Family caregiving necessitates constant negotiations of needs, demands, and capabilities within the larger web of family ties that includes multiple members. During these negotiations, family members reassess their relationships with one another, and caregiving may become an unavoidable responsibility for some. Decision-making involves the entire care network, rather than simply the caregiver and care receiver, which can lead to disagreements. Under these conditions, existing power dynamics among family members may influence decision making about care arrangements. Family scholars have investigated these processes using various theoretical frameworks, focusing on intergenerational solidarity and conflict, filial piety, and gender relations. Capability approach to care, on the other hand, has concentrated on formal care arrangements for older people and questioned whether established mechanisms limit or strengthen care receivers' capabilities and agency. I propose that using a capability approach to family caregiving would be beneficial not only in terms of understanding the agency and autonomy of older people as care receivers, but also of caregivers. The power relations between caregivers and care receivers are built upon the power disparities in parent-adult child and sibling relationships. Who becomes the primary caregiver for the older parent is sometimes determined by necessity, undercutting the agency of the specific adult child and older parent's care preferences. However, the new care arrangements may also result in new forms of power dynamics within the broader care network as well. Given the conditions, ensuring both parties' capabilities without jeopardizing the autonomy of older parent in need is not an easy task to accomplish. It is critical to shift the discussion on care relationships to include not only *functionings* but also *capabilities* of everyone involved by prioritizing their agency in determining what capabilities they value and how power dynamics influence which of these capabilities are undermined for the benefit of others.

"To Leave or Not to Leave": Relocation Decision and Strategies of Families Following the Kahramanmaraş Earthquakes in Turkey

On February 6th, 2023, two earthquakes with magnitudes of 7.8 and 7.5 struck Kahramanmaraş in Turkey, affecting a wide region of 11 cities. In addition to human loss and the complete destruction of entire communities, this devastating disaster forced many people to relocate outside of the region. Based on the mobility justice framework, we contend that migration was a strategy afforded by only some to cope with the aftermath of an earthquake, due to the lack of an efficient post-disaster relocation strategy by the state. In this study, we focused on the experiences of individuals who moved to Ankara or Mersin, where survivors were most likely to relocate. We conducted in-depth interviews with 80 individuals in total, using a life course perspective, to understand their migration decision, post-migration integration, and intentions for return. These earthquakes affected families in a variety of ways, including the death of family members, new impairments, and the loss of their homes and workplaces. Respondents stressed that owing to the urgency of the post-earthquake circumstances, they made the decision to migrate very rapidly, without any negotiations over when or where. Many chose the

destination due to its familiarity based on past professional or educational experiences, or existence of extended kin or non-kin networks. A variety of relocation tactics were used by families, with the primary goal of ensuring members' safety and access to assistance and services. In some families, men had to stay behind to continue working in the earthquake zone while the rest of the family migrated to meet either the education needs of the young or the healthcare needs of the old and the disabled. Others had to rebuild their lives in a new city after losing everything they previously owned. These findings contribute to our understanding of variations in family responses to disasters.

"Those Who Do Not Have the Opportunity to Know This, Will Never Understand". Stigma and Recognition: Affective and Moral Dimension in the Youth of Urban Periphery of Five Chilean Cities.

Territorial stigma has often been understood from its structural aspects of production and reproduction (Wacquant, 2014), and its effects on the identity, self-esteem, integration, and social cohesion of the residents. Other approaches include the agency of people, and as such, integrate a subjective dimension. This research proposes to analyze territorial stigma from the perspective of recognition (Honnet, 2010), by exploring the affective and moral dimensions of 44 young people who live in five different territories in different cities of Chile. These territories are widely known for their negative attributes, been stigmatized for at least two decades. Different than their parents, these youngsters' biographies are built from the stigma that already existed when they were born.

Results show that stigma occurs not only through labeling and the imposition of negative identity but also through a lack of recognition and positive assessment of the ways of living that are developed in the territory. As such, the action of stigmatization erases the ways of living of the community and the positive aspects that these youngsters experience in the everyday life of their communities. Young people contest the stigma in visible and invisible ways, as every time they make life decisions that are different from the stereotype of the stigma, they are taking an opposing stand, resisting the stigma applied to them. At the same time, in those where stigma is accepted, there is a constant search to resolve a conflict, looking for strategies that allow them to overcome stigma, instead of getting tangled in it. The different responses to stigma show that the lack of recognition experienced by the youth is contested in their everyday practices as a way to overcome it.

Making the Non-City and Casting out the Unwanted: The Cases of Conakry (Republic of Guinea) and Abidjan (Côte d'Ivoire)

Conakry and Abidjan were built by the French colonial administration between the 1920s and 1930s. Both cities grew out of a former conglomeration of small villages and coastal towns where the indigenous populations had to be displaced, symbolically or physically, to realize the colonial project of making the city. Furthermore, in these urban regions of West Africa, colonial processes historically shifted endogenous urban nodes from the hinterland to coastal areas to meet the needs of colonial administration and trade routes to Western metropolises. These processes had a profound impact on urban infrastructure and planning, the effects of which are still felt today. One of the main effects of the colonial era was to divide cities along racial lines, with the colonial city reserved for whites and the indigenous city—"la ville des indigènes" in Fanon's terminology of the French colonial regime—abandoned to Africans. These trends continued after independence and during the post-colonial period for the young republics of Guinea and Côte d'Ivoire, where the cities of Conakry and Abidjan had to deal with the unwanted, i.e., people,

ideas, social movements, and urban imaginaries, contrary to the historical colonial logic of city-making characterized by control of territory, goods, and population flows. This presentation is based on a comparative study of eviction policies in the cities of Conakry and Abidjan, which illustrate the colonial filiation and post-colonial continuity in the process of making the city that resembles a non-city. This non-city-making process is based on the urban alienation of formerly colonized populations, who find themselves in charge of urban planning and casting out the unwanted.

 PULTZ, SABINA* (Roskilde University, Denmark)

Hopeful Engagements: Unemployment and the Struggle for Hope

This study explores how unemployed individuals generate a sense of hope and agency in their everyday lives, based on ethnographic research that followed one unemployed person over a year in a remote, de-industrialized city in Massachusetts. The research uses qualitative methods, including shadowing and participatory photo elicitation, to understand the relationship between unemployment, dignity, and hope.

Theoretically, the study draws on Laurent Thévenot's regimes of engagement—plan, familiarity, exploration, and worth—to investigate how hope is negotiated. In the regime of plan, hope emerges through future-oriented strategies, though unfulfilled plans may lead to disappointment. The regime of familiarity shows how hope is built on comfort in familiar spaces like home or social relationships. The exploration regime highlights how new and novel experiences outside the labor market can foster hope through curiosity and openness. In the regime of worth, interactions with support systems are examined to understand how they shape hope.

The research highlights that hope is not solely future-focused but can be cultivated through engagement with other temporal dimensions. It also emphasizes the fluid interaction between hope and other emotions such as grief, nostalgia, and sentimentality. The study argues that hope involves a sense of agency and personal subjectivity, particularly within the regimes of familiarity and worth, where even vague forms of hope help maintain dignity.

The paper critiques conventional unemployment research, which often reinforces stigmatizing narratives, by proposing a more nuanced approach to studying hope. This involves acknowledging small instances of hope and recognizing how it can manifest in unexpected ways, offering a deeper understanding of the experiences of the unemployed, particularly those perceived as trapped in hopelessness.

Securing Basic Needs: The Uncertain Politics of Everyday Life As an Unemployed Person

Engaging in Uncertainty: How Unemployment Shapes Access to Basic Needs

Unemployment profoundly impacts one's ability to secure basic resources and imbues these everyday life practices with uncertainty and affects the experience of dignity. This paper explores how unemployed people manage essential needs such as housing, mobility, and food across three different settings. Drawing empirically from a comparative ethnographic study that saw us shadow 18 unemployed individuals in a small peripheral city each in France, Denmark, and the USA over the course of a year, the paper uncovers how strategies to meet these needs are influenced by emotional, moral, and micropolitical factors. Theoretically, this paper builds on Laurent Thévenot's regimes of engagement framework to examine how people engage in their uncertain situations.

In the comparison, we examine the basic needs of a) mobility, b) food and c) housing. Public transport is limited in many such peripheral regions and not having the ability to get around the city or travel to neighboring towns and cities vastly impacts the job search capabilities and capacity for self-determination. Access to food is shaped by welfare payments for food and various local initiatives, or "food projects," which are often embedded in moral and emotional dimensions. These projects are involve not only obtaining sustenance but also represent a way of acquiring dignity, reflecting different forms of engagement in each region. Housing, another critical need, affects participants' sense of dignity and emotional well-being. The availability and quality of housing are closely tied to the national political and welfare systems in which individuals find themselves.

By examining the interplay of these emotions, politics and morals and how they construct dignity, the study contributes to a deeper understanding of how unemployed individuals secure their basic needs, and demonstrates how this endeavour is both deeply uncertain.

"Better Cotton" in the Anthropocene

Cotton is a unique agrifood crop due to its crucial colonial role in the development of industrial capitalism based on enslaved labor production and proletarian labor processing, and its current substantial ecological footprint in both production and processing. Various programs to develop a "better cotton" make up about one-fourth of total global cotton production. This paper employs a commodity chain conceptual framework to investigate the development and implications of these "better cotton" programs in the Anthropocene. We focus on two programs – organic cotton and CmiA (cotton made in Africa) – to illustrate the successes and challenges in scaling up alternative agrifood initiatives, while at the same time tracing the continued threads of neo-colonialism as the drivers of these commodity chains.

Archetypal Stories: How Important Are They in the Contemporary Narratives?

Among the more watched TV broadcasts of all (as well as of recent) times are international sporting events (such as the Summer Olympic Games or FIFA World Cup); Other broadcasts frequently attracting huge audiences worldwide are televisual rituals and ceremonies (such as funerals and marriages of significant figures (stars/influencers or princes – often coinciding in one person – the stars being contemporary gods as was remarked by E. Morin).

Based on TV ceremonial shows we would like to answer the following questions: 1) for which reasons this kind of shows still attract the contemporary imaginary; 2) is this kind of media narratives important for the contemporary social representations?

- We take into consideration the importance of what C.G. Jung has defined as "archetypes". The existence of the archetypes cannot be observed directly but can be inferred by looking at religion, dreams, art, and literature. Jung's four major archetypes concern the persona, the shadow, the anima/animus, and the self. They are based on ancestral roots, collective unconscious symbols and myths of many different cultures. These archetypes represent behavior patterns that make up different ways of being constituting cultural symbols and images that exist in the collective unconscious and in peoples' wishes or dreams which although mostly not always compatible with modern reason, continue to be important for the human life (such as images with intense emotional meaning, expressing relational primacy of human life, imprints buried in the unconscious – but not "dead").
- If we have in mind Hall's theory on the ways of decoding messages, we better understand why images of "love" and "death" (symbolized in ceremonies concerning "mythic persons" but important for any human life) remain strong in the contemporary representations; viewing mythification of love but also honoring death go together with nature which technology cannot overpass; consequently contemporary narratives neither.

Les Pouvoirs Contemporains Racontés Par Les Séries Populaires

Mythes et contes de fées reproduisent dans toute culture, la « sagesse » populaire (croyances profondes concernant la vie et la mort, le rôle de la chance, des richesses, du pouvoir, de l'« autre », du « mal » etc.). Ces récits, quoique souvent porteurs de contestation symbolique ne s'associent pas à des situations précises et pour cela peuvent dans un sens servir aussi bien d'échappatoire du quotidien que de « contestation rituelle » du pouvoir (proche aux rituels d'inversion étudiés par G. Balandier dans son Anthropologie Politique).

Pour les sociétés contemporaines, le « storytelling » analogue aux récits populaires traditionnels, sont les séries renommées de plus en plus visionnées à travers des plateformes (telles que Netflix). Pour voir (et pouvoir dépister) les thèmes concernant le « pouvoir » favorisé dans la « fabulation » (la mythologie) contemporaine, nous avons procédé à une analyse des récits des séries les plus visionnées de Netflix durant les 10 dernières années (ex. Squid Game, Casa de Papel, Schitt's Creek, Lady in Dignity, Billions, Ozark, Start Up etc.).

Les thématiques relevées concernent l'incertitude générale due à des questions d'argent, et des combats divers pour atteindre des richesses (étroitement liées au pouvoir – qui est aussi pouvoir de décision sur la vie et sur la mort d'autrui). Elles montrent (et dénoncent de façon très impressionnante et très spectaculaire) les inégalités dues principalement au facteur économique, les conduites sans scrupules pour atteindre la richesse mais aussi pour la maintenir, procédé dans lequel ne joue aucune « conscience ». Il s'agit du secret de Polichinelle contemporain qui reste pourtant inédit dans les forums publics dits « sérieux ». A l'exception de quelques voix marginales qui osent dénoncer cette situation, l'humanité joue le jeu de ce pouvoir en cours qu'elle ne dénonce que dans ses... contes de fées.

The Caitlan Clark Phenomenon: Constructing Masculinities and Femininities through Women's Professional Basketball

This paper addresses bodies in time and space, namely, in describing the processes of constructing masculinities, femininities through the bodily aesthetics and performativity as seen through the phenomenon of Caitlan Clark emerging as a media sensation in the WNBA, after a record setting career in college basketball.

Among the questions I seek to address are: What explains the construction of forms of femininity and masculinity in the rising popularity of women's professional basketball? What does a sociological understanding of the phenomenon of Caitlan Clark tell us about the present state of gendered bodies in sport? How has the cultural construction of masculinity and femininity been at the center of competing forms of the gendered body? How has the body been shaped by cultural ideologies of the feminine and masculine body? What meanings, both local and trans-local were constructed around this dynamic form of leisure, play, and the body?

Using a culturalist approach to bodies in time and space from Henning Eichberg, I will seek to explain how culture and society have been shaping forces around the perceived masculinities and femininities of present-day women's professional basketball in the form of the WNBA. As Eichberg states, "Show me how someone jogs, or how they bounce the ball, and I'll tell you a little something of the society in which they live."

In an era of ever-dynamic changes in gender and sexuality, are there emergent possibilities of femininity?

Cedec-Ceipoc Digital Archive: Research Experiences and Reflections on the Contentious Politics of Brazilian Constitutional Democracy

This communication has two interconnected objectives: first, to present the "Cedec-Ceipoc Digital Archive" (www.acervodigital.cedec.org.br); second, to share preliminary reflections that explore the potential of the interviews conducted within this project to analyze changes in contemporary democracy. The Digital Archive aims to gather testimonies from social science researchers regarding their academic and political experiences over the past decade, a period marked by the emergence of tensions and uncertainties in Brazilian politics. This includes the development and archiving of in-depth interviews about current research, academic background, and researchers' professional trajectories, as well as key issues for political-constitutional analysis in the coming years. Regarding the preliminary insights that link the materials produced to a critical moment in contemporary democracy, our analysis of the interviews focuses on the dynamics and unfolding developments of Brazil's current political tensions, particularly in relation to the role played by the Supreme Federal Court.

COOPER, ADAM* (Human Sciences Research Council, South Africa)

An Ambiguous Genre for Ambiguous Subjects: Youth, Biography and Intergenerational Social Mobility in South Africa

Biography occupies a place in between science and art, beholden both to the truth of an individual life, the details of which can be proved by documents and other people, but open to the creativity of the biographer, who is given sufficient license to interpret the meaning of that life, in its historical context. Similarly, the ambiguous category of youth is generally constructed as “in between”, a phase wedged in the middle of childhood and adulthood.

I reflect on the value of this ambiguous genre (biography) for making sense of an ambiguous category of people (youth), describing a book project on social mobility that uses individual lives, over generations, to unpack how important relationships can improve people's life chances. I first describe a chapter focused on the diary of AZ Berman, a person like my Jewish ancestors, immigrants from Eastern European ghettos who travelled to South Africa and experienced significant upward social mobility under a form of racial capitalism. Berman's life is compared to the challenges faced by a young Black South African man I have known for ten years, who struggles for upward mobility under global capitalism post-apartheid. The biographical approach shows how both young men try/tryed to leverage relationships forged beyond the racial ghettos where they were born, attempting to catalyse upward mobility in different historical contexts. The value of using biography as a methodological tool lies in its status, like youth, as something in between art and science, enabling the biographer to create a silhouette of individual human beings against the backdrop of the multiple places they traverse, connecting the macro and the micro whilst remaining true to available information and the historical narrative.

RC34-576.3

COOPER, ADAM* (Human Sciences Research Council, South Africa)

Gigs, Hustles and Hope: Using Precarity and Capitals for Global Youth Studies

The concepts of precarity and capitals help to engage with how youth make a living globally, widening the youth studies gaze to circumstances in diverse contexts. Precarity takes on diverse forms that are relative across time and space. It is a relational concept, illuminating contextually dependent uncertainty and vulnerability. Precarity illuminates the situation of youth in comparison to previous generations and vis-a-vis contemporary peers globally. Capital refers to the production of value systemically through capitalism and in the social/cultural sense, leveraged through status, sets of resources and networked, historically contingent relationships.

I describe recent changes to global capitalism, before showing how they have affected young people's livelihoods, with both similarities and differences between the global north and south. Alterations to forms and locations of capitalist production, advances in ICT and shifting global monetary practices have disrupted the viability of universal employment with social protection, producing a range of precarities in the global north and south, where urbanisation and industrialisation have played out differently. In the global north, where industrialisation happened earlier, the current millennial generation is the first to be materially worse off than their parents. While they are better educated than their forebears, their asset base, employment rates and earning power have diminished. Limited industrialisation with attendant opportunities for wage work did happen in parts of the global south, but has not materialised en masse, with the vast majority of youth in the global south (and therefore globally) making a living in the informal sector.

Using the example of work/livelihoods/income generation I argue that a global youth studies primarily needs to broaden its gaze to interpret circumstances for youth globally, while we simultaneously broaden our conceptual repertoire to include ideas developed in the global south.

RC35-580.2

CORDEIRO DE FARIAS, ALBERTO* (Santa Catarina Federal University, Brazil)

Adorno's Construction of Imagination As a Historical-Systematic Problem in Classical Social Theory.

This proposal addresses a specific chapter in the theoretical and social trajectory of a philosophical-aesthetic category: the imagination. In numerous passages across his essays, articles, lectures, and books, Adorno makes sparse but frequent references to imagination as a philosophical category.

He predominantly uses the German term *Phantasie* (fantasy) rather than its Germanic (*Einbildung*, *Einbildungskraft*, or *Vorstellungsvermögen*) or Latin (*Imaginatio*) variants. Not infrequently, Adorno's approaches to imagination are connected to his reading of the history and systematics of classical social theory. More broadly, Adorno presents imagination as a problem for positivist sociology, marking Comte's thought as a key reference aspect for a sociological prohibition of imagination. The general framework in which Adorno, beginning with Comte, examines the role of imagination in social theory raises a crucial question: the repeated emphasis on a historical and systematic problem, namely the complex relationship between classical social thought and imagination. In this paper, I aim to reconstruct imagination as a historical-systematic problem in classical social theory, based on Adorno's references. I will do so by arguing that Adorno, in addressing imagination both as part of a “spiritual history of fantasy” and as a methodological problem related to the mind's operations, proposes an intertwining between the internal structures of social theories and the forms of their historical development. This intertwining, in my view, justifies a historical-systematic approach.

RC37-JS-50.2

CORDEIRO DE FARIAS, ALBERTO* (Santa Catarina Federal University, Brazil)

Practical Judgment As Reflective Judgment in Georg Simmel.

This communication addresses the topic of practical judgments (a concept from moral philosophy that has been adapted into social theory) with reference to Kant's Third Critique — the *Kritik der Urteilkraft* — and its reception by Georg Simmel. Focusing particularly on reflective judgments, I aim to first reconstruct what I consider the central question of the *Kritik der Urteilkraft*, namely the possibility of empirical knowledge, insofar as it involves reflection on contingent individual cases. This reflection is capable of attributing meaning and significance to these cases within the systematic framework of a legal order. Although Kant primarily focuses on judgments of taste and teleological judgments, I aim to demonstrate that these judgments concern the particular way in which humans comprehend nature in its specific and contingent manifestations. The challenge posed by this cognition lies in the fact that such a legal order is neither predetermined by any cognitive faculties nor can it be derived from the given. Subsequently, I aim to demonstrate how the findings of the Third Critique can influence social theory, particularly the formation of practical judgments in seemingly chaotic, “labyrinthine” contexts of orientation. In these contexts, an infinite variety of empirical forms—which cannot be subsumed under particular empirical laws or universal moral imperatives—configure moral judgment as a dramatic problem of orientation in the world. At this point, I will refer to Simmel with a twofold aim: first, to illustrate the circumstances—both individual and collective—in which moral judgments become problematic; and second, to highlight elements of Simmel's social philosophy that suggest the formation of a reflexive understanding of moral judgments in complex contexts, with the potential to develop into a general theory of orientation.

CORDOVA SUXO, MARIA FERNANDA* (University of Kassel, Germany)

Narratives of Change and Resistance: Indigenous Peasant Movements in Bolivia and the Shifting Dynamics of Hegemony and Subjectivity

This paper explores the formation of hegemonies and reconfigurations within indigenous peasant movements in the Bolivian highlands, following the “Process of Change” initiated in 2006 under President Morales and his political party, the MAS-IPSP (Movimiento al Socialismo-Instrumento Político por la Soberanía de los Pueblos). Two decades later, new forms of resistance are emerging. These forms are not always organized through traditional social movements; instead, they are unified by shared narratives of justice and dignity, which are evoked during moments of social crisis, such as the severe economic challenges that have unfolded in recent years. Bolivia's economic balance has shifted negatively as its primary resource, natural gas, has been depleted. The exploitation of natural resources, driven by the preservation of Western welfare, exacerbates local living conditions, intensifies the climate crisis, and atomizes local grassroots organizations.

The Bolivian experience provides a valuable context for examining the aftermath of a successful hegemonic project. Initially, collective subjectivities, once politically marginalized, transitioned into positions of power, shaping a dominant hegemonic process. However, a reconfiguration of positionalities is now emerging, revealing unmet agendas and ongoing marginalization. This paper focuses on the narratives of leaders from social movements such as the Bartolina Sisa Confederation (Bartolinas) and the Unified Syndical Confederation of Rural Workers of Bolivia (CSUTSCB). Their discourses,

expressed through protests, mobilizations, and internal debates, were gathered during collaborative research conducted between 2021 and 2024. These movements now face internal divisions, exacerbated by partisan struggles.

The discussion highlights the tensions within Bolivia's hegemonic project as new counter-hegemonic forces emerge, contesting persistent marginalization and hidden forms of violence, even under a government that claims to represent and include these movements. This paper aims to offer a nuanced understanding of subjectivity formation in relation to emerging power dynamics and the limitations of indigenous discourse in contexts of multiple crises.

ÇÖREK AKYILDIZ, DOLUNAY* (Galatasaray University, Turkey)

Dispossession in the Anthropocene: Impacts on Rights of Rural Communities

The Anthropocene era marks a critical period characterized by intensified human impact on natural systems and the rapid transformation of ecosystems. One of the most significant outcomes of this era is the acceleration of large-scale dispossession processes that particularly affect rural communities. The transfer of agricultural lands, water resources, and forests to facilitate capital accumulation and development projects deeply impacts the social, economic, and environmental fabric of these communities.

This study employs a literature review methodology to examine the effects of dispossession in the Anthropocene, with a particular focus on the rights of rural communities. Practices such as land grabbing, industrial agriculture, and infrastructure development not only disrupt traditional farming practices but also threaten the rights of rural populations, exacerbating social inequalities and increasing human rights violations. Analyzing the tension between international human rights and environmental law, the research explores the implications for rural communities' rights from a legal sociology perspective. It highlights the resistance strategies employed by these communities, including grassroots movements and sustainable agricultural practices, which advocate for social justice.

By grounding the discussion in real-world examples, this study aims to contribute to the discourse on dispossession and rural rights, proposing recommendations for redefining and protecting these rights in the Anthropocene. Ultimately, it seeks to amplify the voices of rural communities in the international arena, emphasizing the need for equitable resource management and environmental governance.

CORICA, AGUSTINA* (Facultad latinoamericana de Ciencias Sociales (FLACSO) sede Argentina, Argentina)

Secondary Education in Argentina: Educational Trajectories and Experiences of Youth in Vulnerable Contexts.

Secondary education plays a crucial role in the lives and educational journeys of young people. It provides the essential knowledge needed to foster citizenship, gain employment, and prepare for higher education. Additionally, it serves as a key threshold for breaking the cycle of intergenerational poverty. However, secondary education is currently facing a serious crisis, particularly in terms of inclusion. This is evident in rising dropout rates, questions regarding its relevance, and the challenge of diversification.

In this context, our research explores the educational characteristics, both pre- and post-pandemic, as well as the family and labor circumstances of young people in secondary education in Argentina. We analyze the educational trajectories and experiences of youth from vulnerable backgrounds, drawing on data from a longitudinal study conducted with a sample of 1,165 high school students from middle and low socioeconomic backgrounds in 2022, 2023, and 2024.

The results reveal that the post-COVID-19 pandemic period has introduced new challenges related to students' reconnection with the school environment. For instance, we observed an increase in atypical educational trajectories, with 20% of students exhibiting uncertain patterns before the pandemic. Some students re-enrolled during the pandemic, while others returned afterward, creating a fluctuating pattern of school attendance. Despite these challenges, the empirical evidence highlights that young people continue to value their educational experiences, which remain a key space for social inclusion.

CORICA, AGUSTINA* (FLACSO, Argentina)
SCOPINARO, NINA (FLACSO, Argentina)

The Temporality in Contemporary Youth: Experiences Surrounding Time in School Trajectories

Contemporary youth face accelerated changes in various social aspects, which affect their perception and experience of time. Thus, the question of time is an issue that is relevant to the study of young people's lives and whose relevance is renewed especially in the post-pandemic period, as time presents reconfigurations in their lives and in their trajectories in the school space. This merits, in theoretical terms, to deepen the way in which temporality is interconnected in their lives, observing the play of this in everyday life, biographical time and that of generations (Woodman & Leccardi, 2015; Leccardi, 2022), accounting for juxtaposition of temporalities. With that idea, young people attending high schools in Argentina were consulted about: how do you feel time passes in your life when you think about its speed, how do you think time moves in your life and how do you see yourself in the future and what does it depend on. This survey was carried out within the framework of a longitudinal research being developed by the Youth Program of FLACSO Argentina, period 2022-2024, which addressed the issue of time based on the perceptions of the young population of vulnerable sectors. Among the results, it is observed that uncertainty appears as a central characteristic in youth. With respect to secondary school, the processes of dropping out and re-engagement in education reveal new ways of managing time, insofar as it appears that the interruption of trajectories is not an irreversible fact at present, but that these events are seen by young people as an unfinished process, which allows them to foresee the possibility of re-engaging and continuing their studies in the near future. In other words, temporality appears in a flexible and dynamic way.

CORNAGGIA, CECILIA* (Catholic University of the Sacred Hearth, Italy)

Mobilize, Radicalize, Build Networks: Reflections from Italian Climate Activism

In Italy, from 2018 onwards, social movements have played an important role in spreading awareness about the climate crisis. However they have not achieved the desired results at the political level: in the 2022 national election, the environmentalist party Alleanza Verdi-Sinistra (AVS), garnered only 3.6% of the vote. Over the past two years, the center-right government has radicalized its repression of social movements, particularly those using civil disobedience tactics. This has not, however, stopped climate activism. On the contrary, at least three processes of network construction have been launched: 1) the States General of Climate Action (SGCA), a nationwide call for associations, NGOs, and climate movements; 2) the World Congress for Climate Justice, an international appeal addressed to anti-capitalist climate movements; 3) the States General of Climate and Social Justice, addressing both environmental and social groups at a national level.

The present research questions the role that networking can play in supporting the climate cause, using the SGCA as a case study. I make explicit that my positioning is militant, since I myself participate in this network. This places the study in the groove of militant ethnography, which involves the choice of participant observation as the main method of inquiry for the purpose of an embodied understanding of social phenomena. From what I observed - and practiced - over the course of a year, it seems that the creation of the network has had a first result at the political level: in the 2024 European elections, a mobilization was created in a very short time that led to two young AVS candidates entering the European Parliament. A critical element, however, concerns collaboration with the other two networks mentioned above: each addresses, to date, distinct niches and seem to lack an attempt at convergence.

Promoting Gender Studies within a Catholic Institution: Insights from Our Research Group

In this contribution we critically reflect on the history and practices of our research group, which represents an attempt to promote gender studies in a Catholic institution in Italy, the Catholic University of the Sacred Hearth,

where we work and teach. In this institution gender is poorly thematized both in teaching and research: there are no degree courses on gender studies (just an elective course within the Faculty of Psychology), nor research centres focused on the topic. The contribution explains how our work, which consisted of conducting empirical and archival research, organizing seminars, giving lessons, and writing collectively, brought the theme of gender into our university, through specific choices. First, the choice to adopt a *bottom-up approach*, inherent to the very characteristics of the group, composed mostly of PhD students at the time of its foundation. Second, some specific theoretical choices:

- The adoption of a *historical approach* aimed at broadening the sociological canon in a feminist perspective.
- The choice to delve into gender studies starting from *women's studies*.
- The choice to focus on the *production of knowledge* rather than to the change of the praxis (e.g. academic policies).

To date, these choices have proven successful in terms of recognition of the group at an institutional level, but have led to inevitable field limitations, which will not be easy to overcome. The paper gathers the reflections that we have produced and socialized in four years of unpaid work, with the desire to collect feedback and reflections from the conference participants.

Like Gold, with Yield... and Carbon: The Role of Knowledge and Quantified Expertise in the "Environmental Turn" of the Assetization of Farmland

As a key resource to answer to both climate change (through carbon storage) and biodiversity destruction (through the preservation of hedgerows as well as of microbial life in soils), farmland is considered as a tool of ecological transformation by both States and the private sector and its future is scrutinized by a wide range of actors. Focusing on the finance industry, this article examines the dynamics of financialization of farmland in the French/EU case under the lens of specialized data and knowledge that found a "green" assetization of the resource. Building upon studies that stressed the role of specialized knowledge and data in assetization processes (Chiapello, 2018; Birch and Muniesa, eds, 2020), the article first describes the growing dialogue between economics and soil sciences and its impacts on practices of farmland valuation and the quantification of farmland's return on investment. In a second part, it focuses on metrics that enable to think of an "environmentalization" of the financial value of farmland (e.g. the increasing weight of "ecosystemic services" in the quantification of farmland prices, and the possible links with compensation markets) as well as on regulatory initiatives that empowers such metrics (e.g. the proposal to introduce mandatory "soil diagnoses" before each farmland transaction in the context of the preparation of the EU so-called "Soil Directive"). Last, the article discusses the limits of the process, stressing the resistances to the hybridation between economic and environmental knowledge, as well as the assertion of other imaginaries for the future of farmland in ecological processes rising from civil society organizations. The study is based on a series of interviews with financial investors, regulators of the farmland market, farmland experts from various academic disciplines, as well as civil society representatives.

Towards a Green Assetization of Farmland? a Study of the 'Boundary Work' of Financialization, between Financial Actors and Regulators

This article examines the dynamics of the financialization of farmland (Fairbairn, 2020) in the French/EU case, with the objective to show that a "green" assetization of the resource is in preparation. Following studies of the financialization of public policies (Chiapello, 2017; Benquet et al., 2019), it symmetrically examines financial actors and regulators to analyze the 'boundary work' of financialization (Boussard, 2018). As a key resource to answer to climate and biodiversity crises (Granjou, Meulemans, 2023), farmland is constituted as a tool of ecological transformation by both the private sector and the State. If previous studies have focused on civil society movements buying farmland for ecological and social purposes, the article focuses on the strategies of financial actors in relation with regulators. In a context where French farmland is one of the most regulated markets in the EU, the article examines a diversity of

actors and investment strategies that seek to render farmland "investible". The main result is a typology of the divisions within the financial world and their relationship with the State within the EU regulatory context, particularly the CAP and the Green Deal, as this assetization wave capitalizes on the ecological crisis and associated compensation markets. In particular, institutional investors (notably investment banks and insurance companies) appear more hesitant than the actors of "second financialization," such as asset managers (Braun, 2022). The financialization of farmland also takes the form of a "start-upization", with actors playing the role of intermediaries between institutional investors and public authorities. The study is based on a series of interviews with funds' representatives and regulators, as well ethnographic observations of investors' conferences.

Barriers and Opportunities for Citizen Science in Biomedical and Health Research

This paper presents an ongoing project at two biomedical and health research centers, exploring the implementation of citizen science and identifying the main barriers and opportunities encountered by health researchers in its development.

Methodologically, the project is based on a case study approach. The study focuses on two health and biomedical research centers. A mixed qualitative and quantitative approach is being applied. First, 21 in-depth interviews have been conducted with a variety of stakeholders (researchers, project managers, and university staff) associated with these institutions in the field of biomedical and health research. The profiles were selected based on gender, professional category (alternating between profiles with varying levels of experience), and knowledge area.

Additionally, a questionnaire was administered to staff members at both centers. The purpose of this survey is to understand the current work being done in citizen science at these institutions, as well as to identify the main challenges and incentives encountered in its implementation.

