, Yahoo, SOSIG, & Argus) are considered with respect to their principles. Issues & solutions for the systematic collection, administration, & page design of a German clearinghouse for the social sciences (SocioGuide) are discussed in terms of feasibility of knowledge organization principles in Internet information. In the two main regions, "Germany & International" & "Eastern Europe," the GESIS SocioGuide 1997 enables more precise regional restrictions simultaneous with content (sociology, political science, etc) or institutional (universities, research units, etc) access. Eight principles valid for the GESIS SocioGuide Germany & International are addressed.

Oinonen, Eriikka (Dept Sociology & Social Psychology U Tampere, SF-33101 Finland (tel/fax: 358-3-215-6563/6080; e-mail: speroi@uta.fi)), **Where Have All the Children Gone? Children's Invisibility in Family Sociology and a Suggestion to Bring Them in Sight.**

¶ Explores why sociology has not been capable of viewing the child as an active agent. Sociology is conceptually limited; it is well equipped to analyze social structures, but not individual or self. Further, sociology leans heavily on the idea of development. Therefore, children appear in con-

texts of social structures, & their social purpose is to develop into adults who fit in with a society designed by adults for adults. Sociological family theorizing & its feminist critique have provided insight into the family from both sexes' eyes, but not from children's eyes or from the generational point of view. Feminist theorizing could be used in bringing children into the sociological spotlight, but there is also another adaptable tactic: subaltern studies. Subaltern studies aim at making society's marginalized groups & their interests visible, raising the marginalized to the status of subjects by taking into account their own practices, thoughts, discourses, & strategies.

98S35479 / ISA / 1998 / 12720

Oka, Masato (Economic Research Instit Yokohama City U, Japan 236 (tel/fax: 81-45-787-2069/2351; e-mail: okamasat@yokohama-cu.ac.jp)), **Managing the Aging Workforce: The Interplay between Public Policies and Firms' Logic of Action in Japan.**

¶ Large Japanese firm behavior toward aging workers can be characterized as "reject & retain": ie, older workers are excluded from the age-oriented pay & promotion system (Japanese seniority system) in their mid-50s, while they are utilized in the quasi-internal labor market. The excluding behavior arises from the logic of the age-oriented seniority system. This system works well when the organization is growing larger & its age structure is young; however, when the number of aging workers increases under the long-term employment system, it causes a payroll burden & difficulty in fulfilling workers' expectations for promotion. Regeneration of the organization is also necessary under the competitive market situation. Therefore, this seniority system presupposes that older workers be excluded at the mandatory retirement age. Retaining behavior arises from the logic of the state or society insisting on the social responsibility of large firms in the aging society. The interplay between the two logics is analyzed here in a case study of the Toyota Motor Corp.

Okada, Takeshi (Faculty Education Kagoshima U, Japan (tel: 099-285-7760; e-mail: okada@taiiku.edu.kagoshima-u.ac.jp)), **The Social Construction of Japanese University Sport Clubs.**

¶ Japanese university sport clubs possess a strong hierarchical structure based on senior-junior relationships. In addition to sporting achievement, this hierarchical structure is shaped by the role of parties in the subculture of clubs. During parties, which are routinely held at certain times of the year, a senior club member pays for juniors with the expectation that juniors will get completely drunk. When junior members become seniors, it is expected that they, in turn, will honor their former debts by paying for juniors. This open chain of exchange contributes to the fixed hierarchy of senior-junior relationships.

Oliva Augusto, M. Helena (Sociology Dept U São Paulo, Brazil 05508-900 (tel/fax: 55-11-818-3703/211-2096; e-mail: mhaoaugus@usp.br)), **Temporality, Individuality and Social Order.**

¶ The dominant social time of a society is the time in which its fundamental values are manifested & implemented. It is the manifestation of a specific social order. The dominance of different social times throughout history thus expresses both the predominance of different values & the meanings in each one of their moments as different forms of organization of social life. Work is the fundamental value of the modern social order. In contemporary society, work has been questioned as a central value of life; it is sustained by a social order that in effect is no longer (or is rapidly ceasing to be) shaped by work. Compared to other spheres of life, a decentralization of work seems to be occurring; its subjective relevance is diminishing. Points of view that contest modern values & meanings are proliferating, implying that we are already living in post-modernity. A transition to a new set of meanings is occurring that will culminate with the emergence of a new dominant social time, not yet completely shaped.

Olivas, J. Richard (U California, Riverside CA 92521-0204 [tel/fax: 818-784-9691/9693; e-mail: rolivas@ucla.edu]), **Measuring Religious Revivalism in Eighteenth-Century Congregational Churches: Some Advances in Research Methodology.**

¶ In the measurement of religious revivalism, new research methods can assess spiritual awakening within & between local assemblies. Tabulated for nearly 125 New England Congregational churches was the number of adult parishioners who earned admission to full communion, 1740-1746. Congregations recording 10+ admissions in a single month qualified as revival churches. Of 121 assemblies for which records exist, 44 revived. To measure revival's spread between awakened churches, the month that revival peaked in each was noted. Revival's likely path was traced by observing peak month patterns within a 35-mile radius of Boston, MA. Revival began in the Boston area in early 1741, & spread to the edge of northern New England by June 1742. Awakened by revival preaching, Bostonians overwhelmed revivalist ministers. Like triage workers sorting & treating the wounded according to the seriousness of their injuries, Boston's revivalist clerics rationed spiritual help & counsel. Favored recipients of pastoral attention tended to be persons with family & kinship ties to revivalist congregations. By establishing significant facts about a revival, these new methods help scholars to probe more fully its varied meanings throughout time & space.

Oliver, Pamela E. & Myers, Daniel J. (Sociology Dept U Wisconsin, Madison 53706 [tel/fax: 608-262-6829/265-5389; e-mail: oliver@ssc.wisc.edu]), **Diffusion Models of Cycles of Protest as a Theory of Social Movements.**

¶ Develops a theoretical framework for understanding social movements as interrelated sets of diffusion processes. A social movement can be understood as a complex set of many actions by many different collective actors oriented toward some very broad issue or goal. This conception of a social movement is closely linked to the common recognition of cycles or waves of protest & collective violence, recognizing, in particular, that movement actors are affected by actions in other as well as their own movements, & the dynamics of protest cycles are driven by the interplay between dissidents & regimes & between peaceful & disruptive protest forms. This conception of social movements is somewhat consistent with some social constructionist images of collective identities as emergent processes. Adding explicit diffusion concepts enables the formalization & mathematizing of many theoretical understandings, thus making it possible to create a coherent theoretical structure that can be linked to new empirical data being collected on the time series of various kinds of violent & nonviolent events in different nations. Developing are mathematical models of the diffusion of collective action in cycles or waves of protest, focusing on the diffusion of collective violence & disruptive collective protest & how these are affected by cycles of nondisruptive protest, formation & institutionalization of movement organizations, & social control efforts of regimes. Multiple-equation models are being developed for expressing the interplay among different forms of action & between regimes & dissidents: eg, new social movements of Europe, 1975-1990, & the US civil rights movement, 1950-1990.

Ollivier, Michele (Dept Sociology U Ottawa, Ontario K1N 6N5 [tel/fax: 613-562-5800/5106; e-mail: ollivier@uottawa.ca]), **Social and Legal Status: The Legacy of M. Weber and T. H. Marshall.**

¶ Focuses on relational concepts of status, including Max Weber's concept of status as social closure & T. H. Marshall's concept of legal status, arguing that they are useful because they capture collective aspects of inequality that have been largely ignored by proponents of gradational concepts. However, because Weber's & Marshall's concepts refer to status as an attribute of well-defined collectivities, it is argued that they are not very useful for understanding how status operates in contemporary societies, where formally equal individuals compete. In competitive environments, status needs to be conceptualized as an asset in social exchanges rather than as a means of legitimating collective exclusion.

Olofsson, Gunnar (Dept Sociology, Box 114 S-22100 Sweden [tel/fax: 46-46-222-8843/4794; e-mail: Gunnar.Olofsson@soc.lu.se]), **Creating a Moral Hierarchy of Exit/Retirement Routes. The Changing Institutional Framework of Exit/Retirement Processes in Sweden in the 1990s.**

¶ Changes in social & labor market policies in Sweden as well as in regulating institutions during the 1990s shaped new exit/retirement patterns. Institutional & policy change on the societal level interacted with job-based & employer/union decisions in firms, giving rise to different exit/retirement routes. These routes implied a social as well as an institutional differentiation of the individual fates of older workers. Here, it is analyzed how employers handled personnel cuts & exit pressures in Sweden in the early 1990s, based on 1994 survey data on 380 firms. Employers' decisions with regard to the age balance of their staff as well as the effects of firm-specific modes of handling of the qualification/productivity nexus on the older workers were important for the exit process. Also examined are ways that social classes are being pushed into, are attracted by, or have access to different exit-retirement routes, using data on individual exit/retirement paths in a 1928 cohort (N = approximately 1,000 persons), as well as data from the Swedish Labor Force surveys. It is argued that policies, institutions, & changing power relations create a moral hierarchy between the exit/retirement routes in their institutional form as well as between the categories & individuals traveling the different roads to early exit.

Olsen, Gregg M. (Dept Sociology U Manitoba, Winnipeg R3T 2N2 [tel/fax: 204-474-9199/261-1216; e-mail: olsen@cc.umanitoba.ca]), **Social Policy in an Era of Globalization: The End of the Welfare State as Swedes Know It?**

¶ Current debates on globalization center around the possibility for national states to maintain their former position of authority. Here, highlighting globalization of trade, production, & finance, it is suggested that the state has lost a significant measure of its former autonomy, particularly in the area of social policy. Further, globalization has significantly altered the balance of power between capital & labor. Focus is on Sweden's welfare/social policy model. Given its widespread approval among Swedes, & the long-time support of an exceptionally strong & well-organized labor movement, the Swedish welfare state might be expected to withstand globalization, but it too has been seriously eroded.

Öner, İlknur (Sociology Dept Firat U, Elazığ TR-23169 Turkey [tel/fax: 90-424-2128500/2330062; e-mail: lcixio@hermes.nott.oxuk]), **Given and Achieved Opportunities on Female Migrants: Turkish Case of High Dams.**

¶ Offers both theoretical & empirical discussions of changes in Turkish development policies & links among the projects & nonstate & state ac-

tors. While Turkish development policies have come a long way toward recognizing women's role in development, a sociological investigation among 175 Keban Dam female migrants & several related studies on the southeastern Anatolia Dam project reveals widespread historical unawareness of women's place in development policies since the 1960s. The findings demonstrate women's power & ability to create opportunities for themselves in an urban environment. It is important that women's role in development projects such as the dams be acknowledged & that women's status & role be elevated.

98S35491 / ISA / 1998 / 12732

Öner, İlknur (Sociology Dept Firat U, Elazığ TR-23169 Turkey (tel/fax: 90-424-2128500/2330062; e-mail: lexio@hermes.nott.ocuk)), **Female Dam Migrants' Place in Regional and Urban Development: A Case Study of Keban Dam Female Migrants.**

¶ Presents a comparative analysis of high dam development projects, differentiating their visible & invisible impacts & emphasizing women's involvement in them. In particular, migrants' ability to alter visible impacts is stressed: ie, the technical & physical appearances of a resettlement in an urban area & their power to establish new forms of relations, tenure structures, & forms of employment & social organization. A number of international projects are discussed & two Turkish cases are scrutinized. The findings presented are drawn from interviews with Keban Dam female migrants 20 years after their resettlement in an urban area. These findings show that the visible aspects of the project have been taken into account & the invisible ones have been overlooked. Results illustrate that social aspects of the Keban Dam urban resettlement were mainly dealt with by the women or migrants themselves. The transition from invisible experiences of the Keban Dam case to visible changes in relevant policies regarding the Southeastern Anatolia project is traced. The awareness of migrants' power to alter the results through their invisible participation & the necessity of reassessing policies relevant to high dam development & related resettlement projects are discussed.

Ong, Bie Nio & Scheepers, Rita M. J. (Centre Health Planning & Management Keele U, Staffordshire ST5 5SP England (tel/fax: 1782-583191/711737)), **Clinicians in Management in England and the Netherlands.**

¶ Examines the impact of managerially oriented health care system on the medical profession, focusing on the developments in the acute hospital sector in England, & the Netherlands where doctors are explicitly drawn into managerial decisionmaking because of organizational changes in hospital structure. Empirical research on the changing position of doctors & their representative bodies is used to discuss the organizational structure of English & Dutch hospitals with respect to the place of doctors, the manner in which doctors organize themselves as professionals, & how relationships in hospitals develop, most notably between medicine & management.

98S35493 / ISA / 1998 / 12734

Opp, Karl-Dieter (Institut Soziologie U Leipzig, D-04109 Federal Republic Germany (tel/fax: 49-341-9735690/5669; e-mail: opp@sozio.uni-leipzig.de)), **Why Do Ordinary People Think They Are Politically Influential? Explaining a Cognitive Illusion.**

¶ The theory of collective action argues that the contribution of an ordinary member of a large group to the provision of a public good has only a negligible impact. Therefore, preferences for a public good, ie, dissatisfaction with the extant provision of a public good, are not incentives to contribute. If members of a large group nevertheless contribute, this is due to selective incentives; ie, costs or benefits that occur only if individuals contribute or do not contribute. The hypothesis that personal influence on the provision of public goods is perceived correctly is tested for a specific kind of contribution to a public good: political protests, wherein the protesters' goal is to put pressure on third parties to provide public goods. Because protesters are members of a larger group, collective action theory predicts that they regard themselves as uninfluential. Empirical studies indicate, however, that the perceived efficacy of ordinary citizens in large groups is, on the average, much higher than zero & varies across individuals. A theoretically based explanation of this cognitive illusion is developed & tested using data from a 2-wave panel study in the former East Germany conducted in 1993 & 1996. It is concluded that perceived personal influence varies among respondents & is not a constant. A rational choice explanation for political efficacy is tested.

98S35494 / ISA / 1998 / 12735

Orfali, Kristina (U Chicago, IL 60637 (e-mail: krainey@medecine.bsd.uchicago.edu)), **The Duality of Hospital Experience: A Patient's Perspective.**

¶ Patient experience in hospital is explored, 1986-1996, drawing on interview data from 100+ patients on eight wards in eight university hospitals in France, their families & friends, physician & nonphysician hospital staff, & 50 discharged patients & their families & friends, 1-3 months after hospitalization. Findings reveal a duality of hospital experience. On one side, patients deal with their personal experience of illness (anxiety, pain, fear of death, biographical disruption, etc); on the other side, they face an organization, a care system with its specific rules & codes. These dimensions, though related, remain different & must be carefully distinguished from an analytical point of view. A number of apparently inconsistent, or even contradictory, attitudes can in fact be explained by this duality; eg, a desire for autonomy, clearly expressed at the organizational level, may not be incompatible with a strong & apparently opposite demand for emotional support & care at the illness level. Patient experience results from a particular combination of these two dimensions. Although each experience remains unique, it can be framed into four polar situations that largely determine patient expectations & hospitalization experience: acute illness, waiting for diagnosis, treatment in progress, familiarity with hospitals. According to the mutable situation, patients combine the two dimensions of their experience differently. Dysfunctions, failures, & problems will not affect patients in the same way depending on perceived situation; eg, lack of information might be a drama for a patient waiting for diagnosis, affecting immediately the level of illness. For a patient familiar with hospitals, on the contrary, delays are just the way hospitals work, & are perceived as purely organizational problems. The duality of experience, as well as the situational frame, help one to understand patients' complex hospital experience as a process, generating positive or negative effects. This contrasts with satisfaction surveys, which focus only on results without considering the underlying process.

Orzack, Louis H. & Miyazawa, Setsuo (Rutgers U, PO Box 457 New Town Branch Boston MA 02258 (tel: 617-969-9468; e-mail: lhorzack@andromeda.rutgers.edu)), **Global Challenges and National Professions: Japanese Lawyers Confront Foreign Lawyers.**

¶ Global markets & intergovernment agreements to liberalize trade impinge on national professions. The Japanese bar & the Ministry of Justice have largely beaten back outside pressures seeking to increase the number of Japanese attorneys, allow Japanese attorneys in Japan to join foreign law firms, & grant foreign law firms the right to offer advice about Japanese law to foreign clients. These frustrate efforts by foreign bars & law firms, business groups, other governments, & international liaison committees of foreign bars to induce the Japanese bar & the Ministry of Justice to increase the numbers of Japanese nationals & allow practice by foreigners. Variables accounting for resistance or acceptance by professions to changes linked with global markets & intergovernmental agreements are identified.

98S35497 / ISA / 1998 / 12738

Osadchaya, Galina Ivanovna (Moscow State Social U, 107150 Russia (tel/fax: 095-169-9790/8132; e-mail: is@gw.mgsu.msk.su)), **Social Policy: Contents and Values.**

¶ In the context of intensive structural reconstruction & in light of a deep crisis in social policy in Russia, it is argued that institutions & a socioeconomic basis must be created to realize the population's needs & interests, & outline values of social policy & its purposes under conditions of resource limits. The "living minimum" should lie in the core of all constructions; social support & selective family policies are also important in this process for maintaining balance between macro- & microsocial policy. Coming out of the crisis social policy will be more European & directed toward protection from the negative impact of economic development.

98S35498 / ISA / 1998 / 12739

Osirim, Mary J. (Dept Sociology Bryn Mawr Coll, PA 19010-2899 (tel/fax: 610-526-5393/7475; e-mail: mosirim@brynmawr.edu)), **Empowerment and Women's Organizations in Zimbabwe: The Dynamics of Gender and Social Class in the Contemporary Period.**

¶ Explores the role of women's organizations in enhancing the status of urban & rural women in Zimbabwe, focusing on the activities of governmental & nongovernmental organizations as well as women's more informal associations in advancing the socioeconomic position of women both before & after the UN International Conference on Women in Beijing, People's Republic of China. This analysis considers the critical role that social class plays in establishing & structuring women's activities & in setting the agendas for each group. It is argued that poor & working-class women have benefited most from groups that directly address their class & gender needs, as opposed to groups more broadly configured around gender. The activities & goals of groups such as the Zimbabwe Women's Resource Center & Network are highlighted. One specific effort inspired by the Beijing Conference, & focused on here, is the publication of *Zimbabwe Women's Voices*, which documents the perspectives of women from several grassroots organizations & facilitates dialogue Zimbabwean women across class & geographic boundaries.

98S35499 / ISA / 1998 / 12740

Osterbacks, Eva, Zick, Cathleen & Bryant, W. Keith (U Utah, Salt Lake City 84112-0080 (tel/fax: 801-581-7712/5156; e-mail: cathy.zick@frs.utah.edu)), **Maternal Employment and Mother-Child Time in Single-Parent and Married-Couple Families.**

¶ Recent US welfare reform has raised questions of how welfare-related work requirements may affect the mix of low-income, single parents' nonmarket time, particularly the time they spend with their children. Data from the National Survey of Families & Households are used to investigate how maternal employment alters mothers' reports of time spent in physical child care, shared leisure activities, & housework. The analysis utilizes an instrumental variables approach that allows for possible simultaneity between employment status & nonmarket time. Estimates contrast the employment effects of low-income (ie, welfare eligible) vs higher-income families & between single & married mothers. Preliminary work done with only the married mothers reveals that employment has a negative, statistically significant effect on both physical care time & housework, but it has no impact on shared leisure activities.

Osty, Florence (LSCI CNRS, 59-61 rue Pouchet F-75017 Paris France (tel: 33-1-40-25-10-67)), **Sociologie de l'entreprise et intervention** (The Sociology of Business and Intervention). (FRE)

¶ The sociology of business was originally developed in France as a discipline concerned with the production of academic knowledge. It later became a subject of instruction for professionals, managers, & union officials, during which time businesses became silent partners in much research into the concerns of management. The resulting combination of the production of academic knowledge & of means for business intervention is examined & held to be linked to an evolution in social demand that calls into question the position, utility, & professionalization of business sociologists. The nature of the relationship between the sociology of business intervention & other interventionist approaches is considered.

98S35502 / ISA / 1998 / 12743

Otsuji, Emi (U New South Wales, Sidney 2052 Australia (e-mail: E.Otsuji@unsw.edu.au)), **How 'Individual' Is an Individual? In the Case of Business Interaction between Native and Non-Native Speakers of Japanese.**

¶ Examines the role of the individual or participant when analyzing intercultural business interaction, applying a critical discourse analysis framework to explore how the psychobiographical factors of participants from different cultural & social backgrounds should be treated in intercultural business settings. In light of differences of opinion regarding the perception of participants' position & individuality in relation to discursive & social information, investigated are (1) how much people are institutionally, socially, & culturally determined, & (2) the process of individual institutionalization, culturalization, & socialization, focusing on psychobiographical factors of native & nonnative speakers of Japanese in workplaces in Sydney, Australia.

98S35503 / ISA / 1998 / 12744

Oucho, John O. (International Program Population & Sustainable Development U Botswana, Gaborone (tel/fax: 267-351151/375810; e-mail: ouchojo@noka.ub.bw)), **International Migration and Regional Integration in Eastern and Southern Africa: Lessons from COMESA and SADC.**

¶ International migration in the two closely related subregions of Eastern & Southern Africa predate the formation of both the Common Market for Eastern & Southern Africa (COMESA) in 1980 & the Southern African Development Community (SADC) in 1992. The significance of the two institutions of regional cooperation is in their recognition of the importance of international migration, & with the inclusion of a Free Movement of Persons, Right of Residence & Establishment protocol in their jurisdiction. While the first stage of the three-stage protocol has virtually been realized, the last two stages are still contentious issues. Analyzed here are problems surrounding the apparent lack of commitment of the member states to the protocol, lack of data, & the absence of a unit in the secretariats of both COMESA & SADC to handle international migration issues. Suggested are ways to resolve problems that would enable countries of these subregions to factor international migration into their development agenda as they look forward to the formation of the African Economic Community. It is concluded that, as the developed North has now firmly adopted a "shut gate" policy to immigrants from developing countries, African countries must evolve viable frameworks for regional migration in the context of regional cooperation. In the case of the two subregions, the SADC member states will continue to rely on the northernmost member states of COMESA & the rest of Africa, which boasts abundant well-trained & highly skilled human resources.

Ouellet, Pierre J. (York U, North York Ontario M3J 1P3 (tel/fax: 416-652-0544; e-mail: pjouellet@aol.com)), **Montreal-The Poetics of the City.**

¶ Examines the particular relationship that has evolved between the poets of Quebec & their metropolis, Montreal, heard as a dialogue between two kinds of solitude, not necessarily those of language & culture, but perhaps of necessity & history, contingency, & the rhetoric of proximate spaces. Considered is how the city orients to the voice of the scribe &, conversely, how the poet is etched in what *le chansonnier* (the troubadour) Georges D'Or described as "*les rues sales et transversales*" (the dirty & transversal streets) of the urban center. What account is established or settled in this encounter? What transaction is scratched or inscribed on a city of poetic theory whose essence is irreducibly linked to a transgressive version of its own origin & historicity? Finally, how does Montreal, as a site of such creative & intimate violence, co-opt the written imaginary of its own nationalizing discourse in the logos of another's global experience?

98S35505 / ISA / 1998 / 12746

Oussedik, Fatima (Institut sociologie U Algiers, Bouzareah (tel: 33-1-45-48-77-92)), **Social Link and Fading of Symbolic Marks.**

¶ Signs, as symbols, are means that permit one to see a social link; they are the expression of an actor who is a part of a "togetherness." It is hypothesized that, when there is no possibility of having living symbols, one may perceive a social link through death; to meet or to be ready for death becomes the means to make sense of what is happening & experience & to togetherness when the social link is fading. The Algerian situation is drawn on to develop this hypothesis.

Overmyer-Velazquez, Rebecca (Dept Sociology U California, Santa Barbara 93106 [fax: 805-564-4826; e-mail: 6500rl00@ucsbuxa.ucsb.edu]), **Colonial Ideology in Sixteenth-Century Mexico: Women, Nature, and the Conflict of Cultures.**

¶ Explores the history of European colonization in terms of the dualisms it imposed on indigenous people throughout the Americas, drawing on a reading of a 16th-century Franciscan text, *Historia General de las Cosas de la Nueva España* (General History of the Things of New Spain). Considered the first ethnographic study of the Americas, it was written in colonial Mexico through collaboration between elite Indians & Franciscans & between the Spanish Crown & Franciscans. The Franciscans working with the Crown intended to subdue all Indians & their land, while elite Indian men working with Franciscans collaborated on the construction of a "new" Christian ideology that subdued Indian women. While these two relationships did not develop without significant discord, together they heralded the institutionalization (via religion & the state) of European dualistic thought in the Americas. Indigenous peoples were the first to suffer, in a massive way, the effects of this institutionalization, & they continue to suffer, just as many First World people, ecofeminists among them, are realizing that they too have everything to lose from the way the West treated the earth. Placing *Historia* in a broad context starting in Classical Greece, it is suggested that this rich document of cultural contact can teach much about an ideological conflict that continues in spite of the centuries-long dominance of Western dualistic thought. Because humility was long absent in Western rationalistic, androcentric, ideological constructs, it is proposed that ecofeminism & other Western environmentalist theories can only gain from a humble appreciation of their debt to indigenous people's knowledge.

98S35507 / ISA / 1998 / 12748

Oxhorn, Philip (Dept Political Science McGill U, Montreal Quebec H3A 2T7 [tel/fax: 514-398-8970/1770; e-mail: Oxhorn@Leacock.lan.McGill.ca]), **Social Inequality and the Limits of Citizenship in Latin America.**

¶ Drawing on T. H. Marshall's distinction between the civic, political, & social rights of citizenship, the nature of citizenship rights in contemporary Latin American democracies is explored. It is argued that political rights of citizenship have generally preceded guarantees of basic civic rights, with important implications for the quality of democratic regimes & the capacity of civil society to mobilize through democratic institutions to address growing problems of social inequality.

98S35508 / ISA / 1998 / 12749

Oxman-Martinez, Jacqueline, Moreau, Jacques & Straka, Silvia M. (U Montreal, Quebec H3A 2A7 [tel/fax: 514-398-7062/5287]), **Child Neglect: The Problem of a Unisectorial Approach.**

¶ Neglect is a multidimensional problem, with both psychosocial & structural variables. Can the psychosocial interventions delivered by the state resolve the problem of neglect without attention to structural variables such as employment & housing? This question was considered in a study of 131 neglected children, ages 0-18, & 78 mothers referred by child welfare & social service agencies in Quebec. A variety of psychosocial variables were measured using validated instruments at the start of intervention, 8 months later, & 7 years later. Short-term improvements were found in some variables such as social isolation, depression, satisfaction with parental role, & maternal competency. However, after 7 years, 70 children were still in the system for neglect, & the mothers continued to live in similar structural conditions, showing that psychosocial interventions alone are not effective in treating neglect. Intersectorial policies are needed to effect structural-level interventions.

98S35509 / ISA / 1998 / 12750

Oyen, Else, Manor, James, Reis, Elisa P. & De Swaan, Abram (Comparative Research Programme Poverty U Bergen, N-5007 Norway [tel/fax: 47-55589744/55589745; e-mail: crop@org.no]), **Elites and Their Perceptions of Poverty and Poor People.**

¶ Comparative analysis of interview data from elites in 6 developing countries are used to examine their perceptions of how poverty has come about, how it can be reduced, which role they can play in different poverty-reducing strategies, & what impact the actual interaction, or lack of such, between the worlds of the nonpoor & poor has on the reduction/production of poverty. The concept of "social consciousness" is taken to characterize elites who (1) are aware of the interdependence of social groups, including that of the poor, (2) realize that the elites bear some responsibility for the condition of the poor, & (3) believe that feasible &

efficacious means of reducing poverty might be created.

98S35510 / ISA / 1998 / 12751

Oyola-Yemaiel, Arthur A. (Dept Sociology Florida International U, Miami 33199 [tel: 305-348-2247; e-mail: aoyola01@solix.fiu.edu]), **Nunn-Lugar-Dominici Law: First Analysis.**

¶ The US government's recent concern about domestic terrorist attacks has resulted in new policies that link local & national emergency responses, namely, the Nunn-Lugar-Dominici bill, which addressed the fact that terrorist attacks could include the use of nuclear, biological, & chemical weapons. It aims at minimizing such risk by providing financial & structural resources in training of local emergency response offices & by facilitating a coordinate federal-local response. Examined here are Nunn-Lugar-Dominici law's early steps in preparing civil local emergency management personnel (the first responders) to evaluate & respond appropriately to disasters. Also assessed is the initial perception of effectiveness by local emergency management in southeastern FL.

Ozolins, Uldis (School Languages Deakin U, Toorak Victoria 3217 Australia [tel/fax: 61-3-92445440/454; e-mail: uldisoz@deakin.edu.au]), **Letting the Sociological Control the Political: Language Use and Politics of Language in the Baltic States.**

¶ Language policy sits at the heart of recent political conflicts in & over the Baltic states. On regaining their independence in 1991, these states, particularly Estonia & Latvia, were faced with having in their territory large numbers of Soviet-period settlers from Russia & the other Soviet Republics, causing the local nationalities to become almost a minority. National self-determination from the late 1980s eradicated post-Soviet language policies, reinstituted local languages as the only official languages, instituted language requirements for all public contact employment, & made language proficiency the main criterion for naturalization of noncitizens. Politically, criticisms of such policies came from Moscow from the very first days of national reassertion. Most interestingly, perhaps, this criticism has also come from various European institutions concerned variously with human rights issues or security concerns. Such strength of political criticism points to major issues confronting the Baltic states in their efforts at integration & managing their multiethnic states. Yet, sociological analysis reveals a paradox: despite the political noise over Baltic language policies, there is increasingly widespread acceptance of these policies & their legitimacy among those who are seemingly most affected—settlers of the Soviet period. Various explanations of this phenomenon are examined including intersecting sociological, economic, political, & linguistic factors that detail how these small languages are regaining hegemony in their territory.

Packwood, Nicholas (Dept Sociology Lancaster U, LA1 4YL England [tel/fax: 1524-593701/594256; e-mail: n.packwood@lancaster.ac.uk]), **Strategic Planning in the British Construction Industry: An Ethnographic Study and Critique.**

¶ Draws on contract research carried out by the Design, Space & Society Research Unit of the U of Lancaster (England) to examine difficulties in the communication of government strategic planning developed for British construction industry faced with new competition in a unified European market. Categories used by government to conceptually divide the building trades into discrete sectors (geotechnical engineering, concrete, steel, timber, masonry, building services) are represented in the development of national industrial policy. The advantages of an ethnographic approach to the study of these networks are explored while linking this study to broader possibilities for applied anthropology in the con-

text of government & industrial planning. A central challenge lies in conveying insights derived from a sociological perspective to industry professionals whose training is primarily in management & engineering disciplines. This problem applies equally to those managers in government tasked with developing & implementing innovation research policy & to those in industry who are the research target audiences. Establishing the credibility of ethnographic approaches, building relationships in industry networks, & enlisting support in research are all problems for the ethnographic researcher that more closely mirror the challenges faced by government in successfully conveying the results of technical research outcomes. In this sense, the work of ethnographic research has a recursive relationship with the ends set by that research. To investigate the networks whereby innovation research might be disseminated, a network of industry participants must be established. In this respect, the work of the Design, Space & Society Research Unit owes a debt to the research practices & insights of Michel Callon & John Law. Callon's "sociology of translation," is presented as a heuristic device to illustrate the role of the researcher & research in the formulation of innovation policy & the intersection of the disciplines of engineering & sociology.

Paes Machado, Eduardo & Siqueira, Carlos Eduardo (Dept Sociology Federal U Bahia, 41170-290 Salvador BA Brazil), **Environmental Risks in a Petrochemical Complex in Brazil.**

† Discusses the notion of social amplification of risks applied to the residents of Camacari, Brazil, where there is a large petrochemical complex. Interviews were conducted with 50 people to collect data on environmental impacts, social organization, political dynamics, perception of atmospheric pollutants & industrial accidents, & means of formal & informal communication of risks. Special emphasis was given to a rumor about a big explosion of industrial plants that would cause destruction of the cities near the complex. It is concluded that this particular type of social amplification of risks is a consequence of the lack of job opportunities, community mistrust in the petrochemical industry risk management, & lack of power to control environmental impacts.

Paetau, Michael (GMD-German National Research Center Information Technology, Schloss Birlinghoven D-53754 Sankt Augustin Federal Republic Germany [tel/fax: 49-2241-142625/142072; e-mail: paetau@gmd.de]), **"Virtual Enterprises": Networks or Social Systems?**

† Ongoing research on the possibilities of virtualized sociality is used to explore the auto-poiesis of a "virtual enterprise." Is a virtual enterprise only a special form of social networks, or is it an organizational social system with an identity, organizational memory, & a self-description, which allow differentiation of system & environment? Investigated is whether virtual organizations can pose as prototypes for successful enterprises in the context of globalization. A case study with a systems-theoretical approach examines the complexity & dynamics of a virtual enterprise distributed all over the Federal Republic of Germany as a network of individuals, different branches (in five regions), autonomous projects, & collaborating companies in terms of inherent social & organizational forces that keep it together or make it fall apart. Results challenge the hypothesis that (1) virtual enterprises, by virtue of active "boarder" management, cannot develop a systems identity; & (2) there are no characteristic differences between network organizations & virtual enterprises.

Paillé, Michel (Conseil langue française, 800 place D'Youville 13 e'tage Quebec G1R 3N4 [tel/fax: 418-644-9939/7654; e-mail: mpaille@clf.gouv.qc.ca]), **Les Politiques linguistiques au Canada et au**

Québec à la lumière de leurs contextes démographiques (Language Policies in Canada and in Quebec in Light of Their Demographic Contexts). (FRE)

† Language policies have been enacted in Canada by both the federal government & the Assemblée nationale du Québec. The federal government, through the Official Languages Act (1969) & the Canadian Charter of Rights and Freedoms (1982), wants to promote the use of English in Quebec & the use of French elsewhere in Canada. In Quebec—the only Canadian province with a French-speaking majority—the Charter of the French language (1977) strives to make French the language of government & law, as well as the everyday language of citizenship, especially among immigrants who live mostly in Montreal & have historically shifted to English as their usual language. Analysis of population growth trends shows the demographic context of both Canadian & Quebec language policies, & evidences increased bipolarization of the population: more Canadian French speakers live in Quebec, whereas the French-speaking minorities outside Quebec have reduced their share of the population to only 2.9%, largely due to exogamy & language shifts toward English. Yet, outmigration to other provinces & (since 1977) compulsory French education of immigrants' children have reduced the number of English Quebecers. Nonetheless, the situation of the French minorities outside Quebec is worse when compared to the province's English minority. For Canada as a whole, only the French speakers are losing ground. As for Quebec, despite the relative success of its language policy, major demographical factors show a loss in the Francophones' relative weight in Montreal.

Pais, José Machado (Instit Ciências Sociais UL, Av das Forças Armadas Edif ISCTE Ala Sul 1 [tel: 351-1-7932272] e-mail: mac.pais@mail.telepac.pt), **Transitions to Adult Life: The Games and the Rules.**

† In the traditional passage to adulthood, young people adapted themselves to prescriptive structures that set rigid rules on the course to be taken. Increasingly, however, this transition has acquired performative features that can be viewed within the four classic categories of games defined by Callois: agon, alea, mimicry, & ilinx. For many contemporary youths, their life course is increasingly like a game. Similar to playing computer games, they are called on in real life to solve dilemmas, negotiate crossroads, & overcome obstacles. The "yo-yo" trajectories that underlie the transition to adulthood gives this transition an increasingly hypertextualized flavor, with chance & diversity playing an ever more important role.

Pais, José Machado (Instit Ciencias Sociais U Lisbon, Ala Sul 1 P-1600 Portugal [tel/fax: 351-1-7932272/7964953; e-mail: macpais@mail.telepac.pt]), **Economy and Education: Maladjustments and Paradoxes—The Portuguese Situation.**

† In economies undergoing a surge of modernization & sudden & asymmetrical economic development, eg, Portugal, paradoxes result from several structural maladjustments between the economy & education. Interview data from the 1997 Survey of Portuguese Young People (N = 2,000) are drawn on to examine three of the paradoxes: (1) Young people of Portugal manifest overall satisfaction with the educational system, but register striking rates of failure in school; 60+% have repeated a school year at least once. What explanation can be given for their satisfaction with a school that obliges them to repeat the school year? (2) Young students in Portugal manifest very high academic aspirations; 70% aim to finish a higher education course. How can these high academic aspirations be justified or made compatible in light of such high failure rates? (3) In terms of the European Community, the Portuguese are among those who have the fewest academic qualifications. Therefore, in a context of economic modernization, why is it that young Portuguese adults (ages 25-35), who have lesser qualifications, are less affected by unemployment than those who successfully conclude their secondary education?

Pakulski, Jan & Crook, Stephen (Dept Sociology & Social Work U Tasmania, Hobart 7001 Australia [tel/fax: 61-3-62262337/62262279; e-mail: Jan.Pakulski@utas.edu.au]), **Routinisation of Environmentalism in Australia: Issue Concerns, Media Coverage and Social Carriers.**

† Argues that dynamics of public opinion, media coverage, & social activism on environmental issues in contemporary Australia are best under-

P

stood as a process of "routinization," which is reflected in a mainstreaming of environmental issues & a decline in less conventional forms of environment-related political activism. Opportunities for registering environmental concern through the electoral process have increased with the formation of green parties (eg, the Australian Democrats) & the formulation of comprehensive environmental programs by the major parties (the Australian Labor Party & the Liberal & National Parties). Thus, the process of routinization has led from nonconventional protests to conventional forms of political participation & from concentrated party-specific voting to diffuse & "specialized" voting. The environment has entered the repertoire of "routine" public concerns that are familiar, normal, & therefore, less affected by moral panics, the vicissitudes of electoral contests, & media fashions. This familiarity is cultivated by regular (itself routinized) media coverage & political exposure, which has been accompanied by an emergent clustering of environmental concerns & corresponding bifurcation of issue audiences. It is important to note that routinization is not equivalent to the straightforward triumph of old over new politics. Environmental politics have made a difference in Australia: eg, environmental issues have played an important role in loosening traditional (especially class-based) voting patterns. Further, the retreat of green issues to a core constituency does not exclude the possibility that a green issue in the future might become a focus for widespread concern & activism. Environmental concerns in Australia have now been appropriated by all important political actors. This means that their original carriers, the green groups, have to compete for attention on a more crowded scene, where claims to exclusive ownership & representation cannot be defended. This may result in a withering away of green groups or their transformation into conventional political lobbies. Alternatively, intensified bifurcation may occur in which the old issue carriers (green groups & movements) come to monopolize a Left-libertarian green niche. Survey data support both scenarios.

Palidà, Salvatore (Faculty Architecture Polytechnic Milan, I-20133 Italy [tel/fax: 39-2-23-9954-17/35; e-mail: spalid@tin.it]), **Police et société post-industrielle** (Police and Postindustrial Society). (FRE)

¶ Since the end of the 1970s, economic, social, political, & cultural transformations linked to industrial decline & the passage into the so-called postindustrial society, as well as the consequences of the formation of the European Union, have provoked a crisis in urban society & in traditional sociology. The involvement of this crisis with endogenous & exogenous social control is noted; as a result, police have been confronted with new demands for control, involving varied parts of the population, for which they are not adequately prepared. How daily problems & conflicts in the postindustrial city differ from traditional difficulties is investigated, & it is suggested that the unease experienced by police adapting to this new context seems unavoidable when one acknowledges the increased frequency of criminal activity & problems resulting from immigration. The analysis is based on results of several studies of urban police in Italian cities, 1993-1998, & on 4 years of research on the role of immigrants in deviance & urban delinquency.

Palonen, Anne (U Lapland, SF-96100 Rovaniemi [tel/fax: 358-16-3241/32-4500; e-mail: anne.palonen@levi.urova.fi]), **Child Sexual Abuse in Families—A Social, Psychological, and Legal Problem**.

¶ Assesses the division of responsibilities between legal & administrative authorities, with special reference to the protection of law of clients & the problems connected with social workers' & health care professionals' obligation to maintain confidentiality. The research material comprises the records of mental examinations for 130 persons convicted of sexual offenses, 1971-1993; 36 cases involved sexual abuse of a child by an adult living in the same household & having a parent-like relationship to him/

her. Records of decisions about the 36 cases made by social welfare boards & the officials reporting to them are examined. Findings confirm the conception that the position of the Social Welfare Board in the course of criminal proceedings should be made clearer than it is now. It should also have more precise guidelines for the division of responsibilities & roles between different authorities. Explored in this light is the issue of the sanction that society should impose on the offender—punishment, treatment, or both?

Pamir Mete (Dept Comparative Politics U Bergen, N-5007 Norway [tel/fax: 47-55-58-2018/9425; e-mail: mete.pamir@isp.uib.no]), **Causality and Narrativity in Historical Sociology**.

¶ Seeks a dialogue with the Weberian themes of causal imputation & value significance through the guidance of Paul Ricoeur's philosophy. Three modes of causal explanation in historical sociology are identified—variable-oriented, macroanalytic & narrative—and critically examined from the perspective offered by narrative understanding. A discussion located in the context of justification of historical-sociological explanations culminates in the model of Weberian singular causal imputation, which, as it is argued following Ricoeur's analysis of narrativity in "Time and Narrative," brings together the diverse modes of causality under the organizing umbrella of the narrative approach. It is suggested that emplotment, which is a distinctive feature of narrative, offers a way of synthesizing the double ambition of Weberian sociology—historical causal explanation & understanding of human action. Attention then turns to the Weberian theme of value significance in the construction of research objects. By way of an exploratory look at Ricoeur's notion of narrative identity, broader implications of advocating narrative causality in the context of discovery are assessed.

Pandharipande, Rajeshwari V. (U Illinois, Urbana 61801 [tel/fax: 217-333-0946/3466; e-mail: raj-pan@uiuc.edu]), **Codeswitching in Translation**.

¶ Translation presents a fascinating domain in which to examine the structure & function of code-switching where the "meaning" is transferred from one code to another. In this process of transfer, the translator produces new linguistic structures in the target language. However, translations of the original text in the same language do not show identical patterns of code-switching. Here, an examination of five English translations by various translators of a Sanskrit text (*The Bhagavadgita*) demonstrates that (1) all mix the structures of Sanskrit in their English translations, (2) the patterns of code-switching vary significantly across translations, & (3) the structure of patterns is determined by the goal/purpose of the translation; ie, each is aimed at a particular audience & is intended to carry out a particular social or literary function. It is argued that, if determinants of the structure of code-switching are extralinguistic (as they are in this context), the constraints on code-switching cannot be determined in exclusive structural terms.

Paoletti, Isabella (Social & Economic Research Dept INRCA, Ancona Italy [tel/fax: 39-75-5723672; e-mail: ipaolett@unipg.it]), **The Gendered Construction of the Moral Order: Interviews with Women Caregivers**.

¶ Interviews with women caregivers, ages 50+, of older people in Ancona, Italy, are drawn on to describe how the caring task is constructed as a women's duty inscribed in a gendered moral order. Discourse analysis reveals how specific identities of the women are produced through the interaction & how the caring tasks are constructed in the interview as a women's duty. The interview data are treated as "moral tales," ie, ways for respondents (Rs) to display their moral responsibility & a morally adequate images of being a caregiver. Caring within the family is described by the Rs as their own burden, responsibility, & ineluctable destiny. In some cases, no way out is conceivable, & the physical & mental health of the caregivers is threatened. The construction of a gendered moral order is enacted through the development of the interview interaction.

98S35527 / ISA / 1998 / 12768

Paoletti, Isabella (Dept Social Economic Research INRCA, r. s. Margherita 5 I-60124 Ancona Italy [tel/fax: 39-75-5723672; e-mail: ipaolett@unipg.it]), **Caring for Older People: A Gendered Practice**.

¶ Describes some instances of the moral & relational universe in which caring practices are embedded, drawing on data from *The Role of Women in the Family Care of the Elderly* (INRCA, Ancona, Italy), an action

project that interviewed women caregivers in Ferrara & involved them in various initiatives, eg, self-help groups. The data were inspected, in particular, for the material & moral reasons that produce dependency of the family caregivers on the cared for. In fact, if an objective dependency of the cared for exists, in many cases, caregivers' life revolves around the cared for, even when alternative solutions are feasible. Severe psychological & physical health problems are often lamented by the caregivers.

98S35528 / ISA / 1998 / 12769

Papademas, Diana (State U New York, Old Westbury 11771 [tel/fax: 516-922-3047/876-3325; e-mail: sunyowl@lilrc.org]), **The Global Empowerment of Children: Children's Rights.**

¶ Explores global empowerment of children, children's rights, & the concept of citizenship as social practice via analysis of UN, particularly UNICEF (UN International Children's Emergency Fund), support of the Convention on the Rights of the Child & its distinctive emphasis on the involvement in & generation of art. The social contextual/macroanalysis is tied to direct participation with & observation of children's projects on the microlevel of analysis. The UNICEF goal of involving children in the production of art (especially paintings & drawings), making the children's voice a form of global empowerment, is challenged by the patriarchal, bureaucratic, corporate context. A brief social history & postmodern analysis are presented of the purposes & results of UNICEF art & the dynamics of empowering children. A political context is indicated, inasmuch as the movement for children's rights has reinvigorated the value of producing art images & political messages that reach a large & influential audience. The changing meaning of empowerment in a modern patriarchal, corporate, service organization is considered to understand the practices, participation, & meaning of citizenship & empowerment. Visual illustrations of the typology support the discussion.

98S35529 / ISA / 1998 / 12770

Papademas, Diana (State U New York, Old Westbury 11771 [tel/fax: 516-922-3047/876-3325; e-mail: sunyowl@lilrc.org]), **The Children's Rights and Women's Rights Movement: Extending Theory (Beyond Beijing).**

¶ The children's & women's rights movements are analyzed to develop a theoretical grounded framework that accounts for the common & different feminist agendas, global/international & local/regional factors, & gender & age variables. Data are drawn from public documents & accounts of the governmental/nongovernmental organizations, particularly through the UN members that establish Platforms for Action. Developing from several international treaties, the 1995 Fourth World Conference on Women in Beijing, People's Republic of China, provided a Platform for Action along with the UN's sponsorship & several regional declarations. A transnational & gendered analysis of the human rights movement, & a strong focus on young women, or, as the UN has defined the concept of the rights of the "girl child," draws on these public documents & other UN & UNICEF sources to investigate global social movement(s) & regional variations of children's rights as part of, but not the same as, the women's rights movement(s). The historic context & the cross-national comparisons of the movements are summarized to examine the common concerns & goals of improving the position of women/young women. Differences in the issues & strategies for action are explored to develop the theoretical context that allows for variation & differences in the postcolonial division among First & Third World (young) women as well as a theoretical grounding of the issues to extend understanding of feminism in this postmodern period, "beyond Beijing."

98S35530 / ISA / 1998 / 12771

Papadopoulos, Apostolos G. & Daouli, Joan (Dept Economics U Patras, GR-26500 Greece [tel/fax: 30-61-9961-34/61; e-mail: kasiapa@aurora.eexi.gr]), **Forms of Survival and Marginalization of Family Farms in Areas Lagging in Development: The Case of the Prefecture of Aitolokarnania, Greece.**

¶ The main production unit in Greek agriculture remains the family farm-based production unit, despite claims that modernization would completely dominate the country's economy. The common agricultural policy (common agricultural policy) measures implemented in Greece by the European Union have played a significant role in the survival of family production units. However, family farm marginalization is likely to occur due to significant cutbacks (reformed common agricultural policy) in agricultural subsidies. Further, family farm survival in areas lagging in development, such as Aitolokarnania, has been due to defensive strategies against marginalization, often in the form of farm diversification, petty trading, off-farm employment, & flexible organization of family labor.

Also, it may well be that regional policy measures are far more relevant for survivalist family farms trying to face marginalization. Survey data on family farm survival &/or marginalization in the prefecture of Aitolokarnania, gathered in summer 1997 under an European Union-funded research project dealing with the impact of structural policies on areas lagging in development, support the analysis.

98S35531 / ISA / 1998 / 12772

Pardo, Mercedes (Dept Sociología U Pública Navarra, E-31006 Pamplona Spain [tel/fax: 48-169494/169469; e-mail: mpardo@upna.es]), **Environment/Social Control/Cultural Identity.**

¶ Study of environmental problems as a factor of social change in industrialized & developed societies has resulted in an important body of knowledge from different perspectives (eg, economic, political, social, & sociological). Environmental values studies & its political consequences (eg, environmental movements & green parties) have received special attention from researchers. But the environment has an important symbolic potentiality not addressed from that perspective, the potential to connect it with other central features of societies, ie, cultural identity. In societies suffering from cultural identity crises, the environment (or some of its components) might be playing a central role in that process. Here, the environment is considered from a perspective of how it is used for social control & specifically, the dialectic generated around cultural identity processes.

Paris, Chris & Murtagh, Brendan (Magee Coll U Ulster, Londonderry BT48 7JL Northern Ireland [tel/fax: 1504-375342/375402; e-mail: ct.paris@ulst.ac.uk]), **Ethno-Religious Segregation in Northern Ireland: Social Conflict, State Practices, Market Processes and Spatial Divisions.**

¶ Ethnoreligious residential segregation in Northern Ireland is defined in idea-type terms, contrasting areas with mainly (1) Protestants/unionists or (2) Catholics/republicans. Such segregation derives from social conflict, is mediated by state practices, & has intensified despite a private sector housing boom. It adds a conceptual layer & increased spatial complexity to the other main housing-related state-market social cleavage: the socioeconomic & demographic divisions between public tenants & owner-occupiers. Ethnoreligious residential segregation has produced a distinctive pattern of residential differentiation & social polarization. Research indicates that ethnoreligious segregation is not simply a special case, but tests generalizations derived from other examples of residential differentiation.

Parisot, Denis (UFRSTAPS U Nice, F-06205 Cedex 3 France [tel/fax: 33-4-92-29-65-11/49; e-mail: Parisot@unice.fr]), **Condescension and Tolerance with Regard to Sexual Role Transgressions in Sport.**

¶ From a young age, students recite the modern sport creed: sports are sexually tolerant. Common sense takes a back seat to transformations in bodily practices. What is "naturally" taught falls within the province of macho culture. Some, believing in the power of the muscle, oppose others specialized in expressivity & grace. The sexual connotation of sports leads to a pernicious disqualification, which is partially endorsed by transgressors. The territories of an "exacerbated virility" are scratched & found to be the object of a fierce resistance. The right to play games belonging to the other sex is disturbed. Rugby players are not "real women" anymore. After the game, under the effect of stigma, they adopt virile rituals, mock homosexual relations, stripteases, lewd songs, beer-drinking contests, etc. The feminine identity so diluted pushes the most feminine to underline their difference & sketch out classical dance steps. Claiming equality, other female students take part in a sociodrama &

P

mime the right to box, while exhibiting their muscles in the face of detractors & challenging them in a way worthy of the most traditional males. Elsewhere, the not quite masculine character of dance practices is emphasized. In their tolerance, however, girls admitted the right of boys not to be "real males." Transgressions of the sexual norm produce crossed condescensions. Women as well as men can hardly distinguish between biological sex & sexual choice, gender & biological sex. Is the simultaneity of the masculine & the feminine in the expressivity of the body sportingly unthinkable?

Park, Kyung-Tae (SungKongHoe U, Seoul 152-716 South Korea [tel/fax: 82-2-610-4235/683-8858; e-mail: ktpark@blue.skhu.ac.kr]), **Impact of Subjective Feelings about the Environment on Personal Happiness and Satisfaction with Life.**

¶ In the period of economic development since the 1960s, Koreans have ignored the environment. After achieving a certain level of quality of life, they began to think about environmental conditions. In general, personal happiness & satisfaction with life are closely related to how people evaluate the condition of the environment. Koreans, however, still tend to think that the environment is less important than other variables, eg, democratic government, national unification, owning a house, etc. The hypothesis that subjective feelings about the environment do not have a significant impact on personal happiness & life satisfaction is supported by data from the 1996 National Survey on the Quality of Life (N = 1,000 respondents). However, because interest in the environment is increasing, it is expected to have more impact on happiness & life satisfaction in the future.

Parker, Jennifer (13856 Bora Bora Way, Marina Del Rey CA 90292 [tel: 310-827-6819; e-mail: Jennparker@compuserve.com]), **The Corporate Fast Food Restaurant as Transnational Community: Global and Local Interactions among an Immigrant Workforce in New York City.**

¶ Corporate fast food restaurant franchises in New York City are viewed as "global communities," places where global & local interactions take place among multiracial/ethnic workforces comprising new immigrants. Data from interviews & participant observation in fast food restaurants in immigrant neighborhoods show how global & local processes interact & reflect both global corporate restructuring trends in general & emerging patterns of race, ethnic, & gender divisions of labor in the US city. Assumptions surrounding the dichotomy between ethnic & mainstream economies are challenged by examining processes that tend toward ethnic incorporation in the regionalization of global corporate capital. Modes of production based on old & new technologies, local cultural marketing strategies, transformation of work criteria to emphasize social & cultural features of employees, & employers use of immigrant social networks' reflect these processes. The global community creates new labor market dynamics based on cultural categories of race & ethnicity & has implications for employment practices, job opportunities, social mobility, & careers for particular groups.

Parker, Marcie (United HealthCare Corp: Optum Division MN010-S236, 6300 Olson Memorial Highway Golden Valley MN 55427 [tel/fax: 612-797-2718/474-3079; e-mail: mparker@uhc.com]), **Loss in the Lives of Southeast Asian Elders: A Critical Reevaluation of Family Life Education.**

¶ Draws on human ecology, continuity, & loss theory in a qualitative analysis of domains of loss experienced by Southeast Asian elders who

have resettled in Minneapolis/St. Paul, MN. Analysis of extensive life-history narratives obtained from 5 men & 5 women in each of four cultural groups—Cambodian, Hmong, Laotian, & Vietnamese—reveals four domains of loss: loss of a way of life, loss of key relationships, role loss, & fears about the loss of cultural heritage & cultural transmission to younger generations. An ecological spiral model is proposed as one way to understand how Southeast Asian elders experience family life. Implications for theory & the practice of family life education in the community are examined.

98S35539 / ISA / 1998 / 12780

Parker, Marcie (United HealthCare Corp: Optum Division MN010-S236, 6300 Olson Memorial Highway Golden Valley MN 55427 [tel/fax: 612-797-2718/474-3079; e-mail: mparker@uhc.com]), **The Mind/Body Connection: Behavioral Health Research in the Real World.**

¶ Discusses the nature & objectives of multimethod research in an applied setting, where researchers are called on to demonstrate the quality of care as well as the efficacy & efficiency of the services delivered. Topics addressed include results of a national survey of benefits managers; a biopsychosocial approach to behavioral health problems & a study of the severity of caller concerns; biopsychosocial concerns in a large public employer group & an insurance company; & the impact of disrespectful bossing on employee health & morale. Also included is a brief overview of client outcomes of five surveys on mental health, financial, substance abuse, work-related, & domestic abuse problems. Also presented are an overview of client satisfaction surveys; results of a medical cost offset study; & a biopsychosocial health risk assessment tool that looks at individual, couple, & family health. Lessons learned in working & doing research in an applied setting in a large managed care firm vs an academic setting are highlighted. Among the methods used in this research are micro- & macrostudies of claims, written & telephonic surveys, self-report on health status, satisfaction surveys, & health risk assessment tools.

Parker, Robert Nash (Presley Center Crime & Justice U California, Riverside 92521 [tel/fax: 909-787-4604/7394; e-mail: robnp@aol.com]), **Gender Specific Homicide Victimization: A Cross National Analysis of Violence, Alcohol, and Culture.**

¶ The study of homicide in North America has been limited by focus on US data & cross-sectional analyses, & by a lack of consideration of alcohol in homicide causation. European research has been more dynamic & dealt extensively with the alcohol-violence relationship, but these studies also have limited generalizability. A cross-national dynamic analysis of homicide victimization by gender is reported here, as an extension & replication of Rosemary Gartner's (1990 [see abstract 90V6940]) theoretical model of homicide, with alcohol-related concepts integrated into this model. Results based on the analysis of 17 nation-states, 1950-1995, provide evidence that two aspects of alcohol-related behavior, consumption rates & the drinking culture, interact with divorce to cause homicide victimization; further, gender differences are found in the nature of these interactions. The importance of these results for homicide causation & violence prevention policy is discussed.

98S35541 / ISA / 1998 / 12782

Parker, Stanley R. (U Brighton, Eastbourne BN20 England), **Alternative Leisure Futures.**

¶ Discusses four types of leisure futures in the short, medium, & long term: (1) Conservatism means the continuation of present trends & the preservation of the status quo. (2) Reactionism indicates an attempt to return to the conditions & values of an earlier time, perhaps a perceived golden age. (3) Reformism denotes the pursuit of minor changes of policy or practice while leaving the status quo unchallenged. (4) Revolutionism implies a set of fundamental changes in social, economic, & political values & institutions. Consequences of these futures for leisure forms, provision, & experiences are illustrated by examples from the international literature.

98S35542 / ISA / 1998 / 12783

Parmer, Leena (Dept Sociology Rajasthan U, Jaipur 302004 India), **Cross-National Research on Military Organization: The Indian Perspective.**

¶ Examines some emerging issues & problems of military sociology in India. In India, there have been biographical, autobiographical, & accounts of memoirs wherein the military has been narrated as a part of in-

dividual experience; however, there is hardly any systematic work on military sociology. The military system, by its nature, necessitates a certain legitimate degree of nonaccessibility, secrecy, & disciplined silence. Presumed ethical, moral, & national interests & relatively closed structure of the military have led to self-denial of military sociology in India.

98S35543 / ISA / 1998 / 12784

Parra, Maria Cristina (U Zulia, Maracaibo 4005 Venezuela [e-mail: mparra@telcel.net.ve]), **University Faculty: The Specificity of Their Role.**

¶ University faculty, who as actors daily construct the institution in which they develop an important part of their social career, are explored in terms of their specificity in the context of the complex professionalization & bureaucratization process characteristic of modern universities. To belong to the university presupposes a job or occupation that depends on a salary established by the institution or government, which implies that the faculty must organize to negotiate work terms & conditions. Despite these characteristics, which may seem adverse, faculty still maintain relative control of their job. In addition, sociopolitics plays an important role in transformations at all levels & particularly in the production & distribution of knowledge. In Latin America, this analysis should be forwarded considering that regional universities have a tradition different from those of the rest of the Western world, & that faculty & public scholars shoulder social responsibilities transcending the revolutionary model of the 1960s.

98S35544 / ISA / 1998 / 12785

Parra-Luna, Francisco (Dept Sociología U Complutense Madrid, E-28023 Spain [tel/fax: 34-1-3942923/01; e-mail: parralun@lix.intercom.es]), **Can the Performance of Social System Be Measured?**

¶ All societies pursue certain objectives & attempt to reach them using a series of means; ie, society can be defined as a system for transforming means into ends, an operation that has been represented on various occasions. Indeed, any society is implicitly designed from the outset to convert something not directly consumable to something consumable. This can be compared to the classic scheme of manufacture whereby raw materials (money, effort, & means) were used to obtain certain finished tangible or intangible products intended to satisfy individual & social needs. Consequently, society arises to effect this transformation & would cease to exist should such transformations no longer take place or become ineffectual. Hence, there can be no doubt that the definition of input & output is essential to understanding the nature & origin of the social phenomenon, which is nothing more than a "transformation unit."

98S35545 / ISA / 1998 / 12786

Parra-Luna, Francisco (Dept Sociología U Complutense Madrid, E-28023 Spain [tel/fax: 34-1-394-29-23/01; e-mail: parralun@lix.intercom.es]), **The Role of a Referential Pattern of Values in the Analysis of Social Systems.**

¶ Values can be considered the main raw material that founds & forms the social phenomenon. If one can call value "an element of a shared symbolic system which serves as the criterion for choice between orientative alternatives" (Talcott Parsons), then it can be extrapolated that almost everything in the field of human relations can be considered an enormous & complex framework of necessities & interests that can only be satisfied through the achievement of values. The reason for existence of institutions, the aim of all human association is solely a result of the need for carrying out & attaining values that will satisfy original or derived necessities. Any systemic theory of society cannot avoid dealing with values as one of its main subjects.

Partida-Rocha, Raquel (U Guadalajara, Jalisco Mexico [tel/fax: 523-823-7395/854-2195; e-mail: rpartida@campus.gda.itesm.mx]), **Nuevos modelos productivos. La mutación del proceso productivo en la industria alimenticia y electrónica de Guadalajara** (New Productive Models. Transformation of the Productive Process in the Food and Electronic Industries of Guadalajara). (SPA)

¶ Reflects on changes in the food & electronics industries of the city of Guadalajara, Mexico, focusing on the productive restructuring & national free restructure economy. Analysis emphasizes global transformations in work & related flexibility. The hypothesis is that new productive forms emerge from the transformation & adaptation of extant modern models, ie, Japanese or North American models of work organization.

98S35547 / ISA / 1998 / 12788

Pascuzzi, Giovanni (Faculty Law U Trento, I-38100 Italy [fax: 39-461-881899; e-mail: pascuzzi@gelso.unitn.it]), **The Law between Books and Bit.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ The law of primitive society (ie, "mute law") & the law of oral societies are very different; the modern legal cultures (ie, the Western legal tradition) that extensively use printed books are different from the legal cultures that can consult only rare manuscripts. The use of information technology to store, represent, & spread legal knowledge is changing the law in two directions: (1) the concrete rules are changing (eg, regulations about the validity of the electronic documents), & (2) modalities to construct & represent legal reasoning are changing (eg, hypertexts). Discussed are how information technology can be used in legal education, how the technology can be used to transmit legal knowledge, & what law professors have to teach.

98S35548 / ISA / 1998 / 12789

Patil, Rajendra B. (Dept Sociology Shivaji U, Kolhapur 416004 India [tel/fax: 91-0231-655571/656133]), **Chipko: People's Movement in India.**

¶ The Chipko (Hug the trees to save them) people's movement in India was launched in Uttarkhand in the early 1970s to challenge the commercial management of forests. Chipko attempted to create awareness through education. The Dasholi Gram Swarajya Mandal is the mother organization of the movement. It has been active in making villagers understand the importance of forests & in seeking their active participation in afforestation & conservation. When foresters came to chop the trees, the women hugged the trees, saying "Chop us, not the trees! These trees give us water we drink, fertile soil to grow food. These are our life & soil." The movement continued for 8 years until the Uttar Pradesh state government put a moratorium on the felling of green trees for commercial purpose. Analysis of the emergence & success of the Chipko movement shows that, if people actively participate in a movement, it will be successful. This premise is supported by a review of secondary published data.

Pawluch, Dorothy A., Cain, Roy & Gillett, James (Dept Sociology McMaster U, Hamilton Ontario L8S 4M4 [tel/fax: 905-529-7070/522-2642; e-mail: pawluch@mcmaster.ca]), **Lay Constructions of HIV/AIDS and Complementary Therapy Use.**

P

¶ Recognizing the importance of lay conceptions of understanding people's behavior in the face of illness, experiences of individuals with human immunodeficiency virus/acquired immune deficiency syndrome (HIV/AIDS) who use complementary therapies are examined, showing how the use of such therapies—the decision to turn to them, pattern of use, & very definition of what constitutes complementary therapy—is integrally linked with how individuals understand HIV/AIDS & how they construct health & illness more generally. Analysis of approximately 70 qualitative interviews conducted 1994-1998 in south-central Canada indicate that some people think of health holistically as a balance of the physical, mental, emotional, & spiritual with well-being. Others have an understanding that conforms more closely to a mechanistic & biomedical view of health & illness as either the absence or presence of disease. Each group makes sense of complementary therapies in different ways. The diversity of constructions underpinning complementary therapy use among people with HIV/AIDS & how these constructions are shaped by gender cultural/ethnic backgrounds, class, & social networks are explored.

Payne, Clive (Nuffield Coll, Oxford OX1 1NF England (tel/fax: 441-865-278720/278725; e-mail: clive.payne@social-studies.oxford.ac.uk)), **Targeting Floating Voters with Statistical Models.**

¶ In recent general elections in the UK, the main political parties have used statistical models to analyze their private polls. Identified here are the issues that predispose voters to vote for/against their party. The results of these models were then used to help inform the political campaigns of the parties. Described is the modeling work done for the Labour Party in the run-up to its successful campaign in the general election in May 1997. The models were straightforward logistic models of the propensity of floating (ie, noncommitted) voters to vote for the two main protagonists, Conservative & Labour, with adjustments for voter's demographics. Emphasis is on the problems of applying & interpreting such models for politicians & their campaign managers. The issues addressed include (1) what added value modeling brings to the analysis of private polls; (2) why such models should be restricted to floating voters; & (3) nontechnical interpretation of odds ratios & model inference. A method is described that attempts to evaluate how a unit change in the voter's position on an attitude scale affects a party's fortunes.

Pazouski, A., **Globalisation and the Political Economy of Gender: The Case of Female International Migrants in Japan.**

¶ In the context of an emerging international division of labor, examined is the relationship between socioeconomic development, migration, & gender on the international level, using the case of female labor migrants—mainly from the Philippines—in Japan to illuminate the role of gender from the perspective of a global political economy.

98S35554 / ISA / 1998 / 12795

Pazovski, Arcadii & Rostovtseva, Daria (Instit Economics & Industrial Engineering Russian Academy Sciences, 17 Acad Lavrentiev Ave Novosibirsk 630090 (tel/fax: 7-383-2-356991/355580; e-mail: rostov@ieie.nsc.ru)), **Trade Unions and Industrial Relations in Public Transport in Russia.**

¶ In Russia, emerging trade unions, aiming to create their social base, do not seek social partnership & balance; in fact, they do not negotiate with employers & oppose alternative trade union recruiting. Much collective action protest organized by trade unions are based on those reasons. Here, labor conflicts & their causes are analyzed, drawing on data from municipal common transport enterprises in Novosibirsk, Russia, gathered during & after a driver strike. Explored are the reactions & behaviors of labor collectives, enterprises director specialists, trade union leaders, & passengers. Focus is on the lack of accord between management structure & modern market conditions.

98S35555 / ISA / 1998 / 12796

Pearce, Tola Olu & Morrison, Johnetta (U Missouri, Columbia 65211 (tel/fax: 573-882-7265/884-6430; e-mail: socip@showme.missouri.edu)), **Childhood in the Family: A Cross-Cultural Study on Children's Perceptions of Their Position and Responsibilities.**

¶ Explores US & South African children's perspectives on childhood in families, focusing on the viewpoints & activities of children in creating their own identities. From an interpretive sociological perspective, children are viewed as agents who interpret, react to, & shape their environ-

ments. Addressed are (1) what "family" means to children; (2) what roles they see themselves playing in creating family values; (3) what they see as a good family; (4) where they see themselves as fitting in, in terms of the responsibilities for developing good families; & (5) whether they perceive household responsibilities as an avenue for autonomy, a learning process, or something negative. Recognized are three levels operating for the child: nation (macro); ethnicity, class, & gender (intermediate); & individual (micro). Also considered are how cultural diversity affects conceptions of family life, & what impact globalization has on the exportation of ideals of childhood.

98S35556 / ISA / 1998 / 12797

Pearson, David G. (Victoria U, Wellington New Zealand (tel/fax: 04-4721-000-8782/495-5041; e-mail: David.Pearson@vuw.ac)), **States of Unease: Aborigines Immigration and Nationalists in New Zealand.**

¶ Examines current tensions in ethnic politics in New Zealand using a theoretical framework that encompasses elite state & nation making in settler societies & the inclusion or exclusion of aboriginal peoples & migrant minorities in or beyond these political projects. The history of legal citizenship in New Zealand is used as an illustrative guide to the making & remaking of nations at the intersection of meetings between old & new arrivals. Theories of ethnic & civic nationalism are viewed as analytically distinct processes reflecting elite imaginings & practices relating to different conceptions of peoplehood—as popular communities of descent or rational-legal entities. The distinctiveness of settler societies is explored, particularly elite constructions of national myths of origin & descent. It is argued that elite nation making in New Zealand was heavily dependent on the swift emplacement of the state—hence, New Zealand is best viewed as a state-nation for much of its history.

98S35557 / ISA / 1998 / 12798

Peck, Jamie & Jessop, Bob (School Geography Manchester U, M13 9PL England (tel/fax: 0161-275-3627/7878; e-mail: jamie.peck@man.ac.uk)), **Globalizing Workfare versus the 'Welfare Dependent Ghetto': State Strategy, Fast Policy and the Restructuring of Local Welfare Regimes.**

¶ Explores the geopolitics of workfare welfare reforms currently being implemented in countries like the US, Canada, & the UK. In distinctive yet related ways, established welfare settlements have fallen under concerted political attack not only for failing to eradicate poverty but as the source of supposedly new socioeconomic pathologies, ie, welfare dependency. Under workfarism, dependency is countered by active reconnection with wage labor; principles of needs-based entitlement are displaced by those of reciprocity & employability, while federal/national regulation gives way to a new emphasis on decentralized delivery & local solutions. Yet there are a series of profound disconnects between welfarist problems & workfarist solutions, many of which find their most vivid expressions at the urban scale, supposedly the primary welfare problem site. The rise of workfarism is contextualized in terms of broad-level transformations in contemporary state strategies/structures & regulatory conventions. Focus is on the (analytical & political) tensions arising from the fashion in which workfare regimes are simultaneously globalizing (as fast policy transfers increasingly take on an international character) & localizing (as local experiments proliferate & delivery systems become embedded).

98S35558 / ISA / 1998 / 12799

Pedahzur, Ami (U Haifa, IL-37905 Israel (tel/fax: 972-4-8240045/8257785; e-mail: pedahzur@actcom.co.il)), **How Do They Survive? Extreme Right Wing Parties in Fighting Democracies.**

¶ Compares two extreme right-wing parties (KACH & MOLEDET) & several others in Israel to examine how such parties cope with the barriers erected before them by the democratic state. These restrictions seriously impair their ability to adapt their ideology to the demands of the law while remaining extreme enough to attract the voters to whom their message is directed. Discussed are (1) the factors inducing the prospects of an extreme party to cross the barriers presented by the state, & (2) the steps an extreme party should take to maintain its relevance for its potential voters.

98S35559 / ISA / 1998 / 12800

Pedersen, Inge Kryger (Dept Sociology U Copenhagen, DK-1361 Denmark (tel/fax: 45-3532-3291/3940; e-mail: inge.kryger.pedersen@sociology.ku.dk)), **Athletic Career: Modern Strategies amongst Top Female Athletes.**

¶ Among the world champions in sports, several female athletes have been able to combine elite sport careers with motherhood & in some cases, also with education or work. Discussed here is what this phenomenon means in relation to the character of sport, career, & modernity. Empirical research among such female athletes shows a coexistence of different forms of culture. How athletes influence & develop their own social worlds in top sports is the focus of an interpretive interactionist analysis. The institutionalization of elite sport is not necessarily characterized by a linear (evolutionary) process from playing communities to professionalized, individualized elite sport. This statement can be seen as a critique of the concept of career developed in the sociologies of occupations, organizations, & professions. In such contexts, the hierarchical assumptions of progress through organizational layers & levels are attached. How the modern, individualized athletic woman in a risk position uses traditional bonds shows that a successful athletic career is different from linear, monodimensional careers that focus on a single goal.

98S35560 / ISA / 1998 / 12801

Pedersen, Kirsti (Dept Leisure & Cultural Studies Finnmark Coll, N-9500 Alta Norway [tel/fax: 78-45-02-38/43-44-38; e-mail: kirstip@hifm.no]), **Globalization of Local Culture: A Study of Wilderness, Experiences and Changes in Women's Lives in Alta, Northern Norway.**

¶ Common use of outlying areas has until recently been closely connected with a subsistence economy in Alta, Norway, a community located far north of the Arctic Circle. Traditionally, the organization of people's everyday life has centered around the harvesting seasons, with clear divisions between women & men. Rapid modernization & urbanization have transformed this northern region from a peripheral, burned-out area after WWII to a part of the modern Norwegian welfare state. Analyzed here is how outdoor life ideologies, practices, & experiences structure women's lives, & how the relationship between women & outdoor life has changed during the modernization process, drawing on interview data from women & men, ages 20-65, & ethnographic fieldwork carried out in Alta. Nature as a place of subsistence work has been replaced by nature as a recreational landscape. The region has become a part of a globalized sports, leisure, & tourist culture, & the wilderness can be conceptualized as a place for cultural encounters between traditions & modernity as local traditions are adapted to globalized & technology-based activities. Three main types of outdoor people are identified: (1) traditionalists, for whom harvesting nature is the prime motive; (2) classical trekkers, for whom hiking & skiing for pleasure & health are important; & (3) special interest recreationalists, ie, salmon anglers, hunters, dog-sledders, & snowmobilers. The three types overlap & challenge each other.

Pedlar, David John, MacKnight, Chris & Rockwood, Kenneth (Veterans Affairs Canada, PO Box 2502 Charlottetown Prince Edward Island C1A 8C2 [tel/fax: 902-568-7464/8890; e-mail: djp3@po.cwru.edu]), **Social Factors and the Dynamic Model of Frailty: Results from the Canadian Veterans Care Need Survey.**

¶ The identification, management, & prevention of frailty is of central importance in efforts to promote independence among seniors. Previous research has concentrated on biomedical factors, including impaired physiological processes, single organ system indicators, & impaired functions; recent work has focused on a dynamic approach that defines frailty as a balance of resources & deficits that may contribute to a loss of independence. Although social factors, including social integration & social support, are key components of the dynamic model, their contribution to understanding frailty is not yet understood. To address this question, multiple correspondence analysis was undertaken with 1,597 community-dwelling men from the 1997 Canadian Veterans Care Need Survey. Groups of biomedical, environmental, & social measures were entered into the analyses to determine the relative contribution of social factors in understanding frailty. The contribution of social factors to a dynamic model of frailty is discussed.

98S35562 / ISA / 1998 / 12803

Peggs, Kay (Dept Sociology U Portsmouth, Hants. P01 3AS England [tel: 01705-846093; e-mail: kay.peggs@port.ac.uk]), **Women, State Pensions and Poverty.**

¶ Using secondary analysis of the General Household Survey for 1988-1990, it is shown that women of working age are less likely than men to have occupational pensions or personal pension plans, which is largely attributable to the impact of child care responsibilities on their labor mar-

ket position. However, the generally disadvantaged position of women in the labor market means that even women without caring responsibilities are disadvantaged in their nonstate pension membership. The majority of women, therefore, will have to rely on state pensions in the future. However, the value of state pensions is being increasingly eroded. Interviews with 45 employed women, ages 40-59, reveal concerns about government encroachments on state pensions. Few felt that they would be able to survive on the basic state pension, & most were unwilling to rely on SERPS because of cuts. However, the majority of the women were disadvantaged in their nonstate pension membership, & therefore, state schemes will be crucial to their finances in later life. Nevertheless, many will receive reduced state pensions. It is concluded that women's poverty in older age will increase, because concentration on nonstate pensions & diminished state pensions will lead to women being increasingly disadvantaged.

98S35563 / ISA / 1998 / 12804

Pei, Xiaomei, Ingman, Stanley R. & Wu, Zhengzhang (Center Study Aging Duke U Medical Center, Durham NC 27705 [tel/fax: 919-416-5800/5879; e-mail: pei@geri.duke.edu]), **China's Health Care Transition and Its Impact on a Rapidly Growing Aged Population.**

¶ Addresses issues related to health care for a rapidly growing aged population under the current health care reform in the People's Republic of China. It is assumed that (1) older people, who generally live either on meager pensions or rely totally on their children, are disadvantaged regarding access to increasingly market-driven health services; & (2) it is increasingly difficult for older people, who tend to suffer more from chronic than acute conditions, to get appropriate services as the facilities move toward curative care with high-technology equipment. The adequacy of the current state health policy is assessed, drawing on a comprehensive literature review, case studies of health care service providers & aged users in a major city, & investigation of recent government documents. The limits of a totally market-oriented health care system & the role of the government in providing a safety net & alternative health care services to the aged population are discussed.

98S35564 / ISA / 1998 / 12805

Pellegrini, Claudio (Dept Sociology U Roma "La Sapienza", I-00185 Italy [tel: 39-6-6868220]), **Training the Excluded in Europe.**

¶ Preliminary results from a 1994 Eurostat survey of 12 countries regarding participation in continuing vocational training in enterprises indicate dramatic differences in & across countries & in patterns of participation. Differences can be explained by using information on labor market functioning, educational attainment, enterprise size, turnover, etc. Focus is on the features of those employees excluded from training; there are common patterns across European countries in terms of sex, ethnic belonging, age, religion, political party, & education level. This is deemed helpful for designing European programs to help the excluded, tailored to their needs rather than to an abstract representation of the labor demand.

Pellegrino, Adela & Martinez, Jorge (Facultad Ciencias Sociales Programa Población, Minas 1483 p 3 Montevideo 11200 Uruguay [tel/fax: 598-2-4088560/4000871; e-mail: apelle@fcsu.edu.uy]), **Migración de profesionales de América Latina a los Estados Unidos de Norteamérica** (Migration of Professionals from Latin America to the United States of North America). (SPA)

¶ Examines the migration of professionals & skills from Latin America to the US in the 1970s & 1980s, drawing on US Census data & Immigration & Naturalization Service reports of annual admissions to the US. Even if the growth of Latin Americans' migration to the US in the last decades has been dominated by migrants working in low-paid jobs, the emigration of skills jeopardizes the strengthening of qualified labor markets in sending countries. The concept of "brain drain" is placed in the present context of globalization. It is concluded that selective migration to the US is still an issue to Latin American countries in their efforts to develop human capital. Improvements in communications allows interactions between migrants & natives, promoting technological transfers & skill exchanges. The counterpart to this situation is the increasing expectations of professional performance & the development of networks that stimulates migration's projects.

Pels, Dick (U Amsterdam, NL-1012 WX Netherlands (tel/fax: 31-20-525-2262/2446; e-mail: Dpels@psc.wva.nl)), **Knowledge Politics vs Value Neutrality: The Rightwing Challenge.**

¶ The ideal & demand on value neutrality should not be seen as reflecting an ontological gulf between values & facts, but rather, as a changing, context-bound strategy of stabilizing the science-society boundary. For Weber, Sombart, & others, the allegedly "universal" principle of value freedom already worked in opportunistic support of some values & policies (eg, etatist, nationalist, or racial-hygienic) over others. The core problem deriving from this is how to recast the ideas of intellectual autonomy & academic freedom in non-value-neutral terms, without giving in to tendencies toward politicization that erase all distinction between "knowledge" & "big" politics. This issue may be clarified by studying the arguments of some right-wing supporters & challengers of the idea of value freedom, eg, Sombart & Michels; both paradoxically combined an intense political commitment with professions of value freedom. But such ambivalences are also discernible in the work of more radical critics of "bourgeois objectivity," eg, Freyer, Schmitt, & Heidegger. While denying the liberal neutralizations, these "conservative revolutionaries" still manifested a residual concern to preserve a measure of distance between science & politics.

Peng, Ito (Dept Social Welfare Hokusei Gakuen U, Sapporo 0048631 Japan (tel/fax: 81-11-897-1721; e-mail: peng@hokusei.ac.jp)), **Child Care Policies in Japan: Post-War Developments and Recent Reforms.**

¶ Since the beginning of the 1990s, there has been a continuous public & policy debate in Japan over how child care should be arranged, who should care for children & under what circumstances, & who should pay for it. It is expected that the government's recent child care policy reform will significantly change the nature of child care arrangements. Here, recent developments in child care policies are examined with a view to understanding the nature of Japan's welfare regime. Discussion includes why child care is becoming an emerging policy issue in many welfare states, identifying some factors that have affected the child care policy debate in many Western countries & comparing them with Japan. The development of postwar child care policies in Japan is traced across four stages. Social welfare development in Japan is considered from the perspective of policies affecting child care, family, & gender.

98S35569 / ISA / 1998 / 12810

Peng, Ito (Dept Social Welfare Hokusei Gakuen U, Sapporo 0048631 Japan (tel/fax: 81-11-891-2731/894-3690; e-mail: peng@hokusei.ac.jp)), **Cash or Care: The Case of Japanese Social Welfare.**

¶ Explores (1) how noncash or care-based services might be integrated in current comparative research on social policies & (2) Japanese social welfare in terms of cash & noncash transfers. The increasing importance of care & social services in Japan, particularly long-term care for the aged & child care, is discussed. Then, cash & noncash transfers are examined, comparing state-provided transfers such as pension, child allowances, public assistance, & corporate-based cash transfers such as family & housing allowances. Recent developments in long-term care insurance & policies on day care for preschool children are also considered. Some features of Japanese social welfare in relation to cash care are summarized.

Penning, Margaret J. (Dept Sociology & Centre Aging U Victoria, British Columbia V8W 2Y2 (tel/fax: 250-721-6573/6499; e-mail: mpenning@uvic.ca)), **Self, Informal and Formal Community Based Care: Impact on Medical and Institutional Care.**

¶ Examines how self-care, informal caregiving by family & friends, & formal community-based services influence the utilization of physician, hospital, & nursing home services, using data on 661 individuals, ages 65+, with some level of disability interviewed as part of the Victoria (British Columbia) Patterns of Care project. Results point to the diversity of patterns of care that are evident in later life, the primary importance of self-care activities within these patterns, as well as the differential implications of these patterns for the utilization of medical & institutional care. The importance of the findings for understanding health care behavior & for health policy is discussed.

Penttinen, Elina K. A. (Dept Political Science U Turku, FIN-20500 Finland (tel/fax: 358-2333-5935/5090; e-mail: elipen@utu.fi)), **The Individualization of Global Marketplace? How Subjects Are Produced by the Technology of Power of Global Capitalism, a Foucauldian Analysis.**

¶ Discusses how subjects are produced by the dominating discourse of globalization, hypothesizing that globalization in the form of integration of the global market produces new subjectifications. It is argued that governance without governments is still a governance of souls in Foucauldian terms, since it represents a normalizing discourse that is claimed to be universal & is then reproduced at the individual & global levels. Thus it represents a grand narrative that extends power to all fields of life. Power is understood as a network in which both the dominant & the dominated participate, & by whom the form of power can be reproduced or resisted. Globalization represents an anonymous form of power that is normalized & subjectified by the ideology inherent in liberalism based on modern epistemology, & contradictorily takes a neoliberal form. Therefore, the system of emergence & the institutionalization of the globalization discourse is analyzed, focusing on the production of subjectifications, including the claim of reductionist argumentation as a method of producing universal truths & the transformation from the rational subject to the consumer object. An individual is subjectified & isolated, becoming a subject of globalization, by the ideology of consumerism & the commodification of the individual body. The legitimation of globalization is based on liberal concepts, but in practice it emerges as a neoliberal form in the merging neoconstitutionalism, ie, in rights of transnational corporations, & therefore withholds a strong inconsistency in the ideology of progress & practice of commodification of the individual to a consumer, or to a replaceable worker.

98S35572 / ISA / 1998 / 12813

Peräkyä, Anssi & Sorjonen, Marja-Leena (Dept Sociology & Social Psychology U Tampere, SF-33101 Finland (tel/fax: 358-31-2156111/080; e-mail: ssanpe@uta.fi)), **Discussing Patient's Lifestyle in Primary Care Medical Consultations: Implications for Practice.**

¶ Conversation analysis is used to explore how doctors & patients talk about patients' eating, drinking, exercising, & smoking habits in 100+ Finnish primary care consultations. After the doctor's question, the patients define their lifestyle either as problematic or nonproblematic. In most cases, the patients give initial answers that treat their habits as nonproblematic. Even though the doctors seek specification to such answers, their follow-up questions do not challenge this initial assessment. The likelihood of a problem orientation is much greater in those cases where the lifestyle question follows a formulation of a medical problem, especially one done by the doctor in the form of an announcement of test results or findings from a physical exam. The patient's initial answer can bring in an explicit problem orientation or the problem orientation can be gradually consolidated after a neutral initial answer. The lifestyle discussion in problematic cases regularly leads to advice giving by the doctor. It is concluded that doctors orient themselves to specific interactional & normative restrictions in accomplishing the health promotional aspect of their work; practical implications of these findings are discussed.

98S35573 / ISA / 1998 / 12814

Pereira, Alexius A. (London School Economics & Political Science, WC2A 2AE England (tel: 44-171-967-0212; e-mail: A.A.Pereira@lse.ac.uk)), **The Social Dynamics of Institutional Relationships: The Case of Singapore's Rapid Industrial Transformation (1965-1990).**

¶ Examines the social dynamics of institutional relationships between the Singaporean government, a Singaporean economic development agency, transnational corporations, & Singaporean businesses, 1965-1990. It is argued that Singapore's rapid industrial transformation occurred not just through the state's control over the economy, but also through the successful relationships built between the significant players in the field. The key aspects of the relationships included informal elements—eg, trust, honesty, & sincerity—and formal elements—eg, transparency of transactions, smooth bureaucratic procedures, & attractive business packages. These relationships were built up from the time the Singaporean government began its industrialization in 1965 & again when it made the decision to restructure the economy after 1980. When these institutional relationships combined with Singaporean geopolitical & economic circumstances of the period, industrial transformation was successful.

Pereira, Charmaine (Center Research & Documentation, 29 A Sokoto Rd Kano Nigeria (tel: 0041-26-3228122; e-mail: Jibrin.Ibrahim@unifr.ch)), **National Council of Women Societies and the State (1985-1993). 'A Woman Place': The Use of Discourses of Womanhood by the NCWS.**

¶ The official nongovernmental umbrella women's organization in Nigeria, the National Council of Women's Societies (NCWS), bears a particular relationship to the military state, which is grounded in a specific social & political history. The organizational structures & practices that have emerged tend to constrain the nature & scope of women's activism. Such activism is usually legitimated by recourse to particular constructions of what it means to be a woman—what woman's identity is or should be—and, therefore, what kinds of actions are appropriate for women. The NCWS has expressed attachment toward a particular conception of what it means to be a woman—effectively reifying women as wives & mothers within the existing social order. In Nigeria, the multifaceted changes arising from the impact of structural adjustment on Nigerian society & the politics of transition from military to civil rule, form the crucible in which particular constructions of womanhood are transformed or preserved. The focus here is on how the hegemonic discourse of womanhood drawn on by the NCWS during the period of Babangida's military regime were shaped by the history & politics of the organization & its relations with the state & contributed to the legitimation of social & political power. This has had the effect of narrowing the ideological space available for progressive forces to utilize subaltern discourses of womanhood to affect beliefs & understandings of a women's place in Nigerian society or critically challenge the policies & practices of the state.

Peres, Yochanan (Dept Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel (tel/fax: 972-3-640-8831/9215; e-mail: peres@spirit.tau.ac.il)), **Cohabitation—A Contemporary Alternative to Marriage?**

¶ A study of cohabitation focuses on several questions. What are the functions of cohabitation? How does it fit into the human life cycle? Should it be considered an alternative to conventional marriage, or rather, a preparatory stage toward it? How do attributes of cohabitators differ from those of noncohabitators in terms of age, education, religiosity, income, ethnicity, values, & attitudes? To what extent is cohabitation a stable relationship? In what types of societies does cohabitation proliferate? Questionnaire data, drawn from a comprehensive international survey of 23 countries in 1994 indicate three tentative findings: (1) In about 75% of cases, cohabitation leads to marriage. (2) The countries can be grouped according to their relative frequency of cohabitation, with the highest rates in Russia, Sweden, Norway, eastern Germany, & Austria. (3) Two major factors seem to explain the allocation of most countries into the various groups: existence of a comprehensive welfare system & operation of a conservative or traditional value system.

Perevedentseva, Alexandra (Instit Sociology Russian Academy Sciences, 117418 Moscow (fax: 095-310-70-71)), **Emigration Intentions of Young People and Brain Drain.**

¶ Examines emigration intentions of young people (under age 30), of whom 5.8% would like to leave Russia. Intentions are examined in the context of preceding inter-Russian migration biography & present place of residence. Findings indicate that residents of metropolises, especially Moscow & St. Petersburg, display stronger desire than others toward emigration. Residents of other places can improve their dwelling conditions considerably by moving to the capital or other large cities. Among

nonmigrating young people in the country, each sixth one preferred to leave for a foreign country; among those who migrated frequently, the preference for emigration is three times less. Lower preference is associated with absence of experience in movements, notions about difficulties of adaptation, & residence in large cities, where living conditions are much better than in the country on the average. Differences in intentions are related to level of education, occupation, profession, qualifications & parents' social status. Migration, both inside & outside Russia, is more prevalent among educated people; potential emigrants are much more educated than youth on the whole. It is concluded that emigration is a potential brain drain: migrants derive from families with higher social & education status on average; further, the gap in education between migrants & nonmigrants is considerably greater than it was in the previous generation. It is noted that complications involved in migration to the capital encourage some people to emigration abroad.

Perez Adan, José (Campus Tarongers U Valencia, E-46011 Spain (tel/fax: 34-6-382-8454/450; e-mail: Jose.Perez@uv.es)), **Salud social y sociometria** (Social Health and Relevant Social Indicators). (SPA)

¶ Argues that it is possible to arrive at an idea of collective happiness or "social health," by which to rank societies. Addressed here are (1) the relevant social indicators on which to build the idea of collective happiness & (2) how collective happiness is to be measured. It is proposed that communitarian & environmental aspects are of paramount importance, as is the family.

98S35578 / ISA / 1998 / 12819

Perez Adan, José (U Valencia, E-46022 Spain (tel/fax: 34-6-382-8454/8450; e-mail: jose.perez@uv.es)), **Environmental Problems, Socioeconomics, and the Management of Time.**

¶ Environmental problems are not, despite what seems a general agreement, problems of space or of the management of land use in a broad sense. Socioeconomics gives a deeper perspective. At the same time that the rights of future generations & the discussion about values are incorporated into the consideration of the rationality of economic decisions, environmental problems turn into problems related to time management. Historic time is thus an element that has its own weight in all kinds of political & economic deliberations.

98S35579 / ISA / 1998 / 12820

Perez de Guzman, Torcuato (Dept Sociology U Sevilla, E-41005 Spain (tel/fax: 34-5-455-1597/1384; e-mail: torcuato@uv.es)), **Les Relations entre micro- et macro-phenomenes dans les systemes sociaux** (Relations between Micro- and Macrophenomena in Social Systems). (FRE)

¶ Contributions of some new approaches to the sociological problem of relations between agency & structure—or viewed in an systemic context, between members of a social system & the system itself—are examined & evaluated. Concern is not with why self-organization emerges, but rather, with how collective phenomena arise from the activity of individual elements & under what rules, & how these collective phenomena lean on the individuals for their expansion, stabilization, decay, or extinction. Analysis includes (1) culturalist approaches, eg, algorithms of the diffusion of beliefs, the theory of memetics; & (2) approaches based on physical rules, eg, self-organized criticality, & a certain type of computer social simulations, especially the case of cellular automata. The effect that these approaches may have on the morphogenesis of sociocybernetics, & the perspectives of complementarity & synergy between them, are discussed in conclusion.

Perez del Aguila, Violeta Rossana (Centre Applied Research Education School Education & Professional Development U East Anglia, Norwich NR4 7TJ England (tel/fax: 01603-592638/451412; e-mail: V.perez-del-aguila@uea.ac.uk)), **La competencia social de los niños en las interacciones del juego: observación etnográfica en una guardería infantil** (Children's Social Competence in Their Interactions at Play: Ethnographic Observation in a Nursery School). (SPA)

¶ Explores how young children manage to express perceptions, feelings, & intentions in their interactions at play, drawing on ethnographic observation in a nursery school from a symbolic interactionist perspective to discover the meanings of the symbols displayed in children's verbal & nonverbal communication. Data on children's abilities to make friends,

P

join groups, & become leaders show that children struggle to achieve their intentions. Imitation & attempts to trespass & destroy are identified as the most common strategies for seeking friends. Material elements unconnected with those of a particular play routine are used to convey rules to have a dominant role in a play group; children's knowledge of these symbols of communication demonstrates that they share meanings in a specific situation. Symbols in children's social relations are considered expressions of behavior, resulting from observations & interpretation of peers' actions, & are also a manifestation of children's competence to manage & dominate a situation. Findings indicate that children create their own culture.

98S35581 / ISA / 1998 / 12822

Perez, Maricarmen, Garcia, Carmen Teresa & Ayala, Alejandra (Cursante Maestria & Ciencias Políticas U Los Andes, Mérida 5101 Venezuela (tel: 58-74-403960; e-mail: ctgarcia@ciens.ula.ve)), **Research and Social Indicators: Limitations and Obstacles.**

¶ Addresses the problems that the researcher faces when studying secondary data, particularly in the context of comparative studies. An ever-growing globalization process is generating a new perspective that influences world order & the development of different countries. This process engulfs a much greater & complex field than the economic field, given that it includes changes in many areas—eg, social, political, ideological, cultural, & technological. Paradoxically, in this context, the researcher faces two primary obstacles: (1) discrepancies among methods & results, the wide variety of definitions & measurements, incongruity with findings from private & public national institutions, data & global statistics (overdetermination); & (2) the tendency to globalize social statistics under international organizations' policies, from which methods & variables are defined to ethnocentrically classify countries. This makes it difficult to desegregate information & clarify externally imposed & determined categories foreign to national realities.

98S35582 / ISA / 1998 / 12823

Perez-Vila, María Clara D. (Economía Aplicada U Complutense Madrid, E-28040 Spain (tel: 91-5351292)), **Participación ciudadana vs. poder burocrático** (Citizen Participation vs Bureaucratic Power). (SPA)

¶ In the framework of a democratic & participatory constitution, economic systems follow an opening path, attempting to adapt to changing necessities in an increasingly global society. The opening path in democratic systems is protected in a principle triangle: transparency, information, & civic participation. The aim here is to deepen the citizen participation principle that is fed, to a large extent, by the development of information & transparency principles. The diversity of the processes by which people are channeled into citizen participation is the key, so that, in the society of the third millennium, "the functionary secret," ie, the element that Max Weber noted as characteristic of bureaucratic domination systems, disappears little by little.

98S35583 / ISA / 1998 / 12824

Pergola, Tanya (Dept Sociology U Washington, Seattle 98195 (tel/fax: 206-543-5882/2516; e-mail: tanyap@u.washington.edu)), **Manging Salmon: The Dynamics of an Environmental Arena.**

¶ The attempt to reverse the declining salmon runs of the Pacific Northwest provides a clear illustration of how a specific environmental issue has evolved into a large & complicated arena of activity, including not only the obvious players, eg, fishers & conservation groups, but also a large network of governmental agencies on the local, state, federal, & international level; scientists; developers; farmers; ranchers; loggers; & the hydropower & aluminum industries. Because each of these groups brings its own beliefs & protocol into the arena, understanding what it means for each actor to participate helps define the arena structure, providing a framework for understanding & resolving the problem. There has been a movement in certain segments of the salmon arena toward a more "natural" style of resource management—"ecosystem management." Here, conditions that gave rise to this new ecosystem perspective are delineated, & the constraints & conflicts involved in interacting with old & entrenched institutions of natural resource management are addressed. Considered are the utility of employing an "arena perspective" in the study of environmental problems in general, & more specifically, how this perspective aids understanding of why it is so difficult to change the course of action when attempting to counteract environmental degradation. The case of the declines in wild salmon runs in the Pacific Northwest region of the US is used to illustrate these dynamics.

Perry, Pamela G. (Dept Sociology U California, Berkeley 74720 (tel: 510-658-7489; e-mail: pperry@uclink.berkeley.edu)), **White Identity and Racial Multiplicity: A Comparative Study in Two American High Schools.**

¶ Presents ethnographic & interview data to explore the construction of white identity in the lived, daily practices of white youths in two different US high schools—one in which they are the overwhelming majority & the other in which they are a minority. It is shown that white identity takes on a very different form & symbolic content in the two schools, & it is emphasized that, in the mixed-race school, whites are considerably more ambivalent & contradictory in their thoughts & beliefs about themselves & racial others. It is asserted that the differences in racial identities between the schools illustrate the fundamental significance of interracial association in conditioning the ways white people interpret, understand, & act on wider discursive constructions of race & white identity. It is further argued that, because race is fundamentally constructed socially, it is inherently multiple.

Perzow, Jennifer A. (Dept Sociology & Anthropology Concordia U, Montreal Quebec H3G 1M8 (tel/fax: 514-848-2139/4539; e-mail: j_perzow@alcor.concordia.ca)), **Community Health Care in an Era of Cost Containment.**

¶ In Montreal, Quebec, a small group of senior citizens have banded together to compensate for cost-cutting measures of a local hospital. This group of volunteers is used as an example to examine the processes of collective action in health care. Also addressed are the changing roles of community development & the voluntary sector in the Canadian health care system.

98S35586 / ISA / 1998 / 12827

Perzow, Jennifer A. (Dept Sociology & Anthropology Concordia U, Montreal Quebec H3G 1M8 (tel/fax: 514-848-2139/4539; e-mail: j_perzow@alcor.concordia.ca)), **Access to Health Care in Rural Canada: Recruiting and Retaining Physicians.**

¶ Examines a pressing problem in Canadian rural health care: the acute shortage of physicians. While an unprecedented number of physicians are being trained in Canada, numerous rural & remote communities are unable to attract, & keep, physicians. Considered is why nearly 33% of Canadians have either no or restricted access to basic health services, especially in a country so fiercely proud & protective of its Medicare system & its basic tenets of universality & accessibility.

98S35587 / ISA / 1998 / 12828

Petak, William J. (U Southern California, Los Angeles 90089-0021 (tel/fax: 213-740-2411/5943; e-mail: petak@mizar.usc.edu)), **Mitigation: Theoretical Framework for Analysis.**

¶ Successful hazard mitigation policy formulation & implementation are facilitated when policymakers & administrators are able to cope with the ambiguity caused by uncertainty & complexity, incorporate the principles of risk management into policy formulation, manage the conflicts in a system of multiple levels of government & stakeholder groups, & incorporate the social, technical, administrative, political, legal & economic factors that constrain the policy-making system. A framework is provided for analyzing this complex hazard mitigation policy formulation & decision-making process.

98S35588 / ISA / 1998 / 12829

Peters, John (Wilfrid Laurier U, Waterloo Ontario N2L 3C5 (tel: 519-884-1970; e-mail: jpeters@mach1.wlu.ca)), **Development Theory and the Canadian Old Order Mennonite Family.**

¶ Family development theory is applied to the Old Order Mennonites, a "separate" rural community with privately owned farms, who have successfully resisted much of modernity, as evidenced by their continuing use of the horse & buggy, focus on kin, the centrality of religion, & their refusal to join health & fire insurance practices. Life stages are readily divided into four distinct periods. The first stage is childrearing, which is prolonged over almost 20 years. Only recently have simple forms of contraception been adopted. Discussed here are the values, aspirations, & activities of the children. The second stage, adolescence & youth, is almost nonexistent, though age 14 marks the time when children leave school & begin apprenticeships for adult roles. During the third stage, parents have constant ties with their married children, while the latter have autonomy. About the time of the marriage of the last son, parents move out of their residence to an adjacent constructed add-on residence known as the daddy house. The final stage is one of aging & diminishing health. The aged are adequately cared for in their homes & participate in normal life experiences as they are able. Few leave this insular community.

Petit, André (U Lausanne, CH-1015 Switzerland [tel: 41-21-692-32-38/35; e-mail: Andre.Petit@issp.unil.ch]), **Reversibilité symbolique et formes** (Symbolic Reversibility and Social Forms). (FRE)

¶ Georg Simmel & Erving Goffman have pointed out the strong relations existing between the capacity for people to open & close to others & their social forms: from friendship & love to business relationships &/or enmity; from self-presentation & discretion to intrusion & lie; or from unspoken connivance between a few people to ritualized secret societies. An attempt is made to identify the dynamics that generate these social forms by examining the characteristics of the sign as opposed to those of the biologically integrated signal. By articulating both perceptions & immaterial thoughts, symbolic language allows a game of "hide & show"; by authorizing a gap with the referent, it hosts distortions & imaginary constructions of reality; & by using conventional rules, it offers the possibility of breaking them. This three-way game around visibility, metamorphosis, & transgression defines a space of virtual reversibility that stimulates both creation & erosion of social forms. Trust & distrust illustrate this generative vision, where order originates from the permanent prevention of virtual disorder, engendered by the possible reversibility of the interactive postures.

98S35591 / ISA / 1998 / 12832

Petrie, Brian M. (Dept Sociology & Anthropology Concordia U, Montreal Quebec H4B 1R6 [tel/fax: 514-848-2163/4548; e-mail: petrie@vax2.concordia.ca]), **Methodological Hazards Implicit in the Use of Diaries and Personal Journals: Examples Drawn concerning the French Canadian Patriote Convicts, 1839-1848.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Most texts dealing with qualitative methods & archival research stress the need for care when dealing with diaries, journals, autobiographies, & biographies. The need for cross-validation & critical textual analysis is crucial; self-serving "spins" can distort the facts, as can the intrusion of ideological content. The difficulties are particularly problematic when the literary efforts of political prisoners are evaluated. Examples are presented from the diaries & journals of the French Canadian Patriotes who were sent to Australia as convicts after the unsuccessful rebellion of 1838 in Quebec. They described the voyage to Australia, their term of imprisonment, & the return of all but three of them to Quebec by 1848. In the contemporary propaganda of the Independentist movement in Quebec, & among prominent scholars, the diaries are accepted as untarnished records of the reality of their imprisonment. However, significant discrepancies were found when the diaries & journals were compared with parallel maritime, colonial administration, & newspaper documentation. The continued unquestioning acceptance of the veracity of such sources is not warranted; they need careful methodological cross-validation.

98S35592 / ISA / 1998 / 12833

Petropoulos, Nicholas P. (Pedagogical Instit Greece, 396 Mesogeion St Agia Paraskevi GR-15341 Athens [tel/fax: 00301-6016-376/388; e-mail: nppsoc@pi-schools.gr]), **Sociology in Greek Secondary Schools: Professional, Pedagogical and Political Considerations.**

¶ Describes the movement that led to the incorporation of sociology in the secondary school curriculum, & as a university entrance examination subject in the social science cycle during the final year of secondary education. Also described are the impact of traditional teacher training, teacher & textbook selection procedures, & the changing status of sociology in secondary education curriculum on the teaching of sociology & the sociology profession. Special attention is given to the social science vs sociology approach in secondary education, as well as to the role of the wider sociology community in secondary school sociology. Presented in conclusion is a discussion of the possible impact of the 1997 educational

reforms on secondary school sociology & the occupational problems confronted by sociology teachers. An attempt is made to interpret the changing role of sociology during the last 15 years in the wider context of political-economic changes in the world, the European Union, & Greece.

98S35593 / ISA / 1998 / 12834

Petropoulos, Nicholas P. (Pedagogical Instit Greece, 396 Mesogeion St Agia Paraskevi GR-15341 Athens [tel/fax: 00301-6016-376/388; e-mail: nppsoc@pi-schools.gr]), **Background and Sojourn Factors in Foreign Language Learning by Greek Return Migrants.**

¶ National questionnaire data from 3,900 Greek migrants who had returned to Greece during the period, 1971-1985, were used to test the hypothesis that their learning of the host language would depend on both background & sojourn factors, eg, at migration; predeparture language courses; parental education level; level of urbanization of places of birth, departure, & residence abroad; duration of foreign-language training abroad; political integration (acquisition of citizenship) abroad; migrant education & income level; & duration of host country residence. Separate linear regressions were carried out for the four dimensions of self-reported language ability (comprehension, speaking, reading, & writing) & for total sample of return migrants, the sample without foreign students, & those from three English-speaking host countries (US, Canada, & Australia) & the Federal Republic of Germany. Overall, the most significant factors that had independent effects on foreign-language ability were migrant education level, age at migration, enrollment in predeparture language courses, & the length of host country residence. However, there was some variation in results depending on the language component & sample. Theoretical & practical implications are discussed.

Pettersson-Lofquist, Per (Dept Social Science U Kalmar, S-39129 Sweden [tel/fax: 46-480-44-61-38/62-80; e-mail: per.pettersson@sh.hik.se]), **Mythological Complexities in Travel: Reflections on Discourses in Back-Packer Communities in Zanzibar.**

¶ Explores the issue of mythology in travel, drawing on 1991-1997 fieldwork in rural Zanzibar & Roland Barthes' & Edward Said's works on mythology & Orientalism, respectively, to analyze the traveler's discourse of backpackers. In addition to primary mythology about the primitive exotic, common in the postcolonial Occidental world, there is a second-order mythology, the traveler's tale, that is a socially constructed discursive elaboration of the traveler's actual experiences. In places of rest & recreation, the backpacker meets the experience of other travelers. In these conversations, experiences are retold in a mythology of vulnerability & adventure that rarely involves the local community & the Other. Relations between these two stereotypical mythologies are examined.

Pfister, Gertrud (Institut Sportwissenschaft Freie U Berlin, D-14195 Federal Republic Germany [tel/fax: 30-8024860/8383188; e-mail: pfister@zedat.fu-berlin.de]), **Sturdy or Graceful? Body Concepts of Female Gymnasts and Football Players.**

¶ Presents the results of topic-based interviews with 10 competitive female gymnasts & 11 football players in women's first-division teams, carried out as part of the project "Sport in Women's Lives." Examined are their body ideals, notions, & practices. It emerged that the gymnasts & football players interviewed had developed specific body concepts that were closely interwoven with the type of sport they practiced. The respondents regarded their practice of sport as part of their body concept, self-image, & life. The body concepts developed by the gymnasts & the football players are placed in the context of the theoretical discourse on body, gender, & sport.

Philips, Carljine F. (Dept Sociology Rijks U Groningen, NL-9712 TG Netherlands [tel/fax: 31-50-3636-208/226; e-mail: C.F.Philips@ppsw.rug.nl]), **Vacation Communities.**

¶ Explores the development of vacation communities in the European Union—ie, fairly well-known places visited regularly by the same people—arguing that people's choice of vacation community & behavioral style must be understood in terms of their goals, eg, status, behavioral confirmation, & affection. Vacation communities develop when people with the same expectations about interaction flock together, while the expectation & destinations reflect the kinds of restrictions on realizing social goals that are experienced in nonvacation life. Drawing on data from the literature, explored are the categories of persons whose destination choice is affected by the existence of certain kinds of vacation communities.

Phillips, David R. & Berman, Yitzhak (Sociological Studies U Sheffield, S10 2TN England [tel/fax: 1142-22-6453/76-8125]), **Social Indicators, Quality of Life and Postmodernism: Implications for Social Work and the Human Services.**

¶ Explores how theoretical, conceptual, analytical, & substantive aspects of quality of life indicators impact social policy in the context of (1) debates about the purported postmodern fragmentation of both the mission & intellectual outlook of social work, & (2) notions of social quality & social exclusion. Three major themes are addressed: (A) identification of whose quality of life—individuals, families, neighborhoods, cities, regions, nations, or even global society—is being considered; (B) the tension between subjective & objective indicators, particularly when they appear to contradict each other; & (C) holistic indicators vs those that aggregate the scores of individual indicators of specific elements of quality of life. It is concluded that postmodern social work might need postmodern quality of life indicators.

Phillips, William R. F. (Dept Sociology Widener U, Chester PA 19013 [tel/fax: 610-499-4378/4603; e-mail: Maria.P.Reed@widener.edu]), **The Concept of 'Community' in Urban Theory and Research since 1920.**

¶ Explores the use of the concept of community in US sociology beginning with the Chicago school, which for many years determined the theoretical & research agenda of urban sociologists. It is shown, however, that, in the 1970s & 1980s, this approach was significantly altered by the work of Marxist scholars with their emphasis on international economic forces & by compositional theorists who minimized the importance of space in human affairs. Finally, it is argued that there has been a recent revival of Chicago school-like concepts of community with the growth of both neotraditional urban planning theory & environmental criminology.

Pickel, Gert (Europa-U Viadrina, D-15207 Frankfurt Federal Republic Germany [tel/fax: 0049-335-537341/951-537360; e-mail: pickel@euv-frankfurt.o.de]), **Political and Democratic Orientations of Young Germans in West and East Germany.**

¶ In the context of the transition in the reunified Federal Republic of Germany, it is noted that citizens' political support has been declining since 1990 in the old federal states, whereas the new federal states are experiencing stable political support at a lower level. The social consequences of reunification make it necessary to investigate the development of political attitudes comparatively, for West & East Germany. Several questions relating to political orientations are addressed, drawing on current studies of young Germans, ages 16-29. The parameters of these studies & their findings are discussed.

98S35600 / ISA / 1998 / 12841

Pickel, Gert (Europa-U Viadrina, D-15207 Frankfurt Federal Republic Germany [tel/fax: 0049-335-537341/951-537360; e-mail: pickel@euv-frankfurt-o.de]), **Empirical Structures in Subjective Religiosity, Integration in Church and Religious Behaviour in Eastern and Western Europe in Comparison.**

¶ Empirical & theoretical remarks are offered on the comparison of the religious situation in Eastern & Western Europe, with attention to processes of secularization or distance from the church & aspects of religious faith. The state of religiousness & integration in church in Western Europe over the last 20 years can be used to consider secularization or decline of religious affiliation. This situation can be compared with that of Eastern European countries, where the socialists attempted to reduce religious beliefs & affiliations. Three steps of investigation are identified: (1) the construction of useful theoretical groups of similar nations belonging into different clusters; (2) an empirical description of the current situation of religiousness in these clusters & the discussion of the reasons for diversity or similarity; & (3) the empirical investigation of developments & trends of religious orientations & affiliation in the selected clusters of nations & the comparison of substantial dimensions of religion, ie, subjective religiosity, integration in church, & religious behavior. Comparative data from the German Zentralarchiv für empirische Sozialforschung in Cologne, 1981 & 1990 World Value Surveys, & the 1986-1993 International Social Surveys Programmes are referenced.

Pickel, Susanne (Europa-U Viadrina, D-15207 Frankfurt Federal Republic Germany [tel/fax: 0049-335-5543-842/5534-924]), **Com-**

munication and Mutual Perception of German and Polish Students at the European University of Frankfurt.

¶ The European U Viadrina at Frankfurt/Oder (Federal Republic of Germany), which is sited at the German-Polish border with students coming from Germany, Poland, & many other European & non-European countries, is described as a microcosm. Here, factors that obstruct or foster communication between Polish & German students are explored, with attention to the consequences of actual interaction between Polish & German students for their mutual perception. Three different preconditions make possible or block Polish-German contacts: (1) general preconditions, including the individual economic situation of the students, their housing, & their knowledge of languages; (2) institutional preconditions, ie, the university as a meeting point; & (3) personal preconditions. The latter are identified as most important in determining the readiness & the commitment of the individual student to contact other students. Images of the particular nation form the basis of personal & political attitudes. The three components of these images are the general opinion (affective), the knowledge (cognitive) about the foreign nation, & the desire of further development (conative). Considered are how such interactions as meetings, discussions, & other social contacts influence mutual perceptions; how Polish & German students attitudes toward each other & other foreigners differ; whether images changed as a consequence of communication & contact; & the role of the university.

Piirainen, Timo (Dept Social Policy U Helsinki, SF-00014 Finland (tel/fax: 622-5132; e-mail: timo.piirainen@helsinki.fi)), **From Communism to Class Society: Everyday Life and Social Stratification in Russia.**

¶ Distinguishes two basic patterns of social stratification: division into status groups & social classes. The restructuring of Russian society that took place during the transition to a market economy can be perceived also as a transformation of the basic stratification pattern; while the division into status groups was before the predominant form of social stratification, it is now being replaced by the predominance of class, the latter being characteristic to all market-ordered societies. Data are drawn from a large empirical research project conducted in St. Petersburg, Russia, 1993-1996, comprising semistructured interviews focusing on household behavior in a situation characterized by a rapid change of political & economic structures. The restructuring of the Russian society is analyzed through the study of microlevel activity of ordinary households. "Strategy" is a key concept in the study, bridging micro- & structural-level analysis; the emerging stratification pattern in capitalist Russia is outlined through the study of the economic strategies of households. The onslaught of the market order is dissolving the status-ordered stratification pattern characteristic of Soviet society, & a new fourfold class structure is evolving to replace it.

Pilkington, Andrew (Nene Coll Higher Education, Northampton NN2 7AL England (tel/fax: 44-01604-735500/713744; e-mail: andy.pilkington@nene.ac.uk)), **The Underclass Thesis and Race: A Critique and Alternative.**

¶ Sociologists studying the relation between race & class have tended to highlight common disadvantages faced by (nonwhite) ethnic minority groups, conceptualizing them as an underclass, lower stratum of the working class, or racialized class fraction. Here, drawing on analyses of the Labour Force survey & the Census & Policy Studies Instit survey, it is argued that ethnic diversity is as evident as racial disadvantage in GB, & the contention that ethnic minority groups en bloc or singly compose an underclass, lower-stratum working class, or racialized class fraction is not substantiated. Such a discursive framework, it is maintained, relies on an inappropriate model of power & underestimates the cultural capital of ethnic minority groups. Proposed is an alternative framework that recognizes that ethnic minority groups are agents, in some cases, successfully resisting racial discrimination.

98S35608 / ISA / 1998 / 12849

Pilkington, Andrew (Nene Coll Higher Education, Northampton NN2 7AL England (tel/fax: 44-01604-735500/720636; e-mail: andy.pilkington@nene.ac.uk)), **Are Schools Racist? A Brief Comment on the Debate.**

¶ Analysis of the work of key protagonists in the school racism debate reveals substantial agreement that black pupils are overrepresented in lower streams/sets & are disproportionately subject to teacher censure. Where protagonists disagree is over interpretation of these facts. Those writing from an avowedly antiracist stance argue that schools are responsible for the differential treatment of black pupils, & it is incumbent on them to reflect on their existing practices, while their critics writing from an expressed apolitical stance contend that (1) perfectly appropriate professional practices result in badly behaved pupils receiving differential treatment, (2) black pupils only receive such treatment because they are more likely to misbehave, & (3) therefore, there is no need for schools

to reexamine their practices. It is suggested that a way out of this impasse is to recognize that differential treatment & bad behavior are part of a vicious cycle.

Pinaud, Henri (Laboratoire G. Friedmann-CNAM, 2 rue Conté F-75003 Paris France (tel/fax: 33-1-4203-82-11/80-74)), **Problems of Participatory Research with Trade Unions—3 Illustrations.**

¶ Participatory research methods developed in the social sciences have been aimed at smoothing researcher-social actor relations through a democratization of cooperative research processes. Three main characteristics differentiate participatory research with trade unions from traditional research or action-research approaches: the aims, organization, & method are different. They require reaching a tricky equilibrium on the definition of a boundary between the trade union & scientific evaluations, & coping with the problems associated with the third necessary actor taking part in the research, ie, the public or private financier. Three programs have illustrated the cooperation between trade unions & research: two French programs—"PAROLES" CNRS-CFDT (1984-1988 & 1991-1995)—on workers' expression & direct participation, & one current European program, "Scenário 21"—on democratic participation. This last program gathers three trade union organizations together with German, Italian, & French academics. After first assessing the issues encountered on the programs, results are presented regarding the production & use of knowledge, from both trade union & scientific points of view, & some rules are presented aimed at optimizing the efficiency of participatory research.

Piñuel-Raigada, José Luis (Ciencias Información U Complutense Madrid, E-28040 Spain (tel/fax: 34-1-3026196; e-mail: e.pinuel@jet.es)), **Society, Communication and Knowledge in the Construction of Identity: An Analysis of the Mediations.**

¶ Explores proposed epistemological models & methods of analysis for relations between society, communication, & knowledge in the represen-

P

tation of identity both at the behavioral level & at the level of social practices of interaction. The proposed model highlights the systemic analysis of relations between (1) a social system whose structure is regulated by rights & obligations that affect individuals & institutions with regard to the production, distribution, & consumption of goods & services; (2) a system of communication whose structure is made up of patterns of expression corresponding to the various codes (iconic, graphic, & audiovisual) that facilitate the production & interpretation of signs & messages; & (3) a system of knowledge & cultural representations whose articulated content permits things, events, & people to be attributed values, symbols, & prospects, capable of providing the individual with pleasure & suffering. Identification of components & relations within each system & the study of their mutual effects & mediations in the construction of identity yield models of explanation & decision making in fields strategically relevant for sociological analysis of, eg, publicity, political transitions, cultural consumption, & mechanisms of the construction of identity via fashion.

98S35614 / ISA / 1998 / 12855

Pifuel-Raigada, José Luis (Ciencias Información U Complutense Madrid, E-28040 Spain [tel/fax: 341-394-2143/2142; e-mail: e.pinuel@jet.es]), **The Communicative Interactions in Crises Management.**

¶ Communicative interactions build the architectonic structure of relations that unite the components of an organization: members, groups, tools, transformation process, products, & the internal & external organizational rules. Communicative interactions are made to fit the psychobiologic system into the socioeconomic system of production; but they are also made to ergonomically fit the socioeconomic system of production into the psychobiologic system of behaviors. However, communicative interactions are conditioned by the socioeconomic system of production (policy of organization) & the psychobiologic system of behaviors (personality of each member of the organization). Developed here is a model of relations between the communication system & the socioeconomic & psychobiologic systems when the tools of organizational communication & crises management are installed.

98S35615 / ISA / 1998 / 12856

Pirani, Bianca Maria (Faculty Sociology U Rome "La Sapienza," I-00185 Italy [tel/fax: 6-86-02-685]), **"The West and the Rest": Body-Mirage versus Body-Need in Multiethnic Metropolis.**

¶ Need is the watershed that separates neocortical knowledge-electronic & virtual-from pragmatic procedures that traditional societies have adopted in constructing ways of adapting to the environment. Cognitive unity by which the culture of forms constructs its approach to reality is, in fact, social representation, which is the symbolic substitute of the concrete rhythmical body, paradoxically absent of culture. The image of the body is the privileged instrument of socialization. The image of the body shatters the emotional reaction in the so-called "toys of illusion" composing postmodern culture. The so-called subject takes the place of the social link in which the Other becomes the mirage of affection. Socialization is transformed into conflict between conforming to & fleeing from the stereotype, victimizing the concrete body, which becomes a scapegoat of social interaction pathologies (relational anxiety). Explored here is what happens when the postmodern body meets, in immigrants' bodies, the limited & dynamic use of need in traditional procedures. To survive, do "aliens" adapt their bodies to metropolitan stereotypes or do they attempt to construct a "necessary" action, which is often damaging to the receiving society? How does postmodern anomie meet, in the body of the emotional subject, the difference of the alien?

98S35616 / ISA / 1998 / 12857

Pires de Lima, Marinus (Insti Ciências Sociais, P-1600 Lisbon Portugal [tel/fax: 00-351-1-7932272/7964953; e-mail: Marinus.Pires.Lima@ICS.UL.PT]), **Changements des systèmes et des rapports de travail au Portugal, dans le contexte de la globalisation** (Changes of Work Systems and Relations in Portugal in the Context of Globalization). (FRE)

¶ Results of an investigation of changes in work relations in three important sectors of the Lisbon & Setúbal (Portugal) industrial belt (automobile industry, iron & steel industry, & shipbuilding) are presented. The new types of management & organization of work, as well as the representation of the workers, are analyzed. Questions on the work systems & relations are articulated with the circumstances of the market & the social, technological, & organizational innovations in the context of globalization. Several factors contribute to the convergence of the productive

& organizational models & others oriented toward the differentiation of structures, implying a need for more empirical case studies. It is necessary to understand the factors that contribute to the convergence or divergence of the productive & wage models as well as the influence of the specificity of the socioeconomic, institutional, & cultural context. It is equally important to know whether the new productive systems are in continuity or, on the contrary, in structural change in relation to the traditional models. Variations in the process of appropriation & diffusion of the models justify placing the emphasis on the importance of the hybridization of the organizational forms.

98S35617 / ISA / 1998 / 12858

Pires de Lima, Marinus, Quinteiro, Maria, Pinto, Manuel S. & Reis, Sara (Insti Ciências Sociais, P-1600 Lisbon Portugal [tel/fax: 351-1-7932272/7964953; e-mail: Marinus.Pires.Lima@ICS.UL.PT]), **French title not provided.** (Gender and Unemployment in the Family: A Comparative Analysis Brazil-Portugal). (FRE)

¶ Examines the impact of unemployment on family organization to provide a wider understanding of how a family prepares its children for the challenges of the working world, the assumption of social responsibility, the exercise of dialogue, & the relationships between genders. The hypothesis refers to the fact that unemployment's impact is gendered; ie, a man's work is worth more than a woman's. Data are drawn from individual intensive interviews with unemployed men & women from industry (working class) & the services sector (middle class) from São Paulo (Brazil) & Lisbon & Setúbal (Portugal). Discussed are unemployment's impact on (1) personal & familial life, (2) life standards, & (3) responsibilities toward work & in social cooperation. Gender relationships are affected by two contradictory social forces, both of which are a parameter for social actor's behavior: the persistence of sexist values, & changes related to the sexual revolution, women's massive access to both the labor market & education.

98S35618 / ISA / 1998 / 12859

Pirou, Odile (URA CNRS U Paris X, F-92000 Nanterre Cedex France [tel/fax: 1-40-97-71-33/35]), **La Sociologie comme profession** (Sociology as a Profession). (FRE)

¶ Examines the criteria & process for recognizing sociology as a profession & a practitioner as a professional, drawing on data from 189 questionnaires & 30 interviews with sociology graduate students. It is found that, in France, sociology is a "pure" profession or a "science," & not an "applied" profession. The case of sociology in France is almost the same as in Portugal or in Belgium, but different from the Netherlands or the Federal Republic of Germany. It is shown that the question to decide if an occupation is a profession, science, or an applied profession is complicated. The work of E.C. Hughes, R. Bucher, & A. Strauss, who have studied the occupations & professions from an interactionist point of view, is drawn on.

98S35619 / ISA / 1998 / 12860

Pirzio Ammassari, Gloria (U Roma La Sapienza, I-00185 Italy [tel/fax: 0039-6-4453260/49910446]), **Lobbying in the European Union.**

¶ Examines the activity of lobbies & interest organizations at the European Union (EU) level, drawing on empirical research done in Brussels, Belgium, ie, case studies & qualitative in-depth interview data from representatives of European institutions & interest groups. Although, during the 1980s the European Commission sought to strengthen its role vis-à-vis the Council & the member states in a corporatist fashion by exploiting the support of *Euro-quangos* to create consensus on EU policies, it is found that the more informal patterns of interest participation in the political process are predominant. Analysis reveals a distinction between strong & weak interest groups in the European political arena. The former are mainly industrial & commercial interests, while environment, consumer, & worker interests are articulated in weaker organizations. Also, some regional & developed European areas are increasingly considered as strong interests. The problems of competition among interests in relation to the institutional & political assets of the EU are discussed in conclusion.

98S35620 / ISA / 1998 / 12861

Pis'mak, Yuri M. & Smirnov, Petr I. (Dept Theoretical Physics State U Saint Petersburg, Russia 198904 [tel/fax: 007-812-428-4553/7240; e-mail: pismak@snoopy.phys.spbu.ru]), **Minimal List of Elementary Concepts for Modeling of Social Systems.**

¶ It is necessary for the formal modeling of social systems in the frame-

works of sociocybernetics approaches to expose the most fundamental categories describing society. This set of categories must be as small as possible, yet, complete, meaning that each of the notions necessary for formulation of the model can be expressed in terms of the basic elementary concepts, which are nonintersecting & nonexpressible through each other. In the framework of suggested conceptions, society is considered a system of interacting activities of social subjects. The aim-directed activities are of two types: ego- & alteractivity. The game is considered an activity for itself. The activities are restricted by the objective condition of external environment & stimulated by needs & values of the actors. There are two basic values regulating activities: the social significance of the actor & the wholeness of the social being. The first dominates for egoactivities, & the second for alteractivities.

