From the president:

The news media in the UK and the USA suggest that the global economy is currently headed towards recession. When recessions hit, voters often lash out, seeking scapegoats to blame for their suffering. All too often, ideological figures (typically backed by various types of ‘think tanks’) respond by presenting immigrants in this frame.

So, it would be unsurprising if we see a sharp rise in xenophobic discourse in the coming months. (In many places, this increase will come on top of an already high level.) In some instances anti-immigrant ideas will likely come from ostensibly ‘responsible’ political actors claiming that they are only acting in the ‘national interest’.

Most migration scholars know that in general immigrants do not undermine the economic well-being of non-immigrants. (That latter term has become a useful alternative to ‘natives’, a word that arguably has unwarranted implications of primacy.) All the same, the questions in play are more commonly addressed by economists. So, I will offer a brief reminder of some key points that might be useful in rebutting the sort of populist claims that typically get rolled out in pursuit of an anti-immigration agenda.

- Claim: immigrants take ‘our’ jobs and depress wages.
  - Rebuttal: as workers, immigrants are typically complementary rather than competitive with non-immigrants. They take jobs that non-immigrants reject, or jobs for which there are simply insufficient numbers of non-immigrants. They can thus ‘unblock’ investment projects by alleviating labour-supply bottlenecks in specific job...
sectors, facilitating employment for workers in other job sectors. Where immigrant workers are competitive with non-immigrants, the downward effect on wages is generally very small; this effect could be addressed via tax & benefit policies (a more rational response than immigration restrictions per se).

- **Claim:** immigrants are a drain on public resources.
  - **Rebuttal:** especially by virtue of being younger (on average), immigrants provide a net fiscal benefit, supporting the viability of welfare systems (particularly in ageing societies). Immigrants tend to be more entrepreneurial and willing to take risks and are less likely to be unemployed long-term. Insofar as they do draw on public resources (e.g. school places), they are doing so in the context of making contributions (via taxes) to those resources as well.

- **Claim:** immigration inhibits productivity gains and long-term economic growth.
  - **Rebuttal:** key compositional factors tend to work in the other direction. Immigrants often have higher levels of educational attainment than non-immigrants (on average). Even where immigrants themselves have lower skill levels, their labour supply facilitates the advancement of non-immigrants into higher-skilled (& more productive) employment. In addition, immigration is often followed by increased exports directed towards the countries the immigrants come from.

These are of course very broad assertions. They might not apply in every instance/place. Still, they merit attention whenever we see ideological appeals to ‘common sense’ about the (allegedly negative) economic impact of immigration.

At an early stage in my own research career, I had a poor understanding of these issues. It just made sense to me that having a large pool of immigrant workers led to a degraded economic capacity (‘masses of cheap labour’ vs. ‘investment in increased productivity’). My PhD dissertation essentially took this idea for granted. It took me a long time to absorb and appreciate the relevant evidence produced by economists.

The strength of sociological research on these topics has more to do with demonstrating that it is much more ‘productive’ to refrain from demonising immigrants – to seek instead to foster belonging and inclusion. From a trip to Italy a few years ago, I recall seeing city public squares containing sizeable numbers of immigrants (from Africa, it would seem) who spent entire days doing very little. Charitable organizations provided food and shelter – but they could do little to address the waste of economic/productive capability. Even the IMF recognises that racism is expensive.

But economic research gives us a good basis for concluding that immigration itself is not ‘expensive’ (in the sense that it imposes costs on non-immigrants). On the contrary. In the context of an impending recession, attempts to exclude immigrants (prevention of arrival, and demonisation of those already present) would surely make things worse, not better.

NOTEWORTHY AWARD BY MEMBER

Guillermina Jasso won the 2022 James S. Coleman Distinguished Career Award given by the Mathematical Sociology Section of the American Sociological Association. Professor Jasso is with the New York University and her research addresses distributive justice, inequality and stratification, mathematical methods for theoretical analysis, and survey methods for empirical analysis. She has significantly contributed to the study of demography of immigration to America. We warmly recommend her academic work to RC31 members.

MEMBERS’ OTHER ACTIVITIES

MEMBERS’ NEW BOOKS

Demir, Ipek., Diaspora as Translation and Decolonization, Manchester: Manchester University Press.

This innovative study engages critically with existing conceptualisations of diaspora, arguing that if diaspora is to have analytical purchase, it should illuminate a specific angle of migration or migrancy. To reveal the much-needed transformative potential of the concept, the book looks specifically at how diasporas undertake translation and decolonisation. It offers various conceptual tools for investigating diaspora, with a specific focus on diasporas in the Global North and a detailed empirical study of the Kurdish diaspora in Europe. The book also considers the backlash diasporas of colour have faced in the Global North.

Hof, Helena., The EU Migrant Generation in Asia: Middle Class Aspiration in Asian Global Cities, Bristol: Bristol University Press.

This book draws upon ethnographic observation and in-depth interviews with young migrants who moved, in the 2010s, to the countries of Singapore and Tokyo. By studying migratory flows from the West to prominent Asian business centers, this book attempts to demonstrate how the involvement of young European migrants in local businesses and communities enables the reproduction of the middle-class during that period. This groundbreaking book is astute in observing that the precarity of socio-economic life in the crisis-ridden EU makes it impossible for its citizens to aspire towards the occupational security and lifestyles they desire within Europe. Further, it highlights the role of Asian innovation centers in attracting and retaining such young migrants. In doing so, it masterfully underscores the relationship between thriving business ecosystems and the subsequent diversification of communities.
B Camminga, John, Marnell,. *Queer and Trans African Mobilities : Migration, Asylum and Diaspora*, New York: Bloomsbury Publishing Inc.

At the center of this edited volume is the figure of the racialized LGBTQ refugee, who finds themselves escaping violent anti-LGBTQ laws and contending with a hetero-patriarchal state in Africa. This book collates comprehensive case-studies from diverse parts of the African continent to make sense of the challenging displacement processes resulting from sexual orientation and charts its impact on the lived experiences of persecuted LGBTQ Africans. It is empathetic in its approach and shines a critical light on how forced migration of LGBTQ asylum seekers in the Global North can, at one level, provide protection from homophobia and trans-phobia, but on another, reinforce racist stereotypes about African cultures.

**Public lecture series (Goethe University Frankfurt and online)** invites scholars, practitioners and anyone interested in gender and migration around the globe to an inspiring round of lectures and critical discussions on the topic. If you are interested in any lecture topics, do and join us.

- **7 November 2022** (5pm; hybrid): Eleonore Kofman & Parvati Raghuram: “Gender and skilled migration: Histories and changing modalities”