The main findings revolve around intrinsic and extrinsic motivations for researcher participation in the development of science and innovation in line with the Responsible Research and Innovation (RRI) philosophy, specifically in the context of citizen science. Results highlight the importance of support actions from the studied entities (whether in project definition, audience engagement, or dissemination of calls, among others). Another notable aspect is the variation in motivations and challenges depending on the research subject and the profile of those involved. Finally, maintaining long-term commitment presents a challenge. Despite high expectations and the support of public and institutional policies, sustaining professional and non-professional commitment to citizen science initiatives over time is difficult.

Understanding Decision-Making in Individual Research Project Selection: Insights from Biomedical Scientific Careers

This paper aims to understand decision-making in the selection of individual research projects. An individual research project is defined as a set of ideas and research lines explored within the same research topic (Laudel and Bielick 2018). The objective is to explore how these decisions are influenced by different stages of a scientific career and how they affect the construction of scientific knowledge.

The work uses the scientific career model by Gläser and Laudel (2015) as a reference framework. This model distinguishes between an organizational career (various positions and jobs within a professional trajectory), a community career (the researcher's network, collaborations, and prestige), and a cognitive career (different research themes developed over time).

Methodologically, the study combines in-depth interviews with bibliometric analysis. The field of study is biomedicine, where disciplinary culture and epistemic practices influence the selection of individual research projects to be explored. A total of 36 interviews (24 women and 12 men) were conducted with prominent researchers in Spain.

Several factors influencing the selection of research portfolios at different stages of a scientific career were identified. These include cognitive factors

(scientific progress, new technologies, depletion of study objects), community factors (negotiations with principal investigators on continuing topics or establishing new collaborations, among others), and institutional factors (mobility, material constraints, funding...). Additionally, unforeseen situations (such as the COVID-19 pandemic) and personal factors (not covered in this study) were identified.

The empirical data and conclusions drawn may contribute to designing public policies that address these issues and potential challenges in scientific careers.

The Human Body As a Complex System, between Organic Matter, Meaning and Alienation

The human body is a complex whole. It is composed of many parts that make up a system, and is made up of organic tissue and incorporeal thought. The body is much studied by sociology, but only as the location of processes of meaning and subjectivation, while human biological matter is regarded as inert, 'merely living,' and alien to all relationships. The paper argues that - when, 30 years ago, biotechnology started to use humans as a source of raw materials to be exploited - sociology was not, and still is not equipped to perceive its scope and consequences.

For the agents operating in the tissue market (donors, owners, buyers and intermediaries), the body is a collection of molecules with no point of contact with the socialised and political body that M. Foucault and B. Turner, for example, speak of. Today, we have to submit to sociological reflection a very different human body: it is flesh, not body; it is *open access*, i.e. available to relentless exploitation; it is made of parts but is not a whole; it is manipulated as pre-political organic matter and not qualified by the enjoyment of rights.

The paper argues that in order to address this challenge, to grasp the impact of control, appropriation and alienation that biotechnology inflicts on the body, and to attempt to limit this impact, the theoretical and empirical boundaries between biology, anthropology and sociology must be drawn in a new and interdisciplinary way. The human body does not comprise two unrelated systems (one organic and one of thought/meaning). It is a single and unique system, a total social fact that requires an innovative theoretical approach.

Women's Movements in Support of Return Migrants: Between Solidarity and Political Action in Tunisia and Morocco

This paper presents the findings of the WE PROPOSE project, a PRIN PNRR initiative funded by Next Generation EU, and analyzes the role of women's movements in the socio-political contexts of Tunisia and Morocco following the Arab Revolutions. These movements have significantly influenced political reforms and social justice, contributing to reshaping the role of women in their respective societies.

The aim of this study is to understand how these women's movements operated in the post-revolutionary context, mobilizing resources and forming alliances with other social forces to address the challenges of voluntary return migration. Through the analysis of their strategies, the paper explores how these movements have influenced public policies, highlighting the importance of an approach that considers the diverse identities and experiences of women.

In particular, the paper examines how women's movements have worked to ensure that returnee women, especially those with migration experience, benefit from an environment conducive to their social and economic reintegration. These efforts have contributed to the development of inclusive policies that address the needs of both women and migrants, emphasizing rights and dignity.

Additionally, the study discusses the complexities of collective actions and their impact on social dynamics in Tunisia and Morocco. By analyzing these dynamics, the paper highlights how women's movements are contributing to the creation of more just and inclusive societies, underscoring their relevance in contemporary socio-political contexts.

This research provides insights into the evolving role of women in shaping post-revolutionary societies, offering a deeper understanding of how these movements are facilitating societal change and advancing equity in both Tunisia and Morocco.

CORRADI, LAURA* (Università della Calabria, Italy)

Asabiyyah: Social Solidarity, Jineology and the Sociology of Freedom

Asabiyyah is an ancient word in Sumer language, dating 3000 b.C. and meaning *social solidarity* - as discussed in the book 'Sociology of Freedom' (2020) by Abdullah Ocalan leader of the Kurdish people, who has been imprisoned for the last 25 years in a Turkish island. The term refers to pre-patriarchal, pre-state, pre-capitalistic societies based on reproduction, women-centered civilizations, and social solidarity - where the latter is seen as the engine of history (beyond 'mechanical' or 'organic' solidarity, and outside limits of dualistic dichotomous Western thinking).

Social solidarity ties are pivotal for all different forms of democracy. Today, analyzing 5000 years of patriarchy the *Kurdish Women's Movement* proposes to decolonize, de-patriarchalize, and re-write social sciences from women's standpoints, producing eco-sustainable economies; socially useful knowledge (instead of profit-driven knowledge); new ways of political participation; non-violent forms of social life; non-oppressive pedagogies; the re-evaluation of traditional medicine and social ecology. In North-East Syria, Rojava, and in refugees camps, in Makhmur, Iraq, an experiment of Democratic Confederalism is taking place among different ethnic and religious groups (Armenian, Kurds, Ezedi, Arabs, Turkoman, Syriac), living together to build equality in the respect of differences. A new type of social solidarity in action was born, with functioning forms of direct democracy; radical hospitality and revolutionary love, besides family ties; deep social responsibility and the recognition of the necessity to overcome toxic gender relations and hierarchies among cultures. The project of *Jineology* (Women's Science) inspired many publication involving feminists and scholars-activists (Meral Duzgun, JMEWS, 2016; Piccardi, Barca, Springer-Nature 2022; Al-Ali, Käser, Cambridge, 2020) reflecting the urgent necessity for all sciences to become social; for political decisions (about resources and priorities) to become really democratic, i.e., taken *collectively*, from the small communities to the cities, to districts, in different articulations of what has been called 'free life together'.

CORRADI, LAURA* (Università della Calabria, Italy)

From the 'Mothers of Sociology' to Jineology. Mentoring through Labs and Collective Work; Contrasting Invisibility and the Erasure of Feminist Sociologies

After 35 years of teaching, research-action and feminism, I still find the mentoring of women, in hetero-sexist, classist and colonial academic institutions, as a challenging mission (Corradi, Routledge, 2018) Strategies that proved to be effective relate to making the mentorship a *collective effort*, in a non-hierarchical and circular model, where peers' support becomes as important as the advisors'. Will report the ongoing experience of the *Decolonial Feminist Queer Lab* in my university, an intersectional experience started in year 2003. Besides difficulties due to lack of fundings, bureaucracy, and authoritarianism, a positive evaluation is made. Being considered as one of the 'mothers of intersectionality' in my country (<https://www.inchiestaonline.it/donne-lavoro-femminismi/praticare-lintersezione-un-metodo-per-la-ricerca-e-per-la-trasformazione-sociale-intervista-a-laura-corradi/>), I can testify the difficulties of making teaching and research really intersectional; the lack of feminist sociological schools and recognized genealogies makes possible the appropriation and subsumption of feminists' ideas for non-feminist purposes, in an Academia, where the teaching of social sciences is still, by and large, focusing on the 'Fathers of Sociology: an enduring 'original sin'.

Yet, the presence of women sociologists in this world has been significant since the 1930' (Patricia Madoo Lengermann and Gillian Niebrugge, McGraw-Hill, 1998). A politics of erasure has been working relentlessly. I believe the valorization of works by feminist sociologists is an urgent step to be taken by ISA: making pressure on national organizations who are quite silent on the topic; giving space and attention to feminist sociological and intersectional contributions in the past and present time; promoting visibility and understanding. The epistemic proposal of Jineology as a 'Science of Women' (Meral Duzgun, JMEWS, 2016; Piccardi, Barca, Springer-Nature 2022; Al-Ali, Käser, Cambridge, 2020) urges to rescue her/story and women's knowledges in all fields, to build a 'sociology of freedom', transforming and democratizing the academic context; ensuring a successful mentorship to subjects willing to become feminist scholars/activists.

Punishment and Incarceration in Brazil: Punitivism and "Punitive Turn" from a Global South Perspective

The discussions in the Sociology of Punishment have pointed to a kind of punitive will that dominates contemporary societies. The ideas of a punitive turn, beginning in the second half of the 20th century, and the general advance of punitivism have been central to debates in this field of research over the past decades. However, most diagnoses and studies in the area still rely on theories and research limited to national or regional contexts in North America and Western Europe. The aim of this paper is precisely to discuss these issues from the perspective of the Brazilian context and the research of local authors. Brazilian society is still marked by significant social inequalities and discriminatory practices based on class, race, and gender, among others. Local punitive practices, in turn, have always been characterized by brutality, selectivity, and, in contemporary times, a neglect of Human Rights. The increase in incarceration in recent decades has intensified these characteristics rather than changed the situation, reverberating in the emergence of so-called organized crime and paradoxical dynamics, such as the current rise of the ideal of rehabilitation, which occurs in a context of re-democratization and the expansion of the struggle for rights in the country. Thus, through a historical reconstruction of punishment policies in the country, the goal is to problematize the diagnoses of a punitive turn and the advance of punitivism, considering the specificities of the Brazilian context.

CORREA, MAIARA* (University of São Paulo, Brazil)

The Rise of the Rehabilitative Ideal in Brazil: Paradoxes in Times of Mass Incarceration

Despite well-established international analyses that point to the decline of the rehabilitative ideal as one of the outcomes of the punitive turn and mass incarceration, in recent years, South American countries have seen the spread and popularity of social reintegration programs. In the specific case of Brazil, although the country has experienced both the qualitative and quantitative dimensions of the punitive turn—namely, the rise in incarceration rates and the deterioration of prison conditions—there is a noticeable effort in initiatives linked to public security agendas aimed at a dual movement: reward-sanction. Through the description of current practices in the Brazilian prison system, this paper seeks to portray how this discourse has been structured, its dynamics, and methods of application, despite the inherent contradictions of overtly punitive practices, which are characteristic of the Brazilian prison system. This is a qualitative study that involved mapping and identifying connections between practices, institutions, and groups that shape the landscape of what we identify as a rise in the rehabilitative ideal—ideals of social reintegration, rehabilitation, and re-education. To this end, a survey was conducted of legal guidelines, institutions (Resocialization Centers, APACs), programs (sentence reduction), and engaged groups that operate within the prison system context, aligned with the rehabilitative ideal. This study aims to contribute to a broader understanding of the dilemmas and complexities of rising incarceration, the inequality in access to justice, in a country like Brazil with a significant prison population.

CORREA BLÁZQUEZ, MAGDALENA* (University of Almería, Spain)

"Este Es El Nuevo Tacto": We Know the Devil o Una Conversación Con Narrativas Trans Del Cuidado a Través Del Videojuego Como Medio Expresivo.

We know the devil, una novela visual creada por Aeevee Bee y Max Schwartz y desarrollada y publicada por Date Night y Pillow Fight en 2016, sigue las vidas de los adolescentes Venus, Júpiter y Marte durante sus últimas doce horas en un campamento de verano religioso. Escrito por autores trans, el juego establece, con su jugador, una importante - aunque en ocasiones incómoda - conversación sobre género, religión, cuidado e intersubjetividad. Al ser yo el jugador, antes mencionado e interpelado por el juego, me interesa mantener y expandir esa conversación desde el punto de vista del conocimiento situado, tal y como D. Haraway lo define en línea con la noción de M. Foucault del conocimiento situado. Al hacer esto, mi relación con el juego es bidireccional y necesariamente implicada y esto presenta una oportunidad con respecto al desafío presentado por la injusticia epistémica: al tomar el relato de *We know the devil* e interactuar con él tal y como me viene dado, pretendo destacar lo que presenta y cómo sobre la experiencia

encarnada de ser trans. En consecuencia, lo que encuentro es un relato serio y apasionado, hecho posible por los videojuegos como artefacto tecnológico de expresión, sobre cómo autores trans experimentan el cuerpo en un contexto que les desestima y marginaliza como productores de conocimiento.

Right to the City and Housing in Chile's Constitutional Processes (2020-2023)

The two recently rejected constitutional proposals in Chile left a rich urban debate expressed in norms, influenced by social movements for housing. This article describes the particular circulation of both the right to housing and the right to the city in the Chilean constitutional debate and their centrality in the campaigns that culminated in the rejection of the two plebiscited proposals. For this purpose, we analyze the translations and mediations carried out by the movement of settlers in alliance with critical urban planners, professionals and academics, with special focus on the Popular Initiatives of Norm presented by them to influence the constitutional deliberation, contrasting them with the norms that were finally plebiscized. Despite the negative outcome, it is likely that these drafts will become a new source of inspiration for the advancement of anti-neoliberal urban struggles.

CORVINO, ISABELLA* (UNIVERSITÀ DEGLI STUDI DI PERUGIA, Italy)

Power Inequalities: Old and New Kind of Slavery in Cultural Cages

"Legitimacy" appears to be a central concept in much of the analysis surrounding migration phenomena, particularly in relation to labour and market dynamics. The relative utility of employment in the labour market remains a bias that legitimizes the journey more than the motivations that define migrants as economic migrants, asylum seekers and victims of trafficking. The migratory project is a complex phenomenon and often the categories used in literature prove too rigid to understand that there can be unexpected overlaps between trafficking and smuggling, work and slavery. Bales (2012) asserts that in ancient times slaves were valuable commodities as they were not easily obtained. If it is true that in the last two centuries, the potential availability of slaves has increased, with the maximization of profits the predatory capitalism took postmodern society back into a past where huge amount of non-valuable slavery is necessary. Furthermore human trafficking and new kind of slavery are not a gender-neutral issue. Women face heightened risks due to their social and economic status within society for unequal power dynamics between genders, patriarchal values and the objectification of women's bodies and sexuality, the feminization of poverty and the normalization of violence against women. Very often, migrants are aware of their exploitation and victimization, but they endure it because it represents the "lesser evil" even in case they have to face a double alienation as migrants in an unknown country and slave with no value (Cristaldi 2015).

The aim of this contribution is to investigate, including through excerpts from interviews with women who were victims of smuggling-trafficking, the process of victimization and marginalization they experience, which betrays their expectation of achieving a better balance of power between genders in a new country.

COSKUN, CICEK* (Baskent University, Turkey)

Exploring the Intersection of Posthumanism, Artificial Intelligence, and Visual Sociology: A Framework for Fiction Film Production

The relationship between fiction films, visual sociology, and artificial intelligence (AI) provides a robust framework for sociological analysis. Fiction films that engage with sociological themes serve as significant venues for exploring and critiquing social structures. The narrative power of these films can foster critical reflection on social issues. In this context, the production of fiction films is also vital for conducting visual sociology. Moreover, the integration of AI in fiction filmmaking introduces new dynamics in the creation and distribution of visual narratives. As AI systems advance in sophistication, they can influence the types of stories told and how they are represented, either reinforcing or challenging existing social norms.

This study analyzes the production processes of an AI-supported short film. During the screenwriting phase, AI algorithms can assist in examining sociological themes and developing narrative structures that address

contemporary social issues. In the production phase, AI can be utilized to evaluate visual and auditory elements, ensuring alignment with sociological objectives.

The research emphasizes 'posthumanism' as a critical sociological concept in the Anthropocene era. Posthumanism directs our attention to the interactions between human and non-human agents, encouraging the writing of a history of agency that highlights significant and enduring sites of encounter between these entities (Pickering, 2000:174[1]). This research outlines a step-by-step approach for producing a short film that explores encounters between human and non-human agents with sociological content using AI. The study will first elucidate the concept of posthumanism, followed by a detailed description of the processes of scriptwriting, visual creation, and editing using AI tools such as ChatGPT, Runway, Gemini, and Midjourney.

[1] Pickering, A. (2000). Practice and posthumanism. In K. Knorr Cetina, T. R. Schatzki, & E. von Savigny (Eds.), *The Practice Turn in Contemporary Theory*. Routledge, pp. 172-183.

COSKUN, CICEK* (Baskent University, Turkey)

Urban Renewal and Environment: An Analysis of the Bahçelievler Neighborhood of Ankara

Since the 1950s, cities in Turkey have experienced rapid change, especially following the enactment of the Law on the Transformation of Areas under Disaster Risk (Law 6306) in 2012. This legislation aims to regenerate areas at risk of disasters, leading to the demolition of many old apartment buildings and their replacement with new ones. Owners receive new flats at no cost, although these units are often smaller than their previous ones. This transformation has significantly altered Turkey's urban landscape. Additionally, the demolition process generates significant dust and noise pollution, and many trees in the gardens of the old apartments are being cut down during the construction. This situation highlights the need for a multidimensional approach to urban renewal.

This study examines urban renewal projects in Bahçelievler, one of Ankara's oldest neighborhoods. The aim is to understand the socio-environmental impact of these changes on residents. To achieve this, interviews were conducted with 15 residents: 7 who experienced the demolition of their apartments and 8 who remained in their old apartments.

The conceptual framework of this qualitative study is based on Lefebvre's (1992[1]) concept of the production of space, which posits that space is multilayered and not a one-dimensional entity. In the specific context of this study, the reproduction of spaces through urban renewal leads to discontinuity altering the city's historical silhouette and environmental problems. Results indicate that participants appreciate receiving new flats at no cost but express discomfort with the noise and dust from construction. Most are also concerned about the rapid changes in urban spaces. During this process, photographs from the neighborhood were also used in the study. In the Anthropocene era, these transformations pose environmental and health challenges, contributing to urban discontinuity and a loss of identity.

Pro-Migrant Right-Wing Populism? the Case of Syrian Refugee "Crisis" in Turkey

Mainstream scholarship and mediatic discourse associates the rise of right-wing populisms with migration. However, Turkey witnessed a rapid wave of migration from Syria in the years between 2012 and 2016, with a right-wing populist government already in power. Contrary to the expectations, this government proved to be generous to the Syrian refugees compared to its European counterparts until 2019, without losing its hold on state power. Despite popular dissent against the presence of migrants, other right-wing actors who attempted to politicize the issue failed to do so on a mass basis. In this paper, I develop a Gramscian approach to explain this puzzle. The AKP government's admission of mass migration was a desperate attempt to maintain a collapsing model of accumulation, which was linked to a hegemonic vision of the nation's future. Accordingly, the government attempted to create a model subaltern stratum out of the refugee population that would become a transnational agent of Turkish capital. However, the government did not engage in the civic work necessary to popularize the refugees' presence in the country among its own voting basis. Its rivals on the Right, in contrast, are engaged in this work, but lack the economic model or the ideological program to challenge AKP on this question.

Building up a National Public Policy on Mental-Health Reparations for Victims of State Violence in Brazil

According to data from the Brazilian Public Safety Forum, in 2023 the police were responsible for the deaths of 6,393 people across the country. Of these, 71.7 per cent were children, adolescents or young people up to the age of 29, 82 per cent of whom were black. Black movements call it a genocide, and the Inter-American Court of Human Rights sentenced the Brazilian State in 2017 to build a psychological reparation program for the victims, among other mandatory measures.

That's the context where a network called RAAVE was built in Rio de Janeiro in 2022. This is an initiative led by the Public Defender's Office, in partnership with universities (UFF ; UFRJ; UERJ; PUC), the Ministry of Justice, social movements and NGOs. Its aim is to provide psychosocial and legal support to individuals, especially mothers, affected by state violence, expanding access to justice and public health policies. Moreover, the program proposes inputs and crucial guidelines for a National Public Policy on Mental-Health Reparation based on an intersectoral and victim-centered approach, grounded in international legal principles.

With the protagonism of social movements such as the "Mothers Victims of Lethal State Violence", the work started with 100 mothers, as co-researchers at Federal Universities, with scholarship support. The mothers have access to public lawyers and to one of our 12 clinics in Rio de Janeiro, and they are also active agents in the territories affected, showing solidarity to new mothers who have just been victims as well. Students help some mothers on the ground and do the clinic work under supervision.

We aim here to present the innovative work that RAAVE is conducting on the field, with the hope to provide some inspiration for other initiatives in contexts that suffer of extreme police lethal violence

'Triple Transition' in Territorial Social Bargaining: Trade Union's Role and Prospective

Workers' participation in strategic actions, even outside the workplace boundaries, is relevant in contemporary industrial relations. The same can be said about the role of the citizenry, which is increasingly involved in forms of socio-political participation. However, these forms – or attempts – of active involvement in the collective well-being have suffered from structural and organisational weaknesses, as well as a lack of interest on the part of national politics.

Within the crisis of the 'foundational economy' – i.e. the economic space that constitutes the infrastructure of everyday life (Foundational Economy Collective 2018) –, trade unions seem the only institutional actors to succeed in managing these weaknesses. Confederal unions are in fact the most accredited entities in the defence of citizens' rights, workers and non-workers alike. This is also true in the face of the structural changes imposed by technological and climatic transition, as well as demographic transformation.

These processes have long been the subject of the union's interest, mainly by the pensioners' federations. Indeed, through the so-called 'territorial social bargaining' they try to be involved on the front of just transition and the quality and accessibility of services. In this perspective, unions act in a way that is disengaged from the spatiality of the workplace, going beyond their traditional boundaries of action.

This study aims to explore the different forms of action of the Italian confederal trade unions within the so-called 'triple transition' processes while considering not only the strategic forms adopted in workplaces but also the actions carried out outside their boundaries. Through a series of in-depth interviews with representatives of the three largest Italian union confederations and the analysis of the respective repertoires of action (Salento, Costalunga 2024), an attempt will be made to reconstruct how a participatory approach can address the challenges posed by the 'triple transition'.

COTE, DENYSE* (Université du Québec en Outaouais, Canada)

Décoloniser Les Savoirs Féministes : L'Expérience Haïtienne De mouka.ht

Les visions du monde sont propres à une société, à une époque ainsi qu'à des groupes sociaux particuliers; il en va de même pour les savoirs et théories féministes (Harding, 2004). Les paradigmes occidental-centristes, libéraux, pluralistes et modernisateurs qui dominent encore l'intervention internationale (Conway 2017) servent trop souvent de paravent bloquant la circulation des données issues et produites par le Sud global. Ainsi, les savoirs des femmes du Sud ont été colonisés par la modernité occidentale. Car, encadrée par des règles formelles de disciplines, la recherche universitaire est innervée de paradigmes scientifiques construisant l'Autre idéologiquement et re-contextualisent cette construction pour le discours public occidental par le biais des médias (Smith 2008). La production de cet « Autre » se combine d'ailleurs avec un essentialisme, une homogénéisation et une fixité historiques (Meudec, 2017), qui mènent à *marchandiser l'altérité* (hooks 1992) au profit d'un nouveau plaisir, celui d'affirmer la supériorité qu'elle offre aux groupes dominants. Pour contrer les ressorts de la production de mécanismes sexistes et occidental-centristes oblitérant les femmes et les groupes féministes du Sud, cette communication présentera une expérience de mise à disposition virtuelle de données produites par et sur les femmes et les droits des femmes haïtiennes : MOUKA.ht. Gratuit et accessible, cet espace documentaire de presque 2 000 entrées appuie la recherche et encourage l'intervention tout en dévoilant les savoirs. Particulièrement visées par les différentes crises qui secouent Haïti, il devient plus urgent que jamais de regrouper l'information produite par, et sur les femmes haïtiennes pour mieux connaître et comprendre, tout en facilitant le partage des savoirs, des publications ainsi que l'archivage de production haïtiennes difficilement accessibles.

COULON, GÉRALDINE* (UCLouvain, Belgium)

Neutrality through the Lens of Teachers' Representations and Practices: A Principle Guaranteeing Pluralism or Generating Exclusion?

This proposal is part of my thesis project about the various "translations" (in the sense of interpretations and implementations) of the principle of neutrality by secondary school teachers in French-speaking Belgium. Neutrality, in its "exclusive" interpretation (De Coorebyter, 2014), can become a norm for controlling religious expressions, privileging practices stemming from "the majority cultural and religious tradition" when those of minority groups are othered and delegitimized (Torrekens, 2012). Indeed, certain behaviors and religious expressions (or perceived as such) tend to be judged as inappropriate because they are associated with particularisms or "oppressive norms" (Bozec, 2015), whereas the dominant practices (Catholic in Belgium) are considered as secularized, shared and legitimate "cultural" traits (Torrekens, 2012). Researchers working in France (Lorcerie, 2012; Bozec, 2015; Orange, 2016) have noted that debates surrounding neutrality (or laicity) in schools often focus on ethnic and religious minorities, especially Muslims. They point out that these pupils are more closely monitored and controlled, their clothing, attitudes and words being more readily perceived as an expression of religious radicalism threatening democratic values. To reference the ongoing controversy over the headscarf in Belgium, the "objective visibility" of symbols (Jacquemain & Brausch, 2010) has become a criterion for evaluating proselytism, making a cross pendant more acceptable regardless of the wearer's intentions. Through interviews and classroom observations, we will try to understand what attitudes teachers associate with problematic forms of religiosity that should be banned from the school environment. Is this treatment fair toward the different beliefs, or are some pupils more targeted than others, leading to inequalities in the distribution of the "social bases of self-respect" (Rawls, 2009) or to "parity of participation" (Fraser, 2004) in deliberations (ethical, epistemic, etc.) when their speaking, knowledge, or behaviors are excluded or devalued?

Charge (environne)Mentale Et Inégalités Sociales De Santé

Cette communication propose d'aborder la notion de « charge mentale » comme un déterminant d'inégalités sociales de santé.

La charge mentale est une notion développée par la sociologue Monique Haicault (1984) pour rendre compte d'un mode de gestion des activités quotidiennes essentielles à la vie d'une famille depuis l'après-guerre dans les pays Occidentaux.

À la suite de la dernière crise sanitaire entourant la COVID19, la notion a été redécouverte et semble jouir d'une popularité croissante, comme en témoignent les écrits scientifiques et d'autres publications dans différents médias de masse (ex. articles de journaux, magazines, balado). À ce jour, la charge mentale est surtout posée à l'angle de la justice de genre et des effets sur la santé des femmes.

En nous appuyant sur une revue de la portée réalisée par notre équipe interdisciplinaire (sociologie de la santé, communication sociale et publique, sciences de l'environnement, relations industrielles, études féministes) à partir de travaux publiés à l'international (n = 223), nous présenterons les principales composantes de la charge mentale et ses effets documentés sur la santé à l'entrecroisement des identités sociales que sont la race, le genre, le statut socioéconomique, la situation de handicap et le statut migratoire.

À l'ère où des pressions s'exercent pour limiter l'effet de l'action humaine sur les changements climatiques, dans une approche intersectionnelle, nous argumenterons en faveur d'un élargissement de la notion de charge mentale à d'autres formes de prendre soin du vivant et de la planète. Regroupées sous le concept de « charge environne-mentale », elles touchent de manière accrue la santé des personnes appartenant aux groupes sociaux les plus marginalisés. Des pistes de recommandation seront proposées.

Learnings from an Adapted Online Photovoice Method for Participatory Research during the Covid-19 Pandemic

This paper presents our learnings from a virtual Photovoice method in a neurodiversity context (i.e. combining autistic and non-autistic participants and researchers). The project was conducted in partnership with a community organization (Quebec, Canada) focused on professional integration. It began before the onset of the Covid-19 pandemic and we had to adapt our research protocol to an online format due to health and social containment measures. In its original form, the Photovoice method is a participatory visual method where participants use photographs to convey their perceptions of a specific theme or problem, including its causes, and potential solutions (Wang & Burris, 1997). Two groups of four participants each, aged between 21 and 47 years, accompanied with two social educators of the community organization, took part in the project. A grounded theoretical analysis was carried out throughout the project, and each photovoice session began with a validation of ideas related to the previous session (member checking) (Charmaz, 2014; Urquhart, 2012). Overall, the pandemic context appeared as a trigger to better adapting the method to the participants' preferences. The virtual format proved effective in reaching participants who are more comfortable expressing themselves in communication contexts that offer other possibilities than direct, synchronous verbal communication. In addition, the method developed and implemented differs from that used in face-to-face sessions, where visual aids other than photos are used (cell films, drawings, etc.). The results show the relevance of this virtual participatory method in supporting meaningful participation and sharing of experiences among participants. By bridging gaps in verbal communication, it also enhances greater epistemic equity, which is a significant contribution to qualitative research conducted in neurodiversity contexts.

Analysing the "Ordinary Extractivism" of British Elite Schools Overseas Branches through the Lens of Racial Capitalism

The proposed contribution focuses on British elite schools and examines the epistemic, social and racial justice implications of the "sister" or "satellite" campuses that they have developed over the past two decades.

While elite British schools are categorised as charities, and enjoy tax breaks accordingly, the overseas branches that they have established around the world - and particularly in South-East Asia and the Middle-East - are commercial ventures, operated through subsidiaries according to various franchise models. These are typically very expensive quasi-replicas of the British schools known for their exclusionary practices and role in the social reproduction of British elites. Through these financial arrangements, the UK-based schools can profit from the export of their 'brands', extracting capital from their overseas branches and channelling it back to the UK.

Drawing on interviews with staff of these satellite schools and on documentary analysis (including Charity Commission reports), we use the lens of racial capitalism to analyse the relationships between British elite schools and their overseas branches. We argue that through their overseas operations, British elite schools engage in extractive practices and are complicit in processes of enclosure and dispossession - including that of knowledge, as white British ways of knowing and being are positioned as superior. These processes, legitimised by a commercial logic, are also premised along racialised lines and ultimately ensure that the promised 'British eliteness' remains out of reach for those who subsidise its social reproduction.

MANFRIM, ALINE MARIA PACÍFICO (Universidade Federal de São Carlos, Brazil)

Body/Language: Sustaining Space for Oneself and Others

Based on the premise that gesture, body and movement are languages of dialogue in a communicative process, the aim of this work was to understand the emotions, forms of contact, spatial organization, and bodily dialogues among 13-year-old students from a public school in São Carlos-SP, Brazil. Recognizing art as a motivator of integrative bodily experiences that evoke emotions, the proposed didactic sequences involve feeling, being in the world, compassion for the social web to which we belong and are shaped by, and the connection with the planet's biodiversity as forms of resistance against social relations based on competition and the exclusion of otherness. As social beings who inscribe themselves as subjects of language through statements materialized in the communicative process, as argued by Bakhtin, the students' productions and actions-also understood as intentionalities in Laban's view include actions of drawing, selecting words, and holding space through individual and collective bodily movements. The aim of the activities conducted during the sessions was to identify, in the various statements (verbal, non-verbal, intonations, emotions) produced by the students, a notion of self that is interconnected with society and the planet.

Legal Change and Attitudes Toward Abortion in South America: Social Decriminalization?

This article addresses a growing issue in South America: attitudes toward abortion in a context of rapid regulatory changes and increasing political tensions. Abortion is a central issue in the region, not only because of its high incidence but also due to its role as a battleground in contemporary polarization. Between 2012 and 2022, six South American countries have loosened their legal frameworks around abortion, marking a notable shift in nations where previous regulations had remained unchanged for decades. This phenomenon unfolds in the context of a struggle between feminist movements, with growing public influence, and conservative sectors that seek to restore traditional values through moral panic strategies.

Using data from rounds 5, 6, and 7 of the World Values Survey, the article provides a novel analysis for South America based on the number of countries compared regarding abortion attitudes. It examines how attitudes toward

abortion have evolved in nine countries in the region and what variables increase the rejection of this practice.

The results show remarkable stability in attitudes, suggesting that legal changes do not always go hand in hand with shifts in social perceptions. Furthermore, religion, age, and interest in politics were the most significant variables across countries, increasing the likelihood of rejecting abortion. This analysis also challenges theoretical approaches applied to advanced industrialized countries, proposing the need for a more suitable framework to interpret the South American reality. By exploring attitudes toward abortion in the region, this article opens new avenues for understanding moral values and their implications in a scenario of modernity and political polarization

Mapping Moral Controversies in the Digital Age: Big Data Insights into Global Culture Wars

Big Data analysis offers powerful tools for understanding how moral controversies and cultural wars emerge, evolve, and circulate across digital platforms. This paper investigates how recent methodological advances enable us to analyze public debates on contentious issues such as trans rights, abortion, or vaccines. Social media platforms play a crucial role in shaping these debates, acting as arenas where *moral (digital) entrepreneurs*—individuals or groups who drive moral discourses—mobilize their audiences and campaign aggressively against opposing views, often intensifying dynamics of polarization.

While our research focuses on Spanish-language content, the methodologies discussed can be applied to other linguistic contexts, emphasizing the rise of *culture wars* in multiple regions. We explore how different publics engage with moral debates on platforms like TikTok, YouTube, and Twitter, examining how these discussions vary by platform, age group, and cultural context.