Pisati, Maurizio (Dept Sociology & Social Research U Trento, I-38100 Italy (tel/fax: 39-461-881478/881348; e-mail: maurizio.pisati@galactica.it)), **Class Position and Electoral Choice in Contemporary Italy: An Analysis of 1996 Political Elections.**

¶ Analyzes the association between social position & electoral choice in contemporary Italy by using (1) a more valid measure of social class; (2) a more reliable data set; & (3) more proper statistical methods than past studies. The data are from the 1997 Italian Household Longitudinal Study, based on a representative sample of 10,000+ men & women, ages 18+.

98S35622 / ISA / 1998 / 12863

Pisati, Maurizio & Schizzerotto, Antonio (Dept Sociology & Social Research U Trento, I-38100 Italy (tel/fax: 39-461-881478/881348 e-mail: maurizio.pisati@galactica.it)), **Career Paths to Service Class and Working Class Positions in Contemporary Italy.**

¶ Analyzes the career paths of Italian men & women, ages 35+, who ended up in either the service or unskilled working class, drawing on 1997 Italian household longitudinal study data. For each occupational destination, the most typical career profiles are identified, ie, the sequences & timing of career events most likely to lead individuals to the two destinations. The events taken into account are not limited to job spells but include educational attainment, first job search, & unemployment spells. Also tested is whether such career profiles vary across age cohorts & sex.

Pitter, Robert & Stoeckel, Andriol C. (Dept HMSE U Memphis, TN 38152-6223 (tel/fax: 901-678-3480/5014; e-mail: pitter.robert@coe.memphis.edu)), **Sport Delivery, the Open Market and Religion in Memphis, Tennessee: Evangelism or Community Service?**

¶ In light of shrinking resources for public sport & recreation provision, discussed here is the recent growth of church-based sport & recreation programs & facilities in the Memphis, TN, metropolitan area. Using data from a directory of church recreation programs & a telephone survey of recreation leaders, the largest of these programs are compared. Two churches are chosen as representative of contrasting views concerning sport's role in the church's mission. Data from in-depth interviews with recreational leaders & from observations of program participants at these two churches are used to compare the meaning of sport in the contexts of providing sport for evangelistic purposes or for meeting community needs. Additional statistical information about the demographic composition of metropolitan Memphis is also considered to explore how the dynamics of race, class, space, & religion intersect with sport & the impact of this intersection on the production & consumption of sport.

98S35625 / ISA / 1998 / 12866

Pixley, Jocelyn (Dept Sociology & Social Anthropology U New South Wales, Sydney 2052 Australia (tel/fax: 61-2-9385-3744/9313-7859)), **Impersonal Trust in Global Mediating Organisations.**

¶ The concept of impersonal trust in indirect social relationships is often treated as analogous to the personal trust of direct interpersonal relationships (whether primary or secondary), such as in the work of Fukuyama & Putnam. In contrast, in studies of personal networks & overlapping trust relationships among directors of major corporations, trust (or mistrust) is more exclusively a property of direct relationships. Personal trust relations are qualitatively different from impersonal ones, eg, of global mediating organizations of trust that give institutional promises to guard investments against future risk. This includes multinational accountancy firms (eg, Coopers & Lybrand) & credit-rating agencies (Moody's Investors Services & Standard & Poor's) that provide allegedly independent, reliable ratings of firms & countries to financial speculators. Although the Managing Director of Moody's argues (with reference to the 1997 East Asian crisis) that "markets are made of atomised individuals, outside the controls of even the most vigilant government," this is not merely self-serving, but neglects the mediating trust organization itself.

Platt, Jennifer (U Sussex, Falmer Brighton BN1 9QN England (tel/fax: 01273-606755/673563; e-mail: j.platt@sussex.ac.uk)), **The Methodological Heritage of American Sociology.**

¶ This look at the methodological heritage of US sociology suggests that the US probably invented empirical research methods as a category of systematic discussion; part of its contribution has thus been to the definition of a genre, as well as to the methods themselves. The US's position in academic life means that what is now current elsewhere, as well as in the US, is relevant; selections that depend on local & historical circumstances are always made from the available tradition, whether internally or externally. Parts of the earlier methodological heritage that remain alive & influential in current US sociology are examined, & examples of the use of US contributions in other national settings are given. Mechanisms of transmission of methods are briefly treated, including cross-national research projects & related enterprises, eg, data banks. The significance of financial & mechanical resources in enabling developments is considered, as is the possible relevance of cultural factors.

98S35628 / ISA / 1998 / 12869

Platt, Jennifer (U Sussex, Falmer Brighton BN1 9QN England (tel/fax: 01273-606755/673563; e-mail: j.platt@sussex.ac.uk)), **The History of the British Sociological Association.**

¶ The British Sociological Assoc's history since its foundation in 1951 is presented, drawing on its archives, published materials, & interviews with key figures. Topics include the constitution & its changes, the characteristics of officers & membership, finances & staffing, growth to a body no longer dependent on its initial base at the London School of Economics (England), range of activities & functions, & relationship with other academic & governmental bodies. Such material is related to the background of the changing structure of British higher education, the enormous growth of sociology & shifts in its intellectual concerns, & general social patterns, eg, the emergence of the women's movement, 1970s student unrest, & political currents in the larger society. Key interpretive themes are the significance of gender & the effects of the women's movement, the tension between elite & populist conceptions of its role, & the various attempts at professionalization.

Plaza, Dwaine (Dept Sociology Oregon State U, Corvallis 97331 (tel/fax: 541-737-5369/5372; e-mail: dplaza@orst.edu)), **The Role of Afro-Caribbean Grandmothers in Transnational Households.**

¶ Explores the role of the "international flying Afro-Caribbean granny" in GB, who has become an important figure in the Caribbean diaspora. Circulating between London (England), New York, Toronto (Ontario), & the Caribbean to maintain extended family connections, the "frequent flyer" grandmother has become a lynchpin who maintains the flow of communication about the addition of new clan members or the social & economic circumstances of individual family members. Here, conceptualizations of these women's changing roles are examined, drawing on interview data from a subsample of 30 elderly Afro-Caribbean women participating in the ongoing (1950s-present) Family Structure & Social Change of Caribbeans in Britain project, supplemented with data from the 1991 British Census & the 1991 British Labour Force Survey.

98S35630 / ISA / 1998 / 12871

Plaza, Dwaine & Mitchell, Richard G., Jr. (Dept Sociology Oregon State U, Corvallis 97331 (tel/fax: 541-752-1323; e-mail: mitchelr@ucs.orst.edu)), **The Crime of Educational Assessment: Credit for Time Served vs. Proof of Rehabilitation.**

¶ Colleges & universities assess both the functioning of their organizations & the attributes of their products. A considerable body of data, including the rates & patterns of resource distribution & consumption therein, exists regarding the functioning of institutions of higher education. Compared here are two assessment techniques: the use of fixed-response tests of summary student learning & the construction of academic portfolios from assemblages of applied student work. This comparison is based on a review of relevant literature & on the results of an intensive study of a small sample of Oregon State U students during fall term 1994. It is argued that education, the ennobling of selves in personal growth & community service, is best buttressed by amassing collective works, scrutinized, reiterated, & reformed, into concrete demonstrations of intellectual competence.

98S35631 / ISA / 1998 / 12872

Plymire, Darcy C. (Appalachian State U, Banner Elk NC 28604 (tel/fax: 704-963-5043; e-mail: dply@boone.net)), **The Big Red Machine and the Bomb: Steroids as a Metaphor for Nuclear Weapons.**

¶ During the Cold War, the US press represented Soviet & East German sport systems as "factories" that produced machine-like "inhuman monsters," & steroid use in international sport was blamed on the unethical actions of the communist sport system. Women from communist nations were more likely than their male counterparts to be accused of steroid use, because their superlative performances & unfeminine appearances were deemed unnatural. Two related issues are examined: (1) how the public discourse(s) about the communist sport machine, steroids, & gender helped to sell the US public on the (il)logic of nuclear weapons, the arms race, & the Cold War; & (2) how, in the post-Cold War world, the Chinese became the heirs to the tradition of the "Big Red Machine."

Poche, Bernard (CNRS/CERAT U Grenoble, F-38402 Saint Martin d'Heres Cedex France (tel/fax: 33-0-4-76-82-60-00/98)), **La Communication contre la culture** (Communication against Culture). (FRE)

¶ Argues that social treatment of information through new information & communication technologies & the correlated reduction of culture to information seem to change the very nature of the social phenomenon called culture. Culture comprises three elements: social representations corresponding to a group—eg, values, personal status, structure of the group, etc; forms & fields in which they are expressed; & productions of various kinds that let the group recognize, record, & share the result of the expression process. When culture mainly becomes a matter of information, it is cut off from its previous origin & social purposes & becomes a potentially worldwide phenomenon managed through policies. The individual is no longer connected with anything but globality, & the notion of group is cancelled. Because the notion of the group founds culture & its knowledge processes throughout history, humanity seems to be heading toward a sort of culture that would be cut off from any process of sense.

98S35633 / ISA / 1998 / 12874

Podilchak, Walter (U Toronto, Mississauga Ontario L5L 1C6 (tel/fax: 905-828-3945/569-4611; e-mail:

walterp@credit.erin.utoronto.ca)), **Fun in Social Movements.**

¶ An examination of fun in social movements draws on an experiential social exercise where students in a collective behavior & social movement class were instructed to organize a protest against tuition increases & separated into two rooms to organize the protest. One group was told to "have fun" in their protest with no further instruction. It is found that the other (nonfun) group followed prescribed organization practices & was hierarchically driven. Key leaders emerged who followed political strategies to convince other elites of the injustice committed to this group. Few constituencies were engaged in the debates & social actions. Rationality permeated this group within clearly demarcated symbolic differentiations. The social conflict of power politics, ie, "us" vs "them" was evident. The "fun" group developed a circle for inclusionary organizing, consensus decision making, interpersonal collective bonds, personal attachment, & celebration & exuberance, & shared social knowledge of the issues & concerns, representing the new social movements & their affinity groups in practice. A social excitement & collective engagement permeated the group, generating a "we" consciousness. It is suggested that, rather than challenge powered hierarchies directly, fun groups expose elitist practices & brutalities & create a legitimization crisis for hierarchical elites. Critique of 1960s fun & new social movements is not an issue of disenfranchised, expressively romanticized hedonism, but of fun's social-organizing practices for social justice & equality that resists dominant hierarchical practices & discourses & indicates a social-emotional collective experience wherein persons construct social bonds of equality. The collective processes in fun are a resistance practice from which to challenge, buffer, & displace the critical rhetoric. The theoretical issue in fun is social equality, & its praxis is social experience.

Podobnik, Bruce M. (Dept Sociology Johns Hopkins U, Baltimore MD 21218 (tel/fax: 410-516-7626/7590; e-mail: podobnik@jhu.edu)), **Towards a New Energy Paradigm for the 21st Century.**

¶ Explores new environmental policy initiatives taken in advanced industrial countries relating to energy industries. Analysis of state & corporate energy research & development budgets shows that new energy technologies, eg, photovoltaics, fuel cells, & hydrogen-based systems, are receiving growing public & private interest. Examination of the commercial prospects of these technologies suggests that they are poised to undergo widespread diffusion throughout advanced industrial countries early in the next century. It is argued that these new energy technologies are emerging as one of the next century's leading sector industries, & the companies that establish early leads in the commercialization of these new energy systems will reap great commercial & social benefits over the long term. Further, advanced industrial states will be prompted to support the diffusion of new energy technologies to diversify away from overreliance on politically unstable petroleum-producing nations. Growing pressure from national & international environmental movements will further accelerate the diffusion of such systems. Commercial, geopolitical, & social conditions are right for a relatively rapid shift toward a more sustainable energy regime in the next century.

Pokrovsky, Nikita E. (Dept Sociology Moscow State U, 119270 Russia (tel/fax: 095-242-6881/432-8862; e-mail: nikita@theo.soc.msu.su)), **Social Research in the Context of Anomie in the Transitional Societies.**

¶ Before the radical late-1980s social structure change in Russia & other "transitional" societies in Eastern Europe occurred, the theory of anomie did not enjoy any success in the region & was known only to a narrow circle of experts on Western social theory & criminology. Realities of the authoritarian social order with its superstable social structure did not leave an unfilled vacuum in social reactions &, thus, did not give enough material for using theories of anomie as a theoretical & applied research tool. Anomie, as a social phenomenon characterized by the dispersion of social & political values in Russia, either existed at the very depth of the society or was entirely absent. However, deterioration & further collapse of Soviet social structure resulted in a dramatically fast transition to a vacuum in terms of cultural goals & institutionalized means. Diffusion of many basic, as well as derivative, value orientations & vagueness of public concepts about what is permitted & what is not have caused a lack of initial solidarity reaction & motivation. Societal programming & visions of the future do not exist. At the macrolevel, there is no evident conceptualization of national goals & identity, ie, macroanomie. Advocates of Russian Western modernization clash with those seeking to preserve

traditional values. It is noteworthy that both liberal pro-Westerners as well as nationalistic anti-Westerners consider violent means of social change as appropriate for Russia today. Such a situation can be described as total or capillary anomie, which penetrates social institutions as well as capillary structures of social research & professional communities. The role of the sociologist in the face of anomie is discussed in terms of value-free research. The resistance against anomie by way of a gradual reconstruction & renewal of social values is deemed a natural historical process; it should take place simultaneously in the professional & general communities.

98S35636 / ISA / 1998 / 12877

Pokrovsky, Nikita E. (Dept Sociology Moscow State U, 119270 Russia (tel/fax: 095-242-6881/432-8862; e-mail: nikita@theo.soc.msu.su)), **Phenomenology of Global Tourism: New "Hyperreality" and Alienations.**

¶ The new cultural model is based on the unlimited expansion of communications mass media, so that everyone in the global village has almost equal access to the same set of "processed" cultural images, which leads to what is called "hyperreality." In the context of such a model, the concept of global & local tourism substantially changes not only its coloring but also its diverse social meanings. Global hyperreality, with its focus on global vs local, problematizes from a cultural perspective the need to travel anywhere at all. The very notion of tourism (or travel) is in the process of transformation from a cultural to a purely physiological phenomenon, having nothing to do with obtaining new firsthand authentic knowledge, but rather with satisfying the need for good hotels, local food, & cultural/historical sightseeing as advertised on TV & in illustrated magazines. In this sense, the main objective of tourist traveling is to obtain & "check" the adequacy of what has been advertised. People take prepackaged & processed icons & conceptual images as hyperreality, which is superior, by definition, over reality itself. Tourism has become a physiological postmodern by-product of global culture having not so much to do with an exploration of true reality. Thus, it gives rise to phenomenological structures of pure consciousness that describe tourism as "mass media consumption in itself," "passing by," "glossy surface," "novelty as preconceived boredom," "separateness," "returning home without leaving it," & "home as empty nothingness."

98S35637 / ISA / 1998 / 12878

Polanyi-Levitt, Kari (Dept Economics McGill U, Montreal Quebec H3A 2T5 (tel/fax: 514-457-5090/848-2577)), **Re-Reading Karl Polanyi at the End of the 20th Century.**

¶ Draws on the work of Karl Polanyi to compare the 1920s/1930s & 1980s/1990s, when the liberation of capital from political controls (so-called globalization)—associated with the geopolitics of the Cold War—eventuated in the ideological (neoliberal) & real-political (power) hegemony of Anglo American capitalism. An attempt is made to shed light on contemporary & future manifestations of reactive "double movements" in regions most traumatically affected, ie, East & Southeast Asia, Latin America, & the republics of the former USSR.

98S35638 / ISA / 1998 / 12879

Pollert, Anna (Industrial Relations Research Unit U Warwick, Coventry CV4 7AL England (tel/fax: 1203-524-276/184; e-mail: A.Pollert@warwick.ac.uk)), **Labour Movements in Transformation in Post-Command Economies: The Case of Central Eastern Europe.**

¶ Addresses the common features & national variation in labor movements in transformation in Poland, Hungary, the Czech Republic, & the Slovak Republic. Politically, any semblance of neocorporatism is subordinated to the global imperatives of the European Union & the multilaterals, & the emerging institutional pattern is of fragile tripartism & highly fragmented trade unionism. Intermediary industry-level structures are weak, following the Western trend of decentralization. Within this general trend, both Poland & Hungary share union politicization & bifurcation between old & new structures, with Hungary further distinguished by a works council system. In the Czech & Slovak Republics, reformed unions were never challenged by alternative structures & have established a more homogeneous labor movement. In each country, unions are increasingly seen as defending workers' interests & have regained legitimacy, but have decreased membership by 50%; unions have developed at a national political level much faster than at the workplace. However, different national legacies & economic fortunes have produced different rhythms of social consent or opposition to transformation. In Poland, unofficial strikes in the early 1990s gave way to greater quiescence; Hungary has had few disputes, although some in the public sector; the

Czech Republic, which began as a haven of social consent, has entered a more conflictual period of industrial relations, especially in the public sector; while in the Slovak Republic, a few prodemocracy demonstrations do not seem to have escalated to wider labor activity.

Pollet, Ignace (Higher Instit Labour Studies, Leuven Belgium (fax: 32-16-323134; e-mail: Ignace.Pollet@hiva.kuleuven.ac.be)), **The Conditions and Risks of Transnationality: Evaluation of a Partnership.**

¶ The European Union aims to induce innovation in social policy by stimulating projects in temporary transnational partnerships, eg, "Route," which operated 1995-1997. Reported here is an evaluation of Route, not on the products it delivered, but on the transnational process. The partner-organizations came from Belgium, France, Greece, Northern Ireland, & Scotland. The partnership objective was to improve methodologies related with integrated work development—a combination of techniques used to help high-risk unemployed in search of jobs. In general, the Route partnership proved to be a positive experience, primarily because of three major factors: (1) the clear ideas of the initiator about the integrated work development concept & the determination to make it succeed; (2) a working structure (working groups) that allowed for ideas & experiences to be channeled & developed; & (3) the assignment of a facilitating agency from the start. From a more critical point of view, the working structure showed some weaknesses of organizational design, planning, partnership, & composition.

98S35640 / ISA / 1998 / 12881

Pollini, Gabriele (Dept Sociology U Trento, I-38100 Italy (fax: 39-461-881348; e-mail: gpollini@gelso.unitn.it)), **Empirical Studies of Local-Global Relations.**

¶ Examines changing attitudes toward socioterritorial belonging between localism & globalism in Italy, 1989-1995, to determine whether a strong sense of territorial *Gemeinschaft*, persists or if the area of belonging felt to be most important is no longer the commune or the village, but the province, coinciding with the *Gemeinschaft* of Trentino. If the trend is toward globalism—it could not be otherwise considering that it starts from extreme localism—the modal ambit of belonging is the provincial *Gemeinschaft*, with a concomitant increase in the % of the population, albeit still small, that opts for a cosmopolitan type of belonging. However, the sentiment of belonging to the national community has fallen since 1989. It is concluded that, even if the trend is toward cosmopolitanism, localism still prevails, although it has shifted from the communal & village *Gemeinschaft* to the *Gemeinschaft* of Trentino, with a consequent diminution in the sense of belonging to the national community.

Polster, Claire (Dept Sociology & Social Studies U Regina, Saskatchewan S4S 0A2 (tel/fax: 306-585-4158/4185; e-mail: claire.polster@uregina.ca)), **The Global Knowledge Grab: Exploring the Implications of Emerging Intellectual Property Regimes for the Future of Academic Work.**

¶ The development & extension of national & international intellectual property regimes have raised concern among a number of groups ranging from religious fundamentalists to Third World farmers. However, one group that has been slow to recognize & respond to the potentially harmful implications of such emerging regimes is academics. Discussed here are key aspects of emerging national & international intellectual property regimes exploring their impact on academics' ability to carry out their work, particularly their public service mission. It is argued that, taken to their logical conclusion, intellectual property regimes do not simply impede academic work, they seriously threaten the future of the liberal university & wider public interests. Drawing from the strategies for resistance adopted by other groups, suggestions are offered about how academics might respond to emerging intellectual property regimes. Paradoxically, some strategies may actually restore to universities some of the lost liberal vision & practice that make a vital contribution to the social & economic well-being of individual nations & the global community.

98S35642 / ISA / 1998 / 12883

Polster, Claire & Newson, Janice (Dept Sociology & Social Studies U Regina, Saskatchewan S4S 0A2 (tel/fax: 306-585-4158/4185; e-mail: polsterc@leroy.cc.uregina.ca)), **Restructuring Academic Autonomy: New Challenges and Opportunities Facing the Professoriate in the New Millennium.**

¶ Examines various developments at local, national, & regional levels that, either by design (eg, performance indicators) or by default (eg,

p

from new intellectual property rules), & either by imposition or with academics' cooperation, have eroded academic autonomy in recent years. It is shown that a tiering of the profession at all three levels is under way that will have the effect of more closely integrating the university & academics into the emerging global economy. Also considered are the implications of this development for academics & the general public. Various strategies to resist, if not reverse, this process & to reassert & revitalize both the conception & practice of academic autonomy are discussed.

98S35643 / ISA / 1998 / 12884

Pons, Ignasi (Dept Sociology U Barcelona, E-08007 Spain (tel: 3-402-18-02; fax: 3-280-23-78; e-mail: iponsrkd2@eco.ub.es)), **Funciones simbólicas de la tipificación legal y la estigmatización social de la prostitución femenina** (Symbolic Functions of Legal Typification and Social Stigmatization of Feminine Prostitution). (SPA)

¶ The evolution of Spanish criminal legislation is taken as an example to observe the following situations: (1) criminalization of the act of prostitution (soliciting) & its relational & instrumental environment; (2) decriminalization of the act of prostitution (soliciting) but criminalization of its relational & instrumental environment; & (3) articles related to prostitution remain, but are practically empty, reduced, in fact, to child prostitution. Analyzing the level of effective punishment, occasional persecution & practically an absence of persecution are found. When there is an obvious absence of persecution, there is the need to question why there is this interest in the existence of prostitution in criminal codes. One of the main answers is related to the symbolic functions of moral codes & social stigmatization, consisting of a formal condemnation of prostitution to (A) maintain the ideal discourse of marriage, at the same time that it is tolerated or stimulated as a value to effectively protect the formal structure of marriage; (B) appear as if public administration had the moral leadership; & (C) maintain control over apparent & real women's sexual behavior to strengthen real & institutional monogamy. It also allows & socially revalues male institutional monogamy and real polygyny.

98S35644 / ISA / 1998 / 12885

Pons, Ignasi (Dept Sociology U Barcelona, E-08007 Spain (tel/fax: 3-402-18-02/280-23-78; e-mail: iponsrkd2@eco.ub.es)), **Nuevos conceptos y metodología en la evaluación de la calidad de vida de personas con enfermedad mental severa** (New Concepts and Methodology in Evaluation of the Quality of Life of Individuals with Severe Mental Illness). (SPA)

¶ The progressive application of mental health policies based on deinstitutionalization, community intervention, & social rehabilitation has increased the importance of evaluation studies based on life quality. Even if evaluation of clinical conditions & observation of individual existential status has indicated considerable advance, it has initially been measured according to a standard cultural mean, shared by technicians, frequently without taking into account semantic & meaning variables with reference to users' social culture, subjective perceptions, & prospects. In fact, this cultural bias & subjectivity omission is produced in patient expression assessment, during the diagnostic process & pharmacological or psychotherapeutic supervision. Several studies with sociological or anthropological perspectives have revealed the inadequacy of the reference to normality & welfare external to value & cultural meanings relevant for those using the mental health resources. In the last decade, however, especially in rehabilitation process evaluation, cultural variable & subjective measures have been introduced. Greater attention should be paid to how service users feel than to how others see them.

98S35645 / ISA / 1998 / 12886

Poortman, Anne-Rigt & Kalmijn, Matthijs (Dept Sociology Utrecht U, NL-3584 CS Netherlands (e-mail: A.Poortman@fsw.ruu.nl)), **Sex Differences in the Economic Consequences of Divorce in the Netherlands**.

¶ Draws on the 1984-1994 waves of a large-scale socioeconomic panel study to analyze sex differences in the economic consequences of divorce in the Netherlands. Examined are postdivorce changes in income for men & women, using different income measures & the ramifications these income changes have for other aspects of economic well-being, eg, consumption patterns & housing quality. Also considered are the sources of sex differences in the economic consequences of divorce on the basis of a multivariate analysis. In particular, the extent to which the degree of sex-specific specialization contributes to sex differences in the economic consequences of divorce is explored.

Porfiriev, Boris N. (Instit Systems Analysis Russian Academy Sciences Moscow 117312 (tel/fax: 095-244-7886/158-6965)), **The Development of Emergency and Disaster Legislation: The Comparative Analysis of the World and Russian Trends**.

¶ Discusses the emergency & disaster policy & legislation in the developed countries & Russia. The main hypothesis is that such legislation would have more commonalities along with the peculiarities precipitated by the internationalization of the major disaster effects on regional & global communities. By comparing emergency & disaster legislation of Canada, the Netherlands, the UK, & the US with that of Russia, which is analyzed in detail, three general & intertwined trends are revealed: (1) increasing differentiation of emergency & disaster legislation both in types of crisis & social groups involved; (2) increasing integration of this legislation through incorporation of the respective acts & statutes; & (3) shifting the legal regulation of communities' & societies' protection in emergencies & disasters from one based on alleviation strategy with a priority of response & recovery measures to one that involves a comprehensive mitigation strategy. However, the pattern & pace of both trends vary considerably from country to country, depending more on cultural traditions than on economic level & social vulnerability. In Russia, the integration & strengthening of a mitigation bias in the legislation discussed provides for development of umbrella or systems-type law, but other countries rely on a more or less integrated set of specific laws & regulations, rather than a system.

Porina, Vineta (Latvian Language Instit, Akademijas laukums 1 Riga LV-1050 (tel/fax: 371-7-229724/227696; e-mail: latv@ac.lza.lv)), **Minority Language Rights in a Changing Society**.

¶ During the Soviet period, the decrease in the sociolinguistic functions of Latvian went hand in hand with the decrease in native-language competence among non-Russian minorities in Latvia. Minority cultural institutions & schools were destroyed, & education was available in Latvian or Russian only. After independence in 1991, the rights to sustain their language & use it in cultural & educational areas & everyday communication were guaranteed to all minorities in Latvia, & national minority schools were renewed. Nevertheless, the number of students educated in the language of their ethnicity (excluding Russians) is still minimal. As a consequence of the Russification process, many non-Russian minority schools are more culture than language oriented. In some minority schools, the minority language has been taught only as a subject. Here, the collective linguistic rights of minorities, especially Russians in Latvia, are discussed.

Porio, Emma E. (Dept Sociology & Anthropology Ateneo Manila U, Quezon City 1108 Philippines (tel/fax: 632-924-4601/4599; e-mail: eporio@pusit.admu.edu.ph)), **Rethinking the Enabling Strategy in Social Housing: State-Civil Society Dynamics in Southeast Asia**.

¶ Argues for the rethinking of the principle of "enabling strategy" informing the current framework of governance in social housing in Southeast Asia. In practice, enabling strategy is expressed in partnerships involving state housing agencies, private sector groups, nongovernment organizations, & urban poor organizations. These partnerships, anchored on the distinctive competencies of the stakeholders, along with innovative financing schemes, have facilitated access to housing by urban poor communities. A closer examination of the enabling strategy, particularly the structure of financing schemes installed by the state, however, shows that

it has provided greater business opportunities for the private sector. In effect, partnerships have enabled the private sector more than the urban poor. This is further reinforced by the state's neglect of its fiscal & regulatory functions in land-use/zoning policies, which largely favor the interests of the private sector. These functions are crucial in addressing the lack of affordable land for social housing. These conditions impose limits on the enabling power of partnerships between civil society & the state. Overall, the creation of partnerships among stakeholders of different perspectives, capacities, & control over resources have resulted in contradictory & recurring problems/tensions in governance.

Porro, Nicola (Dipt sociologia U Roma 'La Sapienza', I-00198 Italy (tel/fax: 39-68-41-57-48/52-26-31; e-mail: porronic@etruria.net)), **The "Fourth Citizenship": Sport for All in Western Europe.**

¶ In Western Europe, national sports systems developed along a continuum having as reference points two opposite ideal types: (1) a laissez-faire paradigm, which is market-oriented &/or supported by self-organized participants' networks; & (2) an interventionist paradigm, in which the prominent role is exerted by the state. Since the 1970s, the rise of new sport movements for all has put pressure on the traditional sports arenas, making the interpretative categories almost obsolete. Leading professional sports to the hegemony of business sports corporations, the processes of globalization of technological & institutional innovation (eg, satellite TV & supranational regulation) are currently revolutionizing the whole system of performance sport. Also, social change (the aging population & a new map of immigration) & its cultural consequences are increasingly transforming both profile & quality of the sports practice demand at the mass level. European sport for all represents an odd container of cultural resistance & a means for experiencing exciting lifestyles & organizational innovations. Sport for all suggests the need to update the classic theory on citizenship, pointing out the rise of unheard-of social attitudes & demands, mainly coupled to socially widespread cultural & expressive needs. Both organized movements & individual participants (the sports free riders) claim rights of "fourth citizenship." In this perspective, the conflicts of regulation & allocation experienced between the high performance sport arena & the social space of sport for all refer to the crucial problem of granting a new production of meaning, attributing to it both social acknowledgment & institutional role.

Porter, Sam & Campbell, Rona (Dept Sociology & Social Policy Queen's U, Belfast BT7 1NN Northern Ireland (tel/fax: 1232-273715/320688; e-mail: S.Porter@qub.ac.uk)), **Resisting Deprofessionalisation: The Case of British Obstetrics.**

¶ As a result of growing pressure for British women to be allowed to choose where & with whom they should give birth, the government has produced reports recommending that women be given the right to an informed choice about where to give birth. Obstetricians have responded to the state's challenge to their professional dominance by attempting to minimize its effects, eg, by drawing up long, detailed lists of selection or risk assessment criteria that ensure that birth outside a consultant obstetric unit is restricted. Examined here are British obstetricians' strategies of resistance to deprofessionalization, arguing that, while the social closure of professional groups is dependent on state sanction, the relationship between state & profession is complex & ambiguous.

Porto, Maria Stela Grossi (Dept Sociologia U Brasília, 70910-900 DF Brazil (tel/fax: 061-2742544/3473663; e-mail: Portobsb@tba.com.br)), **French title not provided** (Justice and Social Representations of Violence in Brazil). (FRE)

¶ An exploration of violence-viewing its objectivity & subjectivity as part of the constitution of the subject. This viewpoint is drawn on to understand the relations between these two central components of violence definition as a social phenomenon. Violence is considered a subject whose theoretical comprehension needs the knowledge of either the social actors' experience (victims or protagonists of violent situations) or the system (context or environment) in which violent actions are practiced, with emphasis on the relations between violence & the democratization process. Objectively, violence would be what statistics report & notice as the undeniable reality of violence. Subjectively, however, violence would be what different people or society would perceive as such. It is possible to think about the existence of both (objective) contexts favorable to violence's appearance & the fact that what is (subjectively) represented as violence also produces it. The relationship objectivity/subjectivity of vio-

lence is developed theoretically here. The empirical part emphasizes the subjective component of this polarity through analyses of violence as social representations by justice. As an empirical category of analyses, justice is studied through an institutional approach; some key actors from the Brazilian Ministry of Justice were interviewed for investigation purposes.

Posada, Marcelo G., Martinez de Ibarreta, Mariano & Pucciarelli, Pablo A. (National U Lujan, 6700 Buenos Aires Argentina), **The Agro Pampeano in the Nineties: Economics of Scale and Productive Concentration: The Case of Sowing Pools.**

¶ Discusses agricultural growth & dynamics in the Argentine pampa in the 1980s, differentiating two dominant macroeconomic plans. The agricultural expansion of the early 1980s followed the need to invest financial capital in smaller-risk activity, including the sowing business. The general economic crisis at the end of the 1980s curbed these practices & prepared the stage for the arrival of a new macroeconomics system, a new agricultural productive plan in the 1990s. The application of a plan of structural adjustment, deregulation, & economic liberalization (the convertibility plan) modified that national economic operation & the accumulation strategies of intervening actors. In agriculture, its effects were to aggravate trends of concentration & increase advantages derived from scale economies. In addition, it brought new financial capital into agriculture. Analysis focuses on the central features of agricultural investment, raising questions that warrant further investigation.

Posel, Deborah (Dept Sociology U Witwatersrand, Johannesburg 2050 South Africa (tel/fax: 27-11-7163420/3398163; e-mail: 029deb@muse.arts.wits.ac.za)), **Race and Surveillance: Modernising the Apartheid State.**

¶ Contemporary theories of race as a social construct represent the idea of social constructionism as a theoretical one that reinterprets popular biological understandings of race. Much of the literature on apartheid similarly assumes that the practitioners of apartheid expounded biological notions of race that academics have had to deconstruct as social constructions. Shown here is that the apartheid state adopted an explicitly social constructionist position on race, in terms of which racial boundaries were officially defined largely by how they were socially identified & policed. Also considered is how this method of racial classification interlocked with various techniques of power under apartheid, particularly efforts to modernize the state & its mechanisms of surveillance.

Post, David & Pong, Suet-ling (Pennsylvania State U, University Park 16802 (e-mail: post@pop.psu.edu)), **Education, the Family, and Inequality in Hong Kong: The Social Legacy of Colonial Policy.**

¶ Explores the stratification of education in Hong Kong, drawing on 1971-1991 census data, a 1967 colony-wide survey of families, hundreds of published & unpublished government documents, & personal interviews with actors in the education policy arena. Presented are three reasons why Hong Kong's colonial education merits scrutiny by social scientists & policymakers generally, as well as by People's Republic of China specialists: (1) its rapidity of expansion; (2) colonial government's comparatively autocratic powers over the provision of education; & (3) its contrast to most nation-states in its justification for support to schools. Four domains in which Hong Kong society ultimately was transformed as a result of the decision to expand & subsidize education are introduced: (A) social stratification & children's opportunities for upward mobility; (B) the allocation of resources in families; (C) the economic role of women; & (D) interfamily income inequality & arresting population growth.

Posthuma, Anne Caroline (U São Paulo, SP 05433-001 Brazil (tel/fax: 55-11-210-9512/814-7496; e-mail: posthuma@usp.br)), **Shifting Policy Regimes and Industrial Renewal in Brazil: Vestiges of Import Substitution and Impacts of Liberalization.**

¶ The spectacular output growth & investment boom taking place in the Brazilian automotive industry have been hailed by the government as an example of successful market liberalization policies. Since 1990, economic & political transformations have turned a secluded national industry into the fastest-growing vehicle producer in the world & net vehicle exporter for the regional Latin American market. If output targets are achieved by the end of the century, it would seem that this situation de-

p

bunks the view that import substitution industries cannot adapt to new competitive conditions of open markets. Yet, behind this apparent success story of lie important considerations regarding the process of industrial transformation in developing countries. Negative effects on other industrial sectors in Brazil are discussed. Three diverse aspects of this process of industrial transformation are analyzed, drawing on the case of the Brazilian automotive complex: (1) government policy, comparing the sharp divergence from *dirigiste* government policies implemented in the 1950s & 1960s to the current government outlook, which places market factors & transnational corporation strategies as the primary determinants of the shape & direction of industrial transformation; (2) the new spatial diversification emerging in the Brazilian automotive industry, involving the installation of new entrant transnational corporations that are investing in greenfield regions, thereby creating new industrial poles in widely dispersed regions of the country, accompanied by new institutional responses in the traditional industrial belt around São Paulo to confront economic degeneration & deindustrialization; & (3) the new configurations of interfirm relations being introduced into the Brazilian auto industry as a whole, ie, the heterogeneous, Toyota, & Lopez models.

Posthuma, Anne Caroline (International Labour Office, Santiago Chile (tel/fax: 562-201-2727/2031; e-mail: posthuma@sclo.ilo.org)), **Reform of the Brazilian Vocational Training System: Improving Access and Equality through New Institutionalities, Course Structure and Content.**

¶ Describes major changes that have been implemented in the Brazilian vocational training system in the 1990s, & analyzes implications of these profound structural innovations in terms of reducing social stratification. The existing vocational training system is high quality, even by international standards, but is highly restrictive, further adding to social exclusion & stratification. Further, course curricula are traditional in nature & not suited to the new reality of employment & occupations. Far-reaching innovations are being implemented in terms of new institutional arrangements, sources of financing, structure of course delivery, & course content. The new system of vocational training emerging is more broad based & varied, overseen by a greater variety of institutions, more relevant with updated course content, & opens access to broader & more representative strata of Brazilian society.

Postiglione, Gerard A. (U Hong Kong, Pokfulam (tel/fax: 852-2859-2526/2858-5649; e-mail: gerardap@hku.hk)), **State Schooling and Ethnicity in China: The Rise or Demise of Multiculturalism.**

¶ An examination of ethnic minority education in China addresses issues related to state schooling, ethnicity, & development, including (1) the degree to which ethnic groups are drawn from traditional religious institutions to modern schooling, (2) the manner in which state schooling represents ethnic cultures, (3) the effect of state schooling on the conservation of ethnic group language, (4) the scope of basic education across ethnic minority regions, (5) the results of preferential policies to admit ethnic minorities to higher education, & (6) how state schooling's attempt to ensure equal educational opportunities reproduces national culture, & fosters interethnic unity. A challenge is raised to claims that ethnic minority schools adequately represent ethnic minority culture. Also investigated is whether multicultural education can further improve understanding between Han Chinese & other ethnic groups, even to the extent that the latter will increase their participation in state schooling, thereby raising their potential to reap equal rewards in terms of social & economic development. It is argued that, despite the authoritarian character of state schooling, diversity reigns as a result of the vast variety of cultural traditions & practices, especially in religion & language, that continue to flourish.

Pothen, Sosamma (Dept Sociology Government New Girls Coll, Indore Madhya Pradesh 452008 India (tel: 0731-490081)), **Work and Family Life of Female Industrial Workers in an Indian City.**

¶ Data collected in Indore, in central India, from 250 female workers employed in four cotton textile mills are drawn on to test the hypothesis that such workers come from poor economic backgrounds, & their family life, especially child care, is adversely affected by work. Analysis indicates that (1) the number of female workers in the mill is decreasing; (2) 48% are supporting their families; (3) the majority still prefer joint families because of the domestic support these families offer; (4) the majority exercise decision-making power in the family; (5) Purdah (veil) is observed selectively; (6) addiction (alcohol & tobacco) among husbands/children is a major problem; (7) child marriage is widely practiced; (8) widow remarriage is not allowed; (9) 54% of families face serious economic problems & the majority live in unhygienic circumstances; & (10) participation in trade union activities is very poor. It is concluded that the working & family life conditions of industrial female workers is far from satisfactory.

Potters, Talja (U Amsterdam, NL-1012 WX Netherlands (tel: 31-20-523516; e-mail: potters@psc.wva.nl)), **Social Innovation: Strategy against Exclusion?**

¶ Starting in Rotterdam, Netherlands, social innovation was developed as a container of projects focused on (1) avoiding exclusion of citizens of the big cities, especially the inner-city areas, & (2) participation in work, education, health, & neighborhood. Here, origins & goals of these projects will be discussed to introduce an examination of whether the goal of integration & participation of inner-city residents was met by the initiatives started in 1989. Fieldwork in a neighborhood in Rotterdam South is drawn on to address the question of integration theoretically & empirically. A model is developed to show that the type of ties prevailing in urban public space & the relative positions of these ties on an anonymity-intimacy continuum highly influence people's perceptions of community &, consequently, neighborhood-level integration. Starting from a schedule of ties differing according to rationality & instrumentality, possibilities & restrictions of a policy focusing on neighborhood-level participation are discussed. Some policy measures did work out well in making streets more clean & safe, while identification with locality & the experience of a local community remained very restricted. Some indications are given in terms of different approaches to support poor-oriented activities, focusing less on the geographic area & more on the existing or potential networks of people in the most disadvantaged positions in Dutch inner cities.

Prandy, Kenneth (Faculty Social & Political Sciences U Cambridge, CB2 1TN England), **Social Reproduction and Mobility in Britain and Ireland from 1790 to 1950**.

¶ Presents preliminary results from a historical study of social mobility in GB & Ireland, 1790-1950. The research has a unique combination of features: (1) It follows families for up to five generations through both maternal & paternal lines. (2) It uses a continuous measure of social position, rather than class categories. (3) This measure is derived from data on social interaction: correspondence analyses of cross-tabulations of the occupations for marriages taking place 1777-1866 (N = 9,700 cases) & 1867-1913 (N = 8,664 cases) of grooms, their fathers, & their fathers-in-law. (4) Each individual's social position is summarized by a work-life trajectory, represented by his social location at ages 20 & 50. Data have been obtained from family historians, eg, occupational information derived from civil registration & census records. The analyses are based on 21,029 males split into 10-year birth cohorts, 1790-1799 to 1900-1909. Although more detailed analyses are needed, results so far indicate a remarkable degree of stability of social processes of reproduction.

Prasad, Neelam (NISTADS, Hillside Rd New Delhi 12 India (tel/fax: 91-11-572-91-57226406/5754640; e-mail: nistads@sirnetd.er.net.in)), **Scientific Values of Indian Scientists: Are These Universal in Nature?**

¶ In addressing whether there is a need for a separate sociology of science for the developing world, considered is whether the scientific values of Indian scientists are universal in nature, drawing on questionnaire data from 490 scientists. Factor analysis, using varimax rotation to explore the dimensions of scientists' values, reveals replication of a few dimensions conceptualized in previous research in other cultural contexts. Results also depict similarities in terms of how values relate to various research behavior. Further, research-related values of scientists did not vary for individual reasons or by work context, but rather, in different research activities. This provides additional validity to the universal nature of scientists' values.

98S35667 / ISA / 1998 / 12908

Prato, Barsosa Nelson & Velasco, Francisco Javier (CENDES, Apartado Postal 6622 Caracas 1010-A Venezuela (tel/fax: 582-7533475/7531261)), **Spanish title not provided** (Biodiversity and Sociodiversity in Tourism. Sustainable Management). (SPA)

¶ The increasing pace of environmental deterioration around the world has determined the need for policies that propitiate sustainable management of natural resources & an appropriate relationship between society & nature. Within this framework, the notion of tourism development is being redefined in terms of the needs of local communities that have had a well-balanced relationship with their natural surrounding. This has created conditions for the emergence of applied studies related to the use of traditional ecological knowledge & respect for traditional lifestyles in rural settings. In this sense, important research projects are being carried out.

98S35668 / ISA / 1998 / 12909

Preston, Jo Anne & Kriz, Katrin (Dept Sociology Brandeis U, Waltham MA 02254-9110 (tel: 617-736-2638; e-mail: preston@biuah.cc.brandeis.edu)), **Female Teachers in Austria and the United States: A Biographic Analysis of the Impact of World War II on Women's Work Careers**.

¶ Examines the impact of WWII on the careers of women teachers in

Austria & the US & assesses the degree to which disruption in their work careers affected their quality of life, based on work & family histories of 20 Austrian & 20 US female teachers, born 1900-1920. The Austrian evidence came from two published autobiographies as well as life histories of female teachers located in the archives of the Organization for the Documentation of Life Histories in Vienna, & the US evidence from archival material at Radcliffe Coll & Mount Holyoke Coll (in Cambridge & South Hadley, MA). The preliminary data suggest that both countries hired more women teachers during a shortage of male teachers during the war. Postwar policies in the US attempted to increase the number of men in teaching, with some success, while the Austrian government, still facing a shortage of male applicants, employed women in high numbers, but dismissed many from administrative positions in education. From what evidence is available, women whose teaching careers were interrupted suffered some disadvantage, especially those who remained single. This disadvantage was more pronounced in the US, which lacked the extensive social programs instituted in postwar Austria.

Prêteceille, Edmond, Harloe, Michael, Mingione, Enzo & Pickvance, Chris (IRESCO, 59/61 rue Pouchet F-75017 Paris Cedex 17 France (e-mail: edpr@iresco.fr)), **IJURR: Looking Back Twenty One Years Later**.

¶ A retrospective statement concerning the initial orientations of the *International Journal of Urban Regional Research* (IJURR), & their achievement or otherwise, based on memories of actors of the journal. It is acknowledged that the statement is inevitably an intellectual reconstruction of the past in the light of what the authors think today, even though based in part on records of initial discussions about the aims of the journal. The four main orientations when the journal was launched include (1) the adoption of a critical, or radical, approach to urban problems; (2) the choice of a scientific publication, in which theoretical statements were made explicit & subjected to controlled empirical investigation; (3) a commitment to interdisciplinary debate; & (4) an emphasis on comparative research with an international scope.

98S35670 / ISA / 1998 / 12911

Prêteceille, Edmond & Ribeiro, Luiz Cesar de Queiroz (Center national recherche scientifique CSU, 59-61 rue Pouchet F-75017 Paris France (tel/fax: 33-1-40251129/40251135; e-mail: edpr@iresco.fr)), **Trends of Social Segregation in Unequal Global Cities—Paris and Rio de Janeiro in the 80s**.

¶ Globalization has been widely associated with increasing urban inequality, urban poverty, & segregation. The global city model particularly has spread the idea that the restructuring of the labor market by the economic globalization process inevitably produces a new type of social & spatial dualization. The cases of Paris, France, & Rio de Janeiro, Brazil, allow a comparison of two cities affected differently by economic globalization, & two structures of labor markets. To do so, occupation categories are redefined based on similar theoretical perspectives, & trends in the 1980s, between the last two censuses, are analyzed, considering both the level of the urban region as a whole & that of the spatial structure of social segregation. The changes in the overall occupation structures, & those of the urban segregation patterns are compared systematically. A series of hypotheses are proposed to interpret the similarities & differences observed, & their relation to the specific forms of global economic restructuring in each case, & to specific features of labor relations & markets, social policies, class structures, & social stratification.

98S35671 / ISA / 1998 / 12912

Price, Rumi Kato (School Medicine Washington U, Saint Louis MO 63108 (tel/fax: 314-286-2282/2285; e-mail: price@rkp.wustl.edu)), **Vietnam Drug Users Two Decades Later: Disentangling the Consequences of Two "Natural Experiments"**.

¶ Examines the long-term effects of intense drug use & combat exposure in Vietnam & their interaction with psychopathology, drawing on 1972-1997 data for 841 Vietnam veterans & comparison civilians who participated in the Washington U (St Louis, MO) Vietnam Era Study Phase III follow-up. Focus is on the effects of combat experience & subsequent traumatic exposure; hard drug use in Vietnam & subsequent substance abuse; interaction of the previous factors; & effects of childhood antisocial behavior & earlier drug use. Among the drug-positive sample who were positive at the time of departure from Vietnam, 30% were African Americans; about 60% had significant Vietnam combat experience; 90+% of the drug-positive & 45% of the drug-negative samples reported hard drug use in Vietnam. Childhood behavior problems were assessed

p

retrospectively in 1972; substance use was assessed from pre-Vietnam to 1974. The current presentation extends earlier preliminary analyses of posttraumatic stress disorder & drug abuse (Price et al, 1997).

98S35672 / ISA / 1998 / 12913

Price, Rumi Kato (School Medicine Washington U, Saint Louis MO 63108 (tel/fax: 314-286-2282/2285; e-mail: price@rkp.wustl.edu)), **From Childhood Conduct Problems to Adult Antisocial Personality and Substance Abuse: Results from Five Countries.**

¶ Examines whether pathways from childhood behavior & conduct problems to adult antisocial personality & substance abuse are moderated by culture or society-specific environmental factors, drawing on data from 1980s epidemiologic surveys in the US, Canada, New Zealand, Taiwan, & South Korea. Discussed are (1) cross-societal differences in the associations of the severity & syndrome of conduct problems with substance abuse & adult antisocial personality; (2) common & unique indicators of the underlying construct & its developmental path to substance abuse & adult antisocial personality across the five societies; & (3) cross-societal differences in the patterns of the transition from childhood problems to substance use, abuse & dependence, or adult antisocial personality. Findings point out potential societal variations in the developmental pathways from behavior & conduct problems to psychopathology. Sociocultural variations in expressions of childhood behavioral disorders & different stages at which protective factors may operate in specific societies are suggested.

Prins, Baukje (Dept Philosophy U Maastricht, NL-6200 MD Netherlands (tel/fax: 31-0-433-883320/259311; e-mail: b.prins@philosophy.unimaas.nl)), **The Double Bind of Racism.**

¶ Examines Donna Haraway's notion of "situated knowledges" as a way to enrich current research on practices of racial & ethnic exclusion & marginalization. According to the epistemology of so-called standpoint thinking, critical knowledge necessarily starts from the everyday experiences of marginalized subjects. It is suggested that views "from below" would offer a better view of reality. It is argued that this "oppositional realism" tends to produce a paradoxical message by simultaneously negating & affirming the reality described. The crucial question is not so much how to resolve, but how to handle, such a paradox. This question will be explored by a critical reading of Philomena Essed's *Understanding Everyday Racism*, a report in both the Netherlands & the US on the occurrence of racism in these countries. Essed's report illustrates how the racial conflict between black & white can be considered a differend in the sense of Jean-François Lyotard. But this also makes the realist epistemology accompanying the logic of standpoint thinking problematic. It is shown how Haraway's notion of situated knowledges opens new possibilities of dealing with the paradoxical, double-bind relationship between black & white that Essed so passionately denounces.

Pritchard, Bill (Macquarie U, New South Wales 2109 Australia), **Nestlé in the Asia-Pacific: Finding a Model That Best Describes Its Corporate Structure and Strategy.**

¶ In recent years, there has been considerable debate in the food & agriculture literature regarding the corporate shape of transnational agro-food corporations. Goodman (1994) identifies four models that may be used to describe corporate structure & strategy in the global agrofood sector; internationalization, multinationalization, transnationalization, & globalization. Buttel (1996) argues that this framework of models "serves an important first step in enabling greater analytical precision & in developing more sophisticated designs for agroindustrial restructuring research." Taking these points as a position for departure, the activities of Nestlé S. A. in the Asia-Pacific are examined. Based on field research in Australia, the Philippines, & Thailand, the concepts used by Goodman & Buttel are "ground tested" against the Nestlé experience.

98S35675 / ISA / 1998 / 12916

Pritchard, Bill (Macquarie U, New South Wales 2109 Australia), **Local Social Modes of Regulation and the Deregulation of Grower-Processor Relations: A Case Study of the Murrumbidgee Irrigation Area Wine Grapes Marketing Board, New South Wales, Australia.**

¶ Reports on changing relations between semiautonomous wine grape growers & corporate wineries in the Murrumbidgee irrigation area of New South Wales, Australia. Traditionally, grapes have been sourced by wineries through "handshake" deals with family farm suppliers. Some 70% of wine grape growers in the Murrumbidgee irrigation area are de-

scendants of Italian immigrants, & the key wineries are family owned. Elements of trust & shared histories mark relations between individual growers & wineries. However, this local social mode of regulation has been constructed within the existence of the protective safety net of the Murrumbidgee irrigation area's Wine Grapes Marketing Board, which has powers to set minimum prices & to vest annual wine grapes crop. In 1996, a review of the Wine Grapes Marketing Board foreshadowed the deregulation of these arrangements by 2000. In conjunction with a set of wider processes operating in the Australian wine industry, this shift will encourage significant structural changes in wineries' grape-sourcing strategies. The likely outcomes are greater vertical integration within wineries & the emergence of large-scale growers linked by contract to specific wineries.

Probert, Belinda (Royal Melbourne Instit Technology, Australia 3000 (tel/fax: 61-3-9660-3292/1087; e-mail: belinda@rmit.edu.au)), **Work and Gendered Identities in a Restructuring Economy.**

¶ The restructuring of employment in Australia is not only radically undermining work opportunities for distinct segments of the population, but also contributing to significant changes in gender relations & patterns of social stratification. Explored here, based on qualitative interviews, is how changes in employment patterns & household relations are creating new lines of social division among women, discussing the role played by ideologies of child care. Recent policy debates related to the social problems created by the restructuring of work, particularly the limitations of frameworks that rely on the concept of choice, are also reviewed.

Prosch, Bernhard & Petermann, Sören (U Erlanger-Nürnberg, D-90402 Federal Republic Germany (tel/fax: 49-911-5302646/5302660; e-mail: wssl60@wslg1.wiso.uni-erlangen.de)), **The Chicken and the Hostage: Cooperation and Commitments in Experimental Settings.**

¶ Explores decentralized devices for cooperation, explaining cooperation as an adaptation to given situational conditions rather than as a result of direct interventions of central authorities; game theory is used as a theoretical core. Decentralized mechanisms for cooperation are credible commitments, eg, credible promises & threats. Recent developments in experimental game theory have shown that, through commitments, cooperation can emerge in problematic social situations like the prisoners' dilemma or the trust game. Game-theoretical analysis shows that cooperation can emerge when specific conditions & rules of the commitment mechanism are fulfilled; predictions derived from the model were tested in experimental chicken game settings.

Prosono, Marvin (Southwest Missouri State U, Springfield 65804 (tel/fax: 417-836-5683/6882; e-mail: map881f@vma.smsu.edu)), **Dealing in Absolutes: The Study of the Holocaust and Constructivist Sociology.**

¶ The study of the Holocaust has become exceedingly contentious as various perspectives jockey for supremacy in academic, intellectual, & political circles. Constructivist sociology provides both a basis for grappling with the delicate epistemological problems generated by conflicting accounts & methods for extracting data. However, constructivist sociology must contend with the process of sacralization, which appears to be enveloping the study of the Holocaust. Considered here is how the Holocaust is sacralizing & how this "Holocaustism" itself is interfering with the study of what it represents. Various perspectives concerning the study of the Holocaust are collected & archived is discussed; & challenges to & contributions of constructivist sociology are presented. A conceptual & methodological schema based on constructivist principles allowing research on "Holocaustism" to go forward is presented in conclusion.

Prout, Alan (Centre Social Study Childhood U Hull, HU6 7RX England (tel/fax: 01482-466-305/366; e-mail: A.Prout@cas.hull.ac.uk)), **Getting Symmetrical about Children and Childhood.**

Four emphases seem to be emerging in the social study of childhood: childhood as a permanent feature of social structure; children as agents in the construction of social worlds; children as a minority group; & childhood as a social construction. It is in this context that the distinction between the sociology of childhood (objective, large-scale, of long duration, & structural) & the sociology of children (subjective, small-scale, of short duration, & interactional) is understood. Here, it is argued that this distinction is ultimately unhelpful, & conditions for overcoming this are discussed. It is suggested that different approaches to children/childhood are embedded in different kinds of social theory; eg, dualisms such as structure-agency, universality-particularity, & objective-subjective. Therefore, social study of childhood entails narrating not only stories of childhood, but also those of the social. Strengths & weaknesses of these different stories of the social are reviewed via examples from the literature. Merits of the methodological principle of symmetry are addressed, suggesting that the same order of explanations are required for social phenomena, whatever their scale, durability, etc, or the attribution of agency or structural properties to them. As a consequence of a symmetrical approach, advantages of treating all phenomena as constructed effects that need explanation are considered. Scale, durability, stability, etc, are therefore seen as demanding explanation. The metaphor of network is deemed a highly promising one in which to talk about the connections between large- & small-scale phenomena, long & short durations, agency & structure, objectivity & subjectivity, etc. The language of networks can expose these phenomena as unstable & emergent effects, rather than stable analytical pre-givens. It is contended that "childhood" can be appreciated as a large-scale & relatively durable pattern produced, at a given time & place, through a complex & subjectless network of constitutive elements that are worked at, maintained, iterated, dependent on contingencies, defeasible, & locally performed. Children can be appreciated as agents in local situations whose agency is both constructing & constructed.

98S35681 / ISA / 1998 / 12922

Pryce, Anthony (Saint Bartholomew School City U, London EC1A 7QN England (tel/fax: 0171-515-5710/5717; e-mail: apryce@city.ac.uk)), **The First Thing I Did When I Came Back from the Clinic Last Week Was Change the Sheets on the Bed: Contamination, Penetration and Resistance—Male Clients' Experiences of the VD Clinic.**

Reports findings from the Eros study, which is concerned with the interpenetration of two discursive formations, sex & medicine. Much of the historical & social construction of venereal disease (VD) has been saturated with notions of sin, pollution, stigma, & Otherness. The decision to seek treatment may or may not be also accompanied by feelings of embarrassment, guilt, & shame. Interview data from men who have attended "GUM" (genito-urinary medicine) clinics & staff indicate that some men attend regularly for routine check-ups &, for some, the clinical encounter can represent a stressful assault on their bodies & sexual identities. Clients may have acquired infection through illicit or transgressive activities & then receive treatment in a medical setting constructed as Other. These narratives provide support for existing literature on heterosexual & gay repertoires of behavior. Further, findings provide a basis for exploring lay construction of contamination & diseases associated with sex, penetration of both bodies & sexual histories in the clinical ceremonial, & forms of resistance to medical surveillance.

98S35682 / ISA / 1998 / 12923

Pryce, Anthony (Saint Bartholomew School City U, EC1A 7QN London (tel/fax: 0171-515-5710/5717; e-mail: apryce@city.ac.uk)), **'Planting Land Mines in Their Sex Lives'...Culture, Power and Practice in the Field of Genito Urinary Medicine.**

A sexually transmitted disease usually results from a sexual encounter that may, or may not, have been a pleasurable erotic experience culturally located in a discourse of immanent disease & contamination. However, the erotic origins & charge of that event appear to be neutralized by the liturgy of the "GUM" (genito-urinary medicine) clinic & the medical gaze. Much of the ritual ceremonial of the clinic, particularly examination & treatment interactions, are organized around surveillance, ie, professionals' stories of appropriate conduct & monitoring the boundaries of these encounters. Telling sexual stories, hearing confessions, & de-

playing powerful regulatory regimes are central to clinic work. Here, the assumption that staff are formally trained, comfortable, & skilled in discussing issues of sexuality is questioned, based on semistructured interviews. Analysis suggests that formal training is minimal, & the construction of professional practice in consultation & treatment is concerned with the maintenance of sexual boundaries as well as clinical judgment. These tensions are explored, & the ceremonial performance of both clients & staff is illustrated. The social construction of male sexuality in the clinical gaze & powerful implications for professional education & practice are discussed.

Pryue, Michael (Open U, Milton Keynes MK7 6AA Buckinghamshire England (tel/fax: 01908-634-4541/4488)), **The Symbolic Projection of Profitability.**

Over the past decade, the importance of performance indices in various commercial sectors has risen enormously. Focus here is on how such indices relating to the UK property sector have influenced & shaped the activities of its organizations. Recent research is drawn on to examine the effects of the growth of index-related performance on commercial property investment in the UK, in particular, how key organizations were able to produce influential indices that have led to the rethinking of what commercial property offers as an investment instrument & of how performance indices were afforded such importance in this industry. Also examined are how these indices & their imperatives have been interpreted by the leading organizations in this commercial sector & the effects their adoption have had.

98S35685 / ISA / 1998 / 12926

Psarrou, Magdalini (U Macedonia, GR-54006 Thessaloniki Greece), **The Effects of Globalisation in the Agricultural Sector: The Case of the European Union.**

Analyzes the effects of common agricultural policy in the agricultural sector of the European Union (EU) & the necessary policy changes for adjusting the European agricultural sector in the new globalization era. Common agricultural policy is the most traditional & advanced common European policy & is also an example of the difficulties any common policy has to overcome. The analysis of common agricultural policy is built along two dimensions: the convergence of production & exchange, as well as of social structures in the EU; & the adjustment of the European agricultural sector to the demands of globalization. The case of the EU is part of the globalization process & is an advanced example of multinational regional integration. The process toward European integration has significant theory & policy implications. Recently, the trend is for amending the decision-making process of the central institutions of the EU; European integration tends to include the political & the political party system. Also, a European trade union confederation has been formed to promote a unified workers manifestation at the central institutions. In that context, common agricultural policy has to take into account the increasing competition of international markets. Pressures for cuts of the agricultural budget are strong under the new regulations of the International Trade Organization & the efforts for financing common European policies in other areas. At the same time, the enlargement of the EU in Central & Eastern Europe & the dependence of South European countries increase pressures for diverting funds to agriculture.

Psathas, George (Dept Sociology Boston U, MA 02215 (tel/fax: 617-353-2591/4837; e-mail: Geops1@acs.bu.edu)), **Studying Social Structure and Work: Conversation Analysis and Membership Categorization.**

Examines one of the ways in which conversation analysis can deal with studies of social structure or of talk in institutional settings, focusing on how the accomplishment of "work" & "categorization" are interrelated. Two particular instances are examined: calls to a ski school & a package

P

delivery service. Membership categorization is shown to be an ongoing, interactive accomplishment in which the parties are actively involved in self-categorizations, categorizations of the other, & actions based on categorizations. By acting in ways that are "predicatively bound" (ie, predicates of action, rights, obligations, etc), inferences can be made by each of the parties about the other to accept/confirm/validate the other's self-categorization & to produce, via one's own actions, activities that are congruent with the other's self-categorization. Activities of the parties are both category relevant & category generative. Interactional relationships (including talk) between the two categorical incumbents enable the "work" of the organization to be accomplished.

Pugliese, Enrico (U Naples, I-80138 Italy (tel/fax: 39-6-5885998; e-mail: Pugliese@ds.unina.it)), **New Mass Unemployment and Mobilization in European Cities.**

¶ Mass unemployment has been affecting all of Europe since at least the early 1980s, although in a more or less severe way & at different times. The 1990s have seen a general worsening of the labor market situation; unemployment has hit countries such as the Federal Republic of Germany & Sweden & has kept increasing in southern European countries, eg, Italy & Spain. The social structure of unemployment is not homogeneous in Europe, although it is becoming more & more clearly a metropolitan phenomenon. Recent events in France (Paris), Germany (several cities), & Italy (Naples) with regard to mobilization of the unemployed suggest the need to put this issue on the agenda for analysis of the urban question. Mass unemployment & the life experience of the unemployed cannot be seen simply as a dimension of urban poverty, nor can the new mass unemployed be considered part of the modern urban underclass. The social composition of the new unemployed, in particular, those who have been more active in the new movements of the unemployed, is the focus of this study.

Puppin, Andréa Brandão (U Federal Fluminense, Rio de Janeiro 22061-020 Brazil (tel: 021-257-2987)), **Women and Men at an Oil Enterprise.**

¶ Examines gender configurations present in large, important organizations, drawing on a case study of a multinational oil company. Observation & interview data are analyzed to examine whether technological & organizational modernization have affected the gender configurations. It is found that modernization did not cause important modifications in gender relations; "heavy, dirty" work has been eliminated, & a restrictive tendency to female presence in "line functions" that contain the company's purpose functions still exists. Women's insertion is found mainly in support function, eg, assessing, consulting, & planning action.

98S35693 / ISA / 1998 / 12934

Quarantelli, F. I. (Disaster Research Center U Delaware, Newark 19716 (tel/fax: 302-831-6618/2091; e-mail: elqdr@udel.edu)), **Roundtable: What Is a Disaster? Continuing the Dialogue.**

¶ In a roundtable, the 12 authors of chapters in a book edited by Quarantelli, *What Is a Disaster?* (1998), continue the discussion on how to conceptualize disasters for research purposes.

98S35694 / ISA / 1998 / 12935

Quassoli, Fabio (Dept Political & Social Studies U Pavia, I-27100 Italy (tel/fax: 39-2-26111497/76015104; e-mail: fquassoli@mail.sociol.unimi.it)), **The Role of the Judicial System in the Social Construction of Migrants' Criminality: The Case of the Milanese Criminal Court.**

¶ European polities are facing a backlash against migrants. The coupling between migrants & crime is increasingly shaping how political & institutional actors in European states define the criteria for inclusion & exclusion of foreign people within the borders of the European Union. The social construction of migrants as criminals involves different social & institutional actors: police, judicial system, mass media, neighborhood associations, moral entrepreneurs, politicians, & the bureaucracy. An analytical framework is provided here to study how the process of the construction of migrants as criminals takes place in Italy. Particular focus is on the role played by the judicial system. Drawing on ethnographic research in the Tribunale di Milano-involving participant observation & semistructured interviews with judges, public attorneys, lawyers, & interpreters-shown are the common institutional practices by which migrants are recognized, evaluated, investigated, & treated as criminals by the judicial system.

98S35695 / ISA / 1998 / 12936

Quell, Carsten (OISE U Toronto, Ontario M6G 2W8 (tel/fax: 416-923-6641/926-4714; e-mail: cquell@oise.utoronto.ca)), **Language, Immigration and Civic Dialogue.**

¶ Canada is often cast as a multicultural country that has developed, as far as European colonization is concerned, from the historical compromise between its two founding peoples. Contained in this national image are both a liberal & a communitarian ideology. While the policy of mul-

multiculturalism extends to any immigrant group, the communitarian policy of bilingualism benefits especially English & French speakers living in a minority context (Canadian Charter of Rights & Freedoms). Even though framed in terms of language & not ethnicity, the policy of bilingualism is meant to afford minority protection principally to long-established English & French Canadians whose claims to such assistance are based on their heritage & role in the founding of Canada. In Toronto, Ontario, however, about 25% of Francophones have no such roots; ie, recent immigrants from Africa, Asia, & the Caribbean who, rather than integrating with the anglophone majority of the province, have become a part of the francophone minority. This significant change in the ethnocultural composition of an official language minority group challenges the traditional division between immigrants & official language minorities, creating a dilemma: while helping to bolster the overall number of Francophones in the province, these French-speaking immigrants are redefining French Canadian identity &, therefore, possibly weakening the justification for the state's provision of resources, most importantly in the form of French schools. Data collected from francophone media & in ethnographic interviews with members of various francophone associations & government institutions responsible for multicultural policy & official languages are drawn on to explore how this process of transformation plays itself out in the concrete reality of the city.

98S35696 / ISA / 1998 / 12937

Quemin, Alain & Bonnet, Estelle (Dépt sociologie U Metz, F-57000 France (tel/fax: 03-87-31-55-07/06)), *L'Expertise gastronomique. Constitution et mise en oeuvre du jugement de goût* (Gastronomic Expertise. The Constitution and Implementation of the Judgment of Taste). (FRE)

¶ The constitution & implementation of gastronomic expertise as it appears across the great French gastronomic guides (eg, the *Michelin Guide*) are discussed. The genesis of this expertise is discussed, & current guides & their long-term principles are evaluated along three major axes: the investigation of gastronomic expertise from the viewpoint of the experts who evaluate the establishments presented in the guides; the viewpoint of creation & the confrontation of this creation by the judging experts; & the roles of clients, consumers, & guide purchasers in the implementation of the expertise of judgment or creation. Questions are raised about the "judgment of taste," its elaboration, & the tensions that result from it, particularly with respect to social conditions made possible by the passage from a craftsman style to an artistic form of cooking, & the development of taxonomies that allow them to be distinguished.

98S35697 / ISA / 1998 / 12938

Quijano, Anibal (Centro Investigaciones Sociales (tel/fax: 51-1-4373127/4447292; e-mail: aquiqano@unired.net.pe)), *Coloniality of Power and Eurocentrism*.

¶ Coloniality has been pervasive in the relations between Europeans & non-Europeans since 1492. This coloniality was not, & is not, simply material power relations, the intersubjective behavior imposed between colonized & colonizers for social classification & control, & conquest & colonization of the imaginary of the colonized; nor does it end with the end of political or economic domination, ie, colonialism. Intersubjectivity & imaginary have longer lasting & farther reaching effects. However, these traits & issues of coloniality are not perhaps as decisive as the way of production of sense & knowledge that was configured & elaborated, above all by the Europeans, & so European-centered, all along the process of the colonial system, resulting in a universally dominant perspective on the world, which has remained thus for some 5 centuries. While the trouble with this perspective is manifold, focus here is on the most important problem: it forces a view of the heterogeneity of the world, both human and nonhuman (or, natural & historical) as homogeneity, & the nonequilibrium as equilibrium. This way of producing knowledge & meaning is called here Eurocentrism. Major elements of Eurocentrism & the relations between coloniality of power & the process of constitution of such a perspective are identified, & alternative options considered.

98S35698 / ISA / 1998 / 12939

Quinteiro, Maria da Conceição, Lima, Pires de Marínus, Pinto, Manuel S. & Reis, Sara (U São Paulo, 05508-900 Brazil (tel/fax: 0055-011-881-3207; e-mail: mqum@usp.br)), *Family, Work and Gender: A Portugal-Brazil Comparative Analysis*.

¶ Examines the impact of unemployment on family organization, providing a wider understanding of how a family prepares its children for the challenges of the working world, assumption of social responsibility, exercise of dialogue, & relationships between genders. It is hypothesized

that the unemployment impact is gendered; the man is seen as the provider for the family, & his work is worth more. Statistics & interview data were obtained from unemployed men & women from the working & middle classes in São Paulo (Brazil), & Lisbon & Setúbal (Portugal). Findings are presented regarding unemployment's impact on personal & familial life, living standards, responsibilities toward work, & social cooperation. Gender relationships are affected by two contradictory social forces: both the persistence of sexist values & changes related for the sexual revolution; & women's massive access to both the labor market & education.

98S35699 / ISA / 1998 / 12940

Quraishy, Zubeeda Banu (Dept Anthropology U Madras, 600005 Tamil Nadu India (tel/fax: 91-44-4943512/8255636)), *The Impact of Policy Implications on Women's Livelihoods—A Case Study from Indian Scenario*.

¶ Although policies have been formulated to integrate women into the mainstream of development on equal terms with men in developed countries, in Third World countries, the policies on women have not been or are being formulated. In India, economic adjustments programs adversely affect women because the society is largely patriarchal, & so the property rights are vested in men & do not accommodate women as landowners. This has resulted in invisibility of their labor resulting in the neglect of the quantification of women's time, energy, & labor inputs, which in turn, creates a negative impact on other aspects of their lives, ie, access to education, health & health services, etc. Policy makers, planners, & particularly economists have ignored the social & family structures (the social context) in which the development is to take place, which differ from the developed countries. This has a greater impact on those families or households particularly headed by females in rural, tribal, & urban areas. Examined here are the Malayalis, a tribe practicing subsistence agriculture in Kolli hills in Tamil Nadu to analyze how the macropolicies, ie, the introduction of cash crops (tapioca), are impacting the women & their livelihoods.

98S35700 / ISA / 1998 / 12941

Racine, Luc (Dept sociologie U Montréal, Quebec H3C 3J7 (fax: 514-343-5722; e-mail: enicarl@pop.hip.cam.org)), *Interactions between Social Relationships*.

¶ Following some of Georg Simmel's ideas, a conceptual framework is presented that involves two levels: (1) interactions between two groups or individuals (dyadic relationships), (2) interactions between at least three groups or individuals (triadic or polyadic relationships). Social phenomena should be described & analyzed, not as a mere summation of dyadic relationship, but as complex & structured sets of interactions between dyadic relationships: a social relation or interaction between A & B does not influence only subsequent relations or interactions between those two, but also can have an effect on relations between A & C or B & C.

98S35701 / ISA / 1998 / 12942

Radaev, Vadim V. (Instit Economics Russian Academy Sciences, Nakhimovski Prospekt 32 117218 Moscow (tel/fax: 95-129-0618/310-7001; e-mail: vadim.radaev@msk.ru)), *Formation of New Markets in Russia: Transaction Costs and Business Ethics*.

¶ Delineates the main trends that are becoming evident in the development of new Russian business sectors in the late 1990s. Special attention is given to the changes in the market entry costs, contract reinforcement, & the norms of business ethics being established in entrepreneurial networks. The data are drawn from two 1997/1998 surveys of the nonstate enterprise managers & entrepreneurs from 21 regions. The database includes 90 in-depth interviews & 227 questionnaires. By confronting this most recent data with that of 1993-1996 surveys of new Russian entrepreneurs, the elements of change are revealed in the formation of business networks & restructuring of entrepreneurs' relationships with local authorities.

Radoeva, Detelina & Gillis, A. R. (Dept Sociology U Toronto, Ontario M5T 1P9 (tel/fax: 416-978-4213/3963; e-mail: detelina@chass.utoronto.ca)), **Balance Theory, Network Support and Psychological Distress.**

† Suggesting that the relationship between network ties & social support is conditional & more multiplicative than additive, examined are (1) the impact on adolescents of both their most important support networks—family & friends—and (2) how interaction between the two affects their well-being. While secondary analysis of data from the Mississauga (Ontario) Youth Study gives partial support for the additive network hypothesis (the more close ties in a balanced situation, the less distress & depression), it also supports the multiplicative hypothesis derived from balance theory (juveniles whose parents approve of their friends are less depressed than their counterparts whose parents disapprove). However, the situation is complex. Among adolescents whose parents do not approve of their friends, parental bonding is a more important negative correlate of distress than it is among adolescents whose parents do approve of their friends. Findings also suggest that sex-role identifications of male & female adolescents may differ in the way (1) they are treated by their parents & friends & (2) they handle tension & distress in imbalanced situations. While boys may be more inclined to rely on support specifically from fathers, but less inclined to perceive lack of approval & imbalance as a problem, girls' experience of imbalance may be more dramatic. They also show a higher level of fidelity for already existing bonds with both categories of close ties (parents & friends), & as a consequence, pay for this with heavier burdens of distress & depression. In general, bonding matters much more to girls than to boys. Ironically, girls are also more dependent on both family & friends for alleviating the situation. Further interpretation depends on controlling for more variables.

Raghavendran, Gudagundi & Hiremath, S. L. (Dept Studies Sociology Gulbarga U, Jnana Ganga 585106 Karnataka India (tel/fax: 08472-20971/21632; e-mail: root@guluni.kar.nic.in)), **Determinants of Executive Competence in Indian Firms.**

† It is natural to assume that the efficiency & profitability of work organizations largely depend on the competence of those in the top positions. The levels & determinants of competence among top executives in Indian work organizations are examined here, based on a study of 126 top executives via application of a competence scale. Findings suggest that Indian work organizations are managed by executives with reasonably high competence, who are equipped with the requisite knowledge, skills, & expertise. However, younger executives are nearly twice as competent as older ones, which could be attributed to technological change. Urban executives are more competent than those from rural areas, & industrial executives are more competent than those in the processing & service sectors. Further, the study seems to negate the general belief that the private sector is more competently managed than the public sector. Attribution of these findings is attempted.

98S35705 / ISA / 1998 / 12946

Raghavendra, Gudagundi (Dept Studies Sociology Gulbarga U, Jnana Ganga 585106 Karnataka India (tel/fax: 08472-20971/21632; e-mail: root@guluni.kar.nic.in)), **Social Profile of Indian Executives.**

† Interview data from top executives, median age 43.4, in 126 large public & private work organizations in South India are used to construct a social profile of executives as an occupational group. A typical Indian executive of this region is a young urbanite coming from high social origins & of high educational & intellectual caliber. They come from families with little professional background as such; the level of parental education & occupation may not be of much significance in shaping their executive careers. In this respect, they represent a group of people experiencing upward intergenerational occupational & educational mobility.

Ragin, Charles C. (Dept Sociology Northwestern U, Evanston IL 60208 (tel/fax: 847-491-7488/9907; e-mail: cragin@nwu.edu)), **Causality in Case Study and Comparative Research.**

† In terms of causal complexity in the study of social phenomena explored is equifinality—the fact that the same outcome can be reached

through a variety of different paths, typically involving different processes. The pervasiveness of equifinality implies, in turn, that most singular causal conditions are neither necessary nor sufficient for a given outcome. Rather, they are insufficient, nonredundant components of an unnecessary but sufficient combination of conditions. Implications of equifinality for all forms of social research, especially case study & comparative inquiry, are profound: (1) It must be recognized that researchers often conflate causal heterogeneity & error, conceived probabilistically. (2) It is important to acknowledge the interplay between the constitution of research populations, on the one hand, & the identification of probabilistic error vs causal heterogeneity, on the other. (3) Social scientists must develop research designs appropriate for the study of causal conditions that are neither necessary nor sufficient for outcomes.

Rahkonen, Keijo (Dept Social Policy U Helsinki, SF-00014 Finland (tel/fax: 358-9-191-7772/7764)), **Pierre Bourdieu as Homo Academicus: Studying Bourdieu's Thought from a Bourdieusian Perspective.**

† Pierre Bourdieu (1993 [see abstract 9401913]) contends that sociologists' privilege is not to be suspended above those whom they classify, but to know that they are classified & where. Here, an attempt is made to apply Bourdieu's sociological methods to himself through looking at his intellectual biography, addressing Bourdieu's place in the field of *homines academici* & how his place is reflected in his sociological thought. It is argued that there is a paradoxical point in Bourdieu's thought: he develops his own reflexive sociology like a Münchausen trick, ie, a sociology free of interests, or disinterested. Bourdieu's reflexive sociology, which is sociology of knowledge & power, shows that nothing—including aesthetics—is disinterested except this sociology. As a sociologist, Bourdieu does not think that he stands above all classifications, but his sociology does not take a stand for any class. Free from resentment, he thinks that he can generously afford to look at things disinterestedly, ie, to speak the truth scientifically & reflexively.

Rahkonen, Ossi, Arber, Sara, Eero, Lahelma, Martikainen, Pekka & Silventoinen, Karri (U Helsinki, SF-00014 Finland (fax: 358-9-191-7764; e-mail: ossi.rahkonen@helsinki.fi)), **Income and Health: A Comparison of Britain and Finland.**

† Explores the relationship between income & health in terms of whether there is a J-shaped or linear relationship, whether the relationship can be entirely explained by occupational class & employment status, & the effects of alternative ways of measuring income, drawing on a comparative analysis of 1994 national survey data from GB & Finland. The health indicators are self-perceived health & limiting long-standing illness. The relationship between these health indicators & household income adjusted for family composition (using quintiles & deciles) is remarkably similar in both societies. Most of the association between income & limiting long-standing illness is explained by occupational class & employment status. However, the association of self-perceived health with income remains statistically significant after controlling for them. It is concluded that low income is associated with poor health in a similar way in GB & Finland; there is no evidence of a J-shaped relationship in which those with the highest income have poorer health.

Raina, Subash Chander (Faculty Law U Delhi, 110007 India (tel/fax: 91-11-7865103/7053869; e-mail: cityb@nda.vsnl.net.in)),

Victims of Communal Riots in India: Socio-Legal Dimensions.

¶ It is hypothesized that punitive sentencing by courts against perpetrators of communal riots in India, instead of providing relief to the victims, has accentuated bitterness & exacerbated feelings of mutual animosity. It is suggested that compensatory justice can promote resolution of such interpersonal conflicts. Data obtained via interviews from the families of riot victims in Delhi indicate that victims belong to lower socioeconomic strata & are essentially drawn from minority religious communities. Young adult males have been the primary victims, & victim assistance programs consisting of rehabilitation of victimized families have been very scanty. Victimized families do not feel satisfied by the punitive approach the courts have taken against only a few of the perpetrators after a decade of prosecution. There is need to evolve a state victim compensation scheme, keeping in view the limited paying capacity of the offender & the failure of the state to protect life & liberty of its citizens.

Rajagopalan, Prema (Dept Sociology U Madras, 600005 India (tel/fax: 0091-44-568778/5985521)), **Profession of Science in India: Constraints for Women.**

¶ Drawing on a detailed study of women scientists working in research institutions in India, analyzed are their limited performance & success, which are results of the contradictory expectations of their double socialization as a member of society & the science profession. It is shown that women are rarely sponsored by senior colleagues who fear their dropping out to fulfill family commitments. Inclusion in informal networks is rare because of societal disapproval, i.e. a woman in the company of many men. Hence, women scientists are little involved in planning & leadership, despite their significant research contribution. Some women who are unable to meet the demands of being part of the core group adopt a low profile. Few others compete with their male colleagues for sponsorship & membership in informal networks, drawing on their academic credibility. Such women are promptly appropriated by seniors into the networks; however, they are treated more as a male colleague rather than an achieved woman scientist.

Rajagopalan, Prema (Dept Sociology U Madras, Chennai India 600005 (tel/fax: 0091-44-558778/4985521)), **Scientific Community in the Periphery: A Study in Fragmentation.**

¶ Examines the nature of fragmentation of the scientific community in India, which is assigned a peripheral status in the international scientific community. In the Indian context, specialized research institutions are regarded as the center in relation to universities, which constitute the periphery. The latter, in turn, extend the center-periphery chain through a wide diversity in the Indian institutional setting. Examined here are physicists from four Indian universities, each of a distinct type & scattered in different regions of the country. The diversities in the universities in India have enabled the construction of "good" & "bad" science, even in the periphery. These opposites, isolated in their own ways, characterize the fragmented nature of the scientific community.

Rajagopalan, Prema (Dept Sociology U Madras, Chennai 600005 India (tel: 0091-44-568778/4985521)), **Social Exclusion of Women in Science: A Study in India.**

¶ By reconstructing the career profile of about 125 women scientists working in pure research institutes in India, a sociological analysis is attempted to infer the social & other organizational barriers that operate in limiting the entry of women in science & technology. A preliminary analysis shows that these factors can be understood when broadly classified under two notions: (1) the situational adjustments that women make to enter a career in science; & (2) the professional space that women enjoy once they take up the career. Detailed analysis shows that several indicators of overt & covert discrimination effectively operate in scientific professions, reinforced by sociocultural values & norms. The notion of "professional space" clearly reflects discrimination at work toward women scientists, as found in research collaborations, joint publications, nomination for prestigious assignments or fellowships, & membership in committees of research significance or administrative positions. Their low profile among the scientific community is largely due to discrimination, since professional decisions for women scientists are often made by male colleagues & superiors. If a woman scientist is able to surmount such obstacles, her problems have just begun, & often the personal costs are high.

Ram, Bali & Montsion, Nicole (Demography Division Statistics Canada, Ottawa Ontario K1A 0T6 (tel/fax: 613-825-3670/2952; e-mail: rambali@statcan.ca)), **Does Sibling Size Matter? Canadian Evidence.**

¶ Data from the first cycle of the National Longitudinal Survey of Children & Youth, administered by Statistics Canada, 1994/95, are drawn on to examine the impact of sibling size & birth order on selected psychosocial characteristics & the mathematical ability of children, ages 8-11. Findings indicate that, in terms of their math skills, children with two or more siblings perform significantly lower than children with one or no siblings, whereas there is little difference between children with no siblings & those with only one sibling. On average, the first child is not the most intelligent one in the household, although he/she is (1) very close in mathematical ability to the second child or (2) the only child. However, the last child is almost always the weakest, especially in larger households. There appears to be a threshold in terms of the number of children below which children do not suffer due to sibling size regardless of socioeconomic & family backgrounds; this threshold is two children in Canada. Analysis does not find a consistent association between sibling size & psychosocial outcomes. The only child is more hyperactive, less anxiety stricken, & less aggressive, but this does not have to do much with his/her intellectual ability or academic performance; when psychological & emotional traits are held constant, the only child is as intelligent as the child with only one sibling, & more intelligent than those with more than one sibling.

Ram, Kalpana (Macquarie U, New South Wales 2109 Australia (tel/fax: 02-9850-8177/9391; e-mail: Kram@mq.edu.au)), **"Minority Women's Issues" or Core Dilemmas of Modernity?**

¶ Argues that the dilemmas of women in minority communities cannot be contained by the perspective of governmentality adopted by individual nation-states & their agencies, focusing as it does on migration as a movement of population across national borders & the subsequent management of resettlement. Properly understood, the dilemmas of women in minority communities signal a recurring pattern that is not specific either to migration or even to racism. Identical problems come up in liberal democracies, e.g. India, where women of the Muslim minority community have been at the heart of the conflict between Hindu religious national-

R

ism & Muslim communitarian responses. For Indians in Australia, there are strong convergences to be experienced & explored in the mixture of nationalism & rhetoric of equality—understood exclusively as sameness—in both India & Australia. Recognizing these continuities of backlash in multicultural & multireligious liberal democracies would represent an advance over the polarities of West and East.

Ram, Uri (Ben Gurion U Negev, Beersheva IL-84105 Israel (tel/fax: 07-647-2048/2932; e-mail: uriram@bgumail.bgu.ac.il)), **Post-Zionism and Neo-Zionism: The Globalization of Israeli Identity.**

¶ Political culture worldwide is undergoing drastic transformation at century's end. The *gemeinschaft* & *gesellschaft* principles of premodern & modern societies, respectively, are being reshaped into their postmodern counterparts: local neo-ethnic communities, on the one hand, & post-national global systems, on the other. In this new glocal situation, both capitalism & fundamentalism threaten the (half-won) democratic public sphere. In experiencing this new "glocal" state of affairs, the Israeli state faces a crisis of capacity & the nation a crisis of legitimacy. The old national ethos of a homogeneous & unified nation-state is in decline &, in its stead, two alternatives emerge: neo-Zionism, an ethno-religious localist Jewish identity; & post-Zionism, a civic-liberal globalist identity. The former thrives for "the graves of our forefathers," & the latter toward a new Middle East. The former is communal & inherently antidemocratic, where the latter is liberal & inherently antisocial; the former drives toward a holy war, & the latter toward a capitalist peace. It is questioned here whether a third way, combining both peace & social responsibility, is possible. Challenges for critical social studies in Israel in the era of global & local transformation are identified.

Rambo, Eric (Dept Sociology U Wisconsin, Milwaukee 53201 (tel: 414-229-4388)), **Symbolic Interest and Meaningful Purposes: Reconstructing Rational Choice as Cultural Theory.**

¶ Rational choice theory & cultural sociology have often seemed to be at odds with one another. As the two theories become more sophisticated, however, points of convergence have appeared, & a partial synthesis seems possible. Although rational choice theory has almost nothing to say about culture, symbolic process & structure can be conceived through the framework of purposive action. Borrowing core concepts from James Coleman's *Foundations of Social Theory* (1990 [see abstract 92c01569]), one can think of actors' interpretation & intention of meaning as the exercise of control over symbolic resources. Actors have means-&-ends interests in symbolism. From the intersection of this interested control emerge cultural structures that are real conditions of interaction. Identifying these cultural structures & tracing the process of their emergence is one way to conceive the project of cultural sociology. What such a synthesis offers to cultural sociology, in addition to conceptual clarity, is the orienting principle of a social optimum.

Ramp, William (Dept Sociology U Lethbridge, Alberta T1K 3M4 (e-mail: ramp@hg.uleth.ca)), **The Subject Bites Back: Conversations with Dead Agrarian Movements.**

¶ Explains how to do "participatory research" concerning groups or movements that are long dead, presenting primary research into the United Farmers movements that were politically active in pre-WWII Canada. Rather than a study of the determinants of the success or failure of these movements, this research has increasingly become a process in which the subject matter (the moral, social, & political ideals of these movements) confronts & challenges the investigator & the political & cultural world that he inhabits; particularly, his received notions of the meaning of citizenship.

98S35723 / ISA / 1998 / 12964

Rampichini, Carla & Schifini D'Andrea, Silvana (Dept Statistics "G. Parenti," Viale Morgagni 59 I-50134 Florence Italy (tel/fax: 55-423-7246/422-3560; e-mail: carla@stat.unifi.it)), **Life Satisfaction Components in Europe.**

¶ Introduces a multilevel model with ordinal response to examine the determinants of life satisfaction in European countries, drawing on Eurobarometer surveys to verify whether sociocultural, economic, & behavioral similarities are stronger between certain areas of different countries than within countries. The multilevel approach allows (1) taking into account the hierarchical structure of the data, & (2) the simultaneous measurement of how individual & contextual variables impact satisfaction level, thus overcoming the problem of ecological fallacy. At the first (micro)level, the usual probit regression model is defined for each country. Although the same regressors could be used in each country, microregression coefficients are free to vary over countries, allowing different patterns of relationships between dependent & independent variables. At the second level, the microcoefficients are treated as functions of macroregressors. Net to the individual variables, findings show a significant effect of residence region on satisfaction level. To explain this variation, some statistical indicators on the main aspects of social & economic life in different regions of the European Community, computed by EUROSTAT, are introduced to the model.

Rangasami, Amrita (Centre Study Administration Relief, N-19A Jangpura Extension New Delhi 110014 India (tel/fax: 91-11-431-8753/2805; e-mail: csar.rsami@gems.vsnl.net.in)), **Social Right to Food in Different Societies: Accounts in History.**

¶ After reviewing the history of research on the working & the dependent poor (& relations between them) & the evolution of systems of social assistance & their tenacity over a 2000-year history, evaluated are the twin postulates that "the poor will always be with us" & "the poor emerge as a social category only when the state takes over the distribution of public alms." The former tenet enables consideration of the association of poverty with labor throughout history & the obligation upon working poor & dependent poor alike to provide labor in return for food. Also explored are the (1) framework of rights & obligations within which society evolved rules & conditions for subsistence among the working poor; (2) famine-related mortality; & (3) patriarchal society's neglect of the economic role of women & subsequent relegation of women to the category of dependent. The second postulate demands the anchoring of the study of the poor to a moment in historical time. While it acknowledges that, in modern society, the rights of the poor dwindle to nothingness, it does not consider the corollary that, where rights to food are absent, work in exchange for food becomes an imperative. Its conclusions that poverty & famine are relative need to be reexamined.

Rannut, Mart (Instit Estonian Language, Roosikrantsi 6 EE-0100 Tallinn (tel/fax: 372-63-11060; e-mail: rannut@pea.kki.ee)), **International Mediation of Language Politics: Appearance and Reality.**

¶ Several international organizations (eg, the UN, Council of Europe, OSCE, CBSS, & European Union) have provided assistance in trying to resolve the emerging language conflict in the Baltic states. Analysis of their recommendations reveals two different frameworks of thinking, political & scientific. In the latter, one may observe different approaches, based on the interpretation of international law (occupation, citizenship, minority, etc), standards of domestic law, various statistical approaches, & recommendations concerning language policy, which, in spite of extensive & sophisticated data, are based on common sense, & thus, have insignificant value. More fascinating seems to be the political framework that explains the results reached through the scientific framework.

98S35726 / ISA / 1998 / 12967

Rantala, Kati E. & Hellström, Eeva A. K. (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-19123-970/967; e-mail: rantala@valt.helsinki.fi)), **Qualitative Comparative Analysis and a Hermeneutic Approach to Interview Data.**

¶ Qualitative comparative analysis is a comparative tool that uses Boolean algebra for a systematic analysis of similarities & differences across cases. It is mostly associated with causal terminology & applications, which makes it unattractive to many qualitative researchers. Although not commonly recognized, the method has no in-built premises validating only causal applications. An attempt is made to provide an understanding of qualitative comparative analysis that will encourage experimentation with the method regarding different kinds of research, data, & questions asked. Examples are given of noncausal applications of qualitative comparative analysis to both micro- & macrosociological data, based on interviews transcribed into textual form. The microlevel data are from 14 teenagers reflecting themselves & the world through artistic practices; the macrolevel example compares environmental forest conflicts in six Western countries. When qualitative comparative analysis is used as a process where several analyses follow each other at various levels, resulting in constant revision of understanding, it is a supplementary method to textual analysis that helps to clarify & extend previous interpretations. Moreover, the use of qualitative comparative analysis forces deeper penetration into the principles of interpreting & organizing interview data, which is a major challenge & benefit of the method.

98S35727 / ISA / 1998 / 12968

Rantala, Kati E. & Lehtonen, Turo-Kimmo (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-19123-970/967; e-mail: rantala@ralt.helsinki.fi)), **Aesthetic Experience in the Practice of Shopping, Physical Exercise and Art Making.**

¶ Examines the scope of "the aesthetic" in the contemporary social milieu from an empirical & comparative perspective, drawing on data collected via interviews with people engaged in shopping, physical exercise, & art making. Although these everyday practices differ from each other in terms of focus, they all contain four levels of aesthetic experience: (1) People reflect on what they consider beautiful, pleasurable, or tasteful. (2) Aesthetics is not only a matter of detached reflection on something already existing, but of people actively constructing their world as enjoyable. (3) Aesthetic experience refers to being in a flow, ie, totally immersed in what one is doing. (4) An ideal of continuous self-enlargement & openness to new experiences can be realized as an end in itself. Aesthetics has been linked with everyday life by sociology & cultural studies, but often as a very broad & abstract category. This empirical analysis contributes to these discussions by showing more concretely how everyday practices are aesthetically experienced & created, & how the different levels of "the aesthetic" interact with each other. It also encourages discussion on whether the various meanings of "aesthetics" limit the applicability of the concept as an analytic tool.

Rao, Narayana Taniparthi (Dept Psychology Osmania U, Hyderabad Andhra Pradesh 500007 India (tel/fax: 91-40-7173600/7019020)), **Globalization as a Social Transformation Process: The Myth and Reality.**

¶ Globalization appears at once a myth & a reality, for both the construction & the process lack intrinsic strength. A systematic drive to project globalization as a cure-all for economic & social problems provides it an ascendancy. Market mechanisms & mass production have debilitating effects on the poorer nations. Globalization & liberalization

nurture consumerism, tearing apart an already fragile ecology. The social fabric of industrialized nations is inflicted with alienation, anomie, & dehumanization & is not a model for emulation by Eastern societies, which have greater strengths. Democracy, a cardinal principle of globalization, has become an instrument of manipulation. However, seeking substantiation of these views in an empirical study of 77 Indian social scientists leads to inconclusive results, with an even division between favorable & unfavorable expressions & a considerable amount of ambiguity, although there is a slight swing toward an unfavorable view of globalization.

Rapaport, David C. & Weinberg, Leonard (Dept Political Science U California, Los Angeles 90025 (tel: 310-825-0778)), **Elections and Violence.**

¶ Argues that elections are potentially explosive processes able to create new episodes of bloodletting. Focus is on explaining why ballots so frequently produce bullets & showing how those patterns of violence are related to party systems, types of elections, electoral rules, timing cycles, & potential participants.

98S35732 / ISA / 1998 / 12973

Räsänen, Pekka Tuomas (Dept Sociology U Turku, SF-20014 Finland (tel/fax: 358-2-333-5384/5080; e-mail: pekras@utu.fi)), **On the Control of Professions in the Information Society.**

¶ Examines problems in the regulation of professions in a contemporary welfare society, drawing on the assumption that most important professions that act with new technologies already have well-established positions in society (ie, law & medicine). The field of the new technological knowledge is likely to constitute a new belief system, which may extend lay-expert relations to a much more complicated social issue. It is suggested that we must analyze contemporary professional practices in detail to outline future legal & ethical problems & that the control of professions might become far more serious when the informational era broadens.

98S35733 / ISA / 1998 / 12974

Rathzel, Nora (U Bremen, D-28334 Federal Republic Germany (tel/fax: 49-40-4102573/452162; e-mail: 100542.511@compuserve.com)), **Young People of Many Cultures in the City-The Appropriation of Space and Place.**

¶ Investigates the daily life of young people of different ethnic & class backgrounds in an urban area, based on the notion that ethnic categories are constructed under specific conditions. They may be overdetermined by categories of class, gender, generation, neighborhood, political commitment, & subculture codes. Analysis is supported by data from interviews, photos, guided fantasies, audiodiaries, & filmed walkabouts obtained from 160 boys & girls, ages 13-15, from different schools & neighborhoods (one ethnically mixed, one more homogeneous). Findings are presented on two subjects: (1) how places are appropriated in different neighborhoods & (2) practices of exclusion & how they are fought. The aim is to shed light on conditions that lead to exclusion & on successful strategies to fight such exclusion.

98S35734 / ISA / 1998 / 12975

Rattansi, Ali (City U London, EC1V 0HB England (tel/fax: 171-477-8908/8558; e-mail: A.Rattansi@city.ac.uk)), **Fundamentalism and Identity: Inside and Outside Western Modernity.**

¶ Addresses the issues of understanding religious fundamentalism as a category & as a problem of interpretation in sociology, taking versions of Islam & Hinduism as examples. A postmodern conceptual framework is used that has previously been deployed to explore questions of Western racism & ethnicity (eg, Rattansi, 1994, 1995). It is argued that the concept of fundamentalism is problematic, & the movements brought under its umbrella can be better understood more generally as forms of modern religious authoritarianism. The "modernities" of fundamentalist Islam & Hinduism are established, their relations with aspects of Western modernity are explored, & the question of the possibility of completely non-Western modernities is posed. The field of postcolonialist studies, including one by this author (1997 (see abstract)) is drawn on to problematize the idea of pure Western or non-Western modernities in the contemporary period. Processes of identity formation & negotiation among Muslim & Hindu South Asian communities in GB are examined, & it is concluded that, in living inside & outside the West, these globalized, diasporic collectivities face, in acute form, the dilemmas around Western & non-Western identities that the new authoritarianisms & Hinduisms of the Middle East, India, & Pakistan have to confront in different contexts.

98S35735 / ISA / 1998 / 12976

Raynolds, Laura T. (Colorado State U, Fort Collins 80523), **Distancing Workers: The Rising Use of Labor Contractors by Transnational Agro-Food Corporations.**

¶ Analyzes the increasing reliance of transnational fruit & vegetable corporations on contractors to supply labor for large-scale production enterprises in the Americas. As is demonstrated, the economic factors fueling labor contracting are clear—firms gain access to a variable supply of labor, while avoiding the costs of recruitment & management & the responsibility for meeting legally stipulated work conditions & benefits. Less often recognized are the broader social forces that underlie this reconfiguration of the wage labor relation. By analyzing cases where labor contracting has recently been introduced by fruit & vegetable corporations, this analysis illuminates the social, cultural, & political factors that both fuel the introduction of this system & maintain it. Locating the analysis in the literature on flexible production & the casualization of labor, a contribution is made to larger debates on the redefinition of capital/labor relations.

98S35736 / ISA / 1998 / 12977

Reed, Rosslyn E. (U Technology, Sydney New South Wales 2007 Australia (tel/fax: 61-2-9514-1963/2332; e-mail: Rosslyn.Reed@uts.edu.au)), **Making Age Visible: Lessons from Researching Older Women Workers.**

¶ Moves toward a theoretical exploration of the implications of the absence of a theory of age in social & feminist theory, drawing on three empirical studies addressing (1) older women's employment experiences in Australian department stores, (2) trade union policies in relation to older women's workforce participation, & (3) government social & public policies in relation to choices in ongoing employment & options for retirement. Chronological age is taken up relatively uncritically & integrated with concepts of class, gender, race/ethnicity &, to some extent, disability in empirical studies of women & aging. While the latter concepts have been subjected to rigorous conceptual & theoretical debate, age remains to be adequately conceptualized & integrated into social & feminist theories. It is shown that adequate social & feminist theories of age need to take particular account of older women's social location. Their life-course experiences are an important starting point to develop a theory of age.

98S35737 / ISA / 1998 / 12978

Regev, Motti (Hebrew U Jerusalem, Mount Scopus IL-91905 Israel), **The Trance Music Scene in Israel.**

¶ Examines the art world of "trance" music in Israel, which is specific to a segment of the larger scene of electronic "dance" music in the contemporary field of popular music. Unlike existing tendencies to concentrate on subcultural aspects of trance, focus here is on practices of music creation & production. Findings are presented from a study of the Israeli trance music scene, which gained transnational recognition & success during the 1990s. Examined are issues such as the nature of a musical "work in trance;" the difference between live & recorded music in

trance; the artistic ideology held by musicians & critics; & the working of the trance music market. These & other issues illuminate larger questions regarding the meaning of avant-garde & experimentalism in the contemporary field of popular music, & the global-local relations in this field.

98S35738 / ISA / 1998 / 12979

Regini, Marino (Instit Labor Studies U Milan, I-20122 Italy (tel/fax: 39-0-27711-8236/8241; e-mail: Marino.Regini@unimi.it)), **The Resurgence of Social Concertation in Europe. The New Corporatism: Innovations in Social Coordination across World Markets.**

¶ Trade unions & employers' associations have traditionally played a crucial role in the regulation of European economies. The decline of social concertation between the state & organized interests in the 1980s has been widely interpreted as a general trend toward the deregulation of advanced economies, which have responded similarly to pressing needs for greater flexibility. Yet, major cross-country differences have persisted, & in the 1990s, national responses to the common challenges posed by the processes of market globalization & of monetary unification have become far more divergent than before. While the reemergence of social concertation in several countries is the newest & most unexpected development in need of an explanation, the problem of why the same processes affecting all countries are met with very different solutions is equally challenging. These questions are addressed.

98S35739 / ISA / 1998 / 12980

Reid, Barbara & Cole, Ian (Centre Regional/Economic/Social Research Sheffield Hallam U, S1 1WB England (tel/fax: 0114-253-4003/3553; e-mail: b.reid@shu.ac.uk)), **The Value of Tenant Involvement: The Costs and Benefits of Participation and Choice in Improvements Projects in British Social Housing.**

¶ In the context of the continuing salience of debates about community involvement, participation, & citizenship, findings are reported from a research project investigating the costs & benefits of involving tenants in decisions regarding residential improvement & modernization projects in the social rented housing sector throughout GB. Focus is on problems facing organizations of how to arrive at the "right level" of involvement & how organizations manage decision making throughout projects. Also considered are different notions of costs & benefits & how these are perceived by organizations & the communities with which they work. Three issues shape relationships between organizations & the communities they serve: (1) frameworks—aspects of project definition, the nature of the parameters governing the projects, & how these have been decided on; (2) process—how participative decision making involving the community is structured & organized; & (3) outcomes & outputs—perceptions & understandings of the various real, notional, symbolic, social, technical, & long- & short-term costs & benefits deriving from the involvement of tenants & the community in improvement & modernization projects. Examples show how organizations have worked with their tenants & communities. Emphasized in conclusion is the importance of a broader organizational perspective that includes tenants & communities in diagnostic processes at both organizational & project levels. It is argued that there are clear lessons for community involvement as a whole.

Reimann, Renate (Graduate Center City U New York, NY 10036 (tel: 718-399-7477; fax: 212-642-2420; e-mail: rreimann@email.gc.cuny.edu)), **All in the Family: Lesbian Mothers' Involvement with Friends and Kin.**

¶ The literature on heterosexual couples' transition to parenthood regularly points to an increased involvement of new parents with their families of origin. Studies of lesbians & gay men, on the other hand, routinely emphasize the centrality of friendship networks & "the community" in their lives. Thus, lesbian couples who decide to have children are uniquely positioned between blood family relations & chosen family connections in their transition to parenthood. How becoming parents prompted shifts in the social networks of 25 lesbian couples is analyzed here, based on two individual interviews & one joint interview per couples. Shifting networks implied rearranging couples' social lives around their children's needs & their own needs as parents. Like their heterosexual counterparts, lesbian mothers experienced increased involvement of their families. With respect to friends, lesbian parents with primarily homosexual or heterosexual friendship networks began to cultivate relationships with both groups. Contacts with lesbian, gay, & heterosexual families with children increased in importance, because they provided child-friendly environments, & parents' interests overlapped consistently.

98S35741 / ISA / 1998 / 12982

Reimon, Bachika (Dept Sociology Bukkyo U, Kyoto 603 Japan (tel/fax: 81-78-271-3276/252-1337; e-mail: bachika@bukkyo-u.ac.jp)), **Values and Personal Identity.**

¶ Several points & problems in Wendell Bell's *Foundations of Futures Studies: Human Science for a New Era* (1997 [see abstracts 9718149 & 9718150]) are discussed, highlighting (1) the objective assessment of value judgments, especially assessment by "epistemic implication"; (2) religious justification of values; (3) conditions for adopting universal values; & (4) values seen from the viewpoint of personal identity. It is concluded that a widely shared religious & humanistic justification of both particularistic & universal values would be beneficial.

98S35742 / ISA / 1998 / 12983

Reinecke, Jost & Wittenberg, Jochen (U Münster, D-48151 Federal Republic Germany (tel/fax: 49-251-8329338/8329330; e-mail: reinecke@uni-muenster.de)), **Beliefs as Correspondence Hypotheses between Group Constraints and Individual Acts.**

¶ Explores the role of beliefs as a bridge between macrovariables (opportunities & constraints in a group or society) & microbehavior (individual acts). The most validated concept to explain specific behavior on the microlevel is Ick Ajzeo's (1991) theory of planned behavior with its antecedent attitude toward the behavior, subjective norm, & perceived behavior control, which are influenced by behavioral, normative, & control beliefs, respectively; the theory postulates strong relations between behavioral beliefs & standard measures of attitudes. Multivariate analyses of questionnaire data related to contraceptive behavior of 1,223 adolescents & young adults, ages 16-24, in the Federal Republic of Germany examined strength of the relations between beliefs & concepts of the theory of planned behavior. Interpretation will question (1) the relevance of saliency for the correspondence between macrostructure (group level) & microbehavior & (2) the possibility to relate conditions of the social structure (ie, conditions to act) to the saliency of beliefs.

Reiner, Robert, Livingstone, Sonia & Allen, Jessica (London School Economics & Political Science, WC2A 2AE England (tel: 0181-955-7240; fax: 0171-955-7366; e-mail: r.reiner@lse.ac.uk)), **True Lies: Changing Representations of Crime in Media since the Second World War.**

¶ A historical content analysis is presented of how media representations of crime have changed since WWII, based on data from a representative sample of the most popular films shown in the UK, 1945-1991, a representative sample of stories in a popular & a quality national daily newspaper over the same period, & TV series. During this period, representations of authority clearly became more questioning, & crime appeared increasingly threatening. Above all, there is an increasing shift to a victim-oriented perspective. Crime shifts from being depicted as an offense against absolute, taken-for-granted values, & becomes more an issue whose moral status has to be negotiated within the framework of each particular narrative.

Rejali, Darius M. (Reed Coll, Portland OR 97202-8199 (tel/fax: 503-771-1112/777-7776; e-mail: rejali@reed.edu)), **Electric Torture Instruments: Innovation and Diffusion in Torture Methods, a Case Study.**

¶ Electric instruments (Tasers, stun guns, cattle prods, picanas, etc) are now standard issue for police in many countries throughout the world. After first reconstructing the history of innovation & diffusion of electric instruments between police forces, 1890-1997, this history is considered at a more theoretical level in light of the literature on technological innovation & diffusion in other areas. A content analysis is drawn on to consider an alternate approach to diffusion theory proposed by Latour & the extent to which it can be applied to the study of electric torture.

98S35745 / ISA / 1998 / 12986

Remmers, Gaston G. A. (Landbouw Hogeschool Vakgroep Sociologie, VD Westerse Gebieden Hollandseweg1 Wageningen NL-6706 KN Netherlands (tel: 31-317-485039)), **Change, Diversity and Rural Areas: Towards a New Theoretical Frame.**

¶ Argues that the most interesting aspect of globalization in rural areas has not been the homogenization of agricultural practices, but the persistence & increase of their heterogeneity, associated with institutional blindness toward alternative development strategies that either were left undisturbed by the process of modernization or were triggered in re-

sponse to it. This observation, buttressed by empirical data, leads to a search for a theoretical frame suitable for both analysis of complex social interaction in rural areas design of development alternatives. Anthony Giddens's structuration theory is drawn on to elaborate a theoretical image in which the continued confrontation of plan & context leads to ever-changing performances that, in turn, inform & modify plan & context. The interlocking of performances of different actors (joint performances) generates a network that is both stable (in the sense that it draws largely on rules & resources recursively constituted in social practice that display a certain coherence) & constantly quivering & subject to change. In social interaction, plans, contexts, & performances of different actors both mutually constitute each other as much as they gradually modify each other. This leads to new arrangements, coherence, & patterns in styles of farming & administrative behavior. These new arrangements, or new coherence, are equated with development, & social learning is seen as crucial.

98S35746 / ISA / 1998 / 12987

Rempel, Michael (Dept Sociology U Chicago, IL 60637 (tel: 773-227-8634; e-mail: stdmire@icarus.spc.uchicago.edu)), **On the Interpretation of Social Systems: Toward a Critical Reconstruction of Parsons and Luhmann.**

¶ Develops interpretation as an integral addition to the systems theories of Talcott Parsons & Niklas Luhmann. Parsons & Luhmann both divide societies into major subsystems (eg, political, economic, legal, or scientific); however, Parsons defines subsystems as composed of regularly interacting people, whereas Luhmann defines subsystems as composed of strictly conceptual communications—not actual but "probable" communications, based on a particular set of linguistic & cognitive resources. It is proposed that Parsons & Luhmann theorize complementary types of subsystems. Interpretation reveals the historically accelerating tendency of initially distinct social forces to conjoin & intersect. Two types of interpenetration are distinguished: (1) reconstructing Parsons, tight, interpenetrating influence relations may exist among the occupants of different action subsystems (eg, different government bodies, business firms, scientific organizations, etc); (2) reconstructing Luhmann, interpretation may exist among historically distinct communication subsystems. Further, in a given institution, some action or communication subsystems regularly interpenetrate while others do not; the consequential effects of power & exclusion can be generated. It is concluded that a systems theory of interpretation yields a more adequate account of both the social organization & power dynamics in current, technologically advanced societies.

Rempel, Michael (Dept Sociology U Chicago, IL 60637 (tel: 773-227-8634; e-mail: stdmire@icarus.spc.uchicago.edu)), **Alienation/Autonomy: Theorizing the Choices and Material Constraints in Postmodernity.**

¶ Postmodernity can generate new forms of both alienation & autonomy, although most theories fail to recognize this potential & do not adequately integrate dynamics pertaining to both the spheres of leisure & work. By synthesizing a number of theoretical positions, proffered here is a more balanced account of how postmodernity affects the alienation & autonomy potentials. Two positions primarily related to the sphere of leisure are distinguished: one sees expanded access to ideas, images, & tastes to increase an individual's ability to develop informed, reflective choices, while the other sees the tremendous speed of media-generated representations to produce passive subjects, lost, distracted, & alienated from a core sense of self. Both positions are criticized for assessing individual-level responses to informational stimuli, while neglecting the impact of material constraints rooted in the organization of work. Although postindustrial changes create greater opportunities for autonomy, some workers must often spend more time at work, leaving less time for information-based leisure pursuits & more leisure time spent on routine household tasks. It is argued that constraints derived from work partially limit the impact of leisure sphere information trends.

Rene, Jean-François & Garon, Suzanne (Dépt travail social U Québec, Montreal H3C 3P8 (tel/fax: 514-987-3000/8795; e-mail: rene.jean-francois@uqam.ca)), **La Difficulté de devenir sujet: l'empowerment de familles vivant en extrême pauvreté** (The Difficulty of Becoming a Subject: Empowerment of Families Living in Extreme Poverty). (FRE)

¶ Presents a case study of women & couples heading families of one or more children while living in extreme poverty, based on longitudinal interview data from 24 families in Quebec, focusing on their experience of living in exclusion. The social experience of the parents prior to the creation of the family cell is related, highlighting factors rooted in family upbringing & determining their social integration. Their recent social trajectories plagued by financial strains, rare & precarious work experiences, & tense marital relationships are described, emphasizing strategies deployed to contain daily turmoil. How these men & women occasionally succeed, through realization of projects, in reclaiming a certain control over their lives via empowerment while trying to contain determinants that limit opportunities is discussed.

98S35750 / ISA / 1998 / 12991

Rene, Jean-François & Lefebvre, Christine (Dépt travail social U Québec, Montreal H3C 3P8 (tel/fax: 514-987-3000/8795; e-mail: rene.jean-francois@uqam.ca)), **Parcours d'intégration/exclusion de personnes assistées sociales au Québec** (Social Trajectories of Integration/Exclusion of Persons Living on Welfare in Quebec). (FRE)

¶ A study of the process of integration/exclusion of persons living on welfare in Quebec. It is posited that salaried work is in crisis, & integration is increasingly difficult; that is reflected in the social, economic, political, & symbolic dimensions that make up integration. To better understand the transformations in progress, 48 interviews (life stories), outlining specifically the social trajectories leading to exclusion, were conducted with 16 men & 32 women, ages 25-45, heading families. Results reveal very precarious living conditions, as well as the extreme difficulty, if not impossibility, of finding jobs that are not precarious. The research puts to the fore the debate on the centrality of work in today's world.

98S35751 / ISA / 1998 / 12992

Renn, Ortwin (Center Technology Assessment, Industriestr 5 D-70565 Stuttgart Federal Republic Germany (tel/fax: 0-711-9063-160/175; e-mail: renn@afta-bw.de)), **Risk Policies in Political Arenas: The Contributions of the Social Theories.**

¶ Social systems need to define criteria that allow them to prioritize their actions & to neglect those risks that appear trivial. Identifying criteria appropriate for dealing with risks depends on the perspectives of different actors in society. If risk is seen as an objective property of an event or activity & measured as the probability of well-defined adverse effects, the policy implications are obvious: Order risks according to "objective" measures of probability & magnitude of harm, & allocate resources to reduce the greatest risks first. However, if risk is seen as a cultural or social construction, risk management activities would be set according to different criteria, & priorities should reflect social values & lifestyle preferences. These two positions represent extremes in a spectrum of risk perspectives explored here, eg, technical, psychological, economic, sociological, & cultural. Criteria used in each perspective to analyze risk & design risk policies are delineated. In addition, applied to the risk debate is arena theory, which states that social groups in a political arena try to maximize their opportunity to influence the outcome of the collective decision process by mobilizing social resources, eg, power, money, prestige, value commitment, & evidence. The political organization of an arena & the external effects of each group's action on another's constitute structural constraints that make the outcome of an arena struggle often incompatible with the evidence &/or values of any participating group.

98S35752 / ISA / 1998 / 12993

Renn, Ortwin (Center Technology Assessment, Industriestr 5 D-70565 Stuttgart Federal Republic Germany (tel/fax: 0-711-9063-160/175; e-mail: renn@afta-bw.de)), **Style of Using Scientific Expertise: A Comparative Framework.**

¶ Compares European countries & the US regarding utilization of science for environmental policy making, arguing that national culture, political traditions, & social norms influence the mechanisms & institutions for integrating expertise in the policy arenas. Policy analysts have developed a classification of governmental styles with respect to the use of science in policy making. The predominant US style is deemed adversarial, in which policymakers focus on formal proofs of evidence, because their decisions can be challenged by social groups on the basis of insufficient use or negligence of scientific knowledge. The most prevalent style in European countries is the corporatist style. Well-known experts are invited to join a group of decisionmakers where they provide expertise & professional judgment, but do not need to present formal evidence for their claims. The French system is characterized by a strong consensual mode of using expertise. Recent developments in all countries toward the often competing goals of more public participation & increased efficiency have contributed to the genesis of a new regulatory style, which may be called "mediative." Beyond the question of style, goal orientation is an important variable for describing different approaches to utilizing scientific expertise in articulating & promulgating environmental policies.

98S35753 / ISA / 1998 / 12994

Renn, Ortwin, Carius, Rainer, Köberle, Sabine & Oppermann, Bettina (Center Technology Assessment, Industriestr 5 D-70565 Stuttgart Federal Republic Germany (tel/fax: 0-711-9063-160/175; e-mail: renn@afta-bw.de)), **The Role of Procedural and Outcome Fairness in Siting Solid Waste Facilities in the Black Forest.**

¶ Presents a case study of designing a waste management plan, including the siting of a solid waste incinerator & several waste processing plants in the Black Forest area of the Federal Republic of Germany. Three rural counties & the city of Pforzheim joined forces to develop a waste management plan for the Black Forest region, & the Center of Technology Assessment was asked to design & conduct the citizen participation part of the plan. In 1994, a classic mediation effort was initiated to glean suggestions & advice from 16 regional stakeholder groups of how to reduce the amount of solid waste & how to increase the rate of recycling & reuse, further consulting them regarding choice of technologies to be employed for processing the remaining waste. Group representatives reached a consensus on the waste reduction task, but split regarding preferred technologies; a majority voted in favor of biological-mechanical decomposition, a minority for incineration. Political decisionmakers opted then for a combination. Some 20-25 randomly drafted citizens from each potential site location (preselected by technical experts) were given the mandate to find the most suitable site among 10 potential locations for biological-mechanical devices & 6 locations for siting an incinerator. Ten panels consisting of two to three representatives from each potential site community were given the task to develop criteria for evaluating the sites; develop a priority list of three sites for further investigation; & consider social, political, ecological, & economic impacts & equity issues, including benefit-sharing packages. A superpanel consisting of delegates from each panel sought a common solution to be presented to the political decisionmakers. Some recommendations have been implemented, & others await implementation. Fairness issues played a major role in assessing relative burden to the communities & in balancing economic & social concerns.

98S35754 / ISA / 1998 / 12995

Requate, Angela (U Bergen, N-5007 Norway (tel/fax: 47-55-58-94-76/70; e-mail: angela.requate@hit.uib.no)), **The Concept of Action in R. G. Collingwood's Political Philosophy.**

¶ R. G. Collingwood's approach to analyzing the concept of action in *The New Leviathan* (1942) is empiricist; he adopts Thomas Hobbes's basic principles—attraction & repulsion—to explain the development from primitive forms of action—appetite & fear—to its highest form, rational action. Rational action comprises utilitarian, rightful, & dutiful action. Collingwood's exposition of the forms of rational action tries to overcome two approaches for their oneness: intellectualism & subjectivism. The subjectivism in utilitarian action finds its objectivation in its counterpart, rightful action. But rightful action is abstract in subsuming the subject's will under the object. Only dutiful action comprises both, in that the subject knows, wills, & does his or her duty. Thus, dutiful action transforms the abstractness of utility & rightness into concreteness. In his emphasis on duty Collingwood is closer to G. W. F. Hegel than to Hobbes & establishes, with Hegel, a theory of ethical conduct. Like Hegel, Collingwood embeds ethical conduct in social & political institutions. For Collingwood, the essential condition for free will to develop, sustain, & express itself in rational action is a liberal & democratic society.

Reser, Paul A., Coughlan, James E. & Knapman, C. (School Psychology & Sociology James Cook U, Townsville Queensland 4811 Australia (tel/fax: 61-747-81-4964/79-5435; e-mail: Paul.Reser@jcu.edu.au)), **The Near and the Far: Successes and Challenges of Teaching Sociology.**

¶ James Cook U (Queensland) is a regional institution serving Northern Australia where the teaching of sociology to nurses began in 1991 with the transfer of basic nurse education from hospital-based training to the tertiary sector. At the same time, the component of sociology taught to social work students increased to include a required specialized subject in the sociology of health & medicine. The commonalities of instruction between these professions lies in the provision of sociology that is meaningful in the context of occupational practice in regional, rural, & remote settings. The differences are in the meaning & perceived worth of sociology to students & staff from these diverse disciplines. The challenge has been to present a utilitarian sociology while maintaining the integrity of the intellectual tradition. Here, these experiences are examined along with future challenges posed by the teaching of these subjects in a distance education mode.

Rethi, Devi K. (Mother Teresa Women's U Kodaikanal, Tamil Nadu India (tel/fax: 4542-41122)), **Inter-Generational Support in India-A Utopia.**

¶ In the context of a changing society—where the modern family is characterized by nucleation, reduction in size, nonavailability of caregivers in the home, increased participation of women in the labor market, & increased mobility—data from India are drawn on to assess respondents' views on (1) care of the elderly by their family, (2) elderly's expectations of care from their children, & (3) intergenerational support. Results indicate that respondents of all age groups strongly feel that family members should provide support for their elders. As age decreases, elderly's expectations of care from their children also decrease. Employment of women, small family size, mobility, high cost of living, independence, selfishness, & greediness are factors that hinder intergenerational support.

Rexha, Erblin & Kekezi, Ilda (Albanian Viewpoint, Rr. Themistokli Gërmenji No 3 Tirana Albania (tel/fax: 355-42-27731/30506; e-mail: erexha@aedp.soros.al)), **Albanian Youth towards Its Westernization.**

¶ Hypothesizes that assimilation dynamics of Western cultural stereotypes by youths is directly connected with the liberalization of life & economy in Albania in terms of (1) new attitudes toward family as a so-

cial structure; (2) drugs, one of the main problems of Albanian youth; (3) decrease of youth interest in education; (4) youth & political values; & (5) liberalization of Albanian youth sexual behavior. Questionnaire data from a national sample of 1,000 youths indicate that, after the first transitional period, youths still consider the family an important & respectful value, though relationships with their parents have undergone significant changes; family ranks second in youth goals. Youths are attracted to drugs because of unemployment, lack of possibilities for an active social life, intergenerational transmission of youth deviance, & family divorce. Decrease in youth interest in education is attributed to decrease in state interest in education, lack of employment possibilities after graduation, & emigration. Youths (ages 15-35) are four times less interested in politics than are other groups (ages 35-49). Liberalization of youth sexual behavior is evident compared to the attitude of the previous generation; sex is ranked as the 5th most important value for Albanian youths.

Rheume, Jacques, St. Jean, Micheline & Maranda, Marie-France (Dept Communication U Quebec, Montreal H3C 3P8 (tel/fax: 514-987-3000/4650; e-mail: rheume.jacques@uqam.ca)), **Changements dans les milieux de travail et dans les syndicats: les leaders syndicaux vivent de la détresse** (Changes in Workplaces and in Unions: Union Leaders Living in Distress). (FRE)

¶ Clinical research involving groups of union leaders focuses on the experiences of union work conditions in the context of the many changes occurring in the workplace. Changes were presumed to add great pressure on workers, thus affecting their mental health. In a psychodynamic analysis of work theoretical framework, group interviews with local union leaders & unionized employees acting as union counselors in Quebec revealed two disparate patterns of coping with this new working context: (1) risk taking, found with local union leaders & (2) a sort of self-deception, expressed by union counselors. These two patterns are related to changes challenging the unions as a social movement in the context of the dominant neoliberal economic ideology.

Ribolzi, Luisa G. (Faculty Educational Sciences U Genova, I-16100 Italy (tel/fax: 39-10-2477-675/2465-976; e-mail: company@gruppoclas.it)), **Public and Private Schools in Italy: Towards an Integrated Market?**

¶ Recently there has been in Italy a strong debate (both political & cultural) about the extent to which central government has the right to determine the nature & the forms of the educational system. In 1997, a law regulating public administration introduced school autonomy; after that, the government presented a proposal to integrate private schools into an enlarged public system. This situation is compared with other European countries, analyzing problems & perspectives of a transition from a monopolistic model to a quasi-market one. Since Italian schools have a centralized & bureaucratic organization, where only state-managed schools are public, the possibility of changing the organizational model is discussed. The final hypothesis is that, to cope with the social complexity, Italy needs educational policies that incorporate parental choice & school autonomy as important components of the provision of schooling.

Rice, James Mahmud (Sociology Program RISS Australia National U, Canberra ACT 0200 (e-mail: jmrice@coombs.anu.edu.au)), **Crossnational Variation in the Sources of Change in the Distribution of Income.**

¶ Compares developments in the distribution of income in Australia, the Federal Republic of Germany, the Netherlands, Sweden, Taiwan, & the

F

US between the late 1970s/early 1980s & the late 1980s/early 1990s. In addition to describing cross-national variation in changes in the distribution of income, explanations claiming to account for these developments are examined. Past research has tended to focus on changes in two spheres of society: the labor market & the welfare state. Here, two methods are used to assess the contributions made by developments in waged & salaried employment, property ownership, self-employment, state-provided welfare, & state taxation, respectively, to changes in the overall distribution of income. Findings reveal substantial cross-national variation, not only in changes in the distribution of income, but also in the underlying factors driving these changes. While developments in waged & salaried employment have been relatively important factors driving changes in overall income distribution in some societies, they have been relatively unimportant in others. Changes in state-provided welfare & state taxation have been relatively unimportant in all of the societies under investigation.

Richards, Lyn & Richards, Thomas J. (Qualitative Solutions & Research Pty Ltd PO Box 171 La Trobe U Bundoora Victoria 3083 Australia (tel/fax: 613-9459-1699/0435; e-mail: lyn@gsr.com.au)), **Software for Live Data: A New Stage for Qualitative Computing.**

¶ Qualitative data precomputer were multifaceted, illustrated, meaning expressed by style. Documents normally changed as narratives & interpretations developed. Yet qualitative software pushed researchers to plain-text, static, isolated documents, & users accepted this as the price of computing. The first generation of qualitative programs concentrated on coding & searching of static, plain-text documents (Richards & Richards, 1994). The second emphasized "closeness" to (still plain & static) data (Weitzman & Miles, 1995; Richards, in press). An argument is made for rethinking this acceptance, & a new software approach to live documents, in live projects, is described. The challenge now is to support sophisticated analysis of rich, live data. Introduced here are methodological implications of new software supporting rich-text documents that can grow with a project, incorporating interpretation, illustration, & live links between data, ideas, & emerging theory.

