Learning from Memory

Body, Memory and Technology in a Globalizing World

This challenging book, with excellent contributions from international social scientists, focuses on the link between body and memory that specifically refers to the use of computer technologies. Neuroscientists know very well that human beings automatically and unconsciously organize their experience in their bodies into spatial units whose confines are established by changes in location, temporality and the interactive elements that determine it. Our memories might be less reliable than those of the average computer, but they are just as capacious, much more flexible, and even more user-friendly. The aim of the present book is to outline, through the body, what we know of the sociology of memory. We believe that an analysis at the sociological level will prove valuable in throwing light on accounts of human behaviour at the interpersonal and social level, and will play an important role in our ability to understand the neurobiological factors that underpin the various types of memory.

This book is an ideal resource for advanced and postgraduate students in social sciences, as well as practitioners in the field of Information and Communication technologies. Scholarly and accessible in tone, *Learning from Memory: Body, Memory and Technology in a Globalizing World* will be read and enjoyed by members of the general public and the professional audience alike.