We also reflect on the challenges and biases of using Big Data in this context, such as algorithmic filtering and language-specific complexities, and address the methodological difficulties in capturing the nuances of moral debates and polarization dynamics. Based on our study of moral controversies among Spanish-speaking digital communities, this paper sheds light on how digital tools can map discourses, identify key actors, and offer insights into the formation of moral communities and their influence on global moral debates

COZIC, EMELINE* (Aix-Marseille Université, France)

From Domestic Work to Entrepreneurship: Immigrant Women in Southern Italy within the Informal Economy in the Beauty Sector.

The assignment of immigrant women to a very limited number of sectors, particularly domestic work, reflects both a social and racial division within societies as well as a hierarchy of occupations and statuses.

I will present some findings from a qualitative study based on biographical interviews and both physical and online observations.

Women from former USSR countries, predominantly from Ukraine, have been arriving to work since the 2000s and have constituted the largest foreign nationality in Campania for many years. They primarily work in the domestic sector, particularly through work permits and visas specifically designated for domestic labor (Colucci, 2018).

This legal specificity, combined with their status as immigrant women, forces them to remain in and depend on this sector. Nevertheless, some respondents expressed their rejection of this assignment, perceiving it as degrading and lacking respectability (Skeggs, 1997).

This research aims to explore how, within a socio-economic context in Naples that is unfavorable to women, these individuals implement strategies to navigate away from these jobs, how they leverage their social and educational capitals (Bourdieu, 1986), and what skills are employed or acquired within a space where informal economy is developed and in an international economy characterized by lack of formal employment and neoliberalism.

I will highlight two main sectors, demonstrating how they are interconnected and linked to other income-generating activities, both economically and in terms of social recognition and prestige, particularly through social media platforms.

I will discuss Multi-Level Marketing (MLM), followed by the work of beauticians in various forms and related entrepreneurial activities. Through

these examples, I hope to illustrate how the women studied adapt to a precarious labor market that offers few or no opportunities, turning to entrepreneurship, leveraging parts of Naples' informal economy, and depending on new forms of self-employment that is associated with social networks.

Health Expertise in the Making within and Beyond 'the Clinic'

In sociological discourse, biomedical expertise is recognized as central to biopolitical dynamics in Western countries, shaping the commodification of health, self-surveillance, risk forecasting models, and the growing ties between scientific laboratories, clinical settings, and the marketplace. However, this perspective captures only one dimension of the shifting biomedical landscape.

Increasingly, societal segments are relying on knowledge and expertise that are refused by mainstream biomedicine. This calls for a reconsideration of health expertise and emerging ways of understanding the human body, in light of the growing public interest in alternative scientific and medical facts. This study, based on a three-year mixed-method investigation of various Italian communities mobilizing knowledge refused by biomedical institutions, provides a conceptual and methodological framework for understanding how health expertise is discursively and materially performed at the boundaries of biomedical science. Positioned at the intersection of social studies of science and medicine, our analysis explores the social and epistemic conditions under which this "refused" health expertise is enacted.

We argue that health expertise, when practiced outside the boundaries of biomedical sciences, to some extent reflects the expansion of biomedical gaze beyond, and at times in opposition to, mainstream biomedical professions and institutions. We demonstrate that this instance of health expertise, as it emerges in forms of knowing situated at the epistemic margins of biomedicine, can be understood as emblematic of current challenges to biomedical authority over human bodies, while simultaneously becoming increasingly embedded in the contemporary politics of life.

Our contribution offers a twofold approach: first, it provides a conceptual framework for analyzing these rejected forms of health knowledge; second, it offers methodological reflections on researching such expertise. By adopting an agnostic, non-normative, and reflexive stance, we enable a nuanced exploration of alternative health practices without judging their ethical-political validity or assessing their rationality based on traditional scientific standards.

Beyond Material Constraints: Exploring Farmers' Social and Economic Profiles to Discuss Sustainable Farming Intensification Challenges in West and North Africa

This study explores the socioeconomic diversity among smallholder farmers in West and North Africa, focusing on the micro social structural conditions that drive sustainable farming in Africa. Data is from multistage survey data collection (2022-2023) by an EU-funded Horizon 2020 research project, targeted to smallholder farmers in 11 agroecological zones from 5 countries - Burkina Faso, Egypt, Ghana, Niger, and Tunisia. The analysis applies Multiple Correspondence Analysis (MCA) to capture the multidimensional nature of socioeconomic status (SES), followed by cluster analysis to group farmers into distinct SES profiles. Three major profiles emerged: (1) large families engaged in subsistence farming and experiencing material deprivation; (2) smaller families with higher material comfort but low social capital; and (3) families with high social capital, access to technologies, and material well-being. The identified

SES profiles go beyond common analyses that examine socioeconomic determinants in isolation, offering a more holistic understanding of real-life contexts. By capturing the intersection of material and social dimensions, these profiles provide a comprehensive framework to understand how different groups of farmers are positioned within their local contexts, revealing how varying levels of resources and social capital may potentially influence their capacity to adapt to and benefit from sustainable farming innovations. The empirical analysis underpins the discussion on the limitations of promoting sustainable agricultural intensification without considering the real living conditions of farmers and their families. This research contributes to the broader discourse on social transformations in agricultural development in developing countries, emphasizing the need for context-sensitive policies that address differential profiles of farmers and their material and social needs in balancing productivity, environmental health, and social welfare.

CRESCENZO, NADIA* (University of Salerno, Italy)

Breaking Barriers: Non-Formal Education and Digital Youth Work for a Fair Future

In today's educational landscape, organizations significantly influence social inequities by both reinforcing existing disparities and working to address them. This contribution examines how non-formal education and digital youth work can challenge these inequities, particularly for marginalized groups, including individuals with disabilities, people of color, and those outside the cis-male gender binary.

Non-formal education, when integrated with digital technologies, can serve as a powerful mechanism for fostering social inclusion and addressing disparities in access to resources and opportunities. Digital tools enable youth workers to create inclusive learning environments that promote collaboration, communication, and resource accessibility for all young people. Initiatives such as online learning platforms, digital storytelling workshops, and virtual mentorship programs not only enhance critical skills and digital literacy but also reflect the principles of inclusion and social equity.

However, it is essential to recognize how organizational practices within educational settings can affect the experiences of those in disadvantaged categories. Exclusionary practices in schools, universities, and other educational organizations often lead to differentiated educational outcomes, impacting access to knowledge and resources. This contribution explores the nature of these exclusionary mechanisms and their effects on young people's social and educational experiences.

By analyzing the intersection of digital youth work and non-formal education, this contribution highlights the transformative potential of these approaches when rooted in a commitment to social equity. Digital youth work can serve as a space for cultivating relationships, solidarity, and democratic participation, thereby reinforcing civic values and a commitment to a more inclusive society.

This exploration seeks to identify the stakeholders impacted by exclusionary practices in educational organizations and assess the implications of these dynamics for understanding the production of inequity. By uncovering the barriers faced by marginalized youth and proposing solutions, we aim to contribute to the development of educational contexts that prioritize social inclusion and collective well-being.

TG12-994.1

CRESCENZO, NADIA* (University of Salerno, Italy)

Nurturing Inclusion: The Role of Digital Youth Work in Education and Social Love

In the contemporary educational scenario, the role of non-formal education and digital youth work is gaining increasing recognition for its ability to influence the educational and social processes of young people. This contribution explores how non-formal education, integrated with digital technologies, contributes not only to the educational and social development of young people, but also to the promotion of social love, understood as a commitment to collective well-being.

Digital technologies offer youth workers tools to create inclusive and stimulating learning environments, fostering collaboration, communication and access to resources that might otherwise remain inaccessible to many young people. From online learning platforms to digital storytelling workshops to coding clubs and virtual mentorship programmes, digital youth work enables the development of critical skills and digital literacy, promoting education based on principles of inclusion and social love.

The integration of digital technologies in youth work is also a powerful tool to promote social inclusion and combat inequalities. Through the use of digital platforms, it is possible to reach marginalised communities and provide them with access to educational resources and opportunities for

personal and collective growth. Digital youth work, when rooted in social love, does not merely transfer technical skills, but becomes a space to cultivate caring relationships, solidarity and democratic participation, strengthening civic values and commitment to a more equitable society. In this way, non-formal education becomes a catalyst for social transformation, creating environments in which young people feel valued and empowered, ready to contribute to a more just and inclusive world.

Through the analysis of these issues, this contribution highlights the transformative potential of digital youth work and non-formal education, highlighting how, through the integration of digital technologies and the adoption of innovative approaches, it is possible to create educational contexts that promote social inclusion, equity and collective wellbeing.

Gender Equality Plans in European University: A Tool to Challenge Inequality Towards Diversity and Inclusion

Gender Equality is based on the right of all human beings to "equal rights, freedoms and opportunities", a condition that today is still not achieved in the European Research Area and in the HED sector in general. Women are still under-represented in university governing bodies and at various levels of university decision-making. This lack of gender issues' visibility has also occurred in curricula and educational content, with a potential impact on students and the younger generation's social construction of gender. Although most Universities in Europe have already drafted a Gender Equality Plan - GEP, which constitutes an effective tool for initiating change and addresses various manifestations of gender inequality, it is crucial to move from a "tick the box" approach to the utilisation of the potential of such a dynamic document is must. This is the main aim of the European project Pro-Gendering, which, thanks to the collaboration of five European partner universities, intends to change organisational cultures by raising awareness and motivating the academic community, including students, to engage and take initiatives to promote gender equality. Using the qualitative (GEP comparative analysis and interviews) and quantitative (online survey) data collected in the project's research activities, this contribution discusses potential implementation for those actions that these official documents specifically address to students. Strengthening the capacity of universities to build inclusive educational communities also through the provision of know-how for implementing GEPs and educating university students on GE are key objectives for developing an increasingly inclusive future society.

Changing the Future through the Dystopian Imaginary of the Anthropocene

Topic: The relations between speculative dystopian literature and cultural processes in the Anthropocene. How these narratives interpret and influence the collective imagination, establishing links between past, present and possible futures? Hypothesis: dystopian literature stages contemporary anxieties and concerns, outlining possibilities for the future, but tracing canonical imaginaries. The idea that the imaginary has replaced reality and that the world we live in has become its own representation suggests a fundamental reversal in the way reality and the imaginary interact. In the paper, the imaginary is no longer secondary or merely reflexive, but a force that shapes and structures reality itself.

Discussion: from this perspective, objective and social reality is largely sustained by the imaginary. When narratives are socially acknowledged, they play a concrete role, forming a mental and cultural framework that directly influences policies, attitudes and behaviour.

In the context of the Anthropocene, the role of the imaginary becomes even more crucial. The way we visualize and understand ecological, technological and social crises is directly dependent on the narratives and representations that circulate. The imaginary about environmental collapse or a future of technological hyperconnectivity influences the social response to crises. The reality of the Anthropocene is shaped as much by technological and political interventions as by the representations and perceptions that accompany them.

If Imaginary could be reconfigured to produce a new reality, imagining new futures and challenging hegemonic narratives, would this be a critical turn, able to break crisis cycles and enable social and ecological transformations?

Conclusions: speculative literature can imagine new forms of social and ecological organization, and words can act as 'medicines' to heal the world, in a vision that suggests a more active role of narrative in shaping possible futures.

Coopération Internationale Au Développement Et Renforcement Des Capacités Des Communautés. Le Cas Du Parc National D'al Hoceima, Rif, Maroc

Cet exposé soulève quelques questions qui émergent de mon travail de doctorat dans lequel j'étudie l'impact des projets de coopération au développement dans le Parc National d'Al Hoceima (PNAH) situé dans la région du Rif au Maroc.

Dans l'exposition, nous aborderons la relation complexe entre les projets internationaux de coopération au développement et les structures sociales et communautaires présentes sur le territoire.

Nous visons également à décrire et à comprendre le rôle que les entités locales (principalement des coopératives et des associations) et les ONG (locales et internationales) jouent dans les processus d'élaboration, de légitimation et de mise en œuvre des projets de développement menés dans le parc.

Pour ce faire, nous avons documenté l'impact et les transformations vécues par la population du PNH et ses institutions, ainsi que leur degré d'implication, de prise de décision, d'influence, de participation, de compréhension, d'appropriation et de représentation, en prenant deux projets comme référence. Le premier, sur la récupération de la pêche artisanale, et le second sur l'établissement d'une maison de tourisme rural. De cette manière, nous avons pu révéler certaines des hiérarchies de pouvoir possibles qui sous-tendent ces processus, en corrélation évidente avec les relations ostensiblement problématiques entre le Nord et le Sud.

Los No-Públicos y El Patrimonio Memorial: Entre Ruptura y Continuidad. Barrio De La Roquette, París

Estudios sobre memorialización fallida en espacios urbanos. El caso del barrio de la Roquette.

Desde 1945 la patrimonialización de la memoria en el espacio público no ha dejado de aumentar. Sin embargo, dicha memorialización no está exenta de problemáticas. Esta comunicación analiza el complejo equilibrio entre los múltiples usos de los espacios públicos, y la creciente demanda de preservación del patrimonio memorial, tomando como caso el barrio de la Roquette de París. La metodología utilizada para este trabajo ha sido la etnografía, acercándonos al objeto de estudio a través de la observación y análisis de los usos que los habitantes, transeúntes, públicos, instituciones y sociedad civil hacen de dicha musealización. El artículo examina como la memorialización del patrimonio difícil lidia con distintos imperativos tales como movilidad, sostenibilidad, seguridad, turismo, viabilidad, y de cómo la dificultad de llegar a consensos sobre los modos, objetos y contenidos de esta ha conllevado una patrimonialización débil, aséptica, neutra y descontextualizada que contenta e interroga a unos pocos y deja indiferente a una mayoría, y donde el uso de herramientas NTIC es nimio.

The Banality of Gender Violence: The Everyday Lives of Women in Northern Nigeria

This presentation draws on recent empirical research and analysis of the banal gender violence that pervaded their everyday lives into the ways young women in rural contexts of Adamawa State in Northern Nigeria. Using participatory visual methods over an extended series of workshops, a space was created for them to voice their concerns about the difficulties they faced in their daily lives and to develop their own agendas for change. In these workshops, we engaged with two groups of young women, one Christian and one Muslim (14 in each context). Twelve young women from each context also participated in life history interviews. Their accounts illuminated the multiple forms of gender violence to which they were subject, in the home, at work and in education. The emphasis in this presentation is on the banality of this

gender violence and its centrality within the family in both contexts, Christian and Muslim. We highlight in particular the reproduction of a patriarchal gender regime sustained by pious masculinities that depended on the systematic subordination of women in every aspect of their lives. Importantly, while some young women questioned this gender regime, our analysis shows how women themselves were integral to the reproduction of gender violence in their different communities.

CROTEAU, DAVID* (Université du Québec à Montréal, Canada)

Représentations Sociales Et Pratiques Enseignantes Relatives à l'Éducation Inclusive En Classe Ordinaire Au Primaire : Regard Sur Les Élèves Issus De l'Immigration.

Le paysage des classes ordinaires dans de nombreux systèmes scolaires à travers le monde évolue en raison de la diversification pluriethnique associée, notamment, aux crises migratoires et de réfugiés ainsi qu'à la hausse des inégalités. Au Québec, le personnel enseignant est appelé à intégrer les principes de l'éducation inclusive pour soutenir les élèves issus de l'immigration (EI) de première et deuxième génération, dont les parcours scolaires peuvent être marqués par divers défis (apprentissage, socialisation, adaptation).

L'éducation inclusive, en tant qu'approche pédagogique universelle, est de plus en plus reconnue pour ses visées d'équité et d'inclusion. Celles-ci permettent de mener une lutte aux discriminations et aux inégalités à la source du sentiment d'injustice rapporté par des EI. Cependant, il reste des questions quant aux méthodes concrètes permettant de créer des environnements et des expériences scolaires favorables pour ces élèves vulnérables. De plus, le manque de préparation et de formation du personnel enseignant en milieu pluriethnique contribue à développer un sentiment de surcharge chez ceux-ci ainsi qu'à accroître la pensée déficitaire et les inégalités sociales vécues par les EI.

Notre projet a pour objectif d'examiner une dimension encore peu explorée dans la recherche actuelle, à savoir l'étude des représentations sociales et des pratiques du personnel enseignant en matière d'inclusion des EI, compte tenu de leur influence significative sur la mise en œuvre de l'éducation inclusive au sein des classes ordinaires. Notre présentation vise à partager l'état d'avancement d'une recherche qualitative et exploratoire qui prévoit cibler des écoles primaires montréalaises caractérisées par la pluriethnicité et l'engagement du personnel en matière d'éducation inclusive. Des entretiens semi-dirigés avec des enseignant·es et des observations en classe seront réalisés à terme afin d'explorer la manière dont l'éducation inclusive est mise en œuvre pour diminuer les inégalités sociales et soutenir l'expérience scolaire des EI dans les classes ordinaires.

Maestras Errantes. Las Productoras Agroecológicas Del Cordón Hortícola De Mar Del Plata, Argentina, Como Protagonistas De La Extensión Universitaria

La errancia es una categoría pedagógica valiosa por su fuerza contrahegemónica. Conlleva por lo menos tres sentidos: educadores/as que transitan el territorio más inhóspito, como lo hace la extensión universitaria crítica; la equivocación como otra forma de educar; y por último, el que más le interesa a este estudio, la afectividad y la corporalidad como aspectos centrales para la pedagogía, porque posibilitan la experiencia. Este trabajo parte de un proceso de investigación enmarcado en la sociología de la educación imbricada a la sociología alimentaria, para explorar las experiencias pedagógicas en torno a la actividad de extensión *Cocinas Soberanas: entre sabores y saberes por la Agroecología*, de la Facultad de Humanidades de la Universidad Nacional de Mar del Plata, Argentina, en relación a la categoría de maestros/as errantes inspirada en el legado freiriano. Comprende una metodología cualitativa territorial, con enfoque interpretativo y narrativo. Entre los resultados se puede mencionar la potencia de las productoras agroecológicas del cordón hortícola de Mar del Plata (uno de los más relevantes del país) como extensionista, ya que establecen un vínculo pedagógico entre la universidad y los sectores rurales. Esto articula proyectos político-académicos capaces de disputar los modos hegemónicos de producir y consumir alimentos, así como también de enseñar y aprender. Estas maestras errantes, despiertan historias en torno a la agroecología como una alternativa, entre muchas

posibles. La contingencia del cuerpo y los ciclos ambientales, el valor del gesto improvisado y las emociones, se tornan un verdadero acontecimiento pedagógico que revaloriza las experiencias pasadas, para enriquecer las presentes. El cuerpo inteligible, invadido de pensamientos y emotividades, renueva las preguntas pedagógicas, y aquí está la errancia: en hacer una pedagogía del acontecimiento y la territorialidad que posibilita la verdadera transformación social.

Territorial Healthcare and Pandemic Preparedness: Insights from Bologna's "Casa Della Comunità"

The COVID-19 pandemic exposed significant weaknesses in global health governance and healthcare systems, exacerbating inequalities in access to essential care, especially for marginalized communities. This contribution examines the Italian experience, focusing on the Emilia-Romagna region, which has long been recognized for its advanced primary care model and its efforts to integrate health and social care. One of the key innovations in this region is the establishment of Casa della Comunità (Community Health Centers, CdC), which should serve as hubs for both medical services and community-based health initiatives. This model is explored as a potential solution to strengthen pandemics (or syndemics) preparedness and improve response mechanisms in future health crises.

The case study is set in Navile, Bologna's most populous neighbourhood, where a CdC recently launched an Urgent Assistance Center (CAU). This facility was designed to handle minor emergencies locally, thus alleviating the burden on emergency departments in larger hospitals. By examining this specific context, the study explores how localized health services can contribute to a more resilient health system capable of responding more efficiently to both everyday health needs and future pandemics. Using a mixed-method approach—including data analysis, semi-structured interviews with patients and healthcare workers, and participant observation—the research delves into the interactions between health services, the local community, and territorial organizations, paying special attention to how these actors participate in decision-making and service co-design.

In the wake of COVID-19, Italy's National Recovery and Resilience Plan (PNRR) earmarked €18.5 billion for health reforms. These initiatives aim to modernize hospital infrastructure, digitize the National Health Service, and redesign territorial healthcare networks to improve access and equity. By analyzing the CdC in Bologna, this research assesses the impact of these reforms on proximity care, community participation, and the creation of new, inclusive spaces for health beyond traditional healthcare institutions.

CRUZ, SOFIA A.* (Faculdade de Economia da Universidade do Porto, Instituto de Sociologia da Universidade do Porto, Portugal)

Digital Platforms and Artificial Intelligence: Between Professionals and Clients

Digital work platforms are one of the most significant changes that have taken place in the last ten years in the labour market (ILO, 2018; Umar et al., 2021) and in the consumer sphere (Cruz and Gameiro, 2023). The use of technological devices breaks with the traditional model of a company, in the sense that everything takes place in a virtual environment. In other words, there are no face-to-face relationships between worker and client, and work is coordinated, regulated and monitored by algorithms (Bucher et al., 2021; Del Bono, 2019; Möhlmann and Zalmanson, 2017), as is consumption itself (Cruz and Gameiro, 2023). The processes of technological innovation have in Artificial Intelligence (AI) and algorithms two of the most structuring and active dimensions of change, and digital platforms are a paradigmatic example of one of the groups of tasks where AI has been applied, namely the matching of supply and demand for services (OECD, 2019). Algorithms help to ensure that search systems serve as key resources for managing digital platforms and mediating the transaction of services (Jarrahi and Sutherland, 2019), particularly due to the large-scale data they involve. There are also benefits related to increasing the efficiency of companies, through a change in the analysis of information that influences the decision-making of economic agents (Kellogg et al., 2020), and consequently, labour and consumer relations themselves, on which they have positive and negative impacts (Cruz and Gameiro, 2023). This algorithmic management is based on computer-based technology that combines the Internet of Things (IoT), Cloud Computing and AI. Based on a case study of a platformised business organisation, this communication aims to analyse the effects of AI and IoT on professional relationships within the organisation and with clients and partner organisations.

Traditional Knowledge in the Mixteca Alta of Oaxaca: Proposals to Promote Its Protection and Preservation from an Indigenous DATA Sovereignty Approach

Currently, one of the topics that has become relevant in studies on Indigenous Populations are those that address their right to control, use, appropriate and decision-making over their knowledge systems and practices that they possess, as well as the territories in which they are located and interact. Therefore, this proposal focus on the study of traditional knowledge resulting from the interaction between society and the territory of nine Indigenous Mixtec municipalities that integrate the territory called by UNESCO as Mixteca Alta Geopark (MAG) in the Mexican state of Oaxaca. Based on a qualitative approach, the most important traditional knowledge of the nine Mixtec municipalities of the MAG was identified through a census, including the data related to it. Subsequently, the identified knowledge was validated with the communities through various methodological strategies such as participatory workshops with the aim of further explaining how such knowledge is generated, used, adopted, disseminated and transformed, and thus identifying who has control over it. This helped to understand how privacy and security are fragile. In addition, the roles played by the various community actors and actresses in its protection and dissemination is explained. Finally, the challenges faced by the communities of the MAG territory were documented for them to be taken into account eventually to protect and preserve their traditional knowledge and data and serve as input to take informed decisions about their use and appropriation, as well as strengthening their capacity to protect and preserve them.

Commodifying Passage: Ethnographic Insights into Migration, Markets, and Digital Mediation at the Darién Gap and Mexico-Guatemala Border

This paper examines transit migration through the Darién Gap and the Mexico-Guatemala border, focusing on the commodification of migration, the transformative role of digital platforms, and the socio-economic impacts on local economies. Based on ethnographic fieldwork and in-depth interviews conducted from 2021 to 2023, we explore how migration has evolved into a commodified journey where services and safety are bought and sold, often exploiting migrants' vulnerabilities. We analyze how digital platforms have become essential tools for navigation and community building among migrants, yet also introduce new risks and inequalities. Our findings highlight the dual nature of local economic adaptations, which both capitalize on and are reshaped by the migratory flows, leading to significant economic and social transformations. The paper argues for a reevaluation of migration policies that integrates these elements and supports a migration governance framework that prioritizes human dignity and rights. Through exposing these dynamic and interlinked phenomena, we aim to contribute to a better understanding of migration that goes beyond traditional paradigms of border security and control, advocating for policies that are just, equitable, and respectful of human experiences and challenges.

Acceso a La Justicia y Respeto a Los Derechos Humanos: El Caso De Las Personas Víctimas De La Trata De Seres Humanos En Costa Rica, España y Marruecos

Desde una perspectiva ampliada y crítica de derechos humanos se presenta una comparación entre los discursos y las prácticas del acceso a la justicia y el respeto de los derechos humanos que tienen las personas víctimas de trata de seres humanos en tres países: Costa Rica, España y Marruecos. A partir de una discusión de la pertinencia de comparar estos tres países, se pasa a caracterizar las dinámicas que distinguen y diferencian los procesos que implementan sus Estados para garantizar los derechos reconocidos a las personas víctimas del delito de trata de seres humanos o trata de personas, así como su protección.

En base a un diseño metodológico cualitativo se sistematizan los resultados de las entrevistas semiestructuradas y los grupos de discusión realizados en el proyecto "Trata de personas, género y migraciones en Costa Rica, Marruecos y Andalucía: por una defensa multi-garantista y multi-espacial de derechos humanos (2016SEC012)", desarrollado por la Universidad Pablo de Olavide (UPO) entre 2017-2019 con la financiación de la Agencia Andaluza de Cooperación Internacional para el Desarrollo (AACID). El análisis señala las diferencias a nivel normativo en la implementación de los sistemas normativos y penales, así como las limitaciones de las disposiciones y las prácticas para la compensación y la reparación, pese a los avances y mejoras de los últimos años.

Desigualdades Sociales En El Empleo Del Hogar y Cuidado: Análisis Comparativo Entre Bolivia, España y México

En este trabajo se presentan los resultados de una exploración comparativa del sector del empleo de hogar y cuidados en tres países: Bolivia, España y México. A partir de una discusión sobre la pertinencia comparativa de estos tres casos, se ofrece una comparación entre los perfiles sociodemográficos de las trabajadoras que se emplean en este sector laboral, las condiciones laborales y los sistemas de seguridad social, así como las principales vulneraciones de derechos y discriminaciones. Como fuentes se utilizan datos estadísticos nacionales y entrevistas semiestructuradas, complementada con la correspondiente revisión bibliográfica. Los resultados posibilitan una aproximación a las dimensiones que tiene la desigualdad social y las asimetrías que hay entre estos tres países en este sector laboral, poco valorado socialmente en un contexto de sociedades cada vez más envejecidas y con avances en las regulaciones laborales implementadas en los últimos años.

The Accelerating Turn Away from Traditional Religious Denominations in the Post-Socialist Countries of Eastern and Central Europe in the First Decades of the 2000s and Its Possible Causes

In recent years, the social role of religion has again come to the fore in the Euro-Atlantic region. The social and political events of recent times are very strongly linked to the religious dimension, just think of the war in Ukraine and what José Casanova (Casanova 2022) stated about it. After the Second World War, traditional religiosity gradually began to decline in most of Western Europe. In the case of the former socialist country, this was a much more complex process, considering that the socialist regimes were officially anti-religious, so there were essentially no research and census data on the level of religiosity. Religiosity has reached a role that goes beyond itself, as it has become a symbol and tool of resistance to the system. Thus, for some time after the fall of the systems, it was difficult to separate how much the religious data appearing in the first measurements covered real religiosity and how much it was mixed with political meaning. It is no coincidence that after 1990 we talked about a religious revival for a while in the former Soviet occupation zone. In recent decades, however, a gradual decline has become visible. What can the 2021 census tell us about the region's religious status compared to other regions of Europe, 35 years after the regime changes. During the presentation, I will present the transformation that took place in the decade of 2010 with the help of the results of the European censuses and the EVS (in the case of countries where religious affiliation is no longer measured during the census). At the end of the presentation, I would like to explain the reasons for the change with the help of our own domestic survey research data (2020 and 2021).

CUADRA, JEFFERSON* (Caraga State University Cabadbaran Campus, Philippines)

Exploring Oral Health Needs: A Qualitative Study of Older Adults in the Philippines

In the Philippines, older adults continue to experience high rates of oral health problems, even with ongoing government and professional efforts. This study seeks to provide additional evidence in support of Senate Resolution 1021, which proposes amending the Universal Health Care Law to include dental health service and the provision of dentures in the PhilHealth benefit packages. And it also aims to explore oral health experiences and priorities with high oral health inequality.

Participants were selected using purposive sample from the different regions of the Philippines. Qualitative methodology in the form of informal group discussion was used. The study population comprised seven groups of 5-6 respondents aged 60 years and over, selected according to the quota criteria of sex, social class and oral health status. Thematic analysis of the results highlights four themes: (i) older adults expressed concerns about the cosmetic appearance of their teeth, (ii) effective communication with dental professionals, (iii) consistent care, and a (iv) positive treatment experience. These concerns were shaped by past dental experiences, which were negative, and perceived barriers to care, including accessibility, cost, physical limitations, and oral health services in institutional settings. Finally, the study featuring the importance of tailoring oral health messages to specific audiences to ensure effective dissemination.

There are shortfalls in the provision of oral healthcare to older adults in the Philippines. The participants felt that current PhilHealth benefit packages of dental services is not meeting their needs.

Conditions for Inclusion in Civil Society Organised Language Education Programmes for Adult Forced Migrants in Macedonia

This paper examines the conditions for and implementation of civil society organised language education programmes for forced migrants based on the example of Skopje. It discusses adult language education programmes which have been realised by the Macedonian Red Cross starting from 2022, following the war in Ukraine.

Research on civil society and its relation with forced migrants' agency and access to rights in Europe is mostly conducted in popular "destination countries", including few so-called "transit countries" such as Turkey and Greece. Smaller transit countries like Macedonia have so far not been in the centre of attention, with exceptions such as Milan (2019).

This paper elaborates on how educational practices implemented by the Macedonian Red Cross relate to discourses on migration and race. It aims to clarify, which forms of intersectional discrimination can be identified in the context of civil society organised language education for refugees i.e. along which positional lines inclusion/exclusion is negotiated. With realities of protracted transit stays and non-linear migration patterns in mind, educational practices on the periphery of Europe are relevant beyond the local or national context.

The study is of an explorative ethnographic research design. The data set consists of semi-guided interviews with language teachers, learners, volunteers and programme managers, as well as group discussions with language class participants, classroom observation protocols and extensive field notes taken during the duration of the field stay, containing accounts of diverse informal and semi-formal conversations with mostly members of the Ukrainian Community as well as civil society activists in the field.

Preliminary analysis suggests that implementation of programmes is dependent on engagement and pressure from the Ukrainian community. Further, access to the programmes seems to be structured by specific interlocking cultural and social forms of capital (Anthias, 2007; Bourdieu, 1986; Erel, 2010), which this paper aims to explore.

Eating with Others: Food, Faith and Spaces of Multicultural Conviviality

In this presentation I draw on practice-led research on religious spaces and celebrations as key sites for personal and collective practices of multicultural (and multi-faith) food exchange, which foster positive conviviality. This research developed through a participatory and creative project, *Spiritual Flavours* (www.spiritualflavours.com) – including a photographic series, a 30-minute film and a recipe/photo book – and uniquely engages seven faith communities in one neighbourhood in West London. The project contributes to emerging scholarship on how these communities create and adapt spaces through creative material practices – in this case, involving food. Global migration and the increase of highly diverse urban settings has fuelled social research on multicultural relations and cohabitation, with much literature questioning the power relations of ethnic food consumption. While scholars have explored the significance of food cultures and agency in diverse urban settings, these have mainly focused on the high street, within commercial settings, such as restaurants and markets. Little attention has been given to religious food practices within urban settings and within faith communities for enabling interpersonal (non-commercial) multicultural relationships of exchange and reciprocity. In this presentation I argue that these have a paramount role for developing embodied and generally positive multicultural and multi-faith relationships. Further, because of these material practices, the religious identity of many worshipers in these communities is often experienced and celebrated as intrinsically multicultural.

Public History and Digital Platforms: A Case Study between Brazil and France

* This study was financed by the Sao Paulo Research Foundation (FAPESP), Brasil. Process Number 2021/01854-0

The rise of negationism is a transnational phenomenon. Specifically, historical negationism has promoted a "Public History" market as a form of intellectual opposition to this phenomenon. Thus, this paper aims to analyze aspects of this intellectual "market of opinions" which is structured in opposition to historical negationism in two different social contexts. The first is the Brazilian case, where "public history" has promoted new dynamics of interaction between "academics" and "digital influencers". In other words, "intellectuals" in Brazil have found new spaces on digital platforms to disseminate their production, promoting new challenges on public debate. The second is the French case, where "public history" has been institutionalized through master's courses oriented to digital content.

What this research has identified is the existence of a link between the media market and the circulation of different modes of intellectual engagement. In Brazil, in certain respects, this market is constructed in opposition to the university. It means that the production of "public history" promotes a paradox - at the same time it creates a network of opposition against historical negationism, this opposition is subordinated to the interests of the cultural industry, specifically those related to media market strategies. In the French case, this link with the media market is also identified, but there are forms of institutional regulation of these practices through cultural institutions, which is not identified in Brazil. Finally, it is a question of problematizing a market of production and circulation of "public history" in times of historical negationism and digital platforms which is still to be debated in the field of sociology.