98S35766 / ISA / 1998 / 13007

Richman, Judith A. (U Illinois, Chicago 60612 (tel/fax: 312-433-8400/8358; e-mail: JRichman@uic.edu)), **Gender Biases Underlying the Social Construction of Chronic Fatigue Syndrome as a Psychiatric Disorder.**

¶ Critiques the biomedical & psychosocial literature on chronic fatigue syndrome (myalgic encephalomyelitis), a controversial illness of unknown etiology that appears predominantly in women. It is argued that initial failure to demonstrate a viral etiology of the syndrome led to a paradigmatic shift in research perspectives to psychiatric components. This research focus is contrasted with patient accounts of their illness & perspectives on etiology that view chronic fatigue syndrome as a viral-immune dysfunction disorder. It is argued that the social construction of chronic fatigue syndrome is similar to the initial construction of multiple sclerosis as a disease affecting neurotic women.

98S35767 / ISA / 1998 / 13008

Richman, Judith A. (U Illinois, Chicago 60612 (tel/fax: 312-433-8400/8358; e-mail: JRichman@uic.edu)), **Workplace Harassment, Symptomatic Distress, and Alcohol Use and Abuse among University Employees.**

¶ Draws on mail survey data from 2,492 university faculty, graduate stu-

dents, secretaries & clerical workers, & service/maintenance workers to assess their experiences of sexual harassment & generalized workplace abuse & mental health outcomes. In terms of exposure to harassment & abuse, female faculty reported higher levels than males, while male clerical & service workers reported higher levels than females. For all groups, generalized abusive experiences were more prevalent than sexual harassment. Multiple & logistic regression analyses demonstrated that both sexual harassment & generalized abuse were significantly related to symptomatic distress, alcohol use & abuse, & drug use (with some outcomes differing by gender). Findings highlight the need to focus greater attention on interpersonally stressful dynamics in studies of workplace stress & mental health.

Riessman, Catherine Kohler (Dept Sociology Boston U, MA 02215 (tel/fax: 617-353-3757/5612; e-mail: riessman@bu.edu)), **Being Barren: South Indian Women Talk about Infertility.**

¶ Intensive interview data from 31 childless women in southern India (Kerala State) are analyzed for perceived causes, treatments (medical & religious), & beliefs about cure. Although infertility threatens women's status & challenges cultural assumptions about family continuity, women are active agents in the face of stigma. They draw on cultural idioms (eg, snake worship) even as they explore Western biomedical solutions. But women differ in the kinds of beliefs & actions that are acceptable, a patterning of response influenced by social class, age, & rural vs urban context.

98S35771 / ISA / 1998 / 13012

Riessman, Catherine Kohler (School Social Work Boston U, MA 02215 (tel/fax: 617-353-3757/5612; e-mail: riessman@bu.edu)), **'Even If We Don't Have Children (We) Can Live': Stigma and Infertility in South India.**

¶ Infertility in the South Indian context represents family failure, & it is the woman's body that is stigmatized. Motherhood—compulsory after marriage—serves critical functions in India's hierarchical society, & the "motherhood mandate" for young women is policed by older women in families & communities. When a woman does not conceive, others take action against her. Two narratives from an interview with a South Indian woman in an impoverished village are presented in which she tells about her abuse & her resistance against it. The resistance resources she brings to bear involve individual action in a familial & cultural field, & with them she is able to construct a life without children. Analysis of the nar-

ratives focuses on aspects of structure, the context in which they were produced & performed, & their shifting meanings (including the researcher's changing understandings of the narratives over time). Analyzing a translated text opens up issues in interpretation that all narrative analysts face.

Rieusset-Lemarié, Isabelle (IUFM Versailles, 45 ave États-Unis RP815 F-78000 France (fax: 33-142-05-4619; e-mail: rieusset@u-paris10.fr)), "**Savoir sur mesure**" et culture des réseaux: nouveau standard social ou fin de la standardisation? ("Custom-Made Knowledge" and Network Culture: New Social Standard of the End of Standardization). (FRE)

¶ The challenge of information networks is to provide custom-made, rather than standard, knowledge. Because of intelligent agents, users are no longer passive recipients of ready-made social knowledge. The image of the searcher taking a major part on the elaboration of knowledge would be the new social pattern on the Internet, ending standardized knowledge. At issue are (1) which reality underpins this dream, so far as social knowledge is concerned; (2) the stakes associated with custom-made knowledge; & (3) whether it is the end of ready-made information or the last form of the standardization of knowledge, the most recent but also the most pervasive one. It is argued that custom-made knowledge is not an isolated process: from jeans to information, the best merchandise provided on the Internet has to be custom-made according to the new economical standard of "one-to-one marketing." From this perspective, custom-made knowledge has nothing to do with the common knowledge emerging from virtual communities, which may appear as the true challenge of the networks.

98S35773 / ISA / 1998 / 13014

Rigas, Anastasia Valentine (Dept Psychology U Crete, GR-74100 Rethymno Greece (tel: 30-1-8156468)), **Social Identity and Cross-Cultural Research: The Eco-Ecology Approach: The Case of the Rebetico Popular Greek Music and Songs.**

¶ Explores how the psychosocial identity is structured in a social & biographical context, presenting conceptual & methodological tools of eco-ecological method applied on cross-cultural research through the case study of popular Greek music in Rethymno & Athens via analysis of the psychosocial identity of Rebetico culture & "rebetis man." The eco-ecology method, developed to explore identity processes as they emerge in the continuous transaction between the individual & environment, is based on a questionnaire designed by M. Zavalloni & C. Louis Guerin (1984) & probes the background dynamic of the individual by which there is an individual-environment interaction & from which personal & psychosocial identity emerge.

98S35774 / ISA / 1998 / 13015

Rigas, Anastasia Valentine (Dept Psychology U Crete, GR-74100 Rethymno Greece (fax: 30-1-8156468)), **Foreign Children on the Street: A Travelogue on the Streets of Athens.**

¶ Examines the life stories of 20 children working on the streets of Athens, Greece, drawing on semidirected interview, field research, audiovisual, & photographic data. Street children are an urban phenomenon for Greek society, referring to urban children/adolescents, ages 4-16, coming from abroad (Albania, Poland, Russia) in the last 10 years, who spend most of their time working or begging. These children feel that the unfairness & inequality they experience should be redressed through social commitment to their welfare.

Rigas, Anastasia Valentine, Panagiotopoulos, D., Vakakis, V. & Katsoyanni, E. (Dept Psychology U Crete, GR-74100 Rethymno Greece (tel: 30-1-8156468)), **Social Representation in Self-Perception of the Elderly.**

¶ Questionnaire data from 100 elderly people are used to investigate old age in a psychosocial & biological sphere, while social representation is examined in terms of the self, the Other, & society. Zavalloni & Louis Guerin (1996) suggest that old age is situated at the intersection of differentiating individuality, denial, & marginalization. Analysis indicates that the majority of those who are members of elderly clubs seem to be denying bodily changes &, in many ways, aspiring to a self-depiction as a middle-aged person, full of life, & sociable. In contrast, the elderly found in geriatric homes or hospitals attribute bodily changes to eating styles, vitamins, & routine medical checks. The body & dietary nutrition constitute the representational key properties that activate the emer-

gence of a sociodynamic mechanism of psychosocial identities.

98S35776 / ISA / 1998 / 13017

Rigas, Anastasia & Zavalloni, Mariza (Dept Psychology U Crete, GR-74100 Rethymno Greece (tel: 30-1-8156468)), **Social Identity and Cross-Cultural Research: The Eco-Ecology Approach.**

¶ Explores how psychosocial identity is structured in social & biographical contexts via application of the eco-ecology method to cross-cultural research. The method, developed to investigate identity processes as they emerge in the continuous individual-environment transaction, is based on Zavalloni & C. Louis-Guerin's (1984) Multistade Social Identity Inquirer. The background dynamic of individual-environment interaction includes identity words, emotional memory, background thinking, the effective representational circuit, elemental identity space, & the resonance effect. Conceptual & methodological issues are considered.

98S35777 / ISA / 1998 / 13018

Riggs, Fred W. (Dept Political Science U Hawaii, Honolulu 96822 (tel/fax: 808-956-8123/6877; e-mail: fredr@hawaii.edu)), **Shelter Concepts: A Necessary Bridge.**

¶ Presents the "shelter term," under which is subsumed a set of operational or revised versions of the same basic fuzzy concept. More precise concepts listed in a shelter can be thought of as "sheltered concepts." They could include a number of definitions that prescribe specific tests to determine, eg, who should be classed as a "scholar." Each of these more precise concepts usually has a theoretical or empirical context in which it is particularly useful. In new contexts, other variants of the same shelter concept might be added. Whenever one of the sheltered concepts is needed, it can be identified by any convenient word, symbol, or phrase deemed unambiguous & convenient; in ordinary language contexts where these technical terms are not familiar, one may either use the shelter term to give readers a rough idea about the intended concept, or reproduce the full concept description whenever a more precise understanding of the author's ideas is needed. Whenever a new concept is needed, this process can be reversed by selecting a familiar word as its shelter to provide a context in which the new concept can be described & assigned a new term. This can help bridge the gap between ordinary language & specialized & precise concepts used in special languages.

Riley, Alexander Tristan (U California San Diego, La Jolla 92093 (tel/fax: 619-534-4627/4753; e-mail: triley@weber.ucsd.edu)), **L'Année sacrée: The Calling, Collective Work, and the Durkheimian Search for the Sacred.**

¶ Much of the import of Émile Durkheim's work, & that of his colleagues on *L'Année sociologique*, especially those with whom he worked most closely, Marcel Mauss & Henri Hubert, revolves around their engagement of the topic of the sacred. The topic was not for them, however, simply an academic interest; their lives were marked by their own search for the sacred, a search powerfully implicated in their self-construction as intellectuals & made all the more challenging for them by the critical perspective they brought to bear as secular intellectuals on the traditional paths to the sacred followed by many of their predecessors. Suggested here is that these core Durkheimians were involved in an intellectual & eminently personal project to invest the sociological calling itself with the properties of the sacred particularly in its practical manifestation in the intense collective work & vision of *L'Année sociologique*.

Rinkevicius, Leonardas (Dept Public Administration Kaunas U Technology, LT-3000 Lithuania (tel/fax: 370-7204661/7207232; e-mail: leorin@kaunas.omnitel.lt)), **Ecological Modernization as an Ideology: Theoretical Discussion and Some Empirical Controversies.**

¶ Characterizes ecological modernization as an ideology. Defining ecomodernist ideology as a set of beliefs, values, & expectations diffusing in modern industrial societies, summarized are its major traits, which are crystallizing in the recent literature. This ideology is centered around the belief that "pollution prevention pays" & related expectations & beliefs in viability of reconciliation of ecology & economy in the course of societal change without veering from modernization. Other beliefs & expectations of ecomodernist ideology are reflected in the call for a shift from command-&-control environmental policy to one based on trust, tolerance & dialogue, ie, a shift to economic & educational/informative instruments & self-regulatory regime. Comparing ecological modernization with other theoretical approaches to modern environmentalism, it is argued that ecomodernist ideas, beliefs, & expectations regarding environmentally informed societal change are similar to what O'Riordan (1981) & Pepper (1993) call the "environmental management" approach in the technocentric trend of modern environmentalism. An interpretation of ecological modernization as "institutional learning" vs "technocratic project" is applied, contending that attitudes, beliefs, & respective cultural tensions between categories of actors shaping an ecomodernist discourse & environmental policy correlate with or stem from intrinsically conflicting doctrines, principles, & ethos characteristic of different societal structures—bureaucratic, economic, academic, & civic. Structure appears as "external" to human action, as a source of constraint on free initiative. Conceptualizing political, economic, & other institutional spheres in such a way, ecological modernization is seen as a culturally controversial process whereby various actors gradually learn about beliefs, doctrines, & codes of conduct (steering mechanisms, norms, & ethos) shared by actors rooted in other institutional spheres, & learn to adjust with respect to them. Institutional learning is thereby interpreted as a gradual alleviation of those cultural or institutional tensions, leading to social consensus in the course of ecological moderniza-

tion. Empirical examples of such institutional learning are provided, & theoretical & empirical controversies are discussed.

Rissanen, Sari T. H. & Sinkkonen, Sirkka E. (Dept Health Policy Management U Kuopio, FIN-70211 Finland (tel/fax: 358-17-162602/999; e-mail: Sari.Rissanen@uku.fi)), **The Possibilities of Informal and Private Care for the Finnish Elderly.**

¶ The growing number of elderly & cutbacks of public resources have led to decreased public & increased informal & private elderly care in Finland. Here, two questions are addressed: (1) How willing are possible caregivers to give more informal care or the elderly to buy private care? (2) What are women's & men's reasons for participating in informal care or buying private elderly care in home settings? Analysis is based on data obtained in three surveys of (A) citizens who will be the possible caregivers (N = 900, ages 39-59; 65% response rate); (B) possible care receivers (N = 900, ages 60-80; 78% response rate); & (C) the clients of municipal home care (N = 231, ages 75+; 65% response rate). About 15% of the possible caregivers would like to provide more informal care & 33% of the clients of municipal home care would buy private care. Differences between men & women were surprisingly small; however, men (60%) regarded participation in informal care more as a duty than women (50%) did.

Rizvi, Fazal (Monash U, Clayton Victoria 3168 Australia (tel/fax: 61-03-9905-9194/9197; e-mail: fazalrizvi@education.monash.edu.au)), **What's in a Name? The Politics of Difference and Dilemmas of Justice in Australia.**

¶ During the course of 1998, the Human Rights & Equal Opportunity Commission in Australia will change its name to Human Rights & Responsibilities Commission. Here, the politics of difference underlying this name change is explored. It is suggested that the new language represents a fundamental shift in the manner in which the Australian state now wishes to approach issues of race, ethnicity, & education, away from concerns of access & equity to a liberal politics of recognition. Such a politics acknowledges the importance of group identity but, in the process, displaces socioeconomic redistribution as the remedy for injustice. It utilizes postmodern ideas of recognition of difference, but in doing so, masks a broader conservative attempt to discredit indigenous claims to land rights & to portray racial & ethnic minorities as mendicants & people who are exploitative of welfare provisions. This discussion is presented in the framework of a recent theoretical debate run in *New Left Review* between Nancy Fraser & Iris Marion Young over dilemmas of justice in a postsocialist age & points to how competing claims of recognition & redistribution might be reconciled.

Roba Stuart, Oscar (Facultad Ciencias Sociales U República, Montevideo 11200 Uruguay (tel/fax: 598-2-409-8046/0871; e-mail: ors@fcsbd.edu.uy)), **Three Approaches in the Study of Uruguayan Poor Children.**

¶ Examines the results of applying three different but complementary research approaches to a sample of 858 poor families & 1,224 children, under age 5, in Uruguay. A sociological approach found that children, particularly males, in poor sectors, present greater lag indices than their nonpoor counterparts regarding psychomotor development (ie, coordination & language). A risk factors approach indicates that development is impacted by lack of social support, familial communication problems, unequal female & male education, incongruent nursing practices, & a matriarchal functioning of them. A clinical approach explores to what degree there exists an analogy among variables associated with psychomotor lag in poverty & configuration found at a clinic. The existing analogy is directed at common nuclear aspects, at multiple psychopathological disorders, eg, difficulties in cognitive development &/or behavior at any social stratum. A series of risk factors related to parental psychopathology & familial conflict underpin an explanation of this analogy. Methodological issues are discussed, & implications for social policy & programs considered.

Róbert, Péter (Social Research Informatics Center, Victor Hugo u 18-22 H-1132 Budapest Hungary (tel/fax: 36-1-1497-531/1290-470; e-mail: robert@tarki.hu)), **Class and Party from a Rational Choice Perspective.**

● Complete paper available from Sociology*Express. Prepaid orders

only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Analyzes the postcommunist Left turn & Left voting from the perspective of rational choice theory, drawing on 1982 & 1996/97 national & survey data. While rationality in Left voting is generally assumed to be a behavior of electorates from the working class, it seems to be more characteristic for managers & professionals in Hungary; these occupational groups have been overrepresented among former Communist Party members as well. The central prediction is that joining the Communist Party before 1990 & voting for the Left after 1990 are the same rational choices of the same fraction of high-status population. Reestimate the social determination of former Communist Party membership & analyze the class basis of Left voting & the impact of former party membership. In the statistical analysis, Communist Party-membership & Left voting are defined as dichotomous dependent variables. Logistic regression models are fitted on the data for testing the hypotheses. Results provide support that high class position & former Community Party members who accumulated or inherited their privileges, at least partly before 1990, & because of their former party membership, have an economic interest in Left voting.

98S35788 / ISA / 1998 / 13029

Róbert, Péter & Bukodi, Erzsébet (Social Research Informatics Center, Victor Hugo u. 18-22 H-1132 Budapest Hungary (tel/fax: 36-1-1497-531/1290-470; e-mail: robert@tarki.hu)), **Who Are the Entrepreneurs and Where Do They Come From? Self-Employment under Communism and Post-Communism.**

¶ Takes a dynamic historical perspective to investigate self-employment as one of the most important structural changes generating occupational mobility in the last 4-5 decades in Hungary. A causal model is developed, focusing on how entry into self-employment has been influenced by social origin, educational level, previous occupational experiences, & Communist Party membership. The impact of social origin is analyzed in light of interrupted bourgeoisie theory. Cultural capital theory provides a further framework for the analysis, operationalized by educational level. Accumulated political capital, measured by time spent in the Communist Party, was a determinant of entry into self-employment. These effects vary across historical periods. Data are taken from the Hungarian Social Mobility survey of 1992, which contains information on social origin, educational history, full job history, & party-membership history. The analysis is carried out on person period file where social origin is time-constant measure, & educational level, previous class positions & party membership are time-dependent measures. The model is estimated for different historical periods & results are interpreted as historical effects on the changing conditions of social determination for become an entrepreneur in Hungary.

Roberts, Brian (U Huddersfield, West Yorkshire HD1 3DH England (tel/fax: 44-1484-472-816/794; e-mail: b.roberts@hud.ac.uk)), **Biographical Work and the Auto/Biography of the Researcher.**

¶ Examines issues raised by the connections between researchers' own autobiographical writing & their biographical research, beginning with investigation of a number of recent approaches & uses of autobiographical material (eg, literary studies, (auto)biography). The apparent discontinuities in the genre of autobiography are noted—between fact & fiction, past & present, objective record & subjective account, & the nature of autobiographical & biographical writing. While the connections between the life of the researcher & the process of life history/story work are commonly recognized, the types of possible relationship or how these may be made more apparent are less clearly stated. In telling others' stories are we, in some sense, telling our own story? An argument is developed for a more conscious articulation of autobiographical intent & influence in biographical research practice. An interesting example for discussion is where more biographical researchers write at length about their own lives.

Roberts, Kenneth (Dept Sociology U Liverpool, L69 7ZA England (tel/fax: 44-151-794-2971/3001; e-mail: D.M.Oconnor@liv.ac.uk)), **The Leisure and Lifestyles of Unemployed and Self-Employed Young People in East-Central Europe.**

¶ Presents evidence from interview surveys of 400 self-employed & 800 unemployed young people (ages 30 or under) drawn in equal numbers from relatively advantaged & disadvantaged local labor markets in four East-Central European countries: Bulgaria, Hungary, Poland, & Slova-

kia. Findings show that the lifestyles of the unemployed were less depressed, & the lifestyles of the self-employed were less glamorous, than might have been expected. Results are explained by the fact that the countries are in transformation, & new social strata & lifestyle groups are still in formation. Contrasts are drawn between the characteristics of elite leisure (&, by implication, of leisure deprivation) under the old (communist) & new (market) systems in East-Central Europe.

98S35791 / ISA / 1998 / 13032

Roberts, Kenneth (Dept Sociology U Liverpool, L69 7ZA England (tel/fax: 44-151-794-2971/3001; e-mail: D.M.Oconnor@liv.ac.uk)), **The 'Modernisation' of Youth Labour Markets in Armenia, Georgia and Ukraine.**

¶ Evidence from 1997 surveys reveals five main career routes of young people prevalent since the collapse of communism: public sector employment, regular work in medium-sized or large private companies, self-employment, marginal jobs, & unemployment. The proportions of young people following these routes vary, but these routes appear to have been created in all ex-communist, now transitional, societies. Explored here is whether these routes are transitional phenomena; their creation can be sensibly described as modernization or Westernization; & postmodernity is relevant to circumstance & trends in the former USSR. It is argued that, in practice, substantial sections of the former Second World are at risk of regression to premodernity.

98S35792 / ISA / 1998 / 13033

Roberts, Kenneth (Dept Sociology U Liverpool, L69 7ZA England (tel/fax: 44-151-794-2971/3001; e-mail: D.M.Oconnor@liv.ac.uk)), **Economy and Education in the Former Soviet Union.**

¶ Economic reform is at the heart of the transformations in the former Soviet countries, but, in most, there are parallel changes in education, ie, subjects, institutions, links between the educational & economic systems, & the numbers of students. Findings from 1997 research among young people in Armenia, Georgia, & Ukraine are drawn on to analyze the changing roles of secondary & postsecondary education. The numbers & types of young people who are being recruited to different educational programs & their labor market destinations are explored.

98S35793 / ISA / 1998 / 13034

Roberts, Kenneth (Dept Sociology U Liverpool, L69 7ZA England (tel/fax: 44-151-794-2971/3001; e-mail: D.M.Oconnor@liv.ac.uk)), **Why Are There So Many Students?**

¶ Youth employment is fast disappearing in many countries, & higher levels of education are fast becoming the normal role, not only for youth, but also for young adults. In most countries, education is a major growth industry. One explanation of this trend is societal needs. It is argued that, in the information age, leading societies will be learning societies in which education is the pivotal industry, & education is recurrent & life-long. Young people must become more highly educated than their parents if their countries' economies are to be competitive in world markets. Their own reward, they are told, will be satisfying & well-rewarded careers, but whether this is why student numbers are rising is questioned. Alternative explanations are offered: status competition & young people's unwillingness to enter labor markets amid high levels of youth unemployment. These are explored on the basis of 1995-1997 research among young people in East-Central Europe & Confederation of Independent States countries.

98S35794 / ISA / 1998 / 13035

Roberts, Richard (Dept Religious Studies U Lancaster, LA1 4YG England (tel/fax: 44-0152-592423/01524-847039; e-mail: r.roberts@lancaster.ac.uk)), **Space, Time and the Sacred in Modernity/Postmodernity.**

¶ Recent theorization of the space/time matrix allows for a closely focused exploration of the conceptualization of the modernity/postmodernity interface. This, in turn, may provide a setting for the interpretation of the persistence of mainline religion, contemporary religious resurgence, innovative spiritualities, & quasi-religion in terms of degrees of correspondence (& elective affinity) between the fluidity & transformations of spatiality & temporality (seen most notably in space-time compression) & corresponding characteristics in the traditional, de-traditionalized, & re-traditionalizing aspects of world religion & religiosities. Understood as a differentiated function of space/time matrices, the constitution of the sacred may thus be appropriated & used as a categorical framework for classification of contemporary religious phenomena. It may also be augmented & further developed as a multidisciplinary model for the socioscientific interpretation of religion that operates near the core, rather than at the periphery, of current sociological concerns.

Robertson, Roland (Dept Sociology U Pittsburgh, PA 15260 [tel/fax: 412-422-4424/2755; e-mail: rolandr@pitt.edu]), **Comparative Sociology, Global Sociology and Social Theory.**

¶ Addresses problems attendant on the shift in focus from comparative sociology to the sociology of the world as a whole. Comparative sociology has tended to treat societies, or nation-states, as islands. This tendency is challenged by the rise of direct interest in what is variously called world society, the world system, global society, etc. Now comparative sociology has to be undertaken from a new perspective. However, the rapidly increasing concern with globality should not lead to relinquishing the comparative perspective. Social theory is greatly affected by the relationships between comparative & global sociology.

Robertson, Roland (U Pittsburgh, PA 15260 [tel/fax: 412-422-4424/2755; e-mail: rolandr@pitt.edu]), **The Future of Globalization as a Buzzword, as a Concept, and as a Cluster of Empirical Processes.**

¶ Emphasizes the multidimensionality of the concept of globalization, while recognizing that it has acquired a primarily economic, neoliberal meaning in the popular imagination. The circumstances under which the term has acquired this kind of economic meaning are examined, & it is considered whether it is a retrievable concept from a sociological point of view. Different kinds of economic approach to the theme of globalization are considered, along with salient noneconomic dimensions. Globalization is discussed in its popular economic sense & is also placed in a wider sociological frame. Described is how globalization was "hijacked" as a term by a certain kind of economist in the mid-1980s, & contrasts are offered to the institutionalist standpoint of economic sociology. The future of globalization in its various meanings is discussed.

Robin-Maire, Régine (U Québec, Montreal H3C 3P8), **La Littérature comme objet sociologique** (Literature as an Object of Sociology). (FRE)

¶ The International Congress of Sociology is a good observation post for observing connections between sociology & literature. Since no single committee is devoted to literature, sociological narrative, or how sociology deals with narrative, an effort is made to examine these topics. Since all sociology is written, there presumably is a sociological style of writing, with narrative, argumentative, & expressive procedures. Recent works such as Pierre Bourdieu's *La Misère du monde* (The Misery of the World) & some US postmodern writings on sociology are examined to illustrate these points & to help the issues of narrative & the links between sociology & literature find their legitimate place in the discipline & in its publications, colloquia, & congresses.

Robinson, Ian Crawford (Dept Human Sciences Brunel U, West London Uxbridge UB8 3PH England [tel/fax: 44-0-1895-203-306/078; e-mail: ian.robinson@brunel.ac.uk]), **Narrating the Dying Body.**

¶ The focus of much narrative analysis has been on the outcome, as much as on the process, of constructing the story—the narrative as product, rather than the process of narrating. Here, a wide range of interview data from people who were aware that they were in transition from life to death are drawn on to analyze & document the process of constructing a narrative of life of, & with, a dying body. The core argument is that constructing a narrative of the dying body is an intensely iterative process in which embodied contexts are worked & reworked to create & fine-tune a feasible narrative. In this process, rather than an embodied past being remembered, & a disembodied future being imagined, that past is imagined & the future is remembered. Through these means it is possible to live with a dying body.

98S35799 / ISA / 1998 / 13040

Robinson, Ian Crawford (Dept Human Sciences Brunel U, West Uxbridge London UBB 3PH England [tel/fax: 44-1895-203306/078; e-mail: ian.robinson@brunel.ac.uk]), **Disease as a Cure for Old Age.**

¶ Although increasing longevity has been associated with the postponement for many of significant morbidity, the cumulative effect of multiple chronic conditions in later old age is still striking. For some, the robust extension of medical care into old age has been of significant biomedical benefit in containing if not eliminating pathologies associated with aging; however, for others, it represents a pernicious extension of medicalization at the end of life. Here, it is argued that the process of medicalization of old age is not so much valuable in any dramatic reduction in organic pa-

thology, but in the sociological effects it has of reincorporating marginalized older people into a mainstream of social life. Drawing on national statistical & ethnographic studies of people with a range of neurological diseases, as well as epidemiological analyses of changing life expectancies, it is indicated that disease is indeed a "social cure" for old age.

98S35800 / ISA / 1998 / 13041

Robinson, Ian Crawford & Delahooke, Amber (Dept Human Sciences Brunel U, West London Uxbridge UB8 3PH England [tel/fax: 44-0-1895-203-306/078; e-mail: ian.robinson@brunel.ac.uk]), **The Business of Children's Friendships in Institutional Settings.**

¶ Ethnographic data on the extent to which child social interactions & exchanges in institutional settings (eg, schools) centered on circulation of material objects emphasize the importance of such processes for children's relationships with each other & adults. Many of these exchanges & interactions were largely hidden from adult view, but assumed considerable importance in the creation & maintenance of everyday relationships. The nature of the objects themselves, whether they were considered by others to be health related—eg, asthma inhalers—or clothes, toys, etc, became deeply embedded in who people were, ie, their personhoods, & how systems of social relationships were developed & organized. Focus is on how the idea of children's agency is expressed through material objects.

98S35801 / ISA / 1998 / 13042

Robinson, Ian Crawford, Frankenberg, Ronald & Delahooke, Amber (Dept Human Sciences U Brunel, West London Uxbridge UB8 3PH England [tel/fax: 44-0-1895-203-306/078; e-mail: ian.robinson@brunel.ac.uk]), **Reconstructing the Idea of Vulnerability in Childhood.**

¶ The idea of vulnerability as a property of the child is challenged, drawing on ethnographic data from schools, hospitals, & home settings in GB. It has become clear that in a variety of settings, vulnerability, however characterized, takes on different forms & content. Vulnerability is seen to be transferable, contagious, & reversible in the sense that adults working or living with "vulnerable children" may consider themselves to be more vulnerable than their charges. Further, vulnerable children in one context appear to become, both to themselves & others, powerful & "unvulnerable" in other contexts. It is suggested, therefore, that a view of vulnerability as a generic & core property of children is misplaced, & a socially & culturally contextualized approach to the idea of vulnerability is of crucial importance.

98S35802 / ISA / 1998 / 13043

Robustelli, Giacomo (Dipt sociologia U Roma 'La Sapienza', I-00198 Italy [tel/fax: 39-68-41-57-48/55-26-31; e-mail: g.robustelli@business-italy.it]), **Football and Economic and Cultural Integration: The Case of Italy and the United Kingdom.**

¶ Examines economic integration in Western Europe, using as a test the sport industry & its cultural reflections, presenting a case study of access to the stock market of football clubs in Italy & the UK. Also investigated are the different cultural contexts in which soccer became a proper commercial activity in the two countries via analysis of the economic procedure & rationale underlying the stock market quotation of football clubs. The commercialization of soccer in the two countries has differed: in the UK, it has been an almost unexpected result of the policy against hooliganism, while in Italy, it has resulted from an unprecedented expansion of football in many aspects of social life, notably in politics. It is hypothesized that the differences in the cultural & economic structures of the two countries are reflected in this process & that the similarities are marginal, induced by a more general & exogenous expansion of the economic weight of sport, of football, in particular, thus achieving only a superficial integration.

98S35803 / ISA / 1998 / 13044

Rocher, Guy (Faculté droit U Montréal, Quebec H3C 3J7 [tel/fax: 514-343-5993/7508; e-mail: rocher@droit.umontreal.ca]), **Social Link and Social Reforms.**

¶ The social link may be severely strained when important reforms are undertaken by or in a society, or by some group in a society, or in an institution or network of institutions. It is useful to draw a distinction between top-down & bottom-up reforms, because the two types do not have the same kind of impact on the social link. The former can impair the social link, generate an atomization of social relationships, or create or aggravate conflicts that will disturb the social link. The latter may generally be successful insofar as they tighten the social link & rest on it. It is also

useful to distinguish between the influence that the reforms have on relationships among team workers & between professionals & clients. The analyses presented on this theme are based on several empirical research projects undertaken on reforms of the health system & health institutions in Quebec over recent years.

98S35804 / ISA / 1998 / 13045

Rocher, Guy (Centre recherche droit public U Montréal, Québec H3C 3J7 (tel/fax: 514-343-5993/7508; e-mail: rocher@droit.umontreal.ca)), **La Science comme pouvoir et ses rapports aux pouvoirs** (Science as Power and Its Relationship to Other Powers). (FRE)

¶ The notion that science has become a power in itself is examined, noting its links with other forms of power. Undertaken is a microsociological examination of the relationships between researchers, on one hand, & the relationships between researchers & the animals that serve them, on the other, using power relations as a focus. Also explored is how history has become a major factor in the elaboration of the collective national consciousness, which has conferred great political power to historians. The view of science as power at the institutional level is discussed, focusing on forms of partnership that the private sector imposes on researchers & the problems these bring to economic relationships.

98S35805 / ISA / 1998 / 13046

Rodrigues, Fernanda & Stoer, Stephen R. (Faculty Education U Oporto, P-4150 Porto Portugal (tel/fax: 351-2-607-9700/9726; e-mail: stoer@psi.up.pt)), **The Role of Partnerships in Promoting Social Cohesion: The Portuguese Case.**

¶ In Portugal, the political changes of the 1970s led to the recognition of a need to set up a welfare state at a time when other welfare states were in crisis. Portugal joined the European Community in 1986, & attributes around 20% of its gross national product to social protection expenditure. Thus, one might more easily categorize Portugal as a welfare society than as a welfare state. This means recognizing the strong role of civil society as a social provider, via informal family networks & nonprofit organizations (80% connected to the Catholic Church). As a result, economic crisis does not transform itself into social crisis (as might be expected). Social concentration & industrial relations structures are very recent, &, despite recent economic growth, 25%-30% of the population still live in poverty. Data from a larger study sponsored by the European Foundation for the Improvement of Living & Working Conditions (Dublin, Ireland), which studied the role of partnerships in 10 European Union countries over approximately 18 months, are drawn on to examine social cohesion in Portugal as a fight against social exclusion. In-depth analysis of 3 out of the 9 cases studied in Portugal are drawn on to assess the extent to which partnership may be seen as a new strategy for collective action, particularly in light of the struggle against social exclusion.

98S35806 / ISA / 1998 / 13047

Rodríguez Morató, Arturo (Dept Teoría Sociológica U Barcelona, E-08034 Spain (tel/fax: 34-3-453-17-37/280-23-78; e-mail: rodrig@eco.ub.es)), **The Power of Music as a Social Metaphor.**

¶ Social theorists have long been fascinated by musical subjects. Authors such as Max Weber, Theodor W. Adorno, Alfred Schütz, & Claude Lévi-Strauss considered music a key for deciphering social dynamics. From very different theoretical positions, they asserted a heuristic function to music in the social sciences. Examined here are the specific contributions of these authors to a musical view of society. Elaborating on this idea, it is argued that social analysis can be fruitfully conceived in terms of musical analysis.

98S35807 / ISA / 1998 / 13048

Rodríguez Morató, Arturo (Dept Teoría Sociológica U Barcelona, E-08034 Spain (tel/fax: 34-3-453-17-37/280-23-78; e-mail: rodrig@eco.ub.es)), **L'Autonomie du compositeur. Liberté de création et domination des maîtres** (The Composer Autonomy. Freedom of Creation and the Rule of Maestros). (FRE)

¶ "Serious" composers in the Occidental world have suffered from a process of social isolation, while obtaining varying degrees of public patronage for their activities. The resulting autarchic system of production seems to imply the apotheosis of their artistic autonomy. The nature of this autonomy, however, is ambiguous because under the guise of a continuous innovative swirl seems to hide something like "aesthetic freezing." This effect is examined, drawing on data from the Spanish case. Autarchy tends to imply professional predominance in a production system based on commissions that determine the dimension of the work &

artistic success. Obtaining commissions depends on such factors as studies under recognized maestros or aesthetic identity. The composers are subject to competitive dynamics of the clientele type that force them to conform to a specific canon of identity. Outside this canon, success is nearly impossible & even artistic survival might be threatened, resulting in "aesthetic freezing." The efficiency of this constriction mechanism since its regulative dynamics became autarchic is illustrated.

Rodriguez, Manuel Angel (U Autónoma Baja California, Acapulco Guerrero Mexico 39350 (fax: 52-74-86-88-85; e-mail: marodri@mpsnet.com.mx)), **Political Alternation and Transition to Democracy in Mexico.**

¶ Discusses the electoral processes & the long & difficult road to democracy in Mexico. Despite the efforts of those in the dominant party to retain their privilege & power, the citizens have begun to make their presence felt, especially at the local level, generating a new political-electoral geography. Discussion focuses on (1) citizenship in the electoral process & (2) electoral geography in terms of the socioeconomic variables of political/electoral participation & public service.

98S35810 / ISA / 1998 / 13051

Rodriguez, Manuel Angel (U Autónoma Baja California, Acapulco Guerrero Mexico 39350 (tel/fax: 52-74-86-44-02; e-mail: marodri@mpsnet.com.mx)), **Electoral Process and Democracy in Mexico.**

¶ In the last 8 years, democracy in Mexico has achieved advances that were hitherto impossible to perceive. In particular, the electoral process is more open, & election fraud seems to be a thing of the past. This is largely attributable to three factors: (1) rupture of a group of political leaders belonging to the party governor that has generated a democratization movement (hopes of social equality); (2) a more participative civil society, tired of having an illegitimate government based on electoral fraud; & (3) the North American Free Trade Agreement with the US & Canada, which pressured the Mexican government at both the federal & state levels to become democratic & legitimate.

Rogers, Jackie Krasas & Wardell, Mark (Pennsylvania State U, University Park 16802-1602 (tel/fax: 814-865-0745/863-9545; e-mail: jkr4@psu.edu)), **Temporary Workers and Their Families in the United States: Do Conventional Safeguards Work for Them?**

¶ The threefold increase in temporary employment in the US since 1980 has led to charges that companies are replacing "good" jobs with less desirable temporary jobs, & that this practice is creating or exacerbating a host of social problems. Yet missing from much research on temporary employment is the notion that it affects a family or a household, not simply an individual temporary worker. Data from the Feb 1995 Current Population Survey & its contingent work supplement are used to address whether traditional & temporary workers (voluntary & involuntary) differ with regard to protection under various employment policies & practices—eg, health & pension benefits, eligibility for unemployment compensation, & union representation—and to what extent these findings differ by family form. It is hypothesized that detrimental effects of temporary employment loom greatest for involuntary temporary workers in nontraditional family arrangements.

Roggero, Pascal (U Toulouse I, F-31042 Cedex France (tel/fax: 33-05-6163-3678/3500)), **Pour une sociologie complexe de l'action organisée** (For a Complex Sociology of Organized Action). (FRE)

¶ Since Edgar Morin (1977) proposed to go beyond the limits of systems theory by resorting to the thought of complexity, the latter has consolidated its epistemological foundations. Nevertheless, in the field of social sciences & particularly sociology, empirical applications of such thought are largely absent, a lack that seems to originate in the difficulty to make general concepts—most borrowed from the sciences of living—fully operational. Proposed here is the use of operational tools from the social sciences, insofar as they allow it, to amend them through complex reading. The sociology of organized action, initiated by founding works of Michel Crozier & Erhard Friedberg, constitutes an undeniably operational sociological body of work compatible with—amendable by—complex thought. This is demonstrated through a discussion of the concept of a concrete system of action.

Rohrig, Paul (201 Arlington Ave, Syracuse NY 13207 (e-mail: pdroehri@mailbox.syr.edu)), **Use of Computer-Assisted Data Handling and Analysis in "TQM Program Training Decisions: A Higher Education Case Study"**.

¶ Presents a case study to describe & explain the processes & rationale that shaped influential training decisions associated with a staff development program in a higher education institution. Qualitative data were collected through interviews with key personnel & from documents such as memos, internal & public policy statements, meeting notes, published interviews, & newspaper & journal articles. Existing models of university

governance are examined in light of case study data, & refinements to these models are suggested to more accurately reflect study findings. Focus is on benefits, costs, & practical implications associated with use of computer technology in a case study relying exclusively on nonnumeric data. Issues addressed include (1) the use of a database application for storage, classification, & retrieval of relevant literature; (2) the use of Nud*1st software to facilitate qualitative data storage, coding, & theory generation; (3) the role existing theory can play in generating & revising the coding structure & interpretive framework; & (4) practical considerations related to text & interview data handling.

Rokicka, Ewa (Dept General Sociology U Łódź, PL-94214 Poland (e-mail: rokicka@krycia.uni.lodz.pl)), **The Strengths and Obstacles for Sustainable Development at the Local Level.**

¶ In terms of sustainable development, one precondition for solving regional economic & ecological problems is accounting for the local perspective, ie, integration of economic & environmentally sustainable development strategies into a small-scale policy area (Paehlke, 1994) where the role of the site is limited to supporting local initiatives & sharing government subsidies among given administrative units. Since 1989, the fundamental question in Poland has remained whether, in the circumstances of a new system, local development could proceed without a degradation of natural resources & ecosystems. This & other related questions are addressed here, drawing on 1996 research conducted in nine Polish municipalities in which the authorities decided to introduce an ecological program of development & participate in the competition for the most ecological municipality in Poland; a typology of sustainable development as represented by given municipalities is presented. Statistical analysis is used to investigate (1) deterioration of the natural environment, (2) municipality incomes, (3) environmental awareness of the local inhabitants as seen in everyday behavior & public activities, & (4) physical & material living conditions. Also explored is whether these phenomena had a positive or negative impact on the implementation of different strategies of ecodevelopment.

Rolfen-Salles, Maria do Rosário & Castro-Santos, Luiz Antonio de (IDESP, rua Desembargador Guimarães #21 CEP-05002-050 Brazil (tel/fax: 011-864-75-00/263-16-05; e-mail: idesp@eu.ansp.br)), **Immigration and Public Health in Brazil: A Sociological and Historical Account.**

¶ Explores the interrelation of European immigration & sanitary reform in southeastern Brazil during the late-19th & early-20th centuries. In São Paulo, where Italian immigrants were exposed to the virulence of transmissible diseases, health reform was triggered. The planter class considered immigration a vital input to the coffee economy, & there was a strong commitment by urban elites & the national government, whose reformist thought & action immediately targeted health improvement. Historical data related to such actions is presented, highlighting the way that foreign countries—particularly Italy—sent missions to evaluate the health & social conditions of their emigrants who had become wage laborers in Brazil's plantations & urban areas. Focus is on the consolidation of a fairly large Italian medical profession & the opening of Italian hospitals in São Paulo & other parts as the beginnings of the public health movement in Brazil.

Romagnino, Nicole (Centre lettres & sciences humaines U Aix-Marseille I, F-13621 Aix-en-Provence 3 France (tel/fax: 33-442-59-94-75/42-80; e-mail: socio@aixuniv-aix.fr)), **The Qualities of the Social and the Scientific Character of Sociology.**

¶ Epistemological debates on social sciences, particularly sociology, set the latter in the frame of historical sciences, which, in a way, leads to scientific relativism, & to the approach in terms of narration, as opposed to the theory of the unity of science & to the approach in terms of patterns. The pattern/narration difference can be in the frame of a long period of history or in the prospect of a sociology of science, developed as a continuum. Questioned here is whether it accounts for, & renders justice to, the scientific activity in all its specificity. Describing seems to be the last resort in an objective analysis, whereas explanations, interpretations, or the axiomatics of action would only mean the extending of the spontaneous sociologies of social actors. Investigation of those different perspectives & debates reveals a long-lasting difficulty concerning approaches in the human sciences, emerging doubtlessly under new forms in the current sociology of French-speaking countries, but remaining, to us, former problems that were not or could not be solved.

Romanchenko, Natalya (Academy Innovation Management, 107078 Moscow Russia [tel/fax: 7095-263-9471/267-8635]), **Contemporary Educational System—Sociological Aspects of Interaction between Education and Economics, Politics, and Culture.**

¶ The transformation of the educational system is a leading area of development for the world community in creating a new social reality. The existing educational system, the result of the industrial stage of development, is based on the past & is no longer adequate. It is argued that education in its new quality can serve as an instrument of developing a personality that is not only knowledgeable, but able to understand society & to live in the contemporary world (ie, at peace with nature, other people, & him/herself). A new educational model should be characterized by close interaction with ongoing economic, political, & cultural changes. Such a synthesis would (1) realize models of social development that are based on knowledge; (2) overcome the unfavorable imbalance between rational & irrational in social life; & (3) increase the importance of human individuality & personality.

Romm, Norma R. A. (Centre Systems Studies U Hull, HU6 7SZ England [tel/fax: 01482-859037/466637 e-mail: N.R.Romm@mgt.hull.ac.uk]), **Operating Responsibilities in Sociocybernetics.**

¶ The responsible operation of sociocybernetics implies recognizing that ways of knowing might have an impact on the way in which social issues are understood & addressed. To be able to account for knowing practices, it cannot be presumed that cybernetics offers a detached way of finding out about consequences of pursuing lines of action. It must be admitted that the very ways in which possible consequences are defined or envisaged might have their own impact on the social world; definitions can operate as self-fulfilling prophecies insofar as people believe that these definitions indicate necessary consequences. It is proposed that to operate responsibilities in sociocybernetics means to explore ways of proceeding that are not unduly intrusive on others' understandings about possible consequences of actions. A suggestion is made for concentrating on the "socio" aspect of sociocybernetics to create a responsible approach to the employment of cybernetics in society. Such responsibility requires tying epistemology to ethics at the moment of knowledge creation. Implications of such an epistemology/ethic for developing accountabilities as researchers are explored.

98S35824 / ISA / 1998 / 13065

Romm, Norma R. A. (Centre Systems Studies U Hull, HU6 7SZ England [tel/fax: 01482-859037/466637; e-mail: N.R.Romm@mgt.hull.ac.uk]), **The Process of Validity Checking through Paradigm Dialogues.**

¶ Alternative epistemological views of the process of validity checking are discussed. Validity checking in a realist epistemological orientation suggests that dialogue across perspectives is a process of bringing into confrontation different ways of doing research—to better come to terms with various dimensions of social reality. Derek Layder (1993) adopts this argument when he states that "the accumulation of perspectives will add to the picture that was originally revealed," & the overall aim is to "create robust interpretations & explanations of the empirical area in question." With this argument concerning the building up of robust claims is an alternative epistemological view of the process of paradigm dialogue. This process is regarded as a crucial moment of learning to re-

late to others (including research participants & audiences) through an attitude of fairness so that ways of developing research constructions do not become unduly impositional (eg, see Lather, Patti, 1993; & Romm, 1997). In this approach, paradigm dialogue points to the possibility of developing ethical practices through inquiries. These alternative epistemological orientations & their implications for the definition of dialogue are explored.

Roquet, Pascal (Faculté sciences économiques & sociales CEREQ Lille, F-54655 France [tel/fax: 03-20-43-66-30; e-mail: Pascal.Roquet@univ-lille1.fr]), **Les Formations d'ingénieurs en France: à l'origine de la segmentation du groupe professionnel des ingénieurs** (The Training of Engineers in France: The Origins of the Segmentation of the Professional Group of Engineers). (FRE)

¶ The system of engineer training in France rests on a differentiation of training types that leads to the segmentation of the profession, based on the existence of both central segments, modified slightly or not at all, & flexible segments, often linked to the creation of new training plans. Attention is given to the definition of the nature of this process of segmentation, particularly to the kinds of logic that underlie the fact that certain segments endure or disappear, while others create or transform themselves. The implementation of the nouvelles formations d'ingénieurs (new engineer training) in the 1990s is described as the most recent attempt to produce a new segment stemming from a new mode of training. A "school case" is examined in an effort to understand the nature of this process.

Rosado, Caleb (Rosado Consulting Change Human Systems, 1810 Heartwood Dr McKinleyville CA 95519 [tel/fax: 707-839-4004; e-mail: rosado@humboldt1.com]), **What Is Spirituality? Memetics and Quest for Interconnectedness with the Divine in Human Experience.**

¶ Current discussions of spirituality fail at a definition due to a "Flatlander," horizontal approach, which assumes that spirituality operates on one level of human existence; such is not the social reality. Utilizing the new biopsychosocial-spiritual theory of spiral dynamics, which emerges from two converging streams of thought—primarily, Clare W. Graves's value systems theory of levels of human existence, & secondarily, biologist Richard Dawkins's concept of "memes"—spiral dynamics explores the new science of memetics, the study of ideas & their transmission. Memes are cultural units of information that self-replicate by means of thought contagion, using the human mind as a host, & attach themselves to individuals, organizations, cultures, & societies. The discussion of religion & spirituality is moved here from a horizontal dimension focused on the "what" of human religiousness—the surface issues, ideas, beliefs, & actions, or the little memes, that fragment or unify human groups—to the "why" & "how" of such beliefs—the big memes, or the vertical core value systems awakened by changing life conditions & manifested as a dynamic spiral of levels of human existence. Such an approach results in a new understanding of spirituality as a state of interconnectedness with the Other, which expresses itself differently at each level in a human quest for spiritual connection, meaning, & purpose in life.

Rose, Lawrence E. & Pettersen, Per Arnt (Dept Political Science U Oslo, N-0317 Norway [tel/fax: 47-22-85-5175/4411; e-mail: l.e.rose@stv.uio.no]), **The Legitimacy of Local Government: What Makes a Difference? The Norwegian Experience.**

¶ In the context of Norwegian local government's "crisis of legitimacy," citizen orientations to local government & factors that may influence citizen perceptions of local government legitimacy are explored, drawing on national survey data. Findings show a clear tendency for citizens to place primary emphasis on their role as consumers of public goods & services (in contrast to their role as taxpayers or voters/citizens), & overall satisfaction with local government service provision is a principal factor in shaping citizen attitudes regarding local government legitimacy. Results suggest that, as long as local governments are able to satisfy resident expectations of service delivery, there is no genuine crisis of legitimacy, at least in the short run. However, local governments' position as a political arena in which important policy decisions are reached through democratic institutions may be weakened. Such a consequence represents what may constitute a more serious danger in the long run, especially in the event that local governments are not able to satisfy the resident demands.

Roseuil, Sasha (U Leeds, LS2 9JT England (tel/fax: 44-113-233-4409/4415; e-mail: s.roseuil@leeds.ac.uk)), **Queering the Sociology of Social Movements: Towards a New Agenda for Social Movement Research.**

¶ While the past decade has seen the proliferation of empirical studies of lesbian & gay social movements & communities, mainstream social movement theory remains remarkable silent about sexual identity & the politics of sexuality. Even as social movement theorists have turned toward culture & have broadened their field of vision beyond a primary focus on class-based movements, issues of sexuality have yet to be taken seriously. Here, attention is drawn to the sexual lacunae in social movement theory, outlining how the "queering of sociology" might be carried into the sociology of social movements. A queer-informed sociology of social movements would not just study lesbian & gay movements, identities, & communities, but would also explore the sexual constitution & dynamics of all movements & seek to theorize the impact of changing sexual identities as practiced inside & outside social movements on the late/postmodern social condition. Personally conducted research on the Greenham Common Women's Peace Camp & the women's peace movement is used as an example of queer social movement research.

98S35830 / ISA / 1998 / 13071

Rosenfeld, Rachel A. & Trappe, Heike (Dept Sociology U North Carolina, Chapel Hill (tel/fax: 919-962-1272/7568; e-mail: rachel_rosenfeld@unc.edu)), **How Do Children Matter? A Comparison of Family Formation and Labor Market Gender Inequality for Young Adults in the Former East Germany and the Former West Germany.**

¶ The former West & East Germany differed sharply in their family policies. The goal in the East was to encourage women to be both mothers & full-time workers, while in the West, it was more to enable women to be full-time mothers & perhaps part-time workers. Emphasis on the "breadwinner" role for men in the West, which, along with the supports & constraints for mothers, seems to have been associated with later family formation compared with the East. Here, data from cohorts born in the 1950s & early 1960s to 1989 are used to explore how having children affected labor market outcomes for women & men, as well as how labor market position & potential affected timing of first birth. While only mixed support is found for the hypothesis that economic position would be of greater importance for first birth timing in the West, there were stronger effects of having children on employment outcomes in the West (positive for men & negative for women), many of these mediated by employment extent & intensity for women. This does not mean that having children was unimportant for women's (& men's) jobs in the East, but that the less variable life course led to more societal-wide, rather than individual-level, effects.

98S35831 / ISA / 1998 / 13072

Rosenman, Linda S. (U Queensland, Saint Lucia 4072 Australia (tel/fax: 61-7-3365-7969/7489; e-mail: lrosenman@mailboxvq.edu.au)), **Family and Intergenerational Obligations in Women's and Men's Retirement Decisions.**

¶ Analyzes & compares factors underlying the decision of women & men, ages 50+, to retire from paid employment. It is argued that women's labor force participation is organized around family & parental responsibilities & perceived obligations to partners, & these considerations correspondingly more likely to be a determinant of their retirement decisions than for men. Bivariate & multivariate analyses of data obtained in an interview survey of 640 Australians confirm that women are more likely than men to give family- & spouse-related reasons for leaving

the labor force; eg, care obligations for spouses, older family members, & grandchildren, & need to retire to ensure their partner's eligibility for retirement benefits. There was no gender difference in the perceived obligation to retire in order to create employment opportunities for the younger generation; this frequently given reason reflected perceived societal & intergenerational expectations of the older generation.

Rosenmund, Moritz (Pestalozzianum Zürich, Stampfenbachstr 121 CH-8035 Switzerland (tel/fax: 00411-368-26-33/12; e-mail: moritz.rosenmund@pestalozzianum.ch)), **The Ethnic Dimension in Swiss Educational Research: State of the Art and Evidence from Current Research.**

¶ Examines the research about ethnicity & minorities in Switzerland, which is essentially on reactions of the Swiss population to immigration. In the 1960s & 1970s, working immigrants arrived from the European south, & in the 1980s & 1990s, for more heterogeneous reasons, from the European east & the Third World. Initially, research dealt mainly with xenophobe movements, which forced several referenda aiming at the reduction of foreign population in Switzerland, & the discourse accompanying such initiatives. Later, issues of nationality & nationalism & their relationship to immigration & ethnic minorities, as well as the social construction of alterity, became more pertinent. A national research program, "Migration and Intercultural Relationships," & the establishment of a national documentation center for migration studies indicate a growing demand for systematic exploration of the field. A particularly high interest in the issue of ethnicity may be observed in the field of compulsory education. This becomes manifest in an intense elaboration of statistical materials to document the selectivity of the school system along the ethnic dimension, as well as in a shift of focus from an assimilationist (compensatory education) to an integration perspective. Education is also the field where the impact of research on politics & discourse can be best assessed. Data from a survey of members of local school boards are compared with recommendations by political actors on the federal level. Such effects are quite unevenly distributed between the federal, cantonal, & communal levels of the political system as well as between the linguistically differentiated parts of the country.

98S35833 / ISA / 1998 / 13074

Rosenthal, Gabriele (Faculty Social Work U Kassel, D-12053 Berlin Federal Republic Germany (tel/fax: 49-30-6234483)), **Women in Nazi-Germany. Denying Their Own Entanglement and Veiling the Past of Their Husbands.**

¶ Explores the role of women in the Third Reich's annihilation policy, in the Nazi careers of their husbands, & in the post-1945 policy of concealment within the family. Research to date has confined itself to the role of men as perpetrators, viewing women primarily as victims of these perpetrators. This view corresponds to public & family dialogue on National Socialism. This empirical study of German three-generation families shows clearly that if children & grandchildren consider the possible perpetration of crimes in their family, it is generally fathers or grandfathers who are under suspicion. They only rarely entertain a suspicion of the possible active participation of grandmothers in the persecution & annihilation policy. In the interviewed families, the grandmothers have a decisive influence on the grandfathers' not revealing their Nazi past. There are also indications that some of the grandmothers may have been implicated in National Socialist persecution policies themselves.

98S35834 / ISA / 1998 / 13075

Rosenthal, Gabriele (Faculty Social Work U Kassel, D-12053 Berlin Federal Republic Germany (tel/fax: 49-30-6234483; e-mail: firo0733@mailszrz.zrz.tu-berlin.de)), **Veiling and Denying the Family Past. Families of Holocaust Survivors and Families of Nazi Perpetrators.**

¶ Compares different family constellations based on whether the first generation can be categorized as having been victims or perpetrators during the Nazi period, & examines how family histories that differ dramatically affect the process of transmitting the family past from one generation to the next. Focus is on (1) how the family past is transmitted when family members do not manifestly talk about this past & (2) how family secrets & myths correspond with the collective discourse about the past in Israel & the Federal Republic of Germany. Based on case studies of three-generation families, examined are differences between veiling or denying the family past, & how family myths—in correspondence with collective myths—are created to cover up family & collective secrets. While families of survivors try to avoid visualizing & addressing the

theme of the powerlessness of the victims that they do not deny, families of Nazi perpetrators show a greater need to deny the past & create the myth of having been victims themselves.

98S35835 / ISA / 1998 / 13076

Rossie, Anthony J. (Sheffield Hallam U, S10 2BP England (tel/fax: 44-0-1142252-399/430; e-mail: A.J.Rossie@shu.ac.uk)), **Dialectics and Life History: A Contribution to Narrative Analysis.**

¶ Aspects of hermeneutic theory are developed through a dialectical analysis, drawing on a research project into the lives & experiences of youth workers in the UK undergoing professional training. The project included a series of life history interviews with Phil, a worker in training, both during his training & after he entered full-time work. This life history brought out the impact of personal change & showed how he coped with tragic circumstances in his life. However, these aspects of Phil's life history were also brought out by him in public arenas during the training course. The account shows how a dialectical approach can explore the interlinking of narratives without imposing an external structure. 'Immanent conceptual structure' becomes an important concept. The theoretical analysis argues that hermeneutics continues to be important, but part of its potentiality can be realized through a dialectical approach.

98S35836 / ISA / 1998 / 13077

Rossi, Giovanna (U Cattolica Sacro Cuore, I-20123 Milan Italy (tel/fax: 02-72342275/552; e-mail: sciuro@ntt.it)), **Still in the Nest: Delayed Home-Leaving in Europe and the United States.**

¶ Most major trends in family life in recent decades have moved in parallel in Europe & North America. A good example of this phenomenon is the timing of young adults' exits from the parental home: beginning in the 1980s, the average age at leaving home has increased in most Western countries. This commonality suggests that larger transnational forces are influencing the individual life course on both sides of the Atlantic. By considering home leaving among young adults in an international perspective, one can learn whether there are common material & cultural causes of the changes in this life-course event, eg, variations in age & gender differences at home leaving, disparity of job opportunities, & attitudes about what is necessary for a young adult to establish an autonomous life in transition from higher education to economic independence. Territorial variations, relations between young adults & their parents, & creation of independent families are also mentioned.

Rossi, Ino (Saint John's U, Jamaica NY 10039 (tel/fax: 516-482-7679/773-4980; e-mail: iri@worldnet.att.net)), **Coordination of the Emergency Aid after the 9/26/1997 Earthquake in Central Italy.**

¶ In contrast to the 1980 earthquake in southern Italy, the emergency aid for the Sept 1997 earthquake in central Italy was timely & well organized by the Ministry of Civil Protection. Within 3 days, 40,000+ sleeping places were arranged in tents, train wagons, & public facilities. People in actual need turned out to be an estimated 38,000 or so. Delays were documented in only a small number of localities far away from the epicenter. The Italian government adopted the FEMA approach in coordinating the emergency aid according to functions; some adaptations & changes were necessary. The relocation of victims from tents to prefabricated structures or homes turned out to be a troublesome process because of an early bitter winter, the lack of designated areas for prefabricated structures, the contracting of infrastructures to local (small & ill-equipped) firms, & the insufficient number of containers stored in centralized areas. However, within 3 months, most people who lost their homes had found a place either in containers or in other houses with government subsidy.

Rot, Gwenaële (Centre sociologie organisations, 19 Rue Amelie F-75007 Paris France (tel/fax: 153219699/148782541; e-mail: gwen_rot@netmail.com)), **L'Émergence d'un groupe professionnel chez un constructeur automobile** (The Birth of a New Occupational Group in an Automobile Firm). (FRE)

¶ Examines the emergence of a new occupational group constituted by a kind of working elite, ie, skilled workers whose job consists of organizing the production, assisting other workers, & supervising, drawing on interview & participant observation data compiled at a French automobile firm. In short, it is their responsibility to guarantee the successful realization of lean production & total quality management. An attempt is made to analyze how this "new" category of workers deals with the numerous constraints with which they are confronted & to demonstrate that their emergence perturbs local orders in the organization.

98S35841 / ISA / 1998 / 13082

Roth, Roland (Fachhochschule Magdeburg FB Sozial- & Gesundheitswesen, Maxim-Gorki Str 31-37 D-39108 Federal Republic Germany (tel/fax: 49-391-671-6290/6293; e-mail: Roland.Roth@sozialwesen.fh-magdeburg.de)), **Urban Citizenship: A Contested Terrain.**

¶ In the European tradition, urban citizenship is closely connected with progressive ideas like liberation, social justice, equality, & self-government. Until the 1970s, advances in civil, political, social, & cultural citizenship still occurred first in the city & went beyond the institutional guarantees at the national level. The last 20 years present a different & contradictory picture. On the one hand, there are still progressive developments in all dimensions of urban citizenship—eg, the inclusion of foreigners in local elections; efforts toward social integration of marginalized fringes of the population or new forms of political participation; & services aiming at a more inclusive citizenship for women, elderly, children, or immigrants—often as a result of urban social movements. On the other hand, an increasing fragmentation of urban citizenship can be seen enforced & accelerated by the local state. The urbanization of injustice with an "entrepreneurial city management" & gated communities, the policing of the urban poor, & active marginalization, presented in concepts like the global, divided, dual, or even quartered city indicate crucial changes for urban citizenship. An attempt is made to integrate findings of some recent urban studies in relation to urban citizenship.

Rotkirch, Anna (Dept Sociology U Helsinki, SF-00014 Finland (tel/fax: 358-9-191-7777/7778; e-mail: anna.rotkirch@helsinki.fi)), **Mothers, Daughters and Marriages. The Influence of Mothers and Mothers-in-Law on Married and Love Life in Russian and Finnish Autobiographies.**

¶ Russia & Finland are examples of cultures with both strong agricultural roots & early economic independence of women during industrialization. While there are many similarities between Russia & Finnish women, one big difference lies in the strength & content of motherhood. This difference is approached by looking at the relationship between daughters & mothers (& grandmothers & mothers-in-law) concerning sexual knowledge, the choice of future husband/wife, & the subsequent development of married life. The material consists of autobiographies about love and sexual life collected through autobiographical competitions organized in Finland (1993) & Saint Petersburg, Russia (1996). The biographical narratives are also compared with representative survey data about love & sexual life from Finland & Saint Petersburg. The influence of mothers in Russia seems to be relatively stronger than in Finland due

F

to several factors; discussed herein: (1) the constant Soviet housing shortage that prolonged the (century-old) habit of a young married couple living together with the husband's parents; (2) the development of care of old people & weakened intergenerational ties in Finland vs the tradition of Russian women returning, sometimes for several years, to their natal village or town to care for their old &/or sick mothers; (3) the relatively weaker role of the father in Soviet Russia; & (4) the earlier spread in Finland of cultural & psychotherapeutic discourses (& practices) about youth rebellion & independence.

Roudometof, Victor (American Coll Thessaloniki, GR-54006 Greece [e-mail: victor.kav.forthnet.gr@nefeli.forthnet.gr]), **Nationalism, Globalization, Orthodoxy: 'Unthinking' the 'Clash of Civilizations' in Southeastern Europe.**

¶ While the proliferation of the form of the nation-state is an aspect of the historical process of globalization, adoption of the nation-state form does not imply uniformity in the content of national ideologies; over the last 2 centuries, the global discourses of citizenship & nationhood took local ideologies & national identities in distinctly different directions. Here, development of nationalism among the Eastern Orthodox Christians of southeastern Europe serves as an illustration. In 19th-century southeastern Europe, both citizenship & nationhood were pursued, but specific historical factors led to the success of nationhood. Subsequent national rivalries in the region have been the result of adoption of nationhood as the foundational form of national identity among Eastern Orthodox Christians. Therefore, ethnic conflicts in southeastern Europe have been produced by regional reorganization according to the Western European model of the nation-state, & cannot be attributed to a "clash of civilizations."

Roussel, Peggy (UPRES U Marseille, F-13288 Cedex 9 France [tel/fax: 33-4-91-17-04-44/48; e-mail: roussel@staps.univ-mrs.fr]), **Women Bodybuilders: Blossoming or Alienated.**

¶ Focuses on the process of marginalization experienced by the woman bodybuilder, who passionately entrusts herself with intensive muscle development exercises by taking advantage of highly symbolic "male" principles: muscle worship & strength development. They quickly adhere to a new frame of mind & a new way of life made up of constraints & deprivations & soon become marginalized. How can this detachment from social reality, attraction to the bodybuilding world, & fondness for such a subculture be explained? Two approaches are outlined: (1) a positive interpretation, using a phenomenological approach & the concept of subjectivity, & (2) a negative interpretation, using critical sociology & the concept of alienation. It is shown that, in the bodybuilding subculture, women blossom & gain acknowledgement & social status. If bodies can be considered "commodities," allowing their owners to obtain social status, the concept of "alienation" can be discussed.

Roustan, Josune Aguinaga (Dept Sociología U Nacional Educación Distancia, E-28040 Madrid Spain [e-mail: jaguina@sr.uned.es]), **Social Ecology and Globalisation.**

¶ Behind the globalization phenomenon, which must be addressed reflexively, are hidden environmental questions on which hinges future social organization. Here, it is argued that the field of social ecology has been frustrated in trying to analyze organization because of its ambition & the existence of other disciplines that approached social organization from other points of view. In this sense, works about organizing ecology have focused on formal organizations, eg, administration & companies. But from the globalization perspective, taking the planet as a system, social ecology is obliged to contribute in terms of understanding human equilibrium, particularly in the context of a North-South dialogue.

98S35847 / ISA / 1998 / 13088

Roustan, Josune Aguinaga & Arnau, Domingo Comas (Dept Sociología U Nacional Educación Distancia, E-28040 Madrid Spain [e-mail: jaguina@sr.uned.es]), **Evolution of the Use of Time in Spanish Young People 1976-1996: The Increasing Importance of Factor Organised Leisure Time.**

¶ Results of a 1996 time budget survey of 4,800 Spanish young people (ages 14-24) are compared with those of inquiries in 1976, 1984, & 1988, & the findings are used to analyze major changes in time use & relate them with socioeconomic development, political change, & cultural models. In 1996, a more qualitative analysis of diaries completed ad hoc by a sample of young people was added to the inquiry. This methodology made it possible to determine the mechanisms related to organized leisure time.

Royce, Terry (Teachers Coll Columbia U, 2-22-1 Yoyogi Shibuyouku Tokyo Japan 151 [tel/fax: 81-3-3372-3280; e-mail: columbia@gol.com]), **The Word and Image in Sports Reporting: The Case of "Rugby League Week".**

¶ The Australian sports publication *Rugby League Week* is a typical example of page-based sports reporting that makes extensive use of images in combination with verbal text. The co-occurrence of these visual & verbal modes in *Rugby League Week* is problematized, & an intersemiotic explanation is sought. Drawing on the sociolinguistic theories of Halliday (1978, 1985, 1994) & Hasan (1976, 1985), a social semiotic view of the visual-verbal interrelationship in this magazine is offered, & it is argued that Halliday's theory provides a way of accounting for the visual-verbal interface in such sports-reporting texts. It is further argued that both the verbal & visual modes in *Rugby League Week* co-occur for specific purposes that relate to their relevant contextual configuration, which includes aspects of the content or topic area covered, the relationship between the text authors/graphic designers & the readers, & the conventions of page-based graphic design. An analytical framework is presented & an analysis of a sample article is provided.

98S35850 / ISA / 1998 / 13091

Rozga, Ante (Faculty Economics, Radovanova 13 Split HR-21000 Croatia [tel/fax: 385-21-514552/366026; e-mail: rozga@oliver.efst.hr]), **Family Influence on Smoke Habits, Drug and Alcohol Abuse in Croatia.**

¶ A sampling method was used to investigate not only drug abuse, but also smoking habits & alcohol abuse, among Croatian youth, highlighting relationships between the situation in the family & youth misbehavior. Analysis reveals that these relationships are rather strong, especially concerning parental education, employment status, financial situation, marriage status, behavior in the family, medical situation, smoking status of parents, & use of alcohol. It is concluded that the family situation is very much to blame for youth misbehavior; this is particularly true for smoking habits & alcohol abuse, since youngsters try to imitate their parents. When living without parents or with only one parent, the situation gets worse. Also, strong (tough) education produces more diverse effects than expected.

Rozhdestvensky, Sergey M. (Instit Sociology Russian Academy Sciences, Krzhizhanovskogo 24/35 Moscow 117259 [tel/fax: 007-095-128-79-07/719-07-40; e-mail: sergey@rodes.msk.ru]), **Break in Life Story, What Does It Mean?**

¶ At any moment in time, individuals can find themselves at a given point in social space, defined as an aggregate of social dimensions, ie, different aspects of human life. The researcher's task boils down to a description of the dynamics of an individual's movement in social-temporal space. Changes in an individual's position occur spasmodically in the form of an event, brought about either consciously or accidentally. Dynamics of social environment leave traces to the life trajectories of individuals.

als. What does a "break" (ie, a global societal change) in different aspects of human life mean? What kind of dependence is there between individuals & a "break" in terms of social-economic global societal changes? A new method is proposed to the formalization of life story that can be used to answer these questions.

Ruban, Larisa (Institut Sociopolitical Research Russian Academy Sciences, 32a Leninsky Prospekt Moscow 117334 (tel/fax: 7-095-290-27-75/202-51-44; e-mail: osipov@ipsun.ras.ru)), **The Forced Migration and Conflicts in Poly-Ethnic Regions.**

† Instability & long regional conflicts in North Caucasus promoted development of forced migration of indigenous & *ruskoyazitchnoye* populations to safe regions. Restrictive measures of the Krasnodar, Stavropol, & Rostov administrations directed migration to Astrakhan (its national composition grew from 62 to 105 nationalities). Conflicts developed as a result of the contradictions between the indigenous population & the migrants in the economic sphere. Much of the regional conflict is caused by the general social crisis in Russia, which is illustrated.

98S35853 / ISA / 1998 / 13094

Ruban, Larisa (Institut Sociopolitical Research Russian Academy Sciences, 32a Leninsky Prospekt Moscow 117334 (tel/fax: 7-095-290-27-75/202-51-44; e-mail: osipov@ipsun.ras.ru)), **The Characteristic of the Geopolitical Situation in North Caucasus and Caspian Sea Basin.**

† After the fall of the USSR, the geopolitical situation in the Caucasus sharply changed: Russia lost its dominant power in the region; new independent governments began to orient themselves not in Russia, but in neighboring states; Turkey, Iran, & Saudi Arabia sought the role of regional leaders, & Turkey emerged as prevailing military power; & Islamic factors began to play a considerable role. The main political interest of Russia is to maintain stability in the Russian part of the North Caucasus. At the same time, the Caucasus are a single geopolitical system whose stability can only be ensured by political unity throughout the region. Among the Caucasian states, there is an active geopolitical pursuit of the formation of a single government or confederation, & a concomitant rise in anti-Russian attitudes. The high degree of conflict in the Caucasus & southern Russia is defined by a high ethnic & confessional mosaic. The situation in the Caucasus can be characterized as a crisis in all spheres of life that has sharply raised the level of conflict in the region; ie, transformation of social tension into ethnic tension.

Rubinstein Juan C. (U Nacional LaPlata, Buenos Aires CP 1900 Argentina (tel/fax: 54-1-816-1111/5538)), **Spanish title not provided** (Shifting Cores and Peripheries: Post-Fordism, Societies, Brazilianization and Democracy). (SPA)

† The informational society is one of the consequences of the emergence of new modes of production (post-Fordism) led mainly (but not only) by computers, ie, a complex network of personal computers, as mean introduced into the relations of production &, consequently, developing new qualitative forms of society. The other is its fracturation into the two thirds/one third society, phenomena such as the Brazilianization of advanced capitalism. Both consequences are entwined & form a threefold structure with the process of globalization. The former problem of center-periphery relations has become blurred by a new one. The world system is now upheld in a new axis: those included in the informational or post-Fordist societies, or those excluded from them. This feature could be the main screen of the future in the 21st century. If so, democracy as a way of life & the world society could enter under an umbral cone.

Ruchkin, Boris A. (Institut Youth, 5/1 Youth St Moscow 111395 Russia (tel/fax: 374-57-20/78-78)), **The Youth as a Strategic Resource for the Development of Russia in the XXI Century.**

† Arguing that the concepts "youth" & "the future of Russia" are directly interrelated, explored is whether the postcommunist younger generation is in essence, prodevelopment. Youths more easily than older generations, adapt to new economic conditions; youths are a major source for forming new structures & strata of the private sector. Approximately 50% of young Russians are convinced that Russia should continue market reforms. However, because reforms resulted in poverty for the majority of youths, distrust prevails. Negative trends reduce the role of youths as a social force as well as their population, degrade health conditions, deepen youth marginalization, & reduce youth educational level. In an

unstable society, youths believe in the necessity for dictatorship more than a democracy. Thus, to assess the role of youths under new conditions, it is necessary to be aware that youths are not only the bearers of progressive reform, but are also an explosive factor of social instability. Effective youth policy is advocated.

Ruddick, Sue (Dept Geography U Toronto, Ontario M5S 1A1 (tel/fax: 416-978-1589/6729; e-mail: ruddick@cirque.geog.utoronto.ca)), **Leading a Most Provisional Life: Youth and Youthfulness in Globalizing Cities.**

† An attempt to bring the concepts of youth & globalization into productive dialogue, drawing on an evolving research project begun a decade ago to compare processes of globalization & its relationship to youth in four cities: Los Angeles (CA), Toronto (Ontario), & Berlin & Frankfurt (Federal Republic of Germany). Focus here is on social & spatial practices that "fix" young & youthful identities, & how contemporary tropes of youth & youthfulness have become increasingly part of a global dialogue, not only about cultural productions addressing styles of fun & leisure, but also about policy & institutional configurations contending with schooling, unemployment, & criminality. The comparative nature of this research shows how youth is differently constructed & contested in relation to processes of globalization in each of these cities, & how globalizing tropes about youth & youthfulness are intercepted & reshaped by local institutions, sometimes forming the bases of new imaginaries. Also investigated is how cultures of youthfulness are increasingly emerging around a new international division of labor, contemporary practices of consumption, & new geographies. Explored in conclusion is how cultures of youthfulness have contributed to new social geographies of the city, often expelling adolescents from their midst even as qualities of youthfulness are celebrated.

Rueschmeyer, Dietrich (Center Comparative Study Development Brown U, Providence RI 02912 (tel/fax: 401-863-2367/3700)), **On Cultural Explanation in Macrosociology.**

† The conventional mainstream of social theory is challenged from two opposite sides: the programs of cultural studies & of rational action theory. A partial & modest response to that double challenge is presented, addressing cultural explanations of large social phenomena, not explanations of micropatterns & not the understanding of cultural patterns themselves. A brief examination of rational action theory suggests that it is not viable without being complemented by theories about the determinants of needs & wants, of information & analysis, & of norms & values. In addition, this theory has yet to fulfill the promise of reconstructing macrostructures/developments out of individual action & small-scale interaction. In short, it requires additional theories that could plausibly involve cultural patterns as causally relevant phenomena. Yet, cultural patterns are elusive & subject to variable interpretations. The obvious relevance of cultural patterns & developments & the equally apparent difficulties of dealing with cultural phenomena create a serious dilemma. One possibly effective way of dealing with the dilemma is to look for a number of pragmatic "strategy rules" for analyzing cultural patterns & developments as causally relevant phenomena in macrosocial analysis. A number of such strategy rules are discussed: a focus on carriers of culture; an emphasis on different patterns of articulation & disarticulation between ideas & their socially relevant referents; conditions & consequences of the portability of many cultural items across space & time, & skeptical questions about the coherence & stability of various aspects of national cultures.

98S35859 / ISA / 1998 / 13100

Rui, Sandrine (U Victor Segalen Bordeaux II INRETS, 2 ave Mallereet-Joinville F-94114 Arcueil France (tel/fax: 331-47-40-72-17/45-47-56-06; e-mail: sandrine.rui@inrets.fr)), **Public Debate as a Probation of Citizenship.**

¶ In France, the introduction of phases of public debate in the establishment of infrastructure projects gives the opportunity to various actors to collectively produce the public interest nature of the projects. Here, conditions of the exercise of citizenship today & the induced experience are considered, drawing on observation of the debate prior to the realization of the high speed train "TGV Aquitaine," as well as of collective discussions with protagonists of railway & motorway facility siting conflicts. Focus is on different ways by which the protagonists of the debate consider the modalities of discussion.

98S35860 / ISA / 1998 / 13101

Ruixiang, Guo (Center Integrated Agricultural Development Beijing Agricultural U, 100094 People's Republic China (tel/fax: 8610-62574098/68029447; e-mail: xiaoyun@public.bta.net.cn)), **Gender and Poverty. Microfinance for Rural Women in Yilong Country, Sichuan Province of China.**

¶ Examines gender issues in poverty alleviation through the extension of microfinance, focusing on the UNDP-Yilong model in the People's Republic of China. The formation of women's organizations & groups is the stepping stone toward success in the implementation of microfinance activities. Small loans strengthen rural women's economic role & empower them to expand their capabilities & engage in decision making in the household & the community, participate in public affairs, & involve themselves in the local market. Microfinance is a means to help the disadvantaged transform their subordinate position. However, loans under women's names do not mean that they are managed, & all decisions for their utilization made, by women. Extensive impact analyses on women's attitudes & behaviors, employment patterns, & changes in gender relations in households & the community are needed.

98S35861 / ISA / 1998 / 13102

Russell, Raymond & Hanneman, Robert (U California, Riverside 92521 (tel/fax: 909-787-5444/3330; e-mail: raymond.russell@ucr.edu)), **The Formation of New Enterprises in the Russian Economy.**

¶ Drawing on business registrations & telephone listings data in one Russian city, 1983-1996, both the formation of new enterprises & their choice of legal forms are analyzed. The number of new enterprises in each industry is influenced primarily by the number of preexisting enterprises in the industry, & secondarily by the declared priorities of the Soviet & Russian states. The distribution of specific legal forms, eg, the corporation & the partnership, is influenced internally as expected by firm size, but is also affected by external processes of legitimation centered in the state.

98S35862 / ISA / 1998 / 13103

Ruz Santorras, Monica (Calle Trafalgar 74 2a/1a, E-08010 Barcelona Spain), **Nouvelles Technologies et nouvelles activités artistiques: le cas du disc-jockey** (New Technologies and New Artistic Activities: The Case of the Disc Jockey). (FRE)

¶ An effort is made to reveal the particular features of new artistic professions linked to new technologies, looking specifically at the careers of disc jockeys (DJs). It is held that the profession of the DJ shows the trajectory of a social actor who has taken on a new role in the musical domain. Certain artistic identity traits in the profile of the DJ are identified. This research develops along three axes: a theoretical framework that considers certain sociological models for defining the artist in contemporary society, an analysis of press documents & articles from specialized newspapers, & in-depth interviews with DJs & other agents involved in these professional activities. The classification of the artistic profession into aspects linked to its material configuration & related with the context in which artistic activity is developed & defended, as well as by coincidences with certain profile characteristics & the professional dynamic typical of the artistic prototype, is addressed. It is concluded that the DJ abandons the role of mediator to acquire the role of an author capable of realizing his or her own creations.

98S35863 / ISA / 1998 / 13104

Růžicka, Richard (Dept Sociology Charles U, XR-11642 Prague 1 Czech Republic (tel/fax: 420-2-5818018; e-mail: Richard.Ruzicka@ff.cuni.cz)), **Teacher as a Citizen: A Problem of**

His/Her Social Education.

¶ Analyzes the professional role of educators from the perspective that a teacher (educator) is not a socially indifferent actor of education: he/she is influenced by different processes of his/her own society, acts as a filter of social educational goals, & differently coproduces the social reality. It is hypothesized that the social interventions by education substantially depend on the lifestyle & reproduction profile of this socioprofessional stratum. The existence of both general & specific forms (corresponding with the transforming, postcommunist societies) is reflected at the level of life & professional strategies, value orientations, teaching goals, etc, as well as at the level of educators' social self-reflections. Analysis of data obtained via questionnaire surveys in the Czech Republic, supplemented by comparative research in Japan & the UK, shows a limited, narrow ability of teachers to mediate the mutual life understanding of different socioeconomic & ethnocultural strata/groups. A structured set of social knowledge useful for the socially efficient work of educators is developed.

98S35864 / ISA / 1998 / 13105

Růžicka, Richard (Dept Sociology Charles U, XR-11642 Prague 1 Czech Republic (tel/fax: 420-2-5818018; e-mail: Richard.Ruzicka@ff.cuni.cz)), **Teachers in Changing Social Stratification: Understanding of Own Status, Professional and Life Values and Strategies.**

¶ Judges the present—largely Czech—situation of the socioprofessional stratum of teachers as one of the most (quantitatively) important social segments, in fact, partially representing one of the "black boxes" in the middle class's reconstitution, discontinuity, & continuity. The stratum's situation is evaluated in terms of its inner changes, dispositions, & differences (ie, "subjective" correlates of status) significant for its real active role in the transition from the "society of the state employees." Examined are distinctions & tendencies in how educators understand both their own status & the nature of the whole social context of its forming, hypothesizing that this manner is tightly connected with the professional ability to mediate (transfer) a foreign social experience. Professional & life values, goals, & troubles (conflicts), as well as needs reflected (by in-service educators or students) as either social or personal interests, have come into focus first. Analyses are based on survey data.

98S35865 / ISA / 1998 / 13106

Růžicka, Richard (Dept Sociology Charles U, XR-11642 Prague 1 Czech Republic (tel/fax: 420-2-5818018; e-mail: Richard.Ruzicka@ff.cuni.cz)), **Changes and Inertial Forces of Ownership and Participational Action: Enterprise, School, and Housing Co-Operative in the Czech Republic.**

¶ Presents an empirical & theoretical analysis of the mutual dependence of the ownership & participational systems in transforming societies, describing how to be a private owner as well as an active, democratically behaving worker/employee/citizen. These notions are explored in a case study of the Czech Republic in terms of changes in ownership & participation in the realms of business enterprises, schools, & housing cooperatives, based on questionnaire surveys & case studies of institutions over the last 5 years. Analysis of agents in this structuralized process in terms of their economic/professional & life strategies reveals a lack of self-responsibility. Possible mechanisms of recultivating responsibility are crucial to successful privatization, which involves consideration of common social needs & interests. The so-called tunneling of firms, or actual expropriation under the flag of the cooperative ideology, is also discussed.

98S35866 / ISA / 1998 / 13107

Ruzza, Carlo (Dept Sociology U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel/fax: 44-1206-873-747/410; e-mail: cruzza@essex.ac.uk)), **Sustainable Tourism Development and Supra-National Influences.**

¶ Identifies & analyses elements of the sociopolitical & institutional context that facilitate or hinder environmentally sustainable tourist development, giving particular attention to a comparison of the impact of European-level policy initiatives on national tourism policy in environmentally sensitive coastal areas of Italy, Greece, & Spain. Data drawn from interviews with tour operators, tourists, local business people, & reports on countries across different kinds of environment outcomes are used to consider (1) the extent to which national environmental policy & tourist sector programs are linked at the national & local levels; (2) program implementation at the local level; (3) local determinants of tourist development, eg, the impact of local cultures, developmental strategies of local business & large national investors, political corruption, & environmentalist movements; & (4) changing political opportunity structures at the national & local levels.

98S35867 / ISA / 1998 / 13108

Ruza, Carlo (Dept Sociology U Essex, Wivenhoe Park Colchester CO4 3SQ England [tel/fax: 0171-253-2721/0120-687-3410; e-mail: cruza@essex.ac.uk]), **Selection, Incorporation and the Institutionalisation Trajectory of Four Social Movements.**

¶ Observed on the basis of four case studies is how different types of movements institutionalize in different institutional environments & whether there are common factors in the institutionalization trajectory of a diverse set of movements. In the context of environmental, nationalist, & hippie movements, the following questions are considered: Has the constituency of these movements changed? Has the ideological configuration changed? Has the organizational structure become more bureaucratic? Has leadership stabilized? Addressed is the issue of the impact of different institutional realms in terms of whether (1) movement organizations are referring to different institutional realms becoming increasingly different as time goes on, undermining the unity of a movement; & (2) institutionalization in religious environments is different from institutionalization in markets or politics. It is concluded that the most important determinants of institutionalization are processes of selection & differential incorporation in institutional realms, rather than processes of transformation as predicted by the Michels-Weber theory.

98S35868 / ISA / 1998 / 13109

Ryan, Barbara (Widener U, Chester PA 19013 [e-mail: Barbara.E.Ryan@Widener.edu]), **British and American Cultural Influences. Comparative Analysis of Social Movement Activities.**

¶ Parallels between women's suffrage movements in GB & the US are evident, especially in the militant activism of the Women's Social & Political Union (WSPU) & the National Women's Party (NWP). Notable also are the reactionary outcomes each group suffered: imprisonment, hunger strikes, & forced feeding. Although US women involved in the struggle for the vote in GB took that experience home with them, how much they borrowed is not known. Moreover, the differences between the two groups have been ignored. Here, both the similarities & differences of the two movements are explained through a life history approach based on comparative biographies of Alice Paul (founder of NWP) & Emmeline Pankhurst (founder of WSPU): Paul was a Quaker, while Pankhurst was an atheist; Paul was highly educated & single, while Pankhurst was moderately educated & was a wife & mother. The social/cultural differences of their lives provide the framework to examine the import of gender, ethnicity, & biography in understanding the contrasts that emerged over time in militant women's social activism.

Ryan, Desmond Peter (School Nursing & Midwifery U Dundee, Ninewells DD1 9SY Scotland [tel/fax: 1382-632304/641738; e-mail: D.P.Ryan@dundee.ac.uk]), **Between State Socialism and Folk Medicine: The Cuban Medical Profession in the Special Period.**

¶ Since 1990, Cuba has experienced a catastrophic fall in the size of its economy, requiring a variety of adaptive measures by the political leadership to maintain the legitimacy of the regime. With the coming of the "special period," many of the prerequisites of a modern primary health care service have become hard to come by. Examined here is the revival of folk remedies, which are even being adopted by doctors now deprived of sufficient quantities of modern pharmaceuticals. Such practitioners are put in an unusual position in a globalizing free-market world: They are partly scientifically trained employees of a centralized bureaucratic state, & partly folk healers, who have been historically targeted by scientific medicine for banishment from the scene. Drawing on 1998 library/interview research, examined is the specific quality of legitimacy configurable by medical practitioners working under this unique combination of idea systems. Some implications for the theory of professions are suggested.

Ryan, Paul C. (Dept Sociology University Coll Dublin, Belfield 4 Republic Ireland [tel: 1-7067007]), **The Construction of Irish Sexuality within Religious Education.**

¶ Tells the stories of Irish gay men who have negotiated their sexual identity within institutions that have denied the existence of alternative sexuality, drawing on the intersection between masculinity, homosexuality, & Catholic education in Ireland. Focus is on the experience of students in Catholic boys' schools (The Christian Brothers) & the avenues of resistance they pursued against the dominant discourse of masculinity & sexuality in Ireland at that time. This discourse was reinforced by the religious ethos of the Christian Brothers & their alliance with the Gaelic

Athletic Assoc, a nationalistic sporting organization committed to the physical & moral welfare of Ireland's youth. Drawing on in-depth interviews with a number of men, personal narratives are constructed that provide insight into a previously hidden history. Also drawn on are ideas of Michel Foucault & projects of modernity & postmodernization that parallel accounts of gay & lesbian formation.

Ryzhenkov, Alexander V. (Instit Economics & Organisation Industrial Production Russian Academy Sciences-Siberia, Novosibirsk 630090 Russia [tel/fax: 7-3832-35-55-46/80; e-mail: Ryzhenko@ieie.nsc.ru]), **Feedback Control, Learning and Organisational Change in a System Dynamic Model of Cyclical Growth.**

¶ Interconnections between a relative wage, employment, & capital-output ratios are represented by a three-dimensional system of nonlinear differential equations. Distinct scenarios of evolution are possible. In particular, there exist limit cycles in a vicinity of locally unstable equilibrium that are generated via Andronov-Hopf bifurcation. The internal structure of capital accumulation drives long-wave rhythms. The model has two main & three subordinated feedback loops. The initial main loop connects the relative wage & the employment ratio, the additional main loop of a higher order of complexity—the relative wage, employment ratio, & capital-output ratio. It is shown that the polarity of each feedback control loop can shift back & forth, & the regulation progresses through changing socioeconomic relations. Employers & employees learn that the lack of investment flexibility is detrimental for capital accumulation & well-being. They invent new behavioral algorithms that raise organizational complexity & improve economic efficiency. Such changes in production relations are based on & supported by technological advance. The new stabilization mechanism, however, inevitably brings about additional sources of instability that dominate under certain conditions. Environmental upgrading requires new forms of anticipating control that are presented in the extended version of the original model.

98S35872 / ISA / 1998 / 13113

Saaristo, Kimmo (Dept Social Policy U Helsinki, SF-00014 Finland [tel/fax: 358-9-191-7811/7764; e-mail: Kimmo.Saaristo@Helsinki.fi]), **Ecological Movements and New Expertise.**

¶ Social movements' production of new expertise & knowledge provides new interpretations of reality & often challenges taken-for-granted assumptions of authorities. Ecological movements are not perhaps experts in the old meaning of the word—to which concepts such as institution, profession, & science are related (though there are some movements that are at least semiprofessional-institutional, eg, Greenpeace)—but movements are not merely representatives of everyday knowledge either. Here, this new expertise, or counterexpertise, of ecological movements is examined from three points of view: (1) How is this expertise produced in mass media (the rhetorics & factualization strategies)? (2) What is the basis of the expertise of the movements (eg, experience, science, or ethics)? (3) In what way is this kind of expertise different from traditional, professional expertise?

Saaristo, Kimmo (Dept Social Policy U Helsinki, SF-00014 Finland [tel/fax: 358-9-191-7811/7764; e-mail: Kimmo.Saaristo@Helsinki.fi]), **Three Dimensions of the Ecological Way of Life: Spiritual, Rational and Political.**

¶ Argues that the ecological way of life is not only about trying to live an ecologically sustainable life & to organize consumption accordingly. The choice of the green lifestyle can be seen as one way of avoiding a sense of meaninglessness in life & searching for ontological certainty & internal stability. Nature is then understood in a Durkheimian way as something sacred. However, this does not necessarily lead to mysticism or to irrational behavior. A critical dimension of green lifestyle lies in its resistance against technological & scientific rationalism, while its own activity is oriented toward a kind of value rationalism: ecological rationalism. Ecological rationalism means, on the one hand, that all activities are evaluated in relation to their impacts on the environment, & this is regarded as the measure of rationality, & on the other hand, that all projects affecting the environment operate under moral prohibitions & regulations. There may be a political dimension in the ecological lifestyle, as well. Is it possible to see a choice of a lifestyle as a political act, & if so, is the concept of "life-politics" appropriate?

98S35874 / ISA / 1998 / 13115

Saarniit, Jüri (Tartu U, EE-2400 Estonia (tel/fax: 372-7-465926/465900; e-mail: jysr@psych.ut.ee)), **Current Trends of Post-Communist Value Shift in Estonia.**

Examines intergenerational changes in value consciousness of Estonian youth, 1992-1997, in terms of postcommunist value shifts, drawing on questionnaire data from graduates from 9-year & secondary schools in 1992 (stratified random sample, N = 1,676) & 1997 (N = 4,882). The respondents estimated the importance of 11 educational & 10 vocational values on a 4-point scale. Factor analysis indicates that both blocks of indicators measure five generalized value orientations, ie, toward general self-development, professional self-development, social altruism, social position (status), & material welfare. Previous Estonian value studies have indicated that between the early 1980s & 1990s, intercohort value shift was extremely intensive & characterized by a decrease of orientations toward general self-development & social altruism & an increase in orientations toward material & status values. Comparison of the 1992 & 1997 data indicates that the value hierarchies of school graduates have not yet stabilized, but some intergenerational trends have changed during the last 5 years. The decrease of orientation toward general self-development & altruism has stopped, while the orientations toward status & material values continue to increase.

Sabour, M'hamed (Dept Sociology U Joensuu, FIN-80101 Finland (tel/fax: 358-13-251-232/2714; e-mail: Mhamed.Sabour@Joensuu.fi)), **The Brain Mobility and Sociocultural Competence in Mainstream Cultures: A Study of Highly-Educated Finns in France.**

Analyzes how highly educated Finns cope with situations in foreign societies & deal with individuals who represent other cultures, other values, & other strategies of interaction, especially those of the mainstream. Focus is on whether Finns have the social, communicative, cultural, & scientific competences to encounter the Other & to confront the cultural diversity. It is argued that, in the case of Western European countries, there is rather a question of brain mobility, circulation of ideas, & internal expatriation than of brain drain. The discussion is based on interviews with 83 highly educated Finns (eg, professionals, teachers, intellectuals, artists, students, writers) residing in France. Results show that, in the fields of science & technology, the Finns are as competent as the French; however, they have major difficulties in tackling the cultural & social requirements & etiquette of the French society. Their social & cultural competence is often deficient to such extent that it hampers their studies, business, & relationships with the natives. Various psychological, educational, & sociohistorical factors may explain this deficiency.

98S35876 / ISA / 1998 / 13117

Sabourin, Paul & Briand, Milène (Dept Sociology U Montreal, Quebec H3C 3J7 (tel: 514-343-7505; e-mail: sabourin@generation.net)), **D'où proviennent les univers socio-sémantiques? (Where Do Sociosemantic Universes Come From?). (FRE)**

An analytical method for analyzing the documentary corpus is said to proceed from the description & analysis of the sociosemantic universe according to J. Molino; but questions are raised about the origins of this universe as determined by researchers. Whether it is established from an internal analysis of documents or results from the coconstruction of the documents' meanings by researchers is considered. It is argued that, to advance the methodological problematics of the construction of the sociosemantic universe, the practical epistemology of J. C. Gardin should be used in the analysis of the documentary corpus. A life-story analysis was submitted to researchers at various levels of experience, who were assisted by the NUDIST program, which conserved the traces of the operations undertaken on the document at the moment of data construction, for description as well as analysis.

Saganenko, Galina (Instit Sociology Saint Petersburg, 7th Krasnoarmeyskaya 25/14 198052 Russia (fax: 7812-3162929; e-mail: lena@gallup.spb.su)), **Ecological Reflection of Russian People about the Objects of Different Levels (the Research in St. Petersburg).**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

The divergence of annual survey data from Russians revealing very low weights of ecologically significant statements with those of other researchers inspired development in 1996 of a means to better understand ecological consciousness in Russian society. The first step was to study the structures of people's attention to an object without emphasis on particular dimensions. Then the structures of ecological representations were identified & studied, yielding survey questions focused on ecology & environment directly. These questions centered on the system of different level objects: the world, Europe, country (Russia), city (St. Petersburg), people (around the respondent), & respondent. Open-ended questions yielded significant information personally formulated by respondents (N = 250-300 persons per local survey). To analyze the thousands of responses, the software CAIR was developed to organize & transform databases with mixed information. An English version of CAIR is now available.

98S35880 / ISA / 1998 / 13121

Saganenko, Galina (Instit Sociology, Bolshaya Morskaya 47-1 Saint Petersburg 190000 Russia (tel/fax: 7812-3122534/3154359; e-mail: lena@gallup.spb.su)), **Ecological Reflections of the Russian People.**

Empirical studies of mass ecological consciousness in the former USSR & Russia were well represented in the early 1990s. However, the last 5-7 years have seen serious transformations in the mind of the Russian people. The subjective component of ecological security in Russia has lessened, significance of the ecological topic has decreased & current attention of the people is focused on social, not ecological, problems. Findings of earlier surveys have become obsolete, although, even in their own time, their results were biased, substantially inflating the ecological awareness & concern of the Russian people. Results obtained in comparative surveys were difficult to interpret, because countries close to each other in relation to their ecological situation & level of development appeared to be quite different.

98S35881 / ISA / 1998 / 13122

Saganenko, Galina (Instit Sociology, Bolshaya Morskaya 47-1 Saint Petersburg 190000 Russia (tel/fax: 7812-3122534/3154359; e-mail: lena@gallup.spb.su)), **Opportunities of Open-Questions Research and Software "CAIR".**

Discusses qualitative research based on open-ended questions, with substantiation made via the software, CAIR (Kanevsky, Eugene & Saganenko, Galina), for analysis & comparison of research with textual, mixed, & complicated information. The substantiated type of research is based on systems of relevant objects & questions, which gives textual sets that permit joining qualitative & quantitative potentials, with different, mixed, & unusual results. The methodical characteristics, cognitive potential of the research, & relevant situations of using open-ended questions are analyzed systematically. Principles & ways of inductive, optimal, & comparative classification & revealing structures of objects/notions are shown; eg, the main dimensions of the global objects (the world, Europe, Russia, Saint Petersburg, etc) in people's attention are revealed, & comparative systems of ecological notions & anxiety connected with these objects are described.

98S35882 / ISA / 1998 / 13123

Saganenko, Galina J. & Kanevsky, Eugene A. (Instit Sociology, Bolshaya Morskaya 47-1 Saint Petersburg 190000 Russia (tel/fax: 7812-3122534/3154359; e-mail: lena@gallup.spb.su)), **Comparative Text Analysis with Software "CAIR"**.

¶ Presents CAIR software, useful for managing qualitative research with evidential potential. CAIR can manage textual, numerical, & mixed information & can (1) store; (2) manipulate (with chunking, "sampling" of chunks, fields, records, & obtaining different dictionaries); (3) classify; (4) analyze; (5) compare textual sets within a single research project & between sets from different project; & (6) statistically process numerical & quantitative data. CAIR's core is its classification model providing optimal, evidential, comparative classification results. Its technological features include classification schemes for several textual arrays that can be iterated, checked, corrected, & transformed into optimal structure; & ability to search proper classes for chunks by formal comparisons & choose classes according to their sense in dialogue. Its applications are discussed.

Saha, Suhrita (Dept Sociology Jawaharlal Nehru U, New Delhi 110067 India), **Globalization and Hindu Nationalism: Impacts on Contemporary Social Process in India.**

¶ While globalization seeks to widen thought & action toward the free & liberal universalization of society & economy, the emerging trend of Hindu nationalism in India, apparently, seems to be a marginalized social & political process in this context. But its de facto impacts may lead to a strong Hindu nationalist feeling of strengthening the nation & society. In the long run, it may open a wider avenue toward the globe, global society, & the globalization process, because Hinduism is a liberal philosophy of a way of life, the essence of which lies in globalized harmony & brotherhood of mankind. There may be some negative aspects when it is considered from the secularistic point of view. This complex social process & its relation to contemporary India are examined.

98S35885 / ISA / 1998 / 13126

Sahlin, Ingrid (Dept Sociology Lund U, S-22100 Sweden (tel/fax: 46-46222-4748/4794; e-mail: Ingrid.Sahlin@soc.lu.se)), **Conflict Interaction and Crime. Some Outcomes of Contact-Prohibition Orders.**

¶ In Sweden, prosecutors may prohibit an individual from contacting a person whom he or she has previously harassed or abused. Violations of such contact prohibitions are crimes that may lead to arrest & imprisonment. The aim here is to highlight features in private, emotional relationships that are subjected to judgments & measures from the criminal justice system. It is argued that this situation affects the parties' real interaction, as well as their construction of their previous relationship. Within the framework of an evaluation of the current legislation, 12 in-depth interviews conducted with individuals involved in prohibition orders—most of them as applicants, some as targets—were transcribed & analyzed with qualitative methods, mainly within a symbolic interactionist frame of reference. Three related issues are discussed: (1) The parties start to act with an eye on how their acts will appear to, & be judged by, the criminal justice system. (2) They react to & interpret the other party's behavior in a different, sometimes paradoxical, way: new instances of harassment may even be welcomed, because they evidence the culpability of the other, while the other's silence & withdrawal are perceived as false & calculating. (3) The parties reconstruct their previous relationship as one imprinted by the other's criminal essence.

Sahni, Isher-Paul (Dept Sociology McGill U, Montreal Quebec H3A 2T7 (tel/fax: 514-934-2573/848-4539; e-mail: ISHER@vax2.concordia.ca)), **'The Will to Act': An Analysis of Max Weber's Sociology in the Light of Goethe's Fiction.**

¶ Max Weber's "Protestant Ethic" & "Vocation" essays are interpreted in light of Johann Wolfgang von Goethe's fiction, *Elective Affinities*, *Wilhelm Meister*, & *Faust*. Drawing on the themes that frame the latter's novels, the importance of experience, renunciation, & a specialized vocation, which underlie the "will to act," is developed. From there, it is shown that these themes reemerge in Weber's sociology & conceptualization of self-conscious determination. Goethe's view of social action required devotion to a vocation that contributed to the growth & vitality of community. It will be argued that Goethe's view of social action was also the source of the empowerment framing Weber's sociology in general & his understandings of managerial social action in particular.

98S35887 / ISA / 1998 / 13128

Saintive, Brigitte (Electricité France, 1 ave du Général de Gaulle F-92141 Clamart Cedex France (tel/fax: 33-1-47-65-39-77/57-00; e-mail: brigitte.saintive@edf.gdf.fr)), **L.U.C.A.S. Une Méthode rapprochant les concepteurs et les utilisateurs (L.U.C.A.S. A Method Bringing Together Designers and Users).** (FRE)

¶ In the context of task & product standardization, whereby a fragmented production process led to a deepening gap between user expectations & those perceived by designers, described is LUCAS (users & designers linkage) methodology, developed at Electricity of France. Based on active & iterative participation of users at the start of a new product design & introducing psychosociological & organizational factors to be accounted for at that stage, users & designers are brought together to reduce failures & underexploitation in product use, facilitate mastering of innovation by future users, & optimize the manufacturing process.

Sakurai, Célia (Instit Estudos Econômicos/Sociais/Políticas, São Paulo Brazil (tel/fax: 55-11-8647500/2631606; e-mail: idesp@eu.ansp.br)), **Imigração japonesa no Brasil: um exemplo de imigração tutelada, 1908-1941 (Japanese Immigration to Brazil: An Example of "Tutored" Immigration 1908-1941).** (POR)

¶ Japanese immigration to Brazil, 1908-1941, exemplifies a form of immigration oriented as much to the country of origin as to the host country. During this period, the Japanese immigrants in Brazil received subsidies & other help from the Japanese government to help them succeed, explaining their rapid social ascent.

98S35890 / ISA / 1998 / 13131

Sala, Luc (Weesperstr 103, NL-1013 VN Amsterdam Netherlands (tel/fax: 3120-620-2970/625-3280; e-mail: sala@euronet.nl)), **The Paradox: Megabandwidth and Micromedia.**

¶ Explains how the increase in bandwidth in media like TV, cable, & the Internet not only leads to media-oligopoly, but to a whole new class of media, "micromedia," the low-budget, locally made, but sometimes globally interesting, productions for local TV/radio, public access, real-audio/video via the Internet, webcasting, or cd-roms. A whole new class of mediaentrepreneurs is emerging, using the latest digital technology but aiming at the tribal target-group level. Special interest, local democracy, cross-cultural exchange, the micromedia cosmos is just beginning to emerge, but will be a major force in the next millennium. The simplicity of this concept of micromedia, brought back to the level of true information, not merely data exchange, is in sharp contrast with the scenarios

S

of even-expanding global extropy & technology push. The basic function of media is argued to be to reconnect people with their roots, which are far more local & tribal than the mass media seem to assume. This micro-media concept is clarified & illustrated by an outline of a business approach for small local initiatives as implemented in countries like Bulgaria by associates of the author's MySTeR channel. The importance of these small media cells on local awareness, community pride, democratic interaction, & a feeling of rootedness goes well beyond modest business goals, & could be a major factor in social change.

Salaff, Janet & Hardwick, Deborah (Centre Urban & Community Studies U Toronto, Ontario M5S 2G8 (tel/fax: 416-201-1113/978-7162; e-mail: salaff@chass.utoronto.ca)), **Teleworking Mothers and Fathers: How Control over Time and Place of Paid Work Determines the Ways in Which They Do Childcare Work.**

¶ Investigates the influence of the job on how parents juggle paid work & child care when they telework, ie, give up dedicated space in a central office & work from home using telecommunications technology. Drawing on in-depth interview data from 21 teleworkers (employees in low-/middle-management or sales jobs in one large telecommunications firm) who are parents of children under age 12, jobs are categorized as "hot" or "cool" depending on interdependence, communication with co-workers, & job structure. For both male & female teleworkers, the amount of control over the time & place in which they do their paid work determines how they take care of their children. Teleworkers with cool jobs have more control over time & place of work & can perform a wider range of child care work than those with hot jobs. Although there are gender differences in child care work, these differences are no greater than expected among a similar sample of non-teleworking parents. Findings are illustrated with cases of 2 male & 2 female teleworkers in both hot & cool jobs.

98S35892 / ISA / 1998 / 13133

Sales, Arnaud A. (Dept Sociology U Montreal, Quebec H3C 3J7 (tel/fax: 514-343-7310/5722; e-mail: sales@ere.umontreal.ca)), **The New Challenges of the Employment Markets for Knowledge Workers.**

¶ Until the mid-1980s, the employment market for knowledge workers was a relatively stable system that was interwoven with job sequences differentiated essentially by initial specialization & job positioning. The result was relatively impervious job trajectories & a highly segmented & generally secure labor market. The major changes affecting the practices of individuals, companies, & governments in the new international liberal economy have had a major impact on the structure of the job trajectories of knowledge workers. Several trends in the restructuring of these trajectories are examined: increased individual education cost; differentiated profitability of training programs; the feminization of jobs; new market-related risks; development of alternative work arrangements; consequences of the downsizing of the public sector on employment; globalization of labor markets & integration of intellectual work into global networks; & international competition in professional services. Several conclusions are based on the RELANCE study of the employment markets for recent graduates of Quebec universities in 100+ fields of specialization, in comparison to the situation in 1982.

Sales, Tereza (Center International Migration Studies UNICAMP, Rua Tingui 273 São Paulo SP Brazil 05620-000 (tel: 55-11-842-22-17; e-mail: tsales@uol.com.br)), **The Construction of an Ethnic Identity: Brazilian Immigrants in Boston, USA.**

¶ Examines the ethnic identity construction of Brazilian migrant workers to Boston, MA. The immigrants work in the less-qualified jobs, eg, as dishwashers, housekeepers, hotel chamber maids, or nursing assistants for elderly persons. Also discussed is the community's identity construction as a hard-working people, differentiating itself from the other ethnicities, ie, "hispanics".

98S35894 / ISA / 1998 / 13135

Salles, Leila Maria Ferreira (Dept Educação UNESP IB Rio Claro, São Paulo, 13506-900 Brazil (tel/fax: 19-5340244/5340009)), **The Social Representation of the Adolescent and of Adolescence in the School Environment.**

¶ Semistructured interview data from teachers, principals, proctors, & pupils in four public schools in São Paulo State, Brazil, are used to explore the social representation of the adolescent & adolescence to consider how this representation integrates in the daily relations of the school.

Findings indicate that components of this social representation articulate among themselves around the notion of adolescence as an age of less responsibility, living life freely, & doing only what one wants. There is a social representation shared by all segments analyzed, but no consistency in terms of specific attributes; eg, regarding themselves, adolescents describe their doubts, uncertainties, & desires, which do not fit in the general social representation & may skew the perception of the concrete person, thus influencing interpersonal relations (eg, teacher-pupil).

Salles, Maria do Rosario (Instit Estudos Econômicos/Sociais/Políticos, São Paulo Brazil (tel/fax: 55-11-8647500/2631606; e-mail: idesp@eu.ansp.br)), **Imigração estrangeira para o Brasil: os profissionais dentro da corrente migratória. O exemplo da experiência migratória dos médicos italianos em São Paulo no período de 1890 a 1930** (Immigration to Brazil: Professionals in the Immigration Current. The Example of the Immigration Experience of Italian Doctors in São Paulo in the Period from 1890 to 1930). (POR)

¶ Presents a historical analysis of the immigration experience of the Italian doctors who came to São Paulo, Brazil, during the general immigration wave, 1890-1930, highlighting the overlooked situation of professionals in the mass of agricultural workers. The processes of integration & assimilation are explored as the Italian doctors confronted ethnic challenges & technological & occupational differences in the practices of their Brazilian counterparts. Their roles in shaping Brazilian medicine & public health & fighting epidemics are also analyzed.

98S35896 / ISA / 1998 / 13137

Salmi, Minna (National Research & Development Centre Welfare & Health, PO Box 220 FIN-00531 Helsinki Finland (tel/fax: 358-9-3967-2117/2201; e-mail: minna.salmi@stakes.fi)), **Combining Work and Family Life: The Challenge of Extending the Perspective.**

¶ Reconciling work & family life is a key issue in present societal development because it combines three fields that intersect both in everyday life & as fields of policy: working life/work policy, family life/social policy, & gender/equality policy. The point of departure here is in everyday life. The everyday life perspective means an attempt to understand how people transform the social conditions of everyday life into lived everyday life, & how people's different ways of coping with the social conditions create, on their part, new conditions for everyday life, thus creating continuity or change. Gender is seen as a process affecting everyday practices. If one takes everyday life with its gendered practices as a perspective for examining working life, four dimensions are noted that should be addressed: (1) The life-totality perspective is lacking when employees are viewed as simply that, not people with family or outside lives. (2) Gender blindness prevails, with little attention given to the effect of gender on working life. (3) Working life is presupposed to be gender neutral, which is not the case; if one looks at the everyday practices in working life, one notices their gendered & gendering character. (4) The interacting preconditions & consequences between the fields of working life, social policy, family life, & gender equality are often not accounted for. Current trends in working life & social policy in Finland with respect to women's & men's equal participation in both working & family life are analyzed, based on results of a survey of employees' experiences in 11 workplaces. 6 Tables.

Salmikangas, Anna-Katriina (Dept Social Sciences Sports U Jyväskylä, SF-40351 Finland (tel/fax: 358-14-602-038/031; e-mail: salmik@palo.jyu.fi)), **Involvement, Society and Sport.**

¶ There has been more talk than action regarding the involvement of citizens in Finnish society. Many factors (eg, less confidence in the democratic system, lack of public financial resources, new methods of organizing the production of services) have forced the local government to find new ways of getting its citizens involved in the decision-making process & in taking the initiative. Involvement creates so-called social capital, ie, the capability of citizens to act in their society in such a way that they bear responsibility for their own lives & the common good. Involvement is initiated at the local level by creating ways for citizens to become & remain involved. In this kind of society, involvement opens a real possibility for realizing the interests of citizens. Involvement is based on information, consultation, decision making, & implementation. A case study is presented in which sport has been a key to deepening involvement & arousing people's interest in matters other than sports.

Salmon, Claire & Rospabe, Sandrine (Centre étude & recherche développement international U Auvergne, F-63000 Clermont-Ferrand France (tel/fax: 33-0-4-73-43-12-23/28; e-mail: C.Salmon@cerdi.u-clermont.fr)), **The Power of Trade Unions: Why Is the Experience of Developing Countries Interesting?**

¶ The emergence of trade unions is linked to Bangladesh's & South Africa's industrialization process, & the impact of unionization on wage determination & racial discrimination is considered. Econometric results tend to show that in South Africa, trade unions seem to have contributed to reduced wage inequalities & discrimination. It is in the nonunionized sector that the wage gap between white & black workers is the largest. Research on Bangladesh shows that trade unions play a part in public & private wage determination & in the improvement of working conditions.

Samandi, Zeyner (Economics & Social Studies & Research Center, 23 rue d'Espagne 1000 Tunis Tunisia (tel/fax: 2161-244810/343237)), **Femme et pouvoir politique: le paradoxe démocratique** (Women and Political Power: The Democratic Paradox). (FRE)

¶ The specific relationship between women & political power is discussed, focusing on Western & Muslim contexts. It is determined that the best indicator of this relationship is not the democratic or authoritarian character of a society, but rather its modernist or traditionalist features. The coupling of modernity & democracy is held to have made possible the fight for women's rights, but not to have established the equality of the sexes in a direct & immediate fashion. It is contended that the coupling of modernization & authoritarianism, conversely, has induced a feminism of the state that has pushed the feminine question into the center of the political project, permitting a striking historical shortcut toward the promotion of the feminine condition.

Samuel, Nicole J. (Institut universitaire technologie U Paris V, Bourgnon-la-Reine F-75270 Cedex 06 France (tel: 33-1-47-01-35-34)), **Theatre in the Western World: Traditions, Interactions, Influences.**

¶ Examines the development of contemporary functions of theatrical traditions in the Chinese, Indian, & Western civilizations. Each is characterized by a specific mode of conceptualization: reciprocal mode of acting/interacting in the Chinese root/binaries yin/yang; a symbolic mode evident in the Indian preference for the embodiment of transcendental values represented symbolically; & an efficient mode evident in the Western preference for dichotomous distinctions that polarize subject vs object & self vs Other, with a humanistic concern for the value of the individual. Highlighted are the main trends common to Western theater throughout its history, showing specific characteristics that may have appeared in different Western places in different times & identifying influences from one area to another across time. At the same time, the understanding of Western area theatrical tradition is facilitated by seeking influences from parts of the world classified as landmarks along the Silk Road, ie, China & India. Evaluating whether Westerners' relationship to the theater is of a specific kind & can be identified by an emphasis on the individual & oppositions with the subject & self in the context of contemporary theater participation. Such signs of specificity in the history of Western theater are also noted here.

Sanchez de Roldan, Karem (U Del Valle, Cali-Valle del Cauca Colombia (tel/fax: 554-24-60/70; e-mail: deroldan@chasqui.univalle.edu.co)), **Organizaciones empresariales y empleo en el valle del cauca. La década de los 90** (Organizations and Employment in Valle del Cauca Colombia. Decade of the 1990s). (SPA)

¶ Presents the main features of organizational change in Valle del Cauca, Colombia, as a reflection of the global dynamic of the entire country. This change has been influenced by the stress of an open market economy, political & social issues, changes in the employment structure, & a new profile of highly trained professionals without employment. Analysis is based on interviews with human resources managers & directors, as well as national statistics. The new technologies in both the industrial & service sectors & the increase in working people in the third sector are the most important variables in the unemployment rates, increasing the gap between labor supply & demand.

Sánchez Súcar, Antonio (Iberia Airlines Spain, Velazquez 130 8a Blq VI E-28006 Madrid (tel/fax: 587-7059/7180; e-mail: ansanchez@servcoiaa.recol.es)), **The Environmental Balance and the Performance of Social Systems.**

¶ The relationship between economic growth & the environment has become relevant to understanding the prosperity of societies. As economic development tends to be more intensive, pressure on natural resources increases, in such a way that the concept of sustainability prevails in an emerging culture where growth is envisaged in the long term. The action plan for sustainable development, "Agenda 21," adopted by the international community recognized its grounds on worldwide production & service processes. Thus, industry & business environmental management are quickly becoming a key factor to demonstrate company-wide overall performance. Social responsibility must include environmental responsibility, accounted in the social balance at the corporate level. This view of enhanced balance must be provided with adequate methodology & criteria to establish interrelation flows between production companies, environment, market forces, & social organizations. Since the inherent basis for company survival is economic profit, accountability systems must be developed to integrate these flows in the social & financial balances. Environmental indicators & risk assessment must be established within environmental management, as well as cost of diagnosis, & preventive & corrective actions, driving a decision-making process based on cost/benefit analysis. The methodology will comprise why companies should proceed to the internalization of external costs generated & how the market is expected to regulate the process via prices. The role of public & administrative organizations in redistributing economic efforts & environmental & social goals in the production system, via taxes & charges or subsidies based on the polluter-pays principle, is outlined. A vision of the problem from the perspective of the air transport sector is provided.

Sanchez, Ximena, Villarroel, Gladys & Fernández, Francisco (U Playa Ancha Ciencias Educación, Valparaíso Chile (tel/fax: 56-32-28-1134/5041; e-mail: xsanchez@unplaced.upa.cl)), **Projections of Basil Bernstein's Thesis for the Study of the Communication Codes among Chilean Children.**

¶ Socialization as the first way to incorporate the individual into society is done mainly through language. For this reason, Basil Bernstein says that people learn social types of linguistic codes—elaborated & restricted—according to their syntactic & semantic elements. Each of these codes is ascribed to social classes: elaborated to middle & higher classes & restricted to lower classes. These linguistic codes are related to family social structure in terms of how roles & authority are exercised. Moreover, Bernstein states that school institutionalizes the elaborated code, so that lower-class children are more prone to school failure. Secondary analysis of 239 cases confirms that Bernstein's thesis is valid for the Chilean reality. Thus, Bernstein's theoretical statements become a valuable tool to understand or explain the learning process, school achievement, & social inequality.

Sandoval, Gerardo A., Mangahas, Mahar & Guerrero, Linda Luz (Social Weather Stations, PSSC Bldg Commonwealth Ave Diliman Quezon City Philippines 1101 (tel/fax: 63-2-924-4465/920-2181; e-mail: swstech@sws.org.PH)), **The Social Situation of Filipino Youth: A National Survey.**

¶ National survey gathered in 1996 are used to evaluate the attitudes, values, needs, aspirations, & problems of Filipino youth. Findings reveal that youths are proud to be Filipino & put great importance on marriage & family, friends, education, work, religion, society, & money, while not stressing recreation, hobbies, or politics. Comparative analysis with surveys of US youths indicates that Filipino youths have more self-confidence & satisfaction with life; get along better with parents & neighbours; get together with friends less often, but are as satisfied with these relationships as Americans are; & are more content with educational opportunities, standard of living, & jobs. However, Filipino youths get less exercise & are less exposed to TV & movies. Compared to adult Filipinos, youths consider the economy as the country's most pressing problem, but think that they can do little about it. They smoke & drink less, regard their health as good, feel happier, & are more optimistic. Yet, data show unexpectedly high incidences of youth involvement in criminality, illegal drug use, & illicit sex.

98S35908 / ISA / 1998 / 13149

Sanguineti, Gualtiero (Centro studi San Salvador Telecom Italia, San Marco 4826 I-30124 Venice (tel/fax: 39-41-521-3254/2742; e-mail: sanguineti@cstudi.telecomitalia.it)), **Will Time Stress Help the Diffusion of Teleservices in Italy?**

¶ Analyzes segments of the Italian population who feel under time stress with regard to their attitudes toward the new teleservices made available by progress in communication technology. An attempt is made to identify the discriminate characteristics that differentiate time-stressed people who either see the new teleservices as possibly alleviating their problem vs those who do not consider this possibility.

Santos, Hilda D., Baonati, E., Trumper, E., Tropp, A., Sánchez, C. & Kaufman, C. (Instit Investigaciones U Buenos Aires, 1053 Argentina (tel/fax: 54-1-501-6241/432-0121)), **Knowledge of the Use of Birth-Control Methods.**

¶ Explores knowledge about contraception among 249 adult & 233 adolescent women participating in 96 sexual information discussion groups conducted 1995-1997 by the Adolescents Dept & the Family Planning Office as part of a research-action program using qualitative techniques. The analysis considers knowledge of ways of taking the pill, using condoms, taking injections, practicing coitus interruptus, observing fertile days, using intrauterine devices (IUDs), & alternatives. Results show that knowledge of contraception is based, in most cases, in personal experience & social environment. It is a practical knowledge, based on the at-

tempts to solve the problem of pregnancy control, showing more features of common sense than scientific knowledge. It is concluded that, to lead patients to the correct use of chosen birth control method, the physician must first find out the knowledge they bring along so as to avoid running the risk that they repeat certain strategies that might make the method fail. The negative effects of poverty, which limits access to safe contraceptive methods, are highlighted. Health policies that guarantee correct information & use of birth control methods to all people are urged.

Santos, Myrian S. (U Estado Rio de Janeiro, 20550-013 Brazil (tel/fax: 55-21-5877746/2284049; e-mail: myrian@uerj.br)), **The Liberating Power of Bodily Needs and Pleasures in the Schools of Samba.**

¶ Discusses the notion that carnival loses utopian dimensions & the power of inverting established social classifications & hierarchies as it becomes spectacularized. Drawing on historical & empirical research on the practices of the samba schools of Rio de Janeiro, Brazil, it is argued that, although these organizations have been deeply intertwined with politics, market interests, illegal numbers-racket organizations, & more recently, drug trafficking, they also keep the redeeming powers of sexuality, laughter, & forms of mutual assistance. Carnival is Rio's major celebration, & what seems to be a homogeneous spectacle is, in reality, an encounter of different meanings, gestures, & desires. Transvestitism, public nudity, & sexual imagery, which are interdicted during the whole year, acquire the right to be exhibited as "natural" features. At the same time, sensual practices associated with the syncopated rhythm of samba, enacted by black & impoverished people, raise community feelings long suppressed from contemporary life. These features do not necessarily entail a specific agenda based on a critique of political & economic structures, but hold strong political power, because they expand the perceptions of bodies & feelings & increase the scope of freedom.

Santos, Roseli Rocha dos (Federal U Paraná, 80060-000 Curitiba PR Brazil (e-mail: roseli@humanas.utpr.br)), **La Cordination économique et les institutions. Des approches convergentes entre la sociologie et l'economie? (Economic Coordination and Institutions. Convergent Approaches between Sociology and Economics?). (FRE)**

¶ The use of the sociological concept of the institution by the new institutionalist branch of economics is discussed. It is argued that studying institutions has become expected of neoinstitutionalists, who are obligated to resolve theoretical problems relevant to the coordination of economic activities at both micro- & macroeconomic levels. Whether this is leading to a convergence with sociology is explored through an analysis of the neoinstitutionalist economist Douglass North, whose approach is compared to those of Émile Durkheim & Max Weber. The question of the coordination & rediscovery of institutions in economic theory is investigated, as are differences & similarities in economic & sociological methods.

Sanz-Menendez, Luis (CSIC Instit Advanced Social Studies, E-28014 Madrid Spain (tel/fax: 34-1-521-9169/8103; e-mail: lsanz@iesam.csic.es)), **Policy Change and Institutional Reforms in Science and Technology Policy in Spain: Ideas, Interests and Institutions.**

¶ Explores the relevance of interest, ideas, & institutions for the policies & politics of science & technology & how they could help explain political outcomes. An empirical approach is presented, theoretically driven by neoinstitutionalism, to account for the institution reforms & for the changes in science, technology, & innovation policies in Spain. The approach taken aims to make sense both of innovations & the boundaries or limits to the changes in Spanish science, technology, & innovation policies; it is a historical account that is searching for the connections among policies over time & for the transformation of policy domains, through the study of links between ideas, political institutions, political actors, networks of experts, & social interest. Hence, how opportunities for innovation arise & the range of policy options available are examined. Ignoring any of the three main variables will result in an incomplete explanation of human actions & a lack of interesting questions about policy changes & innovations.

Sarantakos, Sotirios (Charles Sturt U, Wagga Wagga New South

Wales 2678 Australia (tel/fax: 02-69-332260/332792; e-mail: ssarantakos@csu.edu.au), **Husband Abuse and Self-Defence.**

¶ To examine the thesis that husband abuse is a form of self-defence of wives fighting against their abusive husbands, interview data were obtained from 68 abused husbands, one of their children (age 15+), one of the wife's parents, & the wife. Incidents of violence reported by the husband were contrasted to those reported by the wife. The findings suggest that the family environment of abused husbands is marked by fear, despair, powerlessness, & demoralization imposed & sustained by the wife. It is also suggested that wives inflict violence on their husbands repeatedly & over long periods, & that many wives admit to abusing their husbands for reasons other than to defend themselves &/or their dependents from imminent danger. Parents & children reported that husband-to-wife violence rarely occurs & is impossible & inconceivable.

98S35914 / ISA / 1998 / 13155

Saraswathy, S. (Sociology Dept Annamalai U, Annamalai Nagar 608002 India (tel/fax: 04144-21136/23080)), **Modernization, Family Change and Inter-Generational Relations—A Study in Tamil Nadu, India.**

¶ Argues that the elderly, with their experience, are the best persons to train younger generations at the lowest cost: they represent an ideal tool for human resource development without massive funds. In India, individuals & families are caught between tradition & modernity, which sometimes leads to ambivalence in attitudes toward the use of knowledge & experience of the past in solving the problems of the present. The role & status of the aged vary with the degree of societal modernization. Examined here is the relationship between attitudinal modernity of the aged & their living arrangements, contact with children, mutual assistance, & as grandparents. Data obtained via an interview schedule with a modernity scale from 300 elderly in Chidambaram, a town in Tamil Nadu, India, reveal that elderly with more modern outlooks prefer to live close to their adult children, but in separate households. The relationship between the generations are, by & large, more meaningful & stable when separate households are maintained.

Sarget, Marie-Noëlle (25 Ave Bolviller, F-91800 Brunoy France (tel/fax: 331-60460129/49542688; e-mail: annales@emess.fr)), **With Some French Authors, towards a Systemic Approach in Sociology.**

¶ Argues that sociology's definition of itself at the beginning of the 20th century closed it inside of limits that impeded its progress in the explanation of social facts. Here, through the works of some contemporary French authors, an attempt is made to demonstrate how systemic principles can help sociology overcome these limits. Beginning with Émile Durkheim, it is shown that sociology's concept of the social fact excludes recursivity, time, the individual, & the investigation/object relation. Analyzed next is the position of Erhard Friedberg, whose microsociological analysis leading to intervention is, on the contrary, based on the substitution of the social part of the actor, more or less determined, by a strategic concept where the actor is viewed through his or her "acting concrete system," leading to a controversy about the status of the theory. Yves Bar-el's positions in "*Le Paradoxe et le système*" (The Paradox and the System) are also reviewed, focusing on its opposition to the common position about the place of the element in the system, & its paradoxical concept of the system & its reproduction. Considered in conclusion is Edgar Morin's concept of auto-geno-pheno-eco-reorganization, which permits the "living" character of social systems to be taken into account at the same time in their genesis & their environment, in a continual autoconstruction process. The revolutionary character of these approaches in helping break the previous freezing of sociology, especially in its relationship with other social science disciplines, is acknowledged.

98S35916 / ISA / 1998 / 13157

Saris, Willem E. (U Amsterdam, NL-1012 DL Netherlands (tel/fax: 31-20-525-2091/2086)), **The Strength of the Causal Relationship between Living Conditions and Satisfaction.**

¶ In social indicator research there are three quite contradictory theories concerning the relationship between living conditions & satisfaction. The livability theory suggests a strong causal relationship between the living conditions of people & their satisfaction level. The comparison theory & the multiple discrepancy theory do not expect strong causal relationships between the living conditions & satisfaction levels on the individual level because people make their judgments not on absolute levels of living conditions, but by comparison with other people & situations. There is sufficient evidence to support the last two theories, because it has been found

repeatedly that the relationship between variables characterizing the living conditions of people have very weak relationships with satisfaction on the individual level. Although evidence supports theories arguing that the satisfaction of individuals is not strongly affected by the living conditions, an attempt is made to prove the opposite. Several possibilities are outlined.

Sarkar, Mahua (Dept Sociology Johns Hopkins U, Baltimore MD 21218 (tel/fax: 410-516-7626/7590; e-mail: moa@jhu.edu)), **Gender, Religion, Class, and the Imagining of the Indian Nation.**

¶ The particular appropriation of Muslim women by an elitist & fundamentally Hindu nationalist movement in late colonial India is examined. The feminist position is taken on the centrality of gender in nationalist discourse, with praxis as its point of departure. However, it also draws on theories of nationalism & postcolonial theories to highlight the simultaneous importance of gender, religion, & class in the process of nation building. It is argued that Muslim women were denied even the partial incorporation as symbols of the emerging nation granted to Hindu women because of their religion. Negative representations of Muslims in general, & Muslim women in particular, were used throughout the 19th century as yardsticks of backwardness & traditionalism against which the achievements of the "modern" women of the new nation, coming mostly from the Hindu middle & upper classes, could be measured. Feminist theories do not adequately explain the exclusion of women coming from certain sections of the middle class from this process of nation building. In the Indian subcontinent, this exclusion is based on religion; in a different geographical or political context, it could be race. It is argued that no theory of gender can be adequate if it cannot accommodate large groups of women who belong to a racial or religious minority in a nation-state. Articles from the late 19th & early 20th century, extant studies, & interview data from Muslim & Hindu women in India & Bangladesh are drawn on, focusing on colonial Bengal.

98S35918 / ISA / 1998 / 13159

Sarries Sanz, Luis (U Pública Navarra, E-31006 Pamplona Spain (tel/fax: 48-169-446/833; e-mail: sarries@si.upna.es)), **La flexibilización organizativa y su impacto en la generación de empleo** (Organizational Flexibilization and Its Impact on the Generation of Work). (SPA)

¶ The present research examines organizational changes in 30 enterprises of Navarra (northern Spain), most of them multinational enterprises. Since the economic crisis of 1991/92, the productivity of these enterprises has increased, but the market is flexible, with many fluctuations in demand for workers. While employment has risen, it is precarious for many because of the market flexibility. There are new forms of employment, in accord with new forms of business organization: work on Saturdays to enjoy more holidays throughout the year, part-time work, less overtime, substitution of old workers after retirement for young workers, etc. The trade unions initially opposed these new forms of organization, but now are open-minded & cooperative.

98S35919 / ISA / 1998 / 13160

Sassen, Saskia (Dept Urban Planning Columbia U, New York NY 10003-6608 (tel: 212-854-8495; e-mail: Sassen@columbia.edu)), **Whose City Is It? Globalization and the Formation of New Claims.**

¶ Argues that place is central to the multiple circuits through which economic globalization is constituted, focusing on one strategic type of place for these developments: the city. Such a focusing allows specification of a geography of strategic places at the global scale, places bound to each other by the dynamics of economic globalization. This is referred to as a new geography of centrality, & one of the questions it engenders is whether this new transnational geography also is the space for a new transnational politics. It is argued that elements of such a new transnational politics can be seen both among those with power—global corporate capital—and those who lack power but have today gained presence—disadvantaged people, eg, immigrants, refugees, & cultural minorities.

98S35920 / ISA / 1998 / 13161

Sassoon, Anne Showstack (School Social Science Kingston U, Kingston upon Thames KT1 2EE England (tel/fax: 44-0-181-547-2000/7388; e-mail: anne.s@kingston.ac.uk)), **Public, Private, Shifting Sands: Gender and the Welfare State.**

¶ Argues that the spatial metaphor of public & private is being undermined both theoretically & empirically, particularly in reflecting on

S

changes in gender identities & relations with regard to the challenges confronting welfare states. Both theoretical advances, in particular from feminist scholars, but also going back to thinkers like Antonio Gramsci, & empirical transforamtions, eg, the changed socioeconomic roles of women & men over the life cycle, force a focus on the fuzzy borders between concepts & realities of public & private, & hence, on the necessity of reinterpreting their significance. Some of these issues are explored from the perspective of contemporary social & political debates in GB, & to a lesser extent, in other European & non-European countries.

98S35921 / ISA / 1998 / 13162

Sastre Guittierrez, Marta & Enguita, Mariano F. (Dept Sociology U Salamanca, E-37071 Spain (tel/fax: 34-9-23-294695/294713; e-mail: mfe@gugu.usd)), **Community Participation in the Local Arena: A Case Study.**

¶ Analyzes the workings of the Social Council of Salamanca, Spain, & the perceptions & attitudes of its partners. Social Councils are participatory organisms integrated by local authorities; public services officials; & representatives from neighborhood, women, youth, elderly, & other local nongovernmental organizations. They are intended to bridge formal democratic local authorities & baseline organizations. In a more profound sense, they represent an attempt to conciliate two conceptions of democracy: representative & participatory, suffrage-based & commitment-based. Further, they can be seen as a device for (1) decisionmakers to know the demands of the public, test the climate of opinion, negotiate projects, & avoid conflicts; & (2) community leaders to gain legitimization before nonmembers, offer public services, & obtain funds & other resources. However, both sides regard each other as potential intruders & remain eager to protect what they consider their unique advantage: up-down authority or bottom-up authenticity.

98S35922 / ISA / 1998 / 13163

Sastre, Cayo (Dept Sociology U Valladolid, E-47011 Spain (tel/fax: 34-83423378; e-mail: cayosas@eco.uva.es)), **The Political Transition in Spain: A Demobilized Society.**

¶ Spain's transition to democracy, which was underpinned by an agreement among elites with broad scope for negotiation, enhanced by the existence of a politically demobilized society, is examined via analysis of the nonconventional political participation of Spanish society, 1975-1978, as reported in the *El Pais* newspaper. An attempt is made to show that it was the demobilization of predemocratic society that enhanced the strategy of change designed by Spain's political elites. It is concluded that (1) Spanish citizens demanded the broadening of some political rights & improvement in quality of life as opposed to deep political & economic changes, & (2) Spanish society was not mobilized either in favor of democracy or to maintain the Francoist regime.

98S35923 / ISA / 1998 / 13164

Sauer, Birgit (Institut Political Science U Vienna, A-1090 Austria (tel/fax: 0043-1-40480-684/683; e-mail: birgit.sauer@univie.ac.at)), **Democratisation within or against the State? Theoretical Concepts of the State and Institutions within Feminist Dialogue.**

¶ Outlines, in connection with Ernst Bloch's diagnosis of feminist politics at the beginning of the century, a concept for the analysis of institutionalization as a feminist democratization strategy. Equal opportunity politics in the Federal Republic of Germany is a good example of how (feminist) movements successfully "invented" new institutions in state administration. The example, however, shows the problematic aspects of the paradoxical institutionalization of feminist politics & aims. This paradoxical institutionalization gets even worse in times of state transformation & deregulation (lean state). An analytic framework is posited to understand the blockades of feminist collective action through & in equal opportunity state institutions in Germany, combining analysis of state bureaucracy inspired by a Weberian but gender-sensible approach & a reconceptualized neo-Gramscian state concept in a feminist perspective. Equal opportunity politics then can be examined as a "position for negotiation" in the state & feminist movements as a locus of critique in the state setting.

98S35924 / ISA / 1998 / 13165

Sauli, Hannele (Statistics Finland, SF-00022 Finland (tel/fax: 358-9-17343497/1734356; e-mail: hannele.sauli@stat.fi)), **Personal Consumption of a Household Member vs His/Her Cost at the Household Level.**

¶ Directly observed personal consumption per the 1994/95 Finnish Household Expenditure Survey (N = 4,500 households) is contrasted

with other concepts used in research on the cost of a child. Statistical comparisons between fathers, mothers, & children of different ages by different income levels & household structures show consistent generational patterns in personal consumption: parental share is rather insensitive to the number of children or income level, whereas the children's share is very dependent on these factors. The distribution of economic resources by gender inside a household fluctuates with age: school-age girls spend more than boys & smaller girls, & mothers spend less than their male counterparts. Of all household expenditures, 66% are nonpersonal at all income levels. Assumptions of the equivalence scales are discussed in light of the findings.

Sausmikat, Nora (Freie U Berlin, D-14195 Federal Republic Germany (tel/fax: 49-30-627-17-33; e-mail: sausmi@zedat.fu-berlin.de)), **Different Kinds of Resistance in Retrospective Accounts of Women Who Participated in the Great Proletarian Cultural Revolution (People's Republic of China).**

¶ Analyzes different sources such as recently published women's autobiographies, narrative interviews, scientific papers, & popular literature on the topic of the *Zhiqing* (urban educated youth who were sent to the countryside during & after the revolution) in the People's Republic of China, to look at this mass movement as a historical event that had a formative influence on the conscious & collective identity of a whole generation. Examined is the social transition caused by these historical events by investigating the relationship between today's collective & individual reflection. Focus is on the different kinds of resistance against being stigmatized as a group of victims or being functionalized into socialist heroes as reflected in women's retrospective accounts. Against a backdrop of different stereotypical lifestyles, individual ways in which women relate their lives are considered, drawing on Gabriele Rosenthal's method & theory.

Sautu, Ruth (Institut Gino Germani U Buenos Aires, 1426 Argentina (tel/fax: 541-555-3257/962-9942; e-mail: postmast@mmdv.fsoc.uba.ar)), **The Effect of the Marketization of the Argentine Economy on the Labor Market: Shifts in the Demand for University Trained Professionals.**

¶ In Argentina, the transition from a highly statized to an open market economy has taken place simultaneously with its integration into Mercosur. Examined here are the effects of technological change & transnationalization on the shifts in the demand for labor by age, gender, & education; & changes in the patterns of employment & unemployment among professionals & other groups, 1991-1997. Data are drawn from four household surveys carried out in the Buenos Aires metropolitan area & cover the measurement of the initial effects of privatization & anti-inflationary policies, a date of high unemployment, & what may be considered the last stage of transition.

98S35927 / ISA / 1998 / 13168

Sautu, Ruth (Institut Gino Germani U Buenos Aires, 1426 Argentina (tel/fax: 541-555-3257/962-9942; e-mail: postmast@mmdv.fsoc.uba.ar)), **The Effects of Family Background and Type of School on Children's Grade Repetition and Achievement.**

¶ Evaluates the association between family standard of living, type of school, & school achievement among seventh-grade elementary school students in metropolitan Buenos Aires, Argentina. School achievement is measured by children's grade repetition & test scores in language & mathematics, & the independent variables by type of school (public-private), teaching facilities, teacher's training & attitudes, children's family standard of living, & parents' education. Survey data obtained from teachers, headmasters, & children are subjected to individual-level analysis & compared to aggregate measures of repetition rates & dropouts. Policy implications are addressed.

Savitch, Hank V. (Urban Studies Instit U Louisville, KY 40208 (tel/fax: 502-852-7929/4558; e-mail: HVSAVI01@ULKYVM.louisville.edu)), **Ten Cities, Thirty Years: A Study of Transition.**

¶ Explores how 10 cities in North America & Western Europe, chosen by virtue of highly differentiated patterns of development, accommodated urban pressures since the 1960s. Examined is how strategic development in these cities dealt with pressures of urban transformation, ie, deindustrialization, suburbanization, & globalization. Different develop-

ment outcomes in these cities are attributed largely to structural factors that refract market conditions & political factors. Comparison of these factors leads to a development typology, which explains why & how cities follow various strategic paths & how those paths can determine differential outcomes.

98S35929 / ISA / 1998 / 13170

Sawyer, Peter R. (CETL U Albany, NY 12222 (tel/fax: 518-442-5333/4567)), **Socialization to Civil Society.**

¶ Civil society is being promoted as an antidote to degenerative forms of individualism & as a space in which dilemmas of collective action can be overcome. Even though the field of political socialization has investigated the significance of civil society to patterns of voting & related political behaviors, no research has served to investigate the socialization patterns that lead to participation in civil society & the pursuit of enlightened self-interest. Through the use of life histories, descriptions of both the citizens who model these sociopolitical practices as well as the patterns of socialization that lead to the practices are provided. It is found that the socialization practices begin early in the family & continue to develop through other mediating institutions. This process of socialization & the inherent sociopsychological development that accompanies it can be conceptualized as a "civic career." The civic careers of participants are marked by certain values & attributes including the valuing of education, self-reliance, responsibility, honesty, civility, hard work, competence, & value of social life over materialism.

98S35930 / ISA / 1998 / 13171

Saxena, Pradeep K. (Dept Public Administration U Rajasthan, Jaipur 302004 India (tel/fax: 0091-141-313260/362018)), **Regulation and the Market: A Study of Primary Capital Market and the SEBI in India.**

¶ The entry of transnational corporations, foreign direct investments, & strategies of capturing the markets promoted the primary capital market in India; but scams, frauds, & failures of companies resulted in a loss of investor trust. Efforts made by the SEBI (acronym not defined) to promote the market proved not only futile but also negative, as regulatory policies were opposed, & consequently, the primary capital market folded. Explored here are the policy options, regulatory institutional network, & market sentiments & responses that were ignored, focusing on relationships between the market & institutions, & how good policies failed by the regulatory institutions in developing economies. Such a regulatory system is unable to understand corporate governance.

98S35931 / ISA / 1998 / 13172

Saxena, R. K. (Dept Sociology Durgar Coll, Bikaner 334001 Rajasthan India), **Development and Welfare Policies in Rajasthan, India.**

¶ Examines the process of development, in terms of both positive gains & negative experience, in the wake of government social intervention in a village & an urban area in Rajasthan, India. Analysis reveals that, although the participation of local nongovernmental organizations has typically been confined to carrying out assigned tasks (eg, training for rural youth), infrastructure in both these areas has, over the long term, been strengthened & has benefited all concerned. However, this has been at the price of a sense of dependence that shows up clearly in terms of peoples' expectations of government to provide roads, power, water, education, health facilities, communication networks, & job opportunities. Further, the development process has not succeeded in wiping out traditional economic & social practices, eg, distillation, the flesh trade, "irrational" expenditures on life cycle-events, & customary relations of domination. While local government has defended its willingness & capacity to solve all sorts of problems, it has been ineffective in challenging the traditional power structure.

98S35932 / ISA / 1998 / 13173

Sayer, Andrew (Dept Sociology Lancaster U, LA1 4YL England (tel: 44-1524-594201; e-mail: A.Sayer@lancaster.ac.uk)), **Moral Economy: A Missing Dimension of Cultural Economy.**

¶ Argues that the turn to culture in sociological studies of economic practices has suffered from a neglect of the moral dimensions of culture & economy. Cultural values include moral norms & sentiments: ignoring them leads to a bland & uncritical economic sociology & to a cultural studies that is complicit in the aestheticization of moral-political values. The concept of moral economy is intended to highlight how economic practices are influenced by moral norms & how these, in turn, are compromised by economic forces. These concerns were seamlessly combined in much 18th- & 19th-century thought. Their subsequent divorce reflects

the disembedding of economic processes, the instrumentalization of cultural values for economic ends, & what Jürgen Habermas terms the colonization of lifeworld by system—in turn reflected by a shift from questions of validity to questions of behavior. It is argued that this divorce needs to be challenged by an approach to cultural economy that spans formal & domestic economic activities & looks at moral economy as herein defined.

Sayre, Nathan F. (Dept Anthropology U Chicago, IL 60637 (tel: 520-908-9631; e-mail: sayre@cicero.spc.uchicago.edu)), **Producing a State of Nature: The Buenos Aires National Wildlife Refuge and Henri Lefebvre's 'State Mode of Production'.**

¶ Transformed from a ranch after purchase by the US Fish & Wildlife Service in 1985, the Buenos Aires National Wildlife Refuge in southern AZ provides an empirical case for examining three key concepts taken or derived from Henri Lefebvre: the production of space, the production of nature, & the state mode of production. Drawing on anthropological fieldwork & archival research, the spatial practices of wildlife management & outdoor recreation are examined, particularly in contrast to those of ranching. The refuge, understood as an expression of the state mode of production, defies the oppositions—public/private, state/economy—that structure its self-representations & reception among local citizens. The production of nature—in this case the restoration of a previously degraded ecosystem—simultaneously legitimates the state & ratifies the logic of the "free" market. Nevertheless, the density & complexity of "superimposed & interpenetrating social spaces" on & around the refuge, most of them regulated by a state agency, testify to the ecological limits intrinsic to state-capitalist production.

98S35934 / ISA / 1998 / 13175

Scatamburlo, Valerie L. (Dept Sociology York U, North York Ontario M3J 1P3 (tel: 1-415-222-0514; e-mail: Valeries@yorku.ca)), **Alienation, Consciousness and the Dissolution of the Subject.**

¶ In recent decades, a predominant theme animating poststructuralism & postmodernism has been the status of the subject. Various "post-al" discourses, have, despite their differences, converged to some extent to deconstruct, decenter, &, in some cases, dissolve the seemingly unified, rational, & essentialist subject bequeathed by the Enlightenment legacy. Some have declared the egregious extermination of the subject, others have posited it as a mere function of discourse or as a fragmented entity incapable of knowing itself. These formulations, however, reveal major limitations, not least of which is the jettisoning of the concept of alienation. Indeed, as Jameson has aptly noted, the "alienation of the subject" has been displaced by the "fragmentation of the subject," & several postmodernist theorists have dismissed Karl Marx's notion of alienation because it allegedly presupposes a coherent sense of self that is, in their estimation, no longer plausible. However, this displacement of alienation has serious political ramifications in that the loss of the alienated subject would seem to preclude the conscious construction of alternative social visions; this is due, in part, to the postmodern proclivity of undermining another important Marxist formulation—the notion of consciousness. These issues are explored, & it is argued that many contemporary theorists have failed to grasp the complexity of Marx's conceptions of the self & alienation.

Schechter, Stephen B. (U Montréal, Québec H3C 3J8 (tel/fax: 514-987-3000/4638; e-mail: r11140@er.uqam.ca)), **Classics, Canons, Postmodernity and Phenomenology.**

¶ Proliferation of theoretical paradigms in 20th-century social science can be seen as a reflection of the societal shift from modernity to postmodernity & as a response to the deeper crisis of the European sciences formulated in the phenomenological critique. After a century of claims for continuous paradigmatic shifts, a consensus is emerging that can best be seen in the debate between the critical & systemic approaches to contemporary society understood as postmodernity. This debate can also be viewed as the contemporary reformulation of the debate among the founding fathers (Karl Marx, Max Weber, Émile Durkheim). Its strength lies precisely in its ability to place itself in the classical tradition & so put the competing paradigms can also lay claim to synthesize maverick discourses in the social sciences, eg, psychoanalysis, but not the only one, as cultural studies assert claims to cross-boundary integration. Such a reading of the current sociological map aims to clarify the disciplinary task.

Schittenhelm, Karin (Institut School Pedagogy & Sociology Education Free U Berlin, D-14195 Federal Republic Germany [tel/fax: 49-30-3212367; e-mail: Kas@zedat.fu-berlin.de]), **Social Inequalities and Cultural Diversities: A Cross-Cultural Approach to the School-to-Work Transition of Young Women.**

¶ Explores conditions that cause either social mobility or social exclusion in the school-to-work transition of young women, based on an empirical study of young women from East German, West German, & Turkish immigrant populations in Berlin, Federal Republic of Germany. Despite a plurality of youth cultures & lifestyles, the effects of social inequalities on attaining vocational qualifications or entering the labor market cannot be overlooked. Different types of diversity are discussed in relation to distinct types of social inequality, linked with gender, ethnic origin, or involvement in the transformation of a postcommunist system. A theoretical assumption is that the pathways between school & the labor market are influenced by resources & strategies provided by intergenerational transmission & by the development of new orientations & values through peer group networks. Data collected through group discussions & life-story interviews reveal distinct social inequalities & cultural diversities are interrelated as a result of different social backgrounds & their influence on the process of transition.

Schmitt, Sylvia Maria (Political Science Institut U Marburg, D-35032 Federal Republic Germany [tel/fax: 49-6421-284363/288991; e-mail: schmitts@mail.uni-marburg.de]), **A Fatalistic Apathetic Mass? Political Participation of the Urban Poor in Ivory Coast.**

¶ In the context of the Ivory Coast's shift from a one-party to a multipar-

ty system, democratization is explored in terms of its impact on the representation of interest & political participation of the urban poor, drawing on 1995-1997 questionnaire & participant observation from four squatter camps. Findings are used to identify internal explanatory factors for political participation & representation of the urban poor. On the one hand, it is important to point out the influence of the sociocultural & economic background & means of action of individuals living in squatter camps. On the other, the former one-party system has created a political culture that still influences & limits options for political action & participation. Examination of conflict situations, eg, evacuation of the squatter camps, illustrates political action strategies used by single actors as well as the whole squatter camp population. Analysis of cleavages between the urban poor & the state clearly shows the continuity of a dominant logic of the one-party system, including the poor's conformist behavior toward the system. It also means that forms of political action & participation still depend on state rules & a specific political culture. However, a change is becoming visible in schemes of action & reaction: democratic rules have been adopted to a certain degree.

98S35941 / ISA / 1998 / 13182

Schmuck, Hanna (Institut Social Anthropology Free U Berlin, D-14195 Federal Republic Germany [tel/fax: 49-30-838-3508/6728; e-mail: schmuck@zedat.fu-berlin.de]), **Floods in Bangladesh: Disaster or Part of the Lifeworld? European Engineers' Perception, Knowledge and Techniques in Comparison to Local and Indigenous Knowledge and Strategies.**

¶ Media reports on Bangladesh mostly concentrate on disasters—cyclones, tornadoes, or floods, in which thousands of people are killed. From a Western perspective, Bangladesh seems to be a catastrophe-ridden country. This conception of the country's problems & needs brings forth such development projects as the Flood Action Plan (FAP), which aims to control the water level of the country to protect people & infrastructure from floods by different kinds of river training structures. FAP is coordinated by the World Bank & financed by 14 Western governments. Its projects concentrate on the Brahmaputra, one of the world's largest rivers. German, French, & Dutch companies are presently building different kinds of test structures to find measures to control this river. FAP planners define floods as catastrophes & the inhabitants of Bangladesh as their helpless victims. They believe that structurally technical measures should be used to prevent this whim of nature. Questioned here is whether the rural population perceives floods as a disaster. Also, what knowledge & strategies have they developed to cope with flooding. Further, how do local perceptions, knowledge, & strategies differ from the Western engineering approach, & do the two "knowledge cultures" have common aspects? Answers to these questions are suggested, based on extensive research among European engineers working on river training projects. The theoretical framework draws on phenomenological sociology, the sociology of knowledge, the sociology of disasters, & development theory.

98S35942 / ISA / 1998 / 13183

Schnaninger, Markus, Are Organizations Simply Too Complex to Be Understood?—The Simplicity of Complexity.

¶ Argues that understanding complex systems in terms of gaining deeper insight into the generative mechanisms underlying the autopoiesis of a social system is a must. System methodology opens new paths to disclosing & shaping causal structures that generate patterns of behavior. This is illustrated via experiments based on organizational cybernetics & system dynamics theories.

98S35943 / ISA / 1998 / 13184

Schoenberg, Susanna (Dept Sociology U Milan, I-20124 Italy [tel/fax: 39-2-760-74387/15104; e-mail: schoenberg@mail.sociol.unimi.it]), **Poverty, Women and the Loss of Youth.**

¶ The material prosperity of South Tyrol, a northern Italian region, is based on both its political autonomy & on ethnic characteristics that could develop its tourism industry. It is important to underline the collective material richness of the area to interpret poverty there as a marginal, antihistorical phenomenon, primarily among women. The poverty careers of young women are quite similar to those of their mothers, & will probably be reproduced in their daughters. An important factor in female poverty careers is the repression of youth as the biographical chapter that "makes the difference" in the determination of individual social opportunities. The negation of youth usually begins with a difficult childhood in a problematic family frame. Young women miss school, have to

work early, abandon their problematic families, get married, & have children without experiencing their own youth. It is argued that young women's poverty is connected with an anticipated adult responsibility, where missing one's own youth involves missing important resources for adult life, often leading to addiction & antisocial attitudes. Analysis of young female biographies includes comparison with biographies of poor women of the same area belonging to older generations.

Schölkopf, Martin (Faculty Administration Science U Konstanz, D-78457 Federal Republic Germany (tel/fax: 7531-88-2604/2381; e-mail: Martin.Schoelkopf@uni-Konstanz.de)), **Long-Term Care Services for the Elderly: At the Periphery of the Welfare State?**

¶ Explores whether the frail elderly have been increasingly marginalized & treated only at the periphery of the welfare state, based on empirical information on the development of home care services & residential care facilities in the Federal Republic of Germany. Findings indicate that the number of places in residential care has remarkably increased during the last 3 decades; the same is true for the number of staff in home as well as in residential care. The expansion of care services for the elderly took place even in times when other social policy programs faced severe cutbacks. In attempting to identify the determining factors of this development, it is argued that the expansion of long-term care services for the elderly in Germany is not the result of the impact of powerful lobby groups, but is the result of the combined effort of politicians driven forward in need of the votes of the elderly & of bureaucrats committed to improving the quality of the services & programs they administer. In this sense, the analysis underlines the significance of state actors as independent agents of social policy change.

98S35945 / ISA / 1998 / 13186

Schorr, John K., Boudreaux, Angela S., Nixon, Sara Jo & Vincent, Robert D. (Dept Sociology Stetson U, DeLand FL 32720 (tel/fax: 904-822-7246/7245; e-mail: jschorr@stetson.edu)), **The Relationship between Perceived Social Support and Perceived Psychological Distress: Oklahoma City Firefighters Two Years after the Alfred P. Murrah Federal Building Bombing.**

¶ Reports results of a 1997 mail survey of Oklahoma City (OK) firefighters who participated in the rescue & recovery efforts after the 1995 Alfred P. Murrah Federal Building bombing. Examined are social-psychological outcome variables, eg, perceived levels of depression, irritability, fear, & anxiety among the firefighters, & analyzed is how type of work (eg, rescue, body recovery, support) & types of social & emotional support received since the bombing are related to current perceived outcomes. Findings indicate that perceived levels of social-psychological distress are currently relatively low, & type of work after the bombing was not a significant factor. However, social & emotional support from coworkers, the community, & fire department management & administration were significantly related to lower levels of perceived social-psychological distress. The theoretical & practical significance of the findings is discussed.

98S35946 / ISA / 1998 / 13187

Schreiber, Michael F. (Dept Marketing Economics & Business Administration U Vienna, A-1090 Austria (tel/fax: 43-1-31336-4402/732; e-mail: Michael.Schreiber@wu.edu)), **Simple Roots of Complex Judgement: Prototypes for Participation in Fractal Neighbourhoods.**

¶ What if we could not agree whether a system was complex or not? Would everybody accept that complexity as an individual & social reality arises by similar processes in all cases? Could we arrive at common distinctions reflecting conscious & nonconscious inclusion & exclusion of past & expected subjects, processes, names, values, & contexts? Such a common root might be simply the ability to distinguish between earlier & later links between names & what is meant by these distinctions. If you answer these questions differently, you might still benefit from the tools articulating the invariants generated by fractal superimpositions of evaluations. To see the invariant zero-grid of accumulated evaluations of properties, a special type of fractal matrix is defined that features special ascending-descending levels of permutations of coinciding distinctions. Additions of such multiple evaluations produce a clear fractal image of the ambiguity zones characterizing this set of criteria. Linear, planar, & spatial representations of simple & weight-distorted transformations can be translated into each other by fractal projections retaining specific profiles of neighborhood among categories & entities. Current prototypes include World Wide Web search engines, land-art participation, & portfolio management. The basic tool for conflict mediation can be explained

with the watch on your wrist.

98S35947 / ISA / 1998 / 13188

Schuchter, W. (Technische U Berlin, D-10623 Federal Republic Germany), **Sustainable Development and the Human Future—The Challenge of a Globalized Concept.**

¶ The paradigm of development pursued by highly industrialized countries is outdated & cannot be transferred to less developed countries. It cannot be expected that people in industrialized countries will give up the heritage of technological developments without expecting the loss of hitherto experienced ways of supplying their needs. It also cannot be expected that people in less developed countries will give up progress toward envisaged higher levels of living standards. If this progress is oriented toward the traditional Western paradigm of development, it will bring well-known negative effects & problems. The present myopic outlook is hindering achievement of global policy preventing destruction of the environment. Development of new paradigms in industrialized nations requires collaboration; it is necessary to organize discussions of regional concepts & have a broad view & control over positive & negative effects of human actions. Democracy is needed to open higher levels of collaboration. Development of industrialized & less developed nations should be uncoupled, because it is necessary to decentralize & deregulate the world by lessening mutual limitations & interdependence between nations. From this will follow changes in understanding & the course of actions.

98S35948 / ISA / 1998 / 13189

Schuerkens, Ulrike (10 rue Jonquoy, F-75014 Paris France), **La Globalisation du système du travail en Côte D'Ivoire et au Ghana** (The Globalization of the Work System in the Ivory Coast and Ghana). (FRE)

¶ Describes how social change introduced by the former colonial powers, GB & France, has continued since the 1950s in Ghana & the Ivory Coast, as evidenced in structural change of African societies. It appears that the structures of the autochthonous systems changed in relation to the situation of contact established by the former colonial powers; a work system characterized by global elements is hypothesized to be emerging. The cases of Ghana & the Ivory Coast demonstrate that a particular mixture between autochthonous cultures & models originating from Western countries has appeared, & that autochthonous African societies have been obliged to accept these proposals. Life stories collected in Ghana & the Ivory Coast are drawn on to describe how the introduction of different structural parameters has influenced individuals & groups.

98S35949 / ISA / 1998 / 13190

Schulz, Markus S. (New School Social Research, New York NY 10003 (tel/fax: 212-387-9517; e-mail: schulz@newschool.edu)), **Resisting the Neoliberal Mode of Globalization: Local, National, and Global Aspects of the Zapatista Uprising, 1994-97.**

¶ Applies theoretical tools drawn from recent European & North American social movement research to examine the relationship between the Zapatistas' local struggle for land & indigenous self-determination in Mexico, the national struggle for democratization, & the global struggle against neoliberalism. The insurgent indigenous peasants of Chiapas were able to hold out against the Mexican army largely because of their ability to gain media attention & their efforts to link up to broader struggles & forge ties with a national & even transnational constituency. By launching initiatives such as the National, Continental, & Intercontinental Conventions, Encounters, & Consultations, the Zapatistas managed not only to keep public attention & support alive but also to serve as a catalyst for the formation of transnational protest against the neoliberal mode of globalization. The emerging protest movement is based on recognition of a plural, yet common, human identity. It has the shape of a network that cuts across borders & connects individuals, groups, & organizations engaged in a multiplicity of diverse resistance efforts. What is a strategic necessity for the Zapatistas' survival vis-à-vis overwhelming military force furthers, at the same time, the communicative construction of a global civil society.

Schunk, Michaela V. (U Manchester, M13 9PL England), **Responses to the Mixed Economy of Care: Informal Care Policies Compared.**

¶ In recent years, informal care has emerged as an issue in public policy, & countries have responded with a variety of measures such as cash benefits (payments for care) &/or service-based forms of carer support. These policies have significant implications for the position of informal

S

carers toward the cared-for person, the boundaries of their responsibility, & their economic & social security. Described here are variations in recent developments & trends in policy responses to informal care, describing & comparing new legislation, program evaluations, & pilot projects for carers of older persons in GB, France, Austria, the US, & Australia. The different approaches are evaluated in view of concepts such as the mixed economy of care, consumer choice, & quality of care, & significant differences are found between countries.

98S35951 / ISA / 1998 / 13192

Schütte, Georg (U-Gesamthochschule Siegen, D-57068 Federal Republic Germany [tel/fax: 49-271-740-4934/4943; e-mail: schuette@SF6240.uni-siegen.de]), **Information Shift: From Television Journalism to Multimedia Journalism.**

¶ In modern industrialized societies in the latter 20th century, TV has become the leading means of mass communication in general & audiovisual information in particular. Along with the advent, proliferation, use, & trustworthiness of TV, TV news journalists emerged as powerful actors within predominantly national symbolic arenas. In the mid-1990s, the proliferation of multimedia constitutes a major shift in the selection, presentation, & reception of audiovisual information, entertainment, & advertisement, although only for a minority of the population of predominantly northwestern societies. It supplements & partially replaces traditional communication contexts. This information shift takes place in the context & as part of a more general communication shift brought about by digital technologies that allow for more globalized & accelerated forms of information gathering, editing, & dissemination, as well as individualized & interactive modes of information usage. This shift implies a shift of communicator roles & the professional understanding of news & information as well as of power relations in increasingly differentiated, media-specific public arenas. National characteristics & transnational commonalities of this shift of communicator roles are specified here, based on analysis of selected TV news shows from the US, the Federal Republic of Germany, & the German Democratic Republic (until 1990), 1949-1995, a screening of selected on-line information offerings, & an analysis of expert interviews with TV news journalists & representatives of multimedia organizations in the two countries. These data were collected during an 8-year research project financed by the German Research Foundation.

Schutte, Gerhard (Dept Sociology U Wisconsin Parkside, Kenosha 53141-2000 [tel/fax: 414-595-2538/2183; e-mail: schutte@uwp.edu]), **Being African in South Africa: The Dynamics of Exclusion and Inclusion.**

¶ South Africans' "African" identity has become a highly contentious issue in an era of national reconstruction & reconciliation. Examined here is the articulation of public & official discourses on African humanism & Western-style capitalist democracy as foci of self-legitimation by different interest groups. Though membership of these groups is not primarily race based, preliberation racial & ethnic identifications alarmingly keep cropping up. Both sides address the question of membership from either a value-rational (cultural) or instrumentally rational (economic) perspective. Strategies of exclusion & inclusion are examined. It is argued that the cultural orientation imbues the majority of the population with a sense of belonging & ownership, whereas the second is deemed important for economic survival & growth. The predominance of the first may harbor the possibility of economic marginalization & that of the second, the polarization of rich & poor or the Brazilianization of South Africa.

Schwartz, Alex F. (Milano Graduate School Management & Urban Policy New School Social Research, New York NY 10011 [tel/fax: 212-229-5888/5404; e-mail: Schwartz@Newschool.edu]), **If Other Cities Were like New York: Lessons from New York City's \$5 Billion, 10-Year Capital Budget Housing Plan.**

¶ In 1986, New York City launched a 10-year plan to use its capital budget to support construction & renovation of low- & middle-income housing &, by 1997, had invested more than \$4 billion on 150,000+ housing units. New York has spent more of its own resources on housing than the 50 next largest cities combined. Here, the impact of this housing investment is examined from several perspectives. (1) Unpublished programmatic data from the city's housing department & land-use data from the city planning department are drawn on to look at how New York's housing programs affected housing construction & land-use trends, including

the reduction of vacant land & buildings. (2) How the city's housing programs have affected community-based organizations, many of whose housing portfolios increased dramatically as they developed city-funded housing, is discussed. (3) The economic impacts of New York's housing programs are assessed. Estimated from a citywide perspective is the multiplier effect in employment & income from both the construction & occupancy of housing built with city funds. Unpublished employment data, interviews, & other sources are drawn on to assess the extent to which the city's housing investments have stimulated commercial revitalization in selected low-income neighborhoods. Discussed in conclusion is what other cities & states can learn from New York City's housing programs.

Schwarz, Eric (U Neuchâtel, CH-2000 Switzerland [tel/fax: 41-32-718-1190/1391; e-mail: Eric.Schwarz@admin.unine.ch]), **A Topology of Values: A Systemic Search for the Foundations of Human Values.**

¶ In the context of the developing cybernetic & systemic paradigm, a transdisciplinary holistic metamodel is proposed to interpret the emergence, functioning, & evolution of viable self-organizing systems. It presents in a coherent pattern the most pertinent concepts of cybernetics & systems theory: positive & negative feedbacks, vortices, autopoiesis, self-reference, autogenesis, & autonomy. The starting point of the model is the most simple & general pattern describing a system or a subject-object dyad, ie, two interacting components forming an emerging entity. It is suggested that the four universal values of freedom, solidarity, responsibility, & equity can be identified with necessary, unavoidable features of the generic viable system. This interpretation shows that these four values are not accidental human idiosyncrasies, but the manifestation of deep requisites for the viability of any system.

Schyns, Peggy (Faculty Social Sciences Erasmus U Rotterdam, NL-3000 DR Netherlands [tel/fax: 31-10-4088649/4525870; e-mail: schyns@soc.fsw.eur.nl]), **Wealth, Welfare-State, Culture and Life-Satisfaction: A Multi-Level Analysis across Nations.**

¶ At the level of nations, there is a positive correlation between economic prosperity & life satisfaction—on average, the wealthier a country is, the more satisfied its citizens. While a positive relation is also found at the individual level, it is very weak. Two theories attempt to connect objective living conditions & subjective evaluations of life: (1) According to need theory, living conditions & life satisfaction are positively related because national prosperity & personal income facilitate the satisfaction of needs, & hence, subjective well-being. (2) Comparison theory states that there is only a very weak relation, if any, between economic prosperity & life satisfaction because peoples' evaluation standards are relative & flexible. Explored here are questions regarding (A) how the nation & individual levels are connected; (B) whether these theories reflect different levels; (C) interaction effects, eg, whether there is a stronger correlation between income & life satisfaction if countries are poor; & (D) whether the presence of a welfare state influences the relationship at the individual level.

Sciortino, Giuseppe (U Trieste, I-38100 Trento Italy [tel/fax: 39-461-210331/10; e-mail: sciorti@itc.it]), **Our Things Were Foreign to Us, We Were Alien to Each Other: The Northern League and the Discursive Construction of a Secessionist Claim.**

¶ The sociology of nationalism has often seen nationalist discourses either as sheet propaganda or as a set of territorial grievances to be evaluated according to truthful criteria. Such an approach implies an inadequate understanding of the role of discursive formations in the establishment of a nationalist claim. It is maintained that national discourses are a distinctive subset of discursive practices directed to transform, through the drawing of a boundary, a given audience into a solitary community, characterized by an internal socially constructed similarity & by an external socially constructed difference. As such, nationalist rhetoric should be considered a crucial sociological matter. Paying attention to the cultural structures of nationalist discourses would help to overcome the current stalemate between the historical realist & constructivist approaches in the sociology of nationalism. Here, analyzed is a sample of articles in the main Italian newspapers concerning the first secessionist campaign of the Northern League, a political movement active in northern Italy, published between the Apr 1996 public adoption of a secessionist platform & the mass secessionist oath ceremony held in mid-Sept 1996. Results highlight the plurality of discursive strategies employed by social actors to advocate or oppose a nationalist claim & the plurality of differentiated- & sometimes conflicting-symbolic arenas activated by the attempt to construct a "Padanian" nationalism.

Sciortino, Giuseppe (U Studi Trieste, Gorizia Italy (tel/fax: 39-51-222607/262959; e-mail: sciortino@pug.univ.trieste.it)), **From Immigration Policy to Immigration Policy-Making: A Theoretical Argument and an Empirical Case Study.**

¶ Develops an analysis of immigration policy making, seeing it as a social process taking place inside a distinctive political structure. It is shown how immigration policy making differs structurally from other policy fields, thus requiring specialized attention. The most diffuse modes of analysis of immigration policy making (basically related to functional, political-economic, or rational choice approaches) often ignore such differences & usually take the structural interests of the policy actors for granted. A different perspective is elaborated that, while incorporating the traditional structural variables, tries to pay dues both to the internal structure of political systems & policy networks & to the external issues connected with the structuring of societal immigration discourses. Such a model is of particular importance in the study of new immigration countries, eg, in southern Europe. The model is tested with an analysis of immigration policy making in Italy, 1986-1996.

Scott, Alan (School Economic & Social Studies U East Anglia, Norwich NR4 6LZ England (e-mail: a.scott1@uea.ac.uk)), **Sociological Theory as Institutional Design.**

¶ Focusing mainly on Max Weber, it is argued that his role as a public intellectual—ie, as one whose scientific work occasionally served & was occasionally influenced by a desire to make an impact on worldly affairs—led him to a concern with institutional design. Thus, his sociological analysis served a practical purpose, creating institutions that addressed contemporary dilemmas in such a way as to facilitate political, cultural, & economic modernization. The question is then whether such attempts to resolve specific problems have wider relevance & whether they remain useful to current efforts to theorize institutions. Insofar as they address questions of the market-state relationship & the creation of institutions to manage that relationship, the answer is “yes.” In a context of the continued influence of neoliberalism & so-called globalization, it is necessary to rethink the role of theory as an aid to institutional design.

Scott, Bernard Charles Edward (Center Educational Technology & Development De Montfort U, Leicester LE1 9BH England (tel/fax: 0016-257-7662/2500-6101; e-mail: bscott@helios.dmu.ac.uk)), **The Role of Higher Education in Understanding and Achieving Sustainable Development: Lessons from Sociocybernetics.**

¶ Addresses the role of higher education institutions in the context of transitioning educational, political, & other social systems under the impact of demographic, cultural, & technological changes, & in terms of achieving sustainable development. Evolution of the global information age & debates concerning ownership, poverty, literacy, & sustainable development are discussed. Topics include the idea of a university in the 21st century; intellectual elites, reflexivity, & responsibility; concepts of “openness” in educational systems; relating concepts of quality & “gradateness” to the social & political goals of sustainable development; & problems of performance & measurement. It is argued that there are particular problems associated with multidisciplinary working & there is a particularly constructive role for the transdisciplines (systems theory, first- & second-order cybernetics). These latter can fruitfully be a source of order & simplicity amidst disorder & complexity, by providing a lingua franca, conceptual understandings, & shared values. Examples of this are illustrated via application of first- & second-order cybernetics concepts (information, requisite variety, self-organization) to various problems.

98S35960 / ISA / 1998 / 13201

Scott, Bernard Charles Edward (Center Educational Technology & Development De Montfort U, Leicester LE1 9BH England (tel/fax: 0116-257-7662/2500-6101; e-mail: bscott@helios.dmu.ac.uk)), **Simplifying the Complex: The Case for Cybernetics.**

¶ Presents examples of “simple” cybernetic models, including (second-order) models of the modeling process itself. It is argued that, while some of these models are extant in academia, & they could be usefully introduced into other educational curricula, as part of Jerome Bruner’s (eg, 1996) “learning spirals.” Referred to are Scott’s (1998 (see abstract in this supplement)) cybernetic models of information, control, & self-organizations as applied in the context of the role of higher education institutions in understanding & achieving sustainable development. Addi-

tional models include system emergency, organizational closure, & conversation.

Scott, Sue, Jackson, Stevi, Backett-Milburn, Kathryn & Harden, Jeni (U Stirling, FK9 4LA Scotland (tel/fax: 1786-467-691/689; e-mail: sjsl@stir.ac.uk)), **Risk Anxiety and the Social Construction of Childhood.**

¶ Risk anxiety is addressed in relation to public concerns about children & childhood, focusing on the sexualization of risk. Contemporary constructions of childhood & sexuality give rise to very particular anxieties whenever the sexual “innocence” of children is thought to be endangered. Children are regarded as a special category of people, while sexuality is constructed as a special aspect of social life (uniquely pleasurable but also dangerous, quintessentially part of private life yet hotly contested in public arenas). These two sets of discourses intersect in the construction of the innocent child; not only is sexuality thought inimical to the well-being of children, it is also perceived as a threat to childhood itself as both institution & experience. These issues are explored in relation to some key antinomies that have emerged in relation to children & childhood in late modernity: tensions between children’s autonomy & child protection & between perceptions of children as “at risk” & as potentially threatening. It is argued that the concept of risk anxiety provides a useful means of analysing contemporary fears about children & childhood & may thus be conceptualized as contributing to the ongoing social construction of childhood. Risk anxiety must be located with the context of gendered & generational power relations, in which children’s lives are bounded by adult surveillance. Furthermore, risk anxiety may have material consequences for children’s daily lives, undermining autonomy & legitimizing increased adult surveillance.

Secondulfo, Domenico (Istit sociologia, I-43100 Parma Italy), **Consumption, Material Culture and Social Relations. How Objects Interact and Are Used inside Social Relations.**

¶ Material culture & consumption can be analyzed starting from the process of reification, analyzing the need for human culture to be translated into things. This comes from Karl Marx's concept of reification & fetishism of goods, & is linked to the process of alienation. Fetishism affects not only the social relations between producer & buyer, but also the weight that goods have in the consumer's life. If it is agreed that capitalism builds not only goods for consumers, but also consumers for goods, it can be argued that the symbolic use of goods in shaping identity & lifestyle is an extension of the process of alienation usually studied inside production. This allows the use of this concept in postindustrial society, more consuming- than producing-oriented. One can obtain some empirical evidence of this phenomenon from the relation between goods, consumption, & identity, linking this both to the Frankfurt school's perspective of Friedman's studies & to recent studies of consumer behavior by Mike Featherstone. The paradox of repression & control inside buying areas as a "permissive repression" is identified, & linked to Herbert Marcuse's reflections.

Segal, David R. & Babin, Nehama E. (Dept Sociology U Maryland, College Park 20742), **Institutional Change in Armed Forces at the Dawning of the Twenty-First Century.**

¶ Describes the transformation of the military organization & civil-military relations at the forefront of the 21st century. The decline of the mass armed forces of WWII & the Korean War to the post-Cold War smaller professional military is traced. The end of the Cold War in Europe & a worldwide democratic revolution have required nations to reconsider the structure, roles, & missions of their armed forces. Simultaneously, the field of military sociology, which had originally been largely dominated by US scholars & researchers focusing on the concerns of the Cold War, has shifted focus to ongoing globalization. In each decade & each region of the world, the position of the military in society has shifted & had a variety of influences on civilian society, including the economy, the political system, development, & modernization. In the contemporary post-Cold War era throughout many regions of the world, the military organization is experiencing an organizational identity crisis. Many nations are, for the first time in generations, living in a "warless" society. Within such a context, the role & mission of the military & its position within the state is at question. Movement toward a post-Cold War military is utilized as a developmental construct to describe the institutional changes that have taken place in military organization & in civil-military relations.

98S35968 / ISA / 1998 / 13209

Segal, David R. & Booth, Bradford (U Maryland, College Park 20742-1315 [tel/fax: 301-405-6439/314-6892; e-mail: segal@bss1.umd.edu]), **Are Post-Cold War Militaries Postmodern?**

¶ Military sociologists have begun to apply the theoretical perspective of postmodernism to the forms of post-Cold War military organization emerging in Europe. While it is well documented that Western militaries are experiencing substantial changes in missions, size, & organizational structure, it is less clear that these changes can be accurately character-

ized as postmodern. An attempt is made here to frame the discussion about the so-called postmodern military by considering some of the recent changes in military forces in terms of postmodern social theory. It is argued that, though some of the more fundamental changes being experienced by the military (eg, its social marginalization & the decreasing likelihood that nation-states will represent the primary actors in future conflicts) are perhaps indicative of a coming era of postmodernity, most of the changing dimensions of military organization being discussed in the sociological literature are still rooted in a modern context, even though the Cold War is over.

98S35969 / ISA / 1998 / 13210

Segal, David R. & Reed, Brian J. (U Maryland, College Park 20742-1315 [tel/fax: 301-405-6439/314-6892; e-mail: segal@bss1.umd.edu]), **Combat Soldiers' Attitudes toward Peacekeeping.**

¶ With the publication of *The Professional Soldier*, Morris Janowitz introduced the constabulary concept. He predicted a trend toward a military force of career professionals composed of highly trained personnel, ready for immediate operations, & sensitive to the political & social impact of military actions on international relations. Janowitz also predicted that soldiers would resist such missions. In this decade, the 10th Mountain Division (Light) has been one of the most frequently deployed units in the US Army & has borne the brunt of the increased number of peacekeeping & humanitarian assistance missions for which the Army has been called. The effects of rank, military occupational specialty, & career orientation on peacekeeping attitudes are examined, based on a survey of soldiers from the 10th Mountain Division who deployed to one or more of the following peace operations: Operation Hurricane Andrew in southern FL, Operation Restore Hope in Somalia, & Operation Uphold Democracy in Haiti. Focus is on four categories of peacekeeping attitudes toward (1) impartiality & the use of force; (2) appropriateness of alternative personnel resources; (3) unit appropriateness & career enhancement of peacekeeping assignments; & (4) provision of humanitarian relief. Findings provide insight into how attitudes are affected by a soldiers' rank, specialty, & intentions to make the military a career.

98S35970 / ISA / 1998 / 13211

Segal, Mady Wechsler, Bell, D. Bruce & Rice, Rose E. (Dept Sociology U Maryland, College Park 20742-1315 [tel/fax: 301-405-6433/314-6892; e-mail: msegal@bss1.umd.edu]), **Family Issues for Reservists on Peacekeeping Duty.**

¶ Following the 1979 Treaty of Peace, the US agreed to provide soldiers to the newly created Multinational Force & Observers for peacekeeping duties in the Sinai Desert. The group's mission was to observe & report violations of the treaty to the two former belligerents, Egypt & Israel. The 28th 6-month US rotation of Multinational Force & Observers peacekeepers was an experiment to test the feasibility of having reserve component soldiers participating in peacekeeping missions. Examined here are family impacts of the deployment of reserve soldiers drawn from 31 states & the Army system of support for the families. Analyses focus on differences in family characteristics, experiences, & outcomes for married reserve soldiers who lived in the home area of the reserve division that provided most of the soldiers vs those who lived in one of the outlying states. The two groups were similar at the start of the deployment in terms of soldier rank, attitudes, characteristics of their marriages, support networks for families, & problems experienced through the midpoint of the deployment. Eight differences emerged between the two groups. Soldiers from the outlying states were more educated & more likely to own a home; more worried about their families' health, safety, & ability to get needed household/automotive repairs; less likely to have attended the predeployment family orientations; & less likely to get help from other Army spouses or receive National Guard flyers through the mail. Soldier marriages did not change through the midpoint of the deployment. However, the soldier's perception of the spouse's support for the mission declined; 18 months after the deployment, attitudes became more positive. The unit's & National Guard's systems for helping soldiers & their families were quite good. Recommendations for improvement include more specific & timely support material, easier & cheaper soldier-spouse communications, & more available services for spouses in outlying states, especially from other spouses.

Segrave, Jeffrey O. & McDowell, Katie (Dept Physical Education & Dance Skidmore Coll, Saratoga Springs NY 12866 [tel/fax: 518-580-5388/581-7421; e-mail: jsegrave@skidmore.edu]), **Language, Gen-**

der, and Sport.

¶ One recent success of the feminist agenda has been to show that organized sport serves as a powerful cultural arena for constructing & perpetuating the ideology & actuality of male privilege & dominance. Through the exclusion of women & the association of masculinity with displays of physical strength, power, & prowess, as well as the sanctioned use of violence, sport has served to reconstitute an otherwise challenged masculine hegemony. Even with the impact of Title IX & the dramatic increase in female athleticism, sport is still male dominated & remains a powerful component of the patriarchal order. Women's sport is often trivialized & women athletes stereotyped as feminized women, rather than competitive athletes. One of the mechanisms that marginalizes women's sport is language, an often taken-for-granted cultural convention that, in fact, operates as a critical component of the social scaffolding on which patriarchal relations are erected. In this light, research on language, gender, & sport is reviewed & placed within a poststructuralist perspective that recognizes the salience of linguistic customs in the construction of the sociocultural order. Sexism in the language of sport appears in naming, masculine generics, gender marking, semantic polarization, verbal descriptors, ambivalent & negative narratives, subcultural argot, the metaphorical language of sport itself, & the use of sport metaphors in a variety of cultural discourses. In conclusion, it is argued that the language of sport is a central dynamic that contributes to the devaluation of women in both sport & society.

Sekgobela, Elijah (ABET Instit UNISA, PO Box 392 Pretoria 003 South Africa), **Student Participation in the Adult Basic Education and Training (ABET) Student Support Service.**

¶ The adult basic education & training (ABET) support service for students at the U of South Africa is organized in a way that allows for "ownership" & control by students & their tutors. Difficulties of doing so in the bureaucratic context in which ABET is located are explored, since this manner of organizing does not always fit easily with the rest of the higher education institution. Interests in the institution can work

against the more participatory style of management that values self-autonomy & ownership & control to those involved in the student support service. How it has been possible to deemphasize the power relations between tutorial groups & the central institution is identified, & how the negotiation of these social possibilities adds a distinct (social) dimension to the cybernetic approach to organization is considered. Further, responsibilities of decisionmakers regarding autonomy are explored. Presented are arguments for allowing control over the service to be confined to the more specialized & technical aspects involved with teaching & learning. However, even this control is something that has been defined in conjunction with many of those involved in the service, so responsibilities have been generated in the "social" operation of the system.

Sekher, T. V. (Instit Social & Economic Change, Nagarabavi Bangalore 560072 India [tel/fax: 91-080-3355468/3387008; e-mail: tvsekher@isec.kar.nic.in]), **'Status Consciousness' and 'Economic Reality': A Sociological Explanation for the Reintegration of Gulf Returnees in India.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Although Gulf migrant workers in India belong to the lowest strata of society & are mainly unskilled, most were able to improve their economic position due to remittances. Examined here is their economic behavior on return & their occupational preferences, drawing on schedule data from 160 returnees to two villages of Kerala. It is argued that, because the community is the principal judge of an individual's success, the returnees felt the need to display their new-found wealth. This psychology was reflected in their preference for a luxurious lifestyle & in their occupations on return. Also, considerable time was spent jobless & their savings were wasted. The workers often returned earlier than anticipated & had no definite future plans. This, coupled with their low levels of education & skills, put them in a situation where they were undecided about their future occupations & how to retain their present living standards. Thus, returnees were caught in a trap of "status consciousness," on one hand, & "economic realities," on the other.

98S35976 / ISA / 1998 / 13217

Selman, Paul & Wragg, Amanda (Cheltenham & Gloucester Coll Higher Education, GL50 4AZ England [tel/fax: 44-0-1242-543313/543273; e-mail: pselman@chelt.ac.uk]), **Actor Networks, Consensus and Policy Integration in Rural Sustainability Planning.**

¶ Actor-network theory supposes that specific scientific ideas & practices stabilize during a four-stage process of translation problematization, interessement, enrollment, & mobilization; as actors enroll in the network, a relatively consensual & stable position emerges. The theory may be applied to environmental management situations, especially where several parties seek to build consensus about a sustainable course of action. Examined here are projects concerned with multiple use of land & water in the UK. Research involving document analysis, stakeholder interviews, & actor-network construction, & focusing on network expertise, "obligatory passage points" for actors, influences on project objectives, stakeholder power relationships, & practical outcomes, indicates that networks tend to be relatively negotiated or prescriptive according to the regulatory context of the project. Although no networks have destabilized, they are held in constant tension & the risk of betrayal is ever present. Much-vaunted recent attempts to build consensus & extend public participation in sustainable development projects have tended to result in new rules & roles, rather than a genuine broadening of ownership.

Sels, Luc & Forrier, Anneleen (Dept Toegepaste Economische Wetenschappen Katholieke U Leuven, Belgium B-3000 [tel/fax: 016-326872/732; e-mail: luc.sels@econ.kuleuven.ac.be]), **In Search of New Production Concepts: A System Theoretical Perspective on the Nature of Organizational Response.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ In analyzing organizational transformations & the rate of their diffusion, a central question is whether radical change is required, ie, whether reforms at the margins of the old Fordist-Taylorist model can meet the challenges faced by new production systems. Here, data from the so-called Trend Study (Huys, R., et al, 1995) in Belgium are drawn on to

S

empirically test predictions relating to new production concepts & to explore why innovative practices have not diffused more widely through the economy. After critically examining the supposed driving external forces behind organizational transformation (market fragmentation, level of automation, changes in the labor market), internal obstacles to organizational transformation are examined, utilizing Niklas Luhmann's theory of autopoietic systems (1984). According to the theory, structural organizational change takes place within the context of an existing organization (eg, a Taylorist/Fordist-type) that itself is the subject of change. In their pursuit of change, the members of the organization are, as it were, imprisoned by this context. These notions are elaborated in an attempt to explain the "delay" in transformation shown by the Trend Study.

Selznick, Philip (U California, Berkeley 94720-2150 [tel/fax: 510-653-5031/642-2951; e-mail: selznick@uclink2.berkeley.edu]), **Gemeinschaft and Gesellschaft: Beyond the Dichotomy.**

¶ As polarities, or ideal types, *gemeinschaft* & *gesellschaft* can distort as well as illuminate understanding of modern society. One must go beyond the dichotomy to see how these principles of social organization interact & how that interaction is manifested in contemporary institutions. Two themes that exemplify the interaction are reviewed: (1) civility & piety as major building blocks of community; & (2) management & governance as interdependent paradigms in large, special-purpose organizations. In each case, the task is to reconcile competing claims of *gemeinschaft* & *gesellschaft*. In sum, the polarity should be understood as a diagnostic tool, revealing problems, interdependencies, & potentially enlarged resources for moral & institutional well-being.

Semashko, Lev Mihailovich (Juridical Instit, 149-1-27 Engels Saint Petersburg 194358 Russia [tel: 7-812-599-9827]), **Spheral Macrosociology: From Monism to Pluralism and Synthesis.**

¶ Spheral macrosociological theory views society as a mutual inclusion system of four equivalent, but nonbalanced, subsystems (spheres of social reproduction): (1) humanitarian sphere, eg, education, public health, family, church, sport, & social security, the product of which is people; (2) informational/spiritual sphere, eg, science, arts, mass communications, religion, & projection, the product of which is information; (3) organizational/administrative sphere, eg, state, politics, justice, finances, & management, the product of which is organization as any social order; & (4) material/economics sphere, eg, industry, agriculture, environmental protection, transport, construction, & trade, the product of which are things & material wealth. These components form the structure of the social; their mutual inclusion & interaction are the object of sociology. Spheral sociology draws on Talcott Parsons, A. Toffler, Pierre Bourdieu, early Karl Marx, & Pitirim Sorokin. Spheral sociology is metaparadigmatic, pluralistic, & tetralistic, combining four monistic paradigms on equal rights: idealism, materialism, organism, & existentialism. Monistic paradigms are argued to be insufficient, yet they produce the material to create integral, pluralistic, metaparadigmatic sociologies. Spheral macrosociology, as a democratic & humanistic discipline, is described as an alternative to monistic sociology with its totalitarian & Marxist bent. A unique system of aggregational social indices, permitting quantitative expression of social status, allows the degree of social, political, economical, financial, ecological, etc, stability in any country or region to be valued. Further, spheral sociology helps root out the sources of social partnership, international collaboration; regional integration; & solutions to social, national, & international conflicts.

Semenova, Victoria V. (Instit Sociology Russian Academy Sciences, Krzhizhanovskogo 24/35 Moscow 117259 [tel/fax: 95-128-79-07/719-07-40; e-mail: victoria@rodes.msk.ru]), **Family History as Cultural Resource for Constructing Identity in Time of Crisis.**

¶ Discusses the problem of changing identity in times of crisis. According to previous crisis researchers, subjective meaning of family for individual life is actualized as a search for support & previous experience in a changing social environment. This situation of total disidentification with "big" social institutions & increasing familial identification is vividly seen in modern Russia (V. Yadov). In biographical research, this is demonstrated by the increasing interest in family history of previous generations & attempts to rewrite/write history. Each biographical narrative brings together the past & the future; it is a kind of self-presentation, explanation, & justification of today's identity of the narrator. Different types of family history rewriting are constructed according to current life

strategies of storytelling, considering family history as a space for search & "historical arguments" supporting change in cultural orientation. A distinction is made between time & topic orientation in storytelling; the former focuses on a definite period of family history, eg, prerevolutionary times or the Soviet period, to solicit family support in different historical periods; the latter bases the story on family values (or family myths), eg, the meaning of money, education, high status, ethnicity, or past social injustices suffered by the family. Discussed are reasons for & consequences of such a situation: Did family memory & family myths force the present strategy, or does the chosen strategy need to be justified by family history?

Serajzadeh, Hossein (Dept Sociology U Essex, Wivenhoe Park Colchester CO4 3SQ England [tel/fax: 1206-873-156/410; e-mail: serasy@essex.ac.uk]), **Non-Attending Believers: The Religiosity of Iranian Youths.**

¶ Iran is known to have a strongly religious society ruled by an Islamic state since 1978. Nearly 20 years after the revolution, the extent of religiosity among 391 high school students in Tehran was measured using a multidimensional scale of religiosity (Clock & Stark's model). The data revealed that the respondents tended to be highly religious. However, as far as softer indicators of religiosity, ie, beliefs & feelings, were concerned, they were more religious than when following religious codes in everyday life & being involved in religious practices. An attempt is made to explain the contradictory elements of their religious attitudes by the paradoxical identity of the Islamic revolution ideology, which embraces both modern & traditional values.

Sergey, Aleshonok (Research Centre Youth Instit, Younosti 5/1 Moscow 111393 Russia [tel/fax: 7-095-374-5930/6132]), **Russian Youth: Searching New Channels of Influence in Society.**

¶ Results are presented of two studies of young Russians' quest for participation & influence in society. The nationwide survey, "Youth-97," monitored the socioeconomic situation & political orientations of 1,897 young people, ages 16-29. Over 50% saw no possibilities for them to influence the life of their communities; only 10.4% trusted political parties & movements, 16.0%, the Parliament, & 21.6% the government. These data correlate with results of another survey, "Youth Participation in Local Voluntary Action," carried out by the East-West Centre for Humanitarian Research & Projects in 1996 in a typical small town. Data from 700 pupils, ages 15-17, showed a complete absence of youth organizations, with school as the main promoter of social activism. Respondents reported that if they joined initiatives, their concerns would lie in the areas of health, cultural activities, local environmental issues, & local political activities.

Servel, Laurence (LSCI-IRESO, 59-61 rue Pouchet F-75017 Paris France), **L'Apprentissage du temps, révélateur d'une socialisation continue** (The Lessons of Time, Revealer of continuing Socialization). (FRE)

¶ Acknowledgment of a strong &, in many instances, direct relation between primary & secondary socialization enhances understanding of modes of action in organizations. Drawing on Peter Berger & Thomas Luckmann's (1992) approach to socialization & on work orientation forms analysis, this issue is considered from the perspective of young, newly hired employees of the transportation system in Paris, France. The aim is to understand how time frames are learned in this employment sector for which the temporal dimension is of such significance. Initial results show that the hiring process must include a means to ascertain how the employee will learn new time practices. In many cases, this learning is facilitated by the youths' previous experience or their parents' lifestyle. Their modes of action & relations with colleagues & superiors can also enhance young employees' adaptation to their new work environment.

Settles, Barbara H. (U Delaware, Newark 19716 [tel/fax: 302-368-0263/5763; e-mail: Settlesb@udel.edu]), **A Look at the Future of Sociology of the Family: Global Advances and Challenges.**

¶ Based on an analysis prepared for the Congress on Sociology of the Family: Global Advances & Challenges, some perspectives on where the field may need to develop & methods for achieving innovations are presented. The Committee for Family Research has sponsored working semi-

nars throughout the world to encourage a more global view of the field of family sociology & develop interdisciplinary ties in family science cross-nationally. In addition, the 1994 UN International Year of the Family brought attention to global needs for policies & programs that require better scientific analysis. Recurrent themes are the political uses & misuses of family study & concepts, the intersections of gender & life-course studies with family sociology, rapid social & economic change, immigration & national boundaries, & multicultural diversity. Challenges to appropriate comparative study & reporting of projects so that global study of families is advanced are addressed. A model for collaborative work, education, & experience is proposed to carry forward these issues into the long-term development of family sociology.

Séigny, Odile & Racine, Guylaine (Centre recherche services communautaires U Laval, Quebec G1K 7P4 (tel/fax: 418-656-2311/7787; e-mail: weber@sympatico.ca)), **L'Alliance entre la recherche et la pratique: un continuum difficile mais créateur** (The Alliance between Research and Practice: A Difficult but Creative Continuum). (FRE)

† Experience over 2 years of conducting a study in collaboration with caseworkers at a Montreal (Quebec) shelter for homeless women is drawn on to document how practitioner-researcher relationships evolve. The road to joint production of new knowledge demands continual discussion of the research process. Presented here are negotiations regarding the choice of qualitative data collection methods. The initial data collected using a board game created by the caseworkers revealed the strategies of the shelter clientele in dealing with their difficulties, but told little of how they actually perceive their problems. This realization gave the opportunity to reflect on research priorities & underlined the importance of working together to discover ways to go beyond that limit. Although the researchers were occasionally tempted to fall back on proven data collection methods, they were determined to include the caseworkers in the creation of new collection tools. This experience is presented in the context of the main aspects of the clinical approach in sociology.

Shakir-zadeh, Addin (Dept Sociology Instit Philosophy & Law Azerbaijan Academy Sciences, Prospect Djavid 31 370143 Baku (tel: 99412-383436)), **Role of Sociology in Social Life of Azerbaijan in Soviet Period.**

† In Azerbaijan during the Soviet period, sociological surveys examined processes of cultural building, immediate participation of people in development of culture, & characteristic peculiarities of people's mode of life. The emergence & development of sociology as a science & as a method of study of public opinion took place in Azerbaijan in the 1970s & 1980s. In 1971, the Dept of Concrete Sociological Researches was established as a provincial center of the All-Union Academic Instit. Efforts were also directed at establishing Azerbaijanian branches of the Soviet Sociological Assoc. During this period, Azerbaijanian sociologists studied in Moscow. Simultaneously, philosophers, historians, economists, psychologists, & representatives of other sciences devoted themselves to sociology & conducted sociological surveys on problems of labor, culture, mode of life, leisure, & public opinion. These researchers defended dissertations & published monographs, books, & scientific articles in Azerbaijan. Results of this research were also reported in conferences in Azerbaijan, as well as in the All-Union & international arena. Sociology faculty & chair are now present at Baku State U in Azerbaijan. A council for defense & awarding of doctoral degrees for sociology is found at the Baku Social Management & Politology Instit. Leading Azerbaijanian sociologists (eg, Rufat Kuliyeu, Rafik Abdikeyev, Adil Ragimov, Gamid Imanov, Djamil Akhmedly) are working in these universities. Further, the Azerbaijanian Sociological Assoc is now functioning. Work on theoretical & applied sociology, & on techniques, methods, & methodology of sociological research is now addressing problems of social life of the young independent state.

Shamov, Vladimir V. (Ave 100 Bldg 60 Tryokhgornaya St, 680054 Khabarovsk Russia (tel/fax: 74212-227575/085; e-mail: shamov@ivep.khabarovsk.su)), **About a Physicalistic Concept of Sustainability of Geographical Systems.**

† As a developing system methodology field, the physicalistic concept of natural & social-natural systems' sustainability is offered for discussion. This concept follows from generalization of the theoretical propositions of nonclassical physics on phenomena traditionally researched within the framework of biology (ecology), geography, & economy. It is supposed that any natural or social-natural system has, on the one hand, top limit value of intensity of changes that are defined by the system's genesis (analogous to light velocity in the special theory of relativity). On the other hand, for each concrete system, there is a bottom limit of intensity of changes behind which the movement of this system becomes indiscernible (analogous to the movement speed of a particle on a stationary orbit caused by existence of minimal—not zero—quantum of action). The first proposition obviously allows the estimation of a measure of a system's sustainability, the second one, measure of its variability, the opposite side of sustainability. Both can be considered as a display of the system's whole: in one case, concerning its inclusion in a supersystem, in the second case, in the relation of subsystem's inclusion in it.

Sharma, Satish K. (Dept Sociology Himachal Pradesh U, Shimla 171005 India [tel: 01770230935; fax: 01770230775; e-mail: hp.university@X400.nicgw.nic.in]), **Environment and Change in an Urban Society: The Case of an Himalayan City.**

¶ Shimla, the capital of Himachal Pradesh, situated on a high ridge of the northwest Himalayas in India, attracts thousands of tourists from around the world. Its natural scenic beauty, fine hill architecture of the British Raj, & pollution-free atmosphere earned it the title, "Queen of Hills." However, with the onset of urbanization, which promises better quality of life, Shimla is fast losing its charm. The changes in its ecology & environment—reflected by increasing deforestation in & around the city, construction of concrete structures, traffic congestion, scarcity of housing, inadequate supply of safe drinking water & health services, garbage & waste disposal problem, inadequacy of the municipality to meet the growing needs of the people, etc.—are the opposite of what has hitherto attracted tourists. Here, this paradoxical situation is explored, examining trends of urbanization & its associated problems in general, in Indian society, in Himachal Pradesh, & in Shimla. Analytical examination reveals that urbanization per se does not lead to deterioration in quality of life, nor does this deterioration follow a uniform pattern. In fact, there is a direct correspondence between the class character of local residents & the physical conditions of the area. Further, problems emerge if resources are not spent in an equitable manner throughout the community. It is therefore argued that it is the political economy of urban development & lack of concern for the larger community that result in distributive injustice, imbalances in urban development, & concomitant environmental problems & community division.

Sharpe, Mary Josephine (Ontario Instit Studies Education U Toronto, M5S 1V6 [tel/fax: 416-922-4004/5157]), **Exploring Legislated Ontario Midwifery: Texts, Ruling Relations and Ideological Practices.** Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Attempts to relate Dorothy Smith's (1995) discourse on the conceptual practices of power to personal experience as a midwife in Ontario, using Smith's methodology to examine how "texts," "ruling relations," & "ideological practices" connect to early days as a lay midwife, current practice as a registered midwife, & recent participation in the birth of a grandchild as her daughter's midwife. Smith's methodology is deemed helpful in reconciling contradictions between the practice that arose out of initial impulses to become midwives & current midwifery practice, which has been profoundly changed by recent legislation. Midwives are learning new texts & engaging in new rulings, fixing them gradually into new relationships & ways of acting & being. Explored is how the midwife herself is implicated in how these texts & rulings interface with the lived experience of the client & how they may detract from or support woman-centered care.

Shaw, Ian (U Nottingham, NG7 2RD England [tel/fax: 115-9515409/232; e-mail: Ian.Shaw@nottingham.ac.uk]), **Inequalities in Mental Health: The Impact of Lay Beliefs.**

¶ Argues that, to examine the value of lay beliefs to thinking on mental health, theory has to be constructed & developed from earlier literature on the sick role. To inform such theory, an important distinction between the "sick" & "patient" roles in mental health is identified, starting with the hypothesis that some social groups in society will be reluctant to move from a sick to a patient role, not only because of perceptions they hold of the services, but because of fear of societal reaction. Focus is on the interaction between lay definitions & perceptions & professional definition. Emerging research data will be utilized to examine the processes of general practitioner referral to specialist mental health services & the impact of lay beliefs.

98S35996 / ISA / 1998 / 13237

Shaw, Victor N. (California State U, Northridge 91330-8318 [tel/fax: 818-349-1683; e-mail: victor.shaw@csun.edu]), **Substance Use and Abuse: A Career Perspective.**

¶ The career perspective examines substance use & abuse as an evolving sequence over time. From a career point of view, substance use is not just use of substance. It is distributed across various stages along specific pathways. Substance users are not just users of a common identity. They are differentiated into various roles or statuses through individual careers. Specifically, the career perspective (1) emphasizes the changing character of substance use & users; (2) stresses the accumulative effect of use or nonuse episodes over a developing sequence of progression or regression; & (3) attends to the interaction of user characteristics, substance factors, & social influences through an evolutionary process. The career perspective—as a theoretical model, a methodological device, & a policy guide—has various implications for public health, social control, community, & organizational reactions to the problem of substance use & abuse.

98S35997 / ISA / 1998 / 13238

Sheehan, Grania Rachel & Funder, Kathleen (Australian Instit Family Studies, 300 Queen St Melbourne Victoria 3000 [tel/fax: 61-3-9214-7865/7839; e-mail: grancias@aifs.org.au]), **Testing a Theory of Distributive Justice in Matrimonial Property Division.**

¶ It is hypothesized that definitions of equitable & just in matrimonial property division differ depending on concepts of property, the actual property being divided, & the relationship context in which the process of division takes place. Here, the fairness of division of property is tested using data from a 1997 Australian national study (via telephone interviews) of property & income circumstances for a national random sample of 513 divorcing men & women who had a child of the marriage. Property & resources are divided into four categories: basic (house, car, chattels); supplementary (business & farms); superannuation; & "human capital." Men's & women's reports of the fairness of each property division are assessed. Each division is tested separately against the standard of objective equity in dollar values & men's & women's subjective standards of fairness. Differences in subjective & objective assessments of equity attributable to gender are examined. Results are discussed in the context of theories of distributive justice & their application to family law & matrimonial property division.

98S35998 / ISA / 1998 / 13239

Sherif, Bahira (Dept Individual & Family Studies U Delaware, Newark 19716-3301), **Gender Roles in Conflict: Negotiating Belief Systems and Social Change in Contemporary Cairo.**

¶ Explores the dialectic of maintaining belief systems in the face of rapid social change through an interdisciplinary examination of the role of family & the development of gender roles among middle-class Muslim Egyptians, drawing on 16 months of fieldwork in Cairo among families in which women work outside the home; extensive historical research is also included. Focus is on how contemporary middle- & upper-middle-class Egyptian Muslim families are responding to the dilemmas & conflicts posed by economic pressures & the rising tide of fundamentalism. Increasingly & fervently, contemporary Islamic fundamentalists are calling for men & women to assume traditional roles to restore a sense of authenticity & religiosity in daily life. Nonetheless, these calls are in direct conflict with everyday economic realities that force women to work outside the home & be partial providers of the family income. In Cairo, gender identities are not being produced exclusively according to either local or fundamentalist knowledge & tradition, but in the context of ever-widening communications & changes in the global economy. Among many middle- & upper-middle-class families, men's & women's cultural understandings of what it means to be male or female are becoming increasingly blurred, varied, & problematic. Simultaneously, the form that Islam is taking varies as men & women selectively adapt or neglect certain traditions & practices; both are increasingly finding Islamic solutions to the pressures brought on by the contemporary situation.

Sherkat, Darren E. (Dept Sociology Vanderbilt U, Nashville TN 37235 [tel/fax: 615-322-7515/7505; e-mail: sherkat@ctr.vanderbilt.edu]), **What's in a Frame? Making Sense of the New Social Psychology of Social Movements.**

¶ To better understand frame analysis of social movement processes, proposed is an integration of structuration & rational choice theory to help (1) provide an understanding of the logic of ideology; (2) situate & ex-

plain interactions between individuals' beliefs & desires & structural resources; & (3) reintegrate incentives & preferences into the social psychology of social movements in a way that systematically separates sources of motivation. The concept of cognitive structures & how ideological resources & schemata intersect with life experiences to generate a hermeneutic for directing action are discussed. Individual & social contexts of action are developed, providing connections across different social realms (culture, politics, occupation, family, etc) that allow a transposition of schemata across dimensions & necessitates an interpretation of resources in & between social fields. How social movement organizations develop ideological & physical resources & how they use & alter these resources as a result of interactions with the social environment are examined.

98S36000 / ISA / 1998 / 13241

Sherkat, Darren E. (Dept Sociology Vanderbilt U, Nashville TN 37235 [tel/fax: 615-322-7515/7505; e-mail: sherkat@ctrux.vanderbilt.edu]), **"That They Be Keepers of the Home": Examining the Effect of Conservative Religion on Early and Late Transitions to Housewifery.**

¶ Based on previous examinations of insider documents & empirical analyses, examined is how conservative Christians make decisions about education & careers. Written materials widely circulated in conservative Protestant communities are used to document how conservative Christians view female labor force participation—proscribing careers other than that of housewife, especially when children are young. Whether religious factors influence transitions to housewifery is tested here by estimating survival regression models & multinomial logistic regression models on data from the Youth Parent Socialization Panel Study. It is found that early transitions to becoming a housewife are strongly influenced by fundamentalist orientations. Also, religious fundamentalism does not predict transitions to becoming a housewife later in the early life course. Fundamentalism significantly increases the risk that a woman spends her early career as a housewife & then enters paid employment later in life.

Sherman, Steven (Dept Sociology State U New York, Binghamton [tel: 607-773-0802; e-mail: ba05105@binghamton.edu]), **The Clash of Civilizations and Multiculturalism.**

¶ Samuel Huntington argues that the current world of nation-states is being superseded by the emergence of several civilizations, ushering in a world of clashes between both "the west & the rest" & among different civilizations themselves. It is argued here that, along with these civilizations (more commonly referred to as fundamentalisms), the nation-state is being subverted by movements collectively known as "multiculturalism," eg, movements of indigenous peoples, national/racial minorities, women, sexual minorities, the disabled, & environmentalists. Whereas the older antisystemic movements claimed to be the bearers of modernity, & the fundamentalists refer to ancient or religious bases for their legitimacy, the multiculturalists base their claims on being the victims of the processes of the modern world. While one can identify territorial units that could be plausibly ruled by one or another fundamentalism (eg, Islamic fundamentalists could rule the Middle East), multicultural groups are both globally dispersed & tend to make up only a fraction of any given nation-state population. While representing a diversity of groups, the political, intellectual, & cultural debates in these movements have paralleled each other. There are also signs that new intellectual tendencies are creating frameworks to bring them all together in a shared effort to end the marginalization, exploitation, & exclusion that have been their fate. Contesting both the culture & the structure of the modern world, they represent the new wave of antisystemic movements.

Sherwood, Steven (Dept Sociology U California, Los Angeles 90095-1551 [tel/fax: 310-825-1313/206-9838; e-mail: sjs@ucla.edu]), **Narrating "Diana": Scandal and the Genres of Individualism.**

¶ Exploring the cultural dynamics of scandal in US culture, the religious & ritual aspects of scandal as a purification process are examined via the narratives of US individualism, which, it is argued, are predicated on a dichotomous yet interrelated tension between autonomy (romance of the individual) & dependence (satire of dependence). The subject is Diana Spencer, Princess of Wales, & her representation in the media prior to & immediately following her death. The inflationary & deflationary aspects of Diana's representation are shown in both heroic & antiheroic modes, & an attempt is made to establish that how she was interpreted

in US culture relates to the continuing (if largely overlooked) strength & persistence of something like a Puritan or Protestant ethic, an argument predicted on the theoretical work of Talcott Parsons, but grounded in the more recent methodological revisions of Parsons by Jeffrey Alexander et al, which enable a more cultural reception of Parsonian insights via narrative, hermeneutic, & myth analysis.

Sheykhi, Mohammad Taghi (Dept Social Sciences Al-Zahra U, Tehran 19834 Iran [tel: 009821-6058898]), **Contrasting Values in Cities with Special Reference to Tehran—A Sociological Study.**

¶ Contrasting values in cities may be defined as the gradual loss of cultural integration. Following the growth of urbanization, the Third World will face different challenges in the next century & the physical & social environment will be reshaped. Urbanization with reference to Tehran, Iran, is discussed here, with attention to the impact of uncontrolled growth on the social & cultural behavior of city dwellers. In such circumstances, contrasting values appear that cyclically create new social problems.

98S36005 / ISA / 1998 / 13246

Sheykhi, Mohammad Taghi (Dept Social Sciences Al-Zahra U, Tehran 13918 Iran [tel: 009821-6058898]), **Modernization and Divorce—A Sociological Appraisal.**

¶ The causes & consequences of divorce, the destiny of children, & remarriages are discussed, drawing on data from document & records, interviews, observation, etc. It is hypothesized that modernization is a key factor influencing divorce. The growing alienation of the young generations under the uncontrolled conditions of industrialization & structural changes toward modernization also affect the behavior, beliefs, & attitudes of young families, often leading to divorce. The five key concepts—social structure, culture, functional integration, social action, & power—are analyzed. Different concepts of separation, desertion, & annulment are also studied as forms of family disorganization. It is found that the incidence of majority of divorce is in lower age groups rather than among those ages 40+. Suggestions are made to control & limit the incidence of divorce.

98S36006 / ISA / 1998 / 13247

Sheykhi, Mohammad Taghi (Dept Social Sciences Al-Zahra U, Tehran 19834 Iran [tel: 009821-6058898]), **The Socio-Psychological Factors of Family Planning with Special Reference to Iran—A Theoretical Appraisal.**

¶ In light of Iran's explosive population growth & its strain on resources & the environment, the social & psychological factors of family planning are discussed. The general findings of surveys demonstrate that few know anything about family planning & contraception. Social, cultural, & religious institutions seem to inhibit the expansion of family planning. Moreover, the lack of economic & social security promotes a large family size & prevents contraceptive use. However, social change in Iranian society will eventually be brought about by urbanization, industrialization, & education, & the ensuing modernization of values is expected to increase the use of contraceptives & lead to changes in the associated social & cultural institutions.

Shields, John M. & Evans, B. Mitchell (Dept Politics Ryerson Polytechnic U, Toronto Ontario M5B 2K3 [tel/fax: 416-979-5000/5289; e-mail: jshields@acs.ryerson.ca]), **Government Downloading and the "Third Sector": The New Public Administration of the Canadian Post-Welfare State.**

¶ The neoliberal assault on the Keynesian welfare state & the demand

S

that government be "reinvented" have come to focus increased attention on the so-called "third sector," because of (1) the moves by neoliberal governments to downloading former public responsibilities onto the market, nonprofit organizations, & individuals; (2) their desire to forge new partnership relationships with nonstate actors (eg, voluntary bodies) to develop alternative service delivery options; & (3) the neoliberal assertion that intrusive government has worked to undermine voluntary citizen participation, charitable giving, & self-help. The question of the place of the third sector in a reformed public administrative structure is of central importance to governance itself. The neoliberal impulse to revive voluntarism & a more participatory civic culture, & in the process, transfer many social support functions to the nongovernment voluntaristic sector, speaks to its desire to disinvest responsibilities for various citizenship rights in the social & economic spheres, & in the process, transform the state's role in society. Moreover, in the government's shift to develop a more contractually based relationship with nonprofit/voluntary organizations, the political economy of the third sector itself is being significantly altered. Explored here is the link between the role neoliberalism sees the third sector playing in its attempt to reinvent government & the implications this holds for public administration practice & governance. The roles of alternative service delivery, partnerships, & contract government as they relate to the new public administration of the post-welfare state are examined.

Shilova, Ljudmila S. (Institut Sociology Russian Academy Science, Leninsky Prospekt 14 117901 Moscow (tel/fax: 719-0940/0740)), **Influence of Russians on the Population Stress Level.**

¶ In the context of investigating possible chronic diseases, questionnaires regarding self-preservation behavior—including an index of stress level—were answered by Moscovites, 1986-1996. In terms of the connection between stress level & gender, age, social position, & education, groups with high stress levels were distinguished, with old people, women, retired people, & workers, who finished just elementary or secondary school, composing different groups. Analysis of scale indicator dynamics showed that two factors have the highest influence on stress: job anxiety & physical exhaustion. Stress level is related to subjective health. However, this relation is influenced by gender. For women, stress level is inversely related to concern about health. The indices of average lifespan & health rate differs between men & women; men's are much lower than women's (the average lifespan difference is up to 14 years). Dissimilarities in terms of different self-preservation behavior are discussed. For women, stress is the reason for higher health concerns. On the whole, male self-preservation culture is lower than female culture. As a result, the indexes of health & lifespan as well as the health value are lower for men than for women.

98S36010 / ISA / 1998 / 13251

Shilova, Ljudmila S. (Institut Sociology Russian Academy Science, Leninsky Prospekt 14 117901 Moscow (tel/fax: 719-0940/0740)), **Difference of Male and Female Model of Health Behaviour.**

¶ Draws on 1985-1996 screening & questionnaire data from 2,465 respondents (Rs) in Moscow, Russia, to define the risk group of chronic diseases & models of self-health reservation behavior, based on Rs seeing a doctor, health self-estimation, stress level, the place of health in struc-

ture of important life values, & satisfaction with the essential indices of lifestyle. The main feature of self-health reservation among Rs was the discrepancy between declared health attitudes & health values, indicating an essential difference between male & female models of health behavior. Women more often see a doctor, obtain better care, & place health higher in a structure of values. These differences seem to underpin the fact that the average lifespan of women is 14 years longer than that of men. It is argued that the Russian socioeconomic crisis & development of a market economy have influenced health behavior. The position of women in the employment market is worse than that of men; therefore they have to sacrifice their health. As a result, the male model of health behavior has improved, while the female model has worsened.

98S36011 / ISA / 1998 / 13252

Shimizu, Shinji (National Instit Mental Health, Khonodai 1-7-3 Ichikawa-shi Chiba 273 Japan (tel/fax: 81-473-72-0141/71-2900; e-mail: Shimizu@ncnp-k.go.jp)), **Natural Disaster and Alcohol Consumption among Residents: Hanshin Earthquake in Japan.**

¶ Examines alcohol consumption in the Hanshin area of Japan following the 1995 earthquake, drawing on quarterly statistics reported by the regional alcohol retail union. Unlike the general pattern of a relationship between disaster & alcohol consumption, an increase in consumption has not been observed, even after controlling for other factors, eg, population outmigration, degree of community casualty, & natural expected change in alcohol consumption volume without the disaster. These results can be examined in terms of the order-oriented traits of the Japanese. It is suggested that further research should examine alcohol consumption in different sample localities.

Shin, Kwang Yeong (Dept Sociology Hallym U, Chunchon South Korea 200-072 (tel/fax: 82-361-240-1304/52-1532; e-mail: kyshin@sun.hallym.ac.kr)), **Democratization and Class Compromise in South Korea.**

¶ Explores class compromise during the process of democratization in South Korea. The transition to democracy in the late 1980s opened a new way to the development of labor movements. In the 1990s, newly organized workers became the most salient & influential social force in shaping the nature of democratization. As the state recognized the reality of union power after continuous worker struggles, class compromise became a real issue to accommodate conflicting interests between labor & capital. Eventually, class compromise took place under the economic crisis in 1998 after the empowerment of progressive union organizations in 1997. The Korean case reveals three facts: (1) class compromise is possible only after the working class becomes a major social & political force; (2) without independent political organization, class compromise is seriously limited in its scope & less effective; & (3) class compromise in newly industrialized countries differs from that of the already industrialized countries because of the impact of international economic dynamics, eg, globalization.

Shiose, Yuki (U Sherbrooke, Quebec J1K 2R1 (tel/fax: 418-651-7375/3548; e-mail: zyl@total.net)), **I Am because of You, or I Am, in Spite of You: Two Models of Boundary Construction in the Classrooms of Japan and Quebec.**

¶ Goffmanian ethnographic observation of several elementary school classrooms is used to contrast strategies taken by primary school teachers to instill a sense of insider/outsider among their pupils in Japan & Quebec. Both societies are imbued by the notion of cultural & national uniqueness & therefore present themselves as pure & impenetrable. Recently, however Japan's uniqueness is being criticized as a myth, while in Quebec, the creation of the national myth is just beginning.

98S36014 / ISA / 1998 / 13255

Shiose, Yuki (Faculté théologie/éthique/philosophie U Sherbrooke, Quebec J1K 2R1 (tel/fax: 819-821-8000/7677; e-mail: y.shiose@courrier.usherb.ca)), **What's Going On? A Comparative Research of the Social Topology of Elementary School Classrooms in Japan and in Quebec.**

¶ Presents ongoing ethnographic research on the interactions taken by the social actors in primary school classrooms in Quebec & Japan. Both societies are modern & capitalistic & have enormous national investments in education. However, the latter epitomizes the so-called authoritarian Asian model, while the former derives its model from the North American scheme. Instead of taking these clichés about these societies &

schools at face value, the actors are interrogated in situ, looking for the answers to "What is really going on in the secret universe of classrooms?" The focal points of the observations include (1) teacher-pupil relationships; (2) inter-pupil communication; (3) processes of constructing order in the potentially chaotic universe of the classroom; & (4) processes of constructing the boundaries between the insiders & the outsiders in terms of collective, national, & cultural identities. Several similarities & differences are found. The classrooms are both the principal arena-topoi-of the cultural & national socialization of children & are the meeting ground of different versions of worldviews presented by the society, the teacher, & the children. The classrooms are different in terms of intellectual requirement & contents transmitted in the classroom, in the interpretation of the collective identities, ie, "nation" & "aliens."

98S36015 / ISA / 1998 / 13256

Shirahase, Sawako, Women and Class Structure: A Comparative Analysis of Japan and Great Britain.

¶ Compares three approaches in assigning the class position of women: (1) conventional, in which their position is determined by their husband's class, (2) individual, in which their position is determined by their own employment, & (3) dominant, in which class is assigned through comparison of wife's & husband's positions. Analysis of the 1995 Japanese Social Stratification Mobility Survey & the 1992 British General Election Survey shows that the approaches are different at the absolute level, but once different marginal distributions under different approaches are taken into account, the relative changes of mobility are virtually the same both in Japan & GB. As far as the pattern of mobility regime in the society is considered, the conventional way of analyzing the class structure does not provide a misleading picture. Further, the proportion of families in which the class position of wives is superior to that of their husbands is still small, implying that families lying outside the scope of the conventional class analysis are still a minority. The conventional approach seems to remain relevant in analyzing the class structure in Japan as well as in GB, at least in examining the relative chances of intergenerational class mobility.

Shkurkin, Anatolii Michailovich (Compl Analys Region Probl Inst, 23a-27 Dicolpoltseva Khabarovsk 680000 Russia (tel: 4212-38-33-00; e-mail: Andy@439sb.khv.ru)), Functional Peculiarities of Labour on Evolutional Stages of Civilization Development.

¶ Analyzes the role of labor & its functions in the three qualitatively different ascending evolutional stages of human development that are determined, correspondingly, by different types of culture. Focus is on the peculiarities of labor in Russia under the conditions of contemporary bifurcation. In accordance with basic principles of synergetics, natural phenomena of functioning of any social object will be to a considerable degree determined by the degree to which the object had deflected from the state of balance. Of particular interest are key events changing the evolutional advancing character of civilized development. Analysis shows that at all stages of transition in the evolutional movement, there occurred displacement of the activity of systems to lower levels of social hierarchy of the society that was expressed in the process of division of labor into separate & more specialized functions, touching, in turn, the lowest structural section of social organization-individual consciousness. Each time in the conditions of bifurcation the decisive role belonged to the morphogenesis processes connected with new means & methods of extracting resources out of the environment & spontaneous adaptation of humanity to these new conditions. The processes of labor division were the means of restraining the aggression of the intellect. Humankind faces a global crisis of labor as the result of all previous phase transitions in evolution. This crisis reflects the general conformity to natural laws: alternation of entropic & negentropic processes leads inevitably to more intensifying crisis states & increasing chaos in the social systems, which are building materials for the creation of a new order under dissipation conditions. At present, Russia has entered the bifurcation phase of the crisis & is in chaos. Research is presented to show that the contradictions of labor under conditions of strong disbalance have become sharper & are beginning to influence the process & results of political & economic reforms.

98S36017 / ISA / 1998 / 13258

Shrivastava, Rewasharan (Dept Sociology JNV U, Jodhpur 342011 India (tel: 291-30910)), Emergence and Explanation of Economic Crimes in India.

¶ Increasing economic crimes, corruption, & financial scams have become a serious cause of concern in India. The Vohra Committee appointed by the government in 1993, has made startling revelations about the powerful network developed by crime syndicates, businessmen, & mafia with government functionaries & political personalities. Here, an attempt is made to understand & explain these linkages via an extended analysis of the socioeconomic changes taking place in India since Independence in 1947. This period is divided in two parts. The first phase was marked by a socialist ideology & state-dominated economy. The regime of control necessitated linkages between businessmen & government functionaries, often involving corrupt means. A system of spoils became firmly rooted. The second phase (since the beginning of the 1990s), known as the liberalization phase, has changed the nature & dimensions of economic crimes. Thus, the transformation from state-dominated development to a liberalized & market-driven economy has not reduced economic crimes, but only changed their nature. The true explanation lies in the peculiar historicity & socioeconomic features of Indian society.

Shterin, Marat (State Library Moscow, Russia (e-mail: 10161.2501@compuserve.com)), The Russian Orthodox Church: Tradition and Disruptions.

¶ Examines the impact of the dramatic events of the 20th century on the Russian Orthodox Church & its current social & political location. It is argued that the present situation cannot be regarded as merely a continuation (or restoration) of the traditional role of the Church in Russian society. Both the Church & society have changed dramatically, & the Church is now in a unique position historically, socially, & politically. Special attention is paid to recent changes in laws concerning religion in Russia & how these were brought about.

98S36019 / ISA / 1998 / 13260

Shulman, Lorenz Helene (Saint Lawrence U, Canton NY 13617 (tel/fax: 315-229-5991/5989; e-mail: Helene.Lorenz@ccmailink.stlawu.edu)), Simple Connective Strategies: Autopoietic Systems and Individual and Community Healing.

¶ Autopoietic systems must negotiate difference & exchange of energies across the borders they create. At the community level, a whole range of connective strategies can be discerned, some of which lead to growth or regeneration & others to dissolution of social networks. Could knowing the code lend to more conscious participation? At the individual level, Western notions of "mental illness" could be rethought as unconscious connective strategies. According to a World Health Organization study on schizophrenia in 9 countries, as well as other sources, what is considered a chronic disease in the West is often cured completely in other environments. Could more be learned about the healing & survival of autopoietic systems from these sources? This would involve a new respect for & collaboration with cultures & healing systems historically colonized & deprived by Western knowledge systems.

Shoval, Judith T. (Hebrew U Jerusalem, Mount Scopus IL-91905 Israel (tel/fax: 972-2-566-0429; e-mail: mshoval@pluto.mscc.huji.ac.il)), Continuity and Change in the Structure of Health Occupations in Postmodern Societies.

¶ Health occupations are undergoing processes of change in response to structural characteristics of postmodern societies, many of which may be seen on a global level. Among the most prominent of these are widespread cost-containment processes that have reduced public allocations to health needs & increased the role of the private sector. Lower-cost personnel have been used increasingly in lieu of high-cost physicians, nurses, & other health care personnel. Increased bureaucratic control of professional role performance has reduced the autonomy of physicians & other providers. Complementary medicine is practiced & utilized by growing numbers of consumers, a phenomenon that has been increasingly accepted by the biomedical profession. Changing expectations & behavior of consumers have caused important modifications in provider role performance. Thus, there has been an erosion in confidence, more vocal criticism demystification, & insistence on evaluation & patients' rights to information & participation in decision making. All of these have caused important changes in the balance of authority & power in the provider-patient relationship.

98S36021 / ISA / 1998 / 13262

Shoval, Judith T. (Hebrew U Jerusalem, Mount Scopus IL-91905 Israel (tel/fax: 972-2-566-0429; e-mail: mshoval@pluto.mscc.huji.ac.il)), Continuity and Change in the Structure of Health Occupations in Postmodern Societies.

S

msshuval@pluto.mscc.huji.ac.il)), **Diaspora Migration: A Comparative Analysis of Germany and Israel.**

¶ Postmodern migration is distinguished by its extreme diversification in terms of immigrant types. Among these are immigrants from diasporas seeking to return to their homelands. Examined here are a number of theoretical issues that concern definitions of diaspora migration, policies regarding the issues involved, & implications. Diaspora migration is based on the "natural right" to return to a historic homeland. In this type of migration an ascriptive, ethnic, or religious criterion determines right of entry & entitlement to specific benefits, in some cases, automatic citizenship. Issues surrounding the reentry of Jews to Israel & ethnic Germans (*Aussiedler*) to Germany in the context of diaspora migration are compared. Focus is on the formal policies of the two governments & the ideological discourse surrounding these policies. Despite the historic & contextual differences between Germany & Israel, the parallels in the social processes taking place in the two societies seem to be greater than their differences.

98S36022 / ISA / 1998 / 13263

Shyam, Nath (U Mauritius, Reduit (tel/fax: 230-454-1041/465-6184; e-mail: vnab@dove.uom.ac.mu)), **Social Implications of Urbanisation in Small Island Countries: A Study of the Mauritian Experience.**

¶ Typically, urbanization in developing nations has created poverty, destitution, & deprivation, & is characterized by migration-led population & economic concentration over geographical areas. Urban growth episode in small island countries, eg, Mauritius, however, has witnessed reasonably balanced spatial dispersal of activities primarily due to lack of migration, external dependence, & coastal tourism. These developments, nevertheless, have contributed significantly to employment & economic growth & have important social implications: eg, the aging of the workforce has impacted the social security system & policy, & rapid growth in female participation in export-oriented industrialization has produced telling effects on family structures, which are manifested in the size of family & dwelling units. Further, the fast growth in tourism about 45% of necessitates attempts to determine optimum tourist population for very small islands with a view of maintaining sociocultural balance. A clear-cut tradeoff between economic growth & social progress is observed that can be used as a Monte Carlo-type of experiment to check the counterfactuals. It is contended that, whereas the rapid economic growth in Mauritius has been more or less autonomous, social policy developments have lacked the growth-induced effects.

98S36023 / ISA / 1998 / 13264

Shye, Diana, Freeborn, Donald K. & Mullooly, John P. (Kaiser Permanente Center Health Research, 3800 North Kaiser Center Dr Portland OR 97227 (tel/fax: 503-335-6748/2424; e-mail: shyedi@chr.mts.kpnw.org)), **Primary Care of Depression in an HMO: Age and Gender Effects.**

¶ Examines how age, gender, & self-reported depressive symptoms interact to affect health maintenance organization (HMO) members' progress in the pathway to outpatient care for depression. Data were drawn from 1990-1992 survey questionnaires & medical charts for an age- & sex-stratified sample of 7,844 members, ages 25+, supplemented by automated utilization databases. Data were collected during a baseline & follow-up year to measure (1) use of outpatient primary medical care, (2) depression-related chart notations, & (3) use of specialty mental health care. Results show that HMO primary care clinicians play the major role in caring for depression & appear to be quite sensitive to its manifestations. Moreover, their diagnosis, treatment, & referral appear to be generally appropriate responses to levels of depressive symptoms & past history of depression rather than to less clinically relevant patient characteristics. However, female gender appears to prompt recognition & treatment of depression independently of symptom levels & other factors—especially among younger women. There were also significant interaction effects between age & gender, & among age, gender, & level of depressive symptoms. Having an identified personal primary care clinician significantly increases the chance of diagnosis, prescription, referral, & specialty mental health care—especially when that clinician was a family practitioner.

Sieben, Inge & De Graaf, Paul M. (Dept Sociology Nijmegen U, NL-6500 HE Netherlands (tel/fax: 31-24-36123-21/99; e-mail: l.sieben@maw.kun.nl)), **Trends in the Total Family Impact on Educational Attainment and Occupational Status in Seven Countries: A Sibling Analysis.**

¶ Following the Blau & Duncans status attainment model, the impact of the family of origin on educational & occupational attainments is operationalized as the effect of educational attainment & occupational status of the parents. However, the total impact of the family is larger than can be measured by these traditional indicators of social class. Other family characteristics, eg, genetic factors & reciprocal influences of siblings, are often difficult to measure. By using sibling analysis, the total impact of the family can be estimated without needing much information. Another advantage of sibling analysis is that the effect of educational attainment on occupational status is without any family bias & therefore not overestimated. Focus here is on differences in the family impact on educational & occupational attainment between countries & historical periods, allowing a test of three well-known stratification theories: modernization, political, & conflict theory. The data are from national representative samples of Australia, England, Hungary, the Netherlands, Scotland, Spain, & the US. Trends in time are studied by making birth cohorts. To test the three theories, macrovariables for modernization & political context are included in the analysis.

98S36026 / ISA / 1998 / 13267

Siebert, Rudolf J. (Western Michigan U, Kalamazoo 49008-5013 (tel/fax: 616-387-4391/3999; e-mail: Gwen.west@wmich.edu)), **The Dialectical Sociology of Religion: Alternative Future.**

¶ The critical theory of religion/dialectical sociology of religion is an integral part of the critical theory of subject, society, culture, & history of the Frankfurt school. The critical theory of society belongs to the philosophy of praxis as one of the three theories of modernity; the other two theories are neoconservatism & deconstructionism. Emphasized here is the difference between the critical theory of society as an integral part of the praxis philosophy on one hand & deconstructionism on the other, because in recent years critical theorists, eg, Walter Benjamin & Theodor S. Adorno, have incorrectly been claimed by deconstructionists. The dialectical sociology of religion consists of three critical theories of religion: (1) Max Horkheimer's & Adorno's Schopenhauerian theory of religion, (2) Benjamin's & Adorno's mystical & historical-materialist theory of religion, (3) Jürgen Habermas's communicative theory of religion. Dialectical sociology of religion stresses the three, more or less possible, probable, or desirable alternative futures of religion: (A) return to the religion of the fathers, (B) disappearance of religion in the totally secularized society, (C) a reconciliation of religion & the modern enlightenment movements. Critical theory of religion negates the desirability of a return to traditional religions (which are seen as obsolete) or a totally profane society; instead, the critical theory of religion intends to reconcile religion & enlightenment by rescuing religious contents considered necessary to resist modern tendencies of "rebarbarization." However, this rescue is to take place in a secular rather than religious form.

98S36027 / ISA / 1998 / 13268

Siegenthaler, Jürg K. & Brooks, Robert (American U, Washington DC 20016-8072 (tel/fax: 202-885-2485/2477; e-mail: jsieg@american.edu)), **Emerging Technologies at Work: A Multi-Disciplinary Review of Applied Science.**

¶ Examines the impact of new technologies on workers of different ages at several historical stages of technological innovation. Social-scientific studies from a broad range of disciplines have tried to assess the impact of new production processes on organizations & workers. An attempt is made to map these studies along different dimensions & over time. It is found that the research is helped by (1) a classification model largely drawn from sociology, & (2) a consideration of the "unity of science" hypothesis. The model & early findings are presented, which indicate that the various scientific disciplines have not come up with clear-cut theories

on work, age, & emerging technologies. However, some partial divisions of labor among disciplines can be discerned. The implications of the research for the sociology of science should be seen as linked with a critical view of the unity of science hypothesis.

98S36028 / ISA / 1998 / 13269

Siemienska, Renata (Instytut Socjologii U Warsaw, PL-00324 Poland (tel/fax: 48-22-8265591)), **Elites and Women in Democratizing Post-Communist Societies.**

¶ Examines mechanisms of the selection of members of political & economic elites after the fall of communist system in Central & Eastern Europe & the role of women in the elites in newly established democracies, drawing on interview data from parliamentaries in Poland, as well data collected in other countries in the region. The changes of the two types of elites are examined from the point of view of their congruency with models of the circulation & reproduction of elites. Discussed are (1) the extent to which members of old communist elites are still in one or another type of elite, (2) whether women were able to get into elites as new or old members, & (3) barriers faced by women & men climbing the ladder to the elites in the democratizing societies. It is found that (A) women are highly underrepresented in the elites; (B) the newly created institutions & mechanisms of elite candidate selection are not women friendly; & (C) those women who are in the elites in the 1990s have more social capital than men occupying similar positions.

Signorelli, Adriana (Dept sociologia U Roma 1, I-00198 Italy (tel/fax: 00396-8611363/8552631; e-mail: signorellia@uniroma1.it)), **Career Paths between Managerial Ties and Individual Strategies. Gender Differences in a High Tech Scientific Organization.**

¶ Brings new arguments to equal opportunities & affirmative action legislation concerning organizations & professions, drawing on field research concerning 386 employees, mostly professionals, of ENEA, one of the biggest Italian scientific organizations. Strong gender differences are evidenced both in division of labor & in career paths. The institutional model of science that distinguishes the administrative from the scientific-professional is rejected in favor of an integrative view of staff & supportive positions that are mostly feminine. Discussion considers the influence of both situational structural ties (Moss Kanter) & individual differences in career strategies (Ibarra, 1995). Principal topics discussed are: (1) how horizontal & vertical differences in the division of labor are influenced by criteria & ways of entrusting new tasks; (2) the prevalence of segregation in respect to low involvement; & (3) worker attitudes in terms of omiphily, choices about mentoring or networking, & leadership.

Siisiäinen, Martti (Dept Social Studies U Lapland, SF-96101 Rovaniemi Finland (tel/fax: 358-16-324-673/600; e-mail: msiisiai@uova.fi)), **Voluntary Associations and the Theory of Autopoietic Systems.**

¶ Suggests that voluntary associations can be seen as a mediating "instance" between interaction systems & organization systems, on the one hand, & between civil society & social subsystems, on the other. Associations are based on trust & their general function is the reduction of "a double contingency inherent in interaction" (Parsons). Associations combine features of interaction systems, groups, & organization systems, & can be seen as a form of mediation between social movements & subsystems, converting disturbances & challenges from civil society into a form in which social subsystems can deal with them, i.e. to the "languages" used in social subsystems, increasing the ability of social subsystems to resonate. This means that associations have functioned as an alarm for the social system. Voluntary associations have helped to combine the different codes of social subsystems into the same discourses, making possible, e.g. communication between moral & economic codes. Examples are selected from among the critical associations of the early 19th century & the present. The limitations of Niklas Luhmann's theory in studying voluntary associations are discussed, with particular attention to his conception of action & his problems in conceptualizing the dynamics of civil society.

Silva, Carlos Nunes (Centro Estudo Geográficos Alameda U, P-1699 Lisbon Portugal (tel/fax: 351-1-794-02-18/796-00-63; e-mail: carlos.silva@fc.ul.pt)), **Local Government Growth and Retrenchment in Portugal.**

¶ Democratic local government was a major change introduced by the

1974 political transition. Indeed, with the end of the long-lasting authoritarian regime, local government increased its overall level of services, although without any major change in relative terms, as central government also increased its overall level of intervention associated with the creation of a welfare-state. With only 7% of public expenditure at local government level, Portugal is one of the most centralized countries in Europe. Major changes are in preparation to reinforce a tendency already well defined for an increase in the overall responsibilities of local government, but more as an enabler than as a provider. This means an increase in local government budgets but with increasing transference of production & delivering of services to the private sector via a series of innovations. Questionnaire data from Lisbon highlight these ongoing processes.

Silva, Wânia R. & Vieira, Francisco G. D. (Paraná State U Maringá, Colombo 87020-900 PR Brazil (tel/fax: 55-44-261-4288/263-6500; e-mail: fgdvieira@wnet.com.br)), **Teaching Sociology to Business Administration Students in Emerging Economies: The Case of Paraná State University of Maringá, Brazil.**

¶ The production of knowledge in sociology passes for the reflection, comprehension, & establishment of a critical perspective before the society that is analyzed. This viewpoint is particularly important in countries whose economic dimensions are in a consolidation phase & where the reality of academic knowledge is reached by only a tiny portion of the population, e.g. Brazil. Sociology must deal with its singularity & establish ongoing dialogue with several areas of the knowledge. It is with the objective of facing that challenge & providing a multidimensional & dynamic vision of reality that the experience of teaching sociology to students of business administration in the Paraná State U of Maringá came about. All sociological theoretical construction accomplished along the course is accompanied by visits to companies, particularly small & medium companies, which are common to the Brazilian economy. During visits, students interview the owners & employees so they can articulate the sociological categories learned in classroom in terms of the interpreted & lived reality. This experience has resulted in greater student motivation by legitimizing sociology as an area of knowledge & a practice.

Silver, Beverly J. (Sociology Dept Johns Hopkins U, Baltimore MD 21218 (tel/fax: 410-516-7636/7590; e-mail: silver@jhu.edu)), **Strategy and Structure: The Changing Geography of Labor and Labor Movements in the 20th Century.**

¶ The growth of structural unemployment & the informalization of work have been associated with an increasing mobility & volatility of capital, as investments are increasingly reoriented from trade & production to finance & speculation. While some have emphasized the unprecedented nature of these changes, others have conceptualized them as a recurrent feature of capitalism (analogous to that of the late 19th century). The question of whether society sits at a fundamental turning point in labor-capital relations is addressed by comparing the nature of work & workers' movements in three different periods: the classical period of finance capital in the late 19th century, the Fordist period of the Cold War era, & the current period of globalization. Drawing on the World Labor Research Working Group database, the changing industrial & spatial distribution of world-scale labor unrest is mapped from the late 19th century to the present. Industrial & organizational shifts in production are then linked to shifts in the bargaining power & militancy of workers' movements. The interrelationship between structural transformations & labor movement strategy are explored.

Silverstein, Merrill & Bengtson, Vern L. (Andrus Gerontology Center U Southern California, Los Angeles 90089 [tel/fax: 213-740-8242/4060; e-mail: bengtson@rcf.usc.edu]), **Intergenerational Family Solidarity over the Adult Life Course: The Influences of Aging, Socio-Historical Change, and Family Resemblance.**

Investigates how cohesion in adult child-parent & grandchild-grandparent relationships changes in accordance with biographical, historical, & generational time, using data from the Longitudinal Study of Generations, in which 350 four-generation families were surveyed 1971-1997. Intergenerational cohesion is measured using the six items of Bengtson's affectual solidarity scale. Separate analyses are conducted for children's relations with mothers & fathers, & for grandchildren's relations with grandmothers & grandfathers. Hierarchical linear modeling procedures identify effects at four levels of analysis: (1) Intergenerational affection is dynamically mapped against the age of each child/grandchild as within-subject growth curves associated with aging. (2) Time of measurement is treated as a contextual factor in which subjects are embedded, thereby yielding estimates of period effects on intergenerational affection. (3) Considered are the effects of birth cohort by examining average lifetime levels of intergenerational affection for successive 10-year cohorts. (4) Within-lineage resemblance is modeled as the variance among biologically linked dyads in levels of affection across successive generational pairs. This analysis introduces time-varying covariates that might explain any observed period effects, eg, divorce of parents/grandparents, & norms of familism expressed by the child/grandchild. This analysis will provide a nuanced portrayal of the complex interplay of personal, social, & historical forces that have shaped the contours of the contemporary intergenerational family.

Simon, Karl-Heinz (U Kassel, D-34109 Federal Republic Germany [tel/fax: 49-561-804-2273/7266; e-mail: simon@usf.uni-kassel.de]), **Modelling Certain Aspects of the Luhmann-Complex: Expected Benefits.**

Investigates whether a modeling approach to certain aspects of Niklas Luhmann's theory empire improve the understanding of the "Luhmann complex" & help it estimate consistency of the network of concepts. Modeling methodology should not be considered too narrowly as a completely formalized endeavor in dealing with concepts & relationships. Formalization requires (1) a certain stage of theory development that has not yet been reached in Luhmann's system theory, & (2) too many important facets & characteristics would be suppressed, & only rather trivial results might be created. Another approach is that of modeling parts of the theory so as to ascertain integration of formal as well as of more intuitive concepts, yielding more richness in problem orientation, material involved, & results produced. Several different modeling methods are applicable for this that have one step in common, ie, the definition of system diagrams representing the structures involved. When explicating expected benefits, structural coupling is taken as an example. As structural coupling is that location in the theory where the interconnectedness of otherwise autonomous working autopoietical systems is guaranteed, it is of special importance.

Sing, Ming (Dept Public & Social Administration City U Hong Kong, Kowloon [tel/fax: 852-2788-9651/8926; e-mail: sasing@cityu.edu.hk]), **Comparing Democratic Transitions in East Asia: The Cases of Hong Kong, Taiwan and South Korea.**

Explores why South Korea & Taiwan gathered greater momentum for democratization since the late 1980s than Hong Kong, despite the latter's consistently higher level of socioeconomic development. According to modernization theory, countries with a medium to high level of socioeconomic development are likely to have democratic systems. Thus, the democratization of Taiwan & South Korea has been attributed to their spectacular socioeconomic development, at least as a long-term factor. However, the socioeconomic development of Hong Kong was no less impressive, even better in terms of gross national product & life expectancy. Variations in democratization of the three East Asian societies are compared along five dimensions: (1) influence of external factors; (2) power of prodemocracy civil society; (3) public commitment to democracy; (4) bourgeoisie opposition toward democracy; & (5) level of civil liberties enjoyed by their people before transitions. It is found that, besides the much stronger external opposition (ie, from the People's Republic of China), Hong Kong has also encountered greater resistance than the other two East Asian societies in terms of the other four dimensions, which, when taken as a whole, can more adequately account for their differences in democratization.

Singh, Harnek (Dept Economics & Sociology Punjab Agricultural U, Ludhiana 141004 India [tel/fax: 161-401960/400945]), **Aging and Family Relations—A Sociological Perspective.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

In Indian society, the aged continue to enjoy respect & power. Here, their relations with other family members are explored, drawing on data from a random sampling of 120 respondents in Ludhiana, a highly developed state in terms of education & industry. The proportion of the aged population is increasing & is estimated to be 7.70% by 2001. Respondents reported very cordial relations with spouse, daughter, & grandchildren, in order of preference. Males were more cordial to spouses, whereas females were more cordial to their daughter. Grandchildren were considered cordial at the second instance by both genders. Compared to males, females had more cordial relations with their sons because of emotional attachment, despite some wrongs done by them. Visits of children were infrequent, & arbitration had to be initiated in certain matters. In the case of illness, caretaking responsibility fell first to the spouse. The aged continually try to adjust themselves to the changing family environment. Their relations were viewed as social assets.

Singh, Lakshman M. (Dept Sociology Bharathiar U, Coimbatore 641046 India [tel/fax: 091-0422-446491/422387; e-mail: mlsingh@as250bharathi.ernet.in]), **Cable Television and Leisure Time Activities of Industrial Workers.**

The introduction of TV in India reached an accelerated phase of development with satellite communication & introduction of large numbers of low-power TV transmitters. The concept of cable TV is catching on fast & has drastically changed recreation patterns. Leisure time has been rescheduled to provide enough time for TV viewing. In the 1980s, visiting movie theaters was the most important leisure time activity of both rural & urban people in developing countries like India. But in the 1990s, TV, particularly cable viewing, has become the primary leisure pursuit. Reported here are data from a stratified sample of 300 households of industrial workers who have had TV in their homes for a mean period of 5.63 years & cable TV for 1.6 years. Respondents view TV for a mean period of 40 minutes on weekdays & 2.5 hours on holidays, cable TV for a mean period of 1 hour 37 minutes on weekdays & 3 hours 17 minutes on holidays. The level of satisfaction about the availability of time to view TV is 59% & 46.4% for cable TV. Specific ways that cable TV has affected respondents at both the personal & social levels are detailed.

Singh, Lakshman M. (Dept Sociology Bharathiar U, Coimbatore 641046 India [tel/fax: 091-0422-446491/422387; e-mail: sociolog@as250.bharathi.ernet.in]), **Comparative Study of Environmental Pollution in Tanneries and Hosiery Industries in Tamil Nadu, India.**

¶ With 13% of the world's livestock population, India is a leading leather-producing country, but tanneries result in air & water pollution. Hosiery is another important export-oriented industry in India, but dyeing & bleaching require large amounts of chemicals harmful to workers & nearby residents. Plant, animal, & even human life are placed at risk. Here, an attempt is made to measure the perception, knowledge, & attitudes of 60 factory executives, 120 workers who handle harmful chemicals, & nearby residents about environmental pollution caused by such production processes. Survey data revealed that the environmental perception score was highest for workers, followed by residents. The environmental knowledge scores followed similar trends. Attitudes toward prevention of environmental pollution were highest among workers, followed by executives, & lowest among residents. The overall environmental score was influenced by income, education, & migratory status of respondents; caste, religion, & age had no significant influence.

Singh, Simboonath (Ryerson Polytechnic U, Toronto Ontario M5B 2K3 (tel: 416-921-9781; e-mail: S3Singh@acs.ryerson.ca)), **Challenging Racial Hegemony in the Caribbean: The Use and Manipulation of Cultural Symbols in the Black Power and Rastafarian Movements.**

¶ The Black Power & Rastafarian movements were particularly influential not only in creating anticolonial & imperialist consciousness among the black masses, but also in injecting race consciousness & spurring ethnic activism to a level unparalleled in the history of revolutionary struggles in the Caribbean. With clear ethnic & political aims, these movements were instrumental in challenging prevailing racial hegemony & negative cultural depictions of blackness by reframing, redefining, & recreating a more positive image of black ethnicity. One goal was to cast off negative stereotypes about blackness by reinventing ethnic & racial social meanings & self-definitions, & embracing ethnic pride—black ethnic pride. To change the meaning of black ethnicity, employed were a number of cultural symbols that were largely Afrocentric in content, which created an empowering image of black people in the diaspora & fueled ideological struggles. Focus here is on cultural symbols such as ganja, dreadlocks, negritude, pan-Africanism, reggae, & Jahdom that were used by ethnic activists in protest strategies. Analysis is located in a theoretical framework that emphasizes the dynamic nature of ethnicity; ie, ethnicity & ethnic identity are socially, politically, & culturally constructed phenomena & can be manipulated to dramatize injustice & animate grievances.

Singharoy, Debal Kumar (Sociology Faculty Indira Gandhi National Open U, Ignou New Delhi 110068 India (tel: 91-011-6961845)), **Grass Roots Mobilisation and Sustainable Social Transformation for Gender Equity.**

¶ Examines the roles of grassroots mobilization in agrarian transformation, in general, & social transformation of the marginalized sections of Scheduled Castes, tribes, & women, in particular, in rural West Bengal, India. Analysis reveals that radical forms of grassroots mobilization provided enormous space for gender equity & empowerment as these mobilizations challenged the legitimacy of women's social, economic, & cultural subordination. Contemporary institutionalized mobilization, in contrast, has provided women with a very limited space for their empowerment, as these have reinforced the preexisting social, cultural, & political institutions that have caused women's subordination. However, persisting grassroots mobilizations have sustained the process of social transformation in rural West Bengal. Even in this limited social & political space, a leadership has emerged among women in rural areas, & various reformative actions in the areas of women's employment, health, education, & political rights have been initiated. These actions have paved the way for a sustainable gender equity for the future society of rural India.

The limitations of & prospects for women's empowerment in institution & mobilization are considered.

Sintonen, Teppo M. (Dept Social Sciences & Philosophy U Jyväskylä, SF-40351 Finland (tel/fax: 358-14-602-924/921; e-mail: temisi@dodo.jyu.fi)), **Two Life-Stories. A Narrative Approach to the Ethnic Identity Construction of Finns in Toronto, Canada.**

¶ Presents ideas on how to examine ethnic identity discursively & narratively. The discursive manners in which the Canadian Finns in Toronto, Ontario, construct their collective ethnic identity are analyzed. In general, identities are constructed & articulated in variable types of narratives. As Emile Benveniste has argued, discourse & narrative provide a speaker with the capacity to posit her/himself as a subject. This enables her/him to identify with certain attributes & characters &, thus, define her/his identity. Besides allowing us to "tell ourselves" into the stories &, thus, define ourselves, narratives open many perspectives on the world. Through narratives, we negotiate & locate ourselves in the world. Thus, we can say that narrativity is an ontological condition of our being in the world. We do not just tell & listen to stories; we live in a world of stories. Two different life stories are analyzed: one with strong religious influence, & one with left-wing political influence. This religious-political distinction reflects the social situation of the Canadian Finns during the 20th century.

98S36049 / ISA / 1998 / 13290

Sirota, Regine (Institut national recherche pedagogique U Paris V, F-75006 France (tel/fax: 33-1-46-34-90-00/43-54-32-01)), **Birthday, a Modern Childhood Ritual of Socialization.**

¶ Considering the birthday a modern ritual of socialization & representation of contemporary childhood, the birthday party is studied via ethnographic data from participant observations, photographic reports, video, & interviews, mainly in Paris, France. Findings indicate how civility rules are set to work in the situation, & it is hypothesized that a modern handbook on childhood civility is written at the intersection of different spheres (market, media, cultural, scientific, scholar, family, & peer groups). How civility rules are edicted implicitly or explicitly is mapped, & how they are set to work in the situation is compared. At stake is the place of children in the emergence of new forms of sociability, solidarity, & integration in social networks.

Sisjord, Mari-Kristin (Norwegian U Sport & Physical Education, N-0806 Oslo (tel/fax: 47-22-18-56-48/57-18; e-mail: mari.kristin.sisjord@uisi.no)), **Physical Education and the Construction of Gender Identity.**

S

Mariks@brage.idrettsns.no)), **Gender and the Snowboard Culture.**

¶ Reports a study on snowboarding as youth culture, focusing on gender issues. Ethnographic fieldwork & 8 qualitative interviews were conducted at a 1-week snowboard halfpipe camp held at a summer ski resort in July 1996. The participants were ages 13-52, with the majority ages 16-20. Several trends emerged from the data that clearly make snowboarding a parallel youth culture. The dimension of youth culture is particularly expressed through the symbol system: clothing, equipment, & language. Also, the practice & organizational matters indicate that the snowboard culture differs from other kinds of organized sport. In snowboarding, participants are more active in the development of the sport, both at the micro- & macrolevels. The snowboard culture appears to be less gendered than other sports in terms of style & equipment, but a gender order does exist.

Sitas, Ari (U Durban, 4000 South Africa), **The New Politics of the Poor: Unwaged Labor, Cooperative Survival Strategies, and Organization in a Globalized City (Durban).**

¶ Explores the impact of three simultaneous processes on Durban, South Africa: the sudden intensity of global economic relations that followed after the 1994 elections; fragmentation of movements representing the poor in the high apartheid period; & the opening up of life chances for the black majority after the civil war. From these emerged forms of labor, waged & unwaged, new forms of economic practice, & new micro-challenges to grassroots patronage systems. Investigated is how the forms of work that buttressed one of the strongest labor movements are reshaped & how new marginalities are coming into voice & action.

98S36052 / ISA / 1998 / 13293

Sitas, Ari (U Natal, Dalbridge 4014 South Africa [tel/fax: 27-31-260-2439/2372]), **Co-Decisions in the Management of Adversity in South African Industry.**

¶ Explores debates on worker participation & codetermination in South Africa in the context of the country's new dispensation. Focus is on the principles of social codetermination that define the new social contract between the state, employers, & labor.

98S36053 / ISA / 1998 / 13294

Sites, William (School Social Service U Chicago, IL 60637 [tel/fax: 773-702-1037/0874; e-mail: w-sites@uchicago.edu]), **Primitive Globalization and Urban Politics in New York.**

¶ Develops the term "primitive globalization" to characterize the role of urban politics, & the particular mix of globalism & localism, in the recent experience of New York City. Drawn loosely from Karl Marx's use of primitive accumulation, the concept of primitive globalization highlights the importance of local-state actors in "separating the producers" from the postwar liberal order & in constructing key elements of the institutional & symbolic undercarriage that sustains neoliberal economic globalization. The institutional dimensions of this process have been central in constraining & fragmenting participation by community actors. Highlighted is the symbolic/discursive role of the city's public leaders, who, far from selling globalization with cosmopolitan themes, have traded heavily in localist representation. Over the past several decades, they have done so in reactive & highly conservative ways, & in the process have succeeded in generating a reassuringly parochial—even primitive—image of community identity & political authority during a period of economic & cultural destabilization. In practical terms, this suggests that, while New York City's global strategy may be criticized in economic terms as a reactive, ad hoc effort oriented around short-term stimulus of the real-estate market, in political terms, the success of public officials in redefining the local community has been considerable. Local-state officials, & local electoral politics as an arena, have played a very important role in establishing the broader social conditions supporting this kind of globalization of the city. It is also possible that the distinctive conditions of the US—a highly neoliberal economy & a relatively decentralized state—result in localist contours of globalization & urban governance that are significantly different from other globalized cities.