Addressing Disparities in Knowledge Creation: Opportunities and Pitfalls of Participatory Research Methodologies

Despite remarkable developments to actualise children's rights, children continue to be an under-researched population across several disciplines in academic research; thus, their views are often not solicited. To address this breach of the United Nations Convention on the Rights of the Child (UNCRC), a growing wave of scholars from a diversity of disciplines, including sociology of childhood, have developed and promoted participatory methodologies to ensure the effective participation of children in research, from respondents to co-researchers to lead researchers. This presentation will discuss current participatory research discourses and methods that seek to address the disparity in knowledge creation by facilitating children's involvement and addressing issues of power in research. Within this landscape, we will explore the intersection between the conception of children as competent social actors, participatory research methodologies, and decolonisation movements relating to knowledge generation with children.

Overview – Whose Knowledge Counts? Reflecting on Child-Led and Co-Produced Research with Children and Young People

Historically, many groups of people have been excluded from knowledge production, including children and young people. In the last decades (years?), child-led and co-produced research with children and young people has emerged as an approach supported by decolonial perspectives to address this gap. It has challenged conventional research and contested what knowledge counts. This position argues that children are entitled to contribute to knowledge creation, and not only adult researchers. This presentation will offer an overview of this process of questioning knowledge production, including: a) a discussion on the children and young people's human rights to participate in all matters relevant to them, including research; b) the recognition of children and young people's experience and expertise as a fundamental resource for research; c) the importance of focusing on appropriate methodologies instead of limiting the discussion to children and young people's abilities; d) the influence of decolonisation of knowledge movements and the opportunities and pitfalls offered to address epistemic injustice. We seek to problematise research epistemologies, discuss counter-narratives to the traditional understanding of research about and with children and young people, and open the research space to them {children} as generators of knowledge.

A Trip Towards Wellness? Perspectives of Facilitators and Users of Unofficial Psychedelic-Assisted Therapy in Slovenia

The recent resurgence of interest in psychedelic-assisted therapy coincides with a massive mental health crisis, sensationalist media reporting, and shifts in public perceptions. Classic psychedelics (like LSD, psilocybin, DMT, and mescaline) are classified as the most dangerous illicit substances without medical application. Yet, they are often described as posing little risk to physical health, low potential for development of chemical addiction, and huge (if insufficiently researched) potential to treat a variety of mental health disorders (depression, eating disorders, PTSD, etc.). Against the backdrop of such narratives, psychedelics are no longer confined to the psychonautic niche and are attracting new groups of users. In the context of restrictive legislation that precludes clinical trials with psychedelics, low accessibility of mental health support services, and an unregulated psychotherapy

market in Slovenia, a variety of unofficial psychedelic therapeutic and shamanic practices are taking place. While providing positive experiences for some, these clandestine practices also present various risks and ethical considerations. Such psychedelic practices remain undetected in the official statistics and thus merit an investigation that takes into account the particular experience, risks and motivations for engagement in, as well as general societal attitudes towards shamanic and therapeutic use of psychedelics and their regulation. The paper will present the results of a broad public survey and semi-structured interviews with facilitators and users of various forms of unofficial psychedelic-assisted therapies and shamanic rituals in Slovenia. While the empirical research presented in this paper focuses on the local context, the research conducted does not neglect the fact that the changing trends in psychedelic use are similar across the Global North, nor does it ignore the problematic implications for the communities of the Global South stemming from the Global North's fascination with traditional shamanic practices and substances.

Enacting Transnational Family Lives in Temporary Labour Migration Flows

In migration regimes regulating temporary labour migration, there exists a lack of attention to transnational family separation and ties across temporal and spatial borders and to the reconciliation of work and family life. In such a transnational division of labour, there is an increasing contradiction, especially for women, between the expanded power of market sources and the capacities for socially reproductive labour in the context of spatial displacement. Furthermore, the increasing complexity of temporally and spatially bounded migration is illustrated by the lived experiences of migrants and their families. Using examples of temporary/circular migration and the posting of workers from the countries of the former Yugoslavia to the EU, the aim of the paper is to contribute to a more nuanced understanding of transnational families and to show how transnational family arrangements are embedded in institutional contexts of temporary and precarious forms of migration. Selected features of labour migration, such as employer-bound contracts, recruitment opportunities, and the temporal dimension of temporary migration programmes, and their effects on transnational family life are examined using the example of the former Yugoslav countries. How do family boundaries change in such families and what are the most common practices in enacting 'transnational family lives' will be among the main questions of the paper. We analyse the exclusion and inclusion of family issues in policy discourses on migration, which often overlook the micropolitics of gender and generation, and suggest ways to better integrate a transnational family perspective into national and international policies on temporary migration in EU and regional contexts.

Memories of Migrants in the Pandemic: Narratives of Resistance in Confronting Racism

People move around the world most of the time in search of a better life, many flee from chaotic scenarios caused by natural disasters, political and economic crises. Added to these events, globalization determines the living conditions of many individuals, leading to an increase in displacement, such as in immigrants' case. However, they end up silenced, invisible, subject to racial discrimination, xenophobia, without social, economic and educational access, aggravated by the pandemic. The objective is to bring up narratives understood here as recovered and relived memories of these people, as a way to empower the community that they are inserted, in order to envision themselves as agents of their own history, responsible for their destiny and for the social processes they experience. Based on Martin-Baró (1979), through the narratives, we will seek ways to heal the social and emotional wounds experienced, the "de-ideologization" of experiences. This research involves the creation of the unprecedented-viable (FREIRE, 1970/1987) generating solid foundations to go beyond the limits of real situations, whose strength lies in viable solutions, but not yet conceived. The methodological proposal is carried out through Critical Collaboration Research (Magalhães, 2011) based on the intentional transformation of contexts with the involvement of all participants.

Mapping the Social Organisation of Neglect in the Case of Fibromyalgia: Using Smith's Sociology for People to Inform a Systems-Focused Literature Review

Fibromyalgia is a syndrome characterised by persistent unexplained pain and fatigue. People with fibromyalgia report receiving little support to manage symptoms, difficult interactions with healthcare practitioners, and stigma associated with this contested condition. In this article, we employ Dorothy E Smith's "Sociology for People" to undertake a literature review from the standpoint of people with fibromyalgia, moving beyond individual subjectivities to map how problems are socially organised. This is a novel application of a Sociology for People which, although previously used to structure research projects, has not previously been reported as a framework for literature review. Our findings highlight how, within a biomedically-orientated healthcare system, practitioners' activities are organised to withdraw support from people with fibromyalgia and characterise problems as "psychological". Those looking to make service improvements for this patient group need to specifically challenge biomedical systems and ideology, in order to promote alternative models of care. We highlight a Sociology for People as a powerful lens for literature review, that links frontline experiences with dominant power relations, and provides an alternative to traditional qualitative evidence syntheses. Additionally, the theoretically-grounded and creative use of published literatures is an ethical approach adding value to extant research.

Crossing the Divide? the Union Role in Re-Regulating Self-Employed Gig Work in an English Warehouse

This paper talks to the RC44 call for papers with respect to *What Labour Movement for the 21st Century?* Specifically on the question of union engagement with self-employed workers and the connection with struggles of workplace-based workers. Drawing from a wider study of multi-actor responses to changing labour market dynamics and labour shortages in the UK the paper examines union efforts to re-regulate delivery work undertaken by self-employed logistics sector workers. The paper traces the union's experience of moving into terrain usually considered hostile for union

organising (Mrozowski and Pilch, 2021; Gautié et al., 2021). In this example, set in the context of the UK's voluntary employment relations system, a fragile form of union-management agreement has emerged. The paper considers the conditions that led to the agreement, how self-employed workers have experienced this engagement and the motives and outcomes for the union in engaging in this re-regulation of gig work, both in terms of its impact on the self-employed and waged warehouse workers. Qualitative data from in-depth workplace interviews are complemented by data from an original survey of UK warehousing employers and stakeholder interviews. The paper develops an argument about union role in the stabilising warehousing work and examines the tensions this creates for union organisation in the 21st Century.

CUTTER, JO* (University of Leeds, Afghanistan)

Just Transition in Spain - 'Best in Class'?

This paper talks to the RC10 call for papers on the theme of *Climate Justice and Trade Unions in Global Perspective*. It focuses on the case of Spain drawing from a wider research project examining the role of labour in just transition policy making globally. Spain is a country that has strongly embedded the concept of just transition within wider climate policy and could be viewed as a 'best-in-class' example of efforts to address justice issues within climate mitigation if the ILO's Just Transition guidelines (2015) are used as a benchmark. Set amongst contradictory assessments over the potential impacts of climate mitigation strategies on employment in Southern Europe, the role of labour and other social actors becomes of interest in how just transition policy and practice are formed. This paper considers how unions and other key stakeholders have engaged in multi-level dialogues over climate and just transition policy and the resultant form that 'transición justa' takes in Spain. It traces how Spanish unions have framed the challenges of climate change and decarbonisation and worked to build coalitions with other actors, notably the state. The paper considers the inherent contradictions and tensions within state-led and labour perspectives on the nature-employment nexus and the implications for wider climate justice within the green transition in Southern Europe.

CUZZOCREA, VALENTINA* (University of Cagliari, Italy)

'Times' of Transitions Rather Than 'Timing' Transitions? Revisiting 'Doing Nothing' and 'time Suspension' for Young People in Italy

Much has been written to address the increasing complexity of youth temporalities, especially through a focus on when adulthood is reached, an approach which informs the tradition of youth studies called 'youth transitions'. This presentation discusses some of the shortcomings of this approach that emerged during the global pandemic. Specifically, it merges literature on youth and on time to address the node of 'doing nothing' as a specific form of time suspension which is generationally connoted.

The pandemic has predominantly been seen as a 'suspension', with implications in particular on two different temporal dimensions: on the one hand, young people have experienced profound changes in their everyday lives due to lockdowns restrictions; and, on the other hand, at the biographical level, a search for alternative lifestyles has emerged, impacting on mid-term perspectives. These changes urge us to reconsider various phenomena of time suspension associated to youth, such as moratorium and waithood, paying attention to the value that young people attribute them.

The presentation reflects on a case study of young people in Italy, and how a disregard for the temporalities that are typically of value to youth appears to have taken place in the governance of the pandemic, based on documentary sources and qualitative material analysed for the project IANG. By reflecting on the changes on the ways of looking at young people during the pandemic, and zooming in on some rituals that were reworked due to lockdown restrictions such as the final school exam, I conclude that we should shift attention from 'timing transitions', to 'times' in transition, and look more attentively at the meanings attributed to various forms of time suspension and possibly 'doing nothing' that make up 'youth-hood' through specific youth temporalities.

CYPRYNIAK, EMIL* (Warsaw University, Poland)

Torn Apart. Transformations in the Emotional Culture of Sadness Among Young Men.

This paper aims to examine the transformations in the emotional culture of sadness among young men. The research involved eight in-depth individual interviews conducted with students from social sciences and humanities programs at universities in Warsaw. Using concepts from the cultural perspective in the sociology of emotions, the study identifies and analyzes contradictions within male emotional culture, including beliefs about emotions and norms regulating their expression and experience. Additionally, the language used by the participants to describe emotional experiences is analyzed. The study reveals that concepts from therapeutic discourse dominate the rhetoric, ways of talking about emotions, and thinking about their social regulation, while the cultural model of "classical" masculinity influences emotional practices. This confirms findings from previous research suggesting that the emotional culture of young men is "disordered." This state is caused by the blending of these two distinct cultural frameworks shaping attitudes towards emotions. The research serves as a starting point for further analysis of changes in male emotional culture in Poland.

D'ALESSANDRO, SIMONE* (G. D'Annunzio University of Chieti-Pescara, Italy)

From the "World at Home" to the "Disabling World". the New Dominant Logics Hidden behind Infrastructure.

Surveillance capitalism (Zuboff, 2019) governed by online platforms allows the emergence of a "world at home" that offers experiences and products directly to people's homes. The fast and pervasive availability of every good supports the need for comfort. The logic of the "comfort zone" programmed by the platforms implements a progressive process of "disablement" in terms of a) decrease in the human capacity to make choices without being supported by the platform; b) decrease in the human capacity to elaborate subjective creative contents without using digital tools. This specific infrastructural connectivity determines "the welding between the infrastructures of things" and the "infrastructures of experience" (Borghi, 2021, 2) but hides a progressive process of cognitive disabling of "unpredictable human decisions" (D'Alessandro, 2023). From this point of view, the concept 'infrastructure' must be interpreted not only as material power to connect and consume quickly, but above all as "cognitive power to disable" alternative choices to the logic of platforms. Through the concept of infrastructure, we can observe what is presupposed by the new spirit of capitalism: an addiction that depowers human reflexivity and transforms the social actor into a socio-technical actant programmed to act and consume in an automatic and pre-reflexive manner. This evident reversal between the active agency of the platform governed by A.I. and the disabled agency of the human actant transforms the imaginary of society and goes beyond Boltanski and Chiapello's (2014) theses. We will explicate the characteristics of 'disabling' by examining: a) Enshittification, a process through which a platform, initially useful and of quality, becomes less and less useful and frustrating for users (Doctorow, 2022); b) The process of content generation by a chat bot on the basis of a prompt that, in the long run, triggers unusual forms of content pathology (Berry and Stockman, 2023; Floridi, 2024).

SONZOGNI, BARBARA (Sapienza University of Rome, Italy)

Inclusion and Social Justice: The Young University Students' Point of View

The theme of inclusion and social justice is, by definition, at the heart of the United Nations 2030 Agenda for achieving the Sustainable Development Goals. In the document, it is possible to note how, although the principles of social justice and inclusion can be taken as transversal to all the aforementioned Goals, they are much more marked with reference to SDG 3 which aims to allow all human beings to achieve health and well-being, to SDG 4 which aims to build quality education, to SDG 5 which promotes gender equality, to SDG 8 which promotes decent work; to SDG 10 which aims to reduce inequalities between countries and within them; finally, to SDG 16 which is aimed at creating peaceful and inclusive social models.

In this context, starting from 2015 and promoted by the Conference of Rectors of Italian Universities (CRUI), the RUS - Network of Universities for Sustainable Development has worked to promote shared policies and sustainable social contexts, to increase a critical awareness of inequalities, discrimination, forms of inequity, and ways of overcoming themselves and to promote services focused on the right to education.

Starting from this, the research conducted in 2021 aimed to investigate the practices of inclusion and social justice among Sapienza students who, during the last three academic years, have carried out a period of mobility abroad through one of the programs of mobility offered by Sapienza (Erasmus EU, Erasmus ICM, Bilateral Agreements, Double Degree). Furthermore, the focus on outgoing students has thus made it possible to highlight the practices that the students, once returned from abroad, highlight as necessary for the University they belong to with the aim to implement inclusive policies aimed at removing any form of barrier, academic or otherwise.

Metabolic Crises, or the Political Making of Critical Zone Governance

The Critical Zone (CZ) refers to the thin layer at the Earth surface, a habitable space in which life maintains the conditions of its perpetuation. A CZ perspective acknowledges the unicity of geosphere, biosphere and 'sociosphere', highlighting the biogeochemical bounds between 'natural' and anthropic environments. Based on these assumptions, 'Critical Zonists' strive at understanding these interdependencies, and mapping the vulnerabilities associated.

This manuscript argues that the CZ concept deserves some further attention from social scientists under the 'New Climate Regime', which considers climate change as the archetype manifestation of human agency on biogeochemical cycles, as well as their constraining properties on life's conditions. CZ thinking is indeed highly political. While it does not only highlight the regulatory characteristics of biogeochemical cycles, it also acknowledges the threat induced by their disturbances: considering habitability as a determinant of sovereignty and security, hence constituting new risks for communities.

This contribution strives to define and explain the conditions for the emergence of Critical Zone Governance (CZG), as the inclusion of the biogeochemical cycle constraints in decision-making processes. The CZ has no willpower as such, and the CZG emergence is not a given: I sustain that the making of CZG is a process, the outcome of collective actions by stakeholders involved in governance structures, who rearticulated the longer-term biogeochemical and the shorter-term socio-political timeframes.

The case of metabolic crises responses and its influences over land planning policies in the Netherlands is reviewed, mobilising qualitative methods. If metabolic crises refer to the increasing tensions weighting over CZ cycle equilibriums, these become matter for policymaking as the outcome of collective actions led by diverse sets of actors involved in governance processes. I compare and provide explanations on how the housing, nitrogen, energy, and raw material crises successively turned to weight on usage conflicts and planning strategies.

Whistleblowing at Work: Whither Sustainability...

Whistleblowing, involving the reporting of illegal, unethical or illegitimate practices at work, lies at the core of how individuals, groups, organizations and national contexts interplay in eliminating wrongdoing at work and building sustainable workplaces. Indeed, whistleblowing is of global importance due to its potential to stop wrongdoing and corruption and, in turn, influence the trust in democratic institutions which preserve democratic rights. As a governance issue, then, whistleblowing facilitates the global sustainability agenda. Yet, despite the significance of the whistleblowing act, whistleblowers are known to suffer grievous consequences, raising concerns about the ethics associated with interventions designed to protect and support them. As a social issue, then, whistleblower mistreatment, which embodies indignity and ill-being, impedes the global sustainability agenda. Wrongdoing and corruption on the one hand and whistleblower mistreatment on the other hand represent two grand challenges facing human society. We endeavour to reconcile these paradoxical aspects of the whistleblowing phenomenon and its link with the global sustainability agenda through a review of international literature on the topic.

D'HERS, VICTORIA* (CONICET - UNIVERSITY OF BUENOS AIRES, Argentina)

Una Revisión De Las Emociones Ligadas a La Crisis Climática En Barrios Populares, En Buenos Aires, Argentina

En la actualidad, la crisis climática está presente en la agenda pública. La importancia de la cuestión ambiental permea no solo el ámbito académico, sino y por sobre todo los planes de gobierno, tanto nacionales como internacionales. Inclusive desde miradas negacionistas que, de todos modos, deben posicionarse frente a dicha problemática. Así, términos como el antropoceno circulan y se repiten de manera ampliada. La discusión en torno a hasta qué punto la acción humana origina la actual crisis se replica en múltiples ámbitos. Sin embargo, dicha presencia en el nivel emocional no es tan clara.

En medio de la llamada "emocionalización" de la vida, y la creciente presencia del plano emocional en el ámbito público, y el desdibujamiento de la frontera entre lo público y lo privado, esta emocionalidad se encuentra en permanente mutación y actualización. Dicho esto, se indaga en torno a la presencia de emociones ligadas a la crisis climática. ¿Es la reiteración del tema un modo de *anestesia* y normalización del problema a nivel de la vida cotidiana? Según se viene comprobando, en términos generales opera el acostumbramiento en lo relativo a lo ambiental. También se hace referencia al "sufrimiento ambiental" diferencial de clases subalternas, relacionándolas con la espera. No obstante, dada la creciente visibilidad de la temática, se propone la pregunta acerca de las emociones que sí emergen en torno al tema.

Es el objetivo de este escrito revisar el modo cómo emerge la cuestión ambiental, en términos de la sociología de las emociones, en la experiencia cotidiana de barrios marginales, en Buenos Aires, Argentina. El trabajo se basa en entrevistas en movimiento llevadas a cabo en el sur de la ciudad.-

Skills Transition within the Reconfiguration of the Automotive Industry: Between Anticipation and Reality

The accelerated shift to electric vehicle (EV) production is expected to have major implications for labour in the European automotive industry, a sector that provides mass employment and relatively high wages for manual workers. While many predict significant redundancies driven by technological displacement, skills obsolescence, and simplified production processes, other studies suggest that EV production may in fact be more labour-intensive. This paper critically examines the anticipated skills mismatch resulting from the dual shift towards digitalisation and electrification, focusing on the automotive supply chain in Italy and Poland.

Our article draws upon Iskander's (2021) reflections on the concept of skill and the power structures it reflects. The way in which skills are valued has consequences for workers inside and outside the workplace, but it also affects workers' organising, by creating distinctions that add to other social categorisations. Braverman (1974) argued that skill is a medium by which power, control and exploitation are both enacted and contested. Employers deploy the skill narrative to create the notion of 'worker deficit', thereby steering learning activities towards objectives contrary to workers' interest - intensifying their control and exploitation (Sawchuk 2008). Conversely, workers and labour movements advocate for skill training to gain greater control over the production process, thus increasing their power against employers.

Drawing on ongoing qualitative research conducted in Italy and Poland from 2023 to 2024, this paper examines how the power dynamics surrounding skills are being mobilised in the current automotive transition. Based on 65 in-depth semi-structured interviews with a diverse range of participants – including employers, trade unionist, workers and key informants – we explore their narratives on skills as well as workers' practical experiences of past and present industry transformations and the implications for workers' leverage in the sector.

D'OTTAVIANO, CAMILA* (University of São Paulo, Brazil)

Self-Managed Housing Production in Brazil

The paper aims to contribute to the discussion about social housing provision, organized movements and self-management from the recent Brazilian experiences.

For five decades, organized social movements have been central actors in the struggle for better housing conditions, but also for the consolidation of self-managed housing programs. As housing movements' goals and participation expanded from local neighbourhood to city scale to national movements, capable of taking part on more complex social and political articulations. From the pioneering self-help housing construction experiments in São Paulo in the early 1980's, early 1990's Programa de Mutirões (Self-management Housing Provision Program) to the recent Minha Casa Minha Vida Entidades (My Life My House Entities) federal program and *Pode Entrar* (Come In) municipal self-managed program. The partnership with militants, technicians and professionals, both from progressive administration and independent technical advisors, was central for the execution of the first projects, but most of all, for the conquest of fundamental improvements in national and local legislation and progressive housing public policies.

Brazilian self-managed experiences represent the improvement of the economic, social and political capacities of the popular sectors. In addition, self-management action empowers the community, qualifying its dialogue and preparing it for confrontations with public authorities

This paper proposes the analyses of São Paulo's ongoing projects – 20 from the federal program and 27 from the municipal program – contributing to the discussion about participation and political organization in social housing practices.

The analysis of recent self-managed housing production in Brazil has the potential to offer alternative and higher quality ways to address the housing deficit and to make the right to the city and citizenship effective for the low-income population.

D'URSO, DANIELA* (KU LEUVEN, Belgium)

Informality and Innovation: Building Post-Pandemic Resilient Communities in Morocco. Echoes from the Suq: Exploring Informality. the Case of Rabat

This research investigates the informal economy in Morocco, using the *suq* (market/bazaar) of Rabat as a case study. In Morocco, the *suq* plays a central role in the urban informal economy and it exemplifies how informal economic activities sustain urban life in contexts of high unemployment and limited access to formal jobs. However, the exploration of *suqs* as sites of informal governance moves beyond a narrow focus on economic considerations. In fact, the processes of economic informality cannot be separated from those of urban informality, as they are closely interconnected.

During the French protectorate (1912-1956)- apart from a small neighbourhood built for Moroccan employees- the entirety of the 'new Rabat' was exclusively reserved for Europeans. The theory underlying this research is that the French protectorate had a huge impact on the spread of informality since the city was strictly divided between Moroccan (*medina*) and European zones (*ville nouvelle*). What happened in Morocco during the protectorate era had a profound impact on its urban space and- still until nowadays- downtown

(home to the Parliament and governmental institutions) is often deemed an inviolable zone, subjecting street vendors to frequent forced evictions. However, itinerant trade not only persisted within the *medina* but also thrived and expanded over the years. Rabat, as the capital of Morocco, best embodies the urban policies implemented during the French protectorate. Therefore, this research aims to explore the cultural and social legacy of the *suq*, in contrast to the space of the *ville nouvelle*. Using a multidisciplinary approach, drawing from sociology and urban anthropology, this study seeks to explore the impact of the COVID-19 pandemic on informal markets.

DA COSTA, JADE* (University of Guelph, Canada)

Remembering Today: Building Collective Memories through Digital Storytelling

This paper explores the methodological and liberatory capacity of digital storytelling to cultivate a "collective memory" of present-day crises. The concept of crisis is not new, and the sociological impacts of crisis events cut across time and memory. Yet, the historical erasure and systematic forgetting of the communities, collectives, and persons who have struggled with, responded to, and resisted the catastrophes, disasters, and atrocities of the past, have left those within the present unprepared for late-stage capitalism and neocolonialism, in which "crises" are commonplace. Although important work is being done to document and translate these histories within and to modern contexts, little research has considered how to better remember present day crisis for future generations. That is, the question of how to avoid collectively forgetting crises in the first place has often gone unaddressed. Bringing my dissertation research, *From Racial Hauntings to Wondrous Echoes: Towards a Collective Memory of HIV/AIDS Resistance*, in conversation with my postdoctoral research, *Exaggerated Hunger: Addressing Racialized Food Insecurity in The Era Of COVID-19*, I propose that digital stories, short videos that pair audio recordings of personal narratives with visuals and soundscapes, can be used to build collective memories in real-time. I argue that memory and sociology are both transtemporal projects that can and should be combined to generate knowledge and resources in a world defined by postcrisis and colonial injury, and that digital storytelling is a versatile enough method to facilitate this responsibility.

DA ROIT, BARBARA* (Ca' Foscari University of Venice, Italy)
WEICHT, BERNHARD (University of Innsbruck, Austria)

The Cheaper Option: How, Why and for Whom? the Politics of Deinstitutionalization in the Field of Long-Term Care

Since the 1990s, and more so after the Covid-19 pandemic, there has been a growing policy emphasis on the deinstitutionalisation of older people with long-term care (LTC) needs, i.e. the reduction of services supplied in residential settings as opposed to those provided in the community or in older people's home. This trend is backed by a set of converging ideas: the need to ensure social inclusion, the preferences of older people and their family members, lower costs of home and community care as opposed to residential care services. The higher cost of residential care has been a particularly powerful argument in supporting cutbacks in the number of beds in nursing homes or in preventing their expansion across countries, also in relation to the overall need to contain public expenditure within LTC policies. Yet, social policy scholars have seriously challenged the idea that home care services are cheaper than residential care services on different grounds.

Based on a review and analysis of the literature, of policy documents, of research output and policy briefs across seven EU countries, the paper highlights the standpoint on the topic across different sets of actors –e.g. researchers, expert communities, policy makers at the European, national and regional level, representative of older people and their family members, representative of care provider organizations and of employees' organizations –, its knowledge basis and its modes of circulation.

In doing so, the paper offers multiple contributions. It provides a complex understanding of the meaning of costs and of whether different options are “cheaper” in relation to LTC and beyond. It sheds light on the prevailing views and the factors that helped them emerging as dominant and on the possible reasons for the marginalization of alternative views. Finally, it problematizes the relationship between policy-oriented research and policy discourses and policy making.

DA ROIT, BARBARA* (Ca' Foscari University of Venice, Italy)
PASIAN, PAMELA (Ca' Foscari University of Venice, Italy)

The Politics of Institutional Ethnography of Long-Term Care Practices. Methodological Reflections Based on a Multi-Sited European Study

This paper reflects on the tensions between the goals, epistemology and methodology of institutional ethnography of long-term care practices and the politically-loaded field of long-term care itself, in a context where research is increasingly oriented by policy-driven projects and funding.

Institutional ethnography is well suited to understand how practices, policies, organizations within the field of long-term care for older people operate, function, reflect and produce tensions, inequalities and (re) arrangements of the social organization of care. Namely, the approach “examines and explores society and the social from where people are in the local actualities” and “can bring them to light and make them available to people” (Smith 1997, p.41).

At the same time, the discovery work of institutional ethnography is not neutral with respect to the actual people that are part of it, the very participants, the stakeholders of the very power relations and that are being unveiled – e.g. persons with chronic illness, paid and unpaid care workers, managers of care organizations, policy makers at different territorial levels. This is particularly the case within a field that is strongly affected by often hidden or non-recognised power relations, interests and struggles over resources. And it is even more important in a field where research funding is increasingly distributed based on policy-oriented projects, which are expected to produce policy recommendations.

The paper's methodological discussion and contribution is based on the first steps and findings of cross-national EU-funded research project - LeTs-Care – which encompasses a multi-sited cross-national ethnography of practices of long-term care for older people with disabilities and chronic illnesses. It discussed the tensions emerging from the selection of the fields and its opening, the relationship between the researchers and the actors within and beyond as well, the communication of the objectives and methods of inquiry, the exchanges on the results.

Affirmative Actions in Public Higher Education in Brazil

In higher education in Brazil, one of the biggest challenges is the inclusion of groups historically excluded from this educational level, especially when we analyze the presence of the black population, notably excluded from this educational level throughout the 20th century. Florestan Fernandes and Roger Bastide showed this process, within the scope of UNESCO studies, in the early 1950s, that is, many black people were not accepted in schools or higher education. In that context, there were initiatives led by black, unofficial organizations, seeking to overcome the segregation of the Brazilian black population. However, these organizations did not always have lasting success, given racial inequalities, especially in higher education.

In public higher education, generally considered to be of better quality, Brazil has experienced a significant change in the last two decades, with the adoption of affirmative action policies, above all, the reservation of places for the black population, indigenous people, people with disabilities, among other historically excluded groups.

Based on data from the Higher Education Census (CES), produced by INEP, an official body of the Federal Government of Brazil, research was carried out and the inclusion processes of black people were analyzed, such as access, permanence and trajectory during higher education courses. graduation from 2013 to 2023 from Brazilian public universities (federal and state).

The data has shown that, following the reservation of vacancies for black people in 2001, the number of black people at this educational level significantly increased, especially following the Quota Law in 2012. The (CES) reveals that, in the last year, 51% of quota students in the federal network completed the course, the rate among non-quota students was 41%. The research, based on quantitative methodology, aims to analyze the trajectories of black students in Brazilian public higher education institutions (IES).

DA SILVA, RENAN* (New Jersey Institute of Technology, USA)

Autonomous Experimental Systems: Understanding Experts' Views on Automating Scientific Discovery

Automation plays a crucial role in scientific research. Advanced computing techniques and algorithm optimization are regarded as tools for enhancing data collection and analysis, and to improve replicability of experiments then resulting in accelerating the discovery of chemicals and materials. However, the decision-making process related to the automatization of tasks in the lab is influenced not solely by scientific objectivity considerations but also by socio-economic, cultural, ethical, and political factors. This article presents the results of an empirical sociological inquiry about scientists' attitudes towards automation in bioengineering and materials sciences. The study employed thematic analysis of interviews conducted with scientists in from research laboratories in the New York Metropolitan area. The findings reveal some factors affecting experts' decision making on automating research on bio and nano-scale engineering and materials discovery: scientist's experience in the field; reflections on the cost-benefit of automation investments; relevance of human validation of experiments; collective trust in autonomously generated molecules and materials by peers; and communicational issues experienced between researchers holding multiple disciplinary affiliations. We argue that, in areas of disruptive innovation such as bioengineering and materials sciences, the decision to automate research advances through tensions arising from the sociocultural environment, which supports the co-production of novel arenas of research and its technopolitical infrastructures. This is a dynamic process that encompass both technical and non-technical arguments, prioritizing mechanisms to continuously support narratives on the objective nature of scientific methods and practices. This resonates with current debates on the overestimated relevance of computational tools such as AI and other algorithm optimization technologies in innovative research fields. It indicates the need to critically examine how claims of scientific objectivity and technical interventions balance each other to stabilize the social order of emerging science and technology.

DABDOUB NASSER, CHRISTIANE* (Independent researcher, Palestine)

Bridging the Gap: Artists and Cultural Professionals Address Environmental Issues in the Southern Mediterranean Region

This study rests on the three following premises 1) the environment as a major concern has not kicked in among the general public in countries East and South of the Mediterranean and whilst it is not considered a priority, it is timidly addressed amongst culture professionals and activists who are aware of its increasing prominence in Western discourse; 2) debates and decisions concerning measures that aim to mitigate climate change are happening elsewhere, motored by political agendas that do not coincide with local priorities and challenges; as such they are perceived as smacking of neo-colonialism. At the same time, they are the remit of institutions that provide funding for cultural activities in the region; and 3) environmental issues threaten international mobility, as it is considered a major contributor to CO2 emissions, adding an extra layer to the burdensome reality in which cultural professionals operate - lack of financial and political support, relative isolation from international exchanges etc.; paradoxically, these issues represent new opportunities for securing financial support, which operators have learned to manoeuvre to accomplish their work and fulfil their own agendas whilst meeting donors' objectives for environmental preservation. As 'performers' they have learned to navigate the system and, through continued experimentation, adjust to its modalities in their favour (Dewey).

Our empirical research revolves around the paraphernalia of solutions put forth by institutions of the European Union to address pressing issues involving the environment and how they are interpreted by cultural professionals in countries east and south of the Mediterranean. It will focus on the issue of mobility, a sine qua non in the professional trajectory of artists and cultural professionals, and how cultural professionals are able to take up the challenge and contribute to the development of a new canon for new practices and an environmentally responsible citizenship.