Sivakumar, Damodaran (Population Research Centre U Kerala, Thiruvananthapuram 695581 India [tel/fax: 91-471-418796/447158; e-mail: dsk@univker.ernet.in]), **Aging of Population in Kerala and China: Care of the Aged: The Challenge of the 21st Century.**

¶ Analyzes population aging & care programs in Kerala (India) & the People's Republic of China. Developed countries had a severely aged

population only after they completed the modernization process & reached a high level of socioeconomic development, with sufficient resources to support & establish adequate social security, social assistance, social insurance, & service care delivery system of the elderly. In contrast, Kerala & China have to support a severely aged population in spite of economic backwardness & underdevelopment. Statistical data are presented on the distribution of the age-65+ population & the elderly dependency ratio in both countries, with projections through 2020. Both provide a large number of social security/welfare fund assistance, & institutional services are on the increase. The sociology of health care of the aged is a growing discipline in providing adequate data for the continuum of services. A multidisciplinary team approach consisting of the geriatrician, the social work journalist, & geriatric nurse in well-organized geriatric centers & their community outreach work through popular participation is a good proposition for the future. The role of the family must also be emphasized.

98S36055 / ISA / 1998 / 13296

Sivakumar, Damodaran (Population Research Center U Kerala, India 695581 [tel/fax: 91-471-418796/447158; e-mail: dsk@univker.ernet.in]), **An Analysis of the National Mental Health Programme in India: Role of Mental Health Sociology.**

¶ The National Mental Health Programme started in India in 1982 is a challenging strategy to ensure (1) availability & accessibility of mental health care to the poor & underprivileged & (2) community participation in mental health. Reported here is a 1997 evaluation study examining (A) prevention & treatment of mental & neurological disorders & their associated disabilities; (B) use of mental health technology to improve general health services; (C) application of mental health principles in improving the quality of life; & (D) national mental health literacy. Results show that the National Mental Health Programme is progressing, & mental health teams—consisting of psychiatrist, clinical psychologists, psychiatric social worker, & psychiatric nurse—have made a tremendous impact in the program. In this context, the task of the mental health sociologist is described as providing mental health literacy to paraprofessionals, social workers, demographers, & leaders in public health; a detailed plan of action for mental health sociologists is presented.

Skirbekk, Sigurd N. (Dept Sociology U Oslo, N-0317 Blindern Norway [tel/fax: 472-285-5216/5253; e-mail: sigurd.skirbekk@sosiologi.uio.no]), **Future Predictions—Human Rights (The Future of Contemporary Concepts of Human Rights).**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Sociologists should be able to predict future human conditions in a more sophisticated manner than just by prolonging statistical trends. Theories of how ideas that were functional for one era become dysfunctional when new challenges arise might help predict turns of trends. The UN Declaration of Human Rights is such a set of ideas having proven functional for political reorientation after WWII for supranational organizations & for humanistic defense against totalitarian regimes. However, facing new challenges of a demographic & ecological nature, there are reasons to conclude that present articles in the declaration will be dysfunctional for vital reorientation. Even if this does not mean that the philosophy of natural rights should be given up, there are reasons to predict that contemporary concepts of the declaration have to be changed.

Skirboll, Esther & Taylor, Rhoda (Slippery Rock U, PA 16057 [tel/fax: 724-738-2424; e-mail: esther.skirboll@sru.edu]), **Two Homes, Two Jobs, One Marriage: Commuter Spousal Relationships.**

¶ The choice of whether spouses will live apart for career reasons has become increasingly common as employment opportunities for professional women have increased & as more women are seeking such employment. To realize career potential for both partners, many couples maintain residences in separate geographic locations, a living situation defined as "commuter marriage." A survey of 150 such individuals, combining qualitative & quantitative methods in a questionnaire, allowed generalization from the data & encouraged new ideas as well as rich personal responses. Subject areas included maintenance of the commuting relationship; details of commuting & reunion activities; attitudes of employers & colleagues; decision making & household responsibilities; quality of the spousal relationship; & effects on friendships, family, children, &

health. Responses indicate high levels of appreciation of the partner's career aspirations as well as generally high levels of satisfaction with the lifestyle. Such partners appear to be equally committed to their partners & their careers.

Sklaire, Leslie (London School Economics & Political Science, Houghton St WC2A 2AE England [tel/fax: 44017-955-7299/7405; e-mail: L.Sklaire@lse.ac.uk]), **Competing Conceptions of Globalization.**

Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Argues that the greatest confusion in the globalization literature results from inadequate attention to the distinctiveness of the "global" as a concept. Four competing conceptions of globalization are identified: world systems, global culture, global society, & capitalist global systems. Each places varying emphases on globalization, with some barely distinguishing the global from the international (labeled transnationalist). Implications are illustrated with reference to the transformation of multinational to transnational-global corporations, & to the creation of an emerging transnational capitalist class.

Slagsvold, Britt (NOVA Norwegian Social Research, Munchesgate 29 N-0260 Oslo [tel/fax: 22-541-258/201; e-mail: Britt.Slagsvold@isaf.no]), **Measures of Quality of Care—Are They Valid?**

¶ The validity of typical indicator measures of quality of care in old age institutions is explored in a sample of 9 nursing homes with a total of 19 wards & 533 patients. Quantitative & qualitative analyses reveal that (1) the correlation between indicator measures & observed evaluations on quality was zero for most quality dimensions; (2) while the indicator measures on quality revealed no differences between large & small institutions, small institutions were unambiguously rated as better on all the psychosocial aspects of care using the observed evaluations; & (3) overall, the indicator measure, which represents typical measures on quality of care, was invalid. A review of the literature on measures of quality of care indicates that low validity is a common problem. It is suggested that indicator measures on quality of care are based on questionable assumptions—eg, that indicators have universal relevance; can be based on formalized processes; can be interpreted independent of context; & are additive, monotonous, & reflective.

Slapak, Sara, Sautu, Ruth, Mendoza, M. Di Virgilio, Luzzi, A. & Martinez, R. (Centro Estudios Avanzados, Uriburu 950 lo Piso 1114 Buenos Aires Argentina [tel/fax: 541-963-6960/6962; e-mail: ceadir@uba.ar]), **Disruptive Behavior and Learning Difficulties among Children from a Poor Neighborhood of Buenos Aires.**

¶ Reports on results of a collaborative applied project carried out at the Children Clinic Psychology Unit of the U of Buenos Aires, Argentina, that is investigating the association between disruptive behavior & child failure at school using sociological & psychological approaches. Data derived from 350 clinic stories of children sent to the unit for treatment by their teachers reveal several types of disruptive behavior: trouble making, which is the most frequent cause of school sanctions; destructiveness & violence, which are associated with other symptoms; & to a lesser degree, truancy & stealing/lying. Children's learning difficulties may be either in the writing/reading, calculus, or low attention disposition. The influence of children's family background, particularly instability of employ-

ment, stability/instability of family ties, violent experiences at home, & adults' education, are assessed. Implications for teacher education & policy making are considered.

Slepickova, Irena (Faculty Physical Education & Sport Charles U, XR-16252 Prague 1 Czech Republic [e-mail: slepickova@ftvs.cuni.cz]), **The Life of Top Level Athletes after Their Sports Career.**

¶ For top-level athletes, sport represents a long & specific part of their life. Periods of preparation, top performance achievements, & retirement from the sports career involve more responsibility & demands for these athletes than for those who do not reach elite levels. The adaptation problems of top-level athletes after their sports career ended was the subject of an international European project called "Eurathlon." The intention was to follow Olympians after their careers were over. Focus here is on former Olympians in the Czech Republic, which has gone through several social/economic changes in this century, investigating their postcareer social adaptation via interviews with 22 of 83 Olympians, asking, in particular, their opinions on the contribution of sports to their social life & professional life. Results show that the athletes did not have serious problems with the transition period into their new social environment, ie, into "normal" life. In most cases, the sport period was considered a positive one.

Smaling, Adri (U Humanistic Studies, NL-3512 VS Utrecht Netherlands [tel/fax: 30-2390-100/170; e-mail: a.smaling@uvh.nl]), **The Paradigm-Dialogue: What Kind of a Dialogue Should It Be?**

¶ To have successful conversations, participants of a paradigm-dialogue must have some awareness of their own paradigmatical inclinations, which implies acknowledgment that a paradigm is also a disciplinary matrix. Acknowledgement of the arational aspects of paradigmatical differences means that dialogue participants should not define their conversation as a debate or a persuasion dialogue, which can be won on a purely logical basis, but should try to clarify their own paradigmatical orientation & try to understand those of others. The quality of a dialogue aimed at self-clarification & understanding depends on the degree to which the following communicative requirements are fulfilled: interactivity, specific symmetry, mutual trust & respect, openness, & charity. The quality of an argumentative (but not necessarily competitive or persuasive) paradigm dialogue also depends on deep insight into different paradigmatical approaches. One may think of empirical-analytical, hermeneutical-interpretative, & critical approaches, but also of more recent approaches, eg, constructivism, postmodernism, & neorealism.

98S36064 / ISA / 1998 / 13305

Smerecky, Jozef (Air Force Academy, Rampova 7 XO-04121 Kosice Slovakia [tel/fax: 42-19565-12152/19563-35192]), **Transformation of Morale in the Armed Forces of Slovakia.**

¶ The armed forces of the Slovak Republic have existed for only 5 years. From the beginning, state authorities & the Dept of Defense have paid constant attention to the morale of the military staff & to morale combat attributes, aware of the fact that most of the commanding staff had been educated to a morale badly shaped by the ideology of directiveness, in the spirit of class-enmity terms. The current transformation of Slovak society is bringing about a transformation of the former morale model into a new pluralism-based model, following the principles of autonomy & responsibilities of every individual, as well as state institutions. The old morale model has failed, but a new one has yet to be established. Here, within the armed forces as a social organization, morale is considered as a sum of social standards & rules of behavior applicable in military organizations or within certain social groups.

Smith, Chris & Meiksins, Peter (Aston Business School Aston U, Birmingham B4 7ET England [tel/fax: 44-0-121-359-3611/6389; e-mail: smith@aston.ac.uk]), **Engineers and the Future of Technical Works: A Comparative Perspective.**

¶ Engineers are central to the development of industrial capitalism. Despite this, little attention has been paid by social scientists to the engineer's place in social structure. On the contrary, social scientists have generally been content to generalize about engineers on the basis of their knowledge of a single country, treating them as if they were all alike, both within & across national boundaries. It is argued that comparative analysis of engineers is badly needed to correct the misconceptions that inevitably result from this kind of generalization. Comparative analysis of engineers reveals wide differences in how they are trained, employed, & rewarded in different countries; their place in the enterprise & social structure also varies nationally. Understanding these differences is of great value to those interested in analyzing different national experiences with technology & industrial relations & in exploring the future of industrial capitalism at both the national & global levels. Studies of engineers in a variety of industrial capitalist countries are reviewed, & their implications for understanding the social position of engineers are summarized, using an analytical model developed in *Engineering Labour* (Smith & Meiksins). It is argued that differences in the role & social position of the engineer continue to affect the evolution of capitalism, even in the era of global capitalism & "best practice" management strategies. To illustrate this argument, several examples are reviewed that show how different constructions of the engineer can affect prospects for democratized workplaces, favor or limit certain kinds of technological development, & shape the reception of best practice managerial strategies in particular national contexts.

98S36067 / ISA / 1998 / 13308

Smith, David (Dept Sociology U Kansas, Lawrence 66045 [tel: 913-864-4111; e-mail: emerald@lark.cc.ukans.edu]), **Willing Executioners? Antisemitism, Authoritarianism, and the Sociology of the Holocaust.**

¶ Contents that Daniel Goldhagen's argument in *Hitler's Willing Executioners* (1996) that Nazi anti-Semitism was the product of two characterological tendencies, both of which were endemic to the German public—an anti-Jewish delusionality & a deep-seated disposition to cruelty & violence—is deeply flawed. He is right to focus attention on issues of anti-Semitism & authoritarianism, which had been virtually banished from most recent discussions of the Holocaust (on the postmodern or functionalist ground that the Holocaust can be traced, not to genocidal tendencies among Germans, but exclusively to science, the hubris of modernity, Enlightenment rationality, or polyarchic bureaucracy). But Goldhagen is wrong about almost everything else. His scholarship is weak, his evidence limited, & his analysis banal. The latter point is significant, because Goldhagen fails, above all, to clarify why & how anti-Semitism & authoritarianism tend to interact in potentially genocidal ways.

98S36068 / ISA / 1998 / 13309

Smith, David (U Toronto, Ontario M5S 1A1 [e-mail: rdsmith@utoronto.ca]), **Status Crystallisation and the Sociology/Psychology Nexus.**

¶ Status crystallization—an attribute of an individual that cannot be defined without reference to a social context—has been explicitly debated, researched, condemned, & praised for 60+ years in the sociological literature. It is argued here that the concept's troubles have been related largely, if not exclusively, to the methodological & theoretical sophistication it demands & not to any intrinsic flaw in the theoretical formulation itself. Status crystallization is a quintessentially social-psychological concept in that it cannot be meaningfully reduced to either a pure social-structural or a pure psychological construct. Properly understanding status crystallization allows theorists & researchers to see divisions such as sociology, psychology, & social psychology more as useful heuristics than anything else. Among other implications, it is proposed that the concept of structure may need to be revisited.

98S36069 / ISA / 1998 / 13310

Smith, David N. (U Toronto, Ontario M5S 1A1), **Interconnected Networks and Boundary Definitions.**

¶ To analyze the role or behavior of networks between & within organizations, it is implicitly necessary to define network boundaries. In a way, these are specific aspects of a more general network paradigm that seeks to incorporate the phenomena of boundary formation, change, & disappearance. Examined here is how boundary changes at one level of analysis (internal, external, formal, informal, etc) can influence changes at another. Further, analysis of these influences are situated in a "connectionist" model with applicability & relevance beyond social organization phenomena.

98S36070 / ISA / 1998 / 13311

Smith, David R. (U Prince Edward Island, Charlottetown C1A 4P3 [tel: 902-566-0433; e-mail: rd.smith@utoronto.ca]), **Societal-Level Theorising: Snare, Delusion or Rosetta Stone?**

¶ Attempts at societal-level theorizing have been derided as excursions into overgeneralized "grand theories," or reifications or misplaced concreteness or defended as a set of crucial abstractions that allows the analysis of such things as culture, society, & social change. This dispute is, in essence, a conflict between those who need these concepts & those philosophers of social science who note that mere "need" has no epistemological weight. Here, drawing heavily on recent work in chaos & complexity theories, elaborated is a paradigm capable of providing meaningful definitions of phenomena at both the dyadic & societal level while not resorting to either reductionism or arbitrary theoretical boundaries to separate the various social scientific levels (or disciplines) from one another.

98S36071 / ISA / 1998 / 13312

Smith, Janet L. (Urban Planning & Policy Program U Illinois, Chicago 60607 [tel/fax: 312-996-2151/413-2314; e-mail: janets@uic.edu]), **Housing Advocacy and Data.**

¶ Examines theoretical & practical issues pertaining to the development & maintenance of a database intended to help advocates monitor the state of affordable, publicly assisted housing. The subsidized housing database maintained by the U of Illinois at Chicago Natalie P. Voorhees Neighborhood Center for Neighborhood & Community Improvement is used to examine logistical & conceptual issues that arise when making data available for advocacy purposes. Drawing from two cases that benefited from this database & existing research on housing-related database projects, suggestions are made for using like kinds of data for advocacy purposes, including the issue of institutional arrangements for database maintenance & the need to have access to a variety of data to provide a context for interpreting housing data. Theoretical & practical issues of maintaining & using such a database at the nexus of housing advocacy & database development, & the benefits of mapping data to analyze distributive effects of housing programs are discussed.

98S36072 / ISA / 1998 / 13313

Smith, Michael (Faculty Arts McGill U, Montreal Quebec H3A 2T5 [e-mail: smith@LEACOCK.LAN.McGill.ca]), **Employment Security, Trust, and Employers-Employee Relations.**

¶ There is a common argument that employment contracts, for the most part, are inherently imprecise. Consequently, a willingness to work diligently cannot usually be ensured through contractual provisions. Rather, such willingness is most likely to be produced by cooperative employer-employee relations built on trust. But the maintenance of cooperation & trust is continuously threatened by the temptation to defect, described in the standard prisoner's dilemma model. The problem, then, is to design institutional forms that will allow an escape from the prisoner's dilemma. Employment security is thought to be a critical element of such institutional forms. The logic of attempts to show that employment security produces trust & cooperation is critically examined here in an iterated prisoner's dilemma framework.

98S36073 / ISA / 1998 / 13314

Smith, Michael Peter (Dept Human & Community Development U California, Davis 95616 [fax: 530-752-5660; e-mail: mpsmith@ucdavis.edu]), **Transnationalism and the City: From Global Cities to Transnational Urbanism.**

¶ Debates on global cities take place in a wider discourse on neoliberal economic globalization that is challenged by those who construct transnational networks & engage in place-making practices that do not fit the contours of the neoliberal order. Transnational networks constitute criss-

crossing articulation of global & local, forging social relations that operate outside & within the boundaries of contemporary urban centers. These networks link people, places, & processes transnationally in disjointed, rather than hierarchical, patterns of interaction. Transnational urban politics is a contested terrain of global media flows, transnational migrant networks, state-centered actors, & multilateral political institutions, all colluding & colliding ad infinitum. In this political space, contested social constructions of immigration, global investment, nation, locality, & globalization are fought out.

98S36074 / ISA / 1998 / 13315

Smith, R. David (Dept Sociology/Anthropology U Prince Edward Island, Charlottetown C1A 4P3 [tel: 402-566-0433; e-mail: rd.smith@utoronto.ca]), **Animal Rights, Animal Welfare and New Age Spirituality.**

¶ One of the assertions of the growing animal rights movement holds that the dominion of humans over animals is biblically mandated by Genesis 1:26. As much of Western society moves out of the direct influence of Judeo-Christian religious traditions, a corresponding refusal to privilege human life is increasingly central to what can be broadly described as New Age spirituality. Here, data from a representative sample of the Canadian province of Prince Edward Island (a largely rural setting) are drawn on to identify the emergence of more contemporary concepts of spirituality as they relate to matters of animal rights. Data linking these attitudes to opinions of assisted suicide, euthanasia, & traditional forms of spiritual expression are also presented.

Smolicz, Jerzy J. (U Adelaide, South Australia 5005 [tel/fax: 61-8-830-75831/34397; e-mail: jsmolicz@arts.adelaide.edu.au]), **The Nation-State and Linguistic Diversity on the Bumpy Road from Homogenisation to Pluralism.**

¶ Examines the culturally homogenizing effects of the nation-state, especially its drive to eradicate all languages other than one chosen as official by the governing elite. The Philippines is taken as an Asian example of the way the hegemonic imposition of the European-derived nation-state, initially by Spain & later by the US, led to the subordination of all indigenous languages. The ideological legacy of the nation-state provided the legitimization for the independent Philippines to single out one indigenous language as national & impose it on the multilingual country. Similarities & differences between the language policies of Australia & the Philippines are traced by examining the changes taking place in Australia as it gradually moves away from the assumption of a nation-state based on the Anglo Saxon & later the Anglo Celtic dominant group. This represents a departure from the former imaginary conceptualization of Australia as an extension of the British nation, in disregard of its indigenous inheritance & of settlers & their descendants from throughout the world. Australia's move toward the ideal of a multicultural nation as the best solution for a multiethnic state that practices both political & cultural democracy is examined.

98S36076 / ISA / 1998 / 13317

Smolicz, Jerzy J. (Centre Intercultural Studies U Adelaide, South Australia 5005 [tel/fax: 61-8-830-75831/34397; e-mail: jsmolicz@arts.adelaide.edu.au]), **Nation-State Dominance and Local Cultures in the Age of Globalism.**

¶ Explores the effect of globalism on a nation-state in a culturally pluralistic setting. A distinction is made between state & nation to highlight the limitation of the concept of nation-state, with reference to frequent instances of a dominant nation using the state for its own convenience. The resulting process of homogenization has eroded, inferiorized, & even destroyed subordinated cultures, whether in the state's own territory or in its colonial dependencies. The fading charisma of nation-state under the impact of globalism demonstrates both its negative impact on local cultures & the impracticality of its monocultural formulation. Contrary to the Eurocentric perspective, which has argued the case for the European nation-state's ability to minimize nationalism as opposed to escalating ethnic conflict in the East, it is argued here that there is a need to distinguish between the ethnic/popular & civic/state nationalism, pointing to the prevalence of ethnic conflict in the supposedly quiescent nation-states of Western Europe, & elsewhere. Attention is drawn to the negative effects of the persistence of monolingualistic-cultural approaches in post-colonial independent states that have attempted to emulate the European nation-state formula. The answer to the decline of the monistic nation-state is seen to lie in the provision of nation-states with a culturally pluralist base. Australia demonstrates the sometimes fluctuating attempts

to transform an Anglo Saxon nation-state into an embryonic, culturally pluralist society. Examples of other formerly centralist & monistic nation-states, eg, Spain, show that a culturally pluralist solution is possible & even desirable in light of economic & cultural globalization. In view of the growing incapacity of the traditional nation-state to control the less desirable forces of globalization, only a concentrated effort of local cultural forces, culturally pluralist nation-states, & supranational organizations is likely to safeguard the environment or prevent the impoverishment of those sections of the population left out of rapid social & cultural changes.

98S36077 / ISA / 1998 / 13318

Smolicz, Jerzy J. (Centre Intercultural Studies U Adelaide, South Australia 5005 [tel/fax: 61-8-830-35831/34397; e-mail: jsmolicz@arts.adelaide.edu.au]), **The Mirage of Tradition: Change and Diversity in a Pluralist Setting.**

¶ Examines the malleability of tradition & the way that the cultural heritages of national & ethnic groups are adapted by their members to meet their changing needs. This reinterpretation of heritage is discussed in relation to periods of profound social change, where formerly negative images of the past acquire a positive connotation & vice versa. In this regard, various dilemmas currently facing some Eastern European countries are examined, as well as the oscillating evaluation of their past by nations with a multiple heritage characterized by deep cultural cleavages. Also considered are postcolonial ethnically pluralist states where the current tradition may reflect several different & frequently opposing interpretations of the past. Traditions that crystallize on such a basis are viewed as providing incommensurate assessments & expectations of both the present & the future, on the part of respective/varying ethno-cultural communities. In this sense, different traditions can be seen to give rise to different modernities & hence, to different postmodernities. The consequences for education of the heritage model selected as dominant is reviewed with reference to the current political/cultural dilemmas in Australia, as it searches for ways to come to terms with its multiple heritages, originating from Anglo-Celtic, other immigrant, & indigenous groups.

98S36078 / ISA / 1998 / 13319

Smolicz, Jerzy J. & Illuminado, Nical (Centre Intercultural Studies U Adelaide, South Australia 5005 [tel/fax: 61-8-830-75831/34397; e-mail: jsmolicz@arts.adelaide.edu.au]), **Language Identity and Division in the Philippines: Core Value and Ecological Perspectives.**

¶ Language contact has often been associated with language conflict. This perception has frequently been used as a justification for policies of linguistic monism & attempts to eliminate or peripheralize all languages other than the dominant one in each particular self-styled nation-state. Here, this approach is critiqued by reference to the dual functions of language, ie, communication & a symbol of group identity, or what has been termed a core value of the particular national/ethnic culture. While ethnospecific languages frequently function as such cores, religion or other aspects of culture may also fulfill a similar role & be responsible for intragroup solidarity, as well as intergroup conflict. The relative merits of the ecological & core value approaches are examined in a case study of the Philippines, where two official languages (English & Tagalog [renamed Filipino & proclaimed the national language]) exist with seven other major indigenous languages. An empirical investigation among senior secondary school students of their activation & attitudes toward English & Filipino, as well as to three of the indigenous unofficial languages, revealed the continued vitality of the unofficial languages, in spite of their exclusion from the education system. It is found that almost all of the respondents were at least trilingual, & the languages had their own characteristic domain(s). Nevertheless, it could be concluded that the core value significance enjoyed by each of the unofficial languages in its respective linguistic community would favor the introduction of vernaculars at the primary school level at least, while maintaining both Filipino & English throughout their education to preserve & enhance both political stability & ecological balance among the multilingual Philippine communities. The introduction of vernaculars into the school can also be justified on educational grounds to arrest the decline in standards of literacy, which can partly be attributed to the fact that children in the countryside (other than those from elite backgrounds) currently receive their initiation into school education in two languages, neither of which is spoken as their home or family tongue.

98S36079 / ISA / 1998 / 13320

Smoreda, Zbigniew & Licoppe, Christian (CNET/UST, Moulinaux Cedex 9 France [tel/fax: 33-1-45-29-64-95/01-06; e-mail:

S

zbigniew.smoreda@cnet.francetelecom.fr)), **Gender Specific Use of the Telephone: The Impact of Sociability Networks and Status Mediated Interactions.**

¶ Compares 1996 telephone billing with interview data from 310 homes in Paris, Lille, & Toulouse, France (N = 77,000 calls) to explore the correlation between observed phone call duration & the gender & status of callers & receivers. Findings indicate that use of the telephone by women is more intensive, & analysis of telephone sociability networks shows that subjects are more prone to call persons of the same gender, especially in the case of women. This tendency is stable over standard sociological categories & nature of correspondents, whether family or friends. Data also show the gender-of-receiver-dependent duration of phone calls. When a man calls a woman, the call lasts almost as long as when a woman calls a woman. In both cases, it lasts much longer than when a man calls a man or a woman calls a man, two combinations that also have similar lengths. This remains true in family or friendship networks alike, which suggests a form of gendered civility in which the call receiver manages the overall duration of the call. That idea is explored in relation to age or status differences between callers & receivers.

98S36080 / ISA / 1998 / 13321

Smyth, Jim & Ellison, Graham (Dept Sociology Queen's U Belfast, BT7 1NN Northern Ireland (tel/fax: 44-1232-335988/320668; e-mail: jp.smyth@qub.ac.uk)), **Social Movements, Identity and Ethnicity: The Civil Rights Movement in Northern Ireland.**

¶ The fate of the civil rights movement in Northern Ireland serves as a case study of the problems facing social movements in divided societies & of how ethnic divisions affect the formation & trajectory of such movements by closing specific discourses. In divided societies, attempts to pursue universalistic & democratic objectives necessarily challenge the position of the dominant group. When this group controls the state apparatus, the problem is intensified. An underresearched area in the study of social movements concerns how the state deals with social protest. The actions of security forces can significantly influence the nature & course of social movements. In Northern Ireland, the suppression of the civil rights movement in the 1960s-1970s encouraged direct military conflict with the state. Until recently, it was possible to treat ethnonationalist conflicts as distinct phenomena empirically distinct from normal social movements. Ethnic, territorial, & cultural conflicts are no longer confined to a few dysfunctional societies, but are becoming a significant feature of the global situation. An analysis of the Irish situation can throw light on an important aspect of collective action.

98S36081 / ISA / 1998 / 13322

Snall, Darryn, **The Organizers of 'Globalized' Production?: TNCs and the Organization of Australian Livestock Production and Export Meat Processing.**

¶ Draws on fieldwork carried out in Australia to (1) examine the role of transnational corporations (TNCs) in the recent organizational changes in livestock production & export meat processing & (2) explore the degree to which the empirical evidence supports the strong or skeptical version of globalization. Issues considered include (1) the history & depth of TNCs' involvement in the industry; (2) the impact of TNCs on the farm management practices of Australian beef farmers & the work practices in the nation's abattoirs; (3) TNCs' formal authority over the production process, national policy making, & production controls of beef farmers & export meat processing workers; (4) international technological transfer & diffusion of employment & work practices; (5) the degree to which TNCs have established international networks of coordinated production; & (6) how TNCs' actions & interests have shaped the flow, form, & location of investment, the conduct of trade, & the development of technologies. How corporate structures of production interact with systems of national power & authority, as well as producers' farm management decisions & abattoir workers' control in the workplace, is considered.

Snijders, Tom A. B. (U Groningen, NL-9712 TS Netherlands (tel/fax: 31-50-363-6188/6304; e-mail: t.a.b.snijders@ppsw.rug.nl)), **Analysis of Repeated Observations on Social Networks.**

¶ For analysis of repeated observations on social networks, represented by digraphs, actor-oriented models provide a good & flexible approach. These models assume that, between the observation moments, which can be separated by periods of arbitrary length, time runs continuously, & unobserved changes may take place. The models assume further that this continuous-time stochastic process of network evolution is driven by the

actors (vertices) maximizing functions that are the sum of a fixed & a random component. Such models can be straightforwardly implemented as computer simulation models. Snijders (1996) & Van Duijn & Snijders (1997) have proposed simulation-based algorithms for parameter estimation for actor-oriented models, focusing on the case of only two repeated observations. This approach is extended here to the case of multiple observations. Example data sets of friendship development among university students are used to explore the advantages that can be reaped from having more than two observation moments: (1) improved convergence properties of the algorithm, (2) increased power, (3) better possibilities for checking model adequacy, & (4) better possibilities for distinguishing between effects with similar consequences.

Snodgrass, Angelina (U California, Berkeley 94720 (tel/fax: 510-655-6348/642-0659; e-mail: asnodgra@uclink4.berkeley.edu)), **"Our Right Is the Right to Be Killed": Making Rights Real on the Streets of Guatemala City.**

¶ Explores how street children in Guatemala City are empowered or disempowered to defend their basic right on the street & in the courts, drawing on in-depth interviews with street youths & those who work with them to examine the process by which street children decide to file *denuncias*, the first step in opening a legal case seeking justice for abuses suffered. It is argued that the decision to take legal action is not based on concrete expectations of legal redress so much as belief in basic human rights principles. The likelihood that individual children will perceive human rights rhetoric as relevant has less to do with their lived experience of the legal system & more to do with their perceived connectedness to mainstream society & its institutions. The more marginalized children perceive themselves to be, the more likely they are to eschew conventional attempts to convince them of their right to be defended; in social spaces of truly extreme marginality, legal rights become meaningless.

Snowden, Lynne L. (Dept Sociology & Anthropology U North Carolina, Wilmington 28403 (tel: 910-962-2828; Snowdenl@uncwil.edu)), **Analyzing Immigration Control Methods: An Application of Criminological Theory.**

¶ Immigration control is a hot topic in Western Europe & the US, fueled by 10+ million Third World immigrants in the European Union & large numbers of undocumented Mexican laborers in the US. The public discourse is focused on both increases & changes in methods of control; eg, apprehension of 1,271,390 illegal immigrants in 1995 on US borders has provoked coercive controls such as larger border patrols, refugee detention centers, government hot lines, & international computer networks. Suggested here is a sociological framework to guide policymakers in their selection of immigration control strategies. Categories developed from Sutherland & Cressy's (1966) critique of social policy are the bases of this analytical model, which is used to evaluate three immigration control methods used currently in Western Europe & the US: employer sanctions, refugee detention, & border interdiction.

Soar, Matthew A. (U Massachusetts, Amherst 01003-4815 (tel/fax: 413-545-1311/6399; e-mail: soar@comm.umass.edu)), **The Worst of Art Directors and the Best of Bees: Ideas, Advertising Creatives and Cultural Economy.**

¶ Matthew McAllister (1996 (see abstract 9614221)) has recently commented on an explosion in the number of book-length studies of advertising. His review of five examples of this trend, however, also stands as testament to the consistent lack of scholarship on advertising production: four were concerned with advertising images, per se, & the fifth with the global structure of the industry. McAllister has rightly noted the seminal influence of Judith Williamson's *Decoding Advertisements* (1978). However, Williamson's contribution is unhelpful in claiming that ads do not speak for their writers. Fresh attempts to counter this tendency may well benefit from the recent emergence of the concept of "cultural economy." Here, this notion is primarily understood as a means to refuse the dichotomy between studies of culture & institutional analyses of which have a chronic tendency to refuse each other's terms. It is asserted that advertising production is an institutional, yet necessarily cultural, practice, a locus of meaning making nevertheless bounded by economic imperatives. At its core are advertising creatives—individuals whose artistic pretensions must be harnessed to the logic of larger marketing plans; eg, the continued attractiveness of copywriting or art directing as career options,

& the advancement of successful ad creatives to better jobs, depend in large part on the notion of relative creative autonomy. The work of these cultural intermediaries is therefore predicated on uncertainty & contradiction. A critical assessment is presented of the possibilities & limitations of the concept of cultural economy.

98S36086 / ISA / 1998 / 13327

Soares, Angelo (CINBIOSE U Québec, Montreal H3C 3P8 (tel/fax: 514-376-0239/987-6183; e-mail: soares.angelo@sympatico.ca)), **Télétravail à domicile dans les années 90: la cyber pomme de Blanche Neige** (Telehomework in the 90s: The New Snow White's Cyber Apple). (FRE)

¶ Telework is defined as a new form of flexible work organization mediated by computers & telecommunications in which work is carried on outside a firm's central office. Here, qualitative data are presented on telehomeworkers in Canadian Federal Offices in Montreal, Quebec, to describe their experiences of this new form of work organization, highlighting the (in)visible reasons they give for accepting such work & its effects on the share of domestic work. Analysis reveals that deteriorated working conditions & social relations at the workplace may play a determinant role in choosing to telehomework, is perceived by almost all workers as a new & positive experience. Teleworkers feel that their new work arrangements have improved their relationships at home with their partners & children, & promoted a reorganization in the sharing of domestic work. Family commitment is one of the main reasons for which women turn to telehomework, though most telehomeworking mothers have maintained the child care arrangements they had when working at the office. The fairy tale of Snow White & the poisoned apple is presented as a metaphor: outwardly, the apple seems delicious & everyone would want to bite into it, but it being half-poisoned, the challenge is to know where to bite so as to maximize the positive effects for workers of this new form of work organization.

Soares, Angelo (CINBIOSE U Québec, Montreal H3C 3P8 (tel/fax: 514-376-0239/987-6183; e-mail: soares.angelo@sympatico.ca)), **Violence against Supermarket Cashiers: Intersections of Gender, Class and Race/Ethnicity**.

¶ Analyzes different forms of violence against supermarket cashiers in terms of gender, race/ethnicity, & class in their encounters with customers, drawing on qualitative interview data from 106 cashiers & 36 managers in Brazil (São Paulo) & Canada (Québec & Montréal) in 20 different supermarkets. Elements from the sociology of emotions & of work are linked to describe the perpetual & multiform struggles produced in the daily working lives of supermarket cashiers, going from rebellion to domination & back in perpetual agitation. Customers are not only a source of satisfaction, incentive, & social interaction, but of violence & suffering for cashiers. Such violence is expressed in several ways, ranging from verbal abuses to physical violence. In both Brazil & Canada cashiers reported more cases of violence in supermarkets located in rich areas. Violence can also take the shape of racism & sexual harassment. Strategies used by cashiers to face violence in their daily working life are identified.

Sobel, Michael E. (Dept Sociology U Arizona, Tucson 85721 (fax: 520-621-9875; e-mail: sobel@U.Arizona.EDU)), **Causal Inference in Statistical Models of the Process of Socioeconomic Achievement: A Case Study**.

¶ In quantitative sociological research, one or more dependent variables are typically modeled as a function of independent variables that are viewed as causes, & the estimates of certain model parameters are endowed with a causal interpretation. Only occasionally are the data used from an experimental study. The usual approach to causal inference in sociological research is compared with an alternative approach that builds explicitly on a counterfactual account of causation. The comparison is relevant because sociologists typically interpret (incorrectly) the estimates obtained using the first approach as supporting causal statements that are counterfactual in nature. To make matters concrete, reconsidered is a simple attainment model of Featherman & Hauser (1976), who are interested in comparing the effects of family background on achievement, using sex & time as covariates. The dependent variables considered here are the respondent's educational attainment & occupational status, & analysis suggests that the coefficients reported by Featherman & Hauser should not be interpreted as effects. However, because children's sex is determined without regard for their subsequent

achievements, it would be reasonable to treat this variable as if it were randomly assigned, which would justify treating sex as the cause & the background variables as the covariates. Unfortunately, how the data were collected precludes such a treatment.

Sobhana, J. Teresa (Saint Jude's Coll, Thuthoor Kannyakumari District Tamil Nadu 629176 India (tel: 91-4652-56215)), **Quality of School Education: Interplay of School, Society and Family Variables**. Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Analysis of data gathered from 722 girls in 15 schools in rural Madurai District, Tamil Nadu, India, establishes that the school environment is more influential than family background in the educational achievement of girls, particularly from poor socioeconomic backgrounds. A greater proportion of variation in educational achievement of girls from lower socioeconomic communities is explained by school variables, whereas a greater proportion of variation in educational achievement of girls from higher socioeconomic communities is explained by mother's education. Since school quality matters more in the case of backward castes, equality in educational achievement among girls of different social groups in rural areas can be achieved only if the quality of schools is improved. Along with that, efforts are needed to improve the literacy level of parents, since schooling of father or mother contributes to their daughter's educational achievement.

Soboleva, Svetlana Vladimirovna (Dept Sociology Instit Economics, 17 Laurentiev Prospekt Novosibirsk Russia 630090 (tel: 8-3832-35-4426; e-mail: SoboLeva@ieie.nsc.ru)), **New Inmigrational Processes of Siberia**.

¶ Significant changes in the socioeconomic situation of the former Soviet republics have resulted in changes in the migration system. The new mode of migrational relationships & flows in Russia is characterized chiefly by their change from partially controllable to uncontrollable, higher importance of regional & settlement differentiation in living standards & quality of life, the rapidly increasing role of labor market conditions, sharply increasing volumes of refugees, forced migrants, & illegal international & interregional migrants. These problems differ in Siberia because of peculiarities in the formation of the population & the structure & character of accommodation of productive forces in the region. The absence of a thoughtfully constructed demographic policy may have negative consequences in the future.

Sofield, Trevor H. B. & Robertson, Robert W. (School Social Sciences Murdoch U, Western Australia 6150 [tel/fax: 618-9360-2529/6480; e-mail: tsofield@socs.murdoch.edu.au]), **The Knowledge Economy and the Tourism System.**

¶ Analyzes the position of tourism in the knowledge revolution & its potential to assume the role of a key initiator in accessing the knowledge revolution, drawing on a recent World Bank study of several South Pacific island countries. The World Bank model of a national knowledge system is based on six fundamental functions: (1) motivation for engaging in knowledge-based activities; (2) creation of knowledge; (3) physical means to access knowledge; (4) the capacity for assimilation, selection, & understanding of knowledge; (5) the diffusion of knowledge to those who can make use of it; & (6) the capacity to use it for both economic & social benefit. The tourism sector may be regarded as "a sentinel industry" in this regard. Its global nature is part of the postmodern challenge to the very notion of the nation-state as the unit of measure of viability in a society. Supranational economic & political unions are becoming powerful & important, eg, the multinational alliances between former national airlines as global megacarriers. Increasingly, some sectors of tourism may find compelling reasons to join or access the knowledge economy as new technologies generate the potential to increase the efficiency of production & service. Those that do not risk losing competitive advantage, market share, & visibility in the global market.

Soga, Matsuo (Nagoya U Foreign Studies, Aichi-ken 470-0131 Japan [tel/fax: 05617-4-111/5-1739; e-mail: soga@nufs.nakanishi.ac.jp]), **Trends of Loan Words in Japan.**

¶ Most Western loan words have come into Japan along with modernization or Westernization since the late 19th century. This basic trend has not changed, but the recent technological & economic advancements, fueled by the force of commercialism or by mere convenience, have further increased the number of loan words that reflect the new social, economic, & psychological conditions of the Japanese. English is most popular among the loan words, but French, German, & Italian are also popular. Also many Japanese-English words (or words created from English in Japan), which may be incomprehensible to native English speakers, have been created. Such cases occur because the Japanese apply their own phonological, grammatical, & semantic operations to the English words so that they will fit in the system of Japanese language. In fact, they are Japanese words derived from English just like we feel that words such as "tea" & "noodle" are English derived from Chinese & German, respectively. Many Japanese are not happy about these changing language patterns, but the trend is likely to continue in the foreseeable future.

Sokolova, Galina N. & Alexeichenko, Yuri A. (Instit Sociology Belarusian Academy Sciences, Minsk 220072 [tel/fax: 0172-394865/271330; e-mail: info@ehy.minsk.by]), **Social Mechanisms of Labour Mobility in Transitional Society.**

¶ Transformations in postsocialist countries are accompanied by deep institutional reforms, rapid reduction of gross domestic product, drop in real incomes, redistribution of labor resources between branches, & out-

flow of employees from state to private sectors. For Belarus, systematic data on sociological monitoring (1992-1997) are drawn on to conclude that the mechanism of territorial mobility is undermined from the outset by an underdeveloped real estate market, rigid passport registration regime, & other nonmarket characteristics of the economy. This situation results in strong negative attitudes of the population toward all kinds of territorial mobility in search of a new employment. The mechanism of branch/sector mobility is blocked by the reverse principle of its stimulation; ie, salary level in nonproductive sectors is lower than average in the Belarusian economy. Salaries in nonproductive sectors are higher for administrators & managers than for scientists & educators. As a result of such stimulation, progressive labor mobility is insufficient & tends to slow down. In such an environment, against a backdrop of decreased productivity & without radical redundancies being declared, an average salary growth is achieved by means of external mechanisms, ie, via increase of prices for products & services. Presented is an argument in favor of applying internal mechanisms for increasing salary levels, suggesting that its motivating influence on labor mobility is the best way to diminish social expenses & reduce the transitional period.

Solanki, Gopika & Gangoli, Geetanjali (61 Scranga Tower, 3rd X Rd Lokhandwalle Andheri Mumbai 400053 India), **Challenge to Fundamentalism and Communalism: A Case Study of a Minority Women's Group in Bombay.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Fundamentalism in the Indian context has taken on a form wherein majority (Hindu) communal forces have successfully created a discourse in which the Muslim community has been projected as the main enemy of Indian nationalism. This has led to the marginalizing & scapegoating of Muslims in political, economic, social, & legal spheres. There has been a reactive process in the Muslim community, in which Muslim identity has been redefined & the narrow parameters of Indian nationhood, as defined by Hindu communal forces, have been challenged. There has also been a rise in Muslim fundamentalism that has focused on a more orthodox representation of identity. A threshold analysis is presented (1) examining how fundamentalist forces in India in collision with the state have succeeded in depriving minority women of their legal & social rights; (2) unraveling the history of their struggles & the obstacles faced by them in their personal lives & as activities of a women's organization, especially given the communalized ambience of Bombay; & (3) documenting the case history of one activist in the group.

Solvang, Per (Dept Sociology U Bergen, N-5007 Norway [tel/fax: 47-55-58-97-76/13; e-mail: Per.Solvang@sefos.uib.no]), **"How I Live Today, That's a Life of Leisure": Analysing a Narrative concerning Physical Disability and Alternatives to Paid Work.**

¶ Suggests some structural conditions for entering the life of leisure & staying there. This way of living as disabled is to a certain extent institutionalized in Denmark. A single biography, out of a larger sample, is analyzed to show how this form of life is socially constructed. The analysis suggests three sets of conditions in which the individual biographical narrative is seen as closely related. (1) Societal changes of late modernity, eg, individualization & postadolescence, are of importance to understand the social conditions for entering an active life outside paid work. (2) Ambivalences expressed in the narrative are closely related to corresponding ambivalences at the structural level of society, in particular, ambivalences of what should be considered work & leisure activities, & the changing importance of the disability role & the role as an ordinary person for someone living with a disabling condition. (3) Political & cultural peculiarities of the Danish society are argued to be highly influential on the range of possibilities for action in the field of alternatives to paid work, passive unemployment, & disability pension. The potential for generalization of the findings is discussed in conclusion.

Somers, Margaret R. (Dept Sociology U Michigan, Ann Arbor 48109 [tel/fax: 313-213-0015/764-6324; e-mail: peggs@umich.edu]), **Fear and Loathing of Citizenship: How (and Why) to Deconstruct a Knowledge Culture.**

¶ Discusses the escalating fear & loathing of the public sphere & its concomitant privatization of citizenship. Also presented are a theory & methodology that explains this particular development & articulates the basic elements of a research program that can be used more broadly in social & political analysis. The research program—a historical sociology of concept formation—is based on the premise that concepts & practices (eg, citizenship & the public sphere) are located in knowledge cultures, ie, sites composed of cultural forms & symbolic systems with spatial & temporal regularities that create patterns of causality, closure, & boundary in the understanding & use of concepts & practices. Knowledge cultures are tenacious, much like paradigms, because their cultural forms

tend to "naturalize" causal themes & epistemological assumptions. One of the most tenacious of such cultural forms is the narrative structure. How Anglo American citizenship theory is narrated & naturalized within its knowledge culture is examined.

Sonntag, Heinz R. (U Central Venezuela, Caracas 1050-A [tel/fax: 58-2-61-52-84/62-94-53; email: sonntag@cantv.net]), **Dependency Approach and Dependency Theory Revisited, Thirty Years Later.**

¶ The term "dependency," first used by the Economic Commission of the UN for Latin America & the Caribbean (ECLA) during the late 1940s, meant "external dependency," signifying that the process of accumulation of capital & reproduction of the underdeveloped societies of the region depended on external commerce &, consequently, on what happened with the prices of the primary (agrarian & mineral) export commodities in the world market. So, it had a more descriptive than analytical meaning. During the late 1960s, the concept was used in a more scientific & analytical way. In the context of critical evaluations of the results of the economic & social politics based on the ECLA doctrine in different countries, the new use of the term extended more & more, following what had been initiated in the ECLA. In terms of what was initially called "dependency approach," there was no general theoretical definition of dependency, except that the concept implied the priority in analysis on the dialectics between external & internal elements in the systems of political domination of underdeveloped countries. This analysis had to focus on specific conditions; ie, how is the particular combination of economy, society, & politics constituted in different historical moments & structural situations? The influence of this approach was first seen in the 1969 Congress of the Latin American Assoc of Sociology in Mexico, although concrete notions of dependency varied across nations, eg, Venezuela, Brazil, & Chile. Dependency was soon conceived as founding a theory, a kind of substitution or complement or underdeveloped version of the theory of imperialism in its Leninist, Luxemburgist, or Hilferdingist formulation, implying that dependency became a rather narrow concept, ironically, quite similar to that of the ECLA doctrine, incapable of differentiating particular sociohistorical situations. There was an intensive debate between the two schools of dependency, ultimately paralyzing fruitful discussion, & much theoretical, historical, & empirical research. During the late 1970s & 1980s, both the dependency approach & dependency theory (as well as the ECLA doctrine) were beaten by the ideological offensive of neoliberalism (a mixture of neo-classicism in economics & neoconservatism in politics). New discussion has emerged in Latin America during the 1990s. ECLA once more took the initiative, renewing discussion of neostructuralism. In this context, the dependency approach is once more accepted, & presented here are its contemporary implications, recognizing that dependency theory does not fit into the analysis of the tendencies of the actual world-system in transition.

98S36105 / ISA / 1998 / 13346

Sorli, Amrit (Centro D'Ompio, Pratolungo I-28028 Pettenasco Italy [tel/fax: 39-323-888-967/980; e-mail: mail@ompio.it]), **The Psychology of the Observer.**

¶ Describes a direct experience of consciousness that concerns a mode of immediate perception, separate from philosophical or theological frames of reference. Two aspects are discerned—a logical & a meditative level—and their consequences explained. The logical level pertains to the process of observation, which is intimately linked to an observer, who can observe this observer part of him/herself as distinct from the environment. This realization forms part of many Eastern spiritual traditions, & involves the observation of both thoughts & emotions. This is described in a formal, analytical, objective sense. The meditative level reflects on the effects of the subjective experience of the logical process. The logical process implies that awareness of the observation of observation must be identifiable & recognizable as a process in itself, which then must be subjectively able to be experienced & lead to self-cognition. Personal experience suggests a specific relationship between (1) the objective logic realization & (2) the subjective meditative experience. It also implies or specifies that mind is a filter composed of all thoughts & emotions. The properties of this filter can then be specified, & consequences can be drawn for personal (& collective) health. If the mental filter is too rigid &/or too dense, it blocks perception of perception & ill health is an inevitable result. Good health is related to a translucence of the filter, & a direct dynamic in the interaction with the environment, with corresponding clarity of perception of perception.

Sosunowa, Irena (Institut Social & Political Studies Russian Academy Sciences, 121069 Moscow (tel/fax: 095-2905098/9151042; e-mail: itc@refiamsu.ru)), **The Socioecological Problems of Contemporary Russia.**

¶ The continuing deterioration of the ecological environment in Russia has made ecology an important factor affecting the social situation in the country. Socioecological tension is observed in many regions. It is important to give due consideration to the deep & multitudinous links between the ecological situation & the key social interests & requirements of the population. Human-nature feedback is more prominent in periods of ecological crisis: the anthropogenic changes in the environment cause ecological problems, which, in turn, affect all aspects of human community existence. Socioecological monitoring is viewed as one component of the general system of ecological monitoring that provides the government, local authorities, economic & public organizations, experts & specialists, & the general public with comprehensive & objective information on the state & trends in the development of the ecological & socioecological situation, nationwide & locally.

Soto, Hélène (UPRES U Marseille, F-13288 Cedex 9 France (tel/fax: 33-4-91-17-04-44/48)), **Uses of the Body in a Working-Class Town.**

¶ In a working-class suburb of Marseille, France, one feels the "weight" of stares. Movements & activities are everywhere scrutinized, for intruders & residents alike. Behaviors are modulated accordingly to the demands of the sensitized space of the town. This sensitization takes place on two levels: (1) global space, in which one comes to feel what one may & may not do, eg, approach a woman, sell drugs; & (2) spaces-times, in that one comes to feel imaginary spaces reserved for particular activities depending on the time, eg, spaces-times for playing, smoking mild drugs, debating, exchanging, & waiting. Specific ways of appearing & behaving thus arise from that shared sensitization. That is how one can recognize & be recognized, how the community exerts a control over its members' behaviors. The uses of the body reveal the sharing of the environment's "sensitive value." Their examination allows understanding of the sociospatial interaction between actor & environment & the organizational methods of a microcommunity. The body is a phenomenal reality that gives an account of the experience of that interaction.

Suoninen, Marja (Dept Sociology U Turku, SF-20014 Finland (tel/fax: 358-2-333-5382/5080; e-mail: marja.suoninen@utu.fi)), **Defining a Finnish Rock Festival in Public Discourse: Ruisrock from 1970 to 1997.**

¶ Examines the oldest extant Finnish rock festival, "Ruisrock," in its cultural & historical context, focusing on the definitions it is given in public discourse, to test Morag Shiach's claims that discourse on popular culture reveals additional perceptions about dominant values & ideals. Drawing on data from discourse analysis of 1970-1997 journal articles concerning the festival, supplemented with cultural statistics, interviews, & other sources, different discourses or frames of speech in public discourse—eg, economical, political, & moral—are identified. Also, Carlo Ginzburg's microhistorical perspective is applied to selected samples of the material. Results show different discourses constructed concerning the festival, revealing the relationship between the festival, or popular culture, & Finnish society.

Southerton, Dale & Shove, Elizabeth (U Lancaster, LA1 4HY England (tel/fax: 01524-593493/5934256; e-mail: d.southerton@lancaster.ac.uk)), **Frozen in Time: Convenience and the Environment.**

¶ In 1970, only 3% of the UK population owned a freezer, but by 1995, the freezer had become an accepted, if not crucial, element in the fabric by modern kitchens & the ordering of everyday lives. Examining the creeping normalization of the freezer & the ways of life that go with it, three phases are defined: (1) an initial period oriented around the utility of preserving home produce; (2) the development of a frozen food infrastructure & the establishment of the freezer as a normal part of the efficient economy of urban & suburban life; & (3) a subtle but significant redefinition of the primary benefits of freezing in terms of convenience. Cast in its new role as "time machine," the freezer is sold as a means of managing pressures of time associated with social change in household organization. As such, it shares important features with other convenience devices.

Concentrating on the latest phase of freezer history, it is suggested that this device has the dual role of creating new possibilities for the management of time while also constraining its users in certain ways. In this, the freezer exemplifies a much larger class of gadgets, objects, & technologies implicated in the distribution & organization of time & labor & the manufacturing of convenience.

Sowards, Kathryn A. (Washington State U, Vancouver 98686-9601 (tel/fax: 360-546-9747/9038; e-mail: sowardsk@vancouver.wsu)), **Narratives of Modern Caregiving: Medical Work in the Intensive Care Nursery.**

¶ Draws on an ethnographic study of medical caregiving in intensive care nurseries that embrace family-centered models of patient care to examine physician accounts of the ways in which they manage the depersonalizing pressures of technology in intensive care while attending to parental needs. It is argued that the need to respond to & mediate demands from radically different social realities—the world of scientific & bureaucratic medicine & the everyday lifeworld of parents—constitutes a pervasive & unique source of strain inherent in this kind of modern medical work. "Compartmentalized" caregiving styles, resembling the Parsonian model of "affective neutrality" are clearly aspired to by some physicians, but an alternative model emphasizing emotional empathy, self-presence, & expressive caring is found to be more comfortable by others. Such dramatic variability in styles suggests that more attention should be given to understanding how physician caregiving style affects quality of care, quality of staff-parent communication, or physician adaptability to stress in neonatal intensive care units.

Spaargaren, Gert & Van Vliet, Bas (Dept Sociology Wageningen U, 6706 KN Netherlands (tel/fax: 31-317-483874/483990; e-mail: gert.spaargaren@alg.swg.wau.nl)), **Sustainable Lifestyles and the Ecological Modernization of Domestic Consumption.**

¶ Within environmental sociology, lifestyle studies can be regarded as the successors of the attitude-behavior studies that long dominated the field. The lifestyle concept, when properly conceptualized, offers a more promising perspective for studying human behavior in several respects, illustrated here with regard to domestic consumption, focusing on routine social practices (from cooking & washing to cleansing & gardening) that together constitute the distinctive lifestyles of particular groups of households. Domestic social practices are embedded in & made possible by a range of expert systems encompassing modern households. When it comes to reorganizing (or "greening") domestic consumption patterns with regard to the use of water, heat, light, information, waste services, etc, sociomaterial collective systems seem to play a crucial role. The introduction of new, more sustainable technological & organizational domestic devices should be analyzed by taking into account the interrelationship between households & the public-private sociomaterial collective systems or "systems of provisions" involved in processes of major change that characterize the public utility sectors, at least in Europe. Liberalization, third-party access, privatization, & commercialization are the catchwords that cover certain aspects of the complex changes in the institutions surrounding domestic consumption in modern societies. In developing a theory of environment-induced changes in Western lifestyles & patterns of domestic consumption, an attempt is made to correct ecological modernization theory for its focus on the sphere of production, thereby contributing to the further development of a sociology of consumption.

Sperberg, Jaime & Kersting, Norbert (U Marburg, D-35032 Federal Republic Germany (tel/fax: 49-6421-285619/288991; e-mail: sperberg@mail.uni-marburg.de)), **Urban Poor, Civil Society and Local Government in Chile and Brazil.**

¶ Examines the political activities of the urban poor & the strategies of local political authorities concerning the problem of poverty in Chile & Brazil. Political behavior of urban poor in Latin America depends on their specific values, resources, & political expectations, & on the political-institutional background of each country. The concept of civil society is very useful to understand the political & social activities of urban poor in a context of democratization in Chile & Brazil. There are two premises related to the concept of civil society: (1) Civil society is characterized by a part-autonomy from the political sphere. (2) There is a normative implication that relates civil society to the fundamental values of democracy. The intention is to prove that civil society of the urban poor is not a political, but rather, at times, oriented to local politics. The constraints of an extension of democracy at the local level are shown by taking into account the political culture of poverty & the political-institutional deficiencies of the system.

Spirou, Costas S. (Social Science Dept National-Louis U, Evanston IL 60201 (tel: 847-475-1100; fax: 312-621-1205; e-mail: cspi@evanl.nlu.edu)), **Sports-Driven Urban Redevelopment in Chicago.**

¶ In response to recent structural shifts, cities across the US have engaged in culturally oriented urban redevelopment projects as a means of regenerating neighborhoods & creating a new urban image. Sport enterprises have become part of this emerging policy agenda, resulting in extensive public support & enormous capital investments. Within this framework, cities compete with each other for professional teams & offer to renovate existing stadiums or build new ones in order to retain/entice professional sports franchises. A number of issues surface regarding the nature & effect of these public policies: (1) What is the role of the state in these processes? (2) What are the neighborhood impacts? (3) What role does race & class play when considering the short & long-term implications of these stadium-centered urban developments? (4) Is sports-driven urban development a form of cultural capital, leading to a redefinition of the urban center & the production of urban image? Analytical insights are offered into these issues, drawing on the experience of recent Chicago (IL) stadium development projects. In the process, a connection between urban policy & community effect is revealed.

Srinivasan, Amrit (Indian Instit Technology, New Delhi 110016 (tel/fax: 91-11-6855227/6862037; e-mail: amritsn@hss.iitd.ernet.in)), **Swadeshi Science: The Global Implications of Gandhi's Legacy.**

¶ Gandhi's experiments with technologies of food, cloth, & sex are explored to arrive at a definition of swadashi science, in which the relation between scientist, worker, & consumer is not destroyed. Nonviolent in its cosmology, swadashi seeks neither to torture nor to seduce nature. The search for truth begins with ones' own body & the apprehension of its limits/needs, for which research is done & practical means are employed. Indeed, the goals of research are to serve oneself & one's immediate environment (human & nonhuman), leaving to others the task of imitating or adapting what is done according to their own needs. The exemplary truth of this "little" science is still available globally through the living evidence of community crafts of the Indian subcontinent—weaving, cooking, metal & leather work, carpentry, masonry, etc. Gandhi's scientific experiments both presumed & built on this local social reality. A re-

examination of the largely ignored artisan technologies of India, rural & urban, brings out their conservationist, not merely conservative, theory & practice.

St. Clair, Robert N. (Dept English U Louisville, KY 40292 (tel: 502-852-6770; e-mail: rstcl@earthlink.net)), **Language, Metaphor, and the Legitimation of Reality Construction.**

¶ There are two models of human communication based on different metaphors of human interaction: (1) The metaphor of language as form underlies the epistemological framework of Western cultures. (2) The metaphor of communication as resonance is characteristic of many non-Western nations (Native Americans, Polynesians, Asians, etc). Both of these models coexist in every society, but one is always foregrounded & legitimated over the other. It is suggested that the biological reasons for these different communicative styles have to do with brain laterality. Oral & literate societies appear to differ in these cognitive styles. The implication of this inquiry leads one to advocate the social legitimation of these biocognitive models of language planning & language education. An example of these changes can be found among Native American tribes that move from oral to print cultures. It is important to note that each of these frameworks has its limitations. Language as form favors the imparting of knowledge, while the phenomenon of resonance is sensitive to life as an experience. Resonance is also concomitant with the existential quest for a new model of understanding the process of being-in-the-world.

Staeheli, Lynn A. (Instit Behavioral Science U Colorado, Boulder 80309-0487 (tel/fax: 303-492-8877/3609; e-mail: Lynner@spot.colorado.edu)), **Mobilizing Women, Mobilizing Gender: Is It Mobilizing Difference?**

¶ Examines prevailing assumptions that (1) women's activism differs from that of men, either because women's structural position is different or because women have different goals & styles of activism, & (2) gender ideologies play a role in shaping these differences. Survey & in-depth interview data from activists in four US cities are used to examine the issues that led activists to become involved in community & political activism; forms of activism in which they engage; & influences of household, employment, & gender on their activism. Preliminary analysis suggests that there is little difference in the kinds of issues & forms of activism in which women & men are engaged, but there are strong differences in the roles of household, employment, & gender identities in mobilizing them. While difference is involved in the mobilization of women, it is argued that difference is not an outcome of mobilization.

Stamatel, Janet P. (12249 Moran, Detroit MI 48212 (tel: 313-893-7155; e-mail: jpstamat@aol.com)), **Incorporating Post-Socialist Countries into Comparative Criminology: Rethinking the Relationship between Social Change and Crime.**

¶ Quantitative studies in comparative criminology have often neglected socialist societies or, when such countries were included, have failed to problematize the systemic differences of socialist vs market societies in their analyses. The new availability of data from the postsocialist countries of the former Soviet bloc offers an opportunity to explore these systemic differences and examine the effects of a new process of social change on crime patterns. Data from the UN World Crime Survey, Interpol, & country statistical yearbooks are drawn on to examine the impact of crime analyses in postsocialist countries on the field of comparative criminology. Focus is on the relationship of social change & crime.

S

Past studies in comparative criminology have defined social change largely in terms of socioeconomic development, eg, modernization & industrialization, or large-scale acts of violence, eg, wars. However, the events that took place in Central Eastern Europe & the former USSR in the 1990s force one to reconsider how we operationalize social change to include other macrolevel processes such as nonviolent revolutions, democratization, & marketization. Analysis of crime trends in select Central Eastern European countries relates these patterns to the transformations each country has undergone since 1989. Assessed in conclusion is the relationship between social change & crime. Suggestions are made as to how comparative criminology can successfully incorporate this region of the world into the field and the benefits of doing so.

Starosta, Pawel & Stanek, Oleg (U Łódź, PL-90214 Poland [fax: 48-42-35-53-09; e-mail: socwim@krysia.uni.lodz.pl]), **Environment as a Prerequisite of Local Identification and Quality of Social Life in Conditions of Radical Changes: The Case of Bulgarian, Russian and Polish Rural and Small Town Communities.**

¶ In the radical changes made in postcommunist Central & Eastern Europe, attempts have been made not only to strengthen the market economy, but also to internalize the principles of a civil society & popularize the idea of sustained development, in contrast to the earlier placement of economy in opposition to ecology. Today, after several years of implementing the radical changes, it is time to assess the role of natural environment. In this light, several questions are addressed: (1) Does the quality of natural environment influence the strength of inhabitants' ties with their place of dwelling? (2) To what extent is the natural environment a basis for assessing the quality of life in local communities of Eastern European countries? (3) Do inhabitants of local communities in Bulgaria, Russia, & Poland attach a similar importance to environmental variables? Interviews conducted in 1996/97 with 1,616 residents of 3 Bulgarian, 3 Polish, & 2 Russian communities revealed a relatively high proportion of reported pro-ecological attitudes is not accompanied by an equal proportion of pro-ecological behaviors in everyday & public life. The internalization of ecological values & norms is superficial & declarative in character. The cross-country differentiation of ecological attitudes is a derivative of the impact of mass media.

98S36122 / ISA / 1998 / 13363

Stassen, Jean-François (Service sociologie général & famille U Liège, B-4000 Belgium), **Conflicts around Citizen Participation between Excluded and Integrated Groups.**

¶ Questioning the relationships between exclusion & competence for citizen participation, the double meaning of these ties are pointed out: participation is a sign & a reinforcing factor of integration; & exclusion processes are determined & increased by lack of participative abilities. Different social groups are diversely integrated into the participation sphere. Moreover, the participation behavior of some groups increases exclusion of others (mostly excluded people). These processes reinforce the dualization of the urban society: on one hand, integration & participation; on the other hand, exclusion & nonparticipation. Based on qualitative data gathered at the neighborhood level, links between excluded & participative groups are examined by studying the constraints & the strategies developed by different actors, & by highlighting connections between micro & macro social levels.

98S36123 / ISA / 1998 / 13364

Stebbins, Robert A. (U Calgary, Alberta T2N 1N4 [tel/fax: 403-220-5827/282-9298; e-mail: stebbins@acs.ucalgary.ca]), **Antinomies in Volunteering: Choice/Obligation, Leisure/Work.**

¶ Test arguments that volunteering, particularly career volunteering, is a form of leisure, drawing on open-ended interview data from 44 key volunteers working in Calgary & Edmonton, Alberta. Analyses reveal that their views of volunteering fall at the poles of two antinomies: choice-obligation & leisure-work. Resolution of these contradictory elements leads to the conception that, at bottom, volunteering, especially the career type, is chosen leisure activity. This conclusion is framed in the context of the marginality of serious leisure in modern industrial society. Discussion & resolution of the two antinomies enables volunteers to explain, both to themselves & others, the true nature of volunteer work.

98S36124 / ISA / 1998 / 13365

Steglich, Christian (Interuniversity Center Social Science Theory & Methodology, Grote Rozenstr 31 Groningen NL-9712 TG Netherlands [tel/fax: 31-50-363-62-97/26; e-mail:

c.e.g.steglich@ppsw.rug.nl]), **How Context Affects Choice. An Experimental Study of the Decision Process.**

¶ To investigate how differences in actor goal structures in decision-making situations influence choice, three phases of the decision process are distinguished: information gathering, problem structuring, & evaluation of alternatives. By explicitly including an interaction of the actor's goal structure with situational information, the proposed model can account for choice set effects & effects of temporal embeddedness as reported by Amos Tversky & Itamar Simonson (1992). In computer experiments, subjects are confronted with multiattribute choice tasks that allow comparison of different models' predictive & descriptive accuracy.

Stehlik, Daniela Anna (Central Queensland U, Rockhampton 4702 Australia [tel/fax: 61-7-49309405/49306402; e-mail: d.stehlik@cqu.edu.au]), **Ageing Mothers & Ageing Daughters: Life-Long Caring and Intellectual Disability.**

¶ Examines the association between aging, caring, & intellectual disability among aging mothers in their 70s & 80s & their intellectually disabled daughters, drawing on an Australian study. The decisions required in the allocation of diminishing resources to this group, previously cared for primarily by their families, eg, their aged mothers, becomes a major dilemma confronting nongovernment service organizations in developed nations. A feminist poststructuralist analysis begins to identify how policy responses by the state to this future dilemma are based very much on influential discourses in the life-long caring experiences. Using the notion of genealogy, described is how powerful discourses at the time of the daughter's birth (1940s-1950s) associated with eugenics, institutional care, & motherhood, are framing the way in which aged mothers today are contemplating the future care of their adult daughters.

98S36126 / ISA / 1998 / 13367

Stehr, Nico (U British Columbia, Vancouver V6T 1W5 [e-mail: stehr@gkss.de]), **From Class- to Knowledge-Based Inequality.**

¶ Explores social inequality & knowledge in the context of a theory of modern society as a knowledge society. Characteristics of contemporary social inquiry into inequality are addressed, arguing that the vast majority of theory & research into the structure of inequality is linked to the theory of modern society is considered, as an industrial society. Why knowledge, as a capacity for action, may be capable of replacing what are accepted as the invidious foundations of inequality of industrial society is considered. Aggregate economic data indicate transformations in the material well-being of large numbers of individuals & households contributing to an uncoupling of their once rather tight dependence on the labor market. Material changes make room for new forms of social inequality, ie, structures linked to knowledge. How knowledge is employed to generate, reproduce, & sustain inequalities is considered.

98S36127 / ISA / 1998 / 13368

Stein, Paul (Warner Graduate School Education U Rochester, NY 14627-0425 [tel/fax: 716-275-8300/473-7598; e-mail: pstn@troi.cc.rochester.edu]), **Sensual Imagination and the Resacralization of Performance.**

¶ The millennial vendue of knowledge, an eros of autistic transference that seduces imagination into the bondage of images, is generated by the continued, structured division of nature & spirit, body & soul. The dream-work culture refuses immanence while selling transcendence by the stylization of desires: the "commercialized occult" of technologies that "imagineer" rapture. Dying to the world, intersubjectivity is incorporated in a communion of consciousness wherein consciousness has no Other. Yet, such labors of salvation by alienated but embodied selves carry insurgent potential against the occult culture. The rituals of transcendence animate a sensual imagination that deforms representation & initiates an indeterminant intercourse of corporeal society. The transgressive & transformative experiences of resacralized sensuality are aspects of an emergent social movement that negates that introjection of dreamed ideas & affirms performative, participatory magic.

98S36128 / ISA / 1998 / 13369

Stenson, Kevin (Buckinghamshire University Coll, HP11 2JZ England [tel: 01-494-605076; e-mail: kstenson01@buckscol.ac.uk]), **Youth, Fear and Public Space.**

¶ Reports a qualitative study of how an ethnically mixed sample of 70 young men & women in their mid-teens perceived & used public spaces in a medium-sized English town. Subjects were questioned about their use of leisure time, aspects of ethnic identity, & attachment to place &

country. While there was evidence of some postmodern hybridity in relations across the borders of ethnicity & gender, class differences remained strong between middle-class whites, whose families have benefited from long-term neoliberal policies, & ethnically diverse youth from poorer backgrounds & neighborhoods. These differences were associated with patterns of conflict between groups of young people, which were manifested in complex narratives linking biography, place, danger, & ethnic & subcultural identities. They provided linkages between wider, racialized cultural themes & more local oral cultures.

98S36129 / ISA / 1998 / 13370

Stevenson, Chris (U New Brunswick, Fredericton E3B 2R5 (tel/fax: 506-453-5063/3511; e-mail: cls@unb.ca)), **Motive Talk as Rhetoric-of-Failure.**

¶ Challenges extant conceptualizations of motive talk using data from an ethnographic study of masters swimmers. In some situations in masters swimming, motive talk is used to justify actions that might be perceived as out of character with the situated social identities of the interactors. In such cases, motive talk is supported by confirmatory nonverbal behaviors, which, together, act to maintain the interactors' essential identity while permitting untoward actions. However, it is also argued that there are other situations in which motive talk is used in quite a different way—not as a justification for one's actions, but rather, (1) as a rhetorical means of confirming status & identity, & (2) as an anticipatory "rhetoric of failure" (Payne, 1989). It seems significant that, in these cases, the nonverbal behaviors act to contradict, rather than support, the motive talk.

98S36130 / ISA / 1998 / 13371

Stevenson, Thomas B. (Dept Anthropology Ohio U, Zanesville 43701 (tel/fax: 740-453-0762/0706; e-mail: tstevens@ee.net)), **Football Matches and the Transmission of Symbolic Messages: National Identity Formation in the Republic of Yemen.**

¶ In May 1990, the Yemen Arab Republic & the People's Democratic Republic of Yemen united as the Republic of Yemen. Under the groundswell of strong popular support for unification were serious questions about the distribution of power between, & equal representation of, the two preunion constituencies. Cognizant of these concerns & aware that they might undermine support for the joint administration, the government attempted to assuage them through public demonstrations of the parties' equality. The selection of the national team & first football championship are cases in point; the team members were drawn equally from both sides. The championship tournament was designed to include equal numbers of teams from North & South. Following Turner (1974) & Kertzer (1988), both sports events are analyzed as social dramas or rituals, focusing on the symbols & symbolic messages conveyed. Then, applying Anderson's (1991) notion of imagined communities & Gramsci's (1971) idea of hegemony as consensus, an assessment is made of how the symbols attached to football contribute to national identity formation.

98S36131 / ISA / 1998 / 13372

Stevenson, William B. (Boston Coll, Chestnut Hill MA 02160 (tel/fax: 617-552-0458/4230; e-mail: stevenson@bc.edu)), **Mobilizing and Taking Action in Environmental Policy Networks.**

¶ A perspective considering the ability of actors to take action & mobilize others in a network of relationships is used to explain the success & failure of actors trying to influence policies concerning environmental issues in a small city. The social structure of interorganizational relations, conceptualized as the network of relationships between actors, is shown to alter the strategies of actors.

98S36132 / ISA / 1998 / 13373

Steierink, Nardi (Dept Psycho-Gerontology U Nijmegen, NL-6500 HE Netherlands (tel/fax: 31-24-361-2653/5726; e-mail: steierink@psych.kun.nl)), **When and Why Will Disabled Elderly Give Up Independent Living?**

¶ Impairment seems to be a necessary but not a sufficient condition for elderly to give up independent living & demand long-term institutional care. Here, the role of other factors & how they interrelate is explored using a theoretical model that predicts that elderly can substitute or compensate for losses to a considerable extent, but eventually reach a critical phase in which they cannot substitute any longer. Need for institutional care is assessed by a scale measuring orientation toward institutional care. Findings indicate that loss of comfort & affection are responsible for the hypothesized existence of a critical phase, in which orientation to-

ward institutional care arises. Resources to counter the loss of comfort & affection—eg, a spouse, income, home adaptations, private help, & informal & formal care—were only partly effective in their hypothesized function to delay orientation toward institutional care. Formal care was even found to increase orientation, when analyzed in interaction with disability. Pressure of others to apply for institutional care showed the strongest effect on orientation. Policy implications are considered.

Steierink, Nardi, Lindenberg, Siegwart & Ormel, Johan (Dept Psycho-Gerontology U Nijmegen, NL-6500 HE Netherlands (tel/fax: 31-24-361-2653/5726; e-mail: steierink@psych.kun.nl)), **Successful Aging and Social Production Function Theory: A Framework for Understanding Adaptation to Life Course Changes.**

¶ It is argued that the problem of formulating a comprehensive theory of successful aging—and thereby of finding good criteria of success—may be attributed to the lack of a suitable multidisciplinary framework that meets at least three basic theoretical requirements. These requirements are explicated, & some existing theories & approaches of successful aging are discussed in their light. The theory of social production functions is presented as an alternative theoretical framework for understanding adaptation to life-course changes. This framework meets the three requirements, including the formulation of theory-guided criteria of success. It is argued that this framework can accommodate a number of existing insights & has the potential to yield further elaborations on both micro- & macrolevels of theorizing on aging.

98S36134 / ISA / 1998 / 13375

Stewart, Fiona (Faculty Arts Deakin U, Victoria 3127 Australia (tel/fax: 03-5227-2205/2301; e-mail: fistew@deakin.edu.au)), **Together, Apart: Women's Embodiment and Identity as Relationships Come and Go.**

¶ In recent work, Turner & Riggs (1996) have reported the aging body to represent a significant disjunction of self. While many older people do not feel the physical age that comes to be reflected in their bodies & resent looking/being "old," others are eager to own their wrinkles & enjoy their age-based seniority within the broader community. For women, the aging body can represent a crisis; as beauty & youthfulness diminish, identity is challenged. Here, issues of identity & embodiment are considered, based on the interview data from a small sample of women, ages 40-45, who have recently divorced, separated, or remarried/-partnered in Australia. Explored is the impact of significant life events, eg, relationship dissolution or commitment, on bodies & identities in a broader social context of postmodernity.

98S36135 / ISA / 1998 / 13376

Stewart, Thomas J., Swadi, Harith & Townsend, Anthony (Faculty Medicine United Arab Emirates U, Al Ain (tel/fax: 971-3-5039437/672995; e-mail: tstewart@emirates.net.ae)), **Perspectives on Patient-Physician Touch among Emirati Medical Students.**

¶ A 25-year review of the issue of physical touch between physicians & patients in medical encounters reveals only a handful of related conceptual articles. An understanding of the factors that influence medical student attitudes, experiences, & perceptions of the matter of doctor-patient touch was deemed to be a key development in designing an informed approach to teaching both clinical examination & communication skills to students in a Middle Eastern medical school. Reported here are results of a project assessing the perceptions & attitudes of medical students in the Faculty of Medicine & Health Sciences, United Arab Emirates U, in the matter of touching patients. A second stage of the project compares the Emirati students with a cohort of US medical students. Survey data are used to classify Emirati students according to high & low tolerance of patient touching. Distinguishing variables are identified, & a preliminary framework is discussed.

Stilz, Stuart Anthony (DGO-HEC, 3000 ch de la Côte Sainte Catherine Montreal Quebec H3T 2A7 (tel/fax: 514-276-8194/340-5635; e-mail: stus@sympatico.ca)), **Developing Nations, NGOs and the Distribution of Costs and Benefits in Global Environmental Negotiating: From the Montreal Protocol on the Ozone Layer to the Kyoto Framework Convention on Climate Change.**

¶ The Montreal Protocol on the Ozone Layer, through its multilateral fund, is seeking to assist less-developed countries (LDCs) to adapt to the treaty both financially & technologically. It is argued here that the fund also serves as a subsidy for firms in the more developed Northern hemi-

S

sphere. LDC adaptation is proving difficult due to the constraints of international competition on environmental policies. On one hand, the dominant firms, whose head offices are located in developed countries, seek to protect patents & other intellectual property rights they hold over substitute & somewhat more environmentally friendly-products & processes. On the other hand, LDCs, in exchange for signing the treaty, are seeking nonpolluting technologies that are simultaneously low-cost & highly accessible. For their part, nongovernmental organizations (NGOs) have helped develop & promote technologies that are more environmentally benign to the ozone layer than those offered by the large Northern-based firms, & sometimes their innovations have had a beneficial impact on LDC economics. The result is that joint economic conversion initiatives-involving NGOs, states, & the Program on the Environment-have created uncertainties in some global markets for substitute products. The lessons of the Montreal Protocol process, which in North-South terms is a highly unequal partnership, have not been lost on the actors in ongoing climate change negotiations.

Stoelting, Erhard (Wirtschafts & Sozialwissenschaftliche U Potsdam, D-14415 Federal Republic Germany [tel/fax: 331-977-3383/3308]), **Religiosity in the Fundamental Political Changes of Eastern Europe.**

¶ Discussions of charismatic aspects of political leadership have tended to concentrate on totalitarian movements & charismatic political leadership. It is argued here that nondenominational religiosity can be seen as a central aspect & a mediating mechanism in situations of fundamental political change. Many of these changes are brought about by religious fervor, even if the aims seem secular. This is demonstrated using the example of Central & Eastern European changes of 1989. The ensuing period of emotional depression can be understood as shaped by the deceptions of former enthusiasm.

Stokman, Frans N., Van Assen, Marcel & Van Oosten, Reinier (Interuniversity Center Sociological Theory Rijks U Groningen, NL-9700 AB Netherlands [e-mail: f.n.stokman@ppsw.rug.nl]), **Bolstering and Activity Effects in Policy Networks.**

¶ Describes & tests a dynamic policy network model in which actors optimize their access relations to, & by consequence, optimize their influence over, other actors in policy networks, drawing on interview data from actors &/or experts. Decisions are assumed to be unidimensional, & actors have preferences regarding the outcomes of the decisions (policy positions) & differ in their interest in the decisions (salience). Preference functions are assumed to be single peaked. Usually, the final decision is taken by a small number of actors with voting power. For other actors, the only way to affect the outcomes of the decisions is by access to other actors. Their influence on other actors depends on the resources they can mobilize relative to the resources of the target actor & other actors with access to the target actor. The (micro)model describes the behavior & choices of the actors concerning the establishment & shifts of access relations to predict the resulting pattern of influence relations (the macrostructure) in the policy network. Influence relations result from the acceptance of an access request of an actor by another actor. It is assumed that both a request by an actor & an acceptance by the target actor aim at strengthening the coalition on the policy positions of the actor at stake. The simulated influence networks are compared with interview data on influence networks.

Stolcke, Verena (Dept Antropología Social & Prehistoria U Autónoma Barcelona, E-08193 Bellaterra Spain [tel/fax: 34-3-581-1142/1140; e-mail: verena@cc.uab.es]), **The "Nature" of Nationality.**

¶ Examines how & why nationality or state membership became "naturalized" in the process of 19th-century liberal state building in Germany, France, & GB, focusing on nationality in the juridical sense as a legal relationship of state membership that has particular consequences for women. Highlighted is a contradiction intrinsic in the origin of modern nationality rules: liberals & democrats advocate a universalist, voluntarist idea of citizenship, while, in a world of competing & warring nation-states, states ascribe membership, using a mix of *jus sanguinis* & *jus soli*. By the 1880s, the similarities between French & German nationality law outweighed the proverbial differences. In both states, *patrilineal jus sanguinis* was the foremost rule conferring state membership. Analyzed is this preference for patriliney as well as early-20th-century women's campaigns for independent nationality.

Stoleroff, Alan David (Insttit Superior Ciências Trabalho Empresa, Ave das Forças Armadas P-1600 Lisbon Portugal [tel/fax: 351-1-79-35000/64710; e-mail: alan.stoleroff@iscte.pt]), **The New Unilateralism in Portuguese Industrial Relations.**

¶ Presents evidence confirming the thesis that a new form of unilateralism is becoming predominant in Portuguese industrial relations. This shift in management practice is based on a hard human resource management strategy of labor management as well as employer retraction from established collective bargaining agreements & from practices of consultation with unions at the workplace. This is a significant inversion of the pattern of industrial relations that emerged throughout the democratization process, which had been based on dual representation of unions & workers commissions in large enterprises; the nationalized sector was prominent & a bastion of this pattern. Over the last decade, union representation at the workplace has been significantly weakened, the pattern of representation is very segmented, & the dimension of workplaces has decreased significantly. Privatization & liberalization have attacked the redoubts of workplace unionism. Collective bargaining has come to provide only the bottom-line positions for employment regulation & is considered obsolete by employers. Macrolevel neocorporatism does not compensate for the lack of effective representation at the workplace. The evidence for the thesis of a new unilateralism is drawn from various sources, including survey research & case studies. Also analyzed is the genesis of the new unilateralism & of the decline of union representation, highlighting the influence of European integration.

Stratton, Terry D., Hunt, Scott A. & Gallagher, Eugene B. (Dept Behavioral Science U Kentucky, Lexington 40536-0086 (tel/fax: 606-257-4039/323-5350; e-mail: tdstro00@ukcc.uky.edu)), **A Genomic Self: Is Genetics Compatible with a "Sociological" Social Psychology?**

¶ Examines the compatibility of genetic factors in a "sociological" social psychological framework by heuristically juxtaposing biologically ascribed genetic attributes alongside a socially achieved emergence of self. It is argued that social psychology, to the extent that it purports to be a truly interdisciplinary approach to the study of human behavior, must allow for the inclusion of both sociological (eg, self) & psychological (eg, personality) phenomena. Discussed are the likelihood & possible ramifications of hypothetical scenarios, eg, the scope of sociological inquiry widening to demarginalize social psychology, & sociological social psychology expanding to inhibit the a priori dismissal of psychological & biological theory/research. It is contended that, while biological factors (including genetics) will probably not be readily integrated into existing sociological models, they are neither inherently incompatible with a sociological social psychology approach, nor do they compromise a theoretical commitment to both social process & social structure.

Straus, Murray A. (Family Research Laboratory U New Hampshire, Durham 03824 (tel/fax: 603-862-2594/1122; e-mail: mas2@christa.unh.edu)), **Research on Corporal Punishment of Children: Methodological Problems and Suggestions.**

¶ Statistics, in combination with a growing body of research, demonstrate continued support for & use of corporal punishment for children through young adolescence among US parents. Together with other data showing harmful side effects from corporal punishment, this indicates a need for research on the social aspect of corporal punishment, especially the social causes & consequences of socializing children through physical violence. However, beyond simple prevalence statistics, there are many methodological problems involved in the collection & analysis of such data. These are reviewed, focusing on the vocabulary & contextual framing of interview questions; the importance of measuring the chronicity & severity, not just occurrence, of corporal punishment; contextual data particularly crucial for understanding the meaning of acts of corporal punishment; methods for dealing with the confounding of normatively expected corporal punishment with physical abuse; & methods for obtaining & analyzing data on social norms concerning when & how to use corporal punishment & social controls that enforce those norms. Sample questions that have been used to obtain data on corporal punishment in a number of published studies are appended.

98S36147 / ISA / 1998 / 13388

Straus, Murray A. & Mouradian, Vera E. (Family Research Laboratory U New Hampshire, Durham 03824 (tel/fax: 603-862-2594/1122; e-mail: mas2@christa.unh.edu)), **Impulsive Corporal Punishment by Mothers and Antisocial Behavior and Impulsiveness of Children.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Tested the hypothesis that corporal punishment, eg, spanking or slapping a child for purposes of correcting misbehavior, is associated with antisocial behavior & impulsiveness by the child, drawing on interview data from a probability sample of 933 mothers of children, ages 2-14, in two small US cities. Analyses of variance found that the more corporal punishment experienced by the child, the greater the tendency for the child to engage in antisocial behavior & to act impulsively. These relationships hold even after controlling for family socioeconomic status, the age & sex

of the child, maternal nurturance, & level of noncorporal interventions by the mother. There were also significant interaction effects of corporal punishment with impulsiveness by the mother. When corporal punishment was carried out impulsively, it was most strongly related to child impulsiveness and antisocial behavior; when corporal punishment was done when the mother was under control, the relationship to child behavior problems was minimal. Nevertheless, even children of mothers who reported being in control when using corporal punishment were not better behaved than those whose mothers did not use corporal punishment. Because there is a high risk of losing control when engaged in corporal punishment & impulsive corporal punishment is so strongly associated with child behavior problems, results suggest that corporal punishment is an important risk factor for children developing a pattern of impulsive & antisocial behavior that, in turn, may contribute to the level of violence & other crime in society.

98S36148 / ISA / 1998 / 13389

Straus, Murray A. & Paschall, Mallie J. (Family Research Laboratory U New Hampshire, Durham 03824 (tel/fax: 603-862-2594/1122; e-mail: mas2@christa.unh.edu)), **Corporal Punishment by Mothers and Intelligence of Children: A Longitudinal Study.**

¶ A review of previous research led to the hypothesis that if parents avoid corporal punishment, they are more likely to engage in verbal methods of behavior control, eg, explaining to the child, & the increased verbal interaction will enhance the child's cognitive development-IQ or intelligence. This theory was tested with 978 children (ages 1-4 in 1986) of mothers in the National Longitudinal Study of Youth. Corporal punishment was measured by a question on frequency of spanking & by whether the mother was observed hitting the child during interviews conducted in 1986, 1988, & 1990. Results show that the mean IQ of children in the lowest quartile of corporal punishment increased, while that of the children in the most frequently spanked quartile decreased. Although parents are now using corporal punishment less frequently & for fewer years, the majority of parents continue to use it sometimes. There is a need for media & educational programs to make clear the benefits of avoiding corporal punishment; even a reduction could have major benefits for children & society as a whole. These benefits are not limited to higher IQ. Recent empirical research suggests that the benefits of reduced corporal punishment are likely to include less juvenile delinquency, adult violence, & masochist sex; a greater probability of completing higher education; higher income; & lower rates of depression & alcohol abuse.

98S36149 / ISA / 1998 / 13390

Straus, Murray A. & Stewart, Julie H. (Family Research Laboratory U New Hampshire, Durham 03824 (tel/fax: 603-862-2594/1122; e-mail: mas2@christa.unh.edu)), **Corporal Punishment of American Children: National Data on Prevalence, Trends, and Relationship to Child and Family Characteristics.**

¶ Interviews with a nationally representative sample of US parents (N = 1,000) in 1995 show that 90+% use corporal punishment with toddlers. The % decreases with child's age: 40% at age 13 & 20% ages 16-17. Mothers use corporal punishment more than fathers, probably because of greater time spent with children. Young age, low socioeconomic status, being African American, & living in the South distinguish parents who use corporal punishment the most. Although the prevalence of corporal punishment of toddlers has declined very little, three other aspects of corporal punishment show steady decreases: chronicity, severity, & duration (the median age to which corporal punishment continues). Implications are discussed in light of findings from recent prospective studies of the long-term effects of corporal punishment.

Straussfogel, Debra L. (Dept Geography U New Hampshire, Durham 03824-3589 (tel/fax: 603-862-1930/2649; e-mail: debbras@christa.unh.edu)), **Bioregions as Systems of Study: Connections between People and Their Places.**

¶ The integration of community & environment is the banner of the bioregional perspective, which holds that local cultures & societies flourish best within the context of natural, environmentally defined boundaries, rather than more arbitrary, politically defined ones. Bioregions are defined first by uniformities of climate, physiography, & indigenous vegetation & fauna. The goal of bioregional analysis is "reinhabitation," ie, "evolving social behavior that will enrich the life of that place, restore its life supporting systems, & establish an ecologically & socially sustainable pattern of existence within it" (Berg, 1978). The call for a theoretic-

S

cal reconnection of human systems with the environmental systems on which they ultimately depend is crucial if anything approaching sustainable relations are to be achieved (Straussfogel & Becker, 1996). Geographer Donald McTaggart (1993) has done a cogent job of creating a stylized way of thinking about the connections that occur within & between bioregions. Here, his conceptual model of bioregions is used as a starting point from which to construct a more dynamic systems framework within which to put these expanded notions of ecosystem health into practice. The Upper Saint John River Valley where it forms the international boundary between ME in the US & New Brunswick in Canada is used as a test case.

98S36151 / ISA / 1998 / 13392

Strom, Elizabeth A. (Rutgers U, Newark NJ 07102 (tel/fax: 973-353-5988/5103; e-mail: estrom@andromeda.rutgers.edu)), **The Global and the Vernacular: Architecture, History and Urban Development in the New Berlin.**

¶ Examines postreunification central city development in Berlin, Federal Republic of Germany, with attention to the influence of global & local forces. Absent the geopolitical circumstances that left both halves of divided Berlin removed from the global market, the city now begins to take on many of the social, political, & spatial characteristics found in other industrialized cities, suggesting a high degree of policy convergence. Nonetheless, Berlin retains a number of singular features that cannot be entirely explained with globalization models. The peculiar imperatives of capital building add a unique dimension to Berlin's policy arena. The discourse surrounding urban development also stands apart, as architects compete to interpret the city's history & define its new aesthetic in ways that are unique to the city. In conclusion, the redevelopment of Berlin's center emerges from the tensions between the global & the local. Global economic & financial forces condition the city's path, but indigenous interests continue to shape specific outcomes.

Strüder, Inge (Dept Political Sciences U Münster, D-48151 Federal Republic Germany (tel/fax: 49-251-846212/8324372; e-mail: struder@uni-muenster.de)), **Housing and Social Contacts of the Elderly: What Planners Can Do.**

¶ Based on actional theory, aspects of Anthony Giddens's (1988) structuration theory & the author's (1998) works, shown is how the built environment is integrated by elderly people (ages 60+) into the organization of everyday activities. Therefore, the built environment—parks, social infrastructure, houses—should offer opportunities for planned & unplanned contacts between inhabitants & visitors. Housing policy & planning for the elderly should enlarge the communicative validity of housing, in particular, & the built environment, in general. Photographic illustrations & a case study of an elderly single woman give rich detail as to how to realize that concept.

98S36153 / ISA / 1998 / 13394

Strüder, Inge (Dept Political Sciences U Münster, D-48151 Federal Republic Germany (tel/fax: 0049-251-846212/8324372; e-mail: struder@uni-muenster.de)), **The Individual Social Regions of Elderly Women in Germany.**

¶ Based on aspects of structuration theory (Giddens, Anthony, 1988) & gender research, categories were constructed to understand individual social regions (Werlen, B., 1995) of elderly women, ages 60+, in the former West & East Germany. The categories & their theoretical assumptions concerning space, time, age, gender, & class are presented. Case studies show how these theoretical concepts shed light on the individual social regions of elderly women, ie, how they refer in their actions to the material & immaterial environment to organize their everyday activities outside of their houses. Differences result, for example, from belonging to different social classes & having led a life in different political systems that had a severe influence on their biography & the actual material living environment. It can be shown that being an elderly woman is the result of many processes of structuration in the years before & is still produced in several ways by elderly women & others.

Su, Tie-ting (61 rue Princess, Canton de Magog Quebec J1X 3W4 (tel: 819-868-0615)), **From 1928 to 1938: Order and Chaos of the Global Socio-Economic Systems.**

¶ In the late 1920s & 1930s, the world system under the British free trade regime was disintegrating. From the perspective of historical hindsight, the world system was in transition to another regime. However, the

transition or melt down period of the world system provided fertile ground for various prototypes of other systems to emerge. Global trade networks are used to fathom structural changes in the period. While the world-system momentum could be indicated by relatively open trade networks led by major trading powers, the imperial autarkic prototypes can be indicated by merchantist trade networks led by major trading power. While regional trading networks can indicate emerging regional socio-economic prototypes, prototypes of cultural alliance can be indicated by trading networks based on traditional cultural ties. The exact configuration of the world system & prototypes of other systems are examined here by employing global trade networks as an indicator.

98S36155 / ISA / 1998 / 13396

Su, Tieting (State U New York Coll, Plattsburgh 12901-2697 (tel/fax: 518-564-3309/3333; e-mail: sut@splava.cc.plattsburgh.edu)), **Cycles of Global Trade Networks?.**

¶ Explores the global trade structure from a historical perspective, using global trade networks as indicators of the structure. It is contended that such complex network structures as trade structures are largely based on the combination of four basic network elements: the star set, the clique set, the dyadic set, & the null set. It is further argued that a major cyclical trend tends to characterize global networks in this century.

98S36156 / ISA / 1998 / 13397

Subhash, Manju (Maitreyi Coll U Delhi, New Delhi 110003 India (tel/fax: 91-11-4615382/3717454; e-mail: subhash@irc.unv.ernet.in)), **The Browning of Canada: Images and Perspectives.**

¶ Immigration is slowly but certainly altering the face of Canadian society. Visible minorities from Asia, Africa, the Caribbean, & Latin America are affecting virtually every domain of civil & political life. The restructuring of the global economy, demographic change, resurgent nationalism, ethnic & political conflict, environmental degradation, expanding communication & transportation networks, & emergence of communities that facilitate integration of migrants lead to tension & social change. Ethnic, cultural, religious, & social diversity of migrating populations, & their higher expectations, awareness about rights, & ability to access the social & economic capital all lead the receiving community to accuse them of racism. Though racism has been a part of Canada, fresh additions of migrants are changing the host population attitudes, adversely affecting immigrants' ability to integrate & find employment, housing, social networks, education, & other vital services. The effect of immigration on social tolerance, race relations, & the values of the host population is discussed, focusing on how Canadians can act powerfully & positively to correct what they know is unjust.

98S36157 / ISA / 1998 / 13398

Sucharczuk, Gregory, On the "Flexibility" of Social Movements.

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ While conventional forms of voluntary associations can usually rely on popular support due to long-standing traditions, ideological ties, & availability of selective incentives, support for social movements is more problematic, particularly in periods of a turbulent social environment that require adaptation. The notion of the "flexibility" of a social movement is explored here, ie, the degree to which a given social movement can introduce significant changes to its ideology, programs, or strategy & still carry the bulk of its supporters. It is suggested that social movements can be located on a continuum from flexible (eg, totalitarian movements, cults) to rigid (certain single-issue movements, peace movements, etc). The conditions leading to flexibility or rigidity are examined on the basis of three case studies: (1) the Solidarity movement in Poland (1980/81), (2) peace movements in the West, & (3) ethnic political movements in the West. It is suggested that (A) charismatic or personalized leadership would lead to "flexibility," because the ties between the leadership & rank & file are not only rational, but also emotional; (B) the "sophisticated" frame would lead to flexibility while the "restricted" frame would lead to rigidity; (C) the centralized, formalized, & bureaucratized structure of a movement would lead to flexibility (to the extent that it innovates), while the opposite type of structure, although conducive to tactical innovations, cannot impose on a whole movement. In terms of the social base of a movement, a heterogeneous, well-educated, professional, & socially well-integrated membership will make the movement more rigid. It is possible that other factors also play a role in determining whether a movement will be able to simultaneously perform the tasks, often contradictory, of innovation & preservation of its support.

98S36158 / ISA / 1998 / 13399

Sudakov, Volodymyr & Sakada, Mykola (Instytut Sociologii National Academy Sciences, 12 Shovkovichna str Kiev 252021 Ukraine (fax: 380-44-291-56-96)), **Globalization of Unemployment: Ukraine and the Contemporary World Situation.**

¶ Unemployment in Ukraine is not the result of scientific, technical progress & technical innovations, or competition in the labor market, & thus cannot be identified with any model of classical unemployment. Rather, unemployment in Ukraine is an unprecedented phenomenon reflecting the general crisis of economy & also the difficulties of the choice of the optimal model of political development. In a general sense, the political & economic contradictions of the unemployment phenomenon in Ukraine are determined by the processes of transition from the state-bureaucratic forms of property to private & new cooperative forms. Another peculiarity of unemployment in Ukraine consists of hidden unemployment in the working population, which is not accounted for by state statistics. Sociological data indicate that nearly 40% of the working population were unemployed by the end of 1997. Investigated here are the different types & forms of social activity of unemployed people. It is argued that main forms of human activity are directly determined by the existential goal orientations that express human struggle for survival. It is concluded that unemployment in Ukraine is not a positive factor of social modernization but a negative factor that destroys social integration processes & increases social poverty. It is suggested that the phenomenon of Ukrainian unemployment is now a real constructive element of the world system of unemployment: thus, globalization of unemployment as a world ontological process reflects regional contradictions of the labor market.

Sugur, Nadir (Eskisehir Anadolu U, Turkey (tel/fax: 90-222-335-0581/3616)), **Privatisation and Changing Patterns of Employment Relations in Turkey: The Case of Sub-Contract Workers in the Cement Industry.**

¶ Examines the effects of privatization on employment relations in Turkey, drawing largely on data from a survey of 196 employees in two privatized cement companies, who expressed their views of (1) the principle of privatization, (2) differences between the public & private sector, (3) the general effects of privatization on employment relations, & (4) the impacts of privatization on their own company. The four categories of employees are distinguished: managers & engineers, clerks, manual workers, & subcontract workers, focusing on the last group, who are excluded from unionization & collective bargaining rights. Following privatization, the new management has pursued a new employment strategy to increase flexible working practices through the use of subcontract workers. These workers have been recruited at less than minimum wage, usually with no social security contributions paid by the employer, on short-term contracts, quite often on an informal rather than formal basis, & with no effective legal protection. The use of subcontract workers has been instrumental for the new employer in deunionization of the workforce & reducing the cost of labor. As subcontract workers are predominantly employed on unskilled & semiskilled jobs, their number can easily be increased & reduced in accordance with changes in demand. In comparison with the preprivatization period, the increasing use of subcontract workers in privatized companies has substantially changed the structure of employment relations with respect to unionization, job security, health & safety, job satisfaction, wages, working conditions, & decision making.

Sugur, Serap & Sugur, Nadir (Eskisehir Anadolu U, Turkey (tel/fax: 90-222-335-0581/3616)), **Intersection of Gender and Class in Turkey: The Case of School Teachers.**

¶ Discusses the intersection of gender & social class, drawing on case study data from 200 primary & high school teachers in Turkey. Analysis suggests that teachers' class position is cross-cut by gender relations, & the intersection of class & gender is such that it effects an accommodation of teachers in Turkish society that could be understood neither from their former identification with the project of modernization, nor from their widespread dissatisfaction with their declining pay & status. The findings raise problems for studies that try to integrate women into theories of class alongside men without considering gender differences. The study clarifies the problem of the relationship between class & gender from two aspects: (1) It supports the view that, despite having involvement in paid work as a gender group, women teachers' class position (in terms of life chances) has been predominantly determined with their husbands' occupation. (2) Women teachers' class position can also be considered as a distinct group in the class analysis since gender composition plays an important role in determining teachers' market situation in respect to entry into the teaching profession, dealing with occupational matters, & attitudes toward unionization. As a result, the increasing number of women in teaching profession in Turkey has meant a considerable decline in the status & socioeconomic conditions of the profession in recent decades.

Suhomlinova, Olga O. & Spenner, Kenneth I. (Dept Sociology Duke U, Durham NC 27708 (tel/fax: 919-660-5614/5623; e-mail: olga@soc.duke.edu)), **Learning the Ropes: Change among Bulgarian State-Owned Enterprises during Market Transition.**

¶ Explores whether organizations created under the old regime of central planning can successfully adjust to an emerging market environment & learn the rules of the new market game just as these rules are being established in the context of peaking uncertainty. The dynamics of interaction between organizational strategy & performance in state-owned enterprises during market transition are examined, focusing on the performance outcomes of strategic changes & the influence of prior performance on strategic change. The extent to which strategic changes are guided by the feedback provided by performance signals, or reflect a relatively random search unaffected by organizational learning, is investigated using longitudinal data from a representative sample of Bulgarian state-owned enterprises for the period from 1989, the last year under communism, to 1996, 5 years after major macroeconomic shifts. Findings show that the influence of strategic changes on performance varies depending on the type of change, but the most radical changes have negative effects on performance, in line with ecological arguments that core changes are deleterious. Results, however, also indicate that strategies change in response to performance signals, thus suggesting that organizational learning takes place even under the conditions of high uncertainty.

Suhonen, Pertti (Dept Journalism & Mass Communication U Tampere, SF-33101 Finland (tel/fax: 358-03-2156263/2156248; e-mail: tipsu@uta.fi)), **The Role of Opinion Polls in Working of Political Parties, Social Movements and Pressure Groups. The Case of Finland.**

¶ Discusses the role of opinion polls in the working of political parties, social movements, & pressure groups, drawing on the case of Finland to illustrate. Because of erosion of social structures & the mass nature of (post)modern societies, the representative ability of parties & other organizations of civil society has grown weaker. Since participation by citizens in political parties & pressure groups has diminished, & new social movements mobilize only a minimal part of the population, opinion polls have become significant means for constructing & presenting the people's will. The increase in the number & significance of opinion polls has made them a social institution that has an established role in the functioning of other institutions. When media continually commission & publish opinion polls, they carry out part of the function of public representation that used to belong to political parties & pressure groups. Also, the relationship between those organizations & their membership is often conveyed through opinion polls instead of member's active participation.

Sulek, Antoni (Instytut Sociologii U Warsaw, PL-00325 Poland (fax: 48-22-826-77-37; e-mail: sulekan@uw.edu.pl)), **The Varied and Changing Functions of the Polish Sociological Association.**

¶ The Polish Sociological Assoc (PSA) was founded in 1957, during the post-Stalinist "renewal." Over its history, it has fulfilled three basic functions: (1) promoting the development of sociology in Poland, (2) representing the milieu of sociologists, forming & expressing its opinion, & (3) serving the interests of the profession. The relative importance of these has changed over time in response to the institutional growth of sociology & long-term political processes in Poland. The first was the most important in the 1950s & 1960s; the PSA was then a major forum for spreading research findings & creating methodological & ethical standards of sociological work. It did not become a subordinate agent of the state; before the fall of communism, especially in the late 1970s & 1980s, it was an important center of independent sociological thought & criticism of the socialist system. Now, it focuses on strictly professional, rather than political, activities, promoting & subsidizing work leading to the modernization of the sociological profession. These changes are described based on archival records, reminiscences of some Polish sociologists, & personal experience.

Sullivan, Robert B. & Belanger, Jean-Pierre (U Wisconsin, Madison 53716 (tel/fax: 608-222-0536/5049; e-mail: rbs@total.net)), **The Use of Social Indicators in Evaluating the Relationship between Government Decentralization and Levels of Social Capital.**

¶ In moving to decentralize budgets & responsibility for health, social services, & community development programs, many governments have acted in the name of efficiency & responsiveness to target populations. The rhetoric of decentralization often includes assertions linking it with improved population health status, a higher quality of life, & greater opportunities for local control of economic development. Moreover, many policymakers believe that decentralization is most successful where levels of social capital are highest, yet few studies have proposed ways to measure & compare levels of social capital in North America. Examined here is a method to evaluate the relationship between decentralization & social capital, based on comparisons among health & social services regions in Quebec. Preliminary findings suggest that decentralization may actually offer opportunities to strengthen social capital & favor economic development.

Sümer, Sevil (Center Social Research U Bergen, N-5007 Norway (tel/fax: 47-55-589778/711; e-mail: sevil.sumer@sos.uib.no)), **A Cross-National, Inter-Generational and Gender Specific Study of the Relationships between State Policies, Family Patterns and Gender Relations.**

¶ Preliminary findings are presented of a comparative study on the dynamics of the relationships between states, families, & individuals, as well as changes in family patterns & gender relations. The effects of increasing modernity on intimate relations & recent changes in family formations are examined using cross-national & intergenerational interview data from Norway & Turkey. One theoretical purpose is to analyze the gendered effects of the project of modernity by concentrating on the clashing demands of the public & private spheres. Survey data & in-depth interviews are analyzed in a complementary manner to discuss state-family relations, on the one hand, & individuals' evaluations of their own situations, expectations, & negotiations, on the other. Internal comparisons provide material to study the effects of different state policies, cultural practices, & value orientations on family patterns & gender relations. Comparisons of attitudes of both women & men show how they experience changes in gender roles & how their expectations related to gendered division of housework & child care differ. Comparing attitudes & ideas of younger & older persons provides valuable material to understand the reasons behind recent transformations. The interviewing process, begun in 1998, will be completed in 2000.

Sundaram, D. (Dept Sociology U Madras, Chennai 600041 India (tel/fax: 91-44-419339/496316)), **Legislative History and Policy on Migrants in Host Country—A Case Study of Indian Migrants in South Africa and France: Two Comparative Situations.**

¶ Compares the integration of Indian immigrants in South Africa & nationality status & citizenship. Analysis of the legislative process & migration policies of the two nations reveals how the South African example began with segregation & ended in integration, & the French question is pure nationality with no discrimination. The need to understand the struggle for nationality & citizenship in host countries is critical because of the current level of market globalization, which induces a higher level of human circulation along with goods & services. Naturalization policy aiming to incorporate migrants into the host nations often clashes with the extant power paradigm & the labor market of the dominant community. Studies on Indian migrants throughout the world provide a picture of the struggle of this community for nationality citizenship. An array of legislative history has influenced the public policy of each host country incorporating migrants into citizenship status through a naturalization process.

Sung, Won-Cheol & Nakazawa, Hideo (Lab Sociology U Tokyo, Bunkyo-ku 113 Japan (tel/fax: 81-3-3812-2111/3815-6672; e-mail: sungwc@za2.so-net.or.jp)), **The Reinvention of Democracy from Below: Local Referendum as a New Protest Strategy in Japan.**

¶ Given political apathy & nonpolitical cultural traditions, why is Japan witnessing massive waves of local referenda in the 1990s? The first referendum, based on a municipal ordinance, was held on the proposed nuclear power plant in Maki, Niigata, in Aug 1996, followed by the Okinawa prefectural referendum on reduction of the US military base & the referendum on siting a facility for industrial wastes in Mitake, Gifu, & others. Local referenda are considered here as a new protest strategy, & the political environments that most favor their rise are explored. The impacts of the framing strategy interpreting local issues are defined as problems of residential self-determination on political effectiveness & opportunities from below. Although policy making by this type of referendum does not constrain the political institutions of Japanese representative democracy, these cases proved that a referendum does have substantial political significance & is an effective protest strategy & resonant interpretive scheme in the 1990s. Considered in conclusion is how a new protest strategy structures the choices of different social actors creating a diffusion process.

Svampa, Maristella N. & Martuccelli, Danilo D. (U Nacional General Sarmiento, 1663 Buenos Aires Argentina (tel/fax: 54-1-8548669/4514578; e-mail: mtlla@unisar.edu.ar)), **Las transformaciones políticas en Argentina: el caso del Peronismo** (Political Transformations in Argentina: The Case of Peronism). (SPA)

¶ In the context of the collapse of Argentina's national-popular model, Peronism is studied: its history is tied both to the launching & the dis-

mantling of the national-popular model. Focusing on its main actors (activists, union members, & members of the urban popular sectors), analyzed is how the recent collapse affects Peronist memory & identity. A 1994-1997 research project used various qualitative methodologies (eg, in-depth interviews) to explore Peronist actors' political experience & the work they needed to do to rebuild their relationship to the political. Analysis shows both the weakening & persistence of Peronism, its mutations & its nostalgia. Much is learned about the social reality of post-Peronism, a political field still strongly delimited by the Justicialista Party.

Swatos, William H., Jr. (Assoc Sociology Religion, 3520 Wiltshire Dr Holiday FL 34691-1239 (tel/fax: 813-844-5990/7332; e-mail: swatos@microd.com)), **Revisiting the Sacred.**

¶ The concept of secularization has been subjected to extensive critique during the past decade, & some parties have also recognized that the secular is intimately tied to the religious. Relatively less attention has been paid to the notion of the sacred, especially in the Durkheimian sense of the "set apart & forbidden." Here, it is argued that sacrality involves a component of the penetration of the lifeworld largely missed by the Durkheimian approach. The reason that secularization has failed to stand the test of scholarly inquiry is partly historical, but it is also because the mysterious continues to penetrate modern/postmodern life, & rational scientific models are incapable of accounting for these experiences convincingly. Hence the "sacred mystery" will continue to demand religious accounts.

Swift, Karen J. (School Social Work York U, Toronto Ontario M3J 1P3 (tel/fax: 416-736-2100/650-3861; e-mail: kswift@yorku.ca)), **"Failure to Protect": Child Welfare Work in Context.**

¶ Child welfare work generally comes to public attention via media coverage of child deaths & the official reviews that follow. Typically, agencies & social workers are presented as having failed children in their care, & various recommendations for tightening up the system are made. But the actual context of child welfare work is complex & contradictory. The work has its roots in three overlapping arenas, all of which make claims on the loyalties & time of workers: (1) child welfare legislation; (2) the social work profession, which contains contradictory mandates of both enforcing & challenging the social order; & (3) child welfare work, which is carried out in bureaucratized organizations that strive for order & objectivity. High profile protection cases are used here to illustrate complexities in & among these three contexts & to demonstrate how contradictory pressures are resolved.

Szabó, Máté (U Eltefac State & Law, H-1364 Budapest Hungary (tel/fax: 361266-9503/5198; e-mail: matedoc@ludus.elte.hu)), **From 'Catacomb' to 'Civic' Activism: Transformation of Civil Right Movements in Hungary.**

¶ An analysis of the problems of human rights initiatives in postcommunist Hungary gives a brief sketch of the profile of the emerging, tiny social movement sector of the civic initiatives on immigrant rights & conflicts related to migrants. Very few nongovernmental organizations have engaged in human rights protection, & these primarily only in Budapest. However, their qualitative relevance in trying to extend civil rights is not negligible. The avant-garde of human rights activists articulated demands for civic freedom, documented & published injuries of civic freedoms of the state & the party, & tried to establish networks with Western activists & similar groups in other postcommunist countries. In the process of regime change, most civic initiatives & their leading activists become part of the new political elite as party politicians, civil servants, or influential actors such as publicists & journalists. Before 1989 a "catacomb" activism dominated, but, since then, many demands of these activists have been institutionalized in the new political & legal system. Six selected initiatives are discussed, based on case studies, interviews, & documentation, eg, press reports, in an attempt to analyze the specific problems of immigrant & civil rights protection in a postcommunist democracy.

Szaflarski, Magdalena (U Cincinnati, OH 45221-0378 (tel/fax: 513-556-4706/0057; e-mail: szaflam@ucbeh.san.uc.edu)), **Health Differentials in Poland: The Structural, Demographic, and Behavioral Determinants.**

¶ Examines the social, demographic, & behavioral determinants of health among different social groups in Poland, drawing on the 1995 Polish General Social Survey. Health status depends to some degree on the level of industrial development & health care organization in a country, but to a greater extent, it is a product of social class, gender, age, & adapted lifestyles. Identified are factors influencing health status, testing a causal mode of the relationships between several predictors & self-reported health via multiple regression. Predictors include, socioeconomic status (occupation, labor force, education, & income), gender, age, urban/rural residence, contextual factors (eg, industrialization, availability of health care & poverty), & health-related behaviors (eg, smoking & drinking habits).

98S36180 / ISA / 1998 / 13421

Szeman, Zsuzsa (Welfare Mix Team Instit Social Conflict Research Hungarian Academy Sciences, H-1068 Budapest (tel/fax: 36-1-3220-207/3515-454; e-mail: 100263.2311@compuserve.com)), **Reforming Pension Systems: Pension Reform in Hungary.**

¶ In Hungary, the number of active earners paying contributions fell by 20% between 1990 & 1995. As long-term unemployment & illegal employment became permanent features, a part of contribution receipts evaporated, leading to a constant social insurance deficit that reached 0.5% of gross domestic product by 1997. At the same time, due to early retirement, by 1997 the proportion of pensioners reached 30% of the population. This situation necessitates reform of the pension system, which has been patched repeatedly since 1975. Here, two pension proposals are discussed: (1) The pension reform proposed by the Pension Insurance Board aimed at transforming the old pay-as-you-go system into a score

S

system to achieve harmony between contribution payments & the benefits attainable; this proposal also aimed to make the system financially sound while accumulating substantial reserves over a period of a few decades. (2) The pension reform proposed by the Ministries of Finance & Welfare aimed at creating a mixed pension system; this reform would entail a compulsory private insurance (a certain type of funded pension) & the remaining contribution would be paid into a modified pay-as-you-go system. The economic & social costs of the radical reform for the strata & groups most unfavorably affected by the new pension system or who are the "losers," either in absolute terms or in comparison to their earlier expectations (acquired rights), are analyzed. These groups include the majority of women, all those who pay contributions for less than 25-30 years, persons age 47+, & those who are not sufficiently informed to choose a good pension fund in time or to convert their accumulated capital astutely into service (eg, annuity) at the right time.

Szinovacz, Maximiliane E. (Dept Sociology Old Dominion U, Norfolk VA 23529 [tel/fax: 757-855-7467/853-4736; e-mail: maxres@visi.net]), **Effects of Parental Caregiving on Adolescents.**

¶ Reports an exploratory study of 30 adolescents whose parent(s) care for a nonnuclear family member in the household. In-depth interviews regarding how the presence of the care recipient has affected various aspects of their lives confirm that caregiving can have a profound influence on caregivers' children. Among the negative effects are decreases & interruptions in leisure & school activity participation, invasion of privacy, decreased attention by the caregiver-parent, & increased tension in the home. Some teenagers complain that the care recipient gets them "in trouble" by telling on them. However, many teenagers also mention positive effects of the caregiving situation. Viewing the situation as a learning experience & enhanced communication with a relative they did not know well prevail among positive comments.

98S36182 / ISA / 1998 / 13423

Sztompka, Piotr (Jagiellonian U, PL-31143 Cracow Poland [tel/fax: 48-12-4116769/4222129; e-mail: @]), **The Vicissitudes of the Moral Bond in Contemporary Society.**

¶ The concern with the decay of moral bonds has been pervasive in sociological accounts of modernity. The "lonely crowd" theme has focused on the atomization & isolation of societal members. The "iron cage" theme has emphasized depersonalization & instrumentalization of social relationships. The "anomie" theme has pinpointed the normative & valuational chaos. The "rebellion of the masses" theme has underlined the congestion & pluralization of social environments. As a result of all four processes, the moral ties, marked by "We" feelings, & expressed in mutual trust, loyalties, & solidarities, have been seen as radically endangered. Indeed, evidence from most modern & modernizing societies proves the disturbing spread of the cultures of cynicism, manipulation, & indifference. However, there are signs of possible reversals: (1) the growing articulation & affirmation of postmaterialist, soft values; (2) the appearance of new value communities & social movements; (3) the revival of religion in new ecumenical forms; & (4) the growth of communities-at-a-distance facilitated by new technologies of communication: world-wide professional communities, invisible colleges, & virtual communities on the Internet. There is a growing popular revulsion against most vicious crimes, as manifested in the massive marches of protest, mobilized vigilantism, & spontaneous grassroots initiatives against delinquency.

Szucs, Stefan & Stromberg, Lars (Dept Political Science Goteborg U, S-4024 Sweden [tel/fax: 4631-773-1200/1871; e-mail: Stefan.Szucs@haga.gu.se]), **Interaction between the Individual Leaders and the Local Community's Structures of Democratic Orientations across Nations.**

¶ Research has shown that sociocultural factors, particularly at the levels of local & regional government, are quite important for the formation, stabilization, & performance of democratic institutions. However, less is known about whether, & to what degree, latent patterns of elite democratic orientations involve hierarchically nested effects; ie, to what extent are belief system structures of individual leaders clustered into their community, controlling for national & political system affiliation? Drawing on 1991-1993 interview data from municipal community officials, politicians, & civic leaders in countries with varying levels of experience with democracy, it is argued that structures of democratic orientations at the leader level involve an effect of local elite interaction at the community level, & that the strength of this effect depends on the nation's experience

with democracy.

Tacq, Jacques J. A. (Dept Sociology Catholic U Brussels, B-1080 Belgium [tel/fax: 32-2-412-4215/4200; e-mail: Jacques.Tacq@KUBrussel.ac.be]), **Have We Transcended Belhamel David Hume?**

¶ Belhamel is a Flemish word, which cannot be translated but is explained. According to 18th-century belhamel David Hume, such concepts as production, energy, & power belong to an obscure philosophy that serves as a shelter for superstition & as a cloak for covering foolishness & errors. According to Bertrand Russell, David Hume's skepticism inaugurated the bankruptcy of 18th-century philosophy. Many causal theories have, however, been formulated since Hume: among others those by Immanuel Kant, John Stuart Mill, Karl Popper, Carl Gustav Hempel, Mario Bunge, Patrick Suppes, & John Mackie. The most brilliant is Mackie's INUS-causation theory, which builds on counterfactuals & possible worlds: One no longer speaks of the cause, but of a causal factor, which is an "I"nsufficient but "N"ecessary part of a set of factors, where the set is "U"nnecessary but "S"ufficient, ie, an INUS-condition in a causal field. The question is, however, whether this notion goes any farther than that of David Hume. Hume was right that the Aristotelian notion of production is the kernel of the causal connection, but not the production, as such, but only the results of it, are observable. The causal statements refer to a journey on a, thus far unboardable, cause-effect train, resulting in a need to rely on well-organized observations at different stations. This is the tragic position of the researcher now & in the 21st century.

Taiwo, Olu & Wood, John (Flat B 9 Northlands St, Camberwell London SE5 9PL England), **Optimising Feelings of Uncertainty to Enhance Public Performance.**

¶ Considers uncertainty in public performance as a way to challenge popular assumptions about complexity & simplicity, taking African traditions of music & dance as a reference point from which to examine performative conventions in Western theater. Reference is made to practical experiments with the "return beat" (Taiwo, O., & Wood, J., 1997; Taiwo, 1998) in which nonexperts are asked to cooperate with others by clapping at a common tempo while trying to visualize the rhythm in their own way. These "joint actions" (Shotter, J., 1993) are analyzed using a reflexive model of perception (Velmans, M., 1990, 1998), & "absorption" (Fried, M., 1987) to examine the interplay between singular & collective action (Nancy, Jean-Luc, 1996). It is shown how an experienced actor or dancer can regulate the complexity of theatrical illusion by focusing the audience's attention onto—or away from—scripted aspects of performance. Although unscripted improvisation can enliven a well-known repertoire, it jeopardizes its perceived simplicity. Any additional complexity increases the possibility of failure, & therefore must be regulated. Performers should "surrender themselves" to feelings of nervousness so that they can fully experience the complexity of their feelings, out of which a renewed illusion of simplicity can be shared.

98S36187 / ISA / 1998 / 13428

Takahara, Kumiko (U Colorado, Boulder 80309 [tel/fax: 303-492-6472/7272; e-mail: takahara@spot.colorado.edu]), **Methods of Borrowing in Japanese.**

¶ Explores the evolution of methods of lexical borrowing in Japanese, which are divided into four categories: assimilation, direct borrowing, loan base creation, & hybridization. At the earliest stage of borrowing of mainly Chinese-origin words, the Japanese attempted to assimilate

them into sounds & meaning according to the native phonetic & semantic system. With increasing contact with Chinese culture & familiarity with Chinese words, the Japanese started to borrow Chinese words with little alteration even to the extent of modifying their sound system to match. As the Japanese mastered the structural principles of Chinese words, they started creating para-Chinese words, which, while enriching the Japanese vocabulary, generated redundant doublets & triplets that have essentially the same meaning. At the turn of the 19th century, when the translation of Western literature became urgent, alien words & terminologies were converted into para-Chinese words with expertise. Contemporary Japanese borrowing from Germanic & Romance languages, which are the major sources for borrowing today, is shifting from assimilationist to direct borrowing modes. At the same time, new hybrid Japanese words are created through the integration of loans into the native vocabulary, the combination of native & loan words, or the development of para-English or Japanglish, just to name the most popular types.

Takatoshi, Imada (Tokyo Instit Technology, Meguro-ku 152 Japan (tel/fax: 03-5734-2268/3617; e-mail: imada@valdes.titech.ac.jp)), **Self-Organization and the Age of Anti-Control Systems.**

¶ Modern society is characterized as penetrating the ideas of function primacy into various fields of social life. In the 1980s, however, skepticism about modernity increased markedly & fluctuation of modernity resulted. This situation is discussed from the viewpoint of a self-organization system, which represents the features of a system that changes its structure by itself. The reality of self-organization consists in fluctuation & self-reference. The sociological concept equivalent to fluctuation is "differing through dedifferentiation" from the established functional differentiation. Also, self-reference corresponds to self-reflection. Therefore, it is said that the social theory based on self-organization theory means a paradigm that formulates the intervention to social structure by action agents through their ability of differing & self-reflection. The common feature in the self-organizing paradigm is that fluctuation is internally reinforced by autocatalytic mechanism. This characteristic leads one to ask how anticontrol systems can be built; this is discussed from the perspective of the necessity of constructing the sociological theory of support system.

Takeuti, Norma Missae (Dept Ciencias Sociais U Federal Rio Grande Norte, 59079-000 Natal NR Brazil (tel/fax: 55-84-215-3556; e-mail: normat@digicom.br)), **Jeunesse, exclusion et violence** (Youth, Exclusion and Violence). (FRE)

¶ An investigation is conducted of Brazilian street children involved in delinquency (drugs, prostitution, vandalism, etc), who are stigmatized, relegated, & excluded from society. Juvenile delinquency is constructed as a Freudian taboo object & a meaningful imaginary reference for Brazilians. At the same time, street youths participate actively in their own process of exclusion, adopting a social discourse & attitude through which they invalidate their own identity &, in so doing, reinforce their marginality. The hatred they develop toward the "sane" elements of society reveals profoundly significant aspects of contemporary society: the failure of the civilizing process, & the failure of the politics of modern life. A sociological analysis of these youths' identification crises & a psychological analysis of their nonintegration are presented, based on data obtained through workshops on theater & sports. Results show how their situation leads to the possible emergence of a social identity of delinquency, perhaps as a gang member involved in collective aggression & juvenile delinquency.

Talahite, Fatima (Laboratoire CLERSE Centre national recherche scientifique, F-75794 Paris CEDEX 16 France (tel: 03-20-33-60-53; e-mail: f.talahite@ifresi.univ-lille.fr)), **Algérie: les femmes encore une fois...** (Algeria: Women Once Again...). (FRE)

¶ Analyzes the apparent body-centered discourses articulated in recent work written by & about Algerian women's changing identities & roles in the current civil crisis. Various images of women, identified with ideological, political, legal, & normative aspects of the conflict, have emerged: women as victims, soldiers, martyrs, alibis, or as the Trojan Horse of Western intervention. It is found that the nature & forms of the conflict imply women in a regression, as seen through the gradual deconstructing of discourse & language. In the words of Pierre Legendre, "The massacre is triumphant wherever human speech is no longer tolerated."

98S36191 / ISA / 1998 / 13432

Talin, Kristoff (Institut études politiques CIDSP, 1030 ave centrale BP 45F-38402 Saint Martin D'Hères Cedex France (tel/fax: 76-54-58-18/82-60-50; e-mail: talin@cidsp.upmf-grenoble.fr)), **Value Change and Modernity in France: A Comparative Study of Angers and Grenoble.**

¶ To explore changes in belief systems & values in a modern context, survey data from Isère & Maine et Loire, France, are drawn on to show the impact of secularization on the values of young professionals ages 22-42. If religious values are secularized along the lines of secular humanism, traditional values like the family are given unanimous support. Beyond consensus & homogeneity at a global level, regional or local differences emerge; eg, in Angers, a city less secularized than Grenoble, professionals appear more conformist than those in Grenoble, who seem more inclined toward individualism & change. These intranational variations in value change are analyzed along sociodemographic lines.