DACE, FRANSCHA* (Yale University, USA)

Hot and Wet: Just Adaptations to Extreme Heat and Flooding in Two Global Cities

By 2050, urban areas will have to account for an additional 2.6 billion people. The UN reporting projects that Asian and African continents will see an estimated 90% of future urban population growth (Lin and Fuller, 2013; Pandey, et al., 2020). Extreme weather events like heat waves and floods are becoming more frequent and more severe. As the climate crisis worsens, urbanites will have to find ways to adapt safely and effectively (Pasquini et al., 2020; Bolles, 2024).

This study examines two mid-sized, water-adjacent and highly segmented cities: the City of Chicago, Illinois (United States) and Dar es Salaam, Tanzania (East Africa). These cities are case studies in localized climate change adaption. I selected these cities for their common dealings with extreme heat and flood events and the growing intensity of the urban heat island effect (Angel, n.d.; ICLEI, 2021). Just as important are their dense histories of place-based systemic oppression and racial segregation (Smiley, 2013; John et al., 2020; Serrato et al., 2022; Khan, 2024). These factors and others make them optimal research sites for investigating the potential interplay between community and climate resilience. This project employs the Just Adaptation framework to investigate relevant, reasonable mechanisms for climate adaptation. This framework is a climate adaptation tool whereby resilience, equity and systemic are at the center, and individuals most acutely impacted by the climate crises are at the helm (Malloy and Ashcraft, 2020).

This project employs urban ethnographic methodologies to respond to questions regarding identity, vulnerability, history and place, all within the context of identifying strategic, accessible interventions for household- and community-level climate resilience.

Multi-Scalar Analysis of Transformational Adaptation in a Coconut-Producing Region in the Philippines

The urgency of climate action fuels ongoing calls for systemic transformations across various sectors worldwide. In global agrifood systems, transformational adaptation is often framed as large-scale change, typically focusing on scaling out climate-smart agricultural technologies. However, alternatives to this “scaling-out” approach exist within complex social-ecological systems, and further research is needed to identify leverage points that can drive broader system-wide change. This paper draws on interviews with national-level decision-makers in the Philippines and fieldwork in a coconut-growing community in Infanta, Luzon, to explore the challenges of achieving large-scale transformation. It argues that diverse interpretations of transformation across different scales make large-scale change difficult to achieve. In Infanta, small coconut farmers favor ecosystem-based adaptation and emphasize intangible aspects of transformation—elements that are often overlooked in national agrifood policy discourses. The disconnect between local adaptation pathways and macro-level transformation narratives creates tensions, preventing local actors from implementing more equitable, just, and ecologically sustainable adaptation strategies. This study challenges the conventional logic of adoption and scaling out, as well as the limited view of place-based transformations that often neglect the multiscalar dynamics and equity considerations critical for systemic change.

DAGLI, WINIFREDO* (University of the Philippines Los Baños, Philippines)

ROQUINO, EDUARDO (University of the Philippines Los Baños, Philippines)

‘Gunita’: Spirituality, Memory, and Socio-Ecological Change in Post-Disaster Infanta, Philippines

Every November, women at St. Mark Cathedral offer prayers for those who perished in the 2004 flash flood and seek forgiveness for the destruction of the mountains that led to the disaster in Infanta, a rural town southwest of Metro Manila. Twenty years later, remnants of the flash flood seem to have faded: the forests have regrown, the town's economy is thriving, and public institutions acknowledge the lessons of history. What role have spiritual beliefs—from animistic traditions to organized religion—played

in the profound transformations of these once socially and ecologically vulnerable communities? While spirituality is increasingly recognized as a coping mechanism, its connection to remembrance and its impact on long-term social-ecological change is less understood. A video documentary production on Infanta's twenty-year journey since 2004 has provided an opportunity for the researchers cum documentarists to understand the role of spiritual beliefs and remembrance in resilience and renewal. Recently, local government officials, religious institutions, and local communities have come together to protest a multi-million dollar dam project, effectively weaving spirituality and collective memory of the 2004 flash flood into the narrative. In the 1754 Tagalog dictionary *Vocabulario de la Lengua Tagala* (Noceda and Sanlucar), the local construct ‘gunita’/‘golita’ (loosely translated as ‘memory’) is defined as “to remember something to bury.” Using local, storytelling-based research methods as well as ethnovideography, this study seeks to expand the sociological understanding of ‘gunita’/‘golita’ in the context of personal and institutional forms of remembering that seem to challenge Western social science categories and dichotomies (e.g., church-state, religion-indigenous belief systems, objectivist-subjectivist perspectives in resilience studies). In the end, the paper argues that spirituality and collective memory shape social actions with critical implications to long-term social-ecological transformation.

Indigenous Knowledge As a Potential Solution for Promoting Sustainable Livelihoods: A Case Study of Lepcha Tribe of Sikkim

Tribal communities across the globe are notably known for their intimate connection with nature, and indigenous knowledge sustains their livelihoods. The availability and diversity of livelihood options are influenced by the complex reciprocity of natural and human-induced factors across different geographical regions. The Lepcha tribe living in and around the Dzongu region of Sikkim are still heavily dependent on natural resources, and of which indigenous knowledge is widely used to support their livelihoods through a plethora of strategies—forest foraging, farming, fishing, hat-making, bee-keeping and cultural tourism—despite the large-scale impact of modernization and urbanization. This paper explores the extent to which the indigenous knowledge is used and how it has been affected by government policies over the years. The results of the study indicate that the participation of indigenous knowledge holders in various grassroots-level activities can enhance the advancement of their livelihoods along with the promotion of their culture, traditional practices, conservation of knowledge and preservation of resources. At the same time, the pitfalls of livelihood options that are dependent primarily on natural resources have also been recognized and documented thereby, necessitating the communities to keep a strict vigilance on the overuse and misuse of natural resources.

Reason and Emotions in Pro-Social Activism Networks in Europe

The relevance of the emotional factor in the participation and mobilisation of movements does not imply the substitution of the rational paradigm with the emotional one, but rather the overcoming of the dichotomy emotion-reason. In this focus area it is crucial to emphasise that the concepts of emotion and feeling should not be used indiscriminately as synonyms (Anolli, 2002): anger, an emotion that seems to be more investigated by scholars of social movements, has different traits, although consequently linked to the feeling of indignation; indeed, both are noted as main drivers for mobilisation.

Even though activists often manifest anger and indignation towards the structures of hegemonic power, which are seen as the enemy, it is possible to detect a further, opposite primary feeling at the basis of the structuring of pro-social activism networks. This feeling can be described as love, understood as empathy or compassionate love, which emerges in attitudes such as solidarity and compassion towards all those who are socially excluded (Flam, 2024).

The aim of this contribution is to analyse prosocial activism and its networks by addressing the following research questions: what types of emotions prevail in the process of building the collective identity of prosocial networks? Is the mobilisation of these networks more driven by the anger/resentment that their members feel towards discriminatory policies or by the inclination to help people in difficulty? How are these emotions communicated to the outside world through mass media and collective events? The emotional key of prosocial activism will be investigated through the examination of data that emerged from a campaign of narrative interviews with members of some pro-migrant European networks in an attempt to provide answers to the above-mentioned research questions.

Colonial Practices and Mechanisms Hampering Access to Administrative Justice: Empirical Evidence from a Multi-Local Case Study

This contribution looks at how colonial practices and mechanisms are still in place, hampering access to administrative justice for large groups of people. On the basis of three empirical case studies in different world regions – Northern Canada, the so-called Dutch Caribbean and South Africa – I will analyse common threads in how Indigenous as well as non-Indigenous people are (potentially and actually) hindered from access to public services and the involved rights and benefits.

Two pillars of discrimination in this sense are explored in more detail: First, the matter of language politics is investigated with empirical data. In the Canadian Northwest Territories, where half the population is Indigenous, people who work in the administration receive a bonus if they speak French, but not if they speak an Indigenous language, although there are nine of the latter. In Curacao, an island in the Dutch Caribbean with autonomous status since 2010, the laws are written in Dutch and 'imported' Dutch judges lead the court hearings in Dutch, although the majority of people speak Papiamentu.

Second, the digital transformation of public services taking shape around the world bears many opportunities, but the realization of these is conditional. My findings confirm the literature which suggests that digitalization has the potential to add barriers to accessing (administrative) justice, and it particularly concerns the already vulnerable and marginalized, often Indigenous and minority groups. The paper posits that digitalization of public services cannot be an end in itself; instead, the digital transformation should be used to improve social justice, also with regard to access to public services and the involved rights and benefits.

The findings are based on field research, including in particular interviews and focus groups with denizens, public ombuds' employees, and civil servants as well as participatory observation.

Effects of Survey Mode and Age Cohort Differences on the Measurement and Perception of Violence: Findings from the Luxembourgish Victimization Survey

Violence is undoubtedly one of the most sensitive topics in modern society. For a long time, victims remained largely invisible in the public discourse on violence. In criminal law, police and judicial statistics, and conventional criminology, the (suspected) perpetrator often takes center stage. In recent decades, however, attention has increasingly focused on individuals as victims of crime. Victimization surveys have become a standard tool in social science research in many countries.

Face-to-face interviews, often considered the gold standard, especially when using specialized techniques, are preferred to collect data on such sensitive topics. However, these surveys are costly, time-consuming, and not always feasible. Traditional paper and pencil surveys are unsuitable due to the complexity of filtering. Telephone and web surveys also present challenges, especially in reaching specific populations (e.g., "mobile-only" respondents vs. the elderly or those with limited literacy skills).

In the Luxembourgish Victimization Survey (N = 5,695), we used a mixed-mode design (CAWI/CATI) to determine the extent to which the population is affected by violence (victimization). In addition, we asked whether certain behaviors (e.g., parental violence, sexual violence in marriage, etc.) are perceived as violent phenomena (awareness). With regard to social desirability effects, we find that the survey mode per se has no significant effect on the probability that respondents report or do not report experiences of violence (victimization), nor on whether or not certain phenomena of violence are perceived as such (awareness). However, there were significant interactions between survey mode and age cohort. In older cohorts, respondents were significantly more likely to report experiencing violence when they participated via the Internet rather than by telephone, even after controlling for sociodemographic factors. Conversely, younger respondents were significantly more likely to classify scenarios as violent incidents when interviewed by telephone compared to the Internet.

Does Tertiary Educational Expansion Contribute to Equal Opportunities and Enhance Occupational Status? a Comparison between Europe and Latin America

The aim of the paper is to analyze the factors of social stratification that influence the inequality of graduation opportunities in higher education across four countries: Argentina, Chile, Italy, and Spain. Special attention is given to age cohorts and gender, considering both "vertical educational inequality"—related to the achievement of higher-level credentials—and its subsequent impact on the attainment of occupational status.

The choice of Argentina, Chile, Italy, and Spain to investigate social stratification and inequality in graduation opportunities in higher education is grounded in three considerations. The significant migration from Spain and Italy to Argentina and Chile provides a meaningful common socio-cultural contextual framework. The comparison of two Latin American countries and two European countries allows us to examine the role of economic development in the equalization process of educational attainment across social origins. Finally, the differences in the levels of educational expansion among the four countries allow us to explore the impact of this expansion on equity in graduation from higher education and its role in occupational status attainment.

We used a quantitative methodology based on three surveys: European Social Survey (Italy and Spain, 2018), Social Structure Survey (Argentina, 2021), Longitudinal Social Study (Chile, 2021). The analysis strategy employs statistical analysis through various multivariate logistic regression models.

The initial results indicate that Italy and Argentina have experienced less educational expansion across age cohorts. The combination of greater educational expansion and higher economic development linked to reduced inequality among social classes—exemplified by Spain—leads to significant progress in reducing disparities in educational opportunities. However, the massification of higher education entails a certain reduction in its positive effect on the attainment of status (more markedly where the expansion has been greater), raising questions about whether higher education continues to be the primary channel for upward social mobility.

Today's Traces of the Highly (Dis)Advantaged in 1880. Examining SES Outcomes Among Descendants Using a Prospective Multigenerational Design

We expand on previous approaches to intergenerational mobility by studying the *longue durée* of social stratification. Demographic and socioeconomic processes can be viewed from a prospective perspective, i.e., analyzing how some ancestors both have more children and descendants, more successful descendants, and leave a stronger cultural mark on future generations. We analyze this by tracing multigenerational dynasties forward in time based on historical ancestry reflecting strong (dis)advantage. Using multiple historical national censuses linked to contemporary registers, we can link the educational and occupational outcomes of twenty-first-century descendants to the 1880 Swedish population, and assess to what extent their outcomes depend on the SES of their 1880 ancestors.

Previous historical work on social mobility has been constrained by standard indicators of socioeconomic status; in historical data largely limited to occupations. We use less common markers of status in the extended family to infer lineages of extreme advantage and disadvantage in 1880. At the high end of the stratification system, these include those with elite surnames, people of aristocratic rank, the higher educated, or those with domestic staff. At the bottom, we will study deprived groups, such as those registered as vagrants or subject to severe disability. Another dimension of marginalization is ethnic minority status, applying to Sami, Tornedalians, and Fins in nineteenth-century Sweden, derived from surnames.

We expand on previous mobility approaches by evaluating the variation in outcomes among descendants from a given distinct social origin in 1880;

over the long term, (how) do different descendants with distinct historical origins fare in school and on the labor market? Does this differ by source of historical (dis)advantage? Are long-term descendants of advantaged groups less mobile than descendants of disadvantaged groups? Are there differences by historical origin in the returns to education?

Who Has Time for More (Children)? Outsourcing Household Chores and the Positive SES Gradient in Swedish Fertility

Despite generous welfare and family policies, Sweden has a sizeable positive socioeconomic gradient in fertility; those with higher incomes have more children than those with lower incomes. While this positive socioeconomic gradient in fertility is not a new phenomenon in Sweden, a similar shift towards a positive fertility gradient is more recently seen in other high-income countries as well. Among potential explanations, this gap could derive from a (perceived) lack of resources necessary for childrearing among lower socioeconomic groups. While the welfare state reduces the economic cost of childbearing and childrearing for all, higher SES groups can consume services alleviating the burden of time-consuming childrearing that aren't accessible to lower SES groups. One of such services is the outsourcing of household chores.

Sweden has a uniquely generous and accessible tax deduction reducing the cost of formal outsourcing of various domestic services by 50%. Whereas domestic services are often part of an informal market and thus undocumented, this generous tax deduction has resulted in a substantial share of such services being documented in Sweden. This creates a unique opportunity to study if and how "buying time" - and a lack of time more generally - is related to the internationally increasingly common positive SES gradient in fertility. Time constraints could either directly affect (continued) childbearing, or indirectly through union stability. That is, to understand if and how outsourcing and time constraints are related to childbearing, we do not only study the fertility outcomes of stable couples, but also of those separating.

This paper is based on individual-level longitudinal register-based data covering all adult Swedes. To address the relationship between regular outsourcing and the socioeconomic fertility gradient we use a novel decomposition method specifically designed to analyze how an intervention, here outsourcing, affects disparities between groups, here fertility differences between socioeconomic groups.

Le Temps De l'Attention. Perspectives Féministes Sur Le Care Et Le Handicap

Cette communication propose de réfléchir aux apports des perspectives critiques du care (Ibos, Damamme, Molinier, Paperman, 2019) et des *Feminist Disability studies* (Morris, 2001) sur les modalités de recherche menées auprès des personnes handicapées. Elle s'appuie sur deux enquêtes de terrain en cours : la première a été réalisée dans des associations portées par et/ou pour des femmes handicapées (Damamme, Saussey, 2024) et la seconde porte sur l'usage des technologies par les personnes handicapées (Martin Palomo et Munoz Terron, 2024). Alors que les logiques de domination validistes et genrées produisent des injustices épistémiques qui traversent les recherches sur le handicap, la plus grande vigilance éthique est-elle toujours suffisante pour ne pas reproduire ces formes de domination dans les relations d'enquête ? Quelles sont les autres ressources dont disposent les chercheuses ? Quelles sont les possibilités de création de relations et d'espaces d'échange pendant et après l'enquête ? Comment rendre compte de ce que nous avons observé/vu/ressenti en cherchant à considérer avec care les logiques sociales à l'œuvre, à rebours des imaginaires misérabilistes et paternalistes qui traversent historiquement le champ du handicap ? Si l'attention que l'on peut déployer dans l'enquête implique émotionnellement les chercheuses, ses retours nécessitent aussi du temps. Ce temps long qui nous est important pour construire une confiance mutuelle est aussi en jeu dans la réflexion sur la lenteur nécessaire à l'élaboration de nos compréhensions (Wiseman, 2022). Pourtant, cette temporalité de «la recherche avec care» est très difficile à soutenir face à un rythme académique contemporain intense.

Navigating the Healthcare System and Addressing Mobility: The Multifaceted Roles of Filipino Nurses in Pediatric Care

The pandemic has exposed significant vulnerabilities within Canada's pediatric healthcare system, particularly regarding its capacity to manage surges in cases attributed to respiratory viruses, influenza, and other infectious diseases. This crisis has raised pressing concerns about Canada's preparedness for pediatric healthcare demands, highlighting systemic inadequacies, including the limited number of specialized children's hospitals and a critical shortage of nursing staff with pediatric expertise. Concurrently, the influx of Filipino nurses into Canada's healthcare system presents a complex system of both opportunity and challenge. Many have been involved in multiple migrations, working in healthcare systems in other countries (e.g., Southeast Asia, East Asia, Middle East, UK, and Europe) prior to arriving in Canada. While these nurses are instrumental in delivering care, they often face systemic barriers that hinder their professional mobility and integration into pediatric settings in Canadian hospitals. This paper conceptualizes the roles of Filipino nurses within children's hospitals and hospital schools, exploring their impact on the educational continuity of hospitalized children. Despite their involvement in health education and patient engagement, the extent to which they contribute to academic learning remains largely unexamined. By investigating the interplay between the Philippines' nursing labour export policies and Canada's recruitment strategies, this conceptual paper aims to elucidate the broader implications of underemployment and credential recognition for Filipino nurses. It also examines the emotional and psychological dimensions of their work and strategies they employ to navigate challenges in high-stress environments. In doing so, the paper advocates for systemic changes to improve the professional landscape for nurses while enhancing the quality of care and education for vulnerable pediatric populations. Ultimately, this seeks to contribute to advancements in pediatric nursing practice and inform policy adjustments that recognize the vital role these nurses play in supporting the health and educational needs of children who are hospitalized in Canada.

ZEKAITE-MACONKO, JOVITA (Vilnius University, Lithuania)

Fear and Insecurity: Bullying in Lithuanian Schools during a Period of Change

The socio-economic and socio-demographic situation in Lithuanian towns and villages at the beginning of Lithuanian independence was exceptional. Lithuanian society was going through a period of systemic transformation, which affected all spheres of life. These changes were felt not only by adults, but also by children, who are one of the most sensitive and vulnerable groups in society. Young people experienced change and uncertainty in both the private and public spheres.

This presentation will focus on the school environment, where young people spend most of their time and are in close contact with both adult teachers and a large community of peers. In order to reconstruct the culture of punishment and bullying that existed at the beginning of Lithuanian independence, the memories of adults born between 1980 and 2000 will be analysed through biographical interviews.

School bullying was first defined by Olweus (1978), who highlighted three core components: power imbalance, repetition and aggression. This framework has guided numerous studies of the phenomenon. Ahmed and Braithwaite (2014) expanded on Olweus' definition by introducing the concept of shame management, exploring how bullying is influenced by both constructive and destructive expressions of shame and honour.

Building on these theoretical foundations, this presentation examines fundamental aspects of children's perceptions of the social world, moral values and behavioural strategies at the time. Interviews reveal a strong emphasis on feelings of fear and insecurity, lack of social authority, and personal experiences of bullying during their formative years. This research not only contextualises bullying within a historical framework, but also sheds light on its lasting impact on the lives of those who lived through this transformative period.

DAMASEVICIUTE, GODA* (Vilnius University, Lithuania)

Navigating Change: Childhood Experiences and Autonomy in Post-Soviet Lithuania

The collapse of the Soviet Union had a transformative effect on Lithuanian society. Children who grew up during this period underwent a personal transformation, but society as a whole also changed. The opportunities that opened up in the new political context highlighted the social and economic differences between people. These differences were particularly felt by children and affected their everyday lives. Although transformative societal processes have been widely analysed, children's life experiences have not been thoroughly researched.

The focus of this presentation is on the interrelationships between children and their social environment, which defined children's autonomy, responsibility, sense of security and use of public space during the transformation period in Lithuania. Over the past three decades, children's lives have become increasingly monitored. This reflects wider social trends that resonate with current debates about children's autonomy and agency. It raises important questions about understanding the past and its relevance to contemporary social dynamics.

Applying biographical interview analysis, this study draws upon Leena Alanen's concepts of generational order and Karl Mannheim's generational theory to contextualise childhood within a historical framework.

The aim is to show how the existing field of rules and restrictions of childhood autonomy is reconstructed from life stories. It is not a factual picture of what really happened, but a picture of what is remembered and how - the content of memories determined by a specific socio-historical context. Biographical interviews with people born between 1980 and 2000 reveal the main areas in which children's autonomy manifested itself. Stories of family, school, other public spaces and everyday childhood activities emerge as formative factors of biographical identity and reflect the socio-cultural changes of transformation.

Gender Stereotyping in the Labor Market: A Descriptive Analysis of Almost One Million Job Ads across 710 Occupations and Occupational Positions

This study presents patterns of gender stereotyping in job ads in the German labor market and examines its association with the unequal distribution of men and women across occupations. Using a large dataset of job ads from the "BA-Jobboerse", one of the largest online job portals in Germany, we apply a machine learning algorithm to identify the explicitly verbalized job descriptions. We then use a dictionary of agentic (male-associated) and communal (female-associated) signal words to measure gender stereotyping in the job descriptions. We collect information for 710 different occupations. Our first result shows that more jobs are female-stereotyped than male-stereotyped. We then take the example of two occupational groups that reveal clear differences in tasks contents and are highly relevant regarding important megatrends like digitalization and the demographic change: one the one hand, Science, Technology, Engineering, and Mathematics (STEM) and, on the other hand, Health and Social Services occupations. Additionally, we investigate the hierarchical aspect of occupational gender segregation. We distinguish jobs according to their required skill level and whether or not they are supervisory and leadership positions. In contrast to our first result, we find within STEM occupations as well as in supervisory and leadership positions that the majority of jobs is male-stereotyped. Our findings indicate a positive association between gender stereotyping and occupational gender segregation, suggesting that gender stereotyping in job ads might contribute to the underrepresentation of women in certain occupations and occupational positions.

DANCEY, SAM* (University of Alberta, Canada)

Reconciling Science Laboratories and Indigenous Community-Based Research

Indigenous people have been exploited as research subjects, giving Indigenous communities good reason to distrust researcher scientists. In academia, procedures are routinely applied across classrooms and labs without a critical examination of whether they are culturally appropriate. The conduct of scientific research relies on the practices of past scientists, most of whom were non-Indigenous adults who have received very little education on Indigenous history, and the role of Western science in historical injustices. The current state of laboratory work, therefore, remains largely culturally exclusive of Indigenous peoples, as their ways of knowing differ from Western methods of research and reporting. As such, university-level scientific training fails to acknowledge and respect the cultural significance of objects, samples, and knowledges that originate from Indigenous peoples and communities.

While I was conducting my undergraduate honours research in molecular biology, the time I spent in the research laboratory was isolating, onerous and exhausting. While the theory behind my project was fascinating, when I presented the culmination of my research to my peers and faculty, only a handful of people in the crowd had a clue what I was talking about. This purely empirical research left me feeling disconnected from myself, my loved ones and from meaningful work. In stark contrast to this experience, is my time working with Dr. Johnson, who has brought me into her community-based research. I am now in Sociology because of my relationship with her, and a desire to reconcile my place as a settler and a scientist with Indigenous Knowledges. I am exploring how lab work can be done with relationality as the guiding principle to allow for ethical and culturally appropriate laboratory research in connection with Indigenous communities. Connectedness with ourselves, each other, and the land grounds us in reality, and should guide scientific inquiry.

DANIEL, ANTJE* (University of Vienna, Austria)

Fridays for Future: An Intersectional Lens on Youth Activism and Its Intersectional Activism

In August 2018, 16-year-old Greta Thunberg began demonstrating for climate justice in front of the Swedish parliament. This protest developed into the global protest movement Fridays For Future, which, according to the organisers, encompassed 163 countries and over four million people in September 2019. Since 2019, teenagers and young adults have been at the forefront of tackling the climate crisis and are able to mobilise the masses for climate justice. Fridays For Future has created a youth activism that is unique in its global reach and the low average age of its activists, as well as the above-average proportion of women. Against the background of these characteristics, the presentation analyses the climate justice movement of Fridays For Future in Austria from an intersectional perspective and using a mixed-methods approach: First, an intersectional analysis is used to show which social categories shape the Fridays For Future movement in order to understand which activists are part of the social movement. Finally, the extent to which social categories such as gender and age shape the perception of problems and the motivation of activists is analysed. Last but not least, by analysing intersectional activism, it becomes clear to what extent diversity and inclusion are part of the self-image and strategy of the Fridays For Future movement, and to what extent hierarchies, social inequalities or forms of exclusion are perpetuated in the social movement. Such an intersectional analysis is still a relatively new phenomenon in the field of social movement research, even though the concept of 'intersectionality' emerged from political activism. The presentation thus makes a significant contribution to the intersectional analysis of the climate justice movement.

RC07-JS-127.2

DANIEL, ANTJE* (University of Vienna, Austria)

Futuring Climate: Imaginations, Emotions and Aspirations

Climate anxiety currently dominates the collective constructions and perceptions of the present among numerous youth activists. Greta Thunberg's statement 'I want you to panic' is symbolic of this. Climate anxiety fuels dystopian ideas of a future characterised by deprivation and inequality, creating a planetary imagination that is not worth living in. The question of how liveable the future is characterises the activists of the climate justice movement. Climate anxiety and dystopian ideas are accompanied by feelings such as anger, worry, indignation and hope. It seems as if fearful emotions and imaginaries of the future characterise the perception and actions of activists just as much as hopeful visions of the future. What is the connection between

the varying emotions of activists in the climate justice movement and what ideas of a 'good life' or socially just future characterise their attitudes and actions?

Based on mixed-methods research, the presentation analyse the emotions, attitudes and imaginaries of the future of climate justice activism in Austria. While sociological research focuses predominantly on emotions as an affective dimension, this presentation will combine theories on emotions and future sociology to investigate how emotions shape future imaginaries and aspirations. In doing so, the nexus between emotions and imaginations of a climate-just future becomes clear, and how emotions are strategically used to create a specific perception of the present and an imagination of the future.

DANOUMA ISMAËL DIALA, TRAORÉ* (EHESS / LAP, France)

Activisme Politique Contestataire En Ligne : L'Engagement Des Membres De La Diaspora Burkinabè En Contexte Autoritaire

L'émergence des médias socio-numériques a permis aux diasporas africaines de renforcer et mieux visibiliser leur participation politique transnationale. Ainsi, même sans être présentes physiquement, les diasporas ont la possibilité de jouer un rôle important sur l'échiquier politique de leur pays d'origine. La généralisation du vote à distance entamée depuis les années 1990 en Afrique (IDEA, 2007 ; Smith et Jaulin, 2015 ; Chauvet et al., 2018) et les apports financiers des migrants dans leur pays d'origine amènent les gouvernements à avoir une attention particulière pour les diasporas. Toute chose qui a amené de nombreux Etats à revoir leurs politiques publiques et à les prendre en compte (Saidou, 2021).

Dans un contexte marqué par la montée de l'autoritarisme au Burkina Faso, avec la remise en cause des libertés fondamentales, les diasporas, à travers la participation au débat dans le cyber-espace, s'affirment de plus en plus comme une des forces contestataires.

Cette communication s'inscrit dans les débats en cours sur la participation politique des diasporas, en mettant la focale sur la contribution des activistes de la diaspora burkinabè dans l'espace public au moment où on assiste à un verrouillage des libertés d'expression et de presse au Burkina Faso.

L'approche théorique privilégiée sera celle des usages et gratifications en montrant comment ces immigrés utilisent les réseaux sociaux numériques pour exprimer leurs opinions et dénoncer le pouvoir. Nous tenterons aussi de comprendre comment ces activistes impactent le débat public national.

Pour ce qui concerne la méthodologie, nous ferons une analyse de contenu des publications faites par une dizaine d'activistes de la diaspora burkinabè vivants en France, en Côte-d'Ivoire, au Sénégal et aux Etats-Unis. Ils sont actifs dans le débat public et beaucoup suivis avec plus de 300 000 followers pour certains. Ces publications portent sur leur appréciation de la situation politique au Burkina Faso.

MONTOYA, NATHALIE (Université Paris Cité, France)

Between an Exceptional Experience and a Turning Point. How Does Participation in the DEMOS Project Figure in the Biographical Accounts of Young French People from Disadvantaged Neighbourhoods?

Between an exceptional experience and a turning point. How does participation in the DEMOS project figure in the biographical accounts of young French people from disadvantaged neighbourhoods?

This presentation aims to analyse the role of participation in the DEMOS project (Dispositif d'Enseignement Musicale et Orchestrale à vocation sociale) in the biographical accounts of the young people who participated. The DEMOS project offers orchestral music courses for three years to children from neighbourhoods or localities that are far away (geographically or symbolically) from public cultural institutions. Based on 60 interviews with young people who participated in the project, almost ten years after their participation, the aim of this presentation is twofold. On the one hand, it is to analyse the place occupied by the DEMOS project and the discovery of classical music in the biographical accounts of young people. On the other hand, it is to reflect on the biographical interview as a tool for evaluating the effect of public policies aimed at cultural democratisation.

RC37-617.4

DANSILIO, FLORENCIA* (Universidad de la República, Uruguay)

Les Musiciens-Producteurs De La Scène Indépendante De Montevideo : Resémantiser L'idée Du Professionnel Pour Faire Face Au Travail Incertain

Cette communication présente les premiers résultats d'une enquête en cours menée à Montevideo entre 2022 et 2023. Elle s'appuie d'une part sur 10 entretiens biographiques réalisés auprès d'acteurs clés de la production musicale indépendante de la ville et d'autre part sur l'observation du travail de studio dans quatre home-studios locaux. Ainsi, en suivant les trajectoires artistiques des «musiciens producteurs» interrogés et en étudiant leur travail en studio, l'objectif est d'analyser les caractéristiques de ce type de travail artistique sous l'hypothèse qu'il occupe un rôle médiateur fondamental, tant dans le passage de l'idée artistique à la réalisation du projet, que dans l'enregistrement puis la mise à disposition de la musique sur les plateformes d'écoute. D'autre part, elle problématise les limites de la professionnalisation en termes économiques dans un marché restreint, comme celui des pays à faible démographie, ainsi que les stratégies pratiques et symboliques pour re-sémantiser l'idée de musicien professionnel.

DAOUDI, KHALID* (UMI FLSH MEKNES, Morocco)

Les Représentations Sociales De La Maladie Psychique Chez Les Jeunes De La Stigmatisation Sociale à L'exclusion Sociale

Il a été constaté que les phénomènes liés à la maladie et à la santé sont parmi les plus vifs aujourd'hui. Ils se posent au croisement des préoccupations individuelles et d'un débat public. Il en résulte que les travaux sociologiques permettent de mieux comprendre la complexité de ce sujet. C'est ce à quoi s'emploie, avec une ampleur inédite. S'appuyant sur une vaste revue de littérature, proposant une lecture sociologique éclairante et structurée, pour penser autrement (social). Il semble que les études portant sur l'expérience de la maladie psychique, des problématiques de stigmatisation et les facteurs sociaux affectant le recours aux soins, ont entraîné la sociologie dans une critique de la médecine psychiatrique. Dans notre problématique, nous demanderons quelles sont les représentations sociales constituées sur la maladie psychique? La maladie psychique est-elle perçue comme une conduite déviante et stigmatisée? La société apparaît-elle comme protectrice ou rejetant vis-à-vis des malades? Notre hypothèse suppose que la stigmatisation sociale inculquée dans les représentations sociales, puisse conduire à l'exclusion sociale du patient psychique, et l'empêche de s'intégrer dans la société et de remplir pleinement son rôle. Pour l'outil méthodologique l'étude suggérerait de choisir l'entretien libre individuel comme technique adéquate de collecte des données. Il peut rendre compte du plus profond, du plus intime de l'expérience; il atteint l'implicite et l'inconscient. Pour notre échantillon, la population interrogée se compose de malades psychiques (atteints de névroses hystériques, phobiques, obsessionnelles...) au nombre de 80, suivis au sein de l'hôpital Ibn Al Hassan. Basé sur un guide d'entretien. L'objectif de l'étude constituera une valeur scientifique, cherchera le sens et la réalité sociale de la maladie psychique. Il constituera aussi une référence, un outil de réflexion pour les chercheurs afin d'affronter, en connaissance de cause, les mutations du monde de la médecine et de la maladie psychique.

DAR, ANANDINI* (BML Munjal University, India)

Reflections on Childhood Studies Research in Context of India

In this paper, I reflect upon how the study of children and childhood in postcolonial contexts need to be examined through two moves: one, a transdisciplinary inquiry, and two, as produced in context of 'everyday urban brutalisms.' For the first movement, I briefly discuss the trajectory of research studies on children as located largely within departments of education and child development, or in publications by child welfare organizations in the context of India, resulting in an apolitical examination of children's lives and conditions. Based on recent emerging critical scholarship, I consider a need to move beyond these disciplinary and institutionally guided inquiries and to study children and their conditions as a transdisciplinary endeavor. The second move I argue requires examining children's lives in India as configured through what Achille Mbembe (2024) calls 'brutalism' that affects our current planetary condition, straddling the local, regional, national and global in their 'everyday urban' socialities (Dar & Kannan, 2023). This is to suggest that for the field to be critical and relevant, beckons a reading of children's lives as political, imbricated in the everyday negotiations, relationalities, and contestations of their needs and aspirations that are made both legible and precarious through processes of modernity, neocoloniality, capital, development, and

dehumanisation. Hence, to study children and their futures as situated in the everyday urban encounters of violence and resistance, implies also a study of larger structures of governance, systems and institutions, and a study of collective futures as well. This kind of examination is central to a trans-disciplinary agenda, contributing towards imagining a distinctive trajectory of childhood studies research.

Intersecting Gender and Sanitation: Progress and Challenges in Achieving Sustainable Development Goals in Karnataka, India

The paper discusses gender and sanitation in Karnataka, India, in the context of the Sustainable Development Goals. It compares progress made so far with what was targeted under goal 5, which is related to gender equality, and goal 6, which is about clean water and sanitation. Data from the National Family Health Survey-5 underlined improvements in urban sanitation with blunt disparities in rural sanitation. Improved sanitation coverage stands at 56.7% of households in India, while 83.2% indicate the same for urban areas. In the country, menstrual hygiene management, in conjunction with female literacy, has witnessed some policy strides, with the situation that remains bleak including aspects of gender-based violence and limited . Grounded in theoretical tenets of feminism, intersectionality, and social constructionism, this paper has described such complex dynamics and offers suggestions for rural sanitation infrastructure, promotes gender-sensitive policy, strengthens education and sensitization programs, improves data collection and monitoring, encourages community participation, and supports victims of gender-based violence. The results warrant an ecological and intersectional approach to sustainable and equitable development in Karnataka.

DAS, VAIVAB* (Indian Institute of Technology Delhi, India)

Limits of Democracy - Transgender Women As Political Candidates in India

The world's largest democracy, provides a running epithet on how the sexual organisation of society maintains control over political representations in organised democracies.

This paper draws from my fieldwork in Telangana, a state in South India, covering the participation of transgender women in local elections. I examine the lived experiences and political strategies (campaigns, political messaging, vote canvassing rallies) of two transgender political candidates in the Telangana State Assembly Election 2024 to unpack how historically persecuted social groups navigate political representation vis-a-vis elections, while carrying the baggage of social misrepresentation. What moral panics does the idea of political representation of transgender persons bear on various constitutive social institutions of a nation-state? Can political representation become a mode of murderous assimilation? What is the story of political representation beyond western geographies? Are some guiding questions for this paper.

The emerging ethnographic insights from Telangana help us to cast a reflexive gaze on the limits of our political systems (democracy). How Repressive State Apparatuses (like the state, police, and bureaucracy) and Ideological State Apparatuses (like religious institutions, family, media and political parties) interact to maintain heterosexuality as compulsory criteria to enter the public domain of politics. And, how representational politics can be a reproduction of the carcerality of gender.

This paper is a part of my broader thesis on *the politics of the body and the body of politics* in India.

DAUKSAITE, LAURA* (Vilnius University, Lithuania)

Materialist and Postmaterialist Value Trajectories and Its Determining Factors in the First Post-Communist Generation

This study uses Inglehart's theory of materialist-postmaterialist value change to analyse the values of the first post-communist generation (born 1991-2000) in 24 post-communist countries. The analysis of the data from the World and European Values Surveys of 1990-1993, 1999-2004, 2008-2014 and 2017-2022 waves leads to the conclusion that in the majority of post-communist countries, post-materialist values have become stronger in the first post-communist generation compared to those of older generations. This trend is particularly pronounced in the economically more advantaged post-communist countries, but is also observed in the economically disadvantaged ones. Although postmaterialist values are increasing among the first post-

communist generation in the most economically advantaged post-communist countries, materialist values are also increasing. The study also examines the impact of religious factors on the materialist-postmaterialist value change in the first post-communist generation.

DAUKSAITE, LAURA* (Vilnius University, Lithuania)

Trajectories of the Value (re)Production in the First Post-Communist Generation

This research investigates how the materialist and postmaterialist value trajectories of the first post-communist generation evolved following the collapse of the USSR and its economic and societal structures. To address this question, biographical interviews were conducted with young people born between 1991 and 2000 from Lithuania, the Czech Republic, Albania, North Macedonia, Georgia, and Kyrgyzstan. The findings challenge R. Inglehart's theory of value change, offering new insights into post-communist societies. The results indicate that despite the increase in postmaterialist values, the materialist values still prevail in the first post-communist generation in more economically advantaged post-communist countries, driven by the intergenerational (re)production of insecurity and a shifting purpose of materialist values. On the other hand, in the first post-communist generation of economically disadvantaged post-communist countries, only postmaterialist values are increasing, supported by strong social ties, the centrality of family, community cohesion, and a heightened sense of belonging. The study questions the progressiveness of the linear modernisation path towards individualism and its impact on the overall wellbeing of society.

The Role of the Media Narratives in the Relationship between Migrations and Shrinking Areas in Europe

European shrinking areas, understood as regions in demographic and economic decline in Europe (ESPON, 2017), have played a significant role in the last decade in hosting voluntary and forced migrations (Membretti *et al.*, 2017). Meanwhile, despite the fact that statistics describe this phenomenon as structural, with both positive and negative effects on territories and their inhabitants (Kordel *et al.*, 2018), in media narratives and political discourses an emergency frame usually prevails (Musarò and Parmiggiani, 2022), portraying migrants as marginalised people and shrinking areas as marginalised (Moralli *et al.*, 2023). Aiming to provide a deeper analysis of the nexus between migration and shrinking areas in the European social imaginary, the article focuses on the representation of shrinking areas and migration in mainstream media, the types of discourses produced by these contexts and the effects of these representations at the local scale. The analysis will be based on qualitative data collected within the framework of the European Horizon 2020 project "Welcoming Spaces" and regarding the role of discourses and representations in the creation of welcoming spaces in shrinking areas. The analysis of the data reveals that both the phenomena of reception and welcoming in shrinking areas are "marginal" topics in the media and public debate compared to the preponderant topic of migration as a security or humanitarian problem, often related to borders and frontiers. Furthermore, the media often reproduce a utilitarian framing of the migration phenomenon in contexts focused on repopulation and socio-territorial regeneration. At the same time, shifting the analysis beyond the general perception of 'remoteness' and 'closeness' of this nexus, it also emerges how a representation of the phenomenon produced by the communities that inhabit it is more effective in positively influencing ongoing local initiatives and processes and deconstructing superficial and stereotypical territorial and social imaginaries.

DAWES, ANTONIA (King's College London, United Kingdom)

CARLOS, SYLVIE* (King's College London, United Kingdom)

Public Institutions and Impartiality in Times of Endless War

This paper addresses the pressing issue of institutional impartiality and political neutrality, a topic that has come to the forefront in recent statements by public bodies in the UK and globally. Drawing from two distinct research projects—one with Black audio professionals at the BBC, and the other with Black doctoral students at an elite British university—we critically examine how these institutions navigate neutrality amidst ongoing global crises.

Our analysis situates the claim of impartiality within the larger geopolitical context, particularly in relation to the global Black Lives Matter movement and the violence against Palestinians in Gaza, which some consider to be acts

of plausible genocide. Universities, while introducing race- and nationality-specific studentships, have avoided publicly condemning this violence, citing a need for neutrality. Meanwhile, public media organizations like the BBC uphold impartiality as an editorial cornerstone, yet use selective, often biased, language when covering different ethnic and national groups.

This paper delves into the lived experiences of individuals working and studying in these spaces, examining how they are personally affected by these contradictory institutional stances. By foregrounding their reflections, we challenge the premise of “neutrality” as an excuse to remain silent in the face of injustice. Their stories raise difficult questions about the limits of freedom of speech, the harm caused by this supposed impartiality, and the ethical responsibility of public institutions. Ultimately, we aim to explore whether these institutions can change—and if so, how—so that they serve not just as neutral entities, but as platforms for justice and equality in an increasingly polarized world.

This nuanced approach positions our work as essential to understanding the stakes of institutional silence in times of global crisis.

Challenges and Benefits in Policy and Research for the Measurement of Femicide

Feminist social and legal scholars, including sociologists, have contributed significantly to discussions about the conceptualization and measurement of femicide in efforts to achieve legal justice for victims and their families. At least 22 countries now include femicide (or feminicide in some regions) in legislation and penal/criminal codes, with varying definitions and indicators used to identify these types of killings in law. Drawing from the United Nations statistical framework and related research, this presentation will examine emerging sex/gender related motives and indicators of femicide (SGRMs), including their accessibility and applicability across countries, including Canada, to identify challenges and benefits posed for research and policy in other countries and regions.

DAYAL, SURBHI* (Indian Institute of Management Indore, India)

Challenging Gender Norms in a Conventional Society: An Analysis of Women Headed Household in a Patriarchal Context

The present paper traces the journey of Kanjar women during different periods of history. Kanjars are a traditional dancing

and singing community and one of the most ancient tribes in India. This study will begin with a schematic account of the

pre-colonial, colonial, and post-colonial history of the Kanjar community. This broad-brush account will necessarily be insufficient, as one does not have either the expertise or historical material to write a comprehensive history of the community. The paper will use official, academic, and popular sources about this past. Gaps and contested versions are therefore a part of this story. This is particularly important, because community members have their own popular history of their past. Through time, the Kanjar community has lived on the periphery of society, earning a livelihood through patronage of their entertaining arts. In the last three decades, Kanjar women have discovered a new source of income through the dance bars of Mumbai, which has transformed their lives completely. To conclude, the paper throws light on various historical junctures that shook the lives of Kanjar women. It further highlights the manner in which they fought for survival and exercised their power at least expected social sites. The central research method used is multisited ethnography due to the peripatetic nature of Kanjars work.

DAYAL, SURBHI* (Indian Institute of Management Indore, India)

Creating School Pathways for Children of Marginalised Communities in Primary Schools in India

This paper focuses on the school pathways of students who come from marginalized communities in rural India. The Constitution of India incorporated specific provisions to guarantee socioeconomic justice, equal opportunity, and dignity for marginalized groups. India implemented the Right to Education in the year 2010, keeping this objective in consideration. However, many marginalised communities remain excluded and unable

to consistently participate in educational institutions. In this context, this research examines the educational status of children in denotified tribes in northern India. During the colonial period in India, the Criminal Tribes Act of 1871 designated certain denotified tribes as criminal tribes. Despite their removal from the Criminal Tribes list after independence, the stigma of their past criminal status continues to haunt them. The communities under focus are not only denotified tribes, but they also engage in sex work as their traditional occupation, with their livelihood heavily reliant on the earnings from sex work. For them, education is the most dispensable entity due to the discrimination faced by them and monotonous curriculum. This paper explores the various sociocultural factors that contribute to the high dropout rate and disinterest in education among the denotified tribes in primary schools. This paper delves into the discrimination that these de-notified tribes face at the school, community, and administration levels, which keeps them away from educational institutions and create social hierarchies. The paper further delves into an experimental model that shows how students from diverse backgrounds can cultivate their interest in education and effectively engage in schools through innovative learning methods. It discusses how the community's involvement can have a meaningful impact on the schools. The study employs ethnography as its central research method. Specifically, the method included participant observation, and in-depth interviews.

Exploring and Developing Societal Agency By Teaching Futures Studies: Experiences and Theoretical Reflections

Over the last decades, programmatic statements have called for the early integration of social perspectives in technology development and design projects. Programmes like user-driven research, ELSA (ethical, legal, and social aspects of emerging sciences) or, more recently, Responsible Research and Innovation were formulated and integrated as principles of funding schemes. They met with an increasing interest on behalf of new generations of engineering students who had been exposed to discursive environments where ideas like sustainability, green transformation, and even de-growth were widely discussed.

In search of a suitable didactical approach for this audience, we found that experimenting with different techniques of Futures Studies resulted in increased perceptions of agency (in particular, self-efficacy) among students and a perspective on the future that is neither utopian nor dystopian. In the proposed paper, we report experiences from two different teaching environments: an elective course at a European university of technology and an international gathering of European engineering students. In these environments, we used (a) a political Role-Playing Game that had students simulate the course of controversies around a particular technological innovation and (b) the technique of Futures Wheels to have students identify potential consequences of technological innovations.

The skill to systematically think about possible futures recently gained prominence as Futures Literacy (cf. Miller 2018; de Boer et al. 2018), promoted particularly by UNESCO. Reflecting on the aforementioned teaching experiences, we formulate a fundamental critique of this concept. While we did find positive effects on students' perception of agency, we also found effects that contradict the theories and assumptions underpinning Futures Literacy. We conclude that Futures Literacy does not translate into a useful scientific concept. We also emphasize that the Futures Literacy framework may implicitly continue a “modernization” agenda that stands in stark contrast to current social and political thought.

Shared Images of the Future: Sociological Alternatives to Predicting Individual Preferences

Despite its prominence in planning, the idea that decision-makers could derive guidance from predicting individual preferences engenders severe methodological problems. To mention only two of them: First, people have a hard time imagining what they want if they do not see it, and they have an

even harder time imagining their lives in the future. Second, trying to derive guidance from preferences of individuals neglects the creative potential of collectively shared images of the future.

Methods of futures studies have tapped into this potential. They depart from asking people to imagine *themselves* in the future and to think about *their* individual future preferences. Instead these methods have asked participants – be it citizens or experts – to abstract from their own lives and positions and think about how a future that matches the needs of people like them should look like. They engage in a participatory co-construction of images of the future. They thus take seriously what sociological classics, ranging from W. I. Thomas to Robert K. Merton and beyond, had to say about the power of collective mental images.

The proposed paper comparatively discusses two methods that scholars in futures studies used for the co-creation of such images, the Futures Workshop and Participatory Systems Mapping. Based on our experiences in three research projects, we discuss similarities and differences between these two methods. In particular, we emphasize how the two methods require participants to go beyond their immediate needs and preferences without neglecting their own position, its leanings and biases. This approach invites them to think about a future that they think would be a valuable world to live in—for many, if not most people. Thus, co-creating images of the future delivers a sound foundation for reasonable decision-making without the theoretical and methodological pitfalls of assessing future preferences.

Self-Legitimization of Economic Elites through Private Art Museums

This paper focuses on private contemporary art museums and their role for elite (self)legitimation strategies. In light of escalating wealth concentration and growing economic disparities around the globe, there is a critical imperative for sociologists to scrutinize the formation and reproduction of contemporary elites, including the social mechanisms and narratives that enable elite groups to signal legitimacy for their resources, status, and power. In this context, private museums have long been seen as a particularly pertinent vehicle for elite status and legitimation. Our paper shows how private art museums serve their founders as platforms for elite (self)legitimation claims and strategies. To that end, we leverage a global database of private contemporary art museums which we established in 2023. This database contains, inter alia, "mission statements" and "about the founder" information of 408 private art museums in 60 countries which are published via their official websites. By examining these discursive (online) representations through topic modeling, we aim to draw out the diverse (self)legitimizing tactics employed by museum founders across different cultural and national contexts. We argue that private art museums offer fertile grounds for elites to construct narratives of legitimacy. Their founders channel various legitimation strategies through their engagement with the arts. These legitimation repertoires can range from presenting founders as engaged creative actors who invigorate the field of contemporary art, as social patrons who invest in local heritage and community education, or simply as particularly refined, cultured elites with both 'good taste' and extensive economic resources. By discussing these different and partly overlapping repertoires, the paper not only advances debates of how the rise of private art museums might contribute to wider elite-making processes today, but in so doing also deepens our understanding of the breadth and scope of contemporary elite's legitimation strategies as such.

The Cultural Meaning of Arts Patronage: Narrative and Hermeneutics As Theoretical Possibility

Drawing from interviews with private museum founders published in the media and in the context of the project "The Return of the Medici? The Global Rise of Private Museums for Contemporary Art", this paper adopts a cultural sociology perspective to investigate the meanings attached to private patronage. Building on previous investigations about the self-legitimation of elites through private art museums (Andrade Silva, Velthuis, and Kolbe, forthcoming), we explore digital techniques such as text mining and topic modeling aiming to contribute to 1) theoretical approaches to changing meaning, narratives and social roles in contemporary society, 2) possible methodologies to understand cultural texts, focusing on the potential of digital models (Baranowski and Cichocki 2021; DiMaggio, Nag, and Blei 2013)

and 3) the relationship between the actors meaning-making and material conditions, especially considering the increasing gap in economic inequality in the last decades.

DE ANGELIS, MARIA CHIARA* (Link Campus University, Italy)
CAPOGNA, STEFANIA (Link Campus University, Italy)

Digital Transformation at University. Fostering E-Leadership in Higher Education

Digital technologies have the potential to serve as a primary vehicle for delivering high-quality education in alignment with the mission and vision of educational institutions. Consequently, the adoption and integration of digital technologies are regarded as a form of educational innovation, necessitating changes across pedagogical, technological, and organizational dimensions. These changes entail a comprehensive review of teaching paradigms, organizational structures, management processes, assessment methodologies, communication systems, and the competencies framework for teaching and learning processes (Johnson et al., 2016; EE.UU., 2013).

How can digital technology actually be able to guarantee inclusion, equality and opportunities for all in the HE sectors? How does this promise materialize in the governance and e-leadership of our universities? The ECOLHE action research project aims to address this question through an exploratory and comparative analysis of six case studies (Yin, 2003; Zack, 2006) from different European countries: Finland, Greece, Ireland, Italy, and Spain.

The project is inspired by the principle of "circularity" between theory and empirical research (Lewin, 1946; Merton, 1967; Merton, 200; Ardigò, 1988) and utilizes a mixed method approach to understand the similarities and differences between the cases, while exploring the study's subject through a replication strategy. The research looked at how each university developed its strategic approaches to digitalization.

Specifically, we analyzed the individual policies of each unit of analysis using the translation perspective (Callon, 1986/a; Latour 1987). We continuously reinterpreted and adapted prevailing perspectives at the macro and meso levels. The goal was to understand the organizational processes involved in university digital transformation, focusing on guidelines, best practices, standards, and constraints, and provide valuable suggestions for policymakers, decision makers, and academic bodies.

DE ANGELIS, MARIA CHIARA* (Link Campus University, Italy)

Driving Social Innovation: Bridging Civic Society and Higher Education for Global Sustainable Development

Engaging Higher Education Institutions (HEIs) with the community and developing synergies between the academic and social fields is increasingly crucial for enhancing citizens' understanding and commitment, ensuring long-term positive effects. According to the *Quadruple Helix Model (QH)*, this involvement helps in sharing knowledge and skills, as well as increasing community participation (Vargiu, 2014; Miller et al., 2018; Carayannis & Campbell, 2019).

The UP2YOU action research co-founded by the Erasmus+ Program, aims to bridge the gap between academic knowledge and the skills needed by Civic Society Organizations (CSOs), involving six European countries: Spain, Italy, Macedonia, Turkey, France and Cyprus.

The project seeks to build more resilient and equitable communities where diverse stakeholders collaborate to identify and address problems. It begins with a community-based study (Lewin, 1946; Stenhouse, 1975; Argyris et al., 1985; Hopkins, 2002) and aims to co-design a Community Leadership Program that focuses on integrating academic knowledge with the pursuit of Sustainable Development Goals (SDGs) and community organizing.

The community building program involved HEIs, local institutions, companies, and CSOs and emphasizes bottom-up approaches, social generativity, and community organizing methodologies, all informed by a *situational leadership approach* (Ayman, 2004).

The process included a desk analysis phase, focus groups, an online survey, and co-design sessions to identify, validate, and adapt the main learning outcomes. The primary findings were analyzed and discussed with the involved community, employing a comparative perspective and following the action research self-reflective circle (Carr, 2006; Kemmis & McTaggart, 2000).

The co-building program is currently in its pilot phase, aiming to empower a specific group of beneficiaries comprising 25 teachers, 150 students, and 90 CSO volunteers/professionals. Our work delves into the findings and gather insights acquired from implementing the QH model in the field.

DE AQUINO, ELIS* (Freie Universität Berlin, Germany)

The Compassionate Turn: Embodying a Transformative Sociology for a World in Crisis

In a world haunted by a “polycrisis” (Morin and Kern 1999) - a tangle of ecological, economic, social, political, and existential disruptions - the cultivation of compassion emerges as a vital task for sociology. Amidst deepening inequalities, rising authoritarianism, wars, genocides, and environmental collapse, it may seem as if compassion and love have ceased to exist. I argue that a “compassionate turn” is urgently needed in sociology, one attuned to suffering, committed to justice, and grounded in the embodied experiences of marginalized communities.

Drawing on Buddhist principles, feminist (Collins, 1986; Haraway, 1995) and decolonial epistemologies, I propose compassion as an ethico-political foundation for sociological research and writing. More than an emotion, compassion signifies a radical openness to the other (Lévinas, 2006), a recognition of shared precarity (Butler, 2004, 2012), and a dedication to social justice. It demands reimagining knowledge production, challenging academic discourses on neutrality, and embracing research as an affective, corporeal encounter.

Grounded in my fieldwork with working-class university students in Rio de Janeiro's peripheries, I reflect on the challenges and potentials of enacting compassion in sociological practice. Discussions of reflexivity often remain superficial, failing to grapple with how research transforms us. Cultivating awareness of these embodied, intersubjective dimensions can bridge the researcher-researched gap, fostering a more engaged sociology.

A compassionate approach shapes both the content and form of sociological writing, engendering new aesthetic and narrative experimentations. It interrogates compassion's articulation with core sociological notions like social justice, equality, and human rights. Centering compassion in our work is essential for reimagining sociology and reconstructing a world ravaged by indifference and injustice.

The “compassionate turn” is a call to embody a transformative sociology that embraces affect, vulnerability, and care as vital resources for understanding and changing the world.

Contributions of 'Extensão' to Activating the Public Role of Universities in Brazil: A Discussion of the Experiences of the Territorial Justice Laboratory at Federal University of ABC

Brazilian experiences of university “Extensão” activities, engaged research, and the application of popular education principles in the relationship between academics and members of non-academic groups, particularly those from the periphery and working-class communities, have been the subject of much interest and debate in recent years.

The participation of academics from Brazilian universities in “Extensão”, which in practice translates into technical, social, or legal advice to vulnerable communities and popular movements, has been noteworthy. However, many academics remain distant from this work beyond institutional walls.

Since 1911, there have been reports of higher education institutions developing university extension activities in Brazil in São Paulo, Rio de Janeiro, and other cities. Its provision in legislation dates back to 1931 through a decree that established the foundations of the Brazilian university system (PAULA, 2013).

In Brazil, extension played a considerable role in the efforts for social transformation in the context of the struggles for structural reforms that took place between 1950 and 1964, in a context of intense political and social mobilizations with national strikes, the emergence of movements fighting for agrarian reform, the campaign for the nationalization of oil, the banner of health reform and the campaign for the defense of public schools, which coincided with the important literacy movement centered on the method developed by Professor Freire.

University extension activities and collaborative research involving peripheral and grassroots communities have developed powerfully in recent decades, despite the numerous challenges and obstacles.

This paper aims to present and reflect on practical experiences in which academics from the Federal University of ABC in the metropolitan region of São Paulo, organized in the Territorial Justice Laboratory, have exercised through activism, advisory and technical collaboration with housing struggle movements and popular communities, using principles of Popular Education and Action Research (FREIRE 1983, BORDA, 2016).

The Environmental Injustice of e-Waste Regulation in India: Invisibilisation of Exploitation and Pollution in the Less Controlled Margins and Peripheries

Using the case of electronic waste management in India, this contribution looks at the relocation of unauthorised recycling activities to less controlled areas, making the exploitation of the workers who dismantle them a little more invisible. Given the globalised nature of the sector, e-waste trade has been widely described as a global environmental injustice akin to ‘garbage imperialism’. As a counterpoint to these discourses, other analyses have revealed the existence of highly dynamic informal repair and recycling economies in the South. This is where the ambivalence of this controversial sector lies, between rejection by some and opportunity for others. Following on from this work, we propose to rethink electronic waste flows at a more intra-regional level in order to examine the new socio-spatial forms of injustice, and opportunities, that latest developments in the regulation of the recycling sector are creating. In India, the introduction of reforms designed by and for the large groups in the organised sector has rendered the work of a multitude of small informal labour illegal. This artisanal recycling, based on low operating costs, has nevertheless not stopped but is now spreading clandestinely to the outskirts of the cities, and especially in rural areas, where a workforce that can be bent to mercy is available and where health controls are virtually non-existent, creating new local forms of environmental injustice.

DE BOTTON, LENA* (Univeristy of Barcelona, Spain)

CAMPDEPADROS, ROGER (University of Girona, Spain)

ALVAREZ GUERRERO, GARAZI (University of the Basque Country, Spain)

Being an Upstander: Overcoming Hate Speech in Social Media

There has been an increase in hate speech, most of it motivated by ethnic or religious discrimination. In this sense, social media has been one of the channels used for its propagation. Despite this, scientific literature has paid much less attention to the discourse that tries to stop it with the counter-narrative. Thus, from the European projects ALRECO and REALUP (CERV 2018-2021/ 2021-2024) and within the framework of the X network, different intensities of hate speech have been identified, including in the analysis the presence of Upstander Speech (referring to the narrative that responds to or anticipates hate speech). At first, an algorithm was designed, and a machine learning process was followed to automatically identify X messages by intensities in hate speech, the existing alternative and affected social groups. In a second part, it was relevant to identify the most effective strategies of Upstander speech. Thus, the results indicate that strengthening the online (and offline) community is a key element to counteract the effects of ‘isolating violence’ and thus a greater positioning of users against hate speech. On the other hand, the analysis through Social Media Analytics (SMA) has revealed that the messages with the greatest impact (with more Retweets and more likes) are those that contain scientific evidence and use attractive and non-violent language. The analysis reveals some strategies and actions that increase the effectiveness and number of Upstander messages, thus favoring greater visibility of Upstander speech. This has a positive impact on the reduction of hate speech by offering information to those followers of hate who show doubts, but also by not normalizing hate speech it invites upstander positioning in favor of the victims.

African Immigrants in São Paulo and Their Efforts Towards a New Vision of Africa

This communication deals with the arrival of African immigrants to São Paulo in the 21st century and their role as cultural mediators between Africa and Brazil. In the 21st century there was an intensification in the migration of people from African nations, mostly black, who differed from the white migratory waves of the 20th century. In our research, we came into contact with many, usually young people, who came from territories that had been colonized by Portugal and France. The interviewed subjects explained during the oral narratives the experienced problems in their displacements and how they had overcome the difficulties. They work in different activities and came from: Congo (1), Niger (2) and Angola (9). They talk about the difficulties for the integration in São Paulo; combating stereotypes and racism; establishing exchanges with other Africans and Brazilians; assisting those who come from Africa; pursuit of individual growth; establishing exchanges with other Africans and Brazilians; spiritual dimension; production of knowledge and understanding by Africans themselves. The interviewees strongly emphasize the significance of African individuals themselves engaging in the construction of history and knowledge, drawing upon their own reflections and experiences. It is important to emphasize how it highlights the significance of the African immigrant's role in enhancing the understanding of what Africa represents. As we conducted numerous interviews, we observed a dimension of the migratory process that we had not initially considered: the shift from African countries to the new reality of São Paulo meant, for many, the necessity to scrutinize how they were perceived. Consequently, they began engaging in activities aimed at demystifying the constructed images of Africans while simultaneously combating prejudices in this new context. They manifested themselves as cultural mediators between these two contexts.

RC25-412.2

DE CABO Y MOREDA, ANNELIE* (University of Gothenburg, Sweden)

A Subject out of Reach? a Feminist Gaze on the Language in Correctional Treatment Program for Women in the Swedish Penitentiary Bureaucracy

Sweden's punitive turn expressed in a rapid expansion of the prison system is now said to be sensitive to its previous gender blindness and currently treating all offenders on equal terms. Hence, women's part of the Swedish prison population increases as women's involvement in gang related crimes has attracted a media attention alerting the police on female offenders. Still, women continue to constitute the 'deviant other' when engaging in crime as men was never really in focus as a gendered category when incarcerated. Given that most women are detained in prisons designed for men, a feminist gaze on Goffman's theorizing on total institutions reveals prisons as spaces in which society's contradictions about gendered expectations for female offenders become amplified. This is especially true when scrutinizing the language embedded in correctional treatment programs (CTP) in female prisons. Framed within a neoliberal logic, the programs require prison officials to adhere to a masculine coded 'manual fidelity' as they are guided by fixed administrative principles designed to operate in a purported gender-neutral bureaucracy.

Considering language as social practices organizing gendered relations, the focus of this paper is the rhetorical resources female prison officials working with women use to negotiate or alter, what they perceive as conflicting objectives posed by CTP. Based on interviews with correctional staff at two women's prisons in Sweden, the findings suggest staff perceiving their work at the bottom of the gendered justice hierarchy. The CTP was criticized for its administrative insensitivity, silencing inmate's own narrative as well as fostering of masculinity even though the staff worked in gendered segregated prisons. However, to counteract these malpractices, more administrative instruments were requested. The staff's reliance on the CPT they simultaneously criticized, is analyzed as an expression of an inherent but expressionless patriarchal routine rendering both inmates and staff 'speechless'.

Socio-Ecological Class Conflicts between Status Preservation and Societal Change

Amidst the climate crisis, conflicts between workers of emission-intensive industries and parts of climate movements become manifest currently. Frequently a class-conscious workforce faces opposite political claims compared to the climate change movement (Bose et al. 2019). One side claims the preservation of jobs, the other an ecological future. Conflicts like that can be understood as socio-ecological transformation conflicts, whose forms have by now been empirically studied for different industries (Tullius & Wolf 2022; Dörre et al. 2023; Schaupp 2024). Yet, there are partially alliances that connect both issues successfully. A prominent example is the 2020 founded campaign #Wir fahren zusammen (#we run together) – a cooperation between the union Ver.di, the climate movement Fridays for Future and workers of public transportation. The alliance demands an expansion of public transportation as well as improved working conditions (Liebig et al. 2022).

This research is related to prior studies, which investigated the attitudes of climate activists and workers as well as their divergences (Hassan-Beik 2022; Lucht & Liebig 2023), yet follows a reconstructive research logic in form of a mixed-methods design and asks, how public transportation workers in an East German region interpret the climate change as well as climate policies. Furthermore, it investigates attitudes towards the cooperation between climate activists and unions as well as experienced respectively anticipated conflicts. To answer the research question(s), we develop reconstructions of field specific orientation patterns on the basis of biographical interviews. Based on this, we conduct a survey to show how these patterns spread across the aimed region as well as how they correspond with sociostructural and other characteristics.

The investigation aims to recognize which potentials and challenges regarding the ongoing socio-ecological transformation exist and to discuss what they mean with respect to the practice of political actors as unions or parties.

Comparing the Inclusiveness of Social Policy in-Kind Benefits: Using the Family Model Method across Six Cases.

Achieving a comprehensive, comparative cross-national understanding of the inclusiveness of social policies aimed at addressing social inequalities has proven notoriously difficult. These difficulties stem from both conceptual and methodological challenges. While there is broad agreement that more universal policies—those with fewer eligibility criteria—tend to be more inclusive, there is no consensus on the definition of social policy inclusiveness. Further, although prior research has successfully compared the inclusiveness of cash benefits across countries by calculating net disposable income (e.g., Van Haver et al. 2024), the cross-sectional analysis of in-kind benefits has proven much more challenging. We argue that the family model method is a valuable tool for comparing and measuring the inclusiveness of social services, as it provides a standardised unit of analysis that allows for clear identification of both cross-national and within-national differences in the inclusiveness of in-kind benefits. We create various family types, differing in key aspects such as the number and age of children, employment status, number of earners, administrative status, and the incidence of disability, to address the common question in social policies: 'who gets what?'. More specifically, this article compares how the right to access childcare benefits changes in Belgium, Croatia, Poland, Spain, Sweden, and the UK when contrasting the 'traditional' nuclear dual-earner cohabiting family with two children to other family types, such as families with migratory status or single-parent households. We anticipate that our contribution will pave the way for future researchers to explore comparative aspects of a range of social policies using this tool. However, we acknowledge the limitations of our study, as this is an exploratory experiment aimed at identifying the usefulness of the family model method for comparing the inclusiveness of childcare and services across EU nations when adjusting for different family types, rather than contributing new empirical knowledge.

The Different Approaches to Disasters and the Role of the Social Sciences: The Case of Brumadinho

This article proposes treating the collapse of the tailings dam in Brumadinho, Minas Gerais, Brazil, as a socially constructed disaster. The natural, applied and social sciences are based on different theoretical approaches, resulting in multiple ways of understanding and dealing with disaster situations. The article discusses the main differences between these strands, and looks at the case of Brumadinho, which suffered a rupture in 2019. The contrast between the approaches, together with a more detailed analysis of the circumstances surrounding the event, suggest that the perspective of socially constructed disasters has the potential to offer adequate analytical tools for understanding the case. Therefore, we suggest that knowledge of the socio-economic, demographic and political characteristics of the region are fundamental to explaining the triggering of the events observed. The great influence of the mining companies, the porosity of the public sector to the demands of this group, the lack of necessary investment by the supervisory bodies and the low capacity for political mobilization to prevent the installation of dams on the part of the populations present in these localities are some examples. We conclude with a call for more in-depth analysis of the case, which consistently takes into account the broader social context that permeates the occurrence of disasters.