98S36192 / ISA / 1998 / 13433

Talmud, Ilan & Yanovitsky, Itshak (U Haifa, Mount Carmel IL-31905 Israel (tel/fax: 972-4-8240-992/819; e-mail: talmud@soc.haifa.ac.il)), **Socially Embedded Business Strategy: Strategic Change and Firm's Performance.**

¶ A three-dimensional framework is suggested for the study of changes in firms. It is argued that a firm's performance is affected by its location of three aspects of social embeddedness: political, structural, & cultural-cognitive. Hence, transformations of a firm's embeddedness modify its performance. The case of the Israeli military industry, Ta'as, is examined. A comparison of various performance parameters (efficiency & effectiveness) in two periods reveals that the differences in the performance of Ta'as are systematically related to modification in its political embeddedness, its structural embeddedness of business transaction, & the changing role of its cultural-cognitive embeddedness. Additionally, it was found that state intervention entails contradictions between different aspects of a firm's social embeddedness, thus severely harming its performance.

98S36193 / ISA / 1998 / 13434

Talts, Leida (Tallinn Pedagogical U, EE-0026 Estonia), **The Role and Values of Young Teachers in the Changing Estonian Society.**

¶ Results are reported of a 1996 questionnaire survey of 720 Estonian elementary school teachers exploring what they value in their professional work & the main sources of stress, as well as factors influencing their self-esteem, job attachment, & attitudes. Teachers are now leaving their profession for several reasons: low pay; deteriorating health; problem children; poor teaching aids, materials, & facilities; pupils' low motivation; & problems with discipline. Factors that make some teachers stay include pupils' positive attitudes toward teachers; long holidays; relationship with colleagues & management; coping with work; parent support; & favorable attitudes regarding professional development at school. Most teachers who had left reported that higher wages would bring them back. Other policies that could improve this situation are also discussed.

98S36194 / ISA / 1998 / 13435

Tam, May, Frenkel, Steve & Korczynski, Marek (CCC/AGSM U New South Wales, Sydney Australia 2052 (tel/fax: 61-2-99319504/96634672; e-mail: May@agsm.unsw.edu.au)), **The Use and Impact of Information Technology in Frontline Service Workplaces.**

¶ Empirically assesses diverse claims about the impact of information technology (IT) on two major areas of working life: changes in work skills & knowledge & management-employee relations. Three views regarding the effect of IT's ability to informate & automate (Zuboff, 1988) are compared: the optimistic, pessimistic, & contingent. The optimistic view alleges that IT will enrich the content of work, enhance job autonomy, & lead to relaxation of supervisory control &, thereby, greater work satisfaction. The pessimistic view posits a downgrading of quality of working life as workers are deskilled, work is made monotonous, supervision becomes tighter, & workers lose their autonomy. The contingent view argues that the impacts of IT vary between different aspects of working life. Hypotheses based on these three views are tested using ethnographic fieldwork & survey data collected from five companies in Australia, the US, & Japan. Analysis shows that, instead of the level, it is the nature of requisite skills & knowledge that IT has transformed. The authority relations between management & workers are heavily influenced by the informing ability of IT. Ouchi's concept regarding forms of organizational control is drawn on to discuss authority relations. It is argued that measurability of output, observability of behavior, & management's knowledge of the labor process mediate the effects of IT on work skills & knowledge, as well as management-worker relations.

Tam, Tony (Academia Sinica Instit European & American Studies, Nankang Taipei 11529 Taiwan (tel/fax: 886-2-2789-9390/2785-1787; e-mail: tam@sinica.edu.tw)), **Getting Ahead in the Labor Market: The Positional Capital Approach.**

Formulates the positional capital approach as an alternative to the human capital & structuralist approaches to labor market inequality; it synthesizes the positional logic of the structuralist approach & the capital logic of the human capital approach. Central is the concept of positional capital: the returns-generating resources rendered by the portfolio or combination of positions ever occupied by an actor in any domain (social organizational, political, cultural, etc). An autonomous network position is, for example, likely a high-return, high-capital position. This approach accommodates both sociological insights—eg, positional rents, job competition models, & career lines—and economic insights—eg, investment costs, differential returns, & the role of market coordination. By emphasizing positional capital as the focus of strategic behavior & optimization, the approach suggests new theoretical questions & offers new explanatory mechanisms for labor market inequality. To illustrate the logic of the positional capital approach, some of the most notable gender inequalities in the labor market are examined. Human capital, discrimination, & positional capital approaches are compared & contrasted.

Tamarit, José (U Nacional Luján, 6700 Buenos Aires Argentina (tel/fax: 54-1-323-23171/25795; e-mail: postmaster@mail.unlu.edu.ar)), **Educación, conciencia práctica y ciudadanía** (Education, Practical Conscience and Citizenship). (SPA)

Before studying the incidence or the contribution of institutional education in the constitution of the "practical conscience" of the citizen-subjects, it is essential to clarify this expression, which has different meanings in different discursive fields: eg, it has been used in the field of "order" (Anthony Giddens) & in the critical (Williams). In the latter perspective, the concept remits to the problematic of the hegemony, & is related to the concepts of Gramscian "common sense" & "nucleus of the good sense," Valoshinov's "behavioural ideology," & Freirian "concrete context." The constitution of "practical consciences" is part of the process of hegemony &, consequently, is strongly involved in the relationships of power among classes, gender, & races. The question is, then, what is the role of the school in the conformation of the practical consciences?

Tancred, Peta (Dept Sociology McGill U, Montreal Quebec 3A 2T7 (tel/fax: 514-398-6868/3403; e-mail: cypt@musica.mcgill.ca)), **Recreating the Professions: Women Transform Traditional Structures.**

Studies the entry of women into male-dominated occupations, & suggests that the problem of their integration is that the original "container" is so profoundly masculinist that only those women who most resemble men are incorporated. Examined are female & male engineers who registered from professional associations through a methodology termed "entering by the exit" & from extensive open-ended interviews. It is found that women (& some men) are not leaving the profession, but are using their qualifications to extend the professional domain. They sometimes remain in the same positions during & after their association membership, because official professional status is becoming less important for many of these posts. But, more frequently, they "recreate" new professional positions that would not be recognized by professional associations, but nevertheless require their professional expertise. It is suggested that it would be an advantage for many of the professions to recognize new professional parameters for the 20th century but, more importantly, to recognize women's contribution to their professional practice.

Tang, Ning (Dept Sociology U Aberdeen, AB24 30Y Scotland (tel/fax: 44-1224-273429/273442; e-mail: n.tang@abd.ac.uk)), **Half of Heaven in China: The Impact of the Women's Movement on Chinese Women's Public and Private Roles.**

Examines how the old, monolithic images of traditional Chinese women have been crumbled & the extent to which the new images of Chinese women indicate their gender position & social autonomy. The concepts of the public & private are clarified to provide a conceptual framework. By examining the effects of the women's movement since the beginning of the 20th century, it is argued that the movement, along with the political, economic, & social movements in the People's Republic of China, have brought about great changes in women's lives, specifically in their gender roles in both the public & private spheres, although it is often directed in male or official discourse. However, sexual division of labor still remains in the workplace & the household; & Chinese women are still undertaking the gender roles of virtuous wife & kind mother in the private sphere, while participating in & contributing to the public work. In spite of the conflicts between the dual work, they pursue the public roles with an effort in fitting their reproductive activities into the broad social production, which has distinguished them from many women in other societies.

98S36201 / ISA / 1998 / 13442

Tanguy, Corine (4 montée de Guise Apt 213, F-21001 Dijon France (tel: 33-3-80-43-67-95; e-mail: Corine.tanguy@wanadoo.fr)), **La Capacité d'apprentissage et d'innovation des firmes: le rôle de l'environnement institutionnel** (Firms' Capacity for Learning and Innovation: The Role of the Institutional Environment). (FRE)

The role of institutional environment in supporting the dynamic innovation of firms appears as a recurrent theme in economic literature. How territory determines interactions & learning between individuals is examined, considering territory as constructed by a collective of individuals & characterized by a set of organizational rules. Technological policy, legislation about patents & competition, & other institutions compose the national system of innovation, in which technological creation & development take place. One of the difficulties for economists in understanding these processes is the lack of theoretical concepts to illustrate the embeddedness of behaviors involved in a collective dynamic.

Tanguy, Lucie (U Paris X, F-9200 Nanterre France (tel/fax: 1-40-97-71-33/35)), **L'Inadéquation d'une pensée adéquationniste en matière d'éducation et de formation. Le Cas de la France** (The Unsuitability of Suitable Thought regarding Education and Formation. The Case of France). (FRE)

Examines the relationships among education, qualifications, & jobs in France. The linking of education & employment is constructed through complex discourse forms combining commonsense assumptions & social misinterpretations. However, in spite of the continuous elevation of educational levels, highly educated young people have difficulty in integrating into the labor market. This paradox is overshadowed in the current public debate. An overview of the principles that have guided the French educational policies since the 1970s is presented. The illusions created by the underlying assumption largely used by policymakers are stressed, ie, the supposed continuum between education, training, qualification, & employment. Different application fields are chosen to illustrate the political process of adjustment between education & jobs: the introduction of the professional baccalaureate, the codification of education & formal training in terms of professional competencies, & the recently institutionalized cooperation between education settings & firms, which has not

been sufficiently analyzed. Finally, it is shown that the formula of education-employment links as it has been nominalized by political actors can be interpreted, following Karl Mannheim, as one of the ideological forms of our times given that it accomplishes various functions, ie, social integration & legitimation of the social order.

98S36203 / ISA / 1998 / 13444

Taniguchi, Yoshimitsu (Akita Prefectural Coll Agriculture, Ogata-Mura 010-04 Japan), **One Global Standard of Organic Foods?: Japanese Farmers' Responses to Global Harmonization.**

¶ Examines how Japanese organic farmers are responding to the global standardization of organic foods. Their responses are categorized roughly as (1) adaptation to the emerging standard, (2) ignorance, & (3) presentation of alternative standards. The background of these categories & their foreseeable effects are discussed.

98S36204 / ISA / 1998 / 13445

Tanner, Julian, Cockerill, Rhonda, Barnsley, Jan & Williams, A. Paul (U Toronto, Scarborough Ontario M1C 1A4 (tel/fax: 416-287-7293/7283; e-mail: julian.tanner@utoronto.ca)), **Flight Paths and Revolving Doors: A Case Study of Gender Desegregation in Pharmacy.**

¶ Examines practitioner reactions to gender-based occupational desegregation in pharmacy in terms of processes of integration, ghettoization, & resegregation. Data from licensed pharmacists in Ontario evidence little genuine gender integration or gender resegregation precipitated by collective male discontent. While female practitioners are more positive in their evaluation of their jobs & their profession, there is no indication that current satisfaction or dissatisfaction is a harbinger of male or female flight from pharmacy. Findings are discussed in light of arguments about a job & gender queue in the labor market.

98S36205 / ISA / 1998 / 13446

Tanwani, D. (Dept Architecture B.I.T. Mesra, Dutta Villa Compound Morabadi Ranchi 834008 India (tel/fax: 91-651-204230/220015)), **Role of Jagriti Vihar in the Displacement of Tribals for Coal Mining, K. D. Hesalong Project.**

¶ Coal India Ltd (CIL), one of the largest coal industries in the world, began in 1774 in the Raniganj coalfield. Slowly it expanded westward & by WWII, coal was already being mined in the states of Bengal, Bihar, Orissa, Madhya Pradesh, Andhra Pradesh, & Assam. During the early 1970s, CIL was nationalized & began expanding quickly to meet the demands of power, steel, & other sectors. Open cast mining of coal reserves that are close to the surface has proven to be the most efficient mining method. While relatively inexpensive, open cast mines require large areas of land. Population growth, particularly in India, makes it increasingly difficult for subsidiary coal companies to acquire the land they need for expanding their operations. Earlier, in place of land, CIL offered jobs to migrants. Now, CIL has extra labor. Hence, with the help of World Bank loans, CIL has hired nongovernmental organizations to compensate landowners & others adversely affected by mining projects. Proper resettlement & rehabilitation will encourage the cooperation of migrants & make it possible for CIL to acquire the land it needs. Here, a case study is presented of the K. D. Hesalong open cast project & its resettlement & rehabilitation administered by the nongovernmental organization Jagriti-Vihar McCluskieganj.

98S36206 / ISA / 1998 / 13447

Tapie-Grime, Muriel (CEDACT U Paris-Nord, F-93430 Villeneuve France (tel/fax: 331-49-40-32-27/33-47)), **De l'apprentissage dans les débats publics** (Learning by Experience in the Public Debates). (FRE)

¶ Examines the various forms of learning that participants experienced during the public debates, which are now organized, in France about transport infrastructure projects. Drawing on empirical data obtained via a direct follow-up of public debates & interviews with the main speakers, developments in the discursive thinking of protagonists & changes in the forms of their speeches are highlighted. Following the hypothesis assumed by the participants that the debate is a democratic experiment, an attempt is made to assess to what extent it gives new resources to citizens, associations, the transport department, local governments, & decision-makers. Relying on French research dealing with related subjects, the relevance of the notion of "hybrid forum" for reporting the debates is questioned. Discussed is whether public debate produces exchanges & interaction leading to a common problem-setting of the project.

Taracena, Elvia (Psychology Dept U Nacional Autónoma México, 04510 Mexico DF (tel/fax: 525-379-2581; e-mail: bertarr@servidor.unam.mx)), **La Vie des jeunes de la rue au Mexique. Socialisation différente ou exclusion?** (The Life of Street Youth in Mexico. Different Socialization or Exclusion?). (FRE)

¶ The life of street youth in Mexico was explored via interviews with the youths, street workers, & relatives. Also described are social networks, survival strategies, informal economy, & use of space. Secondary focus is on the social issue of exclusion. Are those young people facing economic & political exclusion as well as desocialization or resocialization?

98S36208 / ISA / 1998 / 13449

Tarr, Zoltán (134 West 93rd St #5B, New York NY 10025 (tel/fax: 212-865-2270; e-mail: budapestar@aol.com)), **Social Discourses in Vienna and Budapest on Ethnicity and Nationalism.**

¶ Ethnic conflicts in the successor states of the Hapsburg Empire dominate the news; the problem of reconciliation of nationalities is serious. Leading intellectuals of the multiethnic Austro-Hungarian Empire either were working toward the preservation of the status quo or opted for the independence of their respective ethnic groups as separate states. Discussed here are the theories of Adolph Fischhoff, Otto Bauer, Georg Lukács, & Oscar Jászi. Fischhoff, a Viennese Jew & a medical doctor turned political scientist, envisioned in 1869 a multinational & -cultural confederation in which several nationalities could coexist & flourish. His design is contrasted with that of Bauer, chief theorist of nationalities of Austro-Marxism. Lukács was not famous for his interest in the problem of nationalism, but when a Hungarian sociological journal organized a discussion on nationalism led by Jászi, Lukács wrote a still untranslated essay, "Contribution to the Debate on the Question of Nationalities" (1918), a Hegelian-Weberian attempt at a philosophical analysis of the problem. The contemporary relevance of the four theories is assessed.

98S36209 / ISA / 1998 / 13450

Taschner, Gisela Black (Faculdade Arquitetura & Urbanismo U São Paulo, 05508-900 SP Brazil (tel/fax: 55-11-8814935; e-mail: gtaschner@easpe.fgvsp.br)), **Leisure and Consumption: The Pursuit of Happiness?**

¶ Traditional studies have shown that there are some "grey zones" where leisure & work activities mingle (eg, activities involving family life), thus disclosing other dimensions of leisure: a pleasant way of experiencing activities. In more recent approaches, however, where the focus is consumption & no longer production, the emphasis has shifted; It is the "pleasurification" of consuming—the dimension of leisure present in consumption—that becomes salient. The type of contributions brought by this latter perspective are described.

98S36210 / ISA / 1998 / 13451

Taschner, Suzana Pasternak (Faculdade Arquitetura & Urbanismo U São Paulo, 05508-900 SP Brazil (fax: 55-11-815-6661; e-mail: suzana@informatel.com.br)), **Portuguese title not provided** (Recent Trends in Brazilian Squatter's Policy). (POR)

¶ The growth rate of Brazilian squatter homes has increased in proportion to population growth in the 1980s. Of squatter homes, 54% were located in São Paulo & Rio de Janeiro. The importance of intervention in such cities is obvious. At the moment, these municipalities are developing different programs to upgrade squatter settlements. In São Paulo, emphasis has been on the "Projeto Cingapura," which consists of building verticalized units in the invaded places. These apartments are sold to the squatters, highly subsidized. There is no popular participation, neither regarding the definition of the architectural & urbanistic project nor in the management & construction, provided by the private sector. However, in Rio de Janeiro, the present policy has favored the comprehensive upgrading approach, where the goal is to integrate the favela in the neighborhood & to avoid undermining the built stock & counting on popular participation.

98S36211 / ISA / 1998 / 13452

Taschner, Suzana Pasternak & Rabinovich, Elaine Pedreira (Faculdade Arquitetura & Urbanismo U São Paulo, 05508-900 SP Brazil (fax: 55-11-815-6661; e-mail: suzana@informatel.com.br)), **Urban Nomads.**

¶ Uses photographic documentation & oral history to investigate homeless "handcart dwellers" in São Paulo, Brazil, who live on their handcarts, describing them as urban nomads & medieval traders. For them, the traditional separation between workplace & home—a product of the

industrial revolution—disappears, but not in the same way it happened to Virilio's modern sedentary worker, who can be at home almost anywhere by virtue of technology; handcart dwellers are not home anywhere. Focus is on the notion of space & time for handcart dwellers, their ways of occupying the city, & their spatial arrangements.

98S36212 / ISA / 1998 / 13453

Tasheva, Gallina (Institut Sociologie U Bielefeld, D-33615 Federal Republic Germany [tel/fax: 521-10-02-73/106-2988; e-mail: gallina.tasheva@post.uni-bielefeld.de]), **The Response that the "I" Is.**
 ¶ Beyond the classical idea of subjectivity where the subject is subjectum, substantia, & substratum (hypokeimon) constituted, posited in & for itself as an absolute origin, an autonomy of the ego, presence to self of consciousness, & free identity & will, & in counterpoint to the subject's postmodern dismissal, an attempt is made to restore & rewrite the idea of the subject based on nonclassical motifs of responsibility & singularity. To solve the problems of subjectivity on the level of the modern rationality leads to relativizing the self, the Other, & the world. Through reinterpretation of theories of G. H. Mead, M. Merleau-Ponty, & E. Levinas from a phenomenological point of view, new horizons for reinscribing the subject in social theory become possible, not simply as a "decentered subject" that has never been an author, but as a subject, being interpolated by the Other; as noncoincidence with itself in dividing itself for meeting the Other in responding to demands or requests; as a subject—responsive before the question, act, & process are gone, & responsible subjected before the law. A discourse thus restricted can try to situate the subject in a discourse, responsive in itself, which answers to the most pressing concerns of modern societies: crime, genetic engineering, euthanasia, reproductive sciences, & organ transplantation.

98S36213 / ISA / 1998 / 13454

Tastsoglou, Evangelia & Noivo, Edite (Dépt Sociologie U Montréal, Quebec H3C 3J7 [tel/fax: 514-343-7120/5722; e-mail: noivo@ere.umontreal.ca]), **Racialized Womanhood and the Politics of Mating: A Theoretical Reappraisal with Reference to Black Canadian Women.**
 ¶ Deconstructs the sexual politics of racism by examining how current constructions of black Canadian womanhood & the "black male shortage" restrain the dating & marital choices of racialized, heterosexual women. Understanding interracial discrimination in mate selection requires an integrated theoretical framework linking the politics of racial/ethnic identity with colorism, class discrimination, & sexism. Critiques of gender bias in perspectives of cultural racism, essentialist conceptions of "women" portrayed by white feminism, & mainstream classless analyses of "women of color" are incorporated. A conceptual framework that explains black Canadian women's social location in the marriage market requires contextualizing black feminist theorizing—highly based on Afro-American women—to the Canadian case. Based on available literature, discussed are the concerns of lower-class black women to establish racial endogamy, the effects of sexual racism on relationships between women, & issues of social & ethnic reproduction confronting black Canadian women today. Further, how the so-called "marital squeeze" impacts these women's (inter)personal politics & their racial/ethnic consciousness & leads many to alter their physical &/or cultural traits are considered.

98S36214 / ISA / 1998 / 13455

Tavares dos Santos, José Vicente (Dept Sociologia U Federal Rio Grande do Sul, 90046-900 Porto Alegre RS Brazil [tel/fax: 051-316-6890/319-1400; e-mail: jvicente@portoweb.com.br]), **Rural and Urban Violence in Brazil: Social Patterns of a Peripheral Democracy in South America.**
 ¶ Presents a sociological analysis of rural & urban violence as a social process in contemporary Brazilian society, drawing on cartographical, crime rate, & other data from Porto Alegre & rural areas of southern & western Brazil. Reviewed concepts are social processes, reproduction & transformation, & the notion of social relations & social agents. Considered are social status, gender, ethnicity, class differences, professional categories, & social groups. Also considered is that they are organized into social forces & are involved in social struggles for conservation & social order transformation. The violence in social relations between ruling classes & dominated people in the agrarian space expresses a power technology whose political rationality consists of the submission of the rural population to guarantee broad reproduction of the relations of domination & of the exploration of the agrarian social space. The spread of urban violence, on the contrary, means a socially fragmented space

where different social norms & opposite views of sociability can be found to represent plural conceptions of social relationships.

Tavassoli-Gholam, Abbas (Dept Sociology U Tehran, 14174 Iran [tel/fax: 98-21-2232055/8012524]), **Beyond Orientalism and Occidentalism. Iranian Scholars' and Social Scientists' Point of Views.**
 ¶ "Alternatives discourses" in the social sciences has a long history. If the endless battle between Marxism & positivism in Western tradition is renounced, alternatives such as universalism/particularism, globalism/regionalism, institutionalism/individualism, & internationalism/nationalism may be considered. Asian & Islamic societies are witnesses of other concepts, eg, decolonization of social sciences, Islamization of knowledge, indigenization, etc. Several thinkers have struggled with the idea of an indigenous sociology reflecting Iranian sociocultural values, norms, & worldview. Islamization of knowledge may be considered a postrevolution concept in Iran put forward by fundamentalists who wanted to encourage the application of moral rather than social criteria for evaluating various social phenomena. Here, the theoretical framework on the state of the social sciences in Iran is examined, along with argumentation on alternative social sciences.

Tavera, Ligia (Facultad Latinoamericana ciencias sociales, Camino al Ajusco #377 Col Heroes de Padierna 10740 Mexico DF [tel/fax: 525-6317016/6316609; e-mail: ligia@flacso.flacso.edu.mx]), **Social Movements and Civil Society: Rebirth or Embeddedness?**
 ¶ Critically evaluates the consequences of the state-civil society opposition for the study of Latin American social movements. It is argued that such an oppositional framework has led to a one-sided & romanticized vision, in which movements appear as autonomous, spontaneous, & democratizing events that signal the rebirth of civil society. Based on the case study of the 1985 earthquake victim's movement in Mexico City, examined is the process by which social movements can contribute to the expansion of the civil sphere, seeking to uncover mechanisms by which movements can reshape civil society. It is contended that, if social movements are framed by the media in a way that challenges the symbolic code of civil society (Alexander, 1992) on which citizenship or membership in the community is awarded, social movements can contribute to the reconstruction of civil society.

98S36217 / ISA / 1998 / 13458

Taylor, Charles (McGill U, Montreal Quebec H3A 2T5), **Social Change and Collective Action within Late Modernity.**
 ¶ Describes challenges to democratic polities in the coming decades. Democracy is a form of government that requires a high degree of mutual trust, & therefore cannot do without relatively strong solidarity between compatriots. However, the need for trust & solidarity can generate certain reactions of exclusion, where diversity is read as a threat. Since most modern societies are diversifying, these reactions may become stronger & more prevalent. This danger can only be met by innovation in how democratic societies are conceived. The increased penetration of global markets can call forth very different responses from societies: (1) those who welcome this development & can successfully become part of an international economy & society, linking the prosperous classes in great cities; & (2) those who lose—often catastrophically—income, status, & security. The bonds of solidarity may snap, with terrible consequences for democracy, & an adequate response to this challenge has not been determined. In Western societies, there has been a spread of the ethic of authenticity, a search for self-fulfillment, which can call into question earlier forms of belonging, including membership in the democratic polity. Here again, innovation is needed in conceptions of society.

Teicher, Julian & Svensen, Stuart (National Key Centre Industrial Relations Monash U, Melbourne 3000 Australia [tel/fax: 61-3-9903-8700/8710; e-mail: Julian.Teicher@BusEco.monash.edu.au]), **Privatisation, Convergence and Competition Policy in Australia.**
 ¶ Australia has a federal system comprising a central federal government & eight state/territory governments that have each pursued distinctive policies toward state restructuring. As such, the objective, content, & consequences of privatization programs have been divergent. The liberal government of Victoria has pursued an active privatization agenda from its election in 1992. It has sold the state's electricity industry & is proceeding with the sale of the gas & public transport systems. In New South Wales, the premier & treasurer of the Labour-governed state are,

despite the opposition of unions & their own party conference, continuing to seek support for a plan to privatize the state's electricity industry. This apparent convergence in privatization policies between the two major political groupings in Australia, & the role of the 1995 National Competition Policy agreement between the federal labor government & the states & territories in producing this convergence, is analyzed.

98S36219 / ISA / 1998 / 13460

Teixeira, Ana (U Alberta, P-1250 Lisbon Portugal (tel/fax: 351-1-3972334; e-mail: cemri@univ-ab.pt)), **Immigrant Entrepreneurship and Business Innovation: A Case Study of Chinese Entrepreneurs in Portugal.**

¶ Presents the findings of 1995 empirical research on the business strategies & performances employed by Chinese entrepreneurs in Portugal. Immigrant entrepreneurs are approached as active social agents developing their own creative strategies & performances inside the host society, thus offering positive contributions to the host economy. Qualitative data concerning the business strategies were gathered through in-depth interviews with the entrepreneurs & other qualified social informants, while data relating to the geographic & sectoral distribution of the firms were based on documentary sources. The identified strategies of business implantation comprise geographic diversification, sectoral diversification, & the firms' resources to go international due to the networks based on the migratory flows. Three key ideas are emphasized: (1) A double propensity for risk & social innovation is carried by migrant entrepreneurs, because they are involved in two highly risk-oriented social processes: migration & the entry into an independent business activity. (2) Migratory processes allow the convergence of different business cultures in a given geographic market. (3) Cohabitation of different business strategies constitutes a drive & source for business innovation in the host market.

98S36220 / ISA / 1998 / 13461

Teixeira, Joao Gabriel (U Brasilia, 70910-900 DF Brazil), **National Identity in Brazilian Popular Music.**

¶ Explores academic artistic issues involved in the process of preparation of a musical performance about the ethics of the *malandragem* (a Brazilian version of flaneurism) as conveyed by the lyrics of the sambas that constitute the core of the so-called "treasure of Brazilian nationhood" that is its popular music. Analysis is concentrated on the words of 13 of these songs from the 1930s-1950s (the so-called "golden times" of Brazilian popular music) as expressions of Brazilian social thought, showing how these issues are related to the ongoing discussion regarding the development of a sense of cultural/national identity. It is also shown how the musical material utilized in the performance expanded this discussion by illuminating the masculine imaginary regarding the work ethic & gender relations as expressed in the songs. It is demonstrated how that value system still prevails, although recent changes in the economic & religious field might configure new trends & situations.

98S36221 / ISA / 1998 / 13462

Tejerina, Benjamin (Dept Sociology U Basque Country, E-48080 Bilbao Spain (tel/fax: 34-4-464-77-00/82-99; e-mail: cjpemob@lg.ej.es)), **Power of Symbols and Symbols of Power. The Case of Basque Ethno-Linguistic Movement.**

¶ The aim is to reconstruct the process of definition & redefinition of collective Basque identity over recent decades & the central role played by the movement for linguistic recuperation. When sociologists ask social actors about the distinctive features of collective Basque identity, the all-but unanimous reply is that the language (Euskara) is the differentiating element of said identity. Paradoxically, this language is understood & used by only one in four Basques, while all are able to communicate in Castilian (Spanish). How, then, has this distancing between the definition on which the actors base their reality & the linguistic reality of the Basque Country come about? The theoretical argument defended here is that a language may adopt roles other than the purely linguistic. Language can become, in certain circumstances, the symbol that differentiates one society from another, thus separating its linguistic connotations from its communicative role to become the object of social evaluations & role modeling. When, then, did this process begin, & what has its historical evolution been? The relationship between language (evolution) & collective Basque nationalism (definitions) is explored from the points of view of both Basque nationalist sectors & one of the most active agents in the recuperation of the language: the ethno-linguistic movement. This process has passed through at least four stages: (1) Francisco Franco's repression, (2) a stage of development & effervescence, (3) radicalization & conflict, & (4) progressive institutionalization.

98S36222 / ISA / 1998 / 13463

Temkina, Anna (Kamenostrovsky 1115, Saint Petersburg 197198 Russia (tel: 812-237-09-05; e-mail: anna@gallup.spb.su)), **Scripts of Women's Political Participation in Post-Soviet Transition.**

¶ Examines scripts of women's political participation in the post-Soviet transition, drawing on biographical interviews with women candidates to the City Assembly in St. Petersburg, Russia, & participants of the women's movement. The concept of script is applied to the analysis of the social construction of women's political biographies, which both reflect & produce gender culture. Aggregated personal scripts express (gender) cultural scripts (instructions embedded in the cultural narratives). Two ways were distinguished in the political participation: professional & political. The latter includes a nongendered political way & a political career in the women's movement. Three political scripts are described to analyze how & which gender ideas became significant for political biographies: (1) political women of the perestroika period; (2) activist of the political women's movement; & (3) feminist.

Tenga, Titus (Norwegian U Sport & Physical Education, N-0806 Oslo (e-mail: Titust@brage.idrettshs.no)), **Olympic Games and Tanzania's Ideology of 'Ujamaa': Interplay between the Global and the Local Culture.**

¶ Explores the interplay between Tanzania's ideology of "Ujamaa" & the Olympic Games, & uses Taylor's three-tier structural model—"a national scale of ideology, a local scale of experience, & a global scale of reality" (1993)—in an attempt to confirm or refute the argument that this ideology limits the development of Olympic sport in Tanzania. Ujamaa ideology advocates the development of Tanzanian society, & Africa in general, on the basis of the traditional patterns of African social life. According to Nyerere (1968), the main architect of the Ujamaa ideology & the first President of Tanzania, the ideas & values of this ideology come from the traditional Tanzanian society & are inspired by the prevailing societal realities at the time of the country's independence. At the same time, it is fair to suggest that the development of Olympic ideals in Tanzania started in 1968, when the country officially joined the Olympic movement, & such ideals are being constantly perpetuated in the society through Tanzania's participation in the Olympic Games.

98S36224 / ISA / 1998 / 13465

Teodoro, Antonio (U Lusofona Humanidades & Tecnologias, P-1700 Lisbon Portugal (tel/fax: 351-1-7510160/1006; e-mail: anteo@mail.telepac.pt)), **The Construction of Mass Schooling in the European Semiperiphery: The Case of Portugal.**

¶ Yasemin N. Soysal & David Strang (1989 (see abstract 90V2310)) appoint the Portuguese process of mass schooling as a rhetorical construction of education, because conflict & competition over education were absent, causing a gap between political discourse & slow enrollment expansion. This path to the construction of mass schooling has resulted in both a generous precocity in laws & a long delay in allotting necessary resources to increase education. This rhetorical characteristic is confirmed, drawing on empirical data from a continuous sequence of state educational expenses, with reference to gross domestic product, 1851-1994. Analysis indicates that Portugal presents a chronic underinvestment in state expenses for education. The construction of modernity in Portugal shows a constant subaltern condition of the state educational investment with reference to traditional policies of public works encouragement, even during major economic growth. It is argued that Portugal's semiperipheral condition began in the 16th-/17th-century transition & consolidated during the 17th & 18th centuries & was the reason why the state has been almost the sole agent of schooling since the Pombal reforms (1759-1772), without significant pressure from autonomous social organizations to increase school expansion or create alternative schools. Secure borders & an economy removed from the competitive central & colonial states resulted in the state's disinterest in increasing productivity through education & training.

Teratani, Hiromi (Aoyama Gakuin U, Shibuyaku Tokyo Japan 150 (tel/fax: 42363-6947; e-mail: teratani@busi.aoyama.ac.jp)), **Corruption and Mafia in Japan and Russia.**

¶ Corruption has emerged as a major problem in Japan & Russia. In Japan, corrupt politicians, government officials & business executives have strong ties with members of criminal organization, called *Yakuzas*. There are 2,400 crime syndicates in Japan. Many *Yakuzas* have diversified into *Sokaiya* (corporate extortionists) & strengthened their finan-

cial activities, eg, money laundering & loan sharking. In Russia, after the collapse of the USSR, which revealed extensive corruption, the transition from communism to capitalism provided opportunities for more corruption, putting privatized business in contact with mafias. There are 7,000+ syndicates in Russia, ranging from the traditional Blatnoi to modern gangsters from many foreign countries. Their economic activities amount to 40+% of the gross domestic product, in comparison with 6%-7% in Japan. Similarities & differences between Japanese *Yakuzas* & Russian mafias in the social context of both countries are discussed.

98S36226 / ISA / 1998 / 13467

Terborg, Roland (CELE U Nacional Autónoma México, 04510 Mexico DF [tel/fax: 52-5-622-06-80/550-30-08; e-mail: rterborg@servidor.unam.mx]), **Languages in Contact, Languages Shift and Speakers' Disadvantage.**

¶ Languages in contact generally cause dramatic changes for speakers of at least one language. Some groups have more power than others, which is a disadvantage. In some situations, the more powerful linguistic group will make excessive use of that power. Many minorities are still fighting for the rights that the Gaelic speakers in Ireland, eg, enjoy. But as far as their "linguistic human rights" are concerned (Phillipson, Rannut, & Skutnabb-Kangas, 1995), Gaelic speakers do not enjoy the same rights as the more powerful English-speaking population. Examples of this disadvantage from the Mayan area of eastern Yucatán, Mexico, illustrates that power is related to pressure that emerges with the interest in communicating with the powerful group.

Terpstra, Michael G. (Terpstra Professional Services, 13291 SE Oatfield Milwaukee OR 97222 [tel/fax: 503-786-1632/2021; e-mail: mgterpstra@cryogen.com]), **The Illusion of Theoretical Purity.**

¶ Sociocybernetics is a field slowly emerging into its own. The challenge is to set the stage for critical analysis & theoretical advancement. Occasionally theorists appropriate selected segments of existing theories, which are then tailored to fit into a proposed theory. When this happens, the appropriated segments are no longer consistent with the original theory from which they were excised. Tinkering with a parent theory in this fashion has been termed creative misreadings (How, A., 1985). Two questions are addressed: How closely does the model adhere to the letter of the theory? How far can the model deviate from the theory? Creative misreading might also uncover contradictory elements in the borrower's own work. According to How, creative misreadings distort the reality of ideas in a particular way for the specific purpose of furthering one's own project. Changes occur through the perception of the difference between the theory one reads & any model deemed appropriate; ie, the degree of integrity depends on the difference between the theory & the model developed for application. Recognizing the tendency to creatively misread is a step toward bridging the gap between theory & practical application.

98S36228 / ISA / 1998 / 13469

Terrett, Thierry (U Claude Bernard Lyon I, F-69622 Villeurbanne Cedex France [tel/fax: 33-4-72-43-10-92/44-80-27; e-mail: terrett@univ-lyon1.fr]), **French Rugby and Masculinity at the Beginning of the Century.**

¶ Considers the relationships between different models of masculinity in French society at the beginning of the 20th century, the models of rugby play preferred by men, & how the choices of such models participated in the making of masculinities. The diversity of definitions of "man" given by men, & the contrasts between the rugby played by students, educators, countrymen, or urbanites from the southwest of France are examined. Results show that rugby players tried to assert the signs of their existence through an opposition: to parents for the bourgeois youth coming from the Parisian & Bordelaise high schools; to Parisians for provincials; to foreigners for French people; to clericals for republicans; to sportsmen for educators, etc. The quality of a "man" was more a function of resistance than virility at a time when the integrity of the various groups was challenged—there were crises for the Church, the "race," & masculinity for the bourgeoisie at the end of the 19th century, & for the rural world, a bit later. The assertion of masculine identity then joined regionalist & nationalist identities.

98S36229 / ISA / 1998 / 13470

Tezanos Tortajada, Jose Felix (U Nacional Educacion Distancia, E-28040 Madrid Spain [tel/fax: 91-398-7039/7653; e-mail: jtezanos@sr.uned.es]), **Tendencias en desigualdad y estratificación social en las sociedades tecnológicas avanzadas: hacia un nuevo**

paradigma de la estratificación social (Trends of Inequality and Social Stratification in Technologically Advanced Societies: Toward a New Paradigm of Social Stratification). (SPA)

¶ Analyses of 1995-1997 data gathered in three extensive sociological surveys & five Delphi studies at U Nacional Educacion Distancia (Spain) showed the weaknesses & difficulties of interpreting the current dynamics of social stratification from traditional theoretical concepts & schemes. Here, the emergence of new systems of social stratification is studied in relation to the development of new models of social relationships arising from the socioeconomic changes influenced by the technological revolution, from which new images & collective representations are emerging. Emphasized is the new phenomenon of social exclusion connected to structural unemployment, as well as new public perceptions on existing inequality & expert opinions & predictions for the future.

98S36230 / ISA / 1998 / 13471

Thanizholi, Percival (M. S. Swaminathan Research Foundation Taramani Institutional Area, Madras 600113 India [tel/fax: 91-44-235-1698/1229]), **Indigenous Groups, Private Prawn Farms and Mangrove Ecosystem.**

¶ Discusses the Irula (an indigenous group in the Pichavaram mangrove wetlands at the northern end of the Cauvery delta in India), the mangrove ecosystem (on which they rely for subsistence), & two new private prawn farms (which are polluting the ground water & disturbing the ecosystem & the Irula peoples' way of life). As a part of the "Wetlands: Conservation & Management" project with participatory approach in the Pichavaram mangroves, the M. S. Swaminathan Research Foundation (Madras, India) is acting as a facilitator to develop partnership between the state forest department & the dependent communities, including the Irular community. To strengthen the Irulas' livelihood security, the microplan PRA was conducted, & the following problems were identified through the resource mapping method specific to ground water pollution: (1) The villagers are forced to abandon the ring & tube wells located in the settlement & spend 2-3 hours a day transporting drinking water from neighboring settlements. (2) Hundreds of Palmyra trees in the area are gradually dying due to the increase of ground water salinity. These trees are the major source of fuel wood for these people, reducing the pressure on the mangroves for fuel wood. (3) The land available close to their homes is no longer suitable for vegetable gardening. The microplan, which follows the PRA, discusses opportunities & solutions to the problem.

Theodoraki, Eleni (Dept Physical Education Loughborough U Technology, Leicester LE11 3TU England [tel/fax: 44-1509-22-8456/3971; e-mail: E.Theodoraki@lboro.ac.uk]), **Researching the Making of the British Academy of Sport: Strategic Decisions and Government Policies.**

¶ An analysis of sports policy- & decision-making processes in contemporary GB, with particular emphasis on the making of the British Academy of Sport, which the availability of lottery funding has enabled. Since the prime minister's announcement in summer 1995 of the "Sport: Raising the Game" program—which is meant to introduce a "seachange" in the prospects of British Sport—numerous decision- & policy-making processes have been evidenced. Case study, interview, & secondary data (newspaper articles) are analyzed to explore (1) the political context of the policy statements; (2) the government's decision- & policy-making mechanisms; & (3) the strategic responses of groups of organizations in bidding for the establishment of the British Academy of Sport. Organization theory (Clegg et al, 1996) & government policy making (Levin, 1997) frameworks are employed to operationalize, analyze, & interpret the above. Findings are discussed against the assumption that policies, measures, & decisions related to the making of the British Academy of Sport can be viewed respectively as the product of a rationale, a selective response to interests, the outcome of a process, or a reflection of the power structure.

98S36232 / ISA / 1998 / 13473

Thériault, Barbara (Max-Weber-Kolleg U Erfurt, D-99084 Federal Republic Germany [e-mail: BTheria205@aol.com]), **Religious Values, Secular Environment.**

¶ The Federal Republic of Germany, with the annexation of some old Prussian territories, is not only more Protestant, but also more secular. Indeed, the Democratic Republic was characterized, at the institutional level, by hostile policies toward religious organizations, as well as by the highest nonconfessional population in Europe. German reunification has

had major repercussions on churches & their charitable welfare associations in the East. The extension of the basic law to the new *Länder* ensured participation of organized interests—above all, the two dominant Christian churches—to policy making & public service provisions, most notably in the field of social policy. Other law provisions reiterated—or indeed strengthened—the position of those organized interests; some of the constitutions of the new *Länder* even make explicit reference to churches & their welfare organizations. Given this situation, an attempt is made to determine how the churches & their affiliated organizations ensured, after unification, their legal rights & privileged position, & to evaluate their actual institutional presence in the new *Länder*.

98S36233 / ISA / 1998 / 13474

Theriault, J.-Yvon (U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5800/5109; e-mail: jtheriau@uottawa.ca)), **Citoyenneté et culture politique: Canada, Québec** (Citizenship and Political Culture: Canada, Québec). (FRE)

¶ A new conception of citizenship was born with the insertion of a charter of rights & liberties into the Canadian Constitution in 1982. This new citizenship broke with traditional Canadian cultural politics & led—across various processes of judicialization, individualization, & fragmentation—to the Americanization of Canadian political life. How Québec was saved from this influence is examined, noting that it may have caused a greater rift between Québec & English-speaking Canada. An investigation of the tension between the individualist (universalist) pole & the social (particularist) pole of modern democracy reveals that, far from becoming more distant, the Canadian & Québécois political cultures simply respond differently to the same imperatives of hypermodernity.

98S36234 / ISA / 1998 / 13475

Thiers, Paul (U Oregon, Eugene 97403), **From Non-Governmental Movement to State Coordinated Market Strategy: The Transformation of Organic Agriculture in China**.

¶ Examines the emergence of state-sponsored organic marketing & certification programs in the People's Republic of China as an extreme case of international market orientation & developmental state intervention in organic agriculture. It is found that the predominance of state & market instead of community & ecology in the Chinese organic movement has profound implications for the ability of organics to promote environmentally sustainable agriculture in less-developed nations. Direct state intervention may overcome some of the public goods & collective action problems often associated with organic agriculture. However, conflicts of interest between the state as regulator & producer may erode the consumer trust on which organic markets rely. Strong state coordination may also forestall farmer innovation & community empowerment, frequently cited components of a sustainable agricultural system. The case of organic agriculture in China points out the need for caution when applying universalist economic theories about environmental problems to diverse political economies. This has important implications for international environmental regimes as well as the globalization of ecoconsumerism or ecolabeling strategies.

98S36235 / ISA / 1998 / 13476

Thiesse, Anne-Marie (CSA-EHESS, 105 blvd Raspail F-75006 Paris France), **Écriture sociologique et littéraire** (Sociological Writing and Literature). (FRE)

¶ To affirm their scientific identity, the founding fathers of sociology developed a specific style of writing based on asceticism, the rejection of aesthetic seduction, & the overshadowing of subjectivity. Today's anthropologists & sociologists, however, are straying from this style of writing because scientific rhetoric seems improper for expressing their methods of research, since the linear discourse of sociological writing forbids both dialogism & autodialogism. Various trends in modern sociological writing are discussed, including the revalorization of literary writing as a possible model & the denunciation of efforts of self-censure. It is premature to speak of a paradigm shift in sociological writing, since a literary style is not yet accepted as normal, but steps toward structural change are identified. The mastering of the canonical style of sociological writing is an indication of membership, but no longer a mark of distinction.

98S36236 / ISA / 1998 / 13477

Thoemmes, Jens & De Terssac, Gilbert (CERTOP-CNRS, F-31058 Toulouse France (tel/fax: 05-61-50-36-50/69-93; e-mail: thoemmes@cict.fr)), **The Exchange between Work-Time and Employ-**

ment: Process of Solidarity or Time of Subsistence?

¶ Investigates two perspectives on work time: the first considers that work time is only one component of the social temporalities of everyday life; the second position considers work time as a social construction combining references, practice, & legal norms. The evolution of the nature & the way in which work time norms are socially constructed is explored, drawing on empirical data from France, the US, the Federal Republic of Germany, & Russia. Results indicate that the idea of time as a unique, homogeneous, & stable reference cannot be maintained. Specific agreements on work time are analyzed, & the concept of a "time of subsistence" is described.

98S36237 / ISA / 1998 / 13478

Tholen, Jochen (Dept Knowledge Transfer U Bremen, D-28334 Federal Republic Germany (tel/fax: 49-0-421-2183286/2183680; e-mail: jtholen@uni-bremen.de)), **Impacts of Modernisation and Global Competition: Industrial Relations in European Core Countries (France, Germany, United Kingdom and Italy) between Europeanization and Decentralization**.

¶ In the context of the (re)discovery of human resource management in Europe, industrial actors (management & staff) & their relations with each other play an increasingly important role in international competition. The process of European integration, which should lead to an improved position in the international competition for markets, will bring different national laws on labor & industrial relations into line. At the same time, a process of decentralization will be triggered by technical changes & changes in the organization of labor (lean production, teamwork), which will dissolve individual & nationally characterized labor & industrial relations in Europe from below. This bipolar development is the general framework in which the development process of company laws in the core states of the European Union (France, Federal Republic of Germany, the UK, & Italy) is embedded. The principal point of reference is the process of political, economic, & social integration in the European Union & its implementation in companies. This all takes place in the context of globalization processes & international competition, especially between Europe, the US, & Southeast Asia (the so-called Triade).

98S36238 / ISA / 1998 / 13479

Thomas, Bamat (Comissao Pastoral Terra Centro Sao Bento, Avenida Gen Osorio S/A Centro Jodo Pessoa Brazil (tel/fax: 55-83-221-6115)), **Life in the Agrarian Reform Settlements of Paraíba, Brazil**.

¶ In one of Brazil's poorest states, Paraíba, land reform has been occurring at a swifter pace than in most others. What has been unclear is just what kind of life the formerly landless settlers have been able to eke out, & how they perceive life on the land they've won. Furthermore, many observers have wondered why women seem so prominent in the struggles to win title to the land, but so invisible once the settlements (*assentamentos*) are established. Results are presented here of a unique multidisciplinary study carried out in 12 of Paraíba's *assentamentos* during 1997. Despite finding a median monthly family income that is still under \$300 US, adult illiteracy rates of 56%, & an infant mortality rate of 82 per 1,000 live births, the research revealed considerable satisfaction among the vast majority of the settlers; substantial degrees of group unity; optimism vis-à-vis the future; an intriguing collection of personal & collective "dreams," & signs that—despite the power of tradition—a new day may be dawning in rural gender relations. Emerging local initiatives & possible avenues for public policy, support by nongovernmental organizations, & action by settlers themselves that could improve their quality of life & strengthen what has been a very slow & piecemeal process of change are discussed.

Thomese, Fleur (Vrije U Amsterdam, NL-1081 HV Netherlands (tel: 31-0-20-444-6810; e-mail: gcf.thomese@scw.vu.nl)), **Neighborhood Networks of Older Adults and Social Support: Does Urbanization Matter?**

¶ Examines differences between urban & rural elderly in size & supportiveness of their neighboring networks. Data are drawn from a survey of 2,900 independently living people, ages 55-89, in the Netherlands to test three hypotheses: (1) Neighborhood networks in rural neighborhoods are larger than in urban neighborhoods. (2) Exchanges of instrumental support in larger neighborhood networks are more supportive & less balanced than in smaller ones. (3) The effect of larger neighborhood networks is strongest in rural areas, compared to urban areas, where more alternative sources of support exchange are available. Controlling for

background characteristics, results of hierarchical linear regression analyses support the first hypothesis, with the addition that older city dwellers have relatively more network members living in an hour's distance. The second hypothesis is rejected; it is found that network members tend to give less instrumental support when the network is larger, probably in accordance with the older person's need for support. The third hypothesis gets some support in finding that, for older people living in rural areas, exchanges are less balanced in larger neighborhood networks. This effect is not found in urban areas. The availability of professional resources might partly account for this. Even in a rather uniformly dense, populated, high-standard welfare state like the Netherlands, differences between city & countryside thus appear to remain a source of differentiation or even stratification, through the distribution of formal & informal resources.

Thompson, Paul (Dept Sociology U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel/fax: 1865-510-840/132)), **The Pyrrhic Victory of Gentlemenly Capitalism: The Financial Elite of the City of London 1945-1995.**

¶ The recovery of the City of London (England) after 1945, which reached its climax with "Big Bang" deregularization & the boom of the late 1980s, has been widely hailed as a major British economic success, contrasting sharply with the failure of the British manufacturing industry to compete successfully in the international market. In retrospect, however, the boom seems an evanescent bubble. The city's recovery was always partial, & the recent problems of Lloyd's & the Stock Exchange, together with the humiliation of its two vanguard merchant banks, Barings & Warburs, has shown how insecurely founded it was. Based on life-story interviews with 100+ leading city financiers, the social roots of the city's post-1945 economic performance are examined. The recovery effort was led by a narrowly recruited & ill-trained financial elite, whose values, shaped by schoolboy masculinity & ideals of gentlemanly capitalism, inhibited until too late the growth of British professional, multipurpose, global, financial institutions.

Thompson, Paul (Dept Sociology U Essex, Wivenhoe Park Colchester CO4 3SQ England (tel/fax: 1865-510-840/132)), **How Former Stepchildren Reflect on Their Pasts and Futures.**

¶ The growth of stepfamilies has been one of the most dramatic changes in both British & US family life in recent decades. In GB, the rate of remarriage has quadrupled in the last 20 years. In the past, stepfamilies due to remarriage after death were common, & widely referred to in personal documents & literature—above all in the myth of the "wicked stepmother." But in the first half of the 20th century, as parental death became unusual, stepfamilies became unfamiliar rarities. The influence of an idealized nuclear family as the standard for evaluating all family experience was never stronger than in the years immediately preceding the present dramatic return of the stepfamily. The rapid recent growth in divorce & remarriage has thus exposed millions of adults & children to life situations surprisingly little understood. Further, research has been sparse & either statistical or based on unrepresentative samples. To remedy this, a project was undertaken to explore differences between successful & unsuccessful stepfamilies through in-depth life story interviews with 50 former stepchildren in GB, all born in 1958, chosen from a national sample followed from birth via structured interviews by the National Child Development Study. This was the first time they had been interviewed in depth, & the information they provided is full & often powerfully moving. Focus is on the striking differences in how these former stepchildren remember their childhoods & use or ignore earlier experience constructively in thinking of their present life goals.

Thompson, Shona M. (U Auckland, 1 New Zealand (tel/fax: 64-9-373-7599/7043; e-mail: sm.thompson@auckland.ac.nz)), **Sport: Something to Laugh About.**

¶ Draws on interview data from wives & mothers of tennis players in Australia to examine the role of their laughter in discussions of the demands their lives place on them. The presence of laughter in the interviews has theoretical importance in understanding the processes of rationalization & agency when women negotiate their lives in the context of androcentric & exploitative sporting practices. They used laughter as a means of acknowledging the tensions & contradictions that were part of their experiences of providing demanding & marginalized labor to service their family members' sporting practices. The shifts they made between being defined by the expectations of motherhood & wifehood & resisting those definitions were frequently contextualized by laughter. Hence, laughter can be viewed as an acknowledgement of the line of tension that defined the process of "having agency"; the line at which they understood this tension & either accepted the situation or brought about some transformation. There were several ways in which the women used laughter, ie, signifying levels of consciousness or mechanisms for coping or dissipating unease. The aspects of sporting culture & familial relationships that were problematic to these women & how they could be both poignant & very funny are highlighted.

Thomson, Kate (Centre Russian & East European Studies U Birmingham, B15 2TT England (tel/fax: 121-414-6346/3423; e-mail: kate_thomson@mailexcite.com)), **Russia: Public, Voluntary Sector and Community Responses to Disability.**

¶ Analyzes the respective roles & changing interrelationships between the state, voluntary sector, & community (chiefly family caregivers) with respect to services in the area of learning disabilities in the Russian post-communist welfare system, drawing on 1998 interview data & organizational materials collected in one administrative region. While state resources to maintain old services are desperately scarce in the country, innovative welfare measures are being successfully introduced in some regions. This is facilitated not only by relatively progressive (though often unimplemented) central policies, but also by key figures in local government, & the developing interaction between the state & the relatively young voluntary sector, acting as advisor & advocate in policy & service developments. The voluntary sector's direct role in welfare provision is also of increasing importance, with the gradual development of alternative services to fill gaps left by the state system. Many of these initiatives are based at the community level, eg, those emerging from self-help & support groups. The community role in providing welfare is also increasingly recognized by the state sector, through the redirection of services toward family support & individual development.

Thorne, Barrie, Orellana, Marjorie F., Chee, Anna-Eunhee & Lam, Wan Shun Eva (Dept Sociology U California, Berkeley 94720 (tel/fax: 510-643-1073/642-0659; e-mail: bthorne@socrates.berkeley.edu)), **Transnational Childhoods: The Deployment, Development, and Participation of Children in Processes of Family Migration.**

¶ Explores childhoods that transcend national boundaries & families (from Central America, Mexico, Korea, Yemen, Hong Kong, & People's Republic of China) partly based in CA who use transportation & communication technologies to facilitate back-&-forth movements & sustain spatially extended relationships, focusing on generational relations. Ethnographic data from two communities in Los Angeles & northern CA that vary in social class, ethnic composition, immigration histories, & racialization processes are used to examine four ways of seeing children in family migration: (1) economic dependents, needing adult care; (2) persons who are developing & being developed; (3) household members with deployable resources & labor; & (4) participants in ongoing social life. Findings indicate different patterns for transnational families & childhoods: (A) Chain migration, in which adult family members come first, leaving children behind to be cared for by relatives & friends in the home country. Later, children are sent for or join their parents. Ties to the home country may continue, with back-&-forth movements by children as well as adults. Children play an active role in sustaining transnational networks, both through their labor & how they link adults who share the tasks of parenting. The need for discipline may result in sending for or sending back children. (B) So-called "parachute children" are sent, unaccompanied, to live in the US with the goal of taking long-term advan-

tage of educational & economic opportunities, while their parents continue to live & work in the home country. Considered is how migration, whether one way or a complex, back-&-forth variety, disrupts & reconfigures relationships between parents & children, alters definitions of children (their capabilities, their "proper places"), & challenges conventional Western assumptions about the nature of the child.

Thorns, David C. & Perkins, Harvey C. (Dept Sociology U Canterbury, Christchurch 1 New Zealand (tel/fax: 64-3-364-2168/2977; e-mail: d.thorns@soci.canterbury.ac.nz)), **House and Home: A Window on New Zealand Culture and Sense of Identity.**

¶ Shows how houses & homes are socially constructed in a continual & changing process in which houses as material objects & homes as symbolic entities are shaped & reshaped by owners & tenants over time in response to life-course & social context changes. To explore the home's present diversity & factors shaping this diversity, preliminary research from New Zealand is drawn on.

98S36248 / ISA / 1998 / 13489

Thorns, David C. & Perkins, Harvey C. (Dept Sociology U Canterbury, Christchurch 1 New Zealand (tel/fax: 64-03-364-2168/2977; e-mail: d.thorns@soci.canterbury.ac.nz)), **Gazing or Performing? Characterizing the Contemporary Tourist Experience.**

¶ Aspects of the "tourist gaze" are critiqued through an analysis of contemporary New Zealand tourist experiences, arguing that the metaphorical basis of the "gaze" seems to lie in the experiences of certain classes of tourists in Europe, where tourists spend a considerable amount of time looking at historical landscapes & related interpretive sites/sights. By contrast, both international & domestic tourists in countries such as New Zealand participate in active forms of touristic recreation, in which "gazing" is only one component. A better metaphorical approach is to talk about "tourist performance," which incorporates ideas of physical activity & bodily involvement as well as "gazing."

Thurner, Paul W. & Eymann, Angelika (Centre European Soc Research U Mannheim, D-68131 Federal Republic Germany (tel/fax: 49-621-292-1724/1784; e-mail: paul.thurner@mzes.uni-mannheim.de)), **A Simultaneous Model of Party Choice and Abstention Choice.**

¶ Aims at unifying the spatial models of candidate/party choice & abstention/participation choice in a single decision model & providing empirical reaction functions, using the hypothesis of a sequential ordering of candidate & participation choice (Riker/Ordeshook, 1973). General features of hierarchical multistage decision making are discussed, & an operational model for party & participation/abstention choice is presented. This model is more complete than previous theoretical & empirical studies as it (1) considers simultaneously the choice of $N > 2$ parties & the abstention option & (2) differentiates between policy-specific effects of alienation & indifference. The suggested decision structure is estimated with nested multiattributive discrete choice models theoretically founded on random utility theory.

Tillie, J. & Fennema, Meindert (U Amsterdam, NL-1012 WX Netherlands (fax: 31-20-525-2086; e-mail: Tillie@psc.w.uva.nl)), **The Turkish Community in Amsterdam: A Network Analysis.**

¶ Examines the relation between the structure of migrant societies in Amsterdam, Netherlands, & local public policy regarding those communities, focusing on the so-called self-organizations of migrant communities. A large part of social life takes place through organizations. People meet in sports clubs, religious organizations, social-cultural organizations, etc. The structure of the community is significant in terms of how these groups relate to Dutch society; eg, a very inward-looking community will maintain a greater distance from Dutch society than will a strongly outward-looking group, which maintains relations with other organizations in Dutch society. An attempt is made to explain this structure through the local public policy concerning the community & also through the community's choices. The argument is illustrated by the case of a Turkish migrant community in Amsterdam.

Timmermans, Desire & Veenhoven, Ruut (Dept Sociology Erasmus U Rotterdam, NL-3000 DR Netherlands (tel/fax: 31-10-4082059/4525870)), **Women-Emancipation and Happiness in Nations.**

¶ Proponents of women's emancipation claim that gender equality will make society more livable, due to greater happiness for a greater number of people, particularly women. Here the merit of such a belief is explored both theoretically & empirically. Theoretically, the belief is consistent with some memories (eg, economic welfare), but not others (eg, sociology). Drawing on an early 1990s empirical investigation in 35 nations, partial support is found for the claim that women emancipation improves the happiness of all citizens. Analysis of the correlation between emancipation (as measured by the Gender Empowerment Index) & a survey measure of average happiness reveals that males profit as much as females.

Tiourina, Irina Olegovna (Inst Sociology Republic Center Humanitarian Education, Krzhizhanovskogo 24/35 B5 117259 Moscow Russia (tel/fax: 7-095-450-14-30; e-mail: irtiour@cityline.ru)), **Women in the Moscow Labour Market.**

¶ Examines women's position in the Moscow (Russia) labor market to compare the efficiency of different ways of finding jobs under the conditions of market economy (eg, state labor exchanges, private recruiting agencies, self-recruitment). Data are drawn from secondary sociological sources, state & local documents, instructions, statistical information, & content analyses of newspaper "job opportunity" advertisements. According to data from the Committee of Labour & Employment, in 1996, 66% of all jobless Muscovites were women. Analysis of the newspaper ads allows the supposition that the current situation in female segment of the labor market is complicated by the discrimination of women on the bases of age, position, & wage rates. Such discrimination can be explained by (1) an excessively high level of women participation in public production; (2) structure of female employment, characterized by feminization of the least competitive professions; & (3) protectionist politics of the state, securing women with the significant family advantages, which makes female labor less profitable for the enterprises. So, one of the main problems is to find effective ways of employing women. Micro-census data analysis reveals that the most preferable ways of finding women employees are through personal connections, newspapers advertisements, recruiting agencies, & labor exchanges. Presently all of these approaches can be characterized as low efficient. Marginalization of female labor, feminization of poverty & unemployment, & limited possibilities to find satisfying jobs require the development of a new modern public solution to the "female problem." Sociological & social economic research has to become the basis for the development of this conception.

Tiryakian, Edward A. (Dept Sociology Duke U, Durham NC 27708-0088 (tel/fax: 919-660-5632/5623; e-mail: Durkhm@soc.duke.edu)), **Time to Change the Calendar? Sacred and Secular Problems of Y2K.**

¶ The turning of the millennium raises the problematic of continuing or restructuring global time dating of the calendar, which is under siege from religious & secular sources. At the secular level, the turn to 2000 (Y2K) is generating problems for the computer age, & non-Christians are also challenging the continuation of the use of AD in a pluralistic world that does not recognize Christian hegemony; eg, some seek to substitute CE (common era) for AD & BCE (before the common era) for BC, but others argue this still retains a Western bias. The age of modernity in terms of time reckoning began with the aborted calendar of the French Revolution making a new start with the Year I in place of 1792, & Auguste Comte, the progenitor of sociology, proposed his own multicultural positivistic calendar. After reviewing these contestations & alternatives, it is suggested that, in keeping with the emergent global age, universal adoption of a postmodern new start, GYI, should be considered.

98S36255 / ISA / 1998 / 13496

Tiryakian, Edward A. (Dept Sociology Duke U, Durham NC 27708-0088 (tel/fax: 919-660-5632/5623; e-mail: Durkhm@soc.duke.edu)), **Survival Strategies of Small Nation-States: The Case of Armenia and Israel.**

¶ Though only recently autonomous nation-states, both Armenia & Israel represent ancient nations with collective memories that stretch back centuries to the time when each was a "submerged nation." Both are small in territorial & population size, with limited natural resources. In the 20th century, both nations' populations have experienced a genocide, as scapegoats for the ills of the country in which they resided. Today, both find themselves in a harsh & hostile environment that threatens their survival. In drawing this comparison, major features of the survival strategy of Armenia & Israel & their linkage to the global setting are explored.

98S36256 / ISA / 1998 / 13497

Titarenko, Larissa G. (State U Belarus, Minsk 220050), **Dynamics of Change in the Sphere of Work in East-European Countries.**

¶ The countries of the former USSR must confront radical changes in the fabric of their social order, associated with the transition to a market economy, primarily in the sphere of work, including (1) the rise of unemployment & subsequent problems, (2) social inequality, (3) homelessness, (4) poverty & social exclusion, & (5) changes in the meaning of work for individuals. Under socialism, sociologists of work discussed the problem of how work could become meaningful for the large majority of workers, & work was seen as a source of satisfaction. For workers today, work has mainly become a source of income; to have a job gives satisfaction in itself, as many employment opportunities have disappeared. Contemporary sociologists of work in Eastern Europe must place these changes in the wider context of radical social changes.

98S36257 / ISA / 1998 / 13498

Todd, Graham R. (York U, North York Ontario M3J 1P3 (e-mail: gtodd@yorku.ca)), **New Forms of Urban Governance and the Legacy of Fordist Geography.**

¶ Considers the emergence of new institutions & networks of governance at the local level that have been identified in a number of recent publications. These new forms of municipal organization are situated in the context of the urban space that they attempt to regulate & manage. Focus is on examples drawn from the recent restructuring of local government in Toronto, Ontario, highlighting the limitations imposed on administrative change by the historical legacy of the Fordist landscape. While the delivery & regulation of such goods & services as water & land use planning is subject to change & restructuring, the existing infrastructure & Fordist geography of urban space have significantly shaped the development of the post-Fordist city.

Toelke, Angelika (German Youth Instit, Nockherstr 2 D-81541 Munich (tel/fax: 089-62306-273/162; e-mail: toelke@dji.de)), **Gender-Specific Relationship between Private Life Patterns and Success at Work.**

¶ The relationship between family development & job history is a major topic in family research on both men's & women's lives. Status in the labor market, type of job, & success in the job can be gender-specifically important in the marriage market, but also in later life patterns. Each life pattern offers different support for impediments to the job relating to time, mobility, responsibility, help, etc. Logistic regression analyses of retrospective life-history data of birth cohorts of a random sample of Germans reveal relationships between the two life domains. Marriage has a positive effect on careers for both men & women. Having children makes little difference for men's jobs. Part-time work for women is disadvantageous.

cal Process Theories and Institutional Politics: Toward a Rebirth of the Classical Sociological Project?

¶ Today's demand for institutional change is problematized by certain Western actors by replacing reflection on successive models with the theoretical practice of radical process. Compared genealogically, these theoretical practices range from machinic materialism (Gilles Deleuze & Felix Guattari) to the notion of an endless politics accommodated by a community of dissensus (eg, Jean-François Lyotard). In their emphasis on the structurally determinate actuality of intuitive process, these theories surpass the politics of recognition, which is based on contemplating the potentiality for being together. This makes their politics surprisingly comparable to that of the classical sociological project, which emphasized that the coming about of social structures is immanent in the continual institution of a postidentitarian, &, in this sense, postliberal political sphere.

Togonu-Bickersteth, Funmi & Akinyele, O. S. (Obafemi Awolowo U, Ile-Ife Oyo State Nigeria [tel/fax: 234-36-230-333/232-822; e-mail: togonub@oauife.edu.ng]), **Prevalence and Reactions to Symptoms among Community Dwelling Elderly in Nigeria.**

¶ The expected changes in the number & proportion of the elderly in the Nigerian population will require a qualitatively different type of health care delivery services than presently available. Meeting this need requires knowledge about the health & illness behavior of community-dwelling elderly. Reported here are results of a survey of prevalence of symptoms among the elderly in four locations, noting decisions made about these symptoms. The extent to which location, gender, & occupation influenced the types of symptoms reported & responses is examined. Findings show that the majority of the elderly reported experiencing four symptoms: joint pain, fever & sore throat, blurred vision, & insomnia. A significantly greater proportion of rural-dwelling elderly reported pain in the ear, blurred vision, nervousness, waking at night to urinate many times, & insomnia. No significant gender differences in the types of symptoms experienced were identified. With regard to occupation, traders seem to have experienced more symptoms than farmers & civil servants. Only very few reported going to the hospital or consulting medical doctors for their symptoms; the majority self-medicated or used local herbs. The implications of these findings for health care delivery to the elderly are discussed.

98S36265 / ISA / 1998 / 13506

Toivonen, Timo (Dept Sociology U Turku, SF-20014 Finland [tel/fax: 358-2-333-6571/5080; e-mail: toivonen@abo.fi]), **War and the Change of Social Structure.**

¶ Finland experienced a rapid structural change after WWII. In 1940, 56% of the economically active population were engaged in agriculture & forestry, but in 1970, only 20%. In the war, Finland lost areas (in Lappi & the Karelian Isthmus), & 12% of the population lost their homes. Addressed here is whether those who were forced to move from their home areas tended to change their industry &/or profession more than those who remained in their old residence. What happened to these people is discussed, based on 1939-1995 census data.

Toma, J. Douglas & Cross, Michael (School Education U Missouri, Kansas City 64110 [tel/fax: 816-235-2541/5270; e-mail: toma@cctr.umkc.edu]), **Intercollegiate Athletics and Student College Choice: Further Exploration of the Impact of Championship Seasons on Undergraduate Applications.**

¶ On-campus spectator sports—particularly the entertainment spectacles that are football & men's basketball at many large US institutions—are the aspect of the university often most visible to those outside the academic community, both sports fans & nonfans. One external constituency whose attention high-profile intercollegiate athletics may attract is prospective students. The effect that winning a national championship in football or men's basketball may have on the quantity of undergraduate admission applications received by institutions 1979-1994 is examined. This exploratory study suggests that the most apparent measure of athletic success—a championship season—is one factor among several in the college choice process for aspiring undergraduates. Year-to-year & multiyear changes in the number of applications for undergraduate admissions to schools following winning a national championship are compared with changes in parallel sets of data from peer institutions, using peer schools as a vehicle to isolate athletic success as a factor in undergraduate admissions. Under most circumstances, it is found

that notable increases occurred in admission applications received—both in absolute terms but, more importantly, relative to peer schools—in the years following the championship season.

Tomasi, Luigi (Dipt sociologia & ricerca sociale U Trento, I-38100 Italy [tel/fax: 0461-881-429/348; e-mail: ltomasi@gelso.unitn.it]), **Values and Religion among the Young People of Northern Italy: The Trentino Case.**

¶ Interviews with approximately 1,400 respondents in Trent, Italy (carried out in 1990 as part of a larger survey by the European Values Systems Group) are drawn on to compare the directional trends of values among young people in Trentino & those of the wider social context with regard to the family, work, associative life, politics, ethics, & religion. Focus is on their relation to the specific fields of action in which they are inherent, to document how young people act in relation to the problems that modern society inevitably presents within the various spheres of social activity.

Tomasi, Luigi (Dipt sociologia & ricerca sociale U Trento, I-38100 Italy [tel/fax: 0461-881-429/348; e-mail: ltomasi@gelso.unitn.it]), **The History of Sociology in Cambodia.**

¶ Attempts to describe, with objectivity & precision, the reasons for the establishment of sociology in Cambodia, which has suffered a tragic & radical revolution. After explaining the causes of Cambodia's agony, the growth of interest in sociology since 1993 is described, ie, from the first free elections, under UN protection, & the start of the peace process. Sociology in Cambodia is a young science whose roots lie in the desire for rebirth, the will to understand the endemic social & political chaos of the country, & the need to provide an answer to the causes of genocide. The founding of the first sociology faculty in 1994 demonstrates the interest of the political & cultural authorities in this discipline, which is seen as an indispensable aid in the new course set by the nation. Also discussed are the training of the first Cambodian sociology teachers, start of courses, enthusiasm of students, expectations of authorities, establishment of sociology in the Royal U of Phnom Penh, & presentation of the first 22 Bachelor of Sociology degrees in the country after 4 years of regular courses.

Tomasi, Lydio F. (Center Migration Studies New York, 209 Flag PI Staten Island 10304-1199 [tel/fax: 718-351-8800/667-4898; e-mail: cmslft@aol.com]), **Immigrant Integration in the United States. Still a Model for Emulation?**

¶ How pertinent is US incorporation of immigrants to European integration questions & vice versa? Four topics relevant to transatlantic comparisons of immigrant integration & their implications for public policy are discussed: (1) It is contended that the extension of residency & employment rights to foreign workers & their dependents in Europe, 1970-1990, narrowed transatlantic differences. (2) Recent developments in US immigration law & policy that have tended to erode the liberal status afforded resident aliens, which demarcated the US system of legal immigration from European guestworker policies, are summarized. (3) It is contended that recent legal & policy changes in the US have not fundamentally altered its model of immigrant incorporation; in certain respects, the recent changes are consistent with a historical pattern of governmental "benign neglect" of immigrant incorporation. (4) It is argued that, despite important historical, policy, & legal differences, Europeans & Americans have much to learn from one another in the realm of immigrant integration. Suggestions are offered as to why immigration today is such a problem & what might be done to alleviate the situation.

Torrabadella, Laura & Tejero, Elisabet (U Autònoma Barcelona, E-08193 Bellaterra Spain [tel/fax: 34-3-581-13-83/28-27; e-mail: icsc2@cc.uab.es]), **Potentialities of the Biographical Analysis for the Revision of Family and Gender Relationships.**

¶ The use of the biographical-interpretative method for understanding social strategies in a European framework facilitates exploration of the active role played by family & gender relationships in Spain, in the context of the restructuring of welfare states. Focus is on changes in family organization in terms of new kinds of gender & intergenerational negotiations. First the process of individualization is critically examined in light of family dynamics shaping biographical strategies of individuals. Then, the conflation between family & residential group is challenged,

incorporating kinship networks that are permanently operating & being reactivated in biographical movements of risk, in the context of social-economic transformation. Family support should be understood as an outcome of a delicate balance between feelings of love & affection, socially constructed moral duties, strategic options, & conflicts. However, new gender inequalities & forms of conflict between generations are effecting new family relationships & responsibilities. Families are responding to social risk by enabling new forms of social integration & consequently impeding exclusion. Nevertheless, it is argued that this situation is fostering a precarious & conflictual integration based on new gender & generational inequalities.

Tosi, Michelina (High School Social Work U Roma "La Sapienza", I-00185 Italy (tel/fax: 39-6-35497191/39753095; e-mail: mtosi@flashnet.it)), **Clinical Methods of Intervention in Educational Disadvantage: The Case of Roman Schools.**

¶ Different dimensions of educational disadvantage were assessed via a survey of 2,300 students of suburban schools in Rome, Italy. Family seems to be the primary factor explaining disadvantage & emotional uneasiness in junior high school students; many childhood problems persist (fear of the dark, nail biting), probably connected with insufficient primary socialization in the family. The city environment also has an impact; some fear Rome's subway & walking at night, & some (especially females) are suspicious of immigrants. Clinical intervention is focused in the relationship between family & school, especially families that avoid contact with the schools & try to avoid their responsibilities.

Tota, Anna-Lisa (Dipt sociologia U Milano, I-20122 Italy), **Ethnography of Theatre: Cognitive and Cultural Constraints in Theatrical Reception.**

¶ Examined from the perspective of a contextual conception of art is the role played by consumer conditions of a theatrical performance in pre-determining the processes of construction of the meanings. During a performance, different spectators construct different mental artifacts corresponding to a particular "material object" (Mukarovsky). It seems reasonable that this process is affected by several intervening factors: (1) the artistic group who provides a set of instructions for the reception of the artistic event, using several communicative codes available in the theater; (2) the theater itself, regarded as an institutional setting; & (3) the receptive activities of spectators who perform a certain degree of role distance, in that they are, at the same time, free & constrained to follow, on the one hand, institutional norms, & on the other, the artistic group's instructions. Focus is on the instructions provided by the theater as an institution; they function as frames metacommunicating on the event taking place, & they affect the construction of artistic meanings & the definition of the event as an artistic one. Pursuing this perspective, it could be said that part of the knowledge necessary to define something as theater (or art) is inscribed in the design of the spaces socially destined for its exhibition & in the practices traditionally codified for its aesthetic reception.

Tóth, András & Frege, Carola, **Nature of Post-Socialist Co-Operative Industrial Relations Revisited.**

¶ Discusses the shifting nature of postsocialist company-level cooperation between union & management, using the example of the Clothing Union in Hungary. The clothing industry, which has attracted much foreign investment, has been one of the few growing industries in Hungary & one of the largest employers. The industry employs mostly a low-paid semiskilled female workforce. Privatization was completed in the industry by 1993. Analysis is based on 1997 research involving a survey of union members & first union leaders in all unionized clothing firms. Case studies involving semistructured interviews with managers, supervisors, & union activists were also conducted in privatized & unionized firms. Interviews were conducted with national union leaders, & data from the Clothing Workers Union archive were analyzed. Results are presented from case studies in four Hungarian & foreign-owned clothing firms. It is argued that, although the management-union relationship can be characterized as microcorporatism, a major shift in the nature of cooperation has occurred from incorporation of ancien régime to detente between increasingly assertive management & marginalized workplace-level unions. While the bargaining power of local unions severely decreased, the Clothing Union did not manage to establish a complementary sectoral-level social regulation of terms & condition of employment. Unions

have suffered a major setback, despite the increased importance of clothing employment in local communities.

Touraine, Alain (CADIS/Ecole hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-01-49-54-24-57/42-84-05-91; e-mail: touraine@ehess.fr)), **The Changing Nature of Sociological Knowledge.**

¶ Examines the changing nature of sociology. The main transformation is that the study of actors requires directly considering the meaning actors give to their behavior. The only way of going beyond a sociology of systems is to recognize three main aspects of a sociology of actors: (1) the intention & power of leading in dominant groups; (2) the sociology of interest, eg, rational choice theory; & (3) the hypothesis that to be an actor is the central orientation of individuals & groups & that the construction of self-identity, eg, the construction of oneself as a Subject, has replaced, as a central principle of sociological explanation, the integration of the system.

Touraine, Alain (CADIS/Ecole hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-01-49-54-24-57/42-84-05-91; e-mail: touraine@ehess.fr)), **Intercultural Communication in Social Science.**

¶ Although a lingua franca is necessary for worldwide communication, a sociologist cannot limit him- or herself to this elementary observation. Three main reasons are given: (1) Sociological knowledge is culture-loaded & "scientific." Words are used that, even when they can be translated from one language to another one, carry culturally determined denotations. (2) The lingua franca carries with it some particularistic notions & a culturally & socially determined way of thinking. Intellectually & materially, an effect of domination is created. At the same time, there is a serious risk for people who normally use the lingua franca to become ignorant of different languages, cultures, & intellectual traditions. (3) Sociology has devoted a large part of its activity to comparative studies; it would be paradoxical for it to define itself in contradictory terms with its general approach. It is suggested that the problem of intercultural communication in social sciences should be recognized as centrally important for sociologists. A first approach is that each of us should be aware of the roots & the location in time & space of the notions we use. A second is to recommend the development of comparative studies & a better knowledge of cultures that do not normally express themselves in the major international language & especially in the lingua franca. A more practical one should be to support the development of bilingual meetings (in which all participants have at least a passive knowledge of the "other" language) & to recommend that professional sociologists know not only their mother language & English, but also at least one foreign language.

98S36276 / ISA / 1998 / 13517

Touraine, Alain (CADIS/Ecole hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-1-49-54-24-57/42-84-05-91; e-mail: touraine@ehess.fr)), **Social Movements.**

¶ Collective action has generally linked the defense of specific interests with an attack against a clearly defined adversary who holds power or exerts domination & with a call to public interest to historical trends or natural principles. Social movements, especially the labor movement, has been a combination of class action & an evolutionist or "progressist" view of society, which included the reference to a posthistorical situation, beyond social & cultural contradictions that must & can be overcome, either in a democratic or revolutionary way. Social action, conquest of power, & nonsocial principles of legitimization of collective action were constantly mixed or combined. In societies of information or communication, these three elements tend to become dissociated. The conflict is no longer between two categories or classes; it is between worldwide flows, networks, or markets & "identities," & what is at stake is the capacity for individuals & groups to be free, responsible, & coherent actors by combining instrumental action with cultural identity. "Passions" that were political & then economic are now cultural. They struggle, on one side, for social & political control of economic activities &, on the other, want different categories to be recognized as equal, when, formerly, differences were always identified with superiority or inferiority. This deep transformation of collective action entails a change in methods of action & forms of organization.

98S36277 / ISA / 1998 / 13518

Touraine, Alain (CADIS/Ecole hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-1-49-54-24-57/42-84-05-91; e-mail: touraine@ehess.fr)), **From Production to Work.**

¶ Industrial society defined itself as a society of production & progress. Work, as a subjective value, was less important than the utilitarian notion of active participation in social life through productive activities. Categories of self-analysis were still dominated in industrial societies by the ideas of society, production, saving, investment, & growth, more than by the study of work & workers defined as social actors. The main change during the last quarter century is that we have abandoned the idea of progress, ie, the creed in a natural link between growth, welfare, social justice, individual happiness, & peace. But we have not abandoned it for the vague idea of a society of leisure or for the more dangerous idea of a quasi-stable society. We have substituted for this sociology of industrial society a view of social life organized around actors. To be an actor means to be able to combine cultural identities with participation in the world of instrumental rationality. If we are defined only by our identity, we are closed in a blind communitarianism; if we are defined only by our instrumental activities, we are prisoners of market & technological forces. We free ourselves from the stifling community by separating values from law & custom, ie, by a process of laicization. We free ourselves from mass society by our capacity & intention to be "workers." The process through which individuals or groups combine values & work & liberate themselves from communities & markets is termed subjectivation. Without a direct reference to work, competence, & socially recognized activity, we cannot escape from the absolute power of communitarian leaders. Our society gives a more central importance than industrial society to work as a central factor in a personality- & freedom-building process.

98S36278 / ISA / 1998 / 13519

Touraine, Alain (CADIS Ecole hautes études sciences sociales, 54 blvd Raspail F-75006 Paris France (tel/fax: 33-1-49-54-24-57/42-84-05-91; e-mail: touraine@ehess.fr)), **Democracy: Problems and Possibilities.**

¶ The downfall of many authoritarian regimes does not mean by itself the triumph of democracy. Only the end of a monopolistic access to power can lead to an oligopolistic access that is not linked with a real control of state power, the representativeness of political leaders, & the consciousness of citizenship, which are the three basic elements of a democracy. Democracy is much more than a relatively competitive political market. In Western countries, for example, a crisis of representativeness & even of legitimacy of political parties has often been described. In emerging economies, the alliance of liberal economic policies, cultural nationalism, & authoritarian state is visible. It is hard to assert that most postcommunist countries have become democratic. The globalization of economy & identity politics leave very little space to free political institutions. The most adequate description of the current time is the weakening of all kinds of institutional mediations between global problems & local actors. Democracy, by definition, functions bottom up. Such a process requires an autonomous organization of interest groups, currents of opinion, & social or cultural groups & categories that want to be represented. Democracy, in its first phase, represented citizens, in a second phase, workers. This second category was internally differentiated, while citizens formed a unified & unifying category. Today, after civic & social rights, cultural rights play a central role in political debates. This transformation of the state of the democratic spirit goes along with the development of weak agents of democratization.

Toussaint, Jean-Yves & Zimmerman, Monique (Equipe développement urbain Institut national sciences appliquées Lyon, 20 ave Albert Einstein F-69621 Villeurbanne Cedex France (tel/fax: 33-4-72-43-84-71/87-96; e-mail: gcudu@insa.insa-lyon.fr)), **La Conception d'un artefact et la science en pratique** (The Conception of an Artifact and Science in Practice). (FRE)

¶ Presents problems derived from a study of the technical services of a large French city observing the production of an artifact—ie, software—when it meets its addressees (the city's civil servants). Reactions of different users bring into question what service is actually performed by computer software & whether it is interesting only to managing engineers, bookkeepers, & fieldworkers. Conceiving of such a kind of artifact concerns the organization, job, & relationships between organization members. Thus, the artifact is not only an object, it is a project too. Focus is on the artifact as a mobilizing agent & a project in the orga-

nization. In fact, the artifact generates questions about the role & importance of techniques & sciences in social practice, ie, production practice. Thus, it is suggested that the legitimacy & necessity of science & contemporary techniques would be questioned daily.

Trabal, Patrick, Augustini, M., Duret, P. & Mignon, P. (INSEP Dépt sociologie, 11 ave du Tremblay F-75012 Paris France (tel/fax: 33-1-41-74-42-95/45-35; e-mail: crjs.insep@wanadoo.fr)), **Mutations in the Sport Spectacle and Its Social Constraints.**

¶ Today, sport cannot as easily be considered a meritocratic model of fair competition between equals as in the early 1990s. The purpose here is to identify factors challenging this ideal model. The escalation of financial stakes, commercialization, & doping, & the introduction of new technologies are explored. Benefiting from one of these factors has a price. The costs are outlined for the high performance athlete, on one hand, & for the sport spectacle, on the other. Focus is on the consequences of the introduction of technological innovations for the training of high-performance athletes. By studying the interactions between the promoters of innovations & the sports world, it is possible to identify the resistance of athletes & coaches to new technologies. Adopting new equipment sometimes means accepting that new forms of rationality, such as scientific reason (& the notions of proof & logic it implies) or argumentation, take precedence over bodily sensations. Also discussed are the other renunciations imposed by commercialization & doping. But these factors also compel sport to reconsider its justifications. If it wants to continue praising individual merit, the sport spectacle needs to renew how it both stages & condemns injustices. The reaction of spectators to these circumstances is discussed as well.

98S36281 / ISA / 1998 / 13522

Train, Kelly Amanda (5 Gatehead Rd, Willowdale Ontario M2J 2P4 (tel: 416-225-9392)), **Feminist Alien Nation? The Exclusion of Jewish Women of Colour within the Jewish Feminist Community and Feminist Communities of Colour.**

¶ Proposes to destabilize traditional notions of race as exclusive & contained entities that provide the basis & framework for membership & political agendas for the Jewish feminist community & feminist communities of color. Belonging in the Jewish feminist community, & claiming a Jewish woman's identity, necessitates the (im)possibility of membership & identity as a woman of color. Thus, racialized identity is taken up as oppositional & binary, & in this process, Jewish women of color are marginalized from both the Jewish feminist community & feminist communities of color. Concepts of alienation & authenticity are interrogated, specifically in the way that authenticity operates as a basis of exclusion & alienation from community membership & belonging. In this sense, authenticity & authentic identity operate as a means of regulating & policing community identity.

Travers, Max (Dept Human Sciences Buckinghamshire Chilterns University Coll, Bucks HP11 2JZ England (tel/fax: 01494-522141/461704; e-mail: max.travers@buckscol.ac.uk)), **Recognising the Refugee: An Analysis of Judicial Decision-Making in the British Immigration Courts.**

¶ From 1991 to 1996, 208,000 people claimed political asylum in GB under the 1951 European Convention Relating to the Status of Refugees. Since 1994, an average of 40% each year have been recognized as refugees (& a further 16% have been granted "Exceptional Leave to Remain"). Here, an ethnomethodological approach is used to examine the decisions made by adjudicators, the judicial officials who determine the outcome of most applications for asylum, based on 1996 ethnographic study of the British immigration courts. Focus is on two grounds that adjudicators used in refusing appeals: (1) There were no objective risks of persecution in a particular country, as interpreted from reports & documents supplied by the appellant & the British government, including previous case law. (2) The appellant's evidence was lacking in "credibility" because of discrepancies between accounts supplied in court & earlier interviews, & by contradictions or implausible features in testimony.

Treffers-Daller, Jeanine (Faculty Languages & European Studies U West England, BS16 1QY Bristol (tel/fax: 00-44-117-9656261/9763843; e-mail: j-treffersdaller@wpg.uwe.ac.uk)), **Borrowing and Shift-Induced Interference: Contrasting Patterns in French-Germanic Contact in Brussels and Strasbourg.**

†

¶ An attempt is made to test hypotheses derived from the model for contact-induced language change as formulated by Sarah Grey Thomason & Terrence Kaufman (1988). The framework can be shown to correctly predict the basic asymmetries of the contact patterns in Brussels (Belgium) & Strasbourg (France) & is thus an invaluable tool for describing these patterns. The secondary aim is to show how comparison of the two language contact situations can contribute toward a further understanding of variability in this domain of research. More specifically, a comparison of the language contact phenomena in Strasbourg & Brussels can shed light on the debate around the nature of the constraints on contact-induced change. Thomason & Kaufman have said that "it is the sociolinguistic history of the speakers, & not the structure of their language, that is the primary determinant of the linguistic outcome of language contact." This contribution, based on a review of previous research by this author (1994) & by Penelope Gardner-Chloros (1991) & other literature, shows that, despite the differences in the sociolinguistic situations of Brussels & Strasbourg, the overall contact patterns are very similar, from both a quantitative & a qualitative point of view, thus, contradicting Thomason & Kaufman's findings.

Treichel, Bärbel & Schwelling, Birgit (Dept Sociology U Magdeburg, D-39016 Federal Republic Germany (tel/fax: 391-671-6678/6532; e-mail: treichel@zedat.fu-berlin.de)), **Extended Processes of Biographical Suffering and the Allusive Expression of Deceit in an Autobiographical Narrative Interview with a Female Migrant Worker in Germany.**

¶ Attempts to analyze the underlying dynamics of biographical processes of severe suffering in a female migrant worker's narrative. In terms of method, the autobiographical narrative is submitted to a sequential analysis of units of presentation & of processes of the rendering of autobiographical experience in narrative, description, & argumentation. Although the informant, on the surface of her line of presentation, is loyal to her family of origin, the sequential analysis clearly points to her family's responsibility for her biographical suffering. The family sacrifices their daughter as a provider of financial means, while the daughter imagines herself as an actively contributing agent in a temporally extended social contract. When comparing narrative with reflexive parts in the interview, it appears that reflexive activity occurs mainly in the presentation of second-degree activities & rarely in the main story line. Only in those subordinated lines of presentation are allusive mentions of the family's contribution to the informant's suffering made. The surface structure of her interview thus indicates that her reflexive command of her biography is clearly lagging behind her autobiographical experience. On the other hand, the myth of an intact family background in her country of origin serves as a cultural topos, which keeps her functioning under clearly inhuman working conditions in a foreign environment.

98S36285 / ISA / 1998 / 13526

Tremblay, André (U Ottawa, Ontario K1N 6N5 (tel/fax: 613-562-5800/5906; e-mail: atrembla@uottawa.ca)), **Changement d'identité chez les soldats à l'ère des missions de paix: perspectives théoriques** (Changes in Soldiers' Identities in the Era of Peacekeeping Missions: Theoretical Perspectives). (FRE)

¶ Develops a theoretical model for wartime identities in peacekeeping missions. In a hierarchical, totalizing organization such as the army, competing models for adult identities are accentuated. After discussing the contemporary changes in the nature of primary socialization caused by emerging educational, community, social, & global standards, the image of identities as portrayed by the mass media is considered. Despite the multiplicity of peacekeeping missions, the Canadian Army continues to develop identity based on the traditional wartime role of the soldier.

Tremblay, Diane-Gabrielle (Télé-U, CP 670 Station C Montreal Quebec H2L 4L5 (tel/fax: 514-522-3540/3608; e-mail: dgtrembl@telu.quebec.ca)), **Innovation et capital socio-territorial: pistes de recherche dans l'agglomération de Montréal** (Innovation and Socioterritorial Capital: Research in the Montreal Agglomeration). (FRE)

¶ After reviewing the concept of innovation, results from ongoing research are discussed, & theoretical elements that appear pertinent to an evolutionary perspective on innovation, particularly as related to territory, are considered. The role of collective actors in the development of an innovative milieu is highlighted, drawing attention to the organizational learning process & logic behind the theoretical concepts of "innovative

milieu" & "industrial districts." The concept of socioterritorial capital is developed to explain the innovative capacity found in some territories & not in others. Concrete illustrations of these ideas are drawn from ongoing research aimed at identifying whether community involvement leads to different results. Case studies are presented to illustrate community economic development corporations & technopolies trying to activate their socioterritorial capital to spur innovation & foster economic development in specific territories. Discussed in conclusion is the capacity of territories or localities for changing the course of events & innovating through the activation of collective actors.

98S36287 / ISA / 1998 / 13528

Tremblay, Diane-Gabrielle (Télé-U, CP 670 Station C Montreal Quebec H2L 4L5 (tel/fax: 514-522-3540/3608; e-mail: dgtrembl@telu.quebec.ca)), **Working Time and Women in Canada: Perspectives on Work-Family Conciliation and Working Time.**

¶ Examines Canadian data on whether people, particularly women, in industrial societies have gained or lost free time over recent decades. Also examined are data on forms of employment & work schedules, eg, day-time hours that often cause a burden in terms of child care for women. Some working time arrangements that favor a better conciliation of work & family are discussed. Also addressed are (1) how different findings concerning working time reality & aspirations can be reconciled, (2) whether the question of the changing distribution of time & "time pressure" in industrial societies can be answered with any certainty, & (3) whether all groups in a society are exposed to the same type of situation.

Tremblay, Pierre-André (Dept sciences humaines U Québec, Chicoutimi G7H 2B1 (tel/fax: 418-545-5011/5012; e-mail: pierre-andre.tremblay@sympatico.ca)), **Organizational Strategy and the Production of Community: Reflections from the Québec Case.**

¶ Social movements in Quebec are being deeply affected by the coming of post-Fordism. They are moving from a political & oppositional emphasis to strategies based on partnerships with state institutions & other civil society organizations. They are also trying to constitute webs & networks that could contribute to lessening their isolation. Since they are chiefly preoccupied with self-help, they are now called "community organizations." Researchers, seeing this move as only a step back from an era of political demands, have underestimated the positive dimensions of these organizations. It is suggested here that their actions should partly be understood as an effort to maintain & sometimes recreate community bonds badly eroded by the domination of the market currently promoted by state development policies. These efforts show that the relationships between state & civil society inherited from Fordism should be reconsidered; the production of social life should be seen not as a preordained given, but as the effect of social action. Data were obtained using qualitative methodologies & in-depth interviews with organizers & users of community groups in a midsized town.

98S36290 / ISA / 1998 / 13531

Tretter, Felix (District Mental Hospital, Haar/Munich Federal Republic Germany (tel: 0049-89-4562-3708)), **Towards Increasing the Performance of a Public Hospital—A Technique of Graphical Mapping of Management of Complex Dynamics and Its Relevance for Staff Education.**

¶ In the Federal Republic of Germany, health economics is determining discussion on the function of the health care system, but introducing economic thinking to hospital staff evokes problems. To integrate medical & economic guidance for hospital staff, the systemic analysis of problem

environment is a useful technique (eg, the Swiss School of Management in St. Gallen). This technology was applied to the staff of a German mental hospital to show the interdependence of any action with the goal variable "occupation of beds." In a training session, after first brainstorming ideas on conditioning factors that are increasing & decreasing the rate of occupied beds, the mode, strength, & direction of the mutual influence of these factors were determined. Then, the network was sketched for a better overview, & the functions of the total system of operations were discussed. By this session, staff was more able to accept the complexity of management of hospital functions, most likely due to their visualization of its dynamics & complexity. This method is also compatible with mathematical explications for social systems theory.

Trexler, Cary Jay & Spurlock, Charles (Michigan State U, East Lansing 48824 [tel/fax: 517-355-6580/353-4981; e-mail: Trexlerc@pilot.msu.edu]), **From Conception to Consumption: The Influences of Grades and Standards in the Construction of the Certified Angus Beef Product.**

¶ Explores the evolution of beef carcass grades & standards & their current impact on shaping the structure of the beef-cattle subsector by analyzing the Certified Angus Beef Program. It is found that grades & standards have marked results on the organizational structure of the industry; they serve to inform the actors of the "ideal" product form. Science & technology are then employed to construct animals, transportation, distribution, processing, & marketing systems to meet this ideal. To understand emerging trends in the beef-cattle subsector & their implications for this industry & its people, specifications of the Certified Angus Beef Program are used as an analytic frame for examining how both the technology & organizational structure help shape this commodity chain. Questions are raised about the future structure of the beef-cattle industry & how this new structure might influence the rancher or the consumer.

Triandafyllidou, Anna (Instit Psychology Italian National Research Council, Viale Marx 15 I-00137 Rome Italy [tel/fax: 39-6-860-90220/24737]), **The Role of Otherness in Discourses of Nationhood: A Comparative Analysis.**

¶ Aims at showing that national identity is defined not only from within, with reference to the features & traditions that bind fellow-nationals together, but also from outside, as a means for distinguishing & differentiating us from Others. Here, the notion of significant Others is used to investigate the role played by Serbs in the emergency & shaping of a Croatian national identity & the impact on Turks on the crystallization & development of the Greek nation. Focus is on the discourses of nationhood in Croatia & Greece in the early 20th century.

98S36293 / ISA / 1998 / 13534

Triandafyllidou, Anna (Instit Psychology Italian National Research Council, Viale Marx 15 I-00137 Rome Italy [tel/fax: 39-6-860-90220/24737]), **The Immigrant as a Threatening Other: A Comparative Study of the Political Discourse on Immigration in Southern Europe.**

¶ Contemporary European reality is characterized by two potentially conflictual phenomena: (1) an increasing immigration flow from eastern Europe & the Third World toward countries of the European Union of migrants in search of better living & working conditions; & (2) the last 2 decades have witnessed an unexpected revival of ethnonationalist movements both in & outside Europe. These phenomena are examined in the cases of Italy, Spain, & Greece. The main features of Spanish, Greek, & Italian national identity are analyzed, & their civic or ethnic characters highlighted. The political discourse related to the issue of immigration is investigated through analysis of 35 interviews conducted with state officials, trade unionists, & nongovernmental organization representatives who have dealt with the issue of immigration in each country. In conclusion, the results of the three case studies are compared & discussed.

Tritter, Jonathan Q. (Dept Sociology U Warwick, Coventry CV4 7AL England [tel/fax: 011-44-1203-523120/497; e-mail: sysbh@ile.csv.warwick.ac.uk]), **'Getting to Know Myself': Changing Needs and Gaining Knowledge among People with Cancer.**

¶ Building on previous work that examined cancer patients' experiences of their care & initial findings from a current study of cancer patients' needs for support & self-management, explored are patterns of expressed

patient needs & how they change over time; results are drawn from the analysis of qualitative data from two focus group studies of men & women diagnosed with a wide range of different types of cancer in a number of urban & suburban areas in GB. Patients experience different "cancer journeys," with variations in treatment & support. Some of these variations are clearly related to the particularities of the health care contexts in which patients are treated & the clinicians providing their care. Other variations are related to demographic & socioeconomic factors. Suggested is a range of stages that patients may proceed through & how they are related to changes in expressed needs, & patient understanding & are a product of time from initial concerns & diagnosis. While many cancer patients claim that their illness has transformed their lives, the nature of this transformation, its trajectory, & its endpoint vary in systematic ways.

98S36295 / ISA / 1998 / 13536

Trompette, Pascale (CRISTO-UPMF, BP 47X F-38040 Grenoble Cedex 9 France [tel/fax: 04-76-82-55-37/58-43; e-mail: Pascale.Trompette@upmf.grenoble.fr]), **Les Significations sociales du travail** (The Social Meanings of Work). (FRE)

¶ Understanding evolutions that affect the workplace & its meaning in society requires emphasis on the different understandings that people give to work, related to various situations of production & organizations. Constructed is an anthropological approach of logics of exchange organizing the labor contract that takes account of the economical, social, & symbolic nature of work, considered an important factor of socialization. This analysis is based on two main ethnographic studies in different contexts: an industrial factory (nuclear sector), & the military (navy). The purpose is to enlarge the narrow frame of economic exchange to question the meanings that employees are referring to think their engagement in work & its counterparts (symbolical economy). The interpretation given by agents of exchange relations with the institution (firm, state) that employs them could be assessed through measures of gift, honor, social status, solidarity, professional identity, out-of-work identity, etc. Then, one should be able to describe different types of individual expectation & exchange, & draw portraits of contractors. The aim here is to understand the exchange system in labor contracts through three levels of analysis: (1) employment ties as a collective exchange between moral (or collective) persons; (2) work's space as place of socialization & production of identity; & (3) meanings of senses of work in a general economy of social being.

98S36296 / ISA / 1998 / 13537

Trottier, Claude, Laforce, Louise, Cloutier, Renée, Diambomba, Miala & Perron, Madeleine (Faculté sciences éducation U Laval, Québec G1K 7P4 [tel/fax: 418-656-2131/3071; e-mail: Claude.Trottier@fse.ulaval.ca]), **Students' Education Plans and Professional Integration: A Typology of University Graduates.**

¶ Results of a qualitative analysis of educational plans & professional integration of university graduates underpin an examination of whether they decide on their paths & trajectories in an explicit manner, articulating their educational & integration objectives according to a linear logic, or develop their strategies gradually, in a flexible & diversified way that takes into account the multiple constraints & opportunities that they face. The analytical framework has been constructed on the basis of the deliberate/emerging strategy continuum. Three dimensions were defined to specify the observed patterns in students' decision-making process: (1) the precise or ambiguous character of the student's career plan at the time of registration at university, (2) whether an initially precise plan was modified, or a more explicit plan emerged from one that was vague at the outset, & (3) whether an initial plan—either modified or emerging—had been achieved 8 years after obtaining a degree. A nine-category typology of students who had graduated is presented, & bachelor's, master's, & doctoral students are compared.

Truchot, Claude (U Franche-Comté, F-25000 Besançon Cedex France [tel/fax: 00-33-388790703]), **French Language Policies in the Sciences.**

¶ Discusses three aspects of French language policies concerning the sciences: trying to ensure some territoriality to French; adapting to the globalization process of scientific research activities; & spreading the French language. After having described some examples of each, examined is how they interact. While it is obligatory for a doctoral thesis to be written in French, according to the 1994 Law on the use of the French language (territoriality), quite a few foreign students come to France for

research. The law makes them learn how to write in French & disseminate information in their country in this language. An attempt is made to explain why, although French is rarely used now in France in conferences & scientific publications, it is still the working language used inside laboratories, a practice that France's neighboring countries are giving up.

Trushkova, Yulia (RCEL Institute Linguistics Russian Academy Sciences, Bol. Kislavskij Per. 1/12 103009 Moscow (tel/fax: 095-2905268/28; e-mail: socio@iling.msk.su)), **Terms for National/State Languages in Russian Federation.**

¶ Many basic sociolinguistic terms for ethnic languages vary in meaning & function, reflecting differences in scientific traditions, ideological orientations, & linguistic practices in various countries. Some peculiarities of contemporary life of the Russian Federation are manifested in the meanings & use of the terms "national," "state," "official language," etc. The concept of "national language" correlates with "language of nation"—an ethnic community having large strength, developed forms of culture, & usually, its own statehood. Sometimes it also means "language of nationality"; the latter type of community, according to the Soviet tradition, being a former stage of ethnic development, usually lacks statehood, as compared to nation. "National language" can also designate any ethnic language. Finally, this term can denote all languages but Russian (especially concerning the sphere of education); it is also the Soviet tradition of dividing languages into Russian & non-Russian. The terms "state" & "official" designate the official status of a language & spheres of its functioning. The difference is that state language possesses symbolic value, being a symbol of a national statehood. "State" often reflects the language perspective, while "official" reflects the actual functional status of a language, as concerns state & official languages of Russia.

Tsamis, Vasiliki J. (Howard U, Washington DC 20059 (tel: 410-529-5468; e-mail: vtsamis@ubmail.ubalt.edu)), **Should Sociologists Be Concerned with Developmental Epidemiology? The Epidemiological Outlook of Impaired Attention/Encoding Abilities and the Connection to Environment and Memory/Metamemory Processes.**

¶ Considers the possible disadvantages created by the interaction of biological & sociological variables, & how their embedment into the social structure influences cognition during both gestation & early childhood. Cumulative findings suggest that socioenvironmental determinants act on the fetus & the life course before birth. As an example, growing evidence supports the notion that a lack of adequate prenatal care, as well as alcohol consumed during pregnancy, impact on maternal health & in turn, may act on the developing fetus to impair putative mechanisms that support both attention & social behavior. Postnatally, poverty & poverty-related conditions, eg, exposure to lead, parasitic infestation, malnutrition, as well as cultural & educational deprivation, & lack of intellectual & social stimulation, may cause developmental gaps; thus, retarding attention/encoding abilities & the quality of memory & metamemory processes that are significant predictors of childhood aggressive behavior (Rebok & Tsamis, 1997), increasing the risk of labeling accordingly. It is suggested that greater focus be placed on these exogenous antecedents in an effort to lower the risk of early maladaptive behaviors linked to later deviance.

Tsay, Ruey-Ming (Dept Sociology Tunghai U, 407 Taiwan (tel: 886-4-3590121; e-mail: rmtsai@s867.thu.edu.tw)), **The Formation of Inequality in Taiwan's State Bureaucracy: A Positional Capital Approach.**

¶ In the context of studying the Taiwanese government's labor market,

examined are the bureaucratic structure of the civil service system & the career mobility pattern of civil servants, drawing on longitudinal data from state bureaucracy personnel files. Event-history analysis is used to explore the civil service career patterns, focusing on the effects of the posed boundary, especially the position changes in or between bureaus. After analyzing the rate of mobility to promotions, demotions, or transfers, positions that are gateways to higher positions, especially those as heads of sections/departments, are discussed. The main objective is to analyze the mobility patterns of state employees & locate the specific positions that carry higher positional capital for further mobility.

98S36302 / ISA / 1998 / 13543

Tse, Thomas (Dept Sociology Chinese U Hong Kong, Shatin New Territories (tel/fax: 852-2609-6630/2603-5213; e-mail: kctse@cuhk.edu.hk)), **Mission Impossible: A Reconsideration of Democratic Education in Schools.**

¶ Argues that the provision of democratic education is problematic because of organizational constraints rooted in an inherent conflict between a primarily authoritarian & paternalistic school context that prevents realization of democratic schools, a premise of democratic education. The basic problem with democratic education originates from the particularistic characteristics of school simultaneously as a custodial organization & teaching institute. As an organization, the school processes varied & diffuse goals that are pragmatically contradictory. Since the central concern is placed on order maintenance, moral training, & instruction, it leads to the crowding out or removal of democratic education. As a result, democratic education is secondary to moral education or reduced to teaching of formal political topics, & the scope of democratic participation in the formal curriculum is circumscribed by administrative considerations.

Tuck, Jason (School Business King Alfred's U Coll, Hampshire SO22 4NR England (tel/fax: 44-01-962-827498/512; e-mail: J.Tuck@wkac.ac.uk)), **"There's Some Corner of Foreign Field That Is Forever...England, Ireland, Scotland, Wales": Rugby Union, National Identity Politics and the Media "at Play".**

¶ Explores from a figurational perspective the complex interrelationship between sport, national identity politics, & habitus codes with particular reference to the British Isles. The significance of this relationship is addressed through an investigation into the role of the media in constructing & representing the nation through the sport of rugby union. More specifically, these processes are examined by employing qualitative content analysis of national newspapers & TV broadcasts to identify the "national habitus codes" employed by the media in relation to the terms of England, Ireland, Scotland, & Wales during the 1995 Rugby World Cup in South Africa. This investigation into the media's representations of "patriots at play" in some corner of a foreign "field of dreams" provides an interesting insight into the interlinkage between sport, the media, & national character. Findings suggest that the media, as a prominent factor in the formation of I/we & us/them identities, can both reflect & reinforce these affiliations through their portrayal of sport.

Tucker, Clyde (US Bureau Labor Statistics, 2 Massachusetts Ave NE Washington DC 20212 (e-mail: Tucker_C@BLS.Gov)), **The Proof Is in the Pudding: Measuring Micro-Level Measurement Error.**

¶ Some important indicators of social economic conditions come from asking questions of individual respondents in large national sample surveys. Because these indicators are reported at the aggregate level, error in them also has been reported at that level. Known as mean square error, it encompasses both sampling variance & bias. It may be reasonable to view sampling error as an aggregate concept, but to do so for bias would limit the ability to determine its sources. Except for sampling bias, bias is largely the result of errors in the answers received from respondents. Thus, to understand this component of bias, the size of individual-level errors must be ascertained. The conceptual foundation for measuring errors at the microlevel is outlined, & several methods for doing so are explored. Discussion covers the treatment of nonresponse in the context of microlevel measurement errors, the distributional characteristics of these errors, & the relationship between microlevel errors & macrolevel measures of bias.

98S36305 / ISA / 1998 / 13546

Tuete, Conrad Geir, Hansen, Svein Kolstad & Nilsson, Thorbjørn (Ostfold Coll, Halden Norway (tel/fax: 69-18-54-00/63-41)), **Ideas**

of Political Leadership among Local Full-Time Politicians in Swedish and Norwegian Municipalities.

¶ Data obtained via qualitative interviews are used to explore ideas of leadership among 26 local full-time politicians in 20 Swedish & 6 Norwegian municipalities. Focus is on these politicians' theoretical & practical understanding of their role & of political leadership, as well as their relations to actors in their environment. Responses are discussed in reference to new public management & political professionalization, considering whether those political leaders who adhere to these new approaches are better fit for leadership than those who do not. Findings show how politicians go through an informal learning process & internalize informal knowledge that is adjusted for the political world. An important aspect of this informal knowledge is the ability to handle ambivalences & to successfully adjust self-presentations according to different situations. This whole learning process can be seen as a process of professionalization: the individual develops a sense of belonging & identity according to special values that demarcate him/her from other professions & from part-time politicians. It is suggested that full-time politicians tend to take the role of a person who stands above party politics in contrast to the typical partisan politician who represents the opinions of his/her party. In this respect, the ideas of the full-time politicians seem to be in accordance with an elitist view on political representation.

Tuillier, Jean-Noël (Laboratoire Printemps U Saint Quentin, F-78047 Guyancourt France [tel/fax: 33-1-39-25-5651; e-mail: jean-noel.tuillier@printemps.uvsq.fr]), **Le Modèle de la compétence dans l'industrie sidérurgique française** (Competence Model in France's Steel Industry). (FRE)

¶ Since the early 1980s, to reach a new productivity & performance level, France's steel industry adopted human resource practices to go with the development of new technology in the steel-making process. The use of problem-solving teams, incentive pay, better training & screening of workers, & flexibility in assigning job tasks to workers are the characteristics of the greatest steel firms' practices. Innovative tool management as *logique compétence* is also created to develop flexibility remuneration & mobility of workers. Focus here is on the practices of the competence model, especially on the relation between it & the social technical labor value. Examined are how the practices of competence model change the social value in the steel industry technical labor contents & how the steel technical labor changes the practices of the model. Data drawn from a 4-year study in France's biggest steel plant prove the interaction between the model & the technical work contents. Studying the competence model in the plant, demonstrated is how this "tool management" creates new relationships between technicians & managers.

Tulle-Winton, Emmanuelle & Mooney, Elizabeth (Dept Social Sciences Glasgow Caledonian U, G4 0BA Scotland [tel/fax: 44-141-331-3330/3439; e-mail: e.tulle-winton@cal.ac.uk]), **The Government of Old Age: Can Foucault Help Us Theorise Old Age?**

¶ Attempts to test new ways of understanding & theorizing old age by drawing, partly, on Foucauldian analysis. Focus is on the government of populations & of the self in a changing welfare climate that shifts the responsibility for care in & financing of old age from the collectivity to the individual. A cultural shift toward lifestyles & representation, greater social & economic opportunities accompanied by growing social inequalities, & new forms of morality provide the backdrop for the experience of becoming & being old in fin-de-siècle GB. Recent theoretical developments in sociology have problematized dominant cultural, social, & academic constructions of aging & the ways old people make sense of their aging selves against these normalizing processes by highlighting the relevance of structural processes on the experience of old age. The corporeality of old age is perhaps less explicitly theorized, especially in its link with practices of regulation. Based on empirical data collected in the course of life-history interviews with a sample of recently retired people living in Glasgow, Scotland, two related processes are explored that capture the complexity of identity construction in later life in a changing cultural context: (1) the relationship between the corporeal dimension of being old & practices of regulation, & (2) resistance to forms of regulation that are constitutive of old age & their payback for the maintenance of a competent self.

98S36308 / ISA / 1998 / 13549

Tumanyan, Eteri G. (Instit Linguistics Russian Academy Sciences, Bol. Kislovskij Per. 1/12 103009 Moscow [tel/fax: 07095-290-52-68/

05-28; e-mail: @iling.msk.su)), **Sociolinguistic Factors for the Same-Type Changes in the Ethnic Languages of the Former Soviet Union.**

¶ In the different ethnic languages of the former USSR, same-type linguistic changes have taken place, mainly in lexicon, but also in syntax & phonetics. These changes can be observed in all literary languages irrespective of their structural, typological, or genetic characteristics. They began emerging in the 1920s & increased until the USSR was separated into the independent states in 1991. These new linguistic elements cannot be treated as a result of the spontaneous immanent development of the ethnic languages, as they emerged simultaneously in typologically & structurally different languages. Their emergence was caused by the spread of Russian as a means of interethnic communication & by the formation of the common fund of neologisms on the basis of the Russian language, accepted by all languages. The latter was necessitated by the need to reflect societal, economic, & political changes in Soviet society. Together with borrowings from the Russian vocabulary, some phonemes & elements of Russian syntax noncharacteristic of the ethnic languages have penetrated them. Thus, same-type linguistic changes in different-system languages are the result of the influence of the extralinguistic factors.

Turcotte, Paul-André G. (Faculté sciences sociales & économiques, 21 rue D'Assas F-75270 Paris Cedex 06 France [tel/fax: 33-1-44-39-52-89/86]), **Sacré, utopie et compromis chez Engels** (Sacred, Utopia and Compromise in Engels). (FRE)

¶ After examining the relationships between the terms sacred, utopia, & compromise, their meaning(s) in the work of Friedrich Engels on early Christianity & its latter history are explored. Though Engels's argumentation presents some clear limitations, it supports theoretical suggestion, eg, if the sacred is the opposite of everyday life, it has some links with utopia & not with compromise. This one finds out if religion appears as an dialectical relationship between the sacred & what looks like the opposite. Religious institutions are obliged to deal with utopias & compromises in the larger society.

98S36311 / ISA / 1998 / 13552

Turmel, André & Hamelin, Louise (Dept sociologie U Laval, Quebec G1K 7P4 [fax: 418-656-7390; e-mail: andre.turmel@soc.ulaval.ca]), **The Social Construction of Childhood in the Medical Field.**

¶ Examines the changing status of childhood in the first half of the 20th century, defining status as (1) the emergence of the child as a social actor on the national scene in a given society, which was a tremendous change from the previous period where children were considered miniature adults deprived of most rights & responsibilities; & (2) a reconfiguration of what was childhood, particularly a normal child, because this question of normalcy was not previously relevant, with the child considered an irresponsible creature under the tutorship of an adult. Systematic investigation that began in the latter 19th century had a certain number of effects, the most important being the changing definition of the normal child, accomplished via a classification by age categories. Are these tendencies linked to the schema of regularity, scheduling, & norms? Another effect revolved around the question of legitimation: which way was the best for rearing children, & above all, for rearing normal children? The Canadian literature is analyzed for how it redefines the normal child.

98S36312 / ISA / 1998 / 13553

Turner, Bryan S. (Deakin U, Geelong Victoria 3217 Australia

(tel/fax: 61-52-272805/272301)), **Towards a Heideggerian Sociology of the Body.**

¶ Argues that Martin Heidegger's distinction between the ontology of being & its specification by beings provides a way into the contradictory problem of the radical contextualization of the body in time & space, & the universal dimensions of human existence. In the critique of metaphysics, Heidegger distinguished between the vertical dimension of being & the horizontal specification of social being by economic, social, & political relations. By concentrating on being as defined by social roles, we have lost a capacity to analyze being. This is translated into an argument that what all human beings share is their ontological (vertical) frailty as beings-unto-death & their sociological (horizontal) precariousness in institutional terms. This model of vertical/horizontal interaction between existential frailty & sociological precariousness has to be complicated by the development of biological technologies that promise/threaten to transform human beings into hybridized machine-bodies. Considered is whether these genetically reorganized bodies will be moral agents with a capacity for empathetic understanding of frailty.

98S36313 / ISA / 1998 / 13554

Turner, Terisa E. & Brownhill, Leigh (Dept Sociology/Anthropology/Political Studies U Guelph, Ontario N1G 2W1 (tel/fax: 519-824-4120/837-9561; e-mail: terisatu@uoguelph.ca)), **Gendered Class Analysis and Social Movements in Africa.**

¶ Argues that there is a specific gendered relationship characterizing ecology social movements in Africa, which is elaborated as a kind of class relationship. Drawing on case studies of Nigeria & Kenya based on 1980s-1990s fieldwork, it is suggested that women take the lead, a set of men support the women, & this supportive group breaks with the majority of local men who continue to remain in some form of deal or alliance with capital & its national representatives. The Kenya focus is on the refusal of women in smallholder agriculture to produce export crops & their insistence (with some success) in producing food & locally traded crops under their own control. The Nigerian case focuses on the Ogoni struggle against Shell & shows some surprising initiatives by women, especially old women, in forging a functional resistance movement.

Turpin, Pierre (Laboratoire travail mobilités URA CNRS U Paris X, F-92001 Nanterre Cedex France (tel/fax: 33-1-40-97-59-15/71-35; e-mail: Pierre.Turpin@u-paris10.fr)), **Printemps 1968-Hiver 1986, deux mouvements internationaux des jeunes scolarisées** (Spring 1968-Winter 1986, Two International Movements of Educated Youth). (FRE)

¶ A comparative analysis of the youth movements of 1968 & 1986, based on research conducted by the French Centre national de recherche scientifique, reveals that a new, militant political generation appeared in the 1980s. From the viewpoint of the political sociology of social movements, the 1980s were just as interesting as the 1960s. In both cases, one can see the emergence of new value systems & the implementation of new practices & questioning of traditional formations. How the youth of these two periods acted to motivate social movements & call into question the stability of the state is considered. It is concluded that the study of their collective actions could encourage the formation of a new subdiscipline of sociology—the sociology of destabilization.

98S36315 / ISA / 1998 / 13556

Turuntsev, Evgeny (Institut Socioeconomic Studies Population Russian Academy Sciences, Leninsky Prospekt 14 117901 Moscow (e-mail: isepp@glas.apc.org)), **Multidimensional Estimates of Deprivation in Transitional Russia.**

¶ Differences in the ability of former-Soviet people to adjust to the new economic situation have caused changes in the social position of members of the main professional groups, many of whom now live in poverty in Russia. However, income & expenditures of households are not always a reliable way of assessing well-being in a situation of mass income concealment under the prevalence of the shadow forms of economy. Wider estimations are made, taking into account such components of the economic potential of household as disposable dwellings & property. The main sociodemographic groups of Saint Petersburg are investigated, based on a 1997 sociological survey of 900 households.

98S36316 / ISA / 1998 / 13557

Tvetkova, Galina (Russian Academy State Administration, Prospekt Vernadskogo 84 Moscow (tel/fax: 95-436-0409/434-5700)), **Globalization: Regions, Meso-Regions, and the World System.**

¶ Explores the process of Russian transition, which has many problems in the construction of global-local relations, specifically between federal administration & local authorities. At the same time that the federal administration declares an increase in the rights of local authorities, it tries to diminish these rights. This situation raises debate about whether the status of local authorities is part of the state administration or an independent part of the society's global power. There are many unsolved positions in the economic & financial spheres—eg, the federal administration collects all taxes & does not want to give this right to the local governments. In this situation, local authorities cannot solve many local problems. Drawing on case studies of these conflicts, recommendations are made for the improvement of global-local relations.

98S36317 / ISA / 1998 / 13558

Twigg, Julia (Dept Social & Public Policy U Kent, Canterbury CT2 7NZ England (tel/fax: 001604-1-250-7216499/01227-824014; e-mail: J.M.Twigg@ukc.ac.uk)), **Bathing the Body: Giving and Receiving Intimate Care.**

¶ Explores the nature of intimate care from the perspective of both the caregivers & disabled people who receive it, focusing on the provision of bathing in the community & the meaning of such activity in the lives of older people. Specifically, it is examined how help in bathing, which involves nakedness, touching, & the management of the body, is negotiated. Direct body work has traditionally been seen as demeaning to the worker & yet, it is also a source of power. The power relations that underlie intimate care are examined, exploring how the bodies of older people become sites of conflict between the desires of workers to control their work, enhance their status, resist the social & cultural meanings that present their work as demeaning & of low status, & the wishes of older disabled people to retain autonomy in the face of interventions that may deny adulthood & expose them to the controls of others.

98S36318 / ISA / 1998 / 13559

Tyyskä, Vappu (Ryerson Polytechnic U, Toronto Ontario M5B 2K3 (tel/fax: 416-979-5000/5273; e-mail: vtyyska@acs.ryerson.ca)), **Émigré Feminism: Challenging the Boundaries of "Western" Feminism.**

¶ Influenced by postmodernism, questions of generalization & specificity, or homogenization & diversity, have become a constant theme in the analysis & theorizing about women, gender relations, & feminism. This discussion holds two curiously contradictory trends. On the one hand, in deconstructing the category "woman," feminist scholars have provided important insight into the diversity of women's experiences worldwide, while, on the other hand, the category "Western" in relation to women & feminism in the global context, has gained a generalized prominence that holds an essentializing tendency & denies differences. Informed by studies of "émigre," "transnational," & "nomadic" feminisms, discussed here are some of the challenges & contradictions posed to the category "Western feminism" in light of materialist vs ideological schools of feminist theory.

Udry, J. Richard (U North Carolina, Chapel Hill 27516 (tel/fax: 919-966-2829/6638)), **Biosocial Foundations of Gendered Behavior.**

¶ Shows how to integrate biological & social models explaining sex differences. New approaches are introduced to measuring within- & between-sex behavior differences in masculinity & femininity that return to the classical bipolar roots of these concepts. The currently overwhelmingly dominant & politically fashionable conceptualization of masculinity & femininity as orthogonal is abandoned.

98S36320 / ISA / 1998 / 13561

Uhalde, M. (LSCI Centre national recherche scientifique, F-75017 Paris France (tel: 33-1-40-25-10-87)), **Les Dimensions sociales de l'internationalisation des entreprises** (The Social Dimensions of the Internationalization of Firms). (FRE)

¶ It is contended that numerous sectors of economic activity are currently experiencing movements concentrating firms at an international level. Groups form quickly as a result of buybacks by foreign companies & organizations that implant businesses into new countries with strong growth potentials. Recent data from a multinational concrete company are analyzed, revealing that this type of economic development strategy raises new questions about the forms of social integration in firms. Attention is given to problems involving the technomanagerial modernization of factories strongly influenced by the logic of localism & empiricism, tensions between global integration procedures & local dynamics, & re-

search into a new form of group management situated between centralization & decentralization. It is shown that international businesses strongly marked by the local dimensions of markets can serve as original social models through the adoption of the principle of flexible rationalization, which rests on the existence of culturally interfacing actors capable of elaborating compromises between different dynamics. How these actors allow the adaption of cultural regulation to businesses in international contexts is investigated.

Uhlemann, Thomas (Institut Medical Sociology U Hamburg, D-20246 13 Federal Republic Germany [tel/fax: 49-40-4717-3397/4947; e-mail: Uhlemann@Uke.uni-hamburg.de]), **Genome Analysis and Insurances.**

¶ Examines how the development of genetic engineering is received by German insurance companies. The social insurances & the federal government's Parliament-Commission see a new danger for further risk distinctions based this time on genetics, because insurance companies will make use of every possibility to embrace so-called low risks, & exclude high risks in their cost calculation. Considering the imminent deregulation of the insurance sector, discounted premiums & risk money in the private sectors affect the member structure & structure of contributions of the social insurances. A bonus/high-risk premium system devised by private health insurance on the basis of (voluntary) genome analysis would increase the difference in risk categories between the clients of social & private health insurance companies. Basic principles of solidarity of the German Social Safety Networks would be endangered if such a far-reaching genetically argued risk distinction came to fruition.

Ungerson, Clare E. (U Southhampton, SO17 1BJ England [tel/fax: 1703-594808/593859; e-mail: ceu@soton.ac.uk]), **The Production of Marketised Intimacy: Getting Cash for Care.**

¶ The analysis of care in welfare states suggests that (1) large parts of care are produced in the household & hence, are unpaid, & (2) care is gendered. Here, cross-national data are used to argue that care in the household is increasingly commodified; ie, the dualism between paid & unpaid work appears to be breaking down as far as care is concerned. Part of this blurring of the boundaries occurs as a result of some welfare states, notably the Federal Republic of Germany & Austria but also, in a minor way, the UK, introducing the facility for users of care services to opt for cash instead of services, so they can directly employ personal assistants. Qualitative data are provided on paid personal assistants who are employed directly by disabled people to provide them with services, arguing that the "marketization of intimacy" will become an important element in care relationships & in the future of paid & unpaid work.

Upadhyay, Vrajindra (Dept Humanities & Social Sciences Indian Instit Technology, Delhi 110016 [tel: 68-61-977; fax: 91-11-6862037; e-mail: upadhyay@hss.uitd.ernet.in]), **The Role of NGOs in Enhancing Women's Involvement in Natural Resource Planning in India.**

¶ While it is widely acknowledged that women's participation is crucial for the success of schemes designed for the protection of the environment, traditionally, women have been excluded from the decision-making process. However, in the last few decades, women's involvement in both decision making & implementation of schemes has increased significantly. Nongovernmental organizations (NGOs) have made a special contribution in this regard. Their intervention is particularly meaningful, whereas state efforts have not been very successful. Here, the role of two major NGOs in enhancing women's involvement in decision making regarding environmental protection & unsustainable use of natural resources in India is explored.

Ure, George (California Pacific U, Seattle WA 98107 [fax: 001-206-782-4336; e-mail: gune@nwlink.com]), **Periodicity of Phenomena related to Longwaves. When Do Coincident Factors Become Proof of Existence?**

¶ Are Kondratieff long waves an economic phenomena, or are there underlying social, technological, environmental, & resource causes? Proposed here is a matrix approach to the analysis of long-wave phenomena. A review explores social & human needs phenomena & observes that social changes may either lead or lag economic changes. Several matrices are explored & data fitting to the matrices proposed. A simple economic matrix focused on supply & demand is compared to a social matrix, & an integrated economic & human needs matrix is outlined & fit to observed data. Standards of proof are reviewed & some predictions based on the integrated matrix proposed.