El Espacio Social De Las Decisiones Judiciales: Análisis De Los Expedientes Del Servicio Social De Menores De São Paulo (1935-1953)

El presente estudio busca investigar el espacio social de las decisiones judiciales que involucran los casos de menores bajo la tutela del Servicio Social de Menores (SSM) de São Paulo entre 1935 y 1953, examinando las múltiples dimensiones que influyen en la toma de decisiones de los jueces. Se utilizó el método de Análisis de Correspondencias Múltiples (ACM) para examinar la asociación entre las variables categóricas elaboradas a partir de la codificación de los expedientes. Los datos utilizados fueron obtenidos de una muestra de 1415 expedientes, que contienen información personal de los menores, sus familias y el historial de su involucramiento con el sistema de protección y justicia. A partir del análisis, el objetivo fue captar las oposiciones y tensiones que estructuran estas decisiones sobre la internación, derivación o desvinculación del menor del SSM. Los resultados señalan un campo dinámico de oposiciones, donde múltiples factores, además de los propiamente jurídicos —es decir, sociales, institucionales, económicos, morales y familiares— son movilizados para justificar diferentes intervenciones, desempeñando un papel estructurante en las decisiones de los jueces sobre el destino de los menores. Estos hallazgos corroboran la hipótesis de que la delincuencia infantil y las intervenciones institucionales pueden estar fuertemente vinculadas a la percepción judicial sobre la estructura familiar y el grado de control social sobre el menor. Estos resultados contribuyen, por lo tanto, a la comprensión de cómo el sistema de justicia trataba el abandono y la delincuencia infantil a mediados del siglo XX y cómo las instituciones sociales y familiares influían en las decisiones sobre la rehabilitación o el castigo de los menores.

Food Justice and Alternative Organizations: A Comparative Case Study of Local Food Hubs in France and the United States

This paper presents a part of a PhD research in progress, on alternative food systems or food justice initiatives in France and the United States. It compares different cases of organizations that develop local food hubs (or *circuits courts* in French), which can be defined as direct-to-consumer food chains with no to one intermediary. In a socio-historical approach, we look at emerging devices of such food hubs, which according to our current hypothesis combine platform technology with social inclusion and justice narratives. Our research is set at the crossroads between the sociology of food,

that of organizations and the study of alternative food systems, with a view to shed light on their nature as well as their emancipatory and transformative potential with respect to dominant economic and food systems. The cases we compare are organizations that are based on various cooperative, nonprofit and commons models, who all share the objective of serving groups that can be defined as marginalized, based on criteria pertaining to class, age, race and gender (e.g. BIPOC or *black, indigenous and people of color*, women, LGBTQ+, young, small farmers, popular classes). We center our focus on the intermediation work that is conducted by diverse actors within these food hubs, which comprises of organizational, outreach, institutional and advocacy work. We thus also explore the institutional contexts in which such work is framed and being undertaken, in particular those that pertain to the funding of such organizations (i.e. market and/or State institutions). Overall, the aim is to document, through a focus on work, the political and social struggles that permeate such local food hub organizations. Finally, we would also like to discuss community research within such organizations, since our first findings show that it is a central issue for them in terms of economic (in)dependence and emancipation.

DE CLER, ANNE-PAULINE* (Lise, CNAM-CNRS, France)

Nurturing Food Commons. on the Economic and Political Challenges of Scaling Local Food Systems through Cooperative Platforms, a Comparative Case Study.

Based on an ongoing PhD research in progress, this communication explores the economic and political challenges of scaling local food systems through cooperative and open-source platforms, specifically examining the case of the Open Food Network (OFN) in France and the United States. The global food system is dominated by corporate giants, leading to exploitative labor practices and monopolistic control. In contrast, alternative food systems like the OFN strive to offer a more democratic and sustainable model through digital platforms that facilitate short food supply chains, connecting producers directly with consumers.

The research highlights the economic and social potentials of these platforms, particularly their ability to empower small-scale producers by providing more market control, reducing intermediaries, and fostering collaboration among local food hubs. However, it also points out significant challenges, including financial viability, competition with corporate platforms, and the difficulties in achieving social inclusion and scalability without replicating capitalist market dynamics.

Through a comparative case study of the French and US branches of OFN, the paper investigates how these platforms navigate the economic and regulatory environments, and the extent to which they can scale without compromising their core cooperative values. The study also explores the role of digital infrastructures, like data interoperability, in supporting scaling efforts while promoting food justice and sustainability.

Overall, the paper advocates for a critical rethinking of how scaling can be achieved in alternative food systems. It critically engages with notions such as scaling up, deep and out, and offers to broaden the notion of scaling to social inclusion and justice considerations. It argues that true transformation requires not only technological innovation but also political support, financial resilience, and a commitment to democratizing food access, ensuring that marginalized communities reclaim these food systems.

DE CUYPER, ANNELEEN* (Antwerp University, Afghanistan)
VAN DE VELDE, SARAH (University of Antwerp, Belgium)

Measuring Sexual Harassment in Higher Education: A Case Study of a Belgian University.

Higher education has been a focal point of research on sexual harassment for decades. Although studies have found this issue to be prevalent across universities, younger women from ethnic and/or sexual minority groups and university members belonging to medical disciplines are considered to be the most vulnerable (e.g. Bull & Page, 2019; Geldolf et al. 2021; Jussen et al. 2019; Lipinsky et al. 2022). Prevalence rates, however, differ greatly, ranging from 11 to 73 percent for women and 3 to 26 percent for men (Bondestam & Lundqvist, 2020). A potential cause of this remarkable disparity is methodology selection. One of the most widely used instruments to measure sexual harassment prevalence in higher education has been (an adapted version of) the Sexual Experiences Questionnaire developed by Fitzgerald et al. in 1988. This questionnaire enquires about respondents' experiences with a predefined list of potentially transgressive behaviors. In general, prevalence rates measured by the SEQ are much higher than when a single-item question about self-labeled exposure to sexual harassment is employed. Through the lens of hermeneutical injustice, this study aims to examine whether this so-

called 'prevalence gap' might be higher for certain social groups in higher education as opposed to others. A questionnaire including both a list of sexually transgressive behaviors and a single-item question was completed by a total of 2240 students and staff at a Belgian University. Preliminary results indicate that staff who were male, migrant, non-tenured and/or older than 50 were more likely to have inconsistent responses to both prevalence measures than their respective female, Belgian, tenured and younger colleagues. No significant differences were found in the student sample. These results indicate a discrepancy between how certain social groups within the University's staff understand sexual harassment and how the research field measures it, risking a distorted representation of the issue.

Can AI Predict Individual Values and Attitudes? an Experimental Comparison

The growing impact of artificial intelligence (AI) on decision-making processes has sparked a lively debate in the social sciences, focusing on the integration of social and cultural competencies into machine behavior (Aragona et al., 2023). This discourse delves into the challenges and implications of enabling AI systems to comprehend and replicate the nuances of human values, ethics, and cultural contexts (Floridi & Cowls, 2022). Our study positions itself within this debate, exploring the capacity of AI to predict individual orientations regarding values and attitudes based exclusively on socio-demographic information.

Through an experiment that compares the responses provided by AI on attitude scales with data collected from questionnaires administered to real individuals, we aim to verify whether AI can identify with the reference social category and accurately reproduce its patterns of values and opinions. To accomplish this we compare two distinct datasets. The first dataset is composed of approximately one thousand responses generated by an AI language model, which was given initial social categories to simulate the responses of individuals belonging to specific socio-demographic groups. The second dataset consists of real responses collected through questionnaires administered to actual individuals. Matching between the two datasets is performed based on socio-demographic information, allowing a direct comparison between the AI's responses and those of humans.

Without predefined expected results, we find ourselves at an interpretative crossroads: if a significant alignment emerges between the AI's responses and those of human beings, this may indicate that AI possesses a predictive capacity that could—provocatively—open up the possibility of using it in sociological practice. Conversely, a misalignment between the datasets could be equally interesting, as such discrepancies might stem from intrinsic biases in the AI model or in the data collection methods, raising critical questions about the validity and reliability of AI technologies in complex human contexts.

Vision from a Sociological Perspective: Lifestyle, Stress, and Visual Health

Vision has been extensively studied within the medical sciences, yet mainstream literature often tends to overlook the psychosocial factors that shape visual health. This communication explores the interplay between vision, lifestyle, and stress from a sociological perspective, emphasizing how social and environmental factors influence visual well-being. In recent years, research has increasingly highlighted the role of lifestyle changes—such as prolonged screen time, reduced outdoor activities, and shifts in daily routines—on the prevalence of vision issues like digital eye strain and myopia. This communication situates vision not merely as a biological function but as a socially embedded experience, influenced by contemporary work habits, leisure activities, and the pressures of modern life.

By focusing on the sociocultural dimensions of vision, this communication aims to provide a broader understanding of the challenges that individuals face in maintaining visual health in the context of modern living. It also explores the role of social awareness and education in fostering healthier vision habits, advocating for a more integrated approach to vision care that

acknowledges the influence of lifestyle and social environment on visual experiences. This perspective invites a shift from a purely clinical view of vision towards one that recognises the complex interactions between social life, stress, and the ways in which individuals see and perceive their world.

With a posture of clinical sociology and at the intersection of multiple disciplines this communication will pledge for the figure of the Vision Coach as a professional supporting habits and lifestyle to promote optimal vision for life to participate in the solution of the silent worldwide pandemic of vision issues while encouraging the empowerment of individuals as actors in their own socially situated story.

Framing Disputes over Gender in Brazil: Images and Disinformation in the Digital Age

At the intersection of Image Sociology and Digital Sociology, this article offers a reflection on the role of audiovisual media in shaping perceptions of reality and its implications in the debate on disinformation. We revisit Goffman's concept of framing to analyze how, in a mediated and hyper-connected society, images are produced, recovered, and re-signified in political disputes over gender issues, intertwined with other social differences, starting from the 2010s. Through an analysis of YouTube videos produced by political agents, we examine how opposition to gender perspectives is constructed through a media framing that reframes the struggle for sexual and reproductive rights as a threat to families and children. The analysis focuses on understanding the use of videos produced or reworked by these actors, emphasizing their constructive dimension through technical resources such as editing and montage, which create meaning by connecting narrative and visual elements. By studying a specific historical instance of political conflict in Brazil, this article aims to contribute to the understanding of the role of audiovisual media in the political dissemination of disinformation.

Farming for Whom? Agribusiness, Colonial Legacies, and the Case for Agroecology in Brazil

In 2022, Brazil was the second main food exporter in the world while at the same time, it remains on the hunger map. Looking deeper into it, most of the agricultural land in Brazil is in the hands of a minority of large-scale farmers who produce for exportation, and 77% of the population is fed by family farming. The root of this paradox is the export-led extractivist food production system of large-scale farmers in Brazil, which has its roots in an unequal regime of land ownership dating back from the carving of land during the colonization of Latin America.

The current model has negative environmental and social consequences on the population, and it is also opposed by the largest social movement in Latin America: the Landless Workers's Movement (MST). They advocate for land reform, which would redistribute large estates to landless families, enabling them to practice agroecological farming. MST challenges the *latifundio* logic of land exploitation for exportation and profit, as it prioritizes feeding the country's population with non-destructive family farming.

With this article, we shed light on the export-led model of *latifundios* as a colonial legacy that perpetuates the status of Brazil as a commodity frontier and recontextualize the decolonial nature of the MST movement and its sweeping program of land reform. By incorporating a socio-metabolic framework, with a mix of Critical Discourse Analysis and Socioeconomic Data Analysis, we ensure that this research both looks into the discourse being used in the country and into the official socioeconomic data.

Our main finding is that addressing the structural land distribution inequalities rooted in Brazil's colonial past is not only key to overcoming the paradox of being a top food exporter while facing widespread hunger but also crucial for building a more equitable and resilient food system.

Navigating Institutional Rules: A Biographical Exploration of Social Science Research Practices and Trajectories

This abstract explores how institutional rules in social science research shape the practices and career trajectories of researchers, contributing to the discourse on precarity in academic careers. Drawing on a mixed-methods approach combining in-depth interviews and biographical grids, the study examines the experiences of 24 mid-career and senior researchers from psychology, sociology, and anthropology across universities in Madrid and Barcelona.

The research adopts a biographical perspective to analyze how researchers navigate and negotiate various institutional rules, including publication requirements, ethical guidelines, and evaluation criteria. By focusing on the lived experiences of researchers, the study reveals the dynamic ways in which precarity manifests throughout academic careers, from early-stage pressures to publish to ongoing challenges in securing funding and achieving work-life balance.

The findings highlight how institutional rules can both enable and constrain research practices, leading to diverse coping strategies and career paths. The study also explores how researchers internalize and resist these rules, shaping their professional identities and research agendas. By tracing individual trajectories, the paper illuminates the cumulative effects of institutional pressures on researchers' sense of security and autonomy.

This biographical approach to studying precarity in academia offers nuanced insights into the subjective experiences of researchers and the long-term impacts of institutional rules on career development. The paper contributes to the broader discussion on precarity in the era of permacrisis by demonstrating how academic careers are increasingly characterized by uncertainty, risk, and the need for constant adaptation to changing institutional demands.

Precarious Housing, Precarious Belonging: Using Arts-Based Participatory Methods to Explore the Experiences and Perspectives of Young Asylum Seekers Living in Temporary Accommodation.

This paper discusses the role of arts-based methods, including drawings, paintings and graphic visualisations, to produce respectful and representative narratives of young asylum seekers and their experiences of temporary housing in the UK. I adopt a feminist postcolonial framework to discuss the extent to which dominant power dynamics and traditional research practices lead to misrepresentation of the experiences of racialised individuals. I consider the vulnerability of racialised individuals, such as young asylum seekers, to epistemic injustices, particularly hermeneutic injustices. These arise due to cross-cultural terminological and semantical gaps, which are exacerbated by experiencing marginalisation and unequal access to interpretive resources. I hypothesise that such injustices can be navigated using participatory arts-based methods such as visual methods, allowing individuals to share their experiences directly and not only mediated through researchers' interpretations.

DE LA FUENTE, EDUARDO* (University of South Australia, Australia)

Blue, Brown, Orange, Grey: On the Colours of Migrant Affective Landscapes

Kurt H. Wolff begins *Surrender and Catch* by describing a place, the mundane practices he undertook there, the colour of the sky and the fact the wind made him return home prematurely. Even though the sun was shining on his back! Why begin a book on sociology as theory and method thus? Is it a detour into "autobiography" or an act of "regression"? Wolff replies that all sociological meaning is "made by a person"; one with a body; and that the feelings evoked by sun, wind, sky and landscape can be mobilised "in the effort to understand what ha[s] happened". He labels the process one of "accepting" or "surrendering" to the aesthetic and emotional qualities of an experience. But what of migrants and their affective sensescape? Is the surrender Wolff speaks of unitary or fragmentary, fixed or in motion? In this paper, rather than aiming for objective validity or causal explanations I attempt to think about the dynamic and relational qualities of migrant affective landscapes by focusing on the landscapes that have shaped my own biography and my sense of what is picturesque, affords wellbeing and allows me to feel at home. Having just commemorated the 50th anniversary of my family migrating to Sydney, Australia from Montevideo, Uruguay, I use family photographs, reflective writing pieces and other cultural artefacts to think about the colours of the water, the landscape and the cities involved. Throughout I will organise my consideration of the colours in question – namely, blue, brown, orange and grey – via the prism of Wolff's claim: "the effort to regain meaning... inevitably is made by a person". And, in my own case, the person reconstructing meaning became a cultural sociologist interested in the textures of the world.

DE LA FUENTE, EDUARDO* (University of South Australia, Australia)

Stony Urban Surfaces: A Built Environment at the Intersection of Architectural and Landscape Sociology

In recent years, the presenter has been engaging in a writing project based on the concept of the "textural gaze" - where such a gaze focuses on the shape, feel, intensity, rhythm and elemental processes associated with surface-textures. One of the empirical case studies is Sydney Sandstone, the characteristic lithic form of the Sydney region in Australia. The stone formed some 270-million years ago and is present in everything from the region's geology and topography through to Aboriginal rock carvings, British colonial architecture and, because it was so prevalent, features in most forms of urban infrastructure. Although, many sandstone buildings were knocked down during the heyday of international modernism, stone never disappeared as an urban surface and is seen by poets, psychogeographers, heritage experts and urban planners with providing Sydney with a distinctive urban and landscape feel. "Postcard" and wealthy Sydney are predicated on the materialities and aesthetics of the stone; and even Australia's elite universities are called "the sandstones" due to the stone's role in early university Gothic architecture. The stone cuts across the human and nonhuman, the aesthetic and the functional, in ways that unsettle distinctions between architecture, landscape, infrastructure, geological time and the temporalities of colonization/modernity. Elemental forces also contribute by discolouring urban surfaces in a fascinating entanglement of what Plessner terms the "organic" and the "inorganic"; as well as what Mostafavi and Leatherbarrow term the "weathering" of built things. I use Sydney sandstone and its urban-aesthetic associations to pose the question of whether - from the vantagepoint of materiality and meaning - architectural and landscape sociology are really as distinct as we sometimes think?

DE LA PEÑA, HIRAM* (Universidad Nacional Autónoma de México, Mexico)

Historical Transformations in Conservative Arguments on Child Protection in Mexico: From the 19th to the 21st Century

This study examines the evolution of conservative arguments on child protection in Mexico from the 19th to the 21st century, emphasizing how these arguments have been adopted and adapted by contemporary neoconservative and pro-life movements. Through an analysis of archival documents, including period newspapers and testimonies, the study traces how conservative policies and discourses have shaped the subjectivity of their adherents over time. The emphasis is on the centrality of the disputes over secularized sexual education.

The paper highlights the fundamental role of the Catholic Church and later, interreligious civil society, in constructing and perpetuating these arguments. From papal encyclicals that have guided the Church's stance to the influence of these teachings on public policy and social movements, it demonstrates how child protection has been a central axis in the resistance against progressive policies.

Theoretically, the study is framed within the analysis of disputes over meaning, exploring how these ideological conflicts have influenced the configuration of conservative and neoconservative subjectivities. The research reveals that, although historical and social contexts have changed, the instrumentalization of childhood as a symbol of purity and vulnerability remains a powerful resource in conservative discourse.

This analysis not only provides a deep understanding of the history of conservative arguments in Mexico but also offers a critical perspective on their resonance and relevance in the contemporary global landscape.

The Work of Latin American Women on Digital Platforms: Same Wine in a New Glass

The analysis of dimensions of gender equality in the platform economy: equality of access and participation as well as perspectives from the roles of large technology companies on the effects of platform work on women's lives. Understanding the digital paradigm from a gender perspective necessarily calls for intersectionality to become equality based on several premises. The first is to evaluate the market relationships that shape domestic relationships since the economy depends on them. The second is the fact that we are not

all equally unequal. This means that the digital paradigm is the new face of global inequality where there are many opportunities, many possibilities of generating resources with job opportunities, but flexible work that - in theory - empowers us and opens paths, mainly for women "flexiexploitation". The third is to start from the notion that, for 25 years of increasing inequality, these are the same 25 years in which the digital revolution has been consolidating. Technology is not gender neutral; The gender dynamics embedded in technology maintain the patriarchal system that oppresses women. New gender-based practices on digital work platforms serve as a control mechanism. Many of these studies have historically been motivated by a desire for political change, but the economic consequences of such gender inequalities remain understudied. Articulating approaches and tools between political theory and feminist economics allows gender equality policies to open a path for political feminist analysis. These approaches and frameworks that put theory into the practice of public policies contribute to giving direction to social problems, as well as necessary demands, mainly those where gender equity and social justice are important, that is, gender policies and Tools must be put in place to ensure the feminist pattern in the platform economy

Developing a Youth Labour Market Index for South Africa at the Sub-National Level

Assessing the labour market situation for young people is a critical area of research that has attracted the attention of scholars and policymakers globally. However, understanding the complexity of the labour market for youth, particularly in developing countries, requires a comprehensive, multidimensional approach. We address this need by developing a Youth Labour Market Index for South Africa (SA YLMI). The study builds on the work of international scholars as Renold et al. (2014), Pusterla (2015) and Kudrzycki et al. (2020), allowing us, to some degree, to benchmark our findings against those for a group of lower-middle and low-income countries. The SA YLMI incorporates ten indicators that capture the unique, South African youth labour market situation. Drawing on nationally representative data from the Quarterly Labour Force Survey for the period 2013-2023, the YLMI provides a nuanced understanding of the labour market for 15-35-year-olds, and allows for the identification of variations in the labour market's functionality for various subgroups of the youth population. The study reveals alarmingly low YLMI scores for South Africa and its nine provinces, which have decreased over time. Significant gender and rural-urban disparities in the distribution of the YLMI scores are observed. Further analysis reveals that the working conditions and education dimensions are the primary contributors to the low YLMI score, highlighting their role as major drivers of the underperforming youth labour market. Specifically, relative unemployment, skills mismatch, vulnerable employment, and lack of secondary education are key contributors to the low scores, with vulnerable employment particularly critical. These results highlight that the South African labour market for youth is highly dysfunctional. A defunct labour market entrenches inequality by contributing to further unemployment, pointing to an urgent need for policymakers to address the situation.

Exploring Socioeconomic and Gender Inequalities in Physical Activity and Wellbeing: A Qualitative Study of Female Adolescents in Low-SES Neighborhoods

Objective. To understand the inequalities in physical activity habits among low socioeconomic status (SES) neighbourhoods female adolescents and their determinants.

Methodology. Using a qualitative approach, the following steps were followed, create a Z index using indicators such as single-parent households, unemployment rate, migrant rate...etc. The neighbourhoods were stratified into three socioeconomic tertiles: low, medium and high. Once the neighbourhoods were ranked from the highest to the lowest level, 5 neighbourhoods of each city were selected according to their socio-economic status. In order to obtain adolescents' insights, educational centres in the selected neighbourhoods were studied; 36 semi-structured interviews were

carried out, of which 12 were with key informants. Furthermore, 24 focus groups were conducted, 6 with students, 12 with teachers and 6 with parents. The techniques were applied proportionally.

Results. Gender and SES have been highlighted as key determining physical activity habits. Female students show a lower participation in formal sports and physical activity in compared to the male counterparts. Furthermore, in lower SES areas insecurity is a deterrent to public space appropriation, as they tend to avoid places such as parks, poorly-light streets or sport yards and hence, the spend less time outdoors which implies less physical activity. Furthermore, lower SES adolescents are clearly less involved in physical activity as they are not able to afford safe spaces to practice formal or informal physical activity. In addition to previous realities, the lack of peer and societal support suffered by the adolescents discourage them from obtaining equal access to wellbeing and to cities themselves

Conclusions. Gender inequality and insecurity are key deterring adolescents' use of the public realm, decreasing physical activity involvement, negatively affecting their health and wellbeing. A holistic approach is needed to enable all adolescents to freely enjoy the public realm in order to obtain a healthier society.

DE LEON MARCOS, AXEL* (University of Salamanca - Sociology and Communication Department, Spain)

Methodological Rigor in Qualitative Research: How Appropriate Population Selection Enables the Generation of Multiple Qualitative Analysis.

Objective. Generate a Method for Selecting Neighborhoods in Population Health Studies.

Methods. An approach was initiated by creating a Z index using indicators such as the prevalence of single parent households, unemployment rates, and migrant populations, among others. This index facilitated the stratification of neighbourhoods into three socioeconomic tertiles: low, medium, and high. Selecting five neighbourhoods from each city based on their socioeconomic status provided a diverse contextual backdrop for the research. Focusing on educational centres within these neighbourhoods, qualitative data were collected through 36 semi structured interviews, including 12 with key informants who offered in depth insights into community dynamics. Additionally, 24 focus groups were conducted—6 with students, 12 with teachers, and 6 with parents—to capture a wide spectrum of perspectives and experiences. To analyse the data and deepen the understanding of participants' lived experiences and the meanings they ascribe to them, an interpretative/constructivist paradigm within a case study design was adopted, utilizing grounded theory for data analysis. Furthermore, to expedite and enhance the analysis, Atlas.ti 23 software was employed to create codes and categories using axial coding.

Results: The flexibility of this qualitative approach not only enriched the data collected but also provided multiple angles from which to analyse complex social phenomena. By engaging various stakeholders, we obtained nuanced information on topics determining adolescents' behaviour such as economic hardships, gender inequality, insecurity, lack of infrastructure or peer pressure. This multifaceted dataset empowers researchers to address different research questions and themes, leading to the development of several scientific papers, each focusing on specific aspects uncovered during the study.

Conclusion: Utilizing municipalities' databases for precise population selection enhances qualitative studies, enabling comprehensive exploration of complex such as health topics and producing robust research outputs.

Punishment or Privilege? Non-Prosecution Agreements in the Case of January 8th

This paper discusses the Non-Prosecution Agreement (ANPP), a legal instrument recently implemented in Brazil. This study aims to analyze how this instrument has been applied in the case of the anti-democratic acts that occurred on January 8, 2024, in the capital of the country, Brasília. For this

purpose, an investigation was conducted on the Supreme Federal Court (STF) website, focusing on the final judgments of individuals involved in democratic acts. The results were recorded in a database, highlighting the case number, the court reporter, the date of judgment, as well as information about the defendant, lawyers, the charges, and the sentence imposed. Additionally, the study analyzes how the main journalistic outlets in the country portray the legal proceedings of the accused by collecting news articles published in news portals. Ultimately, the aim is to assess to what extent the legal instrument favors (or not) certain defendants based on the analysis of case data and the individuals involved, providing significant insights into the Brazilian legal system.

The Fallout of Citizen Security in Democratic Countries: Police, Authoritarianism, and Hard-on Crime Policies

In recent years, many democratic countries have witnessed a hardening of public security policies marked by a resurgence of authoritarian practices, increased use of force, and heightened police lethality. This paper critically examines the implications of these trends for citizen security and democratic governance. We explore the relationship between the intensification of "hard on crime" policies and the erosion of civil liberties. Our discussion focuses on the rise of authoritarian tactics within democratic frameworks, analyzing how these practices undermine the rule of law and public trust in security institutions. We examine the increase in police brutality and the abuse of force, with emphasis on how these actions disproportionately impact marginalized communities. The paper also analyses racial and ethnic bias towards suspects, the effects of ongoing "war on drugs" policies, and their consequences, such as the rise of incarceration among young black men, Latinos, and women from socially deprived neighborhoods. Furthermore, we investigate the role of political rhetoric and media in shaping public perceptions and policies related to crime and security, highlighting the consequences of punitive security measures on social cohesion and justice. Finally, the paper addresses these practices' legal and ethical challenges, offering insights into potential reforms and alternative approaches to citizen security that uphold democratic principles.

DE MUNCK, JEAN* (Catholic University of Louvain, Belgium)

PARDOEN, LÉONARD (Catholic University of Louvain, France)

Right to Housing, Capacities of the Subject and Conventions of Legality

In the era of the Anthropocene, both evictions and migrations as well as the conditions of the real estate market endanger the right to housing. The exercise of this right is threatened from all sides, even in European social states where homeless people proliferate and where a serious crisis of access to real estate ownership is raging. It calls for the coordination of a sociological perspective on its implementation with a reformulation of the bases of the universal right to housing from the point of view of a theory of justice.

In Social States, the right to housing has been constitutionalized. Different mechanisms allow people to access the right. However, this right is very indeterminate. It is therefore the subject of an iterative interpretation that allows legal intermediaries to define it in multiple implementation mechanisms: Courts, tribunals, negotiations and political pressure, real estate agencies, individualized mediations. In a recent sociological inquiry in Belgium, we identified three conventions of legality allowing the implementation of rights. These conventions build not justice, but daily legality.

This sociological description of the legal implementation of rights cannot suffice to account for the evaluation from the point of view of justice. On the normative level, the question is that of the conception of the subject of law on the one hand, of housing on the other. From the perspective of the Capability Approach, housing appears as a resource or as a factor of conversion. A home is a condition for becoming capable of being oneself and acting freely in the world. A fundamental moral right, it takes the place of the right to property in Kant's legal philosophy : it consists of having a place to live in the world.

DE NEVI, VALENTINA* (Università degli Studi di Genova, Italy)

Psychological Platforms between Self-Care and Self-Branding

The presentation aims to investigate online platforms offering psychological services. It can identify in the key word 'comfort' the red thread that holds together the various digital services. In the specific case of therapy this has different consequences depending on the interface considered, that of the User-Patient or that of the User-Professional. Generally speaking, this "comfort" is realized by making therapy friendly, tailored on the patient and affordable. This fact causes the necessary rapprochement to bridge the gap of the screen, but it also expresses the desire to satisfy every need of the patient-consumer, who can have therapy whenever and wherever they want. Despite the declared intention of these platforms is a democratisation of mental health and a breaking down of the taboos associated with it, a void in the national health system is being capitalised on, and certain trends are being nurtured, including those towards self-diagnosis and the general medicalisation of life. On the other side of the interface, that one of therapist, something similar happens because it's the difficulty of young professionals in succeeding in their profession to be exploited. With online therapy it's indeed no longer necessary renting an office. Also, within the infrastructure of the platform both bureaucratic and self-branding skills are not required, because with a fee paid on each therapy session, this kind of work is done by the infrastructure itself. This twofold analysis provides a clear view of what kind of therapy and what idea of mental health the psychological platforms want to convey: instead of normalise therapy, they capitalise on it, enabling professionals to dialogue with consumers of a service rather than patients, and accepting a fee per session not exactly respectful of the profession they claim to value. Summarizing, a trivialization of both therapeutic practise and the therapist's profession is happening.

DE OLIVEIRA ROYER, LUCIANA* (University of Sao Paulo, Brazil)

FILOCOMO, GIUSEPE (University of Sao Paulo, Brazil)

MITUSHIMA, THIAGO (University of Sao Paulo, Brazil)

Public Standards in Housing in the Municipality of São Paulo, Brazil

São Paulo is the most populous city in Latin America and one of the largest cities in the world. The city has a Human Development Index of 0.80 as of 2010 and accounts for circa 10% of Brazil's GDP, which is one of the largest economies in the world. However, these figures do not reflect the housing needs and challenges faced by the city. A significant percentage of the population living in favelas resides in environmentally fragile areas. Approximately 392,000 households were located in favelas in 2021, according to the City Hall. Around 589,000 vacant households were identified in 2022, according to the Brazilian national census. The apparent dissonance between wealth and urban poverty, in the context of climate change, raises questions about the public spending and the production of policies from a multi-level perspective. The financial resources available for local housing policies come from various sources. Through Brazilian federalism, taxes collected at the national and state levels can finance local housing spending. Local governments can also generate revenue and fund local housing policies. Currently, the local financing of São Paulo's housing policies relies on two public funds: the Urban Development Fund and the Fund for Environmental Sanitation and Infrastructure. Revenue from the first fund mainly comes from the collection of financial counterparts linked to the right to build, stemming from the intense formal real estate activity in the city. The regulation of this financial counterpart dates back to 2002, but it has only recently shown effective results. The revenue from the second fund is based on a concession contract for environmental sanitation services in the city. The analysis of public spending and housing policy suggests that state actions are conditioned by how public revenue is generated, posing challenges to addressing the housing needs of the poorest.

DE PIETRO, CÉLIA* (Université de Lausanne, Switzerland)

Accueillir l'Incohérence Dans Les Luttres Climatiques : Enquête Au Cœur De La Culture d'Extinction Rébellion

Si nos pratiques individuelles quotidiennes ont un impact non-négligeable sur notre environnement, les modifier ne constituerait pas, en soi, une action suffisante pour renverser le cours du dérèglement climatique actuel. Cette vision, souvent partagée par les groupes militants pour le climat, est celle défendue par le mouvement Extinction Rebellion (XR). Ce dernier prône plutôt

de dénoncer un « système délétère » par des actions de désobéissance civile à l'échelle mondiale et de dépasser ainsi une vision en termes de responsabilité individuelle qu'XR rattache à une dissimulation mensongère du problème.

Forte d'une ethnographie immersive (Favret-Saada, 1977 ; 1990) de quatre ans dans le groupe lausannois du mouvement, je compte présenter dans le cadre de ma communication comment les « rebelles » d'XR mettent en place une culture « XRienne » leur permettant de faire coexister leur engagement en faveur du climat et leurs habitudes quotidiennes. Cette coexistence n'est pourtant pas évidente : peut-on lutter en faveur de l'environnement en consommant de la viande ? En prenant l'avion ? En possédant un smartphone ? etc. XR met alors en place des règles strictes encadrant les possibilités d'évaluation des comportements individuels sous la formalité « No blame, no shame ». L'incohérence devient ainsi un élément ordinaire de la lutte. Ces règles peuvent cependant rencontrer des formes de résistance quand le désalignement émotionnel (Hochschild, 2003 ; 2017[1983] ; Kaufmann, 2020) est trop important.