98S36326 / ISA / 1998 / 13567

Uriely, Nathan (Ben Gurion U Negev, Beersheva IL-84105 Israel [fax: 972-7-6472920]), **Working Tourists in Israel and Their Encounter with Hosts.**

¶ The general notion of the tourist role is usually separated from work-oriented activities, though contemporary theories point toward a growing breakdown in the separation of work activities from the consumption of tourism. Here, tourist-host contact is examined across three groups of working tourists (total N = 388) in Israel: volunteers in kibbutzim, working travelers in moshavim, & working travelers in the city of Tel-Aviv. Focus is on encounters between these working tourists & their hosts as determined by the meaning that the former assign to their work situation. Survey data reveal that (1) while the volunteers in kibbutzim grasped their work situation as part of their tourist experience, members of the other two groups perceived it as means to continue their travel; & (2) volunteers in kibbutzim were less likely to hold positive attitudes about their hosts than members of the other groups. These findings suggest that working tourists who perceive their work as part of their tourist experience may hold more vague & higher expectations from their encounter with hosts than their counterparts whose motivation to work is dominated by a mercenary approach. Thus, the former are more likely to be disappointed from the encounter with their hosts than the latter.

Urquidí, Vivian Grace Fernández-Dávila (Dept Sociology U São Paulo, 05508-900 SP Brazil [tel/fax: 5511-8183331/2112096; e-mail: vuquidi@hotmail.com]), **Narcotráfico y reinserción social en América Latina** (Drug Traffic and Social Reinsertion in Latin America). (SPA)

¶ Analyzes drug traffic as a response of social reinsertion of a few sectors with a consolidated organization system, & specific moral values, control styles, & legitimacy, in the context of the globalized postindustrial economy & crisis of the nation-state. New economic politics, however, bring social segmentation, differentiated markets, & the exclusion of many people from formal alternatives to work, who then must find a means of social reinsertion. These are social sectors that actuate out of formal markets of work or, directly, out of the proper law, but present moral principles, behavior rules, & specific levels of legitimacy. In this state, the drug trafficking is a common, but essential, occurrence. Coca producers' movements, organization in drug cartels, & their command actions in urban peripheries are major features of such organized crime workers.

Urze, Paula, Brandão Moniz, António & Osório, A. Luís (UNINOVA-CRI, Portugal (e-mail: pcu@uninova.pt)), **Toward the Virtual Enterprise Paradigm: A Cultural and Technological Information Network.**

¶ The Internet/Web represents a paradigmatic technological fast change from a situation where cooperation was difficult to one in which it can be achieved by accessing very cheap tools like CHAT, electronic mail, etc. The sociology of work must overcome new challenges to clarify the behavioral changes resulting from this new virtual enterprise paradigm. A virtual enterprise can be seen as a structure organized around multicultural (eg, Sainseaulieu) & multilingual working groups (technicians, operators, office workers, managers, engineers, etc.) that need to cooperate to achieve convergent goals in the face of different contractual rules, rules inside enterprise nodes, & management structures & the resulting decision-making shortening. The success of the introduction of the virtual enterprise paradigm is also strongly dependent on personal commitment, & the complexity of social dependencies beyond internal enterprise borders brings new challenges. It is necessary to define a new social framework modeling all characteristics of effective cooperation among persons belonging to different enterprises that may be located in different countries. This new paradigm brings a new set of exigencies at the societal, organizational, & individual levels. Described here are technological facilities enabling wide cooperation among heterogeneous cultures & sociological factors conditioning & influencing the changes on enterprises when they enter in the virtual world. The European Esprit Project PRODNET II is used as a case study.

Vaa, Mariken (Nordic Africa Instit, PO Box 1703 SE-75147 Uppsala Sweden (tel/fax: 46-18-56-22-00/69-56-29; e-mail: Marikan.Vaa@nai.uu.se)), **Housing Policy after Political Transition: The Case of Bamako, Mali.**

¶ Like many other sub-Saharan countries, Mali, since independence in 1960, has experienced rapid growth of its capital city, Bamako. In the 1960s, most of the demand for low-cost housing was met by densification of central wards, & later by construction without permission on unserviced sites. Initially, these unauthorized settlements were located near villages at the city periphery, where people got permission to build from the village chiefs. Later, land & housing became commercialized, & a flourishing, clandestine land market emerged. The authorities' policy toward this process of "pirate urbanization" was long one of laissez-faire, as it had been toward the unauthorized settlements. After the transition to a democratic government in 1991, the new regime launched a more active policy of urban development & housing; a revised master plan for the city of Bamako was adopted in 1995. Large, unbuild areas are being made ready for construction, partly in the form of subsidized, serviced sites. Some unauthorized settlements are being demolished, others are being upgraded. Focus here is on the process of implementation of the new urban policy & how it has affected access to housing for the poor, both in new settlements & in upgraded, older ones. The most advantageously located of these are undergoing a total process of renewal, rather than upgrading, with gentrification as a result. Former tenants from this settlement were located & asked to comment on their fate in the new housing market.

98S36336 / ISA / 1998 / 13577

Vaggione, Juan M. (U National Córdoba, 5000 Argentina (tel: 54-51-33-2059; e-mail: VaggiJ01@newschool.edu)), **Argentina and the Political Parties at the Municipal Level. Between a High Legal Institutionalization and a Low Social Legitimization: The Emergence of "Outsiders".**

¶ Analyzes a paradox in municipal politics in the Province of Córdoba, Argentina. On the one hand, a strong legal institutionalization of political parties has been taking place since the reinstallation of democracy (1984); on the other, there has been a decrease in the social legitimization of political parties (almost 50% of the surveyed population expressing no confidence in political parties, & around 40% very little confidence). This situation has brought the emergence of leaders in several municipalities that present their candidacies as outside the traditional political parties. Survey data obtained from these leaders & from the general population are used to explore reasons for their emergence.

98S36337 / ISA / 1998 / 13578

Vaillancourt Rosenau, Pauline (Health Policy Instit U Texas, Houston 77225 (tel/fax: 713-500-9491/9493; e-mail: prosenau@utsph.sph.uth.tmc.edu)), **Organising Technology Assessment in Health Care: The Cases of Quebec, France, and the U.S..**

¶ Health technology assessment, diffusion, adoption, & utilization practices can be organized to save scarce medical technology resources & assure access of the un- & underinsured to appropriate health services. The cases of Quebec, France, & the US are studied to shed light on how this goal can best be reached, describing their health, outlining their respective experiences with medical technology assessment, & offering observations linking health system characteristics & health policy to medical technology assessment, diffusion, & utilization. Differences concerning the management of medical technology on a range of policy-relevant di-

mensions are discussed, including health system structure, attitudes about planning vs market competition, government regulation, balance between decentralization & centralization, needs of the individual & those of society, linkages between technology assessment & policy making, & the importance of medical technology assessment for medical practice.

98S36338 / ISA / 1998 / 13579

Vaillancourt, Jean-Guy & Perron, Bertrad (Dept sociologie U Montréal, Quebec H3C 3J7 (e-mail: vaillje@ere.umontreal.ca)), **Green Leaders' Attitudes in Quebec and in Costa Rica: A Typology and a Comparison.**

¶ Data collected via questionnaire on the human dimensions of environmental issues, administered to 193 leaders of green groups in Quebec, are used to generate a typology of those leaders. The analysis attempts to assess (1) attitudinal variables; (2) concern regarding technological risks, considering the carrying capacity of various milieus (air, water, & soil pollution) & global environmental problems (global warming, ozone depletion) & their geodemographic consequences; (3) opinions & attitudes concerning possible solutions to these problems & ways to achieve environmental quality; & (4) level of knowledge concerning climate change & opinions about humans' responsibility for the emergence of this global problem. The usefulness of the green activist typology is tested by applying it to leaders of Quebec international solidarity groups (N = 19) & leaders of green groups in Costa Rica (N = 23). Leaders of international solidarity groups, in their concern with environmental issues, are occasionally in contact with leaders of green groups, but their cooperation is fragile. An attempt is made to see if Quebec leaders of solidarity groups are closer in their social & environmental attitudes to Quebec green leaders than to Costa Rican green leaders. Given the more recent history of the green movement in Costa Rica & the insistence there on the conservation of natural resources, one would expect Costa Rican green leaders to be less radical on some issues than Quebec green leaders. However, because (1) Costa Rica is a Third World country, (2) its environment is more strongly threatened by powerful economic forces (multinationals), & (3) green leaders there are influenced by a more radical membership & by international groups, these leaders could be just as radical, or even more so, than Quebec green leaders.

Vaitkus, Mark A. (Dept Behavioral Sciences & Leadership US Military Academy, West Point NY 10996 (tel/fax: 914-938-5642/2236; e-mail: lm6306@exmail.usma.edu)), **Estimating Individual and Unit Morale in the United States Army.**

¶ Large-scale surveys conducted by the Walter Reed Army Inst of Research in the 1980s asked soldiers to estimate their own & their company's levels of morale. While these measures proved to be intercorrelated, they appeared to be measuring different phenomena. Not only were personal morale means higher than those for the company measure & displayed less variance when aggregated at the company level, but in factor analyses & path-analytic models, they showed correlational & predictive patterns that indicated associations with measures of self-esteem & psychological well-being, rather than measures of social solidarity & cohesion, which were better linked to the company measure. It is concluded that, while a deductive approach has certain merits with respect to theory building, for empirical studies it is best to focus on the everyday use of such terms as morale whether referring to individuals or groups.

Vajda, Júlia & Kovacs, Eva Judit (Instit Sociology ELTE U, H-1446 Budapest Hungary (tel/fax: 36-1-266-5222/3860; e-mail: H13073VAJ@ELLA.Hu)), **What Does the "Mogen David" Mean?**

¶ Presents the story of Kati, a Catholic who lives in a mixed marriage with János, who comes from a Jewish holocaust survival family, & their son, Benjamin, who attends one of the Jewish schools established in Hungary immediately after the political transition in 1989. To address the problem of identities in mixed marriages, narrative life-story interviews were conducted with both parents. Analysis shows that Kati, as a result of her fight with her father, identifies herself with the Jewishness of her husband, whereas János, not being able to assimilate the holocaust losses of his family—tries to forget his Jewishness. Their son, growing up in this conflict, cannot find person, religion, or culture with which to identify. At one point, not allowed to verbalize a question about Judaism, Benjamin draws a "Mogen David" on the wall of their house, just being built. The different responses of his parents reveal what this symbol can mean in this complicated situation. Through analysis of this case, the problem

of different "realities" is addressed, & an attempt made to reconstruct the different languages used to bridge the communication & cultural gap between the two parents & their son.

Valdmanis, Janis (U Latvia, Riga LV-1050 (tel/fax: 371-7-227696; e-mail: latv@ac.lza.lv)), **Linguistic Aspects of Integration of Latvia in the European Union.**

¶ Addresses external & internal relations between the Latvian language & languages of the external world, or those used in Latvia, examining the sociolinguistic position of the languages & of the social groups using them. External relations can be inward (the impact of the languages dominant in Europe on the position of Latvian) or outward (the role of Latvian in the rest of Europe). The most relevant & complicated process of the inward direction is the impact of English on the languages & position of the languages used in Latvia. This impact has four aspects, with both positive & negative consequences. Some consequences have a direct impact on internal relations, the most important of which are relations between Latvian & Russian. These relations, both legally & generally, fall into a majority-minority relationship. The case of Latvian is complicated & differs from those of other languages, in that it is an indigenous majority language & experiences some of the problems of minority languages elsewhere.

Valencia, Judith (U Central Venezuela, Caracas (tel/fax: 258-9630454/2636080; e-mail: elanderl@etheron.net)), **The Debt: A Strategic Device.**

¶ Debt is a strategic power device. Focus here is on how it operates in Latin America in relation to politics & mechanisms of capitalist control. This power strategy is commanded worldwide by financial capital, which is trying to force illegality, tempting governments to associate in a politics of fait accompli. Transnationals participate hand in hand with banking partners in the commercial & multilateral financing of the loans. In this strategy, debt is not designed to be cancelled, but to be transformed—through the politics of privatization—into international investment in a nonfrontier territory. This effort is characterized here.

98S36345 / ISA / 1998 / 13586

Valenzuela, Eugenia (Dept Sociology Saint Thomas More Coll U Saskatchewan, Saskatoon S7N 0W6 (tel/fax: 306-966-8947/8904)), **Religion y desarrollo: las iglesias pentecostales en México (Religion and Development: Pentecostal Churches in Mexico). (SPA)**

¶ A critical evaluation of the most predominant theoretical models in the study of Latin American Pentecostalism, with focus on the neoliberal argument of David Martin & the modernistic approach of Jean-Pierre Bastian. It is contended that their concepts are significantly different in their

analysis of religious phenomena & their interpretations of the impact of Pentecostalism on the region's processes of social change. Both accounts agree, however, that Protestantism has the ability to offer modernization & progress to the region. It is argued that both tendencies have had an important theoretical impact in sociological & anthropological studies undertaken in the last decade. Proposed is an alternative methodology based on a neo-Gramscian theoretical framework that allows the localization of religious phenomena in the field of ideology & revitalizes the debate on religion's function in contemporary society.

98S36346 / ISA / 1998 / 13587

Valladarej, Licia (Instit U Pesquisas Rio de Janeiro, 22260-100 RJ Brazil (tel/fax: 55-21-5378020/2867146; e-mail: vallada@ibm.net)), **The Favela Revisited: The Poor from Community to Violence.**

¶ Favelas in Rio de Janeiro, Brazil, have existed 100+ years, standing as a permanent symbol of spatial segregation. Within the last 50 years, a concise body of literature on urban poverty has developed &, in the 1990s, there has been a resurgence of scholarly interest in the study of the favela. Here, the main studies undertaken in such neighborhoods are drawn on to examine (1) different conceptions of poverty; (2) ideas about the causes of poverty & who the poor are; (3) how to mitigate or solve the problems of poverty; & (4) the representation of spatial segregation, living conditions, & the way of life of the poor in the favelas. These issues are related to the sociological debate on poverty & social change in Latin America, & new trends of interpretation are considered, especially the association between favela, poverty, & violence. New paradigms of poverty such as social exclusion seem to reinforce the idea of the favela as a violent neighborhood. It is predictable that the image of the favela will be identified with that of the US ghetto, although other research trends indicate that favelas are still specific, though diverse & changing.

98S36347 / ISA / 1998 / 13588

Valtonen, Kathleen (U Helsinki, SF-00014 Finland (e-mail: kathva@utu.fi)), **The Juncture of Immigrants with Civil Society, the State and the Market: Studies in Finland and Canada.**

¶ Examines the interface & interaction sites of immigrants & society, drawing on a study of resettling actors in Finland & Canada & the societal systems they encounter. Individuals & groups relate to society on many levels & in many roles, eg, immigrants' relations with the labor market & the welfare system are clearly priorities. Yet, in the interest of sustainable & long-term integration, immigrants must achieve a position of negotiation with equity-promoting & policy-making institutions. Also, they must establish a stake in the mainstream society.

98S36348 / ISA / 1998 / 13589

Van Bockstaele, Jacques, Van Bockstaele, Maria & Godard-Plasman, Martine (Centre socioanalyse, 21 rue de Javel F-75015 Paris France (tel/fax: 33-01-42670773/45775912; e-mail: bockstal@ccr.jussieu.fr)), **Simulation as Approach to Analytic Intervention and Research Hypotheses on Cognition/Action.**

¶ In current social intercourse, systems in structural or institutional interaction produce & maintain a stream of mental representations, ie, evidence of an entrenched link between cognition & action directed to an object. Intra-/intergroup relations contribute to produce mental representations in the agents, which are organized into a hierarchy determined by the risk or support they symbolize. Action influences cognitive activity & limits its externalization. Action-simulation-cognition was developed in response to demands for intervention by complex organizations. This approach rests on the research hypotheses many times tested, while developing socioanalytical research & practice of sociological simulation. These hypotheses originate from the observation that representations, images, & connections deriving from & specifying action are reproducible, ie, transferable. It is then possible to simulate these elements, so that they become available for clinical intervention. A situation of interaction between different hierarchical & functional levels—as proposed in an action-simulation-cognition technical apparatus—launches a flow of representations, both individual & categorical, about social relations, about what is at stake technically & politically, etc. The confrontation between categories generates opinions; approaches to categorical relations; management of power relations; & treatment of technical items; knowledge, & experience, thus developing the dynamics of imagination & memory relevant to action.

98S36349 / ISA / 1998 / 13590

Van Bockstaele, Jacques, Van Bockstaele, Maria & Godard-Plasman, Martine (Centre socioanalyse, 21 rue de Javel F-75015 Paris

France (tel/fax: 33-01-42670773/45775912; e-mail: bockstal@ccr.jussieu.fr)), **Pour une observation de l'action in situ (The Case for the Observation of Action in Situ).** (FRE)

¶ In social systems, the observation of action is as much an activity of the agents as it is of the observers, both of which are equally members of a system. Self-observation by the agents integrates the representations made of the observers, & action policies are shaped by this reciprocity. The observer-observed relationship is central to research in the social sciences due to the major importance of intergroup relations in social life. The complexity of the processes involved in interaction tenders the direct, real-time observation of action difficult without the aid of simulation. An exploration under the conditions of simulation of intra-intergroup relationships was carried out to investigate the effects on the cognition & behavior of experimental groups. Variables were transposed for the purpose of exploring action clinically that involved two social entities coming together with a common task & different functions. This produced cognitive responses & behavioral reactions characteristic of a specific level of analysis. It was hypothesized that (1) as soon as intergroup relations are established or perceived as such, cognition & behavior are actively & socially determined; & (2) the boundaries of any social entity are dynamically self-delimited. The possibility of clinical simulation derives from the reproducible (transference) & substitutable (symbols) nature of social phenomena & processes. This simulation requires the identification of the elements, processes, & interactions at play that, when brought together, reproduce a collective intentionality of the social system, which arises when intergroup relations have been established. Organized as such, the coupled system enables each entity to explore & analyze its position on the progress of action during clinical simulation, ie, social analysis.

98S36350 / ISA / 1998 / 13591

Van de Gorr, Anne Geerte (Dept Sociology Utrecht U, NL-3524 CK Netherlands (tel/fax: 31-302534748/302534405; e-mail: A.vandeGoor@fsw.ruu.nl)), **Generations and the Usage of Technological Appliances.**

¶ Investigates whether usage & possession of appliances (eg, entertainment & domestic appliances) in one's formative period influences their usage & possession, in adulthood, drawing on data from 1,000 persons, ages 30-80, in the Netherlands. Individuals raised in periods when there was little technology available learned few technological skills early in life & are expected to have more problems in using appliances later in life. Earlier birth cohorts are expected to buy & use appliances less often later in life, whereas individuals raised in later periods will have acquired more skills in their formative period & are expected to have more skills in handling them & are thus, expected to use & buy them more often later in life. This implies dependency relationships between generations of technology users. Further, it is expected that future elderly are better able to handle technology &, as a consequence, future elderly may be able to live independently at a higher age than current elderly. This is especially relevant because populations are graying in Western countries, which increases social costs for elder care for later generations. Possession & usage of appliances are obviously influenced by factors other than individual skills. Following consumer behavior theory, income & time budgets & social factors are incorporated in the model.

Van de Werfhorst, Herman G., De Graaf, Nan Dirk & Kraaykamp, Gerbert (Dept Sociology Nijmegen U, NL-6500 HE Netherlands (tel/fax: 31-24-36123-21/99; e-mail: H.vandeWerfhorst@maw.kun.nl)), **Intergenerational Transmission of Resources: A Conditional Logit Analysis of the Effect of Parental Resources on Field of Education in the Netherlands.**

¶ In a time when 33% of the population obtains a higher education, it is claimed that the relation between family background & the field of education people choose is an important new form of social stratification. By affecting the educational field of their children, parents see their own resources reproduced. It is hypothesized that (1) children are relatively likely to have the same field of education as their parents, (2) children from lower-class backgrounds & the economic elite are likely to attend fields with large labor market prospects (economics, technical fields), (3) children from the cultural elite are likely to choose fields where cultural resources play a relatively dominant role (social-cultural & artistic fields), & (4) the effects of parental background on field of education are stronger for younger than older cohorts. With regard to this last hypothesis, it is suggested that field of education now serves as a means for social distinction. The hypotheses are tested with conditional logit models, combining the advantages of linear regression & loglinear analyses. Results show that children are relatively likely to enter the same fields of education as their father, especially in teacher education, humanities, agriculture, medicine, & law.

98S36352 / ISA / 1998 / 13593

Van den Broek, Andries (Social & Cultural Planning Office, PO Box 37 NL-2280 AA Rijswijk Netherlands (tel/fax: 31703-198780/963000; e-mail: andries.van.den.broek@scp.nl)), **From Professionals to Amateur? Despecialization in Daily Life.**

¶ In the course of a process generally depicted in terms of functional differentiation or specialization, certain activities or tasks became characteristic of certain social roles. Child care, eg, was the domain of housewives, & men & women of high culture were not involved in common leisure pursuits. While this process may still proceed in the domains of science & economics, the reverse appears to hold for day-to-day life. People more often combine professional work & child care, while a night on the town may involve both an opera & dancing. Borrowing from an anthropologist's perspective (Linton, 1937), an attempt is made to analyze the extent to which activities constitute roles. Using a longitudinal approach, it is assessed whether such roles stand their ground or disintegrate.

Van den Hoonaard, Deborah K. (Gerontology Program Saint Thomas U, Fredericton New Brunswick E3B 5G3 (tel/fax: 506-452-0486/0547; e-mail: DKVDH@StThomasU.ca)), **Moving from the Couples' World: Widows' Strategies That Express the Social Meaning of Widowhood.**

¶ Explores the social meaning of widowhood for older Canadian women from their perspective, drawing on in-depth interview data from 29 women, ages 53-87, who lost their husbands in the previous 5 years & observation of a 6-week workshop for widows. It is found that one of the most challenging aspects of life for widows is relationships. Widows' characterization of the social world as a "couples' world" indicates the extent of this challenge, particularly in three areas: (1) Women find they are "dropped" by many of their friends. This is at least partially explained by the absence of norms surrounding what behavior widows can expect from their friends. (2) Relationships with adult children are affected by unclear expectations. (3) Widows need to find new ways to interact with men regardless of whether they want to remarry. Focus is on the strategies women use to move from a couple identity that had seemed effortless & natural to being single, which requires conscious effort on the part of the widow & those who interact with her.

Van der Heijden, Hein-Anton (U Amsterdam, NL-1012 DL Netherlands (tel/fax: 31-20-525-4501/2006; e-mail: vanderheijden@pscw.uva.nl)), **Environmental Movements, Ecological Modernisation and Political Opportunity Structures.**

¶ During the last 25 years, environmental movements in many northern countries have become highly institutionalized. Resistance against the existing social order has made room for a pragmatic acceptance of that order, & a compliance with ecological modernization as a tool to achieve a more sustainable environment without fundamentally changing the existing social structures. Environmental movements in many Third World countries, however, persist in articulating their struggle against environmental degradation with resistance against oppressing social structures. An integration of northern & southern strategies could be found in the conceptualization of ecological modernization as a locally determined cultural politics, the content & success of which are heavily dependent on the specific political opportunity structure in an individual country. These ideas are elaborated & operationalized by applying them to empirical research results from a number of First, Second, & Third World countries.

Van der Loo, Hans & Mante-Meijer, Enid A. (Centre Policy & Management Utrecht U, Netherlands (tel: 31-30-538101; e-mail: h.vanderloo@pobox.ruu.nl)), **Rethinking Daily Consumption of ICT. Cyberconsumers across Generations and Cultures.**

¶ Semistructured mail survey data from members of a European research network, their partners, & children (total N = 36) indicate that attitudes toward technology in general are strongly related to the so-called "spirit of the time." Dividing consumers that are active in today's marketplace into three broad cohorts of "matures" (born 1909-1945), "boomers" (born 1946-1964), & "X-ers" (born post-1965), contradicts the view that the delimitation can be made between older & younger persons—the latter being the most enthusiastic users of information & communication technologies (ICTs). People ages 40+ are much more inclined to own devices like fax & e-mail & use services like call waiting, call answering, telebanking, & teleshopping. The notion that cohorts who

matured in the 1960s & 1970s are suspicious of modern technologies is confirmed. As with most things, boomers have looked at technology as a character in a morality play, seeing bad- & good-technologies; they strive to avoid the bad & embrace the good. When it comes to the actual use of ICTs in the domestic sphere, boomers cannot only be labeled as early adopters, but also as heavy users. Having grown up in a period in which technology has become part of the fabric of everyday life, the youngest cohorts have a mixed & pragmatic attitude toward technology. They are not extremely technologically minded, but neither are they very negative about technological developments; technology is more or less taken for granted. X-ers seem to be much more selective in consuming new technologies than often is assumed.

Van der Veen, Romke (U Twente, NL-7500 AE Enschede Netherlands (tel/fax: 31-53-4893914/4894734; e-mail: r.j.vanderveen@bsk.utwente.nl)), **Social Security, Solidarity and Social Cohesion. The Social Consequences of the Managed Liberalization of the Dutch Welfare State.**

¶ Analyzes important changes in the Dutch welfare state in the last 15 years as a process of "managed liberalization," in which the state intensifies its grip on social & economic processes by sharpening legal rules, administrative procedures, & organization in the sphere of social policy, & at the same time, risks are partially privatized & incentives are introduced for the administration & citizens. This process can have unanticipated consequences, ie, the risk of exclusion & of market corporatism; how & to what extent these manifest themselves are explored. Concentrating on social security policy, the changes that have taken place are analyzed from the perspective of social solidarity & social cohesion, highlighting the causes for & the consequences of managed liberalization. Theoretically & empirically, it is shown that changes in social security policy can have negative as well as positive consequences for solidarity & cohesion; factors that determine these consequences are explored.

98S36357 / ISA / 1998 / 13598

Van der Zouwen, Johannes & Van Dijkum, Cor (Free U Amsterdam, NL-1081 HV Netherlands (e-mail: zouwen@scw.vu.nl)), **Towards a Methodology for the Empirical Testing of Complex Social (Cybernetic) Models.**

¶ The application of cybernetics for the description of social systems is a great opportunity for the social sciences to comprehend the complexity of the ever-evolving, time-dependent character of social phenomena. Cybernetic concepts such as system, feedback, & nonlinear relations between variables are, in principle, very helpful in analyzing the dynamic character of those systems, & many promising models can be found in the literature. The empirical foundation & validation of such models of social systems is, however, still problematic. One of the reasons for this is that social science methodology is not yet ready to give clear answers to the complicated question of how the empirical validation of complex models can be done in a scientifically acceptable way. Another reason is that the creators of complex sociocybernetic models value theories to infer sociocybernetics models more so than they care about the empirical validation & falsification of their models. Explored here are (1) How can the concepts & explanations of modern cybernetics be translated to sound reasoning in the logic of model building & incorporated in transparent complex models of social phenomena? (2) What problems & solutions can sociocybernetics & social scientists share when they both try to validate complex models in a scientifically acceptable way? & (3) How can those complex models be made plausible, & empirically testable, in a methodologically adequate way?

98S36358 / ISA / 1998 / 13599

Van der Zouwen, Johannes & Van Tilburg, Theo (Dept Social Research Methodology Vrije U, NL-1081 HV Amsterdam Netherlands (tel/fax: 3120-444-6871/6810; e-mail: zouwen@scw.vu.nl)), **Testing Causal Hypotheses with Data Collected in Standardized Panel Interviews.**

¶ Testing causal hypotheses using true or quasi-experimental designs requires successive measurements of the same subjects (Ss) with the same instruments; only then can differences between successive responses given by the same S be safely interpreted as changes with respect to the variables concerned. However, the procedure of standardized repeated measurement may hamper the quality of the data because of the observed reactivity of survey interviewing on Ss' opinions & attitudes, especially the occurrence of Socratic, fatigue, & memory effects on responses given in

subsequent interviews. When Ss are interviewed in subsequent panel-waves by different interviewers (which often cannot be avoided in practice), differential interviewer characteristics & interviewing strategies may distort the validity of the estimations of change. These threats on data quality are studied using data from a large longitudinal study of 2, 096 older adults in the Netherlands. Suggestions are formulated to prevent or correct for misestimating of actual change in Ss over time.

98S36359 / ISA / 1998 / 13600

Van Dijkum, Cor & Lam, Niek (U Utrecht, NL-3584 CS Netherlands (tel/fax: 31-30-253-4911/5797; e-mail: c.vandijkum@fsw.ruu.nl)), **The Complexity of Education Systems.**

¶ Explores education systems in industrial societies. Optimists argue that citizens have good personal reasons to demand education for their children. In modern societies, there is room for one's self-development, & optimists stress that the demand for more education is always the result of many individual choices. However, pessimists do not believe in individual choices & face the system dynamics of the educational system; the demand for education is an autonomous phenomenon. Because of the complexity of educational systems, even government measures will be idle in the long run. Here, to explore both points of view, a computer model of the educational system is presented to plausibly reconstruct the complexity of the development of the educational system. Analysis supports the pessimistic perspective.

98S36360 / ISA / 1998 / 13601

Van Dijkum, Cor, Lam, Niek & Ganzeboom, Harry (Utrecht U, NL-3584 CS Netherlands (tel/fax: 31-30-253-4911/5797; e-mail: c.vandijkum@fsw.ruu.nl)), **The Dynamic of Educational Systems.**

¶ Industrial societies differ regarding their educational achievements. Usually, the more a country has developed, the higher its level of popular education rises. To explore the cause of this phenomenon, a computer simulation that mimics educational system dynamics over time is developed. The model has population, educational, choice, & macro submodels & feedback loops: the output of the educational submodel feeds the population submodel, which, in turn, is connected to the educational submodel. The rate of feedback is determined by the choice submodel. With this model, the consisting rise of the level of popular education can be reconstructed in a plausible way. However, since a reconstruction can never equal a sound explanation, a second objective is to experiment with the computer simulation to get a better understanding of the dynamics & limits of the simulation.

98S36361 / ISA / 1998 / 13602

Van Eijck, Koen & Van Rees, Kees (Faculty Arts Tilburg U, NL-5000 LE Netherlands (tel: 31-13-466-2652; e-mail: c.j.m.vEijck@kub.nl)), **Reading Matters: Testing the Omnivore-Univore Thesis for Dutch Readers 1975-1995.**

¶ Cultural classifications, in the sense of categorizations of cultural goods & practices, are often abused in cultural stratification studies to classify people involved with these goods & practices. The issue is discussed of how to use cultural classifications without begging the question of their definition & without claiming to have an Archimedean point permitting the classification of cultural goods. Latent class analysis of time-budget data from the 1975 & 1995 Dutch Time Budget Surveys (Ns = 1,300 & 3,000 respondents, respectively), focusing on reading in leisure time (75 reading items), provides an empirical test of Peterson & Simkus's (1992) omnivore-univore thesis with respect to actual reading behavior. The main questions are whether present-day Dutch society is composed of clearly distinguishable categories: nonreaders, reading omnivores, & reading univores, & to what extent reading patterns have changed over the last 2 decades. Subsequently, a multinomial logit model is used to test hypothesized causal relationships between kinds of reading behavior & a number of background & intervening variables.

98S36362 / ISA / 1998 / 13603

Van Gijsegem, Veerle (Faculteit Rechtsgeleerdheid Vrije U Brussel, B-1050 Belgium (tel/fax: 32-2-629-24-40/26-37; e-mail: secrscri@vnet3.vub.ad.be)), **Law and Inequality.**

¶ Formulates some considerations concerning inequalities between victims of crimes acting as plaintiffs claiming damages in the Belgian legal system. After examining the role of the plaintiff claiming damages, & initiating a criminal procedure, the plaintiff's role during the criminal investigation & during trial is discussed. Focus is on the possibilities of plaintiffs claiming damages to have the obtained judgment executed through the intervention of a bailiff. It is shown that differences in finan-

cial means of crime victims lead to a number of inequalities in their possibilities to have the crime-related damages repaired through the system.

98S36363 / ISA / 1998 / 13604

Van Huyssteen, Elsa Fransina (Dept Sociology U Witwatersrand, Johannesburg 2050 South Africa (tel/fax: 27-11-716-3420/339-8163; e-mail: 029elsa@muse.arts.wits.ac.za)), **"Rampant Populists" and Other "Charlatans": Constitutionalism, Power and Civil Society in South Africa.**

¶ The new South African Constitution introduced an era of constitutionalism that resulted in a profound shift in the distribution of power, particularly between government & the judiciary. Constitutionalism talks about power, democracy, rights, & justice in ways significantly different from those that dominated during the liberation struggle. It is therefore crucial for the consolidation of democracy & the creation of a new patriotism that the Constitution, constitutionalism, & the Constitutional Court achieve sustainable legitimacy among the majority of South Africans. Several challenges to this process have, however, emerged, including mobilization of ethnic identities, use of the Constitution to protect elite interests, a high crime rate coupled with public perception of the Bill of Rights as a haven for criminals, tension between justice & reconciliation, & frustrated grassroots expectations of the transition. These do not constitute rejection, but rather, a challenge to dominant conceptions of constitutionalism & its implications for the distribution & exercise of power. Investigated here is the struggle over the meaning of constitutionalism, focusing on strategies to legitimize constitutionalism & its implications, including attempts to discredit & demonize dissenting voices. Further, the possibility of creating spaces for the legitimate expression of differences in the face of the nation-building imperative is explored.

98S36364 / ISA / 1998 / 13605

Van Krieken, Robert (Dept Social Work/Social Policy/Sociology U Sydney, New South Wales 2006 Australia (tel/fax: 61-2-9351-2641/3783; e-mail: robertvk@mail.usyd.edu.au)), **The 'Stolen Generations': On the Removal of Australian Indigenous Children from Their Families and Its Implications for the Sociology of Childhood.**

¶ Outlines the results of a study of the development of the policy of Aboriginal child removal in Australia, its antecedents, its surrounding philosophy & politics, & the emergence of a more critical understanding of it in recent years. Implications of this history for the sociology of childhood are considered.

98S36365 / ISA / 1998 / 13606

Van Krieken, Robert (Dept Social Work/Social Policy/Sociology U Sydney, New South Wales 2006 Australia (tel/fax: 61-2-9351-2641/3783; e-mail: robertvk@mail.usyd.edu.au)), **Civilizing Processes and the Tensions between Continuity and Change: How Different Are We Really?**

¶ The members of modern Western cultures see their identities & forms of social relations as historically unique, both in everyday, commonsense understandings of what it means to be a person in contemporary societies, & in social-scientific studies of Western culture & society, especially in history & sociology. However, there are arguments against an overemphasis on the uniqueness of the modern habitus, & against the picture that is then drawn of the Other, ie, the inhabitants of previous eras & other cultures. Here, assessed are arguments against seeing the modern, civilized habitus as radically different from that of previous historical epochs & non-Western cultures, & for a greater sensitivity to the continuities in the historical development of social relations & psychic structures. Hans-Peter Duerr's critique of Norbert Elias & the ensuing debate are discussed to identify the underlying conceptual issues running through historical & comparative sociology that this debate brings to the surface.

98S36366 / ISA / 1998 / 13607

Van Leeuwen, Marco H. D. & Maas, Ineke (Netherlands' Economic Historical Archives, Cruquiusweg 31 NL-1019 AT Amsterdam (fax: 31-20-6160401; e-mail: MLE@iisg.nl)), **Ascription and Achievement in 18th-Century France.**

¶ Several questions are addressed, drawing on a comprehensive dataset of rural France, 1670-1829. What options were open to men & women in rural societies to improve their lives? What role did family & individual characteristics play in the explanation of differential life chances? Was the pattern of ascription & achievement stable over time? The main aim is to investigate the intergenerational transmission of status from a multivariate perspective. It is found that not only the association between father's occupation & occupation of son & son-in-law, but also other

family & individual characteristics (eg, gender, rank order at birth, number of siblings, literacy, age at marriage, etc) affected life chances. Examined in conclusion is the extent to which intergenerational transmission of status differed according to gender & rank order at birth.

Van Logchem-Pasman, Maja (Social Research Methodology Documentation Centre Erasmus U Rotterdam, NL-3000 DR Netherlands (tel/fax: 31-10-408-2195/452-9510; e-mail: hoogenboom@srm.eur.nl)), **Documentation and Cyberspace: Information Services in Transformation.**

¶ For 30 years, a database of references to literature on social research methodology, statistical analysis procedures, & computer software has been built at Erasmus U in Rotterdam (Netherlands). Books, articles, & catalogs are screened & selected by scientific information specialists of the SRM (Social Research Methodology) Documentation Centre. Relevant literature is abstracted & indexed with the help of a "Thesaurus of Social Research Methodology." In the beginning, the database was published several times a year in "Bibliographies" & "Abstract Bulletins." Extensions of computer applications in the social sciences also provided opportunities for computer-mediated documentation. Technical problems with online connections led to the production of a CD-ROM in co-operation with Sage Publishers. Developments in information dissemination through the Internet have initiated the establishment of the SRM-Site, which provides pointers to electronic information sources on social research methodology & statistics. Searching facilities for the literature database are now being developed on the Internet to provide the possibility of consultation by anyone, at any time, worldwide. Potentials & limitations of information superhighways for documentation are discussed.

98S36368 / ISA / 1998 / 13609

Van Meter, Karl M. (LASMAS-CNRS, 59 rue Pouchet F-75017 Paris France (tel/fax: 33-1-40-51-85-19; e-mail: bms@ext.jussieu.fr)), **New Technologies in Sociological Research, Documentation, Publishing and Teaching.**

¶ Describes a special session of the ISA (International Sociological Assoc) World Congress of Sociology, with representatives from the US, Canada, GB, Germany, the Netherlands, & France who have been instrumental in setting up some of the first professional sociological web sites (the ISA, the American Sociological Assoc), electronic journals (*Sociological Research Online*, *Solaris*, *Bulletin de méthodologie sociologique*), & extensive sociological research resources (the Dutch Social Research Methodology Documentation Centre, the British Question Bank, the German Social Science Information Center, the Canadian "Wired Suburb" Project, the French BMS-RC33 Listserv).

98S36369 / ISA / 1998 / 13610

Van Meter, Karl M. (LASMAS-CNRS, 59 rue Pouchet F-75017 Paris France (tel/fax: 33-1-40-51-85-19; e-mail: bms@ext.jussieu.fr)), **Computer Literacy Gap: BMS's On-Line Experience and ISA's E-Mail Questionnaire.**

¶ The quarterly scientific journal, the *Bulletin de méthodologie sociologique* (BMS), founded in 1983, soon started working closely with the International Sociological Assoc (ISA) Research Committee "Logic & Methodology" (RC33), & began publishing the "RC33 Newsletter" twice a year. Since its creation, the BMS has used e-mail as a means of communication between editors, authors, & readers, which includes the sending of entire research articles. Besides its use to assist scientific publication, e-mail has been used as an RC33 organizational tool, particularly for preparing conferences & prospecting for new members. In 1994, RC33 published *Internet Culture and Its Three Levels* at the same time as the BMS & RC33 were moving from level 1—use of e-mail—to level 2—use of systematic information exchange by Listserv, FTP, & other procedures. In early 1995, the ISA e-mail survey questionnaire was developed, results of which are presented here for the first time. BMS experience & the ISA e-mail survey reveal the existence of an astonishing computer literacy gap, that is only now being addressed. This gap continues to exist, & other surveys show that it now extends into level 3 of Internet culture—use of the World Wide Web—where passive browsers contrast with active movers.

98S36370 / ISA / 1998 / 13611

Van Nieuwenhuijze, Otto (Govert Flinckstr 144, NL-1072 EN Amsterdam Netherlands (tel: 3120-6733654; e-mail: 100517.1411@compuserve.com)), **The Simplicity of Complexity.**

¶ There are many models that show that complexity is but a form of sim-

plicity. Here, some of the many models available are described, focusing on their relevance in social systems. It is argued that the transcendental nature of such models makes them so valuable in interdisciplinary settings & in environments separated by differences in paradigm. This makes clear why they are rarely fully understood & so difficult to accept. That they are very relevant is shown by a specific model, ie, the human body, which serves not only as a blueprint for system integrity (in the way the cells & DNA are always attuned to the whole), but also, inversely, for the way humans have a place in society.

98S36371 / ISA / 1998 / 13612

Van Oorschot, Wim & Halman, Loek (Tilburg U, NL-5000 LE Netherlands (tel/fax: 31-13-4662794/4662370; e-mail: w.j.h.voorschot@kub.nl)), **The Poor, Are They to Blame or to Pity? An International Comparison of Popular Explanations of Poverty.**

¶ The readiness to help others in need depends strongly on the degree to which people believe that neediness is beyond needy peoples' personal control. An important question for understanding welfare state solidarities is, therefore, the explanations that people have for the existence of poverty, ie, whether they emphasize internal (blame) or external (pity) factors. International comparative data from the 1990 European & World Values Survey, for various European Union & Organization for Economic Cooperation & Development countries reveal that differences between countries in the degree to which the public think that the poor are to blame or to pity are related to differences in prevailing cultural (religious, individualism vs collectivism, materialism vs postmaterialism), political (Left-Right), & structural (incidence of poverty) characteristics, as well as to type of welfare state.

98S36372 / ISA / 1998 / 13613

Van Otterlee, Anneke (Dept Sociology U Amsterdam, NL-1012 CE Netherlands), **Paradise Won or Lost? Technology and the Transformation of the Edible Nature in the 20th Century: Actors, Ideals and Interdependencies.**

¶ In the 20th twentieth century, food in Western industrialized countries has fundamentally changed, as compared to earlier periods. Good food for everybody, measured by quantitative & qualitative standards, has been utopic. In the 20th century, the Land of Cockaigne has become a reality, as a result of the efforts of several groups of actors, foremost of whom are entrepreneurs, technologists, & scientists. However, at the dawn of the new century, the other side of the coin has become manifest. Technological processing & preservation (of a mechanical, chemophysical, & biotechnological nature) have resulted in a supermarket supply that is remote from the formerly well-known, because close, surrounding edible nature. Eating technological food has become an ambivalent thing. Here, the ideals of the different groups of actors involved in this development are exposed, & the outcome of their plans in the 20th century is attributed to their interdependencies. Varied historical sources are used & implications drawn for the next century.

98S36373 / ISA / 1998 / 13614

Van Rij, Coen & Blom, Ursula (MuConsult BV, Postbus 2054 NL-3800 CB Amersfoort Netherlands (tel/fax: 31-33-465-50-54/461-4021) mucen@pi.net)), **Social-Culture Developments and Mobility in the Netherlands.**

¶ Examines whether emancipation, population aging, shrinking household sizes, & extension of one's duties or responsibilities affect mobility in the Netherlands, drawing on data from five diary-based time-use studies conducted 1975-1995. Analyses show that mobility has increased since 1975, in particular, the number of car movements. Important differences are found between cohorts (or generations) greater than those over the time span. Every new generation has a higher mobility demand than the preceding generation. This is an important aspect of the aging of the population because the next generation to reach pensionable age (born after WWII) will have a higher mobility demand than the present generation. The effect of the extension of one's duties is declining. Single people or people who are living together (without children) have higher mobility. Emancipation has a positive effect. In particular, women with part-time jobs make more trips. They often have to combine working & household (or care) activities. The consequences of these findings for future developments are discussed.

Van Steenberg, Bart (Dept ASW U Utrecht, NL-3508 TC Netherlands (tel/fax: 31-30-253-5472/4733; e-mail: B.vanSteenbergen@fsw.ruu.nl)), **New Perspectives on a Global Cul-**

ture.

¶ New options for a global culture are developed & existing options criticized. In exploring the type of global culture that may be expected, clusters of oppositional answers with a certain elective affinity can be distinguished: homogeneity-heterogeneity, unity-diversity, integration-fragmentation, & convergence-divergence. Also considered are how such processes take place &, especially, whether & to what extent there is a center (or even a hegemon) from which that new culture is disseminated. The (related) dichotomies here are center-periphery, centralization-decentralization, & top down-bottom up. Based on this, a matrix with four options can be constructed: Where I = center x homogeneity/unity, II = center x diversity, III = no center x homogeneity, & IV = no center x diversity. The present discussion on a global culture is dominated by the controversy between options I & IV. Option I represents the notion of a global culture based on a hegemon (mostly the US & sometimes Western civilization) that imposes its values & norms on the rest of the world. Postmodernists seem to show affinity with option IV, a highly fragmented global culture. Here, the one-sidedness of this discussion is criticized & options II & III are explored. Option II is based on the notion that Westernization does not necessarily lead to homogeneity & dominance; on the contrary, room for diversity & pluriformity is an inherent aspect of Western culture. Option III represents the idea of more or less spontaneous (bottom-up) global development toward more unity in the cultural realm. Empirical evidence in the form of emerging institutions is presented to support these two options. Moreover, the debate between the oppositional options II & III is argued to be more interesting & fruitful than the present (dominant) debate between options I & IV, because it leads to less polarization & to a more peaceful integration.

98S36375 / ISA / 1998 / 13616

Van Tatenhove, Jan P. M. & Arts, Bas J. M. (Dept Environmental Policy Sciences, PO Box 9108 NL-6500 HK Nijmegen Netherlands (tel/fax: 31-24-361-5654/1841; e-mail: J.vantatenhove@BW.KUN.NL)), **Environmental Policy Arrangements in the Global Age.**

¶ The agenda of environmental problems is set on different levels, eg, the UN, the European Union, & nation-states, & also in interregional coalitions. To understand new directions in environmental politics, one must look at processes of policy making that exceed the nation-state model, eg, globalization. Focus is on the multiplicity of environmental policy arrangements in contemporary environmental politics, arguing that there is a shift from more rule-directed arrangements to a combination of rule-directed & -altering arrangements. The former are made in the context of the nation-state model, & the latter in new coalitions between governments, nongovernmental organizations, & business, in which actors have the possibility to define the rules of policy making, while power relations have changed. The multiplicity of environmental policy arrangements & the different sites of power are illustrated on the basis of four case studies: (1) agroenvironmental policy, (2) infrastructural projects, (3) climate change policy, & (4) biodiversity policy. The analysis leads to an evaluation of possibilities of public participation & governance in environmental politics.

Van Willenswaard, Hans (IN/I Foundation, PO Box 11514 NL-1001 GM Amsterdam Netherlands (tel/fax: 31-20-62-58294/40503; e-mail: ini@antenna.nl)), **Green Livelihood in the Middle East: A New Approach to Agrarian Development.**

¶ Middle Eastern countries have been making an effort to adopt the European model of making & consuming food. This approach has contributed to problems that derive from overuse of artificial fertilizers, desertification, & alienation of both food producers & consumers. It is argued here that an alternative model of food production is possible in the Middle East. Characteristics of the proposed model include development of food self-sufficiency in local areas & the production & utilization of organic fertilizers produced locally, as well as education for restraining consumerism trends. The discussion is supported by reports on concrete examples of green livelihood from several countries.

98S36377 / ISA / 1998 / 13618

Vanclay, Frank (Charles Sturt U, Bathurst New South Wales 2795 Australia), **Farming Styles in Australian Agriculture.**

¶ Examines the extent to which farming styles exist as a heuristic device but are not very useful in actually classifying farmers. Extension discourse proves to be hegemonic, at least in Australian farming communities, & social desirability & other factors mean that there are difficulties

in identifying styles. Styles that are identified are more likely to be local cultural mythology rather than local praxis or habitus; still, diversity in agriculture exists & must be explainable. Case studies with farmers offer insight into explanations for this diversity.

98S36378 / ISA / 1998 / 13619

Vandelac, Louise (Dépt sociologie U Québec, Montreal H3C 3P8 (tel/fax: 987-3000/4638; e-mail: vandelac.louise@uqam.ca)), **Ingenierie et mutations de l'Être et de l'espèce. Menaces environnementales à la fertilité, production techniciée de vivant et faillité relative des dispositifs éthiques et sociaux** (Engineering and Mutations of Being and Species. Environmental Threats to Fertility, Technical Production of the Living, and the Relative Failure of Ethical and Social Measures). (FRE)

¶ It is argued that under the impact of environmental threats to fertility, the stakes of biopower, reproductive technology, & genetic engineering, human beings are progressively reduced to their biological expression & breeding. How this impacts the definition of species & even the conception of humanity is discussed, along with the relative failure of democratic debates & certain evaluative & social plans & the insignificance of ethical plans. The suspected effects of endocrine impostors associated with certain contaminants on animal life & human health & the explosion of reproductive technology are addressed. It is argued that research on reproductive technology & ethical plans calls into question the technical capturing of life & its effects of symbolic disintegration. If this research emphasizes the need for adequate plans of evaluation & critical analyses of technology's reductive & mechanistic representations, it also highlights the demands of a new epistemology of breeding.

98S36379 / ISA / 1998 / 13620

Vandenbergh, Frederic (Dept Human Sciences Brunel U, Uxbridge Middlesex UB8 3PH England (tel/fax: 44-1895-274000/203018)), **A Metacritical Reading of Theories of Reification.**

¶ The concept of reification is shown to be the central concept of German sociology, from Karl Marx to Jürgen Habermas. Reification is not a simple concept, however, but a "paired" one, in which the Marxist & Kantian conceptions of critique enter into a dialectical tension. If the concept is used in the Weberian-Marxist tradition to refer to the alienating autonomization of social structures, it is used in the neo-Kantian tradition to criticize the hypostasis of concepts & the naturalization of the social world. It is contended that a metatheoretical reading of the theories of reification that critically analyzes their ontological & epistemological presuppositions allows one to adequately formulate the criteria that a realist & hermeneutically sensitive critical theory should satisfy: it should be able to take into account the autonomization of social structures without hypostasizing its concepts.

98S36380 / ISA / 1998 / 13621

Vander Straeten, Raf (Utrecht U, NL-3508 TC Netherlands (tel/fax: 31-30-253-3910/7731; e-mail: r.vanderstraeten@fsw.ruu.nl)), **Sociocybernetics, Socialization, Education.**

¶ The concept of "socialization" is used to analyze relationships between individual & society. This concept & that of education indicate that individuals have to interiorize the values, norms, & knowledge forms on which the continuance of society depends. This classic meaning is questioned here, tracing the consequences of a hypothesis formulated by Heinz von Foerster: the more an element of a system acts "trivially" (ie, predictably), the weaker its influence on the global behavior of the system. As von Foerster stated it metaphorically, individuals who act trivially will feel more alienated, because they will not recognize themselves in their group's activities. Inversely, individuals have a greater impact on the group, & are less alienated, the more they act nontrivially, in the sense of nondeterministically. Perspectives for a reconsideration of the concepts of socialization & education are outlined by elaborating on two consequences of this hypothesis. (1) Relations between the values that guide an individual's activities & the social values that socialization & education are expected to transmit to assure individual & social well-being do not have to be simple & rigid; differences in this regard account for processes of social evolution. (2) The particular lay-out of classrooms (one teacher, several pupils) with their apparatus of tests seems to provoke a trivialization of individuals; but one might also suspect that this constellation invites deviant activities of pupils who oppose the processes of trivialization (youth cultures). Intentional socialization creates its own side-effects.

Vander Velden, Lee & Chalip, Laurence (Dept Kinesiology U Maryland, College Park 20742 (tel/fax: 301-405-2493/314-9167; e-mail: lv3@umail.umd.edu)), **Audience Reaction to the Olympic Games: Winter 1992 through Winter 1998.**

¶ Examines consumer behavior regarding the Olympic Games, Winter 1992-Winter 1998, via five separate studies. Separate questionnaires were designed for the Summer & Winter Games to ascertain overall interest in the Olympic Games as compared to other major sporting events, specific interest in the Summer & Winter Games, & attention to individual events. Demographic characteristics identified those who watched the Games, how often they watched, what events they followed, & their motivations for following specific events &/or the Games in general. The patterns of consumption investigated include identification of the media sources used, time spent watching the Games on TV, & whether viewers made special arrangements to watch. Finally, respondents answered several questions pertaining to the structure of the Olympic Games & their media presentation. Focus is on results pertaining to the motivations for following the Olympic Games, including differences between viewer motives for the Winter & Summer Games as well as the overall trends among US viewers since the end of the Cold War.

Vanreusel, Bart & Taks, Marijke (Faculty Physical Education & Physical Therapy Katholieke U Leuven, B-3001 Belgium (tel/fax: 32-16-32-90-00/31-16-32-91-96; e-mail: bart.vanreusel@Dok.kuleuven.ac.be)), **Sport for All? A Critical Appraisal of 25 Years of Active Sport Democratization.**

¶ Examines the active development by public authorities of large-scale programs for the enhancement of physical activity & sport, commonly labeled "sport for all," using system theory as a theoretical framework. Developed is a model of sport-for-all conceptions that distinguishes explicit, idealized sport-for-all conceptions, eg, enhancement of individual health & well-being, from implicit, neglected conceptions, eg, impact on civil society. It is argued that the sport-for-all ideology has overemphasized & idealized the explicit conceptions that commonly support such programs; however, the impact of implicit conceptions has been underestimated. Outcomes of these implicit conceptions often contradict the basic aims of the sport-for-all movement. Empirical data on sport for all development is used to support this argument. It is concluded that the sport-for-all concept needs to be tuned to its original aims. Updated sport-for-all conceptions are proposed.

98S36384 / ISA / 1998 / 13625

Vanstapel, Maryse (Ringlaan 22, B-3900 Overpelt Belgium (tel/fax: 32-11-64-23-45)), **Hemp: Pros and Cons.**

¶ A discussion of the pros & cons of hemp shows that the rejection & forced alienation of hemp users is an injustice. Examined are (1) the origin of the word "hemp"; (2) the historical economic role of cannabis/hemp; (3) its role as a renewable resource for use in navigation in textiles, oil for lamps, material for construction, to fight diseases, etc; (4) its legality; & (5) its racism-associated prohibition. Although researchers say that moderate use of excellent cannabis is not dangerous, the black market of bad cannabis causes tremendous damage. Reliable information must be distributed.

98S36385 / ISA / 1998 / 13626

Vargas Sanchez, Gustavo (U Nacional Autónoma México, CDA de Claveles N 4 Bis Col Torres de Potrero 01840 DF (tel: 585-17-23; e-mail: gvargas@economia01.economia.unam.mx)), **Effects of NAFTA on the Small and Company Medians in Mexico.**

¶ Qualitatively analyzes the effects of the North American Free Trade Agreement (NAFTA) on the small & company medians in Mexico. The structure of exports to Canada, emphasizing the transformation of this sector in the last 20 years, is described. It is found that exports to Canada are concentrated in chapters 87, 85, & 84 of the classifications of this country. Growth in other chapters is evident & attributed to NAFTA. Characteristics of industries in Mexico associated with commercial flows to Canada & elsewhere are examined: the automobile, motors, electronic, chemical-petroleum, & textile industries. Focus is on changes in the production & employment of small & company medians according to type of market & organization of the companies. It is concluded that NAFTA has facilitated & favored transnational & large national companies. The requirements of quality & technology in the international market are not covered by the small companies. Exit is associated with insertion in the supplier networks, which depends on type of market, organization, & technology.

Vargas-Hernández, Jose & González-García (School Public Administration Carleton U, Ottawa Ontario K1S 5B6 (tel/fax: 613-520-2547/2551; e-mail: jvargas@ccs.carleton.ca)), **The Meeting Again Mexico-Canada and Its Implications. Some Initial Results and Potentialities upon NAFTA.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Suggests that the North American Free Trade Agreement (NAFTA) offers opportunities for cooperation, mutual knowledge, & understanding between Mexico & Canada. Both suffer from strong economic dependency on the US, which is increasing under NAFTA. It is argued that, at some point, Canada & Mexico will realize the range of possibilities they face & will be able to consolidate an economic project, which was formally initiated in 1994. Thus, NAFTA has been a determinant factor of intensification of economic, social, cultural & environmental relations between the two nations. It is concluded that the bilateral relation under NAFTA will be beneficial to both partners, despite the evident asymmetries & dysfunctions between the two. For Mexico, NAFTA provides an instrument for achieving the goals of development, which have been interrupted for the last 2 decades.

98S36388 / ISA / 1998 / 13629

Varsa, Hannele E. (STAKES National Research & Development Centre Welfare & Health, FIN-00531 Helsinki Finland (tel/fax: 358-9-3967-2111/2201; e-mail: hannele.varsa@stakes.fi)), **Art in Development Work on Workplaces—Experiences from the Project "Combining Work and Family Life".**

¶ A 4-year research & development project in Finland called Combining Work & Family Life has produced a video & printed material & done some experimental work in the workplace. Three projects are described: (1) working with the Dept of Film & Television at the U of Art & Design in Helsinki to produce a video on fatherhood; (2) working with a graphic artist on a logo & other material useful in identifying the project; & (3) experimenting with & developing new means for practical development work with an actress & a consultant, based on results of a questionnaire. The researcher presents graphics on the results (ie, at an intellectual level) & the actress presents parts of a play that deals with different situations in the workplace (ie, at an emotional level).

Vasilyev, Vyacheslav Pavlovich (Moscow State Social U, 107150 Russia (tel/fax: 095-169-9790/8132; e-mail: is@gw.mgsu.msk.su)), **The Russian Society: System and Information Approach.**

¶ Information is explored as a type of connection between the components of a system, between the components & the system as a whole, & between the system & the environment. Information accumulated by the mass media not only reflects reality—rightly or wrongly—but also has an effect on it. Here, this “reflection-management” symbiosis is analyzed for the case of contemporary Russia, considering (1) how the social order can be conformed to the private interests of the market information subjects & (2) why the ethics of journalism are not realized in practice where the principle of freedom of speech is announced.

98S36390 / ISA / 1998 / 13631

Vásquez, María & Rodríguez, Isabel (Escuela sociología U Zulia, Maracaibo Venezuela), **Modernization and Organizational Culture: The Challenges of Globalization in Public Administration in Venezuela.**

¶ Presents preliminary results of a case study on a modernization project in public organizations in Venezuela. How modernization has been developed & shared in artifacts, values, & assumptions is measured by using Schein's organizational culture definition. Culture is the clue to creating internal integration & to share assumptions & values to bring about a sense of direction & competencies in surviving to globalization strategy. The findings point out that most of the modernization's dimensions in public organizations—eg, commitment, participation, leadership, competitiveness, productivity, quality processes, technology—are threatened by organizational culture itself, because modernization issues are driven by cultural forces in which assumptions about reality, time, truth, & human nature are different from those that claimed modernization. Only artifacts have been taken: technology, structures, & buildings. To be successful, the modernization agenda in public organizations should be redefined including how its dimensions are culturally measured. These findings are important to introduce alternative public management models, which include those critical issues, to promote change processes.

98S36391 / ISA / 1998 / 13632

Vayrynen, Kari (U Oulu, SF-90571 Finland (e-mail: kari.vayrynen@oulu.fi)), **Styles of Environmental Thinking and Environmental Economy.**

¶ Environmental problems are fundamentally disturbances in the material cooperation between humankind & nature. Consequently, environmental economy must play a central role in the analysis of environmental questions. As the economy no longer works in a sustainable way in the ecological context, it needs to be organized differently, which requires fundamental philosophical reflection about the ecological, social, & ethical possibilities inherent in various modes of environmental & economical thinking. Four fundamental styles of environmental thinking that are presented in environmental economy & policy debate are outlined: (1) scientific technological dominion over nature, (2) romantic criticism of civilization, (3) institutional criticism, & (4) educational optimism. As it is, 1 & 3 are already existing paradigms within environmental economy, while the other two, with their strong economic implications, represent powerful lines of discussion in environmental policy. The four are evaluated with the thought of turning the economy in a more ecologically sustainable direction. Fundamental changes are needed because traditional ways of thinking merely consider the symptoms of the environmental crisis, though its roots are deeply embedded in our social & cultural approach to nature, which is why we must become conscious of our actual system of virtues & their inherent environmentally sound possibilities.

98S36392 / ISA / 1998 / 13633

Veenhoven, Ruut (Erasmus U Rotterdam, NL-3000 DR Netherlands (tel/fax: 31104082102/525870; e-mail: veenhoven@soc.fsw.eur.nl)), **Quality of Life in Individualistic Society. A Comparison of 43 Nations in the Early 1990's.**

¶ In the process of modernization, Western societies became more individualistic, engendering claims that this development will create an unlivable society. Reported here is an empirical test of the claim that quality of life is poor in individualized society, based on a comparison of 43 nations in the early 1990s. Individualization is measured by three aspects: (1) moral appreciation of individualism, (2) opportunity to choose, & (3) capability to choose. Overall individualization is measured by means of expert estimates, & quality of life is measured by citizens' subjective appreciation of life as assessed in representative surveys. The find-

ings show that the more individualized the nation, the more citizens enjoy their life, suggesting that the benefits of individualization are greater than its costs. Scattergrams show a linear relationship between individualization & quality of life, revealing no pattern of diminishing returns, which indicates that individualization has not yet passed its optimum. The relationship appears to be contingent on level of education & economic prosperity: positive correlations appear only among the most knowledgeable & prosperous nations. Results suggest that the misgivings about individualization apply more to the past than to the future.

98S36393 / ISA / 1998 / 13634

Veenstra, D. René (ICS U Groningen, NL-9712 TG Netherlands (tel/fax: 31-50-3636261/3636226; e-mail: d.r.veenstra@ppsw.rug.nl)), **Within Private Schools. The Effect of the Religiousness of Students on Their Scholastic Achievement in Secondary Education.**

¶ Discusses the importance of the religiousness of students for their scholastic achievement in high school, drawing on longitudinal data on 7,500 students at 150 schools in the Netherlands to address the following questions: (1) To what extent do schools differ in the religiousness of students? (2) Does a functional community exert influence on the achievement of students? It is expected that a functional community is beneficial for students who are religious & actively involved in the community. Further, it is hypothesized that a functional community is harmful for students who are actively involved in the community, but who are not religious. It is concluded that the differences in the private sector are large. Only 9 of the 150 schools are part of a functional community. A functional community exerts a strong positive influence on the achievement of religious, actively involved students. There is a negative effect on non-religious students who are actively involved in the religious community.

Vega-López, María Guadalupe & González-Pérez, Guillermo J. (U Guadalajara, Jalisco Mexico CP 44450 (tel/fax: 52-3-6411119; e-mail: ggonzal@udgserv.cencar.udg.mx)), **Desarrollo psicomotor: el diálogo oculto entre madres e hijos (Psychomotor Development: The Hidden Dialogue between Mothers and Their Children).** (SPA)

¶ Explored how interfamily interactions govern the psychomotor development of children under age 5, drawing on in-depth interviews with mothers of 8 households in San Martín de las Flores, an urban marginal zone in Mexico, & observation records of psychomotor behavior of children inside & outside of their dwelling. Analysis indicated that between mother & child, a “system of signs” is established through which the child manifests its motor needs, & the mother assumes movement-stimulating behavior. Even when the mother is primiparous, the skill to respond to the child's needs is evident. According to the mother, this skill is developed only in contact with the child. Further, the perception of signs is influenced by what the social group understands as a sign; ie, an early motor sign may not be fully responded to if the group considers it inadequate. If the child does not send signals, the mother does not foresee stimulating motor development: thus, retarded development is observed at a later stage.

Velasco Ocampo, María Guadalupe & Lopez Perez, H. Antonio (Instit Nacional Estadística Geografía & Informática, Aguascalientes CP 20270 Mexico (tel/fax: 49-18-14-33/15-38-88)), **Population and Rural-Urban Development in Mexico.**

¶ Urbanization took place in Mexico since the 1950s, for years a primarily rural country. Here, population proportions in rural & urban areas are discussed. Six of 10 Mexicans live in localities of 15,000+ inhabitants as distinct from cities with one million inhabitants. During the past 15 years, there has also been growth in medium &/or secondary cities, with 100,000-500,000 inhabitants. Growth has also occurred in towns between 1 & 2,499 inhabitants, suggesting the polarization of localities.

98S36396 / ISA / 1998 / 13637

Vellema, Sietze (Wageningen Agricultural U, NL-6700 HB Netherlands), **Control and Technology in Philippine Contract Farming.**

¶ Examines control in the contractual production of asparagus for a division of Dole Philippines, focusing on how engineer control—in a technical & managerial sense—has difficulties materializing in the farm labor process. Discussing the logic of entering into this particular arrangement with small-scale farmers in Mindanao, it is noted that contract farming is not specifically designed to command farming & labor practices. De-

spite managers' & technicians' efforts to reshape managerial & technological control, lack of control remains a major concern. Contract farming can be seen as the sum of combined forms of control mechanisms, but, while the company is able to define the contours of production, it cannot control the individual farm; thus farming practices are not uniform as illustrated by examples of weed control & harvesting. The company's recent efforts to regain control can engender a process of externalization, which can result in a transformation to corporate farming. Discussed in conclusion is whether the social & technical conditions of asparagus growing will allow this to become a likely scenario.

98S36397 / ISA / 1998 / 13638

Venanzi, Augusto de (Central U Venezuela, Caracas 1051 [e-mail: augdeven@telcel.net.ve]), **The Concept of Poverty in Sociological Research: The Case of Latin America.**

¶ Addresses the changing nature of studies on poverty in Latin America since the 1960s, when research on the topic focused on underdevelopment & dependency theory. The major concept to emerge from the period was that of "marginality," which directed research toward living conditions in the misery belts & lack of sociopolitical participation of the population. The 1980s saw the emergence of the concept of "informality." Studies tended then to see the poor within the division of labor. In the 1990s, globalization (which in Latin America has meant increased competitiveness, macroeconomic adjustment, & heavy payment of external debt) brought with it important changes in the study of poverty. These tendencies gave rise to a specialized sociology of poverty, whose highly descriptive & quantitative character makes it difficult to put forth effective policies to combat poverty.

98S36398 / ISA / 1998 / 13639

Veneziano, Alicia (Facultad Ciencias Sociales U República Oriental Uruguay, 1385 Montevideo [tel: 059-2-4098168; fax: 05-2-4006218; e-mail: alicia@cpolit.edu.uy]), **La descentralización en el marco de la reforma política** (Decentralization in the Frame of Political Reform). (SPA)

¶ Discusses decentralization in Uruguay since the 1980s as political reform, arguing that the current framework differs from the previous decade's, focusing on the repoliticization of the city. It is contended that there are two main facets of decentralization; one represents the institutional reform of the state, concerned with sociopolitical & economic transformation; the other represents a change in management of public policy, affecting bureaucratic rationale & local level decision-making & social conflicts. It is concluded that the social sciences should move away from traditional emphasis on state institutional reform & focus on urban- & community-level actions & how they interrelate with local, national, & global political systems.

98S36399 / ISA / 1998 / 13640

Verduzco, Gustavo (Colegio México, Mexico DF CP 01000 [e-mail: gverduz@colmex.mx]), **Some Lessons from Mexican Migrations to the United States: Modern Traits versus Traditional Approaches.**

¶ Attempts to gain new insights on what theories of migration should consider in light of what is now known about migration, based on extensive research on Mexico-US migration. A synthesized view of various types of migration flows in the 20th century is developed that shows how to better understand variations in terms of different dimensions of social life—eg, temporal, spatial, economic, political, & social contexts—in the two countries. Research on Mexico-US migration expands theoretical perspectives on the migration phenomenon & challenges some traditional methods of envisioning migration. Both theoretical & methodological reflections on Mexican-US migration are offered.

98S36400 / ISA / 1998 / 13641

Verma, Neena (Dept Sociology U Toronto, Ontario M4Y 1R6 [tel/fax: 416-978-8718/3963; e-mail: nverma@chass.utoronto.ca]), **Organized Religion and Ethnonationalism: The Resurgence of Hinduism in Trinidad. A Case Study.**

¶ Examines the current resurgence of Hinduism in Trinidad & the ways in which it is fueling the larger East Indian ethnonational effort toward contesting for equal space in Trinidad's pluralistic society. The specific role of organized Hinduism is explored, along with the various mechanisms adopted by the Hindu leadership, eg, the reinvention of tradition, constructing collective memory, & claiming sacred space. It is concluded that, while the ethnonationalist movement draws heavily from the ancient Hindu tradition (its rhetoric & strategy deeply entrenched in what Anthony Smith defines as the "myth-symbol" complex), the quest for

self-identity is, in turn, changing the nature, form, & content of Hinduism in Trinidad.

Veroff, Susie, Etok, Lydia & Hunter, Jennifer ([e-mail: sveroff@minet.ca]), **Sharing of Knowledge (Issuma), Connection and Support: Inuit Women Building Community while Away at School and at Home.**

¶ Explores the diverse ways with which young Inuit women studying in Montreal, Quebec, develop a sense of community with family & friends while on foreign turf & how that connection is continued & nurtured in their home communities in the North. Related to this is the evolution of consciousness of changing women's roles in general, new strategies for the development of self-esteem, & the growing desire for autonomy & success in the school-workplace arena. Relational knowledge & participatory research form the theoretical basis for reflection on these issues.

Verpraet, Gilles (CNRS CADIS EHESS, 54 blvd Raspail F-75006 Paris France [tel/fax: 33-1-42-52-22-60/84-05-91]), **Three Ages of Urban Planning in France (1975/1995). Public Intervention, Urban Governance, Territorial Democracy.**

¶ Urban planning, as action & policy, 1975-1995, has been submitted to economic restructuring, differentiation of social spaces, & institutional decentralization. The conception of public interventionism has been re-framed between local, public, & urbanistic actions. A sociohistorical approach of planning actions & their thematics of reference & legitimacy distinguish three leading references: (1) Rationalistic planning is associated with economic modernization & direct state intervention. (2) Mediation planning is associated with planning decentralization (1982), but also with the social construction of demand by territorial groups & community actions, ie, territorial politics. (3) Differentiation planning is linked to territorial politics, economic segmentation & competition, & governance by great projects. This sociohistorical framing of planning intervention permits an explanation of some policy configurations: eg, how the successful decentralization policy & territorial politics have been challenged by the market differentiation of urban spaces. The new structuration of metropolitan governance combines differentiation planning & the new rationalization processes of networking.

98S36403 / ISA / 1998 / 13644

Vidal, Gregorio & Correa, Eugenia (Social Science Division U Autónoma Metropolitana-Iztapalapa, Mexico [e-mail: gvb@xanum.uam.mx]), **Capital Structures Changes in Mexican Corporations.**

¶ Analyzes some production structural changes in the framework of the current restructuring of Mexican corporations. It is asserted that the main corporations' economic strategies compression does not mean to know their political preferences, because they do not have a unique political interest & their economic references do not have a unique political expression. It is theorized that the entrepreneurs' associations are not the corporations' direct expression. The fact is that most important entrepreneurs & bankers do politics in a social & personal web with the public institutions & organisms, but also with the enterprises' participation who create images & presence in politics work.

Vidal, Javier & Mora, José-Ginés (Dept Applied Economics U Valencia, E-46022 Spain [tel/fax: 34-6-3828416/3828415; e-mail: ginesj@uv.es]), **Quality Assessment and Accountability in Spanish Universities: Breezes of Change.**

¶ The National Program for the Assessment of Quality of Universities in Spain institutionalizes quality assessment as an extended & continuous process for university evaluation. In addition, public universities have also introduced systematic processes for evaluating the performance of the academic staff, both in teaching & research. This is generating changes in institutional management & academic staff attitudes.

98S36405 / ISA / 1998 / 13646

Vieira de Carvalho, Mario (Dept Musicology U Nova Lisboa, P-1050 Portugal [fax: 351-1-793-37-19; e-mail: mvc@mail.telepac.pt]), **Walter Benjamin's Critical Hermeneutics of Communication: On the Concepts of 'Aestheticization of Politics' and 'Politicization of Art'.**

¶ Walter Benjamin's appeal in *The Work of Art in the Age of Mechanical Reproduction* that the communists should respond with the "politicization of art" to the fascist "aestheticization of politics" proceeds from

a critical hermeneutics of art; as a sociocommunicative system. Benjamin's criticism sees them developing from two different & opposed systems of artistic communication: (1) the bourgeois Enlightenment, based on the transference of "aura" from religion to art; & (2) 19th-century Bohemian art, based on the principle of self-reflexivity of art. Here, it is argued that Benjamin aims at recovering the structural & functional complexity lost in both systems, ie, on the side of reception. In the sense of "blasting open the continuum of history," baroque was seen (eg, in Brecht) as a fragment of the past that was "charged by the time of now," accordingly offered a new & revolutionary way of dealing with art. Not only new works, but also those of the past, should be presented in the context of a new praxis of communication, promoting active, meaning-producing receivers—by means of an hermeneutics based on discontinuity & the search for dialectical images. Thus, Benjamin's criticism had in view both fascist art & socialist realism, which had become the official art of the USSR at the time he wrote his essay. However, its pregnancy has been lost neither for the criticism of the sociocommunicative systems of current art nor for a productive confrontation with recent theoretical approaches to art, ie, that developed by Niklas Luhmann & based on the concept of autopoiesis.

Vihalemm, Peeter (Dept Journalism U Tartu, EE-2400 Estonia [tel/fax: 3727-465188/465440; e-mail: kati@saba.jrnl.ut.ee]), **Reconstruction of Social Time and Space by Estonian Media during Post-Communist Transition.**

¶ Content analysis of three leading national daily newspapers supports an examination of changes in social space & time structures during the restructuring of the Estonian media system & public sphere, 1987-1997. The first stage of Estonia's postcommunist transition, the period of political breakthrough in 1987-1991, could be characterized as a rediscovering of national memory. The second stage was one of rapid economic reforms (shock therapy), 1991-1994, & could be characterized as the opening of social space toward the West & media globalization. Since 1992, events in Western countries have been covered more regularly in the Estonian media than events in the former Soviet & other postcommunist countries. The third stage of transition, the period of economic & cultural stabilization since 1994, is characterized by the dominance of a Western orientation in Estonian social space & an orientation toward the present & the near future in the structure of social time vs that toward the past during the first stage. The content analysis shows that Russia, the US, Finland, the Federal Republic of Germany, Sweden, Latvia, & Lithuania have great importance in the social space of Estonians.

Vilkkö, Anni (Dept Social Policy U Helsinki, SF-00014 Finland [tel/fax: 358-9-191-7775/7764; e-mail: Anni.Vilkkö@Helsinki.Fi]), **Gender and the Meanings of Home in Autobiographical Narratives.**

¶ Discusses aspects of the meaning of home represented in autobiographies written by older women & men in Finland. The concept "home history" is used here to analyze the subjective aspects of constructing meaning for dwelling places where the informants have lived during their life course. The theme is the role that home can play in autobiographies: How do older people tell their home histories? How do they ascribe meaning to home places? And what gender-related characteristics & narrative patterns do home histories have? Analyzing meanings concerning home, two gender-related narrative models can be found. Home is seen as a place for family members, & women's domestic activities are important elements in female narratives. Home, primarily its indoor realms, is described in detail, as the place where important events of life

are often situated. Men put emphasis more on the outdoor rather than indoor areas & activities. Home is discussed in terms of concrete action & perceived as housing. Women's inside perspective to home corresponds to men's tendency to shift the narrative focus to the outdoor reports & to stories of social intercourse therein. Both narrative models of describing home are related to family, especially the phase when children are present.

Villaescusa, M. Elisa V. ((e-mail: jillfalk@laneta.apc.org)), **Some Characteristics of Women's Participation in Trade Unions in Mexico (1980-1996).**

¶ In the 1990s, there has been an increasing number of women occupying positions of greater importance on both regional & national trade union executive committees in Mexico; despite this trend, women have scarcely 3% representation in the upper echelons of the trade union hierarchy. There has been a growing & novel tendency toward the formation of autonomous groups of women workers outside of the trade union structure, with the aim of education & formation of their own leadership models so as to defend their work & gender rights as well as to strengthen the union as a whole. Such are the cases of the teaching profession, where women have created a civil association, & electricians, where, since the 1980s, women workers have had their own specific space or group outside of the actual trade union structure.

Villavicencio, Daniel (U Autónoma Metropolitana-Xochimilco, 04960 Mexico DF [tel/fax: 525-7-24-52-79/5-94-91-00; e-mail: vcdh3758@cueyatli.uam.mx]), **Les Lieux possibles de l'innovation (The Possible Places of Innovation).** (FRE)

¶ In the last 20 years, innovation has been a main issue in industrial economics. Evolutionary economics has been essential in rejecting the idea that technology is external to companies. The cumulative & irreversible process that gives birth to technology is internal to the company. For economists, it is essential to understand how firms acquire technologies with their innovations. Thus, the construction of indicators to measure the innovative effort on costs & productivity is central for these researchers. On the other hand, sociologists of work have developed original approaches that go beyond the deterministic conception of technology. These two dimensions are articulated. Since the aim is to analyze the effects of technology on the division of labor, the content & transformation of work, & knowledge, the sociology of works is not interested in explaining how innovation occurs in the firm. It is claimed that innovation is the result of the creative action of actors in an organized context, using collective knowledge & competences of actors to improve & create new products & processes. Sociology should propose conceptual tools that permit understanding the social regulations around the social process of innovation. This reading of sociological approaches intends to put into perspective concepts & methodologies for understanding dynamic innovation in companies.

Vincenti, Antonella de (U Paris XIII, F-93430 Villetaneuse France [tel/fax: 33-1-49403242/49403015]), **La Gestion des ressources humaines dans les districts d'Emilia-Romagna (Italie): un cas réussi de coopération (Management of Human Resources in the Districts of Emilia-Romagna (Italy): A Successful Case of Cooperation).**

(FRE)

¶ Analyzes an industrial experience combining cost-effectiveness & welfare in the industrial districts of the Italian region of Emilia-Romagna. The districts are networks of small & medium-size firms, in which the management of human resources is mainly characterized by reciprocity relationships between employers & workers & by the "negotiated involvement." Conflict of interests is accepted, & respect of the partner leads to negotiations that result in effective & innovative cooperation, expanding the forms of democratic participation. Similar circumstances exist in Jylland, Denmark, & Bade-Würtemberg, Federal Republic of Germany. Actors & observers agree that this experience generates a process of "collective construction of competitiveness" that benefits all partners.

Vincenzo, Caterina (Centro Women's Studies U Della Calabria, I-87036 Arcavacata di Rende Italy [tel/fax: 39-98449-2573/2575; e-mail: barazzetti@unical.it]), **Young Women, Identity and Higher Education in Southern Italy. The Case-Study of University of Calabria.**

¶ Presents results of research conducted at the U of Calabria (Italy) to analyze how young women relate to higher education, specifically to verify how changes from "fate to choice" could be affected by university attendance. Quantitative data & in-depth interviews revealed that most young women decided to attend the university to get a higher education. Their success is the best evidence: their grades are much higher than those of male students. They are conscious of the gap between their successful university performance & their real chances to develop an adequate career. Youth unemployment is high in Italy, especially among women. Nevertheless, they still consider the university experience a good way to develop their identity. This university has given many people lacking financial means the chance to get a higher education, gain autonomy from family networks, & make their own life plans.

98S36414 / ISA / 1998 / 13655

Vinick, Barbara H. (Veterans Administration Medical Center, 200 Springs Rd Bedford MA 01730 [tel/fax: 718-687-2948/2150; e-mail: barbv@bu.edu]), **Stepfamilies in Later Life: Relationships between the Generations.**

¶ Examines the long-term consequences of remarriage on intergenerational relationships, drawing on in-depth interviews with biological & stepmothers & fathers of adult children from previous marriages (N = 36 families). Within a life-course framework, each spouse looked back on the structural & emotional histories of their relationships with children & stepchildren. Analysis suggested factors implicated in patterns of intergenerational relationships in older stepfamilies, eg, older fathers' lack of engagement with their "ex-children" from previous marriages, stepmothers' behavior as "family carpenters" for damaged relationships, older stepfathers' extreme stances toward their adult stepchildren, & older mothers' retention of close intergenerational ties. The families illustrate the complexity, diversity, difficulty, & resiliency inherent in the stepfamily experience.

Vinken, Henk & Ester, Peter (Instit Social Research Tilburg U, NL-5000 LE Netherlands [e-mail: hvinken@kub.nl]), **The Political Value of Resisting the Adult World. On the Resentment and Conservatism of Dutch Youth Centrists.**

¶ Most prominent in the sociological debate about the cultural perspectives of young people is the controversy between theories claiming that youth indulges in youth cultures to comply with societal demands & theories assuming that youth nurtures an almost natural tendency to establish rebellious youth cultures in opposition to the dominant culture. A recently published Dutch study, *Political Values and Youth Centristism* (1997), puts the controversy in a youth sociological perspective (drawing on recent life-course perspectives) & empirically focuses on political orientations of young people & adults, especially on shifts in similar orientations of young people making antagonistic age-group differentiations, the so-called "youth centrists." Youth centrism plays a key role in understanding youth culture. Youth centrists separate their own world from that of adults & resent the adult world, but claim adult privileges, pleasures, & freedoms, as is shown by results of two Dutch datasets: a 1990 representative cross-sectional value study (N = 1,200 respondents) & a panel study, 1986-1994 (N = 145). Basically, youth centrists follow the overall cultural trends in society with one exception: they have distinct conservative views on the role of women in society. In general, they obey & adapt to the prevailing political culture.

Viola, Eduardo (Dept International Relations U Brasília 20919-970 DF Brazil [tel/fax: 061-344-2669/5684; e-mail: violaedu@nuteconet]), **Globalization and Differentiation in Brazilian Environmentalism in the 1990s.**

¶ Following an examination of how the process of globalization produces increased complexity & strong differentiation inside the Brazilian environmental movement during the 1990s, the four main streams of Brazilian environmentalism are analyzed: conservative-globalists, progressive-globalists, nationalists, & radicals. The progressive-globalists are in favor of the construction of institutions of global governance & of a strong redefinition of the Brazilian state with the objective of coordinating a gradual transition toward a sustainable society based on the idea of ecological reform. The conservative-globalists are in favor of a predominant use of market mechanisms for environmental protection &, in general, concentrate their action in the preservation of natural ecosystems, in which they have a strong capacity for alliance-cooperation with their international partners. The nationalists distrust institutions of global governance & are in favor of strengthening the national state, including its economic regulatory functions & a strong productive state sector. The radicals are in favor of extremely decentralized forms of governance & are reluctant to establish alliances apart from those with radical environmentalists of the North & poor people from Brazil. Analyzed in conclusion are the cleavages, alignments, & coalitions among the differentiated sector of environmentalism around some issues.

98S36417 / ISA / 1998 / 13658

Virtanen, Petri (Ministry Finance U Helsinki, SF-00171 Finland [tel/fax: 3589-160320/1603235; e-mail: petri.virtanen@vm.vn.fi]), **Citizen's Charters as Standard Solutions for Socially Excluded Young People?**

¶ Citizen's charters were introduced to Finland's public policy in 1997, adopted partly from the British model, for use with a section of young people who have become socially excluded. They are excluded from the labor & housing markets, their health & education, have been neglected, & their social networks have been ruptured. A potential problem in providing adequate public services for this population is the substitution of nonhuman for human technology, a phenomenon described as McDonaldization. The principles of the Finnish model of the citizen's charter are (1) quality promises made to customers (the service users); (2) flexibility of service & a customer-centered approach; (3) customer feedback & correction of errors; (4) service statements describing services; & (5) the best possible service efficiently delivered. It is hoped that with this ethical leaning, the citizen's charter will avert the McDonaldization of public services & promote not only the efficiency, but also the quality, of goods & services to come to the rescue of the socially excluded.

98S36418 / ISA / 1998 / 13659

Vlácil, Jan (Faculty General Economics & Public Administration U Economics Prague, 3 Czech Republic [tel/fax: 4202-691-1828/1265; e-mail: vlacil@vse.cz]), **Orientations of the Czech Managers: Restructuring the Industrial Relations and Organizational Culture.**

¶ Changes in the position & ways of recruitment of the new, or so called "old-new," Czech managers lead also to changes in their professional &, especially, sociopolitical orientation. Instead of being secondary "nomenclature cadres," managers are becoming the self-leading experts, co-owners of enterprises, & members of the lobbying associations of entrepreneurs. As representatives of the new economic elite or business class, they form a relatively independent, from the point of view of the development of democracy, necessary social power. In the situation of coinciding demands of systemic transformation & of enterprises' survival during the economic recession, managerial reactions to the turbulent environment have prevailed over intraorganizational problem solutions. New claims require a reorientation toward conceptual creativity, overtaking of entrepreneurial responsibility, flexibility, meritocracy, delegation of power, participative decision making, & nonauthoritative conflict resolution. Managerial mentality & ideology may strongly influence cooperation, industrial relations, social climate, organizational culture, & the economic achievements of enterprises & of society. The coming of foreign capital & management has created social distance leading to intraorganizational coalitions among the Czech & foreign managers, trade union officials, & workers, which could form the germ of a prospective social partnership.

Vladimirova, Ladugina Marina (Dept Sociology Russian Chemical-

Technological U, Moscow 125047 (tel/fax: 095-978-87-74/200-42-04)), **Social Genealogy and Family Resources as Life-Blood in Conflict Zones.**

- ¶ Russia is currently going through social transformation & conflict that touches every family & person. In this situation, family resources—ie, social status & connections, financial & other resources, intellectual capital, moral values, & traditions—make adaptation to new conditions easier. It is suggested that biographies of parents & ancestors help a family find resources by studying previous generations' experiences in adapting to dynamic processes.

98S36420 / ISA / 1998 / 13661

Vladimirovna, Yachmenyova Natalya (Dept Sociology Russian Chemical-Technological U, Moscow 125047 (tel/fax: 095-978-87-74/200-42-04)), **Biography and Value Conflict for Students.**

- ¶ Draws on autobiographical research of 150 Russian Chemical-Technical U (Moscow) students to examine value conflicts currently taking place in Russia. It is found that the most important values for them are the common human values: happy family, health, & love. On the second position, there are values that belong to the modern society: a comfortable life, independence, self-confidence, & freedom. Movement to the last position of such values as justice, equality, law, order, help to each other, & strong traditions shows that students associate them with traditional society. Also, values of postmodern society, eg, rich information & interesting jobs, are not real to students.

98S36421 / ISA / 1998 / 13662

Voeikov, Vladimir L. (Faculty Biology Moscow State U, 119899 Russia (tel/fax: 795-9391268/2788; e-mail: VVL@Ecol.msu.ru)), **General Regularities in the Process of Development of Living Systems.**

- ¶ The complexity of living systems is based on a much more simple process of development that can be studied to discern continuous or stepwise processes (by which structures are formed). Development is always in interaction with the environment (triggers/stimuli/irritation/input), & the process variability & stability together determine the result. Two conditions appear to be decisive—trigger conditions, (ie, volume/surface ratio, concentration, temperature, etc) & trigger quality (added information, rather than energy-input, to the system). The interaction/calibration between the system & the environment can be seen in latent periods (development/response/delay times). Often S-shaped curves ("lognormal functions") are characteristic of the development processes involved, regardless of their system of origin. This has been verified by a number of experiments, & branching reactions have been shown to play a crucial role in this (eg, Semenov, Nikolai, & Hinshelwood, Cyril). System development can then be clearly identified as a self-accelerating process, determined by system feedback-hysteresis to positive/negative input/triggers, which stabilize to a state of balance. Even the simplest biochemical reactions show this property. System development decay is the result of an absence of suitable energy-information stimuli, as can be shown by the "revival" of decaying systems by the proper stimuli. These fundamental principles of development apply in organisms of different size, including human societies.

98S36422 / ISA / 1998 / 13663

Voets, Henk J. L. (Delft U Technology, NL-2628 EB Netherlands (tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Systems Theory and Self-Organization.**

- ¶ Looks to improve the abilities of a special type of social system—the business organization—in the context of economic globalization & internationalization. Self-organization has been considered one of the most important ways to realize an improvement in business organizations. Self-organization can be seen as a social phenomenon, the common ground of more popular phenomena, eg, decentralization & autonomy, productivity through people, & empowerment & entrepreneurship of workers. It is argued that self-organization may result in the formation of a social system with important autopoietic elements. Self-organization has sometimes been accompanied by a form of financial participation by workers. On the basis of theory & research on financial participation by workers, it is contended that, in this form, the economic system will not be destroyed, but rather, modified. Neoclassical economic theory is not able to cope with these processes of change in social systems.

98S36423 / ISA / 1998 / 13664

Voets, Henk J. L. (Delft U Technology, NL-2628 EB Netherlands

(tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Problems of Action Research in Management Studies.**

- ¶ Explores the relations between action & research & actor & researcher in the field of management studies, examining long traditions of industrial democracy research; the role of the organizational consultant/researcher; & newer, business ethics & the learning organization. Elements that the newer specialties have added to the action & research relation are discussed in the context of a comparison to the older traditions.

98S36424 / ISA / 1998 / 13665

Voets, Henk J. L. (Delft U Technology, NL-2628 EB Netherlands (tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Entrepreneurs—Success and Failure.**

- ¶ Data from a 1988-1993 in-depth study of 19 Dutch enterprises are used to evaluate enterprise policy in terms of organization, management, finances, & social aspects to describe the historical development of the enterprises. The most important problems encountered by enterprises & how decisions critical for development were reached are discussed. Focus is on the role of the directors in the decision-making processes. Did they act like a professional manager or a leader? What type of manager or leader was predominant? What phases of the enterprise may be distinguished? Were the directors successful during all of these different phases?

98S36425 / ISA / 1998 / 13666

Voets, Henk J. L. (Delft U Technology, NL-2628 EB Netherlands (tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Industrial Democracy and Worker Ownership: Theory and Practice.**

- ¶ Presents two alternative hypotheses on the positive & negative effects of participation, worker ownership, & profit sharing on productivity, drawing on research findings. It is argued that the hypothesis regarding the effects of worker ownership & (financial) participation relates to not only differences in research results, but also to the different theoretical viewpoints of the researchers. Advocates of the hypothesis of positive effects are often supporting a theory of organizational culture, whereas advocates of the hypothesis of negative effects are often supporting a rational choice theory. Similar differences were found in the orientation of workers: some had a social orientation, & others an instrumental orientation. Further, in (financial) crisis, the orientation of the management was almost invariably an instrumental orientation. The concept of the missionary organization is discussed to reconcile some of the ideas coming from rational choice & organizational culture theory.

98S36426 / ISA / 1998 / 13667

Voets, Henk J. L. (Delft U Technology, NL-2628 EB Netherlands (tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Flexibilisation.**

- ¶ "Flexibility" has become an important question at issue in employer-union collective bargaining deliberations in the Netherlands (& elsewhere). Employers emphasize that more flexibility is needed for many subjects on the collective bargaining agenda & in more sectors as a result of increasing competition & the internationalization & globalization of the economy. The relation among (groups of) employees will be affected in situations when demands for more flexibility have different consequences for (groups of) employees. Exclusion from a permanent job may be the ultimate result for young people & people who have a weak position on the labor market. This may also result in a split in the labor market: a market for permanent jobs & another market for flexible jobs. The relation between employers & unions will be affected by a growing number of conflicts regarding flexibility. These aforementioned changes may be in conflict with another demand of employers: more entrepreneurial employees. Because more flexibility may result in a decrease of motivation & commitment, extra financial stimuli (shares, options, or other bonuses) may be the result for the workers, particularly in Europe, where such stimuli are not as popular as in the US.

98S36427 / ISA / 1998 / 13668

Voets, Henk J. L. & Biggiero, Lucio (Delft U Technology, NL-2628 EB Netherlands (tel/fax: 31-15-2786345/2783956; e-mail: Henk.Voets@wtm.tudelft.nl)), **Globalization and Self-Organization: Consequences of Decentralization for Industrial Organization.**

- ¶ The globalization & internationalization of the economic world system created radical changes & an increased complexity in the environment of other (sub)systems, eg, business organizations. Self-organization has

been considered as one of the most important ways to realize improvement in business organizations. The two faces it assumes in business organizations are those of internal power decentralization top-down & financial participation by workers, both forms of increasing participation & power redistribution. In a pure & radical way of application, both forms of self-organization would be fatal to capitalism, & would probably be prevented. However, in a moderate & progressive way, they would diffuse & develop, entailing significant modifications in socioeconomic organizations. It might be expected that power decentralization would push toward the diffusion of network-like forms of organization, which improve flexibility & instability of firms. Moreover, organizations would become more knowledge-based, & a key competence of managerial skill would be the ability of coordinating autonomous teams. Financial participation could result in (1) reducing the separation between management & owner control, & (2) diffusing forms of nonprofit organizations where workers are owners. In a less-radical perspective, a change in power distribution inside shareholders & between stakeholders is to be expected.

Vogels, Christian (U Nantes, F-44036 France), *Les Enjeux sociologiques de la création contemporaine: quelques effets du passage d'une œuvre confidentielle à la visibilité sociale* (The Sociological Stakes of Contemporary Creation: Some Effects of the Passage of a Work from Confidentiality to Social Visibility). (FRE)

¶ Transformations in the publishing of contemporary works are examined. Inside the major publishing houses, production has begun to respond increasingly to norms outside of literature; further, the multiplication of links between literary creations has allowed innovations in literature, making it less visible, more inventive, & more often linked to the plastic arts. The effects of economic change on different works are discussed, & it is argued that whether or not the work of an innovative writer results from a response to the demands of limited partners, it is apparent that the taste for little-known yet rich works has a tight relationship with the sociological context in which the works emerge. How such works increase in visibility is addressed. It is held that normalized works that respond to the marketing world enter into obligatory cultural practices.

Von Bredow, Wilfried (Institut Politikwissenschaft U Marburg, D-35032 Federal Republic Germany (tel/fax: 49-0-642128-4392/8991; e-mail: wvb@mail.uni-marburg.de)), *Perspectives of a Peaceful World Order and the Mushrooming of Local Wars*.

¶ Perspectives of world peace & local wars are outlined: (1) end of the mass armed forces & extended roles for the military in war & peace; (2) end of mutual assured destruction & beginning of a new design for deterrence; (3) end of the East-West conflict & renewed hopes for universal peace & democracy; (4) anticipated end of the "Westphalian" paradigm & the problems of imposing global collective security; (5) end of the 20th century & the endless stream of pictures of violence, organized & spontaneous; & in contrast, (6) mushrooming of local wars, also a phenomenon of perception. The question of whether a worldwide double standard concerning military violence is emerging is addressed.

98S36430 / ISA / 1998 / 13671

von Hecker, Ulrich (Institut Psychologie U Potsdam, D-14415 Federal Republic Germany (tel/fax: 331-977-2954/2795; e-mail: hecker@rz.uni-potsdam.de)), *Resource-Based Power Differentials and Value-Increasing Behavior Options*.

¶ It is one of the basic tenets of power-dependence theory that the more powerful actor will more frequently receive the best outcome available in the relationship. An attempt is made here to make behavioral evidence more interpretable in terms of power notions, including deliberate action. In an experimental setting involving 13 four-actor groups with four levels of resource-based power, actors were induced to exchange certain amounts of valued resources during scheduled play rounds. Provided there existed an exchange opportunity for them at a given round, actors had to choose between a standard or a value-increased option. Whereas opportunity cost was kept at zero for the standard type of action, actors were facing a one-point cost each time they decided to use the value-increased type of action. It was found that the use of the value-increased behavior option followed the pattern of resource-based power differentials. In pairs of unequal resource power, more dependent actors used the value-increased option more frequently toward less-dependent actors (proportional to their resource strength) than vice versa. Thus, less-dependent actors enjoyed a higher % of best possible outcomes among all actions directed toward them by the more dependent partners than vice

versa. More dependent actors more often deliberately chose to incur high opportunity costs to stay in exchange with actors of greater resource power.

von Simson Rodrigues Moraes, Olga (Faculdade Educação U Estadual Campinas, 13083-970 SP Brazil (tel/fax: 55-019-788-8216/289-3441; e-mail: cmemoria@turing.unicamp.br)), *Living between Two Cultures: Reflections Based on the Life History Narrative of a Turkish Immigrant in Germany*.

¶ Based on experience with oral-history methodology, it is shown that analysis of a life-history narrative will be disappointing without (1) empirical support of historical, economic, & sociological data referring to the subject; (2) a detailed field-book to keep track of all aspects of the developing relationship between interview & interviewer & the emergence of insights; & (3) an analysis of old photographs referring to the theme. Since no valid interview is given without the objective of transmitting a definite message to the interviewer by means of a life history, it is found that successive contacts between interviewer & interviewed are necessary to develop a trust relationship. Without this, the narrative does not have the quality of generating valid knowledge about the focused theme. Despite the fact that precise instruments are lacking for analysis of the narrative of an immigrant Turkish woman in the Federal Republic of Germany, an effort is made to elucidate important aspects of her difficult & humiliating migration experience & to extract the contents of her main message to two student researchers. The analysis is based on former research on immigration.

Von Sundahl, Ingo Michael (Av Diagonal 690 E-08034 Barcelona Spain), *The Privatization of the Spanish Film Industry—Reflections on Some Recent Changes in Spanish Film Policy*.

¶ In 1995, the Conservative Party of Spain won the elections & put an end to 13 years of socialist rule. The policies of the arts & culture changed from state patronage to privatization & toward a greater role & involvement of financial institutions in the funding process. This phenomenon is not only restricted to the Spanish context, but forms part of a European & global trend where governments have been trying to cut their contribution to the public sector, promoting privatization as a way of making things more cost-effective & competitive. For the film industry, this shift was made official by an act of parliament in 1996. While socialist cultural policy had directly supported the film director as the main actor/agent-as-artist in the creative process, Conservative policy considers the production companies as the driving force of the film industry & focuses on the creation of a new role for financial institutions as a source of funding. As a result, there has been a rich & intensive public debate, evaluated here in connection with resulting implications for the film industry.

Vratuša-Žunjić, A. Vera (Faculty Philosophy U Belgrade, 11000 Serbia (tel: 38111-3282-777; fax: 38111-639-356; e-mail: vvratusa@f.bg.ac.yu)), **The Dominant Sociological Paradigm Change in the Social and Historical Context.**

¶ Hypothesizes that there is a correlation between shifts of dominant social scientists' theoretical & methodological orientations, & the changes in structures of social groups' & individuals' power relations on the global, regional, national, & local levels. The empirical prediction is made that, in periods when the social reproduction cycle is relatively stable, mainstream social scientists (especially those living in the central zones of the global division of labor) tend to opt, often only implicitly, for positivist answers to the paradigmatic question of what & whom should social science serve. Conversely, dominantly critical answers to the question should be expected in periods of social reproduction crisis. An empirical test of the hypothesis has been attempted in a study of the fall of the Berlin Wall. It was hypothesized that, after that crucial symbolic event, social scientists' optimistic or pessimistic spiritual moods would depend on their role as ideological representatives of the ascending transnational technocratic fraction of the bourgeoisie, or the descending national statist one. Some preliminary results & problems encountered are presented.

Wæler Løland, Nina (Norwegian U Sport & Physical Education, N-0806 Oslo (tel/fax: 47-22-18-56-54/23-42-20; e-mail: ninawl@brage.idrettsns.no)), **The Male Body-Ideals and Realities: A Study on Satisfaction and Concern with Physical Appearance among Physically Active and Inactive Norwegian Men.**

¶ Examines the differences in satisfaction & concern with physical appearance between active & inactive Norwegian men (N = 787, ages 18-67), drawing on questionnaire scale data. In addition, body mass index discrepancies between actual & desired weight & height were calculated. Analyses showed that physically active men were more satisfied with their physical appearance compared to inactive men, whereas no significant differences in concern with physical appearance were obtained. For both active & inactive men, body mass index was negatively correlated with weight satisfaction, while actual height was positively correlated

with height satisfaction. Actual weight & height did not correlate significantly with satisfaction with appearance among active men. Among inactive men, however, the correlations were negative & positive, respectively. The results are discussed in relation to the sociocultural norms for the ideal male body-tall, muscular, & mesomorphic-& the role of this ideal in men's evaluation of & concern with their own bodies.

Wagner, Peter (Dept Sociology U Warwick, Coventry CV4 7AL England (tel/fax: 44-1203-523940/523497; e-mail: peter.wagner@warwick.ac.uk)), **Vanishing Points. Inescapable Yet Unattainable Issues of a Sociology of Modernity.**

¶ Modernity is often held to be essentially dilemmatic. It is accused of, or praised for, lacking foundations for its own discourses & practices. It

is argued that one may deny the validity of this modern, antifoundationalist proposition & try to develop some substantive ideas for grounding discourses & practices, which, far from being merely "premodern," might withstand the modern experience. Such a viewpoint would often be labeled a critique of modernity. Further, it can be argued that it is exactly modernity's achievement to have overcome substantive & particular foundations & to have replaced them by universalist reasoning, often linked to ideas of procedure & communication. This may be called the classic modern view. During the past two decades, it has often been argued that even such nonsubstantive foundations are untenable &, indeed, include hidden substantive ideas. The ensuing deconstruction of the classic-modern position then led to what has often been called postmodernist thinking. It is seen to maintain that foundations of any kind are neither needed nor justifiable. In many of the recent disputes in social & political philosophy as well as in social theory & methodology it has been assumed that these positions are clearly distinct, providing mutually exclusive & incompatible answers. Here, the commonality of some key questions to which they intend to respond is emphasized, including the certainty of knowledge, the viability of the polity, the finitude of being. It is characteristic of these issues that they are located at vanishing points; they structure the perspective on the world, but cannot be grasped themselves. Furthermore, none of the modes of answering these questions can lay a specific claim to being modern. It is rather the impossibility to give any one superior answer together with the inevitable persistence of the questions that modernity is about: the well-known crucial themes of modern reasoning are inescapable, but stable solutions to the problems they produce are unattainable.

98S36444 / ISA / 1998 / 13685

Wagner-Pacifi, Robin (Dept Sociology & Anthropology Swarthmore Coll, PA 19081-1397 [tel/fax: 610-328-8104/7754; e-mail: rwagner1@cc.swarthmore.edu]), **The Narrative Structures of the Standoff: Times and Spaces in a Situation of Paralysis.**

¶ Standoffs between the state & groups identified as antistate have their own immanent structure. Participants experience transformed systems of time, space, & action as the situation comes to be defined as an emergency. Explored here is the nature of the transformations in these situational parameters as the competing narratives of the standoff emerge over its duration. Historical genealogies & spatial topographies overlay & give meaning to the ongoing interactions of the participants. Several recent cases of such standoffs are systematically referenced for their narrative harmonics & trajectories. Transcripts of negotiations, media interviews with the protagonists, original manifestos & other published documents, & transcriptions of Congressional hearings provide the primary data to appeal to the heightened self-consciousness of standoffs about the shaping influence of notions of time, space, & causality as an entry point to exploring the phenomenology of all contingent social life.

98S36445 / ISA / 1998 / 13686

Wahlbeck, Östen (Institt Migration, Piispankatu 3 FIN-20500 Turku Finland [tel/fax: 358-2-231-7536/233-3460; e-mail: owahlbec@abo.fi]), **Transnationalism and Diasporas: The Kurdish Example.**

¶ Argues that the notions of transnationalism & diaspora can provide sociology with some conceptual tools needed to study migrants in an increasingly global world. An ethnographic study of Kurdish refugee communities is drawn on to discuss the concept of diaspora, taking into account the refugees' specific transnational experiences & social relationships. The sociology of migration has much to gain from the contemporary diaspora discourse. It is argued that the traditional way of looking at ethnic relations, in terms of a relation between strictly localized minorities & majorities, is inadequate to describe refugees' experiences. The concept of diaspora, however, understood as a transnational social organization relating to both the country of origin & the country of exile, can enhance understanding of the social reality in which refugees live.

98S36446 / ISA / 1998 / 13687

Wakeford, Nina (Centre Studies Higher Education U California, Berkeley 94720-4650 [tel/fax: 510-643-2440/6845; e-mail: wakeford@qal.berkeley.edu]), **Local Geographies of Sexuality and Gender in a Californian Internet Community.**

¶ Construction & maintenance of an Internet women's community are studied using interview & ethnographic data from female users of a electronic discussion list based in the San Francisco (CA) Bay Area. Local cultures of gender & sexuality on the list are compared to those that pre-

vail in the geographical area & those predominant in other women's spaces on the Internet. Two examples are used to show the specific local qualities of this community: discussion of transgender participation on the list & practices of defining social & sexual lesbian practices at social events. In the process of constructing local culture in an Internet community, the women's activities demonstrate the dangers of separating virtual identities & communities from their real equivalents.

98S36447 / ISA / 1998 / 13688

Walby, Sylvia (U Leeds, LS2 9JT England [tel/fax: 44-113-233-4437; e-mail: s.wall.leeds.ac.uk]), **Gender, Globalization and Citizenship.**

¶ Explores whether globalization has a gender dimension, considering the extent to which the achievement of citizenship for women has been a global, national, or regional phenomenon. Also explored is the extent to which the nation-state is the most appropriate unit in which to consider citizenship for women, or whether other communities, eg, those based on ethnicity, region, or religion, are of greater significance. This requires an explication of the nature of citizenship for women, including the extent to which this is a matter of the state or civil society & the extent to which criteria may be considered universal or community specific. The relationship between citizenship & industrialization in the shaping of gender regimes is examined, drawing on international data on the timing of suffrage & other dimensions of citizenship, together with comparative case studies.

98S36448 / ISA / 1998 / 13689

Waldinger, Roger (U California, Los Angeles 90024 [e-mail: waldinger@soc.ucla.edu]), **Beyond the Sidestream: The Language of Work in an Immigrant Metropolis.**

¶ Presents a comparative case study of six industries in Los Angeles, CA, to examine the ways in which organizational characteristics—both internal & external—affect language choices at work. Drawing on data gathered via in-depth interviews with 230 employers, it is argued that the language of industry is not constant, but variable. Where immigrant networks have seized hold of the hiring process, detaching the organizations from the general labor market, interdependency on an immigrant labor force pushes employers to accommodate workers' linguistic practices. Elsewhere, greater levels of organizational complexity, workforce diversity, & market exposure yield greater pressure for switching to English.

Wallace, Claire (Institt Advanced Studies, Stompergasse 56 A-1060 Vienna Austria [tel/fax: 00431-59991-213/191; e-mail: wallace@ihs.ac.at]), **The Central European Buffer Zone.**

¶ Since the opening of borders in East-Central Europe & the collapse of communism in most countries, new geographical divisions have emerged in the region. The Central European countries (Poland, Hungary, Slovakia, & the Czech Republic) have had a privileged position in their proximity to Europe &, despite various setbacks, have been the most successful countries in terms of change in the direction of a stable democracy & market system. However, increasing divergence has occurred between these countries & those to the East & the South. These privileged countries form a buffer between East & West in terms of migration & mobility. They send workers & travelers to the West & receive workers & travelers from farther East & South. The circulation of goods, people, & money in the region are examined here, based on qualitative & quantitative data sources.

98S36450 / ISA / 1998 / 13691

Wallace, Claire (Institt Advanced Studies, Stompergasse 56 A-1060 Vienna Austria [tel/fax: 00431-59991-213/216; e-mail: wallace@ihs.ac.at]), **How Old Is Young and How Young Is Old?.**

¶ Argues that modernization tendencies helped to construct the category of youth, which contemporary tendencies are now deconstructing. Modern institutions such as education, work, the city, & leisure industries structured age-status transitions so that the life course was divided according to distinct stages. The extension of social policies & state institutions defined youth in particular ways as targets for intervention. However, there were also variations between social classes, gender & ethnic groups, & countries. The former communist countries of Eastern Europe defined age even more strongly than the welfare capitalist countries of Western Europe. However, recent tendencies have been toward the deconstructing of age-status transitions as leisure, family transitions, & education are no longer associated so strongly with age—or at any rate, not only with the young. Age is becoming a more elastic category as both young people & adults resist age-typing. This has important implications for social policies & for citizenship in contemporary European societies.

98S36451 / ISA / 1998 / 13692

Wallace, Claire & Alt, Raimond (Instit Advanced Studies, Stompergasse 56 1060-A Vienna Austria (tel/fax: 00431-59991-213/191; e-mail: wallace@ins.ac.at)), **Swing against the Nazis.**

¶ Considers the role of a popular youth subculture—so-called Swing kids—as a form of resistance to dominant constructions of youth under National Socialism in Germany. At the time, when youths were strongly pressured to participate in the dominant youth organization & conform to a particular model of youth associated with fascist modernity, there were few opportunities to construct alternative ideas of youth. However, participation in the Swing kids subculture—through dances; listening to music; & using certain styles of speaking, walking, & dressing—offered such an opportunity to construct alternative ideas of youth, ones heralding a more postmodern orientation. Swing came from the US & emphasized a sensual, fun-loving, hedonistic style. As such, it was condemned as degenerate music. Many members of the Swing kids subculture were punished, & some were even sent to concentration camps. Parallels are drawn with regard to this role of youth subcultures as a form of latent opposition to totalitarian regimes & dominant official constructions of youth under the National Socialist regime & under the former communist regimes of Eastern Europe.

98S36452 / ISA / 1998 / 13693

Wallace, Michael (Dept Sociology Indiana U, Bloomington 47405), **The Next Long Wave: Spatialization and the Global Restructuring of the Labor Process.**

¶ Attempts to make theoretical sense of a variety of contemporary changes in the organization of work. It is argued that changes such as organizational downsizing, contingent work, deindustrialization, deskilling & reskilling, & the demise of the social contract governing work relations since WWII reflect a fundamental reorganization of the labor process. The social structure of accumulation framework of Gordon, Edwards, & Reich is extended to argue for the emergence of a new social structure of accumulation, here called "spatialization," characterized by the spatial reorganization of the labor process. The implications of this new social structure, which is part & parcel of the new global economy, the future of work, the labor movement, & the "end of the job" thesis are discussed.

98S36453 / ISA / 1998 / 13694

Walsh, Pat (Victoria U, Wellington New Zealand (tel/fax: 64-4-472-1000/495-5084; e-mail: Pat.Walsh@vuw.ac.nz)), **The Model for the Future? The State and Labour in New Zealand.**

¶ The restructuring of the state in New Zealand has been described by the Organization for Economic Cooperation & Development as the most radical of all its member countries. It is distinctive for its scope, the speed with which it occurred, & the degree to which it was based on specific theoretical frameworks grounded in public choice models, transaction cost analysis, & agency theory. It has affected not only the state's trading enterprises, but all public sector agencies, including local government, health, & education, as well as the civil service. Integral to these changes has been a recasting of the state's industrial relations role, both in terms of its relationship with its own employees & its wider role in the labor market. The most striking expression of this has been the enactment of the Employment Contracts Act, which overturns a century of extensive state involvement in the negotiation of employment conditions & the relationship between trade unions & employers. These comprehensive changes are documented & their impact on trade unions & state & labor relations is assessed.

98S36454 / ISA / 1998 / 13695

Walter, Jorge (U San Andrés, 1644 Victoria Province Buenos Aires Argentina (tel/fax: 541-746-2608/5090; e-mail: walter@168-96.180.3)), **French title not provided** (Innovation and Business Development: Argentinian "Islands" of Innovation). (FRE)

¶ After the hyperinflationary experience of the late 1980s, the Argentine economy has abandoned a developmental model—founded on state intervention in the economy, substitution of imports, & unlimited protection of the internal market—and entered a phase of stability & sustained growth, characterized by deregulation & privatization. Presented are two case studies of Argentine companies that export products of high added value on the basis of their own product design & engineering capacities. They constitute a real island of innovation in a context where the innovative capacity of firms has not had an outstanding role to play in history. The objective here is to trace the history of these examples to

show how the firms developed such capacities in such an unfavorable context.

98S36455 / ISA / 1998 / 13696

Walters, Lynda Henley, Warzywoda-Kruszynska, W., Gurko, T. & Skeen, P. (U Georgia, Athens 30605 (tel/fax: 706-546-6466/542-4389; e-mail: LWalters@fcs.uga.edu)), **Time for Marriage: Young Couples in Georgia, Poland, Russia, and the United States.**

¶ According to Daly (1996), in a capitalist society, "time has become the dominant currency in families." Similarly, in the former USSR, according to Robinson, Andreyenkov, & Patrushev (1989), economic metaphors have been used to describe the social relevance of time. With the accelerated pace of living, one wonders whether time use might be associated with marital happiness, specifically, whether greater time spent in work activities (inside & outside the home) or less time spent alone together places a strain on marriage. Data were obtained from 1,718 young couples in the Republic of Georgia, Poland, Russia, & the US. Calculated separately for each country, cluster analysis was used to identify happy & unhappy marriages, & discriminant analysis to examine different uses of time. In all countries, perceived happiness in marriage was associated more with time spent alone together.

Walzer, Norman C. (Western Illinois U, Macomb 61455 (tel/fax: 309-298-1031/2142; e-mail: NormWalzer@wiu.edu)), **Public-Private Partnerships for Local Economic Development in US Cities.**

¶ Examines public-private partnerships in urban economic development, with focus on their effectiveness, how they are managed, & the investments made by cities in these ventures, based on a survey of 250+ municipal officials in the US. Methods used to monitor the projects are noted. Overall, cities that have engaged in public-private partnerships for local economic development report satisfaction & intend to participate in future partnerships. The city investments have been substantial, but they differ according to whether the ventures are retail, manufacturing, or service. The findings provide substantial insights into the thinking of local public officials about partnership arrangements & other issues.

Wanderley, Márcia Cavendish (U Federal Fluminense, 24220-000 Niterói Rio de Janeiro Brazil (tel/fax: 021-6205194)), **Quebec/Nord/East: esquisse d'analyse social et historique des romans écrits par des femmes Canadiennes et brésiliennes** (Quebec/North/East: Comparative Social and Historical Analysis of Novels Written by Canadian and Brazilian Women). (FRE)

¶ Compares two female novelists, Gabriëlle Roy of Quebec & Marilene Felinto of Nord/East Brazil, taking for granted the analogous lower social situation of both regions. A colonial past has marked deeply the culture & literature of both as seen in Roy's *Bonheur d'occasion* (Happiness of Chance) & Felinto's *Mulheres de Tijucupapo* (Women of Tijucupapo). In Quebec, there remains a separatist desire & the interest in preservation of the French language; in Nord/East, the question of regional linguistic accent remains a mark of cultural inferiority. While comparison of a French literary realist & Latin fantastic realist is difficult, Roy & Felinto share a preoccupation with revealing class & gender discourse that have been forgotten in the construction of the collective identity.

98S36458 / ISA / 1998 / 13699

Wang, Wen C. (Dept Sociology California State U, Northridge 91330-8318 (tel/fax: 818-677-3591/2059; e-mail: wen.wang@csun2.csun.edu)), **The Consequences of Gender Preference in China.**

¶ Parental preference for male offspring is prevalent in India, Pakistan, the People's Republic of China, Korea, & other developing patriarchal societies, but to some extent, it is a universal phenomenon. A review of the existing literature concerning the effects of parental son preference on fertility behavior supports analysis of its consequences for women's schooling & employment in China. Through analysis of 1982 & 1990 census data & focused interviews with rural & urban samples, three factors involved in son preference are discussed: (1) Based on the traditional value that the less women learn the better, gender discrimination leads to lower educational achievement for women, especially for rural & minority women, so parents value a son who will complete higher levels of education. (2) When parents become old, they usually receive financial support from a son that they would not receive from a daughter, because a son's higher level of education would provide a higher income to sup-

port himself & provide for his parents. (3) Gender preference also leads to employment of women at younger ages, meaning that they receive less pre-employment education, especially in rural areas. However, 1982 & 1990 educational & occupational data show a decline in such discrimination &, thus, in gender preference, though it is still prevalent.

Wang, Wen C. (Dept Sociology California State U, Northridge 91330-8318 (tel/fax: 818-677-3591/2059; e-mail: hcsos006@email.csun.edu)), **The Cultural Capital and the Brain Drain between China and the USA.**

¶ Since the 1970s, a high proportion of professionals emigrated from Eastern European & Asian countries to Western & capitalist countries. Generally, this migration has been attributed to demographic & socio-economic factors. Here, in a case study of brain flow between the People's Republic of China & the US, life histories & open-ended interview data collected from 214 Chinese intellectuals in 1991 in both China & the US show that, in addition to the explanatory power of the above predictors, the cultural capital owned by the Chinese professionals also contributes to the explanation of their migration decisions. The results suggest that the respondents who are more exposed to Western mass media & Western culture, eg, listening to the VOA & BBC broadcasts, reading *Newsweek* & *Time* magazines, & having US friends, are more likely to give up the socialist collectivist ideologies & to immigrate to the US, when demographic & socioeconomic factors are controlled. The cultural capital is thus shown to be a determinant of migration decisions of Chinese intellectuals.

Wang, Xudong (Instit Higher Education Beijing Language & Culture U, 100083 People's Republic China (fax: 86-10-62311040; e-mail: hed@blcu.edu.cn)), **Private Higher Education in China.**

¶ Examines the standards disparity between private & public higher education. The development of private higher education is faced with numerous difficulties, eg, the shortage of experience & social recognition, the insufficiency of its legislation & reliable financial source, etc. In view of the status quo & the prospect of Chinese social development & on the basis of plenty of data, the great potential of private higher education in the People's Republic of China is analyzed. It is concluded that it is an inexorable trend in the 21st century to establish a new pattern for the joint development of public & private higher education.

98S36461 / ISA / 1998 / 13702

Wang, Yongxiang & Ming, Gao (Physical Education Dept North-eastern U, Shenyang People's Republic China 110006 (tel/fax: 86-24-3919910/2719091; e-mail: manyk@ramm.neu.edu.cn)), **A Sociological Analysis of the Soccer Fans Phenomenon in China.**

¶ Examines soccer fans as a specific cultural phenomenon in the People's Republic of China, based on theories of sociology & social psychology & analyzing soccer fans in Dalian & Shenyang in terms of the phenomenon's developing process. Fans are discussed in their move from individual to group & from freedom to organization, & their common characteristics of worship are studied along with the political significance of the phenomenon. It is thought that the basic reason for the phenomenon lies in the agreement between the function of soccer & the needs of fans. In China, soccer fan turbulence has been common during the 1990s, tending to happen inside the venue, thus suggesting that soccer fan associations are a means of organizing fans & allowing them to fully play their social roles.

Warde, Alan, Shove, Elizabeth & Southerton, Dale (Dept Sociology Cartmel College U Lancaster, LA1 4YL England (tel/fax: 44-0-1524-594-183/256; e-mail: a.warde@lancs.ac.uk)), **Convenience and the Scheduled Life.**

¶ Many products are sold & activities conceptualized in terms of "convenience," a complex concept that usually refers to the acquisition of goods & services that save labor time, usually by changing the character of the labor input, & sometimes involving greater use of natural resources. This concept is explored in detail, arguing that it illuminates central concerns of everyday life in late-20th-century Western societies & helps make sense of the ratcheting up of consumption (& the concomitant use of energy & production of waste). Time scheduling has become a major pre-occupation, seen as a means by which prioritized purposes may be achieved through the management of movements in time & space. In the context of theories of time-space distancing, the everyday language of

time-use is examined to explore the relationship of machines, techniques, & regimes for the organization of the "scheduled life."

Warren, Lorna (Dept Sociological Studies U Sheffield, S10 2TU England (tel/fax: 44-114-222-6468/276-8125; e-mail: l.warren@sheffield.ac.uk)), **Considering the Culture of Community Care: Anthropological Accounts of the Experiences of Frontline Workers, Older People and a Researcher.**

¶ Draws on research into social care for older people living in their own homes in two northern cities in the UK, illustrating how anthropological perspectives have helped both to inform understanding & shape accounts of community care. The methodological approaches to the separate studies are identified, discussing efforts to combine qualitative methods with more structured systems of data collection in order to build a holistic picture of the world of social care. In examining key actors, it is shown how the role of frontline workers is underpinned by a familial model of care that bears important implications for the gendered nature of caring & caregiving, as well as for workers' relationships with other professional carers. The experiences of older people are the product of a complex interplay between individual biography & environmental factors, all of which affect individuals' attitudes to care. A failure to take into account this complexity underlies the ineffectualness of policy promises to involve & empower users in the organization & of delivery of welfare services. Drawing attention to the centrality of reflexivity to effective policy & practice, the researcher's role in the construction of these accounts of social care, & particularly the impact of the researcher's gender, age, & status as postgraduate student & research fellow on the form & content of the research reports, are discussed.

98S36466 / ISA / 1998 / 13707

Warren, Lorna & Maltby, Tony (Dept Sociological Studies U Sheffield, S10 2TU England (tel/fax: 44-114-222-6468/276-8125; e-mail: l.warren@sheffield.ac.uk)), **Older Women in the United Kingdom: Lifestyles and Health.**

¶ Reports findings from a pilot study investigating the lives of older women in the UK, drawing on biographical interview data. Set in a life-course perspective, findings highlight the link between social integration & health, covering topics such as education, employment, marriage, housing, leisure activities, & attitudes toward aging & older people. Dis-

W

cussed are the aims to establish a basic set of questions that are effective in eliciting information from older women on how they perceive their well-being & needs &, ultimately, to develop more proactive & empowering models of health assessment, intervention, & support.

Warskett, Rosemary (Dept Law Carleton U, Ottawa Ontario K1S 5B6 (tel/fax: 613-520-2600/4467; e-mail: rwarsetk@ccs.carleton.ca)), **Learning to Be "Uncivil": Transforming Union Representation within the Canadian Administrative State.**

¶ Explores postwar associations of Canadian civil servants & why & how they learned to become "uncivil," transforming themselves into militant unionists during the 1980s & 1990s through a case study of the Public Service Alliance of Canada (PSAC), the largest union of frontline workers in the administrative state. In 1966, PSAC leaders adopted a consultative, harmonious approach to staff relations, which began to change during the 1970s & 1980s, when working-class formation & capacity developed in the labor movement in concert with feminism. In the PSAC, collective bargaining, the right to strike, & the development of working-class feminism produced openings for learning & strategizing around subordinate class & gender issues & demands. Activists learned to use openings in state structures to transform union agency, despite the existence of a legal regime that continues to constrain the development of working-class & feminist capacities.

98S36468 / ISA / 1998 / 13709

Warzywoda-Kruszyńska, Wielisława (Instytut Socjologii U Łodzi, PL-90214 Poland (tel/fax: 48-42-355258/355309; e-mail: zsol@krysia.uni.lodz.pl)), **Poverty in Contemporary Poland—Causes and Explanations.**

¶ The most popular explanation for poverty in Poland today is offered by World Bank analyses, using data from household budget surveys carried out by the Central Statistical Office, according to which low wages are the main factor, followed by unemployment. Attempted here is a determination of whether poverty explanations developed in Western countries fit the situation in postcommunist countries, particularly in Poland. In developed European countries, restructuring of the economy toward an economy based on services (ie, deindustrialization) & globalization of the market are held to lead to unemployment & underemployment. In Central Europe, at least in Poland, transformation & modernization processes affect employment schemes more seriously than do deindustrialization & globalization. Countries that belonged to the Eastern bloc were & still are located on the margin of the world market & constitute its periphery. Thus to some extent, development theories might explain poverty phenomenon in this region. Since Poland's economy is affected very strongly by political decisions, the role of the state in impoverishment of some groups, as well as in alleviation of poverty, is examined.

98S36469 / ISA / 1998 / 13710

Warzywoda-Kruszyńska, Wielisława (Dept General Sociology U Łodzi, PL-90214 Poland (tel/fax: 48-42-355251/355309; e-mail: zsol@krysia.uni.lodz.pl)), **Pockets of Poverty in Łódź, Polish Large Industrial City.**

¶ Marginal poverty that existed in Poland till the 1990s turned into massive, structural poverty when the market economy was implemented, particularly among rural & small town populations. The poor living in large cities are underrepresented, leading politicians & scholars to conclude that poverty is not a social problem in large cities. This assumption is challenged here, arguing that, although the poverty ratio is relatively low in large cities, they are particularly exposed to risk of concentrated poverty. Arguments about the possible existence of a spatially segregated underclass in urban industrial contexts of Poland are reviewed, with particular reference to the propositions advanced by William Julius Wilson. Using data from the General Inhabitant Register & the local Social Assistance Agency to calculate the ratio of poverty in particular spatial units in 1996, it is shown that, in Łódź, the second largest Polish city, there are many districts that might be defined as strongly pauperized areas, ie, "pockets of poverty," in which at least 30% of the inhabitants have an income below the poverty line or are supported by social assistance, a figure nearly twice as much as stated at the city level. The cultural effects of the existence of spatial locales with an intense concentration of deprivation are investigated using data from focus group interviews with experts & poor & nonpoor groups living in particular pockets of poverty. Interventions by nongovernmental organizations in these areas are also described.

Watts, Meredith W. & Feldman, Ofer (Coll Criminal Justice Northeastern U, Boston MA 02115 (tel/fax: 617-373-2727/8773; e-mail: mwatts@lynx.dac.neu.edu)), **Predispositions and Perceived Sanctions: Japanese Perceptions of the Personal Consequences of Aggression against Outgroups.**

¶ Research into the nature of xenophobia (Watts, 1997) suggests that the expression of aggressive predispositions is related to & mediated by mechanisms of augmentation & suppression in the individual's perceived social environment (eg, individuals with only moderately hostile attitudes may be aggressive when sanctions are low & social augmentation is high). Though this broad proposition seems intuitively tautological, the empirical questions are (1) How do predispositions & perceived sanctions interact? (2) Which elements of the social environment are most important? (3) How can the structure of perceived sanctions be measured in a useful way? A newly designed instrument is tested via survey of 1,000+ Japanese students at several universities in fall 1996 (Watts & Feldman, 1997). Family, peer groups, school, media, & police were the potential sanctioning agents.

Watts, Rob (Dept Social Sciences & Social Work Royal Melbourne Inst Technology, Victoria 3001 Australia (tel/fax: 61-3-9662-0611/9663-2764; e-mail: watts@rmit.edu.au)), **Theorising State Terrorism: The Case of Holocaust (1941-1945) and Ethnic Cleansing (1992-1994).**

¶ Proposes a theoretical framework for understanding genocidal state crimes, considering the cases of major genocidal violence in two modern social settings & exploring the relationship of the status of modernity & nationalism as explanatory variables. To this end, Foucauldian governance theory is triangulated in a historical sociological account to argue that modernity per se is not a particularly useful theoretical point from which to try to conceptualize the genocidal terror waged by states.

98S36472 / ISA / 1998 / 13713

Wearing, Betsy (School Social Work U New South Wales, Sydney 2052 Australia (tel/fax: 61-2-9385-4745/9662-8991; e-mail: brets@ozemail.com.au)), **Views from the 'Other': From Margin to Centre in Women's Leisure.**

¶ In many senses, viewing the Other has always been a part of the leisure activity of dominant cultures. The Other has been seen as a source of difference & excitement, with possibilities for exotic pleasure, eg, in art. At the same time, dominant cultures reinforce their sense of superiority through viewing the Other while excluding the latter's from theory & practice. Postcolonial theorists are critical of this stance, arguing for the voice of the Other to be heard, in social theory & in cultural practices. Postcolonial feminists have sought to incorporate the voices of women who have been marginalized through race, color, ethnicity, class, & disability in feminist theory. When marginalized people such as Australian Aboriginal & African American women speak of leisure, they tell of their own ways & means of making spaces & meaning in oppressive circumstances. The spaces they create enlarge not merely individual selves, but the community in which they live, & sometimes result in political action. Leisure then moves beyond notions of individual freedom & singular self-enchancement to disrupting dominant discourses & subjugation & enlarging personal & political horizons. Thus, the notion of leisure offers possibilities to challenge gendered cultural inferiorization. The voice of the Other enlightens Western notions of leisure & adds a dimension to feminist theorizing about leisure.

98S36473 / ISA / 1998 / 13714

Wearing, Michael J., Dowse, Leanne & Orr, Neil (School Social Work U New South Wales, Sydney 2052 Australia (tel/fax: 61-2-9385-4743/9662-8991; e-mail: M.Wearing@unsw.edu.au)), **Redressing Stressors with Resources?: A Study of Public Housing, Mental Illness and Service Delivery on Waterloo Housing Estate, Sydney.**

¶ Since many public housing tenants in New South Wales & elsewhere in Australia experience severe emotional & mental health problems as a result of their living conditions & general quality of life, the relationship between stressors (eg, psychosocial, environmental, physical) & resources (eg, social supports, programs & services, personal) for 30 residents is examined, using a model developed by Dekker (1987) to address preventive mental health issues. The mental health stressors examined included physical & mental illness, drug & alcohol use, patterns of service use, perceptions of effectiveness & appropriateness of services, & demographic features. Findings show two distinct groups—older residents suffering from chronic illness & a younger group who had qualified for accommodation through the emergency housing list—that exhibited significantly different mental & emotional health characteristics, environmental stressors, & service usage.

98S36474 / ISA / 1998 / 13715

Wearing, Michael J., Masam, Margaret & Orr, Neil (School Social Work U New South Wales, Sydney 2052 Australia [tel/fax: 61-2-9385-4743/9662-8991; e-mail: M.Wearing@unsw.edu.au]), **Normalising Distress and Defending the Territory of Self and Family: A Study of the Life Stories of Housing Estate Residents in Inner-City Sydney.**

¶ Investigates the social & psychological distress experienced by residents on fixed low incomes using a biographic method, based on life narratives of 15 people ranging from long-term residents to recent arrivals in Waterloo Housing Estate, an inner-city public housing block in Sydney, Australia, with 70% of households on government assistance. All participants were concerned about overcrowding, violence, drug use, & the role of social service agencies. Most would not have chosen to live at Waterloo & were concerned about the effects of gentrification of the area. Central themes around ideas about the self, social memory, Otherness, & defense against danger are developed from the data. These themes are connected in the biographies of each resident, particularly in their experience of distress, isolation, & fear. Residents make efforts to normalize their lived experience in everyday life & also display strategies of hope to counter & resist the "despairing homogeneity" of this normalization. Government trends toward selling off estates & dispersing their populations are encouraged by the demographic drift in recent years from aged residents toward residents such as drug users & single mothers. It is argued that this drift is creating new divisions expressed in housing estate communities. Thematic & discourse analysis are used to interpret the residents' experience of changes on the estate & their efforts to normalize the self.

98S36475 / ISA / 1998 / 13716

Wearing, Stephen L. & Neil, John (School Leisure & Tourism Studies U Technology Sydney, Australia 2070 [tel/fax: 61-2-9514-5432/5195; e-mail: S.Wearing@utsedu.au]), **"Tourism That Counts": Ecotourism, Volunteerism and Serious Leisure.**

¶ Attempts to contribute to a more comprehensive theoretical understanding & hence, provision of so-called alternative forms of tourism experience by positing a conjunction of interrelating elements that often contribute to such experiences—ecotourism, volunteerism, & serious leisure. Extant literature indicates that tourism is significantly more than culturally sanctioned escape routes for Western travelers, in that holidays provide a potentiality for the cooperative exchange & interaction of value that is fundamentally reliant on the recognition of the host community's centrality in this process.

98S36476 / ISA / 1998 / 13717

Wearing, Stephen L. & Neil, John (School Leisure & Tourism Studies U Technology Sydney, Australia 2070 [tel/fax: 61-2-9514-5432/5195; e-mail: S.Wearing@utsedu.au]), **Refiguring Self and Identity through Tourism Connections: Some Theoretical Contributions from Interactionism and Post-Colonialism.**

¶ Argues that travel focused on the idea of it being a means to identity formation providing for self-esteem can provide a sound basis to resist gender stereotypes & thus, develop the self. This is essentially a question about the desire in knowledge practices that examines issues of power & the need for innovative approaches to leisure & tourism studies. Interactionism & postcolonialism are explored within the context of leisure & tourism studies in an attempt to move beyond what has remained largely within the tradition of Western thought, ie, a predominance of travel to escape. Cohen & Taylor (1976) drew on Erving Goffman's (1974) concern with the presentation of self in everyday life to argue that holidays are culturally sanctioned escape routes for Western travelers. One problem for the modern traveler, in this view, is to establish an identity & a sense of personal individuality in the face of the anomic forces of a technological world. Holidays provide a free area, a mental & physical escape from the immediacy of multiple impinging pressures in technological society. Thus, holidays provide scope for the nurture & cultivation of human identity, & overseas holidays are structurally similar to leisure because one of their chief purposes is identity establishment & the cultivation of self-consciousness.

98S36477 / ISA / 1998 / 13718

Wearing, Stephen L. & Wearing, Betsy (School Leisure & Tourism Studies U Technology Sydney, Australia 2070 [tel/fax: 61-2-9514-5432/5195; e-mail: S.Wearing@utsedu.au]), **Smoking as a Fashion Accessory in the 90s: Conspicuous Consumption, Identity and Adolescent Women's Leisure Choices.**

¶ Conspicuous consumption, as conceptualized by Thorsten Veblen, increasingly influences people's choices of leisure commodities, not for their use value, but for their signification in terms of identity & status. Explored here is the impact of the choice of smoking as a leisure activity by adolescent girls on their processes of identity formation. It is suggested that this form of leisure is a two-edged sword. As a fashion accessory or a form of conspicuous consumption, it may enhance outward appearances, status, & peer group approval, & project an image of autonomy. However, it may also deny the opportunities that leisure offers for exploration of identities that add more enduring value to one's sense of self. As a fashion accessory, its very nature is of ephemeral value, while its long-term effects can be fatal. It is concluded that leisure in the 1990s offers both the possibility of stultifying stereotypes & of enriching identities.

98S36478 / ISA / 1998 / 13719

Wearing, Stephen L. & Wearing, Michael J. (School Leisure & Tourism Studies U Technology Sydney, Australia 2070 [tel/fax: 61-2-9514-5432/5195; e-mail: S.Wearing@utsedu.au]), **Decommodifying Ecotourism: Rethinking Interventions in Nature and the Policy Regime of Ecologically Sustainable Tourism.**

¶ In liberal market economies, human need & resultant policy agendas are predominantly defined by the interplay of government regulation & market forces. Decommodified social policy is usually accessible to all & places social objectives & social rights (eg, the right to work or to a decent standard of living) over those of economic value & ends. The commodified/decommodified distinction can also be applied to the development of ecotourism. Commodifying processes occur where the final outcome is defined as the economic use-value of the production. These processes are particularly evident in policy arguments for increased competition, the pursuit of pure markets, & new forms of regulation through greater accountability, including customer-service accountability. Ecotourism policy is not divorced from such national trends, but is heavily involved in conservative political agendas that support the pursuit of economic growth. It is argued that current directions in ecotourism are toward the commodification of nature in the unrelenting search for profit & the tourist dollar in capitalist economies. Such a policy trajectory requires decommodifying actions toward ecologically sustainable tourism that places social value on the quality of interaction with nature, the ethics of care for nature, & a greater appreciation of the consequences of human action for nature. Implications of the decommodifying thesis for the politics of ecotourism & the future of tourist policy in Australia & elsewhere are explored.

Webster, Edward C. & Adler, Glenn (U Witwatersrand, Johannes-
burg 2050 South Africa [tel/fax: 11-716-2897/3781; e-mail:
029edw@muse.arts.wits.ac.za]), **South Africa's Double Transition: Is
a Class Compromise Possible?**

¶ Examines the limits & possibilities of a redefined class compromise in South Africa & its relevance to other new democracies in the developing world. Class compromise during the "golden age of capitalism" was based on economic concessions to organized workers (high wages & job security) who, in return, accepted the fundamentals of the capitalist system. It has been argued that such a compromise is not feasible in the new democracies in the developing world, with serious consequences for the consolidation of democracy & economic adjustment. This "double transition" can be contradictory: adjustment imposes high social costs on workers & the poor, which can undermine the legitimacy of democratic institutions. A class compromise, some argue, is impossible because globalization weakens possibilities for Keynesian-style demand management & trade unions cannot represent the working class or enforce compromises in countries with large sections of the population outside of formal employment. Here, it is argued that labor movements can shape the double transition. South Africa is a newly industrialized country in the midst of a double transition with a powerful labor movement rooted in the workplace & capable of influencing national policy. Since the 1994 democratic elections, labor, capital, & the state have created institutions enabling a process of "bargained liberalization." It is suggested that, through such institutions, a powerful labor movement can promote a redefined class compromise between labor, state, & employers. Such a compromise is based not on high wages to organized workers, but on the introduction of a social wage to all citizens & the extension at all levels of participation & worker's control to ensure that workers & the poor benefit from accumulation. Labor's demands take account of the interests of the working class as a whole; capital gains a more productive workforce & commits itself to longer-term productive investment; the state achieves economic growth & stability. Such a compromise would ensure that the costs of economic restructuring are not borne by workers alone, thereby strengthening popular commitments to democracy. This argument is based on extensive research on corporatist-type arrangements in South Africa & on the possibilities of a comprehensive social security system there.

Weede, Erich (Seminar Soziologie U Bonn, D-53113 Federal Repub-
lic Germany [tel/fax: 0228-738424/738430]), **Is the Market or the
Welfare State an Escape-Proof Prison?**

¶ In the early 1980s, Lindblom argued that the market is a prison & politicians are its inmates; investor decision making forces politicians to play by capitalist rules. Here, Lindblom's story is inverted. Not the market, but the welfare state, is an escape-proof prison. Collective action patterns & political processes in democracies force politicians to compete with each other by providing favors, subsidies, & transfers to concentrated, informed, & organized special interest groups at the expense of diffuse interests & rationally ignorant majorities who suffer from obstacles to collective action. A politician who recognizes that rent seeking & the welfare state promote economic decline nevertheless remains a prisoner of the system. Dismantling the welfare state implies benefiting large groups of people who do not feel it &, therefore, cannot reward one with their votes at the expense of small groups of vociferous minorities who do feel the loss & will punish one at the next election. If there are forces to curtail the welfare state, they do not arise from competition in politics, but

from globalization & competition between policies.

Wegmarshaus, Gert-Rüdiger (Facultat Kulturwissenschaften Euro-
pa-U Viadrina Frankfurt, D-15230 Federal Republic Germany
[tel/fax: 49-335-5534316/5534225; e-mail:
marshaus@euv-frankfurt-o.de]), **Ecological Awareness of Russian In-
telligentsia in St. Petersburg: Some Empirical Findings and Theoretical
Considerations.**

● Complete paper available from Sociology*Express. Prepaid orders
only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-
0416. E-mail: socio@cerfnet.com

¶ Textual analysis of questionnaire data from a 1996 opinion poll concerning the ecological awareness of Russian intellectuals in St. Petersburg traces changes in the minds of intellectuals regarding politics in a democratic society & establishes attitudes toward global, national, regional, & local environmental problems. Findings suggest a remarkable degree of approval of the new political system & acceptance of market economy conditions. However, it is fair to conclude that ecological issues show in general a low profile against the background of social & economic problems perceived & expressed by respondents, indicating that concerns for the environment are ranked much lower in comparison to problems of economic survival & social security. This finding marks an intriguing difference with respect to the data on ecological awareness in Moscow obtained by R. Inglehart et al in the recent World Value Survey.

Wegner, Eldon L. (U Hawaii Manoa, Honolulu 96822 [tel/fax: 808-
956-7152/3707; e-mail: wegner@Hawaii.edu]), **New Insurance Pro-
visions and Restructuring Care for the Elderly in Germany.**

¶ Describes consequences of the Federal Republic of Germany's 1995 provisions in its national health insurance law for long-term care assistance, based on 1996 interviews with citizens & health care, insurance company, & government officials. The new insurance provides payments for family caregivers, community-based services, & institutions, & provisions are structured to encourage the lowest cost care & family caregiving, while discouraging institutional care. Evidence indicates that these intended results are being realized. Also, the large fund for reimbursing services quickly stimulated the growth of private home care services & new residential arrangements. While serious issues remain, especially for persons with mental illness or dementia, it is concluded that the German experience shows that an insurance approach can be cost-effective & expand the choices available to families in providing long-term care.

Weil, Susan W. (University Coll Northampton, NN2 7AL England
[tel/fax: 01604-735500/14564; e-mail: susan.weil@nenc.ac.uk]), **Re-
flexive Turns in Paradigm Dialogues: Tensions and Challenges in
Transcending Different Domains for Knowledge Generation.**

¶ Explores research that evolves alternative approaches to "knowing & being known" as a living process, beset with tensions, contradictions, & uncertainties, drawing on personal experience as a researcher at the boundaries of complex social & organizational systems & disciplines & as director of a transdisciplinary postgraduate action research center. In particular, the example of a current partnership initiative with South Africa will illustrate the concept of reflexive turns in paradigm dialogues. Examined are the systemic tensions that arise from universities becoming engaged as partners in social transformation. At the same time, in a postapartheid world, academics experience new pressures to abide by "conservatizing" universalized & unitary academic criteria for determining the quality of knowledge-generation processes & outcomes.

These pulls can diminish possibilities for generating & enacting new forms of relational knowledge that transcend different theoretical voices, traditional researcher roles, academic disciplines, & social knowledges in response to complex social problems. So too is the potential for generating processes of knowing & being known that make a positive difference in the lives of participant coresearchers & to the social & organizational learning processes through which new forms of partnership might be sustained & enhanced. The notion of research as a reflexive, systemic, & social learning process will be introduced & developed.

Weiner, Gena (Dept Child Studies Linköping U, S-58183 Sweden (tel/fax: 46-13-282-936/900; e-mail: genwe@tema.liu.se)), **Towards a New Understanding of Poor Children. An Analysis of 276 Letters from Foster Children.**

¶ Argues that it is possible to approach the life & self-understanding of children, even that of the poorest, using the child's familiarity with letters as a genre. Bottom-up & gender perspectives are drawn on to analyze 276 letters from foster children in Solna Child Welfare Bureau in Stockholm, Sweden, with respect to what issues the children brought up & what they wanted to achieve. Not surprisingly, the most common issue concerned the well-being of the biological parents & siblings. Foster children did not have a passive & dejected attitude as has been presumed in earlier research; they emerge as active fighters, not as objects for adults to impose their wills on, & make clear demands that are sometimes met. At times, demands were contrary to the principles set down by the Bureau or clashed with concrete reality, but it often proved worthwhile for the children to express their opinions. They were often adept at arguing their case, & they knew which strings to pull. Thus, they were not powerless, even if they depended on the willingness of adults to listen to them.

Weiss, Danièle (Institut national jeunesse & éducation populaire, 86 rue de Flandre F-75019 Paris France (tel: 33-1-39-17-27-62)), **Une Démarche d'intervention dans une résidence universitaire (Intervention in a University Residence).** (FRE)

¶ Reports on the response of the training department of France's National Institut for Youth & Popular Education to a request from the Versailles regional services center for academic & university affairs for assistance in the matter of school failure & the consequent marginalization of students living in Nanterre's residence (near Paris). Finding a conflict between the residence's employees & the student residents, it was decided to redefine the "command" through an analysis of the social demand based on inquiry regarding organizational functioning, new regulations, & coping strategies. These students' social agitation shows that problems in school can be part of a larger frame of reference, ie, student living conditions. Analysis then included the larger context of marginalization & the increased poverty that characterized this group of residents, poorer than others living by. The intervention process is described, as is the hypotheses put forward to explain the dysfunction of the residence, the is-

ues at stake between partners in the situation, & actions (internal & external) taken by directors to address the diverse proposals formulated by employees & students. A critical analysis of the different steps of the intervention process is presented in conclusion.

Weiss, Otmar, Norden, Gilbert, Hilscher, Petra & Vanreusel, Bart (Dept Sport Sciences U Vienna, 1150 A-Austria (tel/fax: 43-1-982-2661-253/252; e-mail: otmar.weiss@univie.ac.at)), **Ski Tourism in Austria: An Analysis of the Ecological Awareness within Different Interest Groups.**

¶ Explores how the environmental effects of mass skiing on nature are perceived by the local population & the tourists, as exemplified by ski tourism in Austria. The ecological awareness of locals & tourists in Austria's most important skiing regions is comparatively examined, based on study data from 1,849 respondents in seven regions & representative survey data from 920 Austrians in the general population. In addition, results of a Belgian survey (Vanreusel et al), aligned with the design of the Austrian research, are included so that cross-cultural aspects of ecology & economy can be examined. The main hypothesis—that ski tourists have a higher level of ecological awareness than locals working for winter tourism—is supported. If the gap between the concerns of tourists & locals grows wider, one consequence may be that the expectations of tourists will not be met in the future, which may mean that economic objectives may no longer be realizable. Results indicate how important it is for the tourism sector to take notice of ecological aspects to meet the demands of tourists—crucial for the preservation of skiing resorts' economic interests.

Weitman, Sasha (Tel-Aviv U, Ramat-Aviv IL-69978 Israel), **Bringing the Social Back In.**

¶ Sociologists cannot imagine the Good Society because they have lost sight of "the social" in sociology—as distinct from economics, political science, psychology, history, anthropology, demography, & the other social sciences. After describing the meaning & role of the social in sociology, focus shifts to three main points about the discipline: (1) the politics of sociology; (2) how the Good Society should be viewed in sociology; & (3) the social in the relational sense, proposing that it comes in two variants—moral-ethical & erotic-ludic, both discussed here. It is argued that a proper understanding of socioerotics could reveal important clues to more satisfactory alternatives to society as known in this century; & theorizing the socioerotic offers a good chance to advance significant new ideas about how sociologists could contribute to the Good Society.

98S36494 / ISA / 1998 / 13735

Wejnert, Barbara (Dept Rural Sociology Cornell U, Ithaca NY 14853), **A Threshold Model of Diffusion Based on Process Rationality.**

¶ Provides an integration of the diverse concepts, variables, & processes represented in the study of diffusion. Diverse diffusion variables are grouped into three major components that focus on the contribution of societal context, characteristics of the innovation, & actor characteristics to the process of adoption of innovations. The manner in which these three components contribute to the processes of diffusion is explored by assessing the contribution of all variables to four lines of influence on the process of adoption. Three of these lines of influence (information flow, innovation value, & innovation feasibility) are shown to converge on an actor's rationality processes that derive from the theory of rational choice, & an overall estimate of the risk or probability of a positive outcome of adoption is formulated & compared to an actor's tolerance for the associated risk, which is based on the fourth line of influence arising from actor characteristics. The product of those two risk estimates, in interaction with an actor's threshold of adoption, is formally discussed in the framework of a trade-off function. A threshold model of adoption is proposed based on a synthesis of the above analyses, & the implications of the model for representing (1) individual differences between actors, (2) the effect of generalized modulatory variables on the adoption threshold, & (3) a predictive perspective on adoption in populations of actors are discussed.

Wekliem, David (Dept Sociology U Connecticut, Storrs 06269 [fax: 860-486-6356]), **Societal Development and Class Polarization: An International Comparison.**

¶ Many accounts of social change maintain that support for the traditional economic policies of the Left & class polarization both decline with the development of industrial (or postindustrial) society. Taken together, these claims suggest that support for policies of the Left should decline more sharply among the working than the middle classes. This idea is tested by a comparison of nations included in the 1990 World Values Survey. Levels of support for government action to promote equality & related policies in each class are regressed in measures of gross national product per capita, average educational attainment, & occupational composition. In general, the hypothesis of a decline of class polarization with economic development is not supported. In some cases, average opinion is influenced by these factors, but these effects do not vary across classes in the predicted manner.

Wellman, Beverly S. & Kelner, Merrijoy (U Toronto, Ontario 76G 2R9 [tel/fax: 416-978-1787/4771; e-mail: bevwell@chass.utoronto.ca]), **Health Care Experiences of Medical and Alternative Patients.**

¶ Expands the conception of health care to include both medical & alternative therapies, drawing on 300 health narratives obtained 1994/95 from patients in the metropolitan Toronto (Ontario) area. Beginning with initial onset of symptoms, through the self-care & informal consultation stages, & concluding with the use of the practitioner currently being consulted, software-based analysis addresses (1) what people think good health means, (2) what worries them most about their own health, (3) how they reinterpret their health problems over time, (4) how information from friends & family influences decisions to seek care from medical & /or alternative practitioners, (5) the number & range of therapeutic modalities they use when seeking relief for chronic problems, (6) their views on what constitutes a satisfactory practitioner-patient relationship, & (7) their views on how the health care system should be organized to deliver optimal care.

98S36499 / ISA / 1998 / 13740

Welser, Ted H. (Miami U, PO Box 3922 Logan UT 84323 [tel: 801-750-5890]), **Accessing the Aesthetic Dimension in Cultural Practice; a New Perspective in Critical Sport Inquiry.**

¶ Examines the contradictions in the notion of the heritage of contemporary society as one of domination. According to Beal (1995), Csikszentmihalyi (1988), & Welser (1997), some participants of alternative sports exhibit beliefs, values, & behaviors that contradict elements of the domination heritage. The alternative sports participants were critical of ideas & behaviors associated with mainstream life. Here, these critical perspectives & their relationship to alternative activities are studied. Issues are theorized via a critique of contemporary society as (1) integrating ways of life, thought, & systems of domination (one-dimensional); (2) a critical mode of thought (second dimension); & (3) the role of aesthetic experience in providing access to the second dimension (Marcuse, 1955). Using the concept of aesthetic dimension, alternative activities provide space for the development of thoughts, beliefs, & values independent of

the imposed standards of one-dimensional society. Some characteristics of alternative activity contributing to the development of alternative insights are theorized as: level of involvement, distance from mainstream, access to aesthetic experience, & relative degrees of control & freedom. Some relationships of these alternative insights to social change are discussed.

98S36500 / ISA / 1998 / 13741

Wengraf, Tom (Middlesex U, Enfield EN3 4SF England [tel/fax: 44-0-181-362-5408/5440; e-mail: Tom3@mdx.ac.uk]), **Representations of Interpreted Biographies in Contexts: General Concepts and Unique Cases under International Development.**

¶ International cooperation between sociologists of different countries, languages, & research traditions to develop comparative case studies & general theories involves complex processes of adjustment & communication, as well as a high degree of reflexivity. The use of biographical methods to explore the specificity of life histories to come up with cross-or transnational findings is likely to experience these classic contradictions in a peculiarly strong & fruitful form. The SOSTRIS project, focused on social strategies in risk societies, is currently comparing biographies-in-context across seven European countries in six types of social category. Such an operation presumes the development & accomplishment of cross-category & cross-societal understanding in a number of ways at a number of levels. Offered here is a conceptual & empirical analysis of the research team practices, stresses, & issues that arise at different stages of the production process as small teams of social researchers develop changing & compatible ways & concepts for handling cross-case/-national comparison making. Several questions are addressed: (1) How is it that some general concepts sometimes seem to permit fruitful cross-case/-national comparison, while others seem to enforce their distortion? (2) What are the uses & abuses of typologies & of universal & particularized concepts in such work? (3) If there is a point at which the system that has generated commonly systematizable comparative analysis becomes less of a sufficient resource as artful interpretation, & theorizing becomes a more pressing priority, how do the teams deal with this transition point? (4) Of what use for understanding these complexes of processes & practices are contemporary writings on comparative qualitative case study research?

98S36501 / ISA / 1998 / 13742

Werle, Raymund (Max-Planck-Institut Gesellschaftsforschung, D-50677 Cologne Federal Republic Germany [tel/fax: 49-221-3360525/3360555; e-mail: werle@mpi-lg-koln.mpg.de]), **An Institutional Approach to Science and Technology.**

¶ The absence of general social theory in many science & technology studies seems to indicate that the specificity of the research object precludes a "conventional" approach to this area. Introduced here is actor-centered institutionalism, a variant of the institutionalist approach, to demonstrate the analytic power of conventional social theory in the science & technology studies. Actor-centered institutionalism is particularly well-suited to linking the meso- & microlevel of analysis because it treats institutions & actors as equally important in the shaping of social processes. To highlight the assets of actor-centered institutionalism, this approach is contrasted with the social construction of technology approach. Empirical examples referring to the area of international technical standardization & the evolution of computer networks for research & education will be used to show that actor-centered institutionalism is not meant to replace the social construction of technology approach, but that either approach may benefit from the other.

98S36502 / ISA / 1998 / 13743

Wermuth, Nanny (Center Survey Research & Methodology ZUMA, Mannheim D-68159 Federal Republic Germany [tel/fax: 49-621-1246-155/100; e-mail: wermuth@zuma-mannheim.de]), **On Tracing Paths in Generating Processes.**

¶ Argues that, if causal interpretations are of interest, statistical models of multivariate observational data that can represent processes by which the data could have been generated in a direct, stepwise manner should be sought; eg, systems of univariate recursive conditional distributions, as they are formulated both in the context of linear structural relations & of graphical Markov models. Wright's method of tracing paths in linear systems have been extended to predict the type of implied relation (conditional independence or dependence) for a variable pair in recursive systems that are called quasilinear but may contain categorical, ordinal, & quantitative variables with some nonlinear relations; methods are based on so-called separation criteria. Causal interpretations of develop-

ment are consistent with following paths in such generating processes. To gain confidence in the interpretations, it is necessary to replicate results, if possible, several times & under slightly modified conditions. Additional checks are typically needed, because distorted conclusions are possible. Graphs in which nodes represent variables & edges relations between variables to explain the tracing of paths & conditions under which some of the potentially distorting effects are known to be absent are presented.

Wesselingh, Anton A. (Dept Educational Sciences U Nijmegen, NL-6500 HE Netherlands [tel/fax: 31-24-361-2341/5978; e-mail: A.Wesselingh@ped.kun.nl]), **School as a Training Ground for Active Citizenship.**

¶ In postindustrial society the opportunities for schools to offer citizenship education are under pressure as schools are confronted with claims to extend their curricula with subjects that are supposed to help solve many problems in society. At the same time, education has been brought under the regime of the market, with the central government giving more autonomy to the schools themselves. It is argued that the acquisition of citizenship virtues in democratic society should be practiced in schools both in & outside the official curriculum, more specifically in school practices. The debate on the role of the school as an institution of moral education is evident throughout the history of educational thought. The discussion is illustrated by recent development in educational policy in the Netherlands.

Wever, Kirsten (Rutgers U, New Brunswick NJ 08903 [tel/fax: 732-932-1746/8677; e-mail: kswever@rci.rutgers.edu]), **Bringing Women In: Rethinking Comparative Industrial Relations.**

¶ The mainstream comparative social science literature tends to characterize employment relations—and hence, outcomes for workers—as being quite different in the worker-friendly social market economy of the Federal Republic of Germany vs the more business-friendly free market-oriented US. Two striking & apparently contradictory similarities in labor market outcomes for women in the two countries are explored: a relatively large gender wage gap & relatively low levels of occupational segregation, compared with other Organization for Economic Cooperation & Development countries. Considered here are a range of institutional factors, some of which work counter to the overall employment relations systems of these two countries, that can help account for these counterintuitive outcomes for women. Implications for the broadening of comparative analytical frameworks are discussed in conclusion.

98S36506 / ISA / 1998 / 13747

Wheatley, Elizabeth L. (Dept Sociology U California, Santa Cruz 95064 [tel/fax: 408-427-3141/459-3334; e-mail: wheatley@cats.ucsc.edu]), **Negotiating "Acceptable Risk": Collaboration, Compromise and Contestation in Cardiac Recovery.**

¶ Explores how having heart disease & being "at risk" for heart attacks (re)structures social relations, obligations, & routines. Also examined are situated sensibilities & practical reasoning among cardiac patients who make sense of heart disease, & its risks, in daily life, drawing on (1) sequential interviews conducted at the time of hospitalization & continuing through a 6-month period of recovery with 20 men & women in northern CA, diagnosed & treated for coronary artery disease, (2) tape-recorded support group discussions among men & women who have heart disease, & (3) participant observation in two northern CA cardiac rehabilitation clinics over a 12-month period. Identified are social dilemmas of cardiac recovery as people (re)negotiate social obligations & relationships in the aftermath of a cardiac event. Situational & social constraints of cardiac recovery are highlighted, & a range of strategies people develop to manage cardiac risks in daily life are outlined. Social relations that constrain & enable risk management are described, & how cardiac recovery involves various degrees of collaboration, compromise,

& contestation among those who inhabit specific illness contexts is shown. Rather than being determined by health knowledge, individual choices, or personal behaviors of patients, acceptable risk is achieved through ongoing negotiations in micropolitical practices of power & persuasion.

98S36507 / ISA / 1998 / 13748

Wheaton, Belinda (School Sport Studies Whitelands Coll, West Hill London SW15 3SN England [tel: 0181-392-3541; fax: 01243-376854; e-mail: b.wheaton@roehampton.ac.uk]), **"Just Do It": Consumption, Commitment and Identity in the Windsurfing Subculture.**

¶ Theories about the destabilization of social categories & the increased fluidity of social relationships point toward fragmented identities; ie, people draw their sense of identity from increasingly diverse sources, eg, consumption practices & sport & leisure lifestyles. Here, ethnographic work on sport subcultures conducted 1994-1996 focused on a windsurfing community in England to explore how subculture (male & female) members create identities through their sport consumption & its attendant lifestyle. More broadly, characteristics of sport consumption in these cultural spaces of late modernity are examined, & whether these alleged features of contemporary postmodern culture, eg, self-identity loss & a media-saturated "schizophrenic" experience, are reflected in new sports consumption is assessed.

98S36508 / ISA / 1998 / 13749

White, Michael J. (Dept Education & Training Children's Youth & Family Services, Manning Clark House Reed St Tuggeranong ACT 2901 Australia [tel/fax: 02-6205-1938/7187; e-mail: michael.white@dpa.act.gov.au]), **Ripple Effects or Tidal Waves—Community Recovery after Fort Arthur and Canberra Hospital.**

¶ The Port Arthur massacre (1996) & failed implosion of the Canberra Hospital (1997) in Australia impacted significantly on the sense of personal safety & social well-being of the wider communities in which they occurred. In some cases, they retraumatized individuals who had no contact with the event & for whom the original traumatizing event was not only unrelated but occurred some years previously. Here, these two events are compared, & appropriate community recovery approaches are outlined. The two events' management responses are described, & major features of the community recovery exercise are discussed: scope & purpose; management & service delivery structures; & key issues, eg, role of the media in defining the disaster & participating in recovery.

Whitty, Geoff (Inst Education U London, WC1H 0AL England [tel/fax: 44-171-612-6819/6813; e-mail: tedpggw@ioe.ac.uk]), **Marketization and Privatization in Mass Education Systems.**

¶ Recent education reform in many countries has sought to dismantle centralized educational bureaucracies to create systems that emphasize parental choice & competition between schools, thereby creating quasi-markets in educational services. In addition to this widespread marketization of public education systems, publicly financed & provided education services have been privatized. Here, marketization & privatization policies are compared, & initial research evidence on the impact of marketization & privatization in England, the US, Australia, & New Zealand is examined. Advocates of such policies claim that they will lead to increased diversity of provision, more efficient management of schools, & enhanced school effectiveness. Some proponents have argued that such reforms will bring particular benefits for families from disadvantaged communities. However, critics of such reforms also suggest that they will almost certainly increase inequality between schools & question whether these changes will bring about a discernible improvement in school effectiveness once value-added measures are employed. Also considered is the significance & efficacy of attempts currently under way, in GB & elsewhere, to temper the emphasis on consumer rights within policies of marketization & privatization with a renewed concern for the citizen rights traditionally associated with social-democratic approaches to education policy.

Widerberg, Karin (Dept Sociology U Oslo, N-0317 Blindern Norway (tel/fax: 47-22855-247/253; e-mail: karin.widerberg@sosiologi.uio.no)), **Alternative Methods—Alternative Understandings: Exploring the Social and the Multiple I, through Memory-Work.**

¶ Understandings of identity in the social sciences are formed not only by choice of theoretical approaches but also by the methods applied. The understanding of identity, theoretically understood as the multiple I, requires empirical methods that can contribute to the unfolding of the I into its varieties, also in terms of voices. It is argued here that memory-work is a method conducive to this aim. Examples, based on extensive use of this method—both collectively & individually—are provided to illustrate the kinds of knowledge that may be gained through such a methodological approach. These examples also illustrate how this method is particularly fruitful in illuminating gender, class, & ethnic aspects of the social & multiple I. Finally, reflections regarding the merits & shortcomings of this method are discussed in relation to more traditional methods, especially in terms of problematizing "the taken-for-grantedness" of the social & the promotion of the visibility of the social & multiple I.

Wieland, G. Darryl, Lamb, Vicki, Wang, Huei, Davis, Dorothy, Egbert, John & Eleazer, Paul (U South Carolina, Columbia 29201 (tel/fax: 803-734-4421/4855; e-mail: isbjorn@aol.com)), **Participants in the US Program of All-Inclusive Care for the Elderly (PACE). Program and Service Characteristics in Relation to Disease-Impairment-Disability.**

¶ Based on the On Lok (San Francisco, CA) model, the Program for All-Inclusive for the Elderly (PACE) is a capitated, managed medical/long-term care provider enrolling frail elderly who meet states' nursing-home entry criteria. PACE maximizes participants' autonomy & health, allowing community tenure—preventing institutionalization—for as long as feasible. Prior studies convey a high disability burden among enrollees, but do not address population heterogeneity. Because of the seemingly high per capita expense of PACE to public insurance systems, the more precise nature of PACE participants & their needs has arisen as an important policy issue as PACE faces expansion as a fully eligible provider under Medicare. Here grade-of-membership (GoM) analysis—a multivariate classification technique based on fuzzy-set mathematics—is used to estimate the number & makeup of participant disease-impairment-disability profiles. Validated for clinical coherence by a physician panel, the profiles' predictive validity is tested by estimating their relationship to program differences, use of devices, special treatments, & procedures & other service characteristics. Data were obtained from DataPACE, the participant data set obtained during PACE's demonstration phase on a cross-sectional sample of 3,000 enrolled in the program in early 1997. Seven GoM profiles were analytically derived. These profiles predict most nonrandom variation in sociodemographic characteristics; program case mix; & use of formal & informal supportive care, prosthetics, medical treatment, special therapies, & other services. The relationship of participant types to these latter characteristics is discussed in terms of the variable socioeconomic & organization of care in the PACE model. Policy implications are also addressed.

Wiggins, Richard D., Joshi, H., Cooksey, E., Clarke, L., Verropoulou, G. & McCulloch, A. (Dept Sociology City U, London England EC1V 0HB (tel/fax: 0171-477-8488/8583; e-mail: rw@ssru.city.ac.uk)), **The Consequences of Family Disruption: Multilevel Models of the Cognitive and Behavioral Development of Children in Longitudinal Data from Britain and the USA.**

¶ New evidence is presented to quantify the existence, if any, of an association between child development & various sorts of family disruption, drawing on data from two countries where demographic trends have resulted in the greatest diversification. Multivariate multilevel modeling is used to discern several indicators of the well-being of children while still

of school age: a summary index of their emotional adjustment & measures of educational attainment. Behavioral problems are reported by mothers on standard scale & index items. The consequences of this & children's numeracy & literacy are examined for four broad types of deviation from an intact two-natural-parent family. Among current lone-parent families, children who started life with a lone mother are distinguished from those born into a two-parent family that has split; reconstituted families are likewise divided by whether the child started life with one or other of the natural parents. These questions are addressed using prospective longitudinal studies: from GB, the National Child Development Study of the 1958 birth cohort; & from the US, the National Longitudinal Study of Youth. The modeling extends earlier work by Wiggins & Wale (1996) on intergenerational transmission of literacy & numeracy. The formal specification of these models facilitates an explicit modeling of family-level & child-level variations.

Wilenius, Markku (Finland Futures Research Centre, PO Box 110 FIN-20521 (tel/fax: 358-2-3383-524/2330-755)), **Tales of Transition: Futures Studies and Sociological Explanation.**

¶ It is sometimes argued that the current practice of sociology falls to provide sufficient clarification of late-modern complex societies now experiencing the transition from an industrial- to an information-based social structure. This argument is often related to the alleged general affinity of modern sociology to focus either on narrowly defined sociopolitical processes without any larger relevance, or to attach itself to dubious visions of cultural representation & symbolic meanings. The real problem lies in the fact that, without sufficient consideration of these aspects of sociological exercise, sociology becomes inadequate to explain the complex character of the present transition. An attempt is made to provide an insight into how futures studies might fill apparent gaps of sociological explanation. Three conclusions are presented: (1) futures studies need a sociological reinterpretation of the scope of the research objectives they address; (2) the present transformational period of Western societies, labeled as a period of the information society, calls on new concepts to understand the relationship between culture & nature; & (3) along the lines of Manuel Castells's recent trilogy, three major processes of social change—the information revolution, the globalization of the capitalist economic system, & the spread of new social movements—must be undertaken as a basis for any efforts of futures studies in charting the possible futures of present transitions.

Wilensky, Harold L. (Dept Political Science U California, Berkeley 94720 (tel/fax: 510-642-6323/9515; e-mail: hwilensk@socrates.berkeley.edu)), **Migration and Politics: Explaining Variations among Rich Democracies in Recent Nativist Protest.**

¶ Discusses structures & public policies that minimize nativist violence in rich democracies. Antiimmigrant sentiments are most intense where the number & concentration of immigrants are heavy, the social distance between natives & strangers (in education, religion, language, ethnicity, & race) is great, & the economic instability of industrial readjustment is most widely experienced. Most important, industrial democracies differ in their ways of channeling mass prejudices & populist-Right movements. It is found that the core electoral base of xenophobic, populist-Right groups & parties is similar to that of successful tax-welfare backlash movements—the "middle mass." Successful antitax, antisocial spending, & antibureaucratic movements almost always add nativist rhetoric to their other appeals.

Williams, Claire R. (Flinders U, Adelaide South Australia 5001 (tel/fax: 088-201-2628/3521; e-mail:

claire.williams@flinders.edu.au)), **Masculinities and Emotional Labour in Trade Unions.**

¶ Australian unions historically encouraged the active participation of large numbers of men by helping construct a subordinated masculinity of working-class Anglo men. The latter valorized the male breadwinner ideal & the difficult physicality of manual labor. It conflated militancy with a construct of heterosexual virility. However, the same men had little control over their lives. The masculinity & emotional labor academic literatures are used in conjunction with in-depth interviews to examine how contemporary men in union leadership are dealing with issues raised by the new feminism & gay & lesbian movements. Not only have men's emotions been problematized, but so also has the construction of unionism around this subordinated masculine culture.

Williams, Claire R., Thorpe, Bill & Baker, Jenny (Flinders U, Adelaide South Australia 5001 (tel/fax: 088-201-2628/3521; e-mail: claire.williams@flinders.edu.au)), **Visible and Invisible: Towards a Sociology of Work of Australia's Indigenous People.**

¶ Since the colonization of Australia over 200 years ago, Australia's indigenous people, the Aborigines, have been employed in the dominant economy. While, in some cases, they have made major contributions, they have invariably worked as unpaid, part-time, &/or casual employees. Moreover, continuing processes of colonialism have rendered Aboriginal workers as both desirable & undesirable sources of labor, visible & invisible. Here, their status in terms of occupational health & safety is assessed, arguing that Aborigines have the worst health status in the community. Aboriginal lives cannot be categorized into work/nonwork, an assumption demanded by workers' compensation. Survival has depended on voluntary labor in communities & liaison with non-Aboriginal officials & professionals where Aboriginal employees use their own emotions & cultural understandings to deliver (invisible) emotional labor.

Williams, Fiona (U Leeds, LS2 9JT England (tel/fax: 1132334427/1132334415; e-mail: j.f.williams@leeds.ac.uk)), **New Principles for a Good-Enough Welfare Society.**

¶ The social, economic, & political changes since the time of economist William Beveridge (1879-1963) have forced a rethinking of the claims being made of welfare. Beveridge's "five giants"—want, disease, idleness, squalor, & ignorance—reflected the politics of the time in the (limited) redistribution of social opportunities & the management of major risks & inequalities. Over the postwar period, one of the most significant changes in politics was the (re)emergence of social movements whose demands were not simply focused on the economics of redistribution, but on the politics of recognition—linking the personal to the political, acknowledging that cultural injustices intersect with economic inequalities. Different forms of welfare activism have put on the agenda needs associated with personhood & well-being, posing questions about the nature of newly constituted or articulated risks (eg, in relation to intimacy, autonomy, & racial & sexual abuse), & about the new principles underpinning welfare over & above equality & universalism. Seven new areas of debate are discussed here—care, autonomy, intimacy, bodily integrity, identity, freedom of movement, & voice—considering how these may signify the emergence of any sort of new, diversely constituted consensus around welfare.

Williams, Patricia Ama T. (York U, Ontario M3J 1P3 (tel/fax: 416-663-3153/736-5837; e-mail: williams@york.ca)), **Constitutional Rights Are Not Women's Rights: An Examination of Nigerian Women as Full Citizens.**

¶ In Nigeria, social change, defined as the process of alterations in social events, has been selectively accepted, particularly in relation to women. Focus here is on constitutional rights & women's rights in Nigeria, examined via a diachronic analysis of historical & contemporaneous events. It is a truism to assume that women's rights are assured because rights have been entrenched in constitutions. Rather, it is posited that women's rights become obfuscated under the all-embracing rubric—people. This submission is justified in analyses of women's as citizens in Nigeria's 10 constitutions, 1914-1995, spanning the colonial & postcolonial periods. While in the former, Nigerian subjects could not claim rights, in the latter, they can claim rights as full citizens. However, Nigerian women continue to be denied the full benefits of citizenship, because patriarchy, cultural laws, & values take precedence over constitutional provisions in domestic matters. Women cannot have justice, because those empowered to uphold the law are inhibited by these factors.

Wister, Andrew V. & Dean, Kathryn J. (Gerontology Program Simon Fraser U, Vancouver British Columbia V6B 5K3 (tel/fax: 604-291-5044/5066; e-mail: wister@sfu.ca)), **A Comparative Analysis of Graphical Interaction and Logistic Regression Modelling: Self-Care and Coping with a Chronic Illness.**

¶ Using a new statistical method, graphical interaction modeling, & comparing it to logistic regression, coping with a chronic condition is analyzed as a function of interrelationships between three sets of factors: (1) age & sex; (2) characteristics of the chronic condition; & (3) self-care responses. Focus is primarily on the interactions between the self-care practices of exercise, stress reduction, mutual aid, & prescription drug use. The research employs a subset of the baseline data from the North Shore Self-Care Study, which is based on phone interviews with a random sample of 904 persons, ages 50+, who were diagnosed with arthritis/rheumatism, heart problems, hypertension, & stroke. Wister & Dean analyzed identical datasets separately, using only one of the statistical techniques & without knowledge of the other's findings. The results of the logistic regression analyses support main effects associations between coping with a chronic condition & exercise, mutual aid, & stress reduction, but not prescribed medications. Age group, sex, chronic condition, & perceived seriousness also demonstrate statistically significant re-

relationships with the dependent variable. Interestingly, none of the multiplicative interaction terms in the logistic regression analysis are found to be statistically significant. Yet, the graphical interaction analysis identifies several important interactions between the self-care practices as well as with characteristics of the disease (especially the type of chronic condition) & age & sex.

Witkin, Robert W. (Dept Sociology U Exeter, EX4 4QJ England [tel/fax: 01392-263282/263285; e-mail: rwwitkin@exeter.ac.uk]),

Theorising in Sonata Form: Aesthetic Codes in the Social Formation.

¶ Explores the homology between styles of theorizing & theory construction, on the one hand, & the aesthetic codes that govern the production & reception of works of art, on the other hand. Focus is on three major modes of theory construction in sociology—classical individuation, divided selves, & individuated agency—which are analyzed as the product of a unitary development both as discourse styles & in the construction of their internal relations. A correspondence or fit between these three modes of theorizing is made to the development of three major codes of musical composition, classical tonality, tonal irony, & the atonal revolution (including 12-tone technique), arguing that the correspondence is more than one of metamorphic resemblance. The orientation of the subject in the making of modern music & art parallels that of the sociologist in the making of modern sociology.

Witkin, Robert W. (Dept Sociology U Exeter, EX4 4QJ England [tel/fax: 01392-263282/263285; e-mail: rwwitkin@exeter.ac.uk]),

The Theory of the Avant-Garde and the Praxis of Everyday Life.

¶ Avant-garde movements of modern art, literature, & music have, in the 20th century, been marked by their lack of popular or mass appeal & their distance from popular forms of art whether literary, musical, or visual. Yet, this difference does not reflect an elitist rejection of the prosaic or the everyday by so-called serious artists; avant-garde takes the most prosaic, everyday, & ordinary matter as its subject & content. Marxist aestheticians, eg, Theodor Adorno & Burger, have argued that avant-garde art arises from a serious—and in Burger's view, a failed—attempts to regain a critical significance for art in the praxis of everyday life, a significance that was lost as a consequence of the autonomy status attained by art in the modern world. The products of the culture industries, by contrast, are held to be commercial, false, & manipulative, the antithesis of the critical spirit. The (postmodern) thesis asserting that, in recent art, the divide between "high" & "low" art has collapsed is dismissed by Burger as a case of the "false sublation" of serious art in the praxis of everyday life. An alternative conceptualization is offered here of the mediation of mass culture & so-called serious art that acknowledges their mutual involvement in the formation of everyday consciousness & rejects Burger's pessimistic view of modernism as having failed to overcome its separation from the praxis of everyday life. It is suggested that Adorno & Burger conceive of the functional import of aesthetic material too narrowly & that a sociology of the aesthetic, especially one that embraces the aesthetic in everyday life, is hindered by an approach that ends up proscribing so many modern repertoires.

Wobbe, Theresa (Institut Soziologie Freie U Berlin, D-10715 Federal Republic Germany [tel/fax: 0049-30-85002-124/8837562; e-mail: wobbe@zedat.fu-berlin.de]),

The Power of the Sociological Tradition. The Case of Social Differentiation of Gender Differentiation.

¶ Examines the interrelations among the construction of a canon, the sociological tradition, & the changing theoretical concepts of the discipline. As Schmucler N. Eisenstadt & Niklas Luhmann have argued, sociology has developed a distinct set of problems (*Fragestellung*) identified as the sociological tradition. The function of that *Fragestellung* is to integrate the field of knowledge & establish its boundary maintenance. In this context, the constitution of a disciplinary canon takes place. Talking about the canon thus works as a reflection on the current stage of theory & the changing boundaries of the discipline. Against this background, it is argued that (1) changing perspectives on social & gender differentiation in the sociological tradition can be considered as examples to integrate the field of knowledge; & (2) these perspectives have been & still are able to stabilize a specific disciplinary identity.

98S36536 / ISA / 1998 / 13777

wobbe@zedat.fu-berlin.de]), **Elective Affinities: Georg Simmel and Marianne Weber on Differentiation and Individuation.**

¶ Around 1900, founders of sociology as well as women of the feminist movement in Germany were concerned with the interrelations among individuation, social differentiation, & gender difference. Within this constellation, Georg Simmel & Marianne Weber held a prominent position. Simmel's concept of social differentiation & gender differentiation referred to the emergence of the women's movements of his time. Weber's ideas on cultural patterns of women's socialization contained a specific link between sociological & feminist perspectives. Referring to Simmel's concept of differentiation, Weber developed a vision of female solidarity. It is argued that both Simmel & Weber offer a sociological explanation for the emergence of women's movements & a gendered view on individuation. In so doing, they focus on a set of problems that remain unresolved today.

Wolf, Christof (Research Institut Sociology U Cologne, D-50939 Federal Republic Germany [tel/fax: 49-221-470-4397/5180; e-mail: Christof.Wolf@uni-koeln.de]), **Going Virtual: The World Wide Web as a Market Place for Religious Organizations.**

¶ The World Wide Web is becoming the most powerful communication channel in history. Just like businesses, universities, & others, religious organizations have discovered the potential of this new medium, & an increasing number of religious groups, ranging from the local parish to transnational units have a home in cyberspace. Here, this phenomenon is addressed in three steps. A brief exploration of the religious contents of the Web shows the variety & richness of the religious sites available. Theoretical arguments concerning the activities of religious organizations on the Web are discussed. Following diffusion theories, it is hypothesized that younger, less traditional religious organizations were the first to use the new communication medium (eg, Kinney, Jay, 1995 [see abstract 9609561]), with older, more traditional organizations following that lead. Unlike other mass media (eg, TV; Hughey, Michael W., 1990 [see abstract 91X2794]), the financial means for presenting oneself on the Internet & using it for the dissemination of ideas are negligible, creating a fairly unrestricted marketplace for religious competition. The economic theory of religion proposed by Rodney Starke, Roger Finke, & Laurence R. Iannaccone (1995 [see abstract 9606726]) asserts that a situation like this will create & a highly competitive market encompassing countless participants. Some of these theoretical propositions are tested empirically, using data from an electronic mail survey of religious organizations around the world.

98S36538 / ISA / 1998 / 13779

Wolf, Steven & Zilberman, David (U California, Berkeley 94720), **Agricultural Economic Information Gathering by Trans-National Corporations.**

¶ Addresses patterns of agricultural economic information gathering by transnational firms with specific reference to use of information provided by public institutions, commercial suppliers, industrial networks, & in-house analysts. Transnational corporations' behaviors are compared to those of other firms in commodity systems. Observations are drawn from personal interviews in wheat, potato, & hog sectors in the US. Overarching trends & cross-commodity heterogeneity in information networks are explored.

Wolkowitz, Carol (U Warwick, Coventry CV4 7AL England [tel/fax: 44-1203-523159/523497; e-mail: C.Wolkowitz@warwick.ac.uk]), **Nuclear Families: Women's Narratives of the Making of the Atomic Bomb.**

¶ Whereas many feminist critics have focused on how "phallic" nuclear weapons symbolize the masculinity of their creators, a different tack is taken here, looking at the actual social relations in which the construction of the atomic bombs dropped on Hiroshima & Nagasaki, Japan, was embedded, drawing on a full review of the secondary literature. The main source of data, however, is volumes of personal narrative—memoirs, letters, & autobiographies—written by women who were involved in the three communities set up by the Manhattan Project. Most of these books, now out of print, were written by women scientists, or the wives of male scientists, shortly after 1945 & later published by local history societies. They are analyzed as texts of identity that document women's understandings of their place in the gendered, racialized, & class-divided communities they helped to build. The analysis suggests that the women's attempt to write themselves into the story ends up domesticating it, inscrib-

W

ing the bomb with family values. Their version of the story is even today included in museum exhibitions & books on the anniversary of Hiroshima, forming a gender-specific coda to the official discourse absolving the US of ethical responsibility. It is therefore concluded that, although feminists have come to equate the denial of moral responsibility with strategic, stereotypically male war talk, women's focus on the personal can also function as a form of denial.

Wong, Lloyd L. & Grant, Donald (Okanagan U Coll, Kelowna British Columbia V1V 1V7 [tel/fax: 250-762-5445/470-6001; e-mail: lwong@okanagan.bc.ca]), **Globalization-Racism in a Three-Piece Suit: An Interpretation of How the New World Order Substitutes for Old World Imperialism.**

¶ Argues that the economic structures of postindustrialism & postmodernism are in reality a thinly veiled justification for "reconquering" the Third World. The traditional instruments of imperialism & colonialism have been augmented & camouflaged by the policies of neoliberalism to create a new world order. Consequently, global affairs are becoming increasingly polarized along economic lines, which have subsumed the old familiar orientations of racism & ethnic discrimination. It is contended here that it is no accident that the losers in this restructuring process happen to be concentrated primarily in the Third World. This argument is presented through an examination of the historical process of colonization & how it created the impasse at which capitalism arrived in the latter half of the 20th century. In this context, globalization is shown to be a variant of imperialism that retains racism as a core element & "keeps the faith" with the original. Explored in conclusion are the ramifications of unchecked globalization for all of humanity, including the First World.

Wong, Raymond Sin-Kwok & Treiman, Donald J. (Dept Sociology U California, Santa Barbara 93106 [fax: 805-893-3324; e-mail: wong@sscf.ucsb.edu]), **Revolutionary Times, Revolutionary Transformations? Changes in Mobility Patterns in Eastern Europe during Early Transitions.**

¶ One of the most important transformations in the 20th century is the massive socialist experiment to transform the fundamental mechanism of stratification, particularly through the active demotion & ascendance of certain classes by the state in occupational attainment, either through direct intervention in the labor market or indirectly through selection in the educational system. Granted the recent collapse of socialism in Eastern Europe & other cumulative empirical evidence, while it may be reasonable to conclude that the socialist experiment had only limited success, that conclusion remains tentative. Addressed here is the issue of dramatic societal openness in the mobility structure immediately after the transition of power to socialism in four Eastern European countries, & the relative success of the experimentation is assessed. Data derived from the Social Stratification in Eastern Europe after 1989 project are used to examine intra- & intergenerational mobility patterns in Bulgaria, Czechoslovakia, Hungary, & Poland in 1948, 1952, & 1963. Both loglinear & logmultiplicative models are used to study changes in relative mobility regimes over time & across countries.

Woodrow, Anna (Dept Sociology & Anthropology Concordia U, Montreal H3C 1M8 Quebec [tel/fax: 514-931-1988/848-2139; e-mail: woodrow@vax2.concordia.ca]), **Local Laughter, Global Silence.**

¶ Explores the community of contemporary Canadian comedians at the local, regional, national, & international levels. It is shown that structural, geographical, & political roadblocks impact the development of any stand-up performer's career. Limited venues force the performer to travel across Canada in search of stage time; a conservative character will travel farther & with greater success than a more liberal character, resulting in maintaining & breaking down stereotypes. When a performer has a successful show, a link has been forged between the embodied site (of the performer) & the actual site of performance. Local humor will not be suitable across the country, & this reality requires the comic to develop material saleable anywhere—including TV, radio, & the US. The desire for US success, level of competition, & individualistic nature of the business lead Canadian performers to conclude that their national system is the best form of training to compete in the transnational market. While most would prefer to remain in Canada, the reality of a low-ceiling & poor wages send the hopeful comic into the mires of America. As performers gain experience they consider a character that incorpo-

rates a Canadian sense of identity & fervent disappointment with the lack of national support for their careers; coupled with US managers & agents who encourage removing any Canadian references lost on US audiences; the result is a sort of secret society of Canadian performers in the US & the production of Canadian-turned-American stand-up comics who are repackaged & sold back to Canadians at a profit. Analysis exposes the global phenomenon of colonization practiced by the industry of popular culture.

98S36543 / ISA / 1998 / 13784

Woroniecki, Alexander Korybut (Dept Studies & Planning Ministry Foreign Affairs, 1a Warecka St Warsaw Poland PL-00-950 [tel/fax: 48228263021/3026]), **Illegal Immigration to Poland: Causes, Forms and Forecasts of Possible Consequences.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ As North Atlantic Treaty Organization (NATO) enlargement/European Union (EU) extension proceeds, both NATO & EU will "acquire" Poland's eastern frontier. One implication is that, because this is a porous border, what is today a Polish problem soon becomes a NATO/EU problem, with clear security implications; ie, if ways are not found to deal with illegal immigration, Poland's accession negotiations will be difficult because of Western wariness about this potential security threat. The scope of the illegal immigration problem is outlined, describing how many international networks involved in the smuggling of illegal immigrants also engage in other international criminal activities, eg, drug trafficking; robbery; arms & human organ sales; trafficking for the European sex trade, forged & stolen documents, cars, & currency counterfeiting. Steps already taken in the frame of European integration efforts, eg, the harmonization of certain migration policies at the EU level, & especially the implementation of the Schengen Agreement, reveal that working together to combat this problem is more important than ever. But difficulties arising from actual differences in internal & external policy issues hinder the possibilities for concerted action. Some practical suggestions for combating illegal immigration into Poland & Western Europe are offered.

Worrell, Mark P. (Dept Sociology U Kansas, Lawrence 66045 [tel/fax: 913-441-2598/785-864-5280; e-mail: worrell@lask.cc.ukans.edu]), **The Structure of the Fascist Imagination.**

¶ The North American ultra-Right has busily transfigured its image over the past few decades & has won increasing voter recognition & public identification. Today, categories like fascism & totalitarianism somehow fail to grasp the essence of the far Right. To account for the new icons & impulses of the Right, pundits have conjured up old rubrics, eg, populism, to take their place. Meanwhile, marching under various post-Marxist banners, many critical social scientists repudiate the distinction between Left & Right; embrace the populist spirit of militant antigovernment groups; argue the need to engage in dialogue with these groups to seek common interests; demonstrate a willingness to overlook anti-Semitism; & make excuses for Nazis like Schmitt & Jünger. Examined here is the worldview & social base of Buchananism—arguably the most significant manifestation of the North American "new" Right. Buchanan's growing appeal & constituency are explained. Further, illuminated are the contradictions of this worldview & how its embeddedness in capitalist relations renders its goals of progressive social reconstruction an impossibility is shown. It is suggested in conclusion that Buchananism is far from new, but is, in fact, a variation on classical authoritarian politics.

Wozner, Yochanan & Rahav, Giora (Bob Shapell School Social Work Tel-Aviv U, Ramat-Aviv IL-69978 Israel [tel/fax: 972-3-640-9573/9182; e-mail: wozner@post.tau.ac.il]), **The Impact of Social Welfare.**

¶ The systemic quality of life model was used to assess the relation between quality of life & the utilization, availability, & importance of, & satisfaction with, social welfare services. Questionnaire data from prisoners in the Israel Prison Service showed positive correlation between all model subsystems & independent variables. The systemic quality of life model is suggested as a feasible definitional system for social welfare & a practical instrument to measure its impact.

98S36546 / ISA / 1998 / 13787

Wraith, Ruth E. (Dept Child Psychotherapy Royal Children's Hospital, Flemington Rd Parkville Victoria 3052 Australia [tel/fax: 03-9345-5511/6002; e-mail: wraithr@cryptic.rch.unimelb.edu.au]), **Disaster Management: Gender Issues.**

Complete paper available from **Sociology*Express**. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Argues that the space & mode in which women currently work in emergency management prevents them from contributing to the disaster debate & determining their own needs & definitions. Further, exercise of power & control, almost exclusively by men, predetermines agendas, establishment of priorities, & allocation of resources from a particular perspective. The impact of current practice on women & implications for both men & women & the recovery system are considered, & practical strategies to provide a more representative approach to emergency management are suggested. Examples from the Australian experience are used to illustrate the discussion.

98S36547 / ISA / 1998 / 13788

Wrede, Sirpa (Dept Sociology Åbo Akademi U, SF-20500 Finland [tel/fax: 358-2-215-4327/4808; e-mail: sirpa.wrede@abo.fi]), **Midwives as an Interest Group in Finnish Health Care. A Women's Profession Defending a Welfare State Mandate.**

¶ Examines the relationship between the welfare state & midwives in Finland, conceptualizing it as a welfare state mandate. In the early days of the Finnish welfare state, primary prevention—provided by midwives—rather than medical care was chosen as a central element in the care of pregnant women. Since the 1970s, however, Finnish midwives have suffered a steady narrowing of their professional mandate in maternity care. Public health nurses are taking over many of the previous tasks of midwives; eg, together with primary care physicians, public health nurses are now responsible for health care during pregnancy, signifying a policy shift. The ideology of primary prevention has not been rejected. The new policies for maternity care reflect a new agenda, namely working with families rather than mothers. Policy changes are explored, considering midwives as an interest group in this policy making. It is argued that midwives & midwifery need to be considered in political context; in a welfare state, the politics of restructuring health care shape—and are shaped by—health professions & their practice.

Wrench, John (Danish Centre Migration & Ethnic Studies South Jutland University Centre, DK-6700, Denmark [tel/fax: 45-79-14-11-40/99; e-mail: jwr@suc.suc.dk]), **Countering Racism and Discrimination at the Workplace: An Analysis of Discourse within the EU.**

¶ Among the institutions of the European Union (EU), there has been a recent discourse on how the social fabric is being weakened by processes of exclusion operating against some social groups, & a desire to institute measures to counter racism & discrimination. Recently, a number of EU-wide initiatives have been undertaken to combat racism & discrimination in employment. However, problems are encountered in initiatives at this level: (1) What is understood by racism or ethnic discrimination varies in different national contexts, & correspondingly, measures to promote equal treatment, foster equal opportunities, or counter racism & discrimination in employment will have very different emphases. (2) There are, among key interest groups (employers, politicians, trade unionists), strong ideologies of resistance to the acceptance of the area as a problematic social issue, & the content of these ideologies varies in different national contexts. Here, material is drawn on from three recent comparative projects covering case studies from all 15 EU member states. An attempt is made to classify & understand the various approaches to these issues, drawing on an original international typology of antidiscrimination activity.

98S36549 / ISA / 1998 / 13790

Wright, Wynne (Central European U, H-1051 Budapest Hungary), **Last Resort Farmers: Transnational Corporations and Agrarian Change in East-Central Europe.**

¶ Examines the role of transnational tobacco corporations in the transformation of the global tobacco system. Beginning with the premise that the growth of the tobacco industry is constrained in many developed nations by a uniquely complex set of social & political factors, discussed is how transnational tobacco corporations have forced open transnational venues in countries that are more willing to legitimize their products. Also highlighted is the symbolic dimension in which tobacco products are

socially constructed as a consumer "good" when uncertain markets need stimulation. Focus is on how transnationalization of the tobacco commodity system has altered social relations of production for newly integrated producers at the local level. Emphasized are select countries in East-Central Europe targeted by transnational tobacco corporations as markets for increased consumption & production, in spite of unfavorable agroenvironmental conditions, drawing on documentary sources & interview data from Polish & Hungarian tobacco producers & state officials. Homogenization of product & changes in the agricultural labor process have been two of the most significant results of the corporations' attempts to overcome present accumulation & legitimation crises.

Wrublevski-Aued, Bernardete (Pontifícia U Católica São Paulo, Florianópolis SC Brazil [tel/fax: 048-331-9330/9751; e-mail: aued@cfh.ufsc.br]), **Professions in the Past, Profession in the Future.**

¶ Explores theoretical difficulties in the attempt to determine whether some professionals are extinct or work itself is extinct, considering whether the extinction of work post & professions mean the end of a social epoch &/or the end of waged work. Between the extinction of one profession & the emergence of another, the impact of new technologies must be explored, particularly how social actors transform themselves in response to new technical needs, social control, & discipline. The contradictory potentials of information technology in the bourgeoisie era are discussed.

98S36551 / ISA / 1998 / 13792

Wu, Chyi-In (Instit Sociology Academia Sinica, Nankang Taipei Taiwan 11529 [tel/fax: 886-2-2652-3397/3398; e-mail: ssslciw@gate.sinica.edu.tw]), **Parenting Practices and the Co-Occurrence of Adolescent Depressive Symptoms and Deviant Behaviors.**

¶ Earlier study has demonstrated the critical role of parenting in mediating & moderating the influence of external & internal stress on adolescent adjustment problems. A comprehensive model to investigate processes whereby parenting practices might be transmitted to such problems was tested using 1996-1998 interview data from the Taipei Youth & Families Project, a three-wave longitudinal study of 1,343 urban families, in which the target child was living with both biological parents. Both maternal self- & adolescent-report measures were utilized for the latent construct. Analysis using structural equation modeling procedures showed that mothers who had engaged in aggressive parenting produced children who were likely to have internal & external adjustment problems. Findings are consistent with results of several studies conducted in Western societies. It is concluded that adolescents not only directly model their parents' behaviors, but also learn particular deviant behaviors through recognition & social learning mechanisms.

Wu, Chyuan-Yuan (Instit Sociology & Anthropology National Tsing-hua U, Hsinchu Taiwan [tel/fax: 886-3-574-2824/572-2800; e-mail: cywu@isa.nthu.edu.tw]), **Representation of Scientists in Taiwan: The Embedded Nature of Scientific Development in a Newly Industrialized Country.**

¶ Explores the predicament facing a newly industrialized Asian country as it adopts Western techniques of research assessment to boost its scientific research & evaluate its scientific performance. It is argued that specific cultural values & contextual factors create Taiwan's distinct approach to research assessment, which, in turn, gives shape to her scientific community. Based on analysis of data collected from bibliographical sources & fieldwork interviews, it is demonstrated that—underlying this predicament facing the Asian countries, in general, & Taiwan, in particular—are not only the problem of scientometrics per se, but also the embedded nature of scientific development.

98S36553 / ISA / 1998 / 13794

Wu, Luping (China Youth Research Center), **The Attitudes toward Politics, Morality and Values of Chinese Youth in the 1990s.**

¶ Attitudes toward politics, morality, & values held by Chinese youth in the 1990s are examined via survey data. Results indicate that although Chinese youth do not have any radical political behaviors such as those of youth in the 1980s, the majority are not isolated from politics & society. They are concerned with important political events at home & abroad, have political beliefs, have strong feelings of patriotism, & are satisfied with the situation of China's politics & economy. There are some moral problems stemming from the transformation to a market

W

economic system, but the moral mainstream is good. While practical & concerned with their individual values & interests, youth still put the interests of the state & to the collective first. They do not completely accept Western values based on individualism. These findings are interpreted from a sociological perspective.

98S36554 / ISA / 1998 / 13795

Wu, Shiyen (Dept Economics U Iowa, Iowa City 52242), **On the Changing Nature of Entrepreneurship.**

¶ Examines how the entrepreneurial role has changed over time in the context of an evolving US economy since the Civil War. Because entrepreneurs do what the market has failed to do by itself, they complement each other. Therefore, it is not surprising that, as the market evolved, the role played by entrepreneurs also changed predictably. As the entrepreneur's role evolved, so did the characteristics of the firm & the economy. The resulting firm becomes a coalition of entrepreneurs, & decision making in the firm is decentralized, which, in turn, leads to greater responsiveness to the consumer & more extensive utilization of the market.

98S36555 / ISA / 1998 / 13796

Wydra, Harald (Institut Politikwissenschaft U Regensburg, D-93040 Federal Republic Germany (tel/fax: 49-941-9433554/9434808)), **Violence and Its Causes in New Eastern European Democracies.**

¶ Elaborates some theoretical guidelines for the study of violence in fledgling Eastern European democracies. It is hypothesized that democratization aggravated historical & psychological conflicts by provoking a politics of memory, ideological antagonisms, & a search for institutional & individual scapegoats. Selected types of violence are linked to the historical heritage of communism & the psychological implications of the perception of democracy before & after 1989/1991. It is argued that communist order eroded through the weakening of institutionalized monopolies of violence (corruption, economic inefficiency, political delegitimation). Reversing Norbert Elias's hypothesis, the collapse of communism came down to a decivilizing process. This negative trend was contrasted by a "positive" fascination of "backward" Eastern Europe with Western democracy. Yet, democracy was soon perceived as generating the dark sides of postcommunism (ie, breakdown of state capacity & state territory, vulgar capitalism, immigration, ethnic conflicts). Moreover, democratic mechanisms of conflict resolution as of 1989 made an unequivocal rupture with the communist past & the institutional resolution of guilt for communist crimes (lustration) widely impossible. In terms of René Girard's hypothesis on mimetic conflict, the identification with the imitated model (democracy) in a systemic crisis generates violence, which becomes a structuring principle in the foundation of the new democratic order. At the intersection of these opposed processes, the causes for new violence in fledgling democracies should be sought. Totalizing projects (eg, nationalizing states, anti-Semitism, cultural discrimination, ethnic cleansing) are partly a result of a decivilizing process, but are aggravated by the ambivalent influence of democracy that enhances conflicts. In this vein, the streamlining of language, culture, history, & collective memory, as well as ideological outbursts of nationalism or anti-Semitism, are tightly linked to the long-term imitation of models of national & cultural unity as well as of rationalization of power from Western democracies.

98S36556 / ISA / 1998 / 13797

Wyness, Michael (Nene Coll, Northampton NN2 7AL England (tel/fax: 0044-1604-735500/713744; e-mail: mike.wyness@nene.ac.uk)), **Childhood, Agency and Educational Reform.**

¶ Draws on case study material illustrating the contested nature of the child's position in the education system to comment on the relationship between childhood & agency in the context of education reform. The prominence of a child-centered social science & the trends in child care policy, at least in some countries, toward the articulation of children's voices, suggest possibilities for children as both research subjects & competent members of society, which are addressed via analysis of a series of local & global issues connected to organizational, curricular, & pedagogic changes in schooling across North America & Europe. The position of the child is examined in terms of the role of the market & the individualization of schooling. Conceptions of childhood are located in relation to expressed concerns for behavioral & curricular standards in schools. Demands on educationalists to produce schooled citizens draw attention to the relationship between the school & the wider social community. Implications of these demands are outlined in terms of conflicting notions of children's autonomy & adult control.

98S36557 / ISA / 1998 / 13798

Wynne, Derek (Dept Sociology Manchester Metropolitan U, M15 6LL England (tel/fax: 44-161-2473021/2476321; e-mail: d.wynne@mmu.ac.uk)), **Lifestyles and City Cultures.**

¶ Investigates lifestyles of people who have recently moved into newly refurbished warehouses & other old industrial buildings in central Manchester, England, drawing on questionnaire, in-depth interview, & ethnographic data. Development of an urban revitalization program for the city is outlined, & explanations of gentrification processes associated with a new middle class are evaluated in the light of results. It is suggested that processes of cultural commodification & consumer culture have blurred traditional cultural boundaries between high & popular culture. As such, rather than a new middle class & associated cultural intermediaries engaged in processes of distinction, it is argued that contemporary city cultures are important in revealing the emergence of new social groupings whose members actively construct lifestyles (work & leisure) & engage in activities best explained by processes of individualization & risk.

98S36558 / ISA / 1998 / 13799

Xu, Jiqiang (Dept Counseling & Educational Psychology Michigan State U, East Lansing 48824 (tel: 517-355-8538; e-mail: xujqian@pilot.msu.edu)), **Spatial Autoregression Models in Network Analysis.**

¶ The spatial autoregression model deals with the relationship between the observation vector Y from a group of subjects (S_s) & the association matrix W , which describes the relationships among all S_s . In the model, the two main estimants, the autocorrelation coefficient ρ & the variance of the random error term σ^2 are uniquely determined by the matrix W & the vector Y . But the commonly used computational technique for the estimation of ρ produces many large values outside of a sensible range for ρ , & even the interpretation of the estimate ρ itself is yet not well understood. All these facts restrict the use of network effects models with parameter ρ . Explored here are the interpretation & estimation of estimate ρ as well as σ^2 . The importance of the extent of the consistency between W & Y , which is captured by ρ , is emphasized, & application of the network effects models in practice is made possible. This newly developed technique for the estimation of ρ is especially useful in the social sciences where the data could be high in dimension & are possibly highly correlated in complicated ways.

98S36559 / ISA / 1998 / 13800

Yajima, Masumi, Saeki, Toshio, Mamiya, Toshio, Suzuki, Mamoru & Nakazawa, Makoto (Faculty Economics Meikai U, Chiba 279 Japan (tel/fax: 81-3-3474-1396; e-mail: masumi.y@ppp01.infopepper.or.jp)), **Traditional Sport and Community Identity: A Case Study of Rural Sport in Fuenterrabia, Spain.**

¶ Illustrates the relation between Basque rural sport & the formation of ethnic & community identity. In particular, the effects of rural sport on community formation in Fuenterrabia, Spain, are analyzed. In general, traditional sport is an important part of ethnic identity &/or strengthens community identity in that region. The Basque have their own language culture & unique rural sports derived from the work of farmers, market-gardeners, & fishermen. Basque sports are deeply linked to ethnic & community identity because they are an extension of their daily life activities. Today in Fuenterrabia, the *estropadak* (long-boat regattas) are linked to gambling & are very popular among all people, regardless of age or sex. Because the *estropadak* race features representative crews of 10+ districts, it particularly arouses community identity. In addition, *harrijasotzaile* (stone lifting) & *aizkoraris* (log cutting) are performed as part of the festival. Because of social changes, eg, region activation, sightseeing administration, & improvement of living standards, Basque sports have gradually changed. The traditional rural sports are now at the crossroads of prosperity & decline.

Yamaguchi, Yasuo, Tohi, Takashi & Takami, Akira (Faculty Human Development Kobe U, Nada 657 Japan (tel/fax: 81-78-803-0904; e-mail: yasuo@main.h.kobe-u.ac.jp)), **Assessing the Relationship between Quality of Life and Sport and Leisure Activities: A Comparison between the Middle-Aged and the Elderly.**

¶ Explores the influence of sport & leisure activities on quality of life among the middle-aged & elderly Japanese to (1) replicate a study by Brown & Frankel (1993); (2) analyze participation in physical activity, leisure satisfaction, & life satisfaction; & (3) examine a modified model between the middle-aged & the elderly. Questionnaire data from 458

middle-aged & 212 elderly individuals in Kakogawa City indicate that the Brown & Frankel model accounted for 43% of the variance in explaining life satisfaction for males (Ms) & 47% for females (Fs). Thus, the model is applicable to the Japanese context. The findings indicate generational differences in the influence of sport participation & free time on life satisfaction between the middle-aged & the elderly, which appears to be greater for F vs M middle-aged & M vs F elderly people. It is suggested that an active lifestyle might improve the quality of life.

98S36561 / ISA / 1998 / 13802

Yanitsky, Oleg N. (Instit Sociology Russian Academy Sciences, Krzhizhanovskogo 24/35 b.5 117259 Moscow (tel/fax: 095-930-5638/719-0740; e-mail: yanitsky@glas.apc.org)), **Ecological Movement in 'Transition Society': Constructing a Middle Level Theory.**

¶ Attempts to construct a middle-level theory of the production of an ecological movement under the critical conditions of the collapse of state socialism & the transition to capitalism. The basic idea of the concept is the dependence of the mode of an ecological movement production on changing context. The phenomenon of hostile context is analyzed. It varies from unfavorable economic conditions to the resistance of mass consciousness & political repression. A hostile context is permanently reproduced by the systemic crisis of the "transition" society. A specific feature of a hostile context is the production of the "energy of collapse." The more a context becomes uncertain, turbulent, resource-consuming, & hostile to an ecological movement, the more the movement is forced to spend its resources on maintenance of its organizational structure & networks.

98S36562 / ISA / 1998 / 13803

Yannick, Rumpala (Groupe analyse politiques publiques École normale supérieure, F-94235 Cachan Cedex France (tel/fax: 33-01-47-40-59-57/56)), **Economy behind Ecology: Shifts in the Bases of Environmental Policies and Adjustments in the Role of the State. A Viewpoint from Some Evolutions of French State Strategies in the Environmental Field in the Early Nineties.**

¶ Explores processes that participate in the integration of environment-based requirements into the administrative realm. In the French case, such a matter is worth examining because the treatment of environmental problems by the state in the early 1990s seems to have undergone some changes in the referential system that guides public actors of this policy field. Stakes on which environmental policies are built actually call for a more thorough insight, for they express intersections of interests that may transform apparent motives. In fact, economic considerations have gained increasing weight in the ecological decision-making processes &, consequently, have tended to alter enforcement of public strategies. Issues raised by such an evolution are considered in terms of: (1) translations that affect environmental concerns in the public sphere of activity (extension of stakes & displacements of interests); (2) increasing confidence in an economic apparatus so as to integrate environmental objectives; & (3) handling of environmental problems as an incentive to reorganize the role of the state & the resulting trend toward an economic-administrative management of ecological requirements. These trends indicate shifts that tend to reshape state strategies regarding environmental matters & eventually reveal a need for a framework that could account for the influence of economic logic in this policy field.

Yates, Simeon J. (Faculty Social Sciences Open U, Milton Keynes Buckinghamshire MK7 6AA England (tel/fax: 01908-654-508/488; e-mail: s.j.yates@open.ac.uk)), **Digitising Culture—Digital Ethnography?**

¶ Explores a set of recent technological & social developments that raise questions about contemporary ethnographic practices & methodologies. These developments include computer-assisted qualitative data analysis software (CAQDAS), digital recording equipment, & multimedia production software. CAQDAS systems are now used by many social scientists. Similar software is also being applied in the related field of sociolinguistics. Considered is how such software is changing the relationships & practices in the processes of data collection & analysis. New technologies for the collection of data, eg, digital video & audio recorders, & scanning & OCR software, increase the amount & type of data that the ethnographer can collect. The increasing storage capacity of personal-computer-based databasing systems exacerbates this problem—making the holding & cataloguing of large bodies of data possible. Explored here are some methodological implications for ethnographic research that the development of large bodies of digitized textual data brings. The develop-

ment of higher-quality user-friendly multimedia development technologies & standards for hypertext production (HTML) provides the ethnographer with a range of new methods for the presentation & distribution of results. This changes the processes of data collection, analysis, & presentation & raises questions about the role of the ethnographer in this process. Implications for social science that this digitization of culture might imply are considered in conclusion.

Yazawa, Shujiro (Hitotsubashi U, Tokyo 186 Japan (tel/fax: 8142-580-8264; e-mail: cs00180@svu.cc.hit-u.ac.jp)), **Informatization of Asian Societies and Its Impact to Centre-Periphery Structure in Asia.**

¶ After examining informatization processes of Silicon Valley, CA, similar processes in Japan, Malaysia, & Singapore are analyzed. Various East Asian development models & the concept of developmental state developed by M. Castells are examined. Center-periphery structures in Asia presented by J. Arrighi, J. Drangel, & C. Chase-Dunn are also explored. The impacts of informatization of societies in Asia on the center-periphery structure are discussed.

98S36565 / ISA / 1998 / 13806

Yeates, Nicola (Queen's U Belfast, BT7 1NN Northern Ireland (tel/fax: 44-1232-273712/320668; e-mail: n.yeates@qub.ac.uk)), **International Trade, Globalism and Social Policy.**

¶ It is argued that globalism necessitates theoretical & conceptual revisions to the national-based framework currently dominating social policy analysis. A conceptual framework for analyzing social policy in global context is developed, starting from the changing role of the state vis-à-vis international agencies & institutions, & capital & labor. Ways that a feminist perspective on the relationship between globalism & social policy can be incorporated into the approach are outlined. The framework is then illustrated by focusing on the role of the World Trade Organization, the International Monetary Fund, & the World Bank in regulating international trade. Implications for welfare states & for "gendered citizens" are considered.

98S36566 / ISA / 1998 / 13807

Yeganeh, Cyrus (U Art, Tehran Iran (tel/fax: 21-886-4606/4609)), **Structural Differences and Similarities between Iran's Science and Technology Activities (STA) and Other Developing Countries and Developed Countries.**

¶ Despite a rich history in science, a talented population, & generally favorable attitudes toward science, science & technology activities (STAs) are weak in most Iranian enterprises. The GERD/GDP % & GERD per capita are very small compared with industrialized nations. The sources of funds, the locus of expenditures, & personnel figures point to structural differences in STAs between Iran & industrialized societies & to similarities with other developing nations, namely concentration in universities & government research institutes as opposed to industry. The separation between the productive & higher education sectors in Iran is very pronounced. A relatively weak economy excessively dependent on oil exports is a major obstacle to development of science & technology, since it leaves no inherent incentive for research & development in most enterprises. There is no major industry that is not government-owned, organization & management of most enterprises are below world standards, & individual initiative & work motivation & discipline are similarly weak. In this situation, most scientists & engineers see science as an academic exercise, scientists & politicians engage in the rhetoric of numbers, & there is scientism at the core of scientific thinking—& the corresponding opposite trend toward mysticism among nonscientists & even many scientists.

98S36567 / ISA / 1998 / 13808

Yekani, Fereshteh (Ministry Industry, Shahrak-E-Apadana Block No-30 (S2) Tehran 13918 Iran), **Science and Technology as Generator of Development—A Socio-Industrial Appraisal.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Discusses science & technology, which reciprocally affect each other. Such an interconnection has already shaped the industrial world, but is still in the process of shaping the developing world. Also, through urbanization, industrial development gives rise to problems of public health, housing, & control of the urban environment. Industrial—ie, developed—society requires an educated workforce. Industrialization & access to new technologies create the preconditions for a substantial

Y

growth of social welfare & vice versa. Technology, or the application of knowledge to the solution of practical problems, gradually brings social changes, alterations to the behavior patterns of the people, & changes in the culture & structure of a society. The transformed institutional structures are the consequences of new technical inventions causing social changes in a cyclical manner. In this process, the natural environment also has been badly affected, the result of which appears in the form of deforestation, global warming, etc. In the case of Iran, decentralization policies have been adopted to attain development goals through industrialization, & promotion of science & higher education have been followed up through the private & the state/public sectors. One of the most important aims of industrial development has been to lower dependence on foreign imports, but facing contrasting socioeconomic conditions due to technological complexities is inevitable.

Yelles, Chaouch Mourad (U Paris VIII, F-93526 Saint Denis Cedex France), **Centralité méditerranéenne et communauté culturelle** (Mediterranean Centrality and Cultural Community). (FRE)

¶ On the geostrategic level, the last 25 years have been marked by increased polarization of the North & South, emergence of new Asiatic pillars of economic excellence, & readjustment of political & ideological relationships between the West & certain of its former satellites in the Pacific region. In this context, the Mediterranean area seems to have lost its historic buffering function between Europe, Africa, & the Orient. The exacerbation of nationalist tensions, the advent of fundamentalist movements, the failure of economic development policies, & strengthening of self-protective (exclusive) strategies indicate an unpromising future for the region. However, the Mediterranean & its resources can become an important alternative to the US-European secular development.

Yenal, Zafer (Binghamton U, New York NY 13902), **From a Mass Market to Market Segmentation: The TNCs in Turkish Agro-Food Sector**.

¶ Examines the impact of transnational corporations' (TNCs') activities in the agrofood sector on food consumption patterns in Turkey since the liberalization of markets in the early 1980s. Highlighted are the cases of Unilever & Nestle, the two biggest & oldest TNCs in the Turkish agrofood sector since the 1950s, drawing on in-depth interviews with these companies' & their local partners' managers & advertising policies. The aim is to show that, while middle- & upper-middle-class diets may converge on a global scale as suggested by most of the literature on globalization, the same global economic processes, with TNCs as main actors, are likely to result in a further stratification of food consumption patterns in a peripheral country such as Turkey.

Yi, Chin-Chun, Lu, Yu-Hsia & Pan, Yun-Kang (Instit Sociology Academia Sinica, Nankang Taipei Taiwan 11529 (tel/fax: 886-2-2652-3338/3398; e-mail: chinyi@gate.sinica.edu.tw)), **Female's Family Status—A Comparison of Family Structure and Employment Patterns in Taiwan and Mainland China**.

¶ In traditional China, a female's life was confined to the private sphere, & this domestic role expectation is maintained in contemporary Chinese societies. Therefore, it is significant to analyze factors accounting for changes in women's traditional secondary role in the family system. Here, the female's family status is operationalized in terms of the power structure at home, measured by decision-making outcomes. It is shown that a female's gainful employment contributes to her decision-making power in the family. Although coresidence with elderly parents is decreasing in both Taiwan & mainland China, complex family structures still constitute a substantial proportion in both societies, & in such cases, husbands are more likely to dominate family decisions. With regard to female's employment status, informal employment is an important pattern among Taiwanese females, but in mainland China, the government still determines what work females are assigned. It is thus interesting to explore if a female's work status affects her domestic status similarly in Taiwan & mainland China. Data are from two corresponding projects in Taiwan & Tienjin, in which 500 married couples plus 500 married females were interviewed in Taiwan in 1995, & 400 couples were interviewed in Tienjin in 1996. An attempt is made to show how family structure, female's employment patterns, & possible related factors contribute to the female's domestic status in these two Chinese societies.

Yi, Li & Yin, Jiafei (Dept Sociology U Illinois, Chicago 60607-7104 (tel/fax: 312-996-4789/5104; e-mail: yli9@uic.edu)), **The Outline of China's Social Stratification**.

¶ The latest census & survey data, are drawn on to outline social stratification in the People's Republic of China. Before 1978, people were divided into three classes—cadre, worker, & peasant—on the basis of property, power, & prestige. There was serious class discrimination & separation, maintained by the *Hukou* (household registration system) & *Danwei* (work unit). Social mobility could be attained through the *Gaokao* (the national university entrance examination system). After the reforms of the late 1980s, the capitalist & middle class emerged & developed rapidly; the working class increased, & the peasant class decreased gradually. It is argued that important Chinese social processes & social movements, eg, the Cultural Revolution & 1989 student protest at Tiananmen Square, cannot be understood without understanding the social stratification system.

Yi, Soonhyung, Zoh, Myunghan & Choi, Myung (Dept Child Development & Family Studies Seoul National U, South Korea (e-mail: ysh@piaza.snu.ac.kr)), **Value Orientation and Evaluation of Quality of Life of Korean Male Workers**.

¶ Draws on survey data from 352 men working in Korean companies to investigate (1) the relationship among four value orientations (individualistic, collective, materialistic, & familism); (2) the relationship between ideological orientation & quality of life; & (3) variables that influence this relationship. Quality of life is measured by means of three categories—satisfaction of self, family, & work. Results reveal (1) significant relationships exist between & among value orientations; (2) collective value orientation has the most meaningful relationship with the three categories of satisfaction, although the other value orientations are also related; (3) variables such as marital status, working status & direction, & place of birth make a significant difference in collective value orientation; & (4) working status makes a significant difference in total life satisfaction.

98S36573 / ISA / 1998 / 13814

Yli-Pietilä, Päivi (STAKES National Research & Development Center Welfare & Health, FIN-00531 Helsinki Finland (tel/fax: 358-9-3967-2075/2207; e-mail: paivi@stakes.fi)), **Combining Work and Family: Towards Family-Friendly Policies and Practices**.

¶ Questions of combining work & family life are analyzed from the viewpoint of development work, based on interview & survey data gathered in Finland, in a project called "Combining Work & Family at Different Stages of Family Lifespan." Changes in Finnish working life—eg, the growth of unemployment, increasing competition & workloads, & decreasing municipal services—are affecting women's & men's opportunities to combine work & family. Results suggest that changes could be made in the workplace to support working parents, & the social responsibility of companies could be increased in the context of the Finnish welfare society.

Ylönen, Marja Katariina (U Jyväskylä, FIN-40351 Finland (tel/fax: 358-14-602-930/921; e-mail: mkylonen@tukki.cc.jyu.fi)), **Environmental Crimes and Changes in Their Definition: A Finnish Case Study**.

¶ Examines the dynamics of societal communication concerning environmental crimes (ie, pollution), 1970s-1990s, in Finland, focusing on changes in the definition of environmental crimes & in societal processes & mechanisms associated with these changes. Six case studies are presented of water pollution crimes, based on official documents, statute law, committee reports, court decisions, judges' interpretations of water law, newspaper articles, & interviews with judges, environmental authorities, environmental movement activists, & members of company management. Environmental crimes form a complex research field that can be approached from the system- & action-theoretical viewpoints. Niklas Luhmann's (eg, 1989, 1995 (see abstract 96c02689)) theory of social systems is drawn on to examine the communication of social subsystems & their relations. Mechanisms that have brought changes in such communication are also analyzed. Anselm Strauss's (eg, 1978) negotiated order approach provides an action-theoretical framework that moves toward consideration of historical turning points, conflicts, & concrete groups; Michel Foucault's (eg, 1989) genealogy is drawn on as a methodological guideline.

98S36575 / ISA / 1998 / 13816

Yogev, Abraham (Dept Sociology Tel-Aviv U, Ramat-Aviv IL-69978 Israel (fax: 3-6409477; e-mail: yogev@ccsg.tau.ac.il)), **A Non-Monolithic Approach to the Development of Israeli Universities.**

¶ Despite the growing body of literature on the stratification of the university system in the UK & the US, the treatment of all universities in countries where the system of higher education is publicly controlled tends to remain monolithic. This is true of Israel, where all universities & colleges are controlled by the Council of Higher Education, which considers all six universities the "first layer" of higher education vs the "second layer" of degree-granting colleges. It is claimed that the six Israeli universities are highly stratified into three elite institutions, aiming for academic excellence, vs three "target universities," aimed at specific or peripheral populations. Drawing on periodical university figures published by the Central Bureau of Statistics, 1985-1996, it is shown that the growth of various academic fields & graduate studies has been limited in the target universities. Consequently, their student composition is different from that of the elite universities; they have larger-than-expected proportions of older students, women, & minority students (Sephardic Jews & Arabs). It appears that the target universities have relieved the elite institutions of social pressures for the expansion of higher education while letting them sustain their academic hegemony. The recent growth of degree-granting colleges could therefore be considered an additional stage in the stratification process of higher education in Israel.

Yonariza (Pusat Studi Irigasi-U Andalas, Padang 25128 Indonesia (tel/fax: 62-751-21565; e-mail: ps-ua@indosat.net.id)), **Economic Development and Matrilineal System. A Case of Agricultural Transformation in a Shifting Cultivation Community, West Sumatra, Indonesia.**

¶ It is contended that the integration of matrilineal societies into the market economy has not necessarily brought about the disintegration of the traditional matrilineal system. A case study from a Minangkabau community in West Sumatra proves this point. This community has involved itself in the market economy by producing rubber for the export market. A profile of this matrilineal community's social organization, political system, & land tenure system is followed by a description of its dual economic system: the declining shifting cultivation & the rising cash crop cultivation through which the community has become involved in the market economy. Supporting factors for the persistence of the Minangkabau matrilineal system are discussed in conclusion.

98S36577 / ISA / 1998 / 13818

Young, Frank W. (Cornell U, Ithaca NY 14853 (e-mail: fwyl@cornell.edu)), **Formal Participation and Health: An Unresolvable Anomaly Explanation?**

¶ Since the late 1970s, prospective studies of mortality have repeatedly shown a strong statistical relationship between formal social participation in clubs & associations & lower mortality rates. In contrast to informal & family relationships, such formal social participation is a pure, group-level process, unlike the personal ties hypothesis of biomedical theory. Once this group/individual contrast is recognized, it can be shown that the biomedical model cannot assimilate the participation effect either as a term in an interaction ("buffering") or as a direct effect. Social participation does not deliver the personal support required by the buffering hypothesis. Neither can it be integrated as a direct effect in the individually grounded general biomedical model. This lack of fit poses the question of whether the participation effect is mistaken or the biomedical model is fatally flawed.

Young, T. R. (Red Feather Instit, 8085 Essex Weidman MI 48893 (tel: 517-644-3089; e-mail: tr@tryoung.com)), **Chaos Theory, Alienation and Human Agency: Postmodern Approaches to Emancipatory Knowledge.**

¶ Most premodern knowledge processes presume that one must seek divine intervention in order to improve or control one's own life. In these knowledge processes, one must abandon both self & society if one is to gain sure & certain knowledge. Modernist knowledge processes also assume that sure & certain knowledge is possible; however, knowledge requires carefully designed research processes & focus on dynamics of reality existing natural & social systems in this world. Knowledge thus loses its divine face & takes on a human face. Nihilist postmodern knowledge processes assume, falsely, that sure & certain knowledge is impossible; all knowledge processes are hopelessly contaminated by human interests, human desire, & human effort to mystify others in both theory & practice. Affirmative postmodern knowledge processes accept the human sources of research designs, targets, & findings; however, such processes posit that, as much as the scientific endeavor is distorted by the structures of race, class, gender, & ethnocentric purpose, transcendent knowledges are possible, some of which are mystic in nature & thus never fully provable. Chaos theory offers a multifocal view of natural & social science in which both stable & semistable outcome states ground a usable knowledge process. In it, human agency has a changing dialectic with objective structural dynamics: there are moments when it is possible & low cost, & others when human agency is difficult & very costly. In premodern & modernist knowledge processes, human agency is preempted by forces beyond human control. In the former, the god concept controls both knowledge & agency; in the latter, universal laws shape natural & social processes. In postmodern sensibilities, human agency is much more; however, personal agenda & malevolent purpose reduce the knowledge process to power struggles between those who have access to resources & those who want to displace them. An affirmative, well-tempered human agency is possible using concepts of praxis from Marxist theory, community from theology, & humanism from liberal social philosophy.

98S36583 / ISA / 1998 / 13824

Zagorski, Krzysztof (Instytut Polityczny Polskiej Akademii Nauk, Polska 18/20 PL-00625 Warszawa (fax: 48-22-25-21-46; e-mail: zagorski@optimus.waw.pl)), **Changes in Wealth Distribution during Radical Transformation: Cross-Sectional and Cohort Analysis.**

¶ Polish longitudinal data for 1989, 1994, & 1997 on wealth accumulation & distribution are subjected to cohort & cross-sectional analysis of age groups comparable in time. Results suggest independent improvement of the material situation of birth cohorts & of comparable age groups during the postsocialist transformation. However, this improvement is much greater in young than in old cohorts & groups. In both cases, it is connected with growing inequality, so that the whole process can be described as a transition from "equality in poverty" to "inequality in wealth." Independent effects of cohorts, age, time, & human capital (education) on wealth are distinguished & measured. Special attention is paid to the increasing role of education. Some subjective consequences of wealth accumulation are also examined.

Zaidi, Ali Hassan (Dept Sociology U Alberta, Edmonton T6G 2H4 (tel/fax: 403-439-2619/492-7619; e-mail: azaidi@gpu.srv.Ualberta.ca)), **The Islamic Approach to Sociology as the Search for the Good Society.**

¶ The collapse of the orthodox consensus has led to many alternative formulations in the philosophy of the social sciences. Like other communities of scholars, Muslim researchers are attempting to define their own peculiar approach to or paradigm of the philosophy of the social sciences. Of course, Islamic sociology has a long tradition, extending back to the work of Ibn Khaldun. However, modern Islamic sociology draws on the Quran (or Koran) for its inspiration & direction. Following F. Rahman's interpretation of the Quran, it is posited that Islamic social science is intrinsically tied to the search for the Good Society & attempts to raise an awareness of a society's own moral situation. In contrast to the supposedly value-free positivist/empiricist approach, the Islamic paradigm is inherently value-laden, but it is argued that a recognition of those values is a necessary aspect of social scientific research & a search for the Good Society. The pros & cons of the Islamic paradigm's search for the Good Society & its similarities to P. Winch's idea of social science as a moral-practical concern are discussed in relation to the positivist/empiricist paradigm's search for knowledge for its own sake, & to the antifoundationalist, relativistic postmodern approaches that eschew any search for a Good Society.

98S36585 / ISA / 1998 / 13826

Zalar, Boštjan (Institut Socialnih Znanosti U Ljubljani, 61000 Slovenija (tel/fax: 386-61-168-31-18/23-39)), **The Privatisation of the State's Coercive Authority: From Compact Back to Combat?**

¶ Contrasts the legislation on privatization in the executive & judicial branches in Slovenia with the regulatory principles that constitute Slovenia as a lawful state. The analysis shows that privatization can undermine the universality of equality of opportunities, freedom, & justice if the efficiency of the state's apparatus & the political power of professional associations (especially physicians & private security officers) are the only (f)actors that determine the goals of the privatization reform. It is suggested that Slovenia should strengthen the surveillance of the public police over private security businesses & determine more precisely the legal powers of private security officers. It is also suggested that Slovenia will have to adapt the present procedures & the internal organization of the existing committees that determine the civil rights of private practitioners in professional associations to the standards of an independent & impartial judiciary.

Zammit, E. L. (U Malta, MSD 04 Msida (tel/fax: 356-3290-2726/340251)), **Efficiency vs Democracy in the Workplace: Self-Management at Malta Drydocks-A Postscript.**

¶ Evaluates the experience of self-management at Malta Drydocks, 1974-1997, based on longitudinal empirical surveys of the workforce, extended interviews with management & other key players, & documentary evidence. A worker-elected council bears the main responsibility for running this state-owned, traditional, highly unionized, ship-repair enterprise. Simultaneously, a number of workers' committees, also directly elected, were involved in the implementation of council decisions at departmental levels-alongside professional management. This democratic form of management has tended to be more concerned with extending the traditional arena of collective bargaining than with the issues of enterprise productivity, discipline, & competition, which continue to be perceived as primarily managerial concerns. After 20 years of such experience in workplace democracy, despite heavy public subsidies, the financial situation of the enterprise progressively deteriorated. As a result, in early 1997 an amendment to the Drydocks Act was passed in Parliament that effectively abolished the system of self-management. A new participative system was installed that reestablished government control over the enterprise. Only time will show whether the new system will succeed in making the enterprise viable again. A more evenly balanced approach to enterprise democratization is proposed, one that harnesses both management & worker/trade union initiatives.

98S36588 / ISA / 1998 / 13829

Zanatta, Anna Laura (Dipartimento di Scienze Demografiche, I-00161 Roma Italia (tel/fax: 0039-6-4991-9523/8530-3374; e-mail: zanatta@dsd.sta.uniroma.it)), **Family Policy in Italy. The Relationships among the Family, the Welfare State and Family Policies.**

¶ It is assumed that, in Italy, the family model affects both the welfare model & family policies. The prevailing family model is based on a rigid division of labor between men & women & on the economic dependence of women & children on working men. Italian family obligations play an important role in the social distribution of welfare: the welfare state has nearly ignored the family, mainly because of the strength of family solidarity & kinship networks, supported by women. The family is considered the most qualified institution for taking care of children & other frail members of society. As a consequence, both the economic support of the state for families & services (public & private) for children & working women are very scarce. But the weakening of the traditional family (through separation & divorce) & the changes in women's condition (more highly educated, working women) are producing a crisis, with a need for a more impressive action from the public system. However, it is concluded that, in Italy, the family continues to be "a partnership with unlimited liability."

Zangerl-Weisz, Helga (Dept Social Ecology Institut Interdisziplinäre Forschung, Seidengasse 13 A-1070 Vienna Austria (tel/fax: 43-1-526-75-01/523-58-43; e-mail: helga.zangerl-weisz@univie.ac.at)), **Environmental Risks and the Coevolution of Natural and Social Systems.**

¶ Presented here is a theoretical concept of society-nature interactions that contributes to a sociological understanding of environmental risks. The concept can be placed in Rosa's (1977) second quadrant (realism, macroscopic). Similar to Ulrich Beck, this approach focuses on the relationship between society & the physical environment, but it comes to different conclusions. Two complementary concepts, "society's metabolism" & "colonization of nature," describe the physical interaction between the systems of society & nature: (1) the flow of materials & energy between nature & society & (2) the deliberate & sustained transformation of natural systems through various forms of intervention (planting, application of agrochemicals, consolidation of farmland, changes of water regimes, breeding, genetic engineering, etc), respectively. A brief review of the stages of colonization shows how it dramatically changed social structures & generated environmental as well as social risks. As colonization cannot easily be reduced, the responsibility of managing natural systems is passed on to later generations. Eventually, required resources exceed the organizational capacity of a society. With reference to Niklas Luhmann's distinction between risk & danger, colonization describes a coevolutionary process between social & natural systems in which societies gradually transform dangers into risks until the capacity of society is exceeded, & risks are retransformed into dangers. How the concept of colonization can contribute to major macrosociological approaches concerning risk is considered in terms of the views of Beck & Douglas & Wildavsky.

Zdravomyslova, Elena (Centre Independent Social Research European U, 191002 Saint Petersburg Russia (fax: 812-321-1066; e-mail: zdrav@socres.spb.su)), **Renaming Campaign in Political Mobilization of Perestroika.**

¶ Renaming campaigns emerged in Eastern Europe in the late 1980s & were important aspects of the velvet revolutions. In Russia during the protest cycle of perestroika, renaming campaigns were also salient. Focus here is on the case of renaming in Leningrad-St. Petersburg, based on analysis of local documentation, newspapers, & interviews with residents. Protest mobilization & consequent electoral victory of democratic opposition in St. Petersburg in 1990 included renaming not just city objects but the city itself. Renaming is conceptualized as a symbolic action campaign, part of the struggle for local citizenship, & as a realm of symbolic actions expressing the ideological preferences of its agents & compensating for the lack of instrumental political action. Renaming is also viewed as a resource for mobilization of local patriotism in the fight for local civil society; the renaming of Leningrad as St. Petersburg is analyzed as such. Social movements such as local renaming campaigns are distinguished from political movements such as perestroika.

Zelditch, Morris & Floyd, Anthony (Dept Sociology Stanford U, CA 94305 (e-mail: zelditch@leland.stanford.edu)), **Negotiating Consensus.**

¶ Describes an experiment that induced demand for justification of an unexpected, untoward act under conditions of doubt about consensus in a dyad & observed the structure, content, & process of justification. Despite the doubt cast on consensus, subjects (Ss) continued to presuppose consensus &, therefore, continued to construct justifications. Despite the fact that legitimation depends on consensus, the effect of dissensus was not that it made it impossible for Ss to construct legitimations, but that it altered the structure & content of the legitimations that Ss constructed. Providing Ss know they share a common group identity & address a common task, the effect of doubt about consensus was to transform justifications into metajustifications, ie, justifications of justifications. In metajustifications, justifications become what is to be explained, & more fundamental norms, values, & beliefs, which are otherwise taken for granted & go unmentioned, become the premises of the justification. Thus, Ss behave as if legitimacy, as it does in all sociological theories of legitimation, depends on consensus. But dissensus with respect to one norm, value, or belief apparently does not imply to them that there is dissensus with respect to others. Hence, they continue to search for premises that will be acceptable justifications to the "Other" in the experiment, with the burden of proof evidently on dissensus; ie, they doubt consensus only if the Other acts to reject their justification, & one can think of the interaction as continuing the search for consensus until premises that are shared are found. Thus, the Ss in this sense interactionally construct consensus. The experiment also found that a third party is decisive in determining where this consensus lies.

Zelenkov, Anatoly (Faculty Philosophy & Sociology Belarussian State U, 22050 Minsk (tel/fax: 172-22-37-86; e-mail: phse@fef.bsu.unibel.by)), **Post-Industrial Prospects for Belarus and Social Radicalism.**

¶ Explores the problem of global-local relations in the choice of the optimum strategy to approach the social & political transformation in Belarus. According to the official government program, the principles guiding this transformation include developing competition; reducing the share of state ownership in the economy; reforming the political & social system to establish favorable conditions for the formation of an educated, creative, morally & physically sound personality; & solving some acute ecological problems, particularly the negative impact of the Chernobyl disaster on the economy & political structure. However, real changes in the economy, education, living standards, & other areas conflict with these postindustrial development aims & values. The same fundamental problems underlie global-local relations in Belarus, creating obstacles in the realization of the country's postindustrial prospects. It is contended that one of the most important obstacles lies in the principles of social radicalism & authoritarianism in the current political system.

Zemiti, Khelil (CERES, 23 rue Espépie Tunis), **Approche anthropologique de la notion de centralité à travers le cas de l'aire méditerranéenne** (Anthropological Approach of the Notion of Cen-

trality through the Case of the Mediterranean). (FRE)

¶ An anthropological approach to the notion of centrality focuses on the Mediterranean region. While Mediterranean centrality is not a fixed reality, free-exchange agreements between the sub-Mediterranean countries & the European Union are causing a reevaluation of this concept of regional centrality, both democratization & regional market sharing are key concepts to these agreements. Field studies in Tunisia underpin an exploration of current shifts in the sense of Mediterranean centrality, at a time when globalization relativizes conventional social closure.

Zghal, Abdelkader & Ouederni, Ahmed Iadh (Centre études recherches économiques & sociales, 23 rue d'Espagne Tunis 1000 RP Tunisia (tel/fax: 216-1-728891/343237)), **Globalisation et puritanisme politico-religieux: approche comparative Europe occidentale/monde arabe** (Globalization and Politico-Religious Puritanism: An Approach Comparing Western Europe and the Arab World). (FRE)

¶ Investigates reasons & meanings behind the emergence & circulation of the discourse of Islamic movements in Arab societies, particularly observable differences in the impact of the discourse between different Arab societies, on one hand, & different social categories in each of these societies, on the other. It is argued that the principal obstacle, with respect to epistemology & intelligibility of this phenomenon, resides in the postulate of the absolute Otherness of Islam & Muslim societies. This postulate is rejected & another adopted based on the hypotheses that (1) there are certain similarities between the sociohistorical contexts that gave birth to the revolution of Protestant saints of the 17th century & the political conflicts that occurred in the name of a puritan interpretation of Islam in the 20th century, & (2) the state has a deciding role during moments of crisis or uncertainty.

98S36595 / ISA / 1998 / 13836

Zghal, R. (Faculte Sciences Economiques Gestion, Tunisia (tel/fax: 00216-279-154/273-139)), **French title not provided** (The Maghrebi Management Organizations: The Weight of History and the Common Challenges). (FRE)

¶ The three countries of North Maghreb-Tunisia, Algeria, & Morocco—are concerned about the same challenges of globalization & maintain the same preferential economic links with the European Union. Analysis of how organizations work in the three countries reveals a great convergence, even though their economic politics differ. This convergence includes historical conditions of the emergence of modern industrial companies & the state's intervention, conditioning managerial environment & the style of managerial practices; testimonies of managers show, on one hand, the trend to adopt external managerial models, & on the other, their weak interest in organizational research & development. The trend associated with centralized bureaucratic power may lead to many dysfunctions in the organization, eg, outdated managerial practices, an insufficient communication system, a lack of systemic connections within the management process, the absence of external connections with cultural environment & with educational, vocational training & research institutions. Some consequences of that situation are the wasting of human cultural knowledge, know-how resources, & generally, the inability to create & exploit internal & external synergies.

Zhang, Naihua (Coll Liberal Arts Florida Atlantic U, Boca Raton 33431 (tel/fax: 954-230-1138/236-1150; e-mail: nzhang@acc.fau.edu)), **Beijing '95 and Beyond: How Has It Affected China and Chinese Women?**

¶ Based on conversations with Chinese women & men & analysis of official documents & discourse, the impact of the 1995 Beijing Conference & the NGO (nongovernmental organization) Forum on China & Chinese women is examined. It is shown that women's issues in the People's Republic of China have become internationalized as a result of China's encounter & interaction with the global women's movement. The government has reframed the official gender discourse in accordance with international conventions. It has also tried to reinterpret some other incoming concepts to incorporate them in the Chinese system without causing conflict. For Chinese women & women's organizations, the conference provided a perfect opportunity to connect to the global women's movement & draw resources, inspirations, & strength. Foreign donor organizations have played an important role in the process. However, the government has also tightened supervision & control over women's organizations & foreign funding. Chinese women activists & scholars are working in this post-1995 context, pushing for women's advancement. Since the Beijing Conference, China's interaction with global feminism has become one of the most dynamic forces shaping official ideology & the women's movement.

Zic, Zoran (Rockford Coll, IL 61108 [tel/fax: 815-226-4018/4119; e-mail: zzic@rockford.edu]), **Democratic Transition in Multiethnic States: A Cross-Regional Perspective.**

¶ Examines the impact of main variables that determine outcomes of democratic transition in multiethnic states by comparing Spain, the former Yugoslavia, & South Africa. Variables are the sequencing of state formation & democratization; scope, timing, & impact of past ethnic conflicts; economic performance & economic aspects of interethnic relations; roles & policies of national & ethnic/regional elites; international influences; & the impact of preexisting or newly introduced institutional arrangements (regionalism, federalism, power sharing). Spain managed to democratize & preserve its integrity through a unique system of regionalism with elements of federalism benefiting from cooperative elite policies & international support. In the former Yugoslavia, a very decentralized federal system did not manage to control or accommodate suddenly emerging political pluralization quickly usurped by nationalist entities. The country disintegrated amid interethnic wars, while democratic transition in its successor states is only partially accomplished. Contrary to many expectations, South Africa, guided by compromise-seeking elites, managed to initiate a relatively smooth & trouble-free transition process toward democracy coupled with constitutional transformation into a federal state.

Ziehl, Susan C. (Sociology Dept Rhodes U, Grahamstown 6140 South Africa [tel/fax: 27-461-318363/25570; e-mail: scsz@warthog.ru.ac.za]), **Class, Culture and Household Structure—A View from South Africa.**

● Complete paper available from Sociology*Express. Prepaid orders only. Telephone: (800) 752-3945 or (619) 695-8803. Fax: (619) 695-0416. E-mail: socio@cerfnet.com

¶ Explored is why, if class is the major explanatory factor, extended family structures are not more common among lower-class Americans generally, compared to their more affluent counterparts. Results are reported of a household survey among 300 English- & Afrikaans-speaking whites

living in Grahamstown, South Africa, to test the claim that class is a better predictor of household structure than culture. The latter was measured by home language, & it was surmised that Afrikaans speakers would ascribe to a family ideology that favors extended family arrangements, while English speakers would not. From the results, a model is developed of the relationship between class, culture, & household structure, the crux of which is that class & culture combine in a particular way to produce different propensities to live in different household types. The model is applied to a comparison of black & white household structures in South Africa generally. It can also elucidate Allen's finding that only among blacks does class seem to influence the prevalence of particular household structures.

98S36601 / ISA / 1998 / 13842

Zimmerman, Don H. (Dept Sociology U California, Santa Barbara 93106 [tel/fax: 805-893-3422/3324; e-mail: zimmeram@ssc.ucsb.edu]), **There's uh Fire below My House an' above My House an' I Wanna Know If I'm—If It's under Control or If I'm Supposed to Evacuate: Negotiating Peril in a Major Brushfire.**

¶ Drawing on tape recordings of a series of telephone calls to an emergency number, eg, 9-1-1, occasioned by a major brushfire, examined is how callers & call-takers negotiate an orientation to the fire as actually or potentially a threat requiring evacuation. Specifically examined is how the absence of an official evacuation order affects call-takers' management of queries concerning evacuation & how callers' queries exhibit an orientation to & respect for official definitions of the situation.

98S36602 / ISA / 1998 / 13843

Zimmermann, Ekkart (Insttit Sociology Dresden U Technology, D-01062 Federal Republic Germany [tel/fax: 49-351-463-4284/7085; e-mail: zimmer-e@rcs.urz.tu-dresden.de]), **On the Readiness to Use Protest and Violence in East Germany.**

¶ Analysis of 1993 & 1995 survey data on the readiness to use protest & violence in the former East & West Germany indicates that preparedness is lower in East Germany, & polarization between users & nonusers of protest & violence has occurred there, parallel to increases in apathy. Younger, male, single participants, with higher education & membership in political parties, unions, & citizen initiatives (negative influence on violence, positive one on the protest indicators), membership in other associations, & political extremism, increase the willingness to protest & use violence; personal responsibility & respect for law & order decrease it. Four different theory blocs are exposed to several multivariate tests. In a broader sense, a model of resource mobilization is best suited, followed in part by political ideology & framing; social isolation & postmaterialism cannot be adequately tested with respect to the concept of relative deprivation. Predictions as to how long the relative calm will persist in East Germany are deemed difficult to make presently. In theoretical terms, more ground can be covered in (1) elaborating the many variants of relative deprivation theory (comparisons with oneself, one's own group, another reference group within the same nation, comparisons across nations—all over various points in time) & (2) tying this to the social identity theory of Taifel; action constraints can be further narrowed in elaborating on insights drawn from political opportunity theorizing.

Zolberg, Vera L. (New School Social Research, New York NY 10003 [tel/fax: 212-229-5782/5595; e-mail: zolbergv@newschool.edu]), **Postmodernism Previewed: Aesthetic Eclecticism in the 19th Century Museum.**

¶ The postmodern discussion tends to define the phenomenon in relation to various transformations in economy, global relations, & their effects on the arts & culture more generally. Here, questions regarding the novelty of postmodern developments are raised by considering earlier changes as indicated in cultural institutions, eg, museums, as well as the built environment. These changes either prefigure contemporary postmodernism or represent a "phase" discernible in previous epochs. The problematic it suggests is addressed.

98S36604 / ISA / 1998 / 13845

Zubieta, Judith (Insttit Investigaciones Sociales U Nacional Autónoma México, 04510 DF Mexico [tel/fax: 525-622-7416/665-2443; e-mail: zubieta@servidor.unam.mx]), **S & T Development in Mexico: Obstacles and Opportunities.**

¶ Presents an overview of scientific & technological (S&T) research & development in Mexico. Some quantitative indicators are given to portray characteristics of the problematics & facilitate the identification of

obstacles & opportunities for its growth & consolidation. One indicator deals with faculty qualifications (scientists & engineers engaged in research & development activities) measured through membership in the Mexican National Researchers' System since participation is highly regarded for its impact on Mexico's S&T development. Another indicator is federal expenditures on S&T development, which clearly shows the insufficient resources allocated to research & development activities. Finally, some alternatives are explored, bearing in mind their feasibility as well as the urge to improve & increase participation of all economic sectors in financing S&T; among them, the allocation of resources from the private sector, especially industry. In resonance with the demands from most public universities, the need to strengthen & emphasize the relationships between academic endeavors & industry needs is noted.

98S36605 / ISA / 1998 / 13846

Zubok, Julia A. & Chuprov, Vladimir I. (Instit Socio-Political Research Russian Academy Sciences, 32a Leninsky Prospekt 117334 Moscow (tel/fax: 095-938-0079/307-6643)), **Russian Youth and Modernisation: Values and Participation.**

¶ An analysis of changes in the sphere of youth consciousness from the point of view of the process of modernization & social transformation in contemporary Russian society. Comparative sociological research confirms that Russian youth, as well as the whole of society, are remarkably differentiated by values, social needs, & interests. This cannot fail to influence the participation of different groups among young people in the process of modernization & citizenship formation. The main question addressed here is the extent to which these processes facilitate the stabilization of Russian society on the one hand & intergroup cohesion of young people on the other.

Zubrzycki, Geneviève (Dept Sociology U Chicago, IL 60637 (tel/fax: 773-643-7496/702-4849; e-mail: genez@uchicago.edu)), **Poland's Return to Europe: Reconstructing National Identity in a Global World.**

¶ It is often assumed that globalization lessens the significance of the nation-state as a political unit, makes national identity increasingly obsolete, & brings about the demise of the political community as a meaningful representation of society's unity. However, this assumption is invalidated by post-Soviet societies' experience. In East Central Europe, globalization trends are intimately linked to the redefinition of national identity, the construction of sovereign nation-states, & the heightened significance of the political community. Drawing on empirical evidence from the case of Poland, an argument is made against the tendency to reduce the complex relationship between globalization, political structures, & the salience of national identity to a simple causal relationship. How & to what extent the creation of a political community & the redefinition of a national culture are affected by parallel global trends are investigated. The analysis of public discourses on "Poland's return to Europe" reveals that global trends associated with the opening of the formerly closed Eastern bloc have been perceived as opportunities by some, but as threats to Polish national identity & to the state's sovereignty by others, perceptions that must be linked to opposed visions of the nation.

98S36607 / ISA / 1998 / 13848

Zubrzycki, Geneviève (Dept Sociology U Chicago, IL 60637 (tel/fax: 773-643-7496/753-7886; e-mail: genez@uchicago.edu)), **Reconstructing National Identity after Soviet Domination, in the "Age of Globalism": The Polish Case.**

¶ In Eastern Europe, globalization trends are intimately linked with the redefinition of national identity, the construction of sovereign nation-states, & the heightened significance of the political community. Using the Polish case, it is argued that the collapse of state socialism & the end of Soviet hegemony have brought about the reconstruction & solidification of the political community as the official representation of society; the construction of a "state of & for Poles" has brought about the necessity to redefine Polish national identity—an issue that has been central since 1989. At the same time, because of the collapse of the USSR & the opening of the formerly closed Eastern bloc, Poland is starting to be affected by processes subsumed under globalization: transnational migration flux, foreign investments, & negotiations for Poland to be included in supranational structures. Analysis of public discourse reveals that these global trends have been perceived as opportunities by some, but as threats to Polish national identity & state sovereignty by others. These different positions must be linked to opposed visions of the nation, & should be understood in the context of past Soviet imperialism.

98S36608 / ISA / 1998 / 13849

Zubrzycki, Geneviève (Dept Sociology U Chicago, IL 60637 (tel/fax: 773-643-7496/702-4849; e-mail: genez@uchicago.edu)), **Intellectuals, Scholars and Politicians: Reconstructing National Identity in Post-Communist Poland.**

¶ Investigates the role of intellectuals & scholars in the redefinition of Polish national identity through their involvement in the creation of a new discourse of the nation. If under totalitarian & foreign rule a certain narrative of the nation was more performative than others, the new context calls for the reinvention of a national narrative that would rehabilitate concepts that had been appropriated by the socialist state (eg, citizen, civic duty, universalism) & reconcile notions that have been historically divorced in Polish national consciousness (nationality & citizenship). It is in this context that one should understand intellectuals' marked & growing interest in the concepts of civil society, the civic nation, the *Rechtsstaat* & the importance of citizenship as a mode of social integration. These topics have been prominent in recent intellectual production & are clearly present in the political discourse of certain groups & parties. It is argued that efforts to introduce these concepts in academia & in the public sphere are part of a broader effort to create a Polish national identity less focused on ethnicity & faith (ethnic nation) & more on political relations (civic nation).

98S36609 / ISA / 1998 / 13850

Zuckerman-Bareli, Chaya (56 Weizmann str, IL-62155 Tel-Aviv Israel (tel: 03-6047507)), **Framing and Mobilization of Consensus: An Interactive Approach.**

¶ Analyzes the dynamic process of framing & its relation to the interaction & struggle between two social movements & the authorities, & addresses the relation between the framing process & mobilization of consensus. The movements—"There Is a Limit," a relatively radical social movement, & "Peace Now," a reformist one—were both active in Israel against its war in Lebanon, 1982-1985. Content analysis of the movements' publications & assemblies & of daily newspapers shows that the frame of "There Is a Limit" developed through two main stages: an initial moderate stage, followed by radicalization in diagnosis & prognosis around the issue of a citizen's obedience to the authorities. This was also the main issue of dispute between the two movements. The power of "There Is a Limit" to mobilize support to its frame was stronger in the first stage than in the second. Social conditions that led to this phenomenon are discussed.

98S36610 / ISA / 1998 / 13851

Zuñiga, Jorge S. (U Nacional Callao, Lima Peru 138 (tel/fax: 51-1-4299899/4296607; e-mail: Zudjor@Redunac.Unac.Edu.Pe)), **The Problem of Employment in Merchant-Like Towns: The Case of Lima.**

¶ Urban process in Peru grows & reproduces a merchant-like system with high rates of unemployment & underemployment. Since the Peruvian state resists decentralization, cities such as Lima grow weak & disorderly. Hence, the productive employment problem is not resolved, & Lima will not become a modern city of material & spiritual realization. It is necessary to stress the urgency of planning the growth & the development of cities & their urban processes, with industry as the nucleus, but incorporated into holistic & ecological concepts & practices. The move toward an urban society must be firmly guided by sustainable industrial development in order to stimulate productive employment & meet the demands & needs of human & social development.

Zuzanek, Jiri & Beckers, Theo (U Waterloo, Ontario N2L 3G1), **Changing Valuations of the Perceived Importance of Leisure, Family, and Work, and Their Contribution to Life Satisfaction in Canada and**

Z**the Netherlands: A Comparative and Across-Time Analysis.**

¶ Investigates proposals that social & cultural changes in industrial societies are associated with shifts toward postindustrial or postmaterialist values, with growing importance being attributed to the values of leisure & qualitative aspects of work. Valuations of the perceived importance of leisure, family, & work, & their relationship to life & work satisfaction in Canada & the Netherlands are compared, drawing on 1981-1990 data from the European Values Study. Results suggest that the proportion of population approving or accepting potential decline in the importance of work has increased over time from 55% to 57.6% in the Netherlands, & from 40.3% to 83.9% in Canada. However, overall trends are complex, with the Dutch appearing to attribute more importance to leisure than

Canadians. In 1990, the mean value score for leisure, on a 4-point scale, was 3.4 in the Netherlands vs 3.3 in Canada, & attribution of greater importance to leisure affected life satisfaction more strongly in the Netherlands than in Canada. Analysis of changes in the most valued attributes of work shows that the Dutch increased their valuations of both the pragmatic & more "intrinsic" characteristics of work—eg, opportunity to meet people, have an interesting job, etc—while Canadian trends were marked by greater emphasis on pragmatic values of pay, job security, & opportunity for achievement. Evidence suggests that Dutch trends were marked by a shift toward postindustrial or postmaterialist values to a greater extent than the Canadian ones. Also discussed is whether post-materialist value changes are compatible, or indeed contingent on, high levels of economic growth.

Sociological Abstracts now has a new address:

WWW. csa. com

Now Available on the Internet Database Service From Cambridge Scientific Abstracts

Sociological Abstracts has long been the best source for current trends and research in sociology and related areas. Now it's available on the Web via the Internet Database Service — providing **site-wide, unlimited-use** subscriptions.

Precision Tools for Precision Research

Over 40 databases are available on the Internet Database Service in areas such as:

- | | |
|--------------------------|---------------------|
| ■ Aquatic Sciences | ■ Market Research |
| ■ Biological Sciences | ■ Materials Science |
| ■ Computer Sciences | ■ Medical Sciences |
| ■ Engineering Sciences | ■ Social Science |
| ■ Environmental Sciences | |