Dans ma communication, je partagerai des comptes rendus d'observations issus de mon ethnographie d'XR. Les cas que je présenterai permettront une réflexion sur les enquêtes (Dewey, 1993[1938]) menées par les rebelles d'XR quant à *ce qui compte vraiment* pour le mouvement, l'essence et le sens même de leur lutte, ainsi que sur les moments de désajustements internes et externes au groupe révélant des tensions quant aux valeurs et pratiques pouvant coexister.

DE SARIO, BEPPE* (Fondazione Giuseppe Di Vittorio, Italy)

CARRERA, FRANCESCA (Fondazione Giuseppe Di Vittorio, Italy)

Discrimination and Intersectionality: Trade Union's Action in Europe

Intersectionality is a conceptual tool that has proven useful in recognizing the different and interconnected dimensions of discrimination. Instead of relying solely on single-axis frameworks, which focus on one dimension of discrimination at a time (e.g. gender or ethnicity or disability), an intersectional approach caters to the multidimensionality of people's experiences and identities.

From activism to academic studies, the intersectional approach has spread in the principles of various international conventions and treaties and in policy field at national and supranational level (e.g. EU), with references to "multiple" or intersectional discriminations.

Trade unions are important non-discrimination actors that make an essential contribution in this area. They typically have well-organised structures and TU representatives in the workplace can draw on the expertise of their sectoral and national officers and offices, giving them the potential to effect wider societal change through their non discrimination actions.

An intersectional approach to trade union action must consider three levels: collective bargaining and social dialogue (collective agreements, participation in the decision making process, etc.), internal organization and "inclusive" trade unions (training of trade unionists and cultural change, participation of workers and minority groups, etc.), the relationship with civil society organizations (awareness campaigns, community organizing, etc.).

The paper is based on the results of the TUAD project (Trade Unions against Discrimination), promoted by ETUC (European Trade Union Confederation), carried out by interviews, learning seminars and analysis of "good practices". It presents a theoretical reflection on the relationship between intersectionality and trade union action at different levels (collective bargaining and industrial relations, advocacy for social rights, relations with public institutions) and an analysis of specific trade union action to detect and combat intersectional discrimination in the workplace and in society.

DE SOUZA, FLAVIA ALESSANDRA* (Universidade Estadual de Santa Cruz, Brazil)

Virgínia Leone Bicudo (1910-2003): The Plurivalence of a Black Brazilian Woman Sociologist, Psychoanalyst and Engaged Intellectual

Virgínia Leone Bicudo (1910-2003) is at the center of this work for the excellence and vanguard of her studies of race relations in Sociology and Psychoanalysis in Brazil – despite the combined oppressions of race, gender and class, which impacted her adversely while black woman on the rise in São Paulo. Our access to Virgínia Bicudo happened through the research carried out by Janaína Damaceno, a Black woman and anthropologist whose

scientific production has consisted of understanding Virginia's life and research journey. Janaina Damaceno has paid special attention to the seminal studies of racial attitudes and color prejudice undertaken by Virginia at the Escola Livre de Sociologia e Política de São Paulo in the 1940s and 1950s, and to her pioneering and painful journey as an intellectual Black woman, constantly subjected to racist and misogynistic ploys of neglect and erasure (DAMACENO, 2010, 2013, 2014, 2016, 2020). Virgínia Bicudo also is a socially engaged intellectual, especially through the dissemination of psychoanalytic knowledge that she provided, in an inaugural way in Brazil in the 1950s, in her program on Rádio Excelsior called "O Nosso Mundo Mental", and in texts published in the newspaper Folha da Manhã. I argue that Virginia's sociological and psychoanalytic production must be studied globally, and that it can contribute in a very special way to the field of Clinical Sociology studies.

Samworth Academy, United Kingdom)

Weaving the Anticolonialism: The Origins of Quilombo Cafundá Astrogilda

The aim of this article is to conduct a historical analysis of the experiences of a Black and Mestizo peasant community situated in the interior of Rio de Janeiro, which was subsequently designated as Quilombo Cafundá Astrogilda. This article examines the impact of European colonialism on the Global South. In this context, the article addresses the struggle for land in Brazil following the abolition of slavery. It can be hypothesised that the economic subsistence strategies developed by the community members constituted an obstacle to the political and economic proposals put forth by intellectuals, politicians and members of the Brazilian state. Moreover, these strategies presented a challenge to the political project of restructuring national production, which commenced immediately following the abolition of slavery.

Speculative property capital and the Brazilian state sought to modernise the region in which the community is located. The two plans had a common objective, namely the commercialisation of land that had traditionally belonged to the local peasantry, who had developed new ways of living, working and producing. It can thus be seen that the colonial dimension of state power is manifested in economic domination. The social and cultural structure of the community constituted an obstacle to the process of civilisation and modernisation of the peripheries and rural areas of Brazil. This represented a direct challenge to the legacy of colonialism, which had been significantly reshaped by the forces of capitalist development.

The following section will present the political strategies employed by community members in order to combat the colonial projects directed at their territory. Furthermore, this article will examine the sociological aspects that anticipated the social and political organisation of the peasant community, and will also shed light on its transformation into a quilombola territory as a central element of the anti-colonial struggle.

Rethinking Legal Frameworks: Network Approaches to Law in the Age of the Anthropocene

Traditional legal models, which typically emphasize linear cause-and-effect relationships, are increasingly inadequate for addressing the global and interconnected nature of contemporary environmental challenges. This poster investigates the intersection of emerging legal frameworks and the complex nets that characterize the Anthropocene, an epoch defined by profound human impacts on Earth's ecosystems. It presents key findings from my doctoral research, which aimed to identify and analyze socio-legal scholarship proposing a shift toward more adaptive, network-based approaches to law that recognize the interdependencies between natural, human, and technological environments.

The research highlights the necessity for legal structures capable of regulating not only individual actors or isolated events but also interactions that transcend geographical, sectoral, and disciplinary boundaries. Network-based socio-legal approaches aim to develop more resilient legal frameworks that can effectively manage the non-linear processes of the Anthropocene. Addressing the multi-scalar challenges that emerge at local, national, and global levels also requires legal institutions to evolve and adapt to dynamic feedback loops. Key areas of concern include climate change, environmental degradation, and the regulation of digital networks.

Ultimately, this research points to a reimagined legal paradigm that reflects the environmental interconnectedness and supports global sustainability and justice in the face of unprecedented ecological and technological challenges.

DE VAL, SOPHIE* (University of Sheffield, United Kingdom)

Defending the Undefendable: Mould, Home, and the Body in London's Private Rented Sector

This research aims to understand how Private Rented Sector (PRS) renters in London, UK, live with mould, exploring how boundaries of home, body, and identity are (re)shaped. Domestic moulds can be pathogenic, and evidence shows it can lead to serious, and sometimes fatal, health affects – outcomes which are variegated between and within tenures. However, there is little research exploring the everyday and tenurial relations of/with mould. Housing commodification and financialisation have perforated and destabilised the fabric of homes in the PRS – from speculative building, overcrowding, 'no-fault' evictions, and under-supply of affordable homes. As such, PRS renters are more likely to live in older, converted, and lower energy performance stock – exposing renters to moisture pressures that allow mould to creep in, such as extreme weather, fuel inflation, and changing domesticity. Lives with mould (re)surface these material and semiotic discontinuities. When domestic architectures are damaged, mould breaks down the barrier between the inside and the outside environments, generating new materials; blooms, spores, and gaseous compounds that re-materialise the home. These materials can also resurface the body by 'getting under the skin' and damaging the tissue. Living with mould may also break down and (re)generate domestic-urban identities, as renters affirm/resist conditions by tolerating, remedying, rule-breaking, complaining, campaigning, abandoning, and so on. The research will explore phenomena of living with mould in the PRS by focussing on a region of London with a large and extremely competitive PRS rental market; a place where the researcher lives in close encounter with moulds, people, and buildings. Employing ethnographic historical analysis, interviews and home-tours with PRS renters, and interviews with key informants over six months, the presentation will introduce the background and methodology and explore initial findings from this study.

The Gender Impacts of Transitions: What Role for Industrial Relations? Some Reflections from the Italian Manufacturing Sector.

The success of the triple digital, ecological and demographic transition will depend on the capacity of industrial relations actors to facilitate improvements in the status of women in the labour market. Indeed, these processes of structural change are inextricably linked with gender dimensions. On the one hand, an increased presence of women in digital and green occupations can contribute to economic growth and social welfare. Furthermore, some studies have indicated that an increase in gender diversity in managerial roles and female entrepreneurship can contribute to a reduction in corporate emissions that contribute to climate change. Conversely, more favourable work-life balance policies and an extension of public care services to assist female workers can help offset the decline in birth rates, which poses a risk to the long-term stability of economies and welfare states. In a context such as that of Italy, which is characterised by high female unemployment rates and a rapidly ageing population the possibility of successfully managing the triple transition is contingent upon greater gender inclusion. Despite the fact that equal opportunity is a cross-cutting and priority goal of both the just transition and the 2030 Agenda, there is still a certain reluctance in Italy to integrate a gender and intersectional perspective into industrial relations. The primary focus of social partners is on awareness campaigns, with a particular emphasis on traditional bargaining issues such as the wage gap, the elimination of vertical and horizontal gender segregation, the enhancement of health and safety protection, and the implementation of work-life balance policies. The objective of our contribution, which is derived from the aforementioned reflections, is to analyse the actions and role of the social partners in the Italian chemical manufacturing sector. This analysis will provide insights that can inform the ongoing debate on the gender impact of the green transition.

MOSQUERA VERA, CAROLINA* (University of Warsaw, Poland)

Navigating 'Abortion Work' Under Restrictive Law: Abortion Testimonies from Honduras and Poland

This article aims to explore the affective loads and depths of reproductive labor performed under restrictive abortion laws. We undertake this assignment by examining the so-called 'abortion work' (O'Shaughnessy 2024) through testimonies written by women in Poland and Honduras. In Poland, access to abortion was severely tightened in 2020, allowing only for abortion in cases where the pregnancy is a result of a criminal act or when the woman's life or health is in danger. Whereas in Honduras, abortion has been prohibited under any circumstances since 1982.

While existing literature discusses the use of counter-narratives of abortion to advance the social decriminalization of abortion (Belfrage, Didier and Vázquez 2022; Baird and Millar 2019), more work is needed to understand the testimonies made public by women in countries where abortion is essentially impossible. Therefore, we conduct a content analysis of the testimonies from Poland and Honduras. In Poland, we explore testimonies published on the website of an organization called *Aborcjyny Dream Team*, while in Honduras, we draw from the publication *Aborto, Mi Historia*, published by the coalition Somos Muchas in 2017. These testimonies offer a human perspective on the global struggle for reproductive justice, highlighting the resilience of women while also exposing the harm caused by oppressive policies.

By analyzing the affective landscapes (Ahmed 2004) of these narratives, e.g., emotions of relief, guilt, grief or empowerment, our analysis aims to unravel how women navigate their lived experiences in light of embodied social norms and expectations, their insurgent agency and restrictive law. Furthermore, we wish to explore what kind of registers of transmission these testimonies appear to offer: may it be to break the silence about abortion, to inform others about the practical process of abortion, or, for instance, to address the need for catharsis for closure or therapeutic reasons.

RC37-JS-19.1

DEBUYST, JULES ANDRE* (Montclair State University, USA)

Performative Arts, New Critical Spaces for Inclusion in Transitional Justice

Performative arts seem to embrace the characteristics that should be those of Transitional Justice — contextual, complex, capable of integrating different temporalities, and bringing together individual and collective voices, subjective memories and a shared history. Thanks to these characteristics, they seem offer a new approach to situations of political transition, and also new perspectives on dealing with traumatic experiences.

Firstly, it can be argued that they generally allow a contextual approach to be followed. Secondly, performative arts offer new perspectives on dealing with traumatic experiences, opening up space for new forms of expression. This approach is not only beneficial to the healing process for victims, but also to the reintegration of ex-combatants. The advances in neuroscience at the end of the last century tend to establish connections between the body and the brain.

The initiatives led by María Estrada-Fuentes provide eloquent illustrations. She defines the human body as "an intersectional place for identifying relational patterns that can be considered and rehearsed towards adaptation where necessary", and movement "as a tool to better understand affective transactions and emotional states that facilitate conflict transformation processes".

Yet, the use of performative arts in Transitional Justice processes often appear counter-intuitive —if not far-fetched— in the eyes of many players in public life, given that art does not fit into the rational liberal logic of today's democratic societies. Besides, if projects using performative arts in the context of Transitional Justice processes are multiplying, methodology is often missing.

Though the casuistical approach of these spaces should be preserved, consideration ought to be given now to making them more operational and sustainable. Three avenues should be explored: that of national institutional structures, of international organizations, and of structural intervention in the workplace.

DECIMO, FRANCESCA* (University of Trento , Italy)

High Fertility in a Lowest Low-Fertility Country: How Moroccan Migrants Construct Large Families in Italy

This paper sketches the interrelationship between birth events and the migration process, basing the analysis on migrant women's life courses (50 participants) and how reproductive decisions have been positioned in their movements between Morocco and Italy. I retrace the ways these women, along with their husbands, construct their fertility choices by considering how different births happened at different moments of the family cycle. I map the process that led these couples to achieve their ideal number of children (2-3) or even larger families (4-6 children), detaching themselves from the fertility norm for Italy, a rate that is dramatically low (1.2 children per woman in 2023). The paper examines how these babies have come into the world, considering pregnancy as an experience that may intersect with planning, desire, surprise, and disappointment. I then show that high fertility is represented by them as a positive outcome that better-off families are able to afford. The well-being of these households is to be considered in relative terms, not only in a monetary sense: conjugal complicity, household harmony, and the proud awareness of having been able to develop such mobility trajectories and family cycles represent further and significant elements of fulfilment. The couples who are able to pursue this set of values, managing to establish solid, affectionate, and numerous households in migration, represent the ideal evolution of the transnational mobilization of reproductive resources that underpins the evolution of these households on the move. Understood in these terms, I argue that these fertility behaviours point to a family pattern that evolves through *consolidation* and *celebration*: while planned children are conceived within the consolidation phase of the migratory process, births after the third child are portrayed as an unexpected gift, akin to a celebration of the thriving migrant household with all its roles and rituals.

DECIMO, FRANCESCA* (University of Trento , Italy)

The Place of Families: Transnational Marriages and the Circulation of Care between Morocco and Italy

The aim of this paper is to reframe how family reproduction and transnationalism are conceived in migration studies by focusing the analysis on transnational marriages, i.e. conjugal unions between individuals of the same nationality or national origins who are connected through kinship or community ties. Specifically, I consider transnational marriages as a particularly valuable circuit of 'reverse remittance' (Mazzucato 2011) through which distant kin support individuals in making matches, celebrating the wedding, and settling the household abroad. I argue that this perspective significantly expands the scope of the "care circulation" research field, especially given that the range of processes, practices, and relationships which fuel the horizons of migrants' social reproduction from and beyond the context of origin have yet to be exhaustively explored. Based on qualitative data collected among Moroccan couples living in Italy, my analysis considers how mate selection took place across the Mediterranean, examining the nuances between marriages arranged and by choice. Most importantly, I consider how marriage events are interrelated with and triggered by transnational kinship networks. Exchange flows can be seen as multidirectional when reconstructed in this perspective, in that I show how families and relatives from countries of origin support migrants' care in the country of destination, and not only vice versa. Furthermore, by mapping the ways these family cycles unfold, I suggest that family transnationalism shapes not only relationships at a distance, but also proximity relationships and the process of emplacement. In times of increasingly enforced national borders, kinship networks play a key role – and not only as circuits enabling the circulation of care. By mobilising affective and social resources more broadly, they literally drive the relocation of spheres of social reproduction abroad, thereby extending the features of family transnationalism (Decimo 2024).

DECORTE DECORTE, JOLE* (University of Milan, Italy)

Caring for the Aging in a Familialistic Welfare System: An Autoethnographic Case Study on Dementia and Social Housing in Milan

In the contemporary landscape, the issue of population aging intersects with various social challenges, particularly in Italy, where a deeply familialistic welfare model exacerbates pressing social problems. This sociological research aims to closely analyze the life of an elderly individual suffering from dementia through the lens of microsociology. Given Italy's unique socio-economic context, understanding the dynamics of caregiving within families becomes increasingly urgent as the population ages.

The chosen methodology for this study involved an autoethnography conducted by the researcher over the course of one year in the home of an elderly woman diagnosed with dementia. This immersive approach facilitates a nuanced exploration of the daily realities faced by both the individual and her caregivers. The findings reveal critical insights into the emotional and social complexities inherent in dementia care, highlighting issues such as caregiver burden, isolation, and the limitations of existing support structures.

Furthermore, this in-depth case study is part of a broader analysis of active social housing policies in Milan, which seeks to address the housing needs of aging populations. By contextualizing the lived experiences of those affected by dementia within the framework of housing policy, this research contributes valuable perspectives to ongoing discussions regarding the efficacy of welfare systems and their capacity to support vulnerable groups.

Ultimately, the findings of this study are emblematic and hold significant implications for policy discussions. They underscore the necessity for a comprehensive reevaluation of welfare and housing policies to better accommodate the needs of aging individuals and their families, fostering a more inclusive and supportive societal framework.

DECOTEAU, CLAIRE* (University of Illinois at Chicago, USA)

Abortion Restrictions As State Violence

Since the *Dobbs v. Jackson Women's Health Organization* (2022) Supreme Court ruling in the United States, twenty-one states have introduced abortion restrictions or outright bans that reduce reproductive care access for all pregnant people. This has disproportionately impacted lower-income and racially marginalized women, who are both most likely to seek out abortions and face the greatest structural barriers to access. This paper draws on 150 interviews collected from 2024-2025 with abortion seekers from states with abortion bans who have pursued various pathways to abortion access: traveling out-of-state to clinics; using telemedicine abortion medication; self-managing abortions at home with pills from a community network. As a whole, the interviewees are socioeconomically marginalized, the large majority are women of color, and almost 2/3 have children. This paper analyzes the state violence of abortion restriction alongside the other structural violences abortion seekers face in the contemporary US, and the contradictions women experience in dealing with the state as mothers. Interviewees often expressed disgust at the fact that the state imposes restrictions on abortion access but will not offer sufficient resources for women to raise children in safe and sustained ways. Or as one woman put it, "people out here struggling and the government don't care ... but they want to tell women what to do with her body!" This paper engages with theories of reproductive justice to analyze the nexus of violent state acts that abortion seekers must navigate in the post-Dobbs era.

DECOTEAU, CLAIRE* (University of Illinois at Chicago, USA)

'I'm Trusting You with My Entire Life': Networked Pathways to Abortion Care Access

Since the *Dobbs v. Jackson Women's Health Organization* (2022) Supreme Court ruling in the United States, twenty-one states have introduced abortion restrictions or outright bans that reduce reproductive care access for all pregnant people. This has disproportionately impacted lower-income and racially marginalized women, who are both most likely to seek out abortions and face the greatest structural barriers to access. This project compares three different pathways women living in states with abortion bans use to access abortions in the post-Dobbs era: 1) using abortion funds to finance physical travel to a clinic in a state where abortions are still legal, 2) using telemedicine organizations to access medication abortion (mifepristone and misoprostol) via the mail, and 3) using abortion pills from underground community networks to self-manage abortions at home. This paper analyzes the impersonal ties that women have to trust in order to access abortions. Most women find out about their options for abortion access via social media and the internet, and a few use personal or institutional networks, but because of the heightened stigma and legal surveillance of abortions, many women pursue their options alone. And yet, they must learn to trust the impersonal network of activists and advocates who enable access (via abortion funds, telemedicine or community networks). The pregnant women I interview describe this as a "leap of faith." These are weak, impersonal and disposable ties but they are trusted because pregnant people need abortions and choose to rely on a faceless group of people they know are committed to reproductive justice. Drawing on over 150 interviews with abortion seekers, as well as abortion fund workers, clinicians, and abortion advocates, this paper situates the impersonal but trusted networks that make abortion possible within the broader sociological literature on health networks.

The Governance of the Fight Against Food Precarity in France: Actors, Levels, and Challenges.

In France, the fight against food precarity (LPA) is defined in the Social Action and Family Code (CASF) as follows: "The fight against food precarity aims to promote access to safe, diverse, good-quality and sufficient food for people facing economic or social vulnerability" (Article L266-1 of the CASF). The contemporary governance of the fight against food precarity is based on a complex system involving a range of public, private and associative actors. The various actions implemented by these actors follow the intertwining of different levels of governance, which can be European, national, regional, or local (departmental and municipal). It is important to note that the LPA is also part of an interministerial policy that encompasses various themes related to food and agriculture, the fight against poverty, and the reduction of food waste, and these themes are covered by several ministries. Thus, understanding the governance of the LPA is complicated by the overlap of different actors and levels of intervention. This presentation therefore aims to clarify the French governance model. To this end, we provide insights and knowledge around three main axes: 1 – Describe the roles and relationships between the different actors involved in the LPA. 2 – Detail the intertwining of the various levels of governance in the LPA. 3 – Present the key issues characterizing the French governance model.

A Struggle for Meaning and a Search for Consensus Around Groundwater Overexploitation in Morocco

For over fifteen years now, the Moroccan government, and more specifically the hydraulic basin agencies responsible for water management, have been warning of groundwater 'overexploitation' in several regions of the country, and calling for more rational and sustainable use of these resources, which are being depleted by their current uses and by climate change. In this paper, we revisit the definition of this phenomenon as a 'public issue' (Neveu, 2015), focusing both on the arenas in which the problem is framed (Gilbert & Henry, 2012) but also on the discourses relating to its political implementation (Barthe, 2000). By analysing the implementation of several 'aquifer contract' schemes in Morocco, we demonstrate how the various players involved in these projects are participating in a redefinition of the problem. This process is largely shaped by two intertwining and paradoxical tensions. The first relates to the existence of sectoral competition constituting a 'struggle for meaning' (Contamin, 2010), while the second arises from the search for a coherent national strategy on the issue, leading these rival actors to seek a form of consensus. Beyond this, we show that the stakeholders agree on a minimal definition of the problem, mainly considering the socio-economic risks associated with the availability of the resource. Finally, the problem is politicised through a form of 'ambiguous consensus' (Palier, 2003) based on localised irrigation techniques known as 'drip irrigation' (Venot et al., 2017), with significant ambiguity regarding the concrete impacts of these techniques on groundwater resources.

Determinants of Trust and Distrust in the Context of Values: The Relationship between Trust and Distrust with Value Systems Among High School Students in Aydın-Turkey

In the late 20th century, social trust in the social sciences was regarded as an outdated phenomenon from past, but it was soon realised that this perspective was a mistake. In late modern society, with the differentiation in lifestyles, individualisation, reflexive modernity and the rise of risk society, the concept of trust has become central to social research. This importance and interest in trust stems from the central role that trust plays in both modern and late modern societies. In many respects, the current period can be characterised as an age of risk and uncertainty, even a crisis society. In this context, according to numerous studies, it is observed that insecurity is increasing both on a local and global level. Although there are many studies, it is observed that these studies mostly focus on the relationship between certain values (e.g. materialistic values) and social trust. On the other hand, the fact that this empirical research was conducted in Turkey is important in terms of risk society and trust research because Turkey has the lowest level of trust compared to OECD countries, especially post-industrial countries. The empirical part of the study is based on a survey of 2200 high school students in different types of high schools in Aydın. The findings of the study point to a significant network of relationships between prevalent value systems among young people and social trust and distrust. In other words, findings contribute to the understanding of the nature of the relationship between value systems and the problem of trust and mistrust, which is one of the most common social problems of today and deeply affects social relations, have been reached. Finally, it is thought that revealing the values that increase trust and the qualities of common values in insecure individuals will contribute to the field.

Disengagement or Different Engagement: Social Change and Young People's Political Participation in Turkey

Sociologically, youth is a distinct social layer within the social structure. As a historical social structure, this phenomenon has always been a controversial issue. One of the most common aspects of this debate is the issue of youth politics. There is widespread concern about the lack of political awareness, political apathy, indifference to politics and lack of participation in the political process among young people. Declining levels of political participation among young people, especially since the early 1980s, have been a source of concern in many countries and in Turkey. It is often argued that the low levels of political participation in elections and general disinterest in politics among young people are part of the 1980s generation, who are apathetic and unconcerned about political issues. The aim of this study is to test these common assumptions and to try to address the following areas: perceptions and levels of participation in politics? Are they indifferent or do they perceive politics differently? What is their level of political participation? How do they perceive current/traditional politics, political elites and political parties? What are their commonly shared political commitments and value systems? And finally, the questions of which political socialization environments and opportunity structures encourage participation were sought. In a sense, the content, frequency, characteristics and participation channels of university youth political participation were investigated and revealed as variables. In this context, the data of the surveys (N=750) conducted in three different universities in Turkey, two public and one private, examining political attitudes, political awareness, levels of participation and participation issues indicate important findings.

DELLA PORTA, DONATELLA* (Scuola Normale Superiore, Italy)

ANTONELLI, MARCO (Scuola Normale Superiore, Italy)

Workers' Chains of Struggles: How Labour Protests Spread in Time and Space

Despite structural weakness, labor movements around specific firms in the logistic have stratified in time and spread geographically. Although sporadic, they have managed to leave a somewhat positive legacy and, at certain times, have spread to different nodes within the same firm. In this sense, social movement research could contribute some knowledge on the dynamics of diffusion of labour protests, as characterized by an assessment of similarities and the learning from positive cases.

This paper analyzes the evolution of the struggles of workers at Mondo Convenienza, a large Italian company involved in the sale of furniture, by examining their diffusion processes across space and time from a relational perspective.

We identify three rings as belonging to a long chain of mobilization, looking at their different characteristics in terms of main actors and their strategies, but also at their connections. In this sense, we conceptualize *chain of struggles* pointing at how, while not directly connected to each other, different moments of contestation, are chained to each other in a process of resource accumulation and cognitive learning. In particular, we analyze how different, loosely connected actors use various repertoires of action to target the company within evolving collective frames, and how they interact with the company's counter-strategies.

The results show that despite frequent defeats, there is nevertheless a gradual accumulation of a range of resources for workers. The learning from each other's experiences, but also their reinterpretation, passes through practices of remembering and comparing present and past protest contexts on the side of activists. Indeed, it is in action that contacts are developed, and knowledge is exchanged.

The research is based on a qualitative approach, through the analysis of press releases and statements (mainly published on Facebook) combined with semi-structured interviews gathered from the main actors involved in the events.

Youths and Social Innovation in the Inner Areas of Southern Italy: Between Isolation and Solidarity

In the inner areas of South Italy, affected by depopulation and a lack of essential services in healthcare, education and transportation, social innovation processes initiated by youth organisations can serve as a vanishing point from which new sustainable, egalitarian and inclusive perspectives of participatory governance, good practices, projects and medium- to long-term visions may emerge. These processes are capable of generating forms of solidarity and social love where youths act as socially supportive actors, considering social innovation as a set of 'bottom-up initiatives, responding to emerging social needs or instances, initiating paths of collaboration and community participation, while fostering skills, diverse competences, and individual and collective knowledge' (Moralli, 2019).

This paper aims to explore social innovation processes and narratives driven by youths in the inner areas of Southern Italy through a multi-sited ethnography. The goal is to observe social innovation practices in both offline and online contexts, to understand how community engagement promoted by young people within the framework of social innovation, constitutes a strategy for cultivating meaningful connections, fostering mutual support, solidarity and promoting social inclusion in fragile and marginalized areas.

DELLO BUONO, RICARDO* (Manhattan University, USA)

Moving Towards a Social Metabolic Alternative: Dialectics of 21st Century Socialist Construction

Classical Marxism posited a necessary withering of the state as a prerequisite for transcending the capitalist mode of production. Soviet Marxism as well as Western Marxist theory instead posed the necessity of a strong state consolidation of a command economy in order to establish

socialist hegemony. 21st Century Marxism has inherited this conceptual tension in its attempts to theorize a socialist transition. This paper adopts the view that there is no "half way house" between capitalism and socialism. The definitive transcendence of capital requires a radically different metabolic system of social reproduction in which the state is displaced as the primary mode of social coordination. This view continues developing a strain of Marxism that was initiated by the Praxis School of thought in the former Federal Socialist Republic of Yugoslavia and has been further developed in the 21st Century work of the Hungarian theorist István Mészáros.

DELMOTTE, FLORENCE* (UCLouvain/F.R.S.-FNRS, Belgium)

(De)Civilising Nations and Nationalism

In 2024, it is no longer possible to deny that nationalism is gaining ground everywhere, in various forms. Because it is still associated, especially in Europe, with two world wars, fascism, Nazism and the violence of the 'age of extremes' (Hobsbawm, 1994), 'nationalism' is still seen as a repellent term, albeit less and less so. Few of the far-right political formations identify themselves as such, and liberal, conservative or progressive parties and their voters identify themselves even less as such. And yet, nationalist ideas have taken hold everywhere to the point of colonising the political arena, and 'contaminating' the so-called 'traditional parties', supposedly anxious to retain voters increasingly attracted by the populist vote. Among them all, however, the nation – the idea of nation, the national feeling – seems to be a consensus. 30 years ago, people were predicting the end of nations and the disappearance of borders, but today the 'nation' seems to be doing better than ever. In the United States as in France, in Flanders as in Italy, nationalists and their political opponents alike claim to cherish it and defend it against its adversaries in the opposite camp. 'It is nationalism which engenders nations, and not the other way round. Nationalism is not the awakening of nations to self-consciousness: it invents nations where they do not exist', wrote the great modernist historian Ernest Gellner in 1983. 40 years on, this paper

proposes to re-examine the proposition in the light of current issues and the work of Michael Billig (1995) and Norbert Elias (1989, 1991). How does an obsolete survival unit – in a globalised world – continue to exist through the consciousness of its members? How does 'banal nationalism' provide a breeding ground for extreme nationalism? How does the national habitus ensure continuity between 'patriotism' and 'nationalism'?

RC56-863.3

DUCHESNE, SOPHIE* (CNRS/Sciences Po Bordeaux, France)

From Parents to Children - Un Air De Famille: The Early Transmission of Nationalism through Family and National Habitus

This paper will present some of the findings of a qualitative study of 30 families in the Bordeaux region of France, which seeks to understand how nationalism is reproduced through its early transmission within the family, before children learn to read at school. The project is based on the critical theses of psychologist and social scientist Michael Billig on 'banal nationalism' (1995). According to Billig, nationalism is a universal ideology that reproduces itself through mechanisms such as 'flagging', which make nations as omnipresent as they are unnoticed in everyday life. Our paper aims to show how the 'naturalisation' of nations operates in the parents of young children, a question that Billig has not explored. Using projective methods with families that were as sociologically diverse as possible, the interviews asked the parents about their own trajectory and belongings and the way in which they received, modify and transmit them through family life and habitus, precisely conceived as a social, 'second nature'. The analysis of the interviews draws on an in-depth knowledge of Elias's writings on national habitus, nationalism and the 'civilisation of parents' to explore the various dimensions of the naturalisation of nation(s) that underpins banal nationalism which, according to Billig, feeds all types of nationalism, including its most extreme forms. We emphasise that naturalisation – the fact of taking nations for granted and inescapable while in no way considering oneself nationalist – refers (1) firstly to the naturalisation of the division of the world into nations, (2) secondly to the naturalisation of national feeling and (3) thirdly to the naturalisation of national preference. We show how these three dimensions are modulated differently from one family to another, and that they nonetheless reveal common features that partly relate to the supposed particularities of the 'French' national habitus.

DELP, CHRISTINE* (University of Minnesota, USA)

From "Selling out" to "Sold out": Affinity Alienation in the Gilded Age of Documentary

In semi-autonomous creative fields, there is a well-documented tension between the commercial interests of the marketplace and the cultural values of the field. When artists privilege commercial interests over the cultural values of the field, they are often imagined as "selling out," with the impact of decreasing their cultural capital within the field for the promise of economic capital. But what happens when a cultural production field undergoes a major market shift, with the commercial interests of the market now challenging the field's core cultural commitments?

I investigate the independent documentary film field as a case study. First, I trace the historical rise of streaming platforms and their role in the "boom and bust" of independent documentary film. I argue that the popular myth of "the Golden Age of Documentary" should be reconceptualized as the Gilded Age of Documentary, with streaming companies as modern day robber-baron who engage in modified practices of vertical integration and automation, resulting in increased economic inequalities among creative workers in the field. Second, I draw from 56 interviews with U.S.-based documentary filmmakers and industry leaders to understand how the commercialization of independent documentary has impacted worker feelings of affinity for their work. I argue that rapidly shifting market forces have caused widespread alienation among both filmmakers and industry professionals, as workers experience a sense of discordance between the appetite of the marketplace and their moral and aesthetic values. I contend that the documentary field has moved from a semi-autonomous field of cultural production to a semi-automated field of mass cultural production, with significant implications for workers' sense of creative purpose. In conclusion, I describe the theoretical implications of an agentic conception of creative workers in semi-autonomous fields "selling out" to a structural conception of creative workers being "sold out" during major market shifts.

New Figures of Women's Entrepreneurship in Sub-Saharan Africa

The literature on women's entrepreneurship in Sub-Saharan Africa is largely structured around two dominant figures: the "success" figure, embodied by businesswomen integrated into transnational trade networks, and the figure of "survival and resourcefulness," referring to female traders operating within the informal economy. Recent research, however, points to the emergence of a new generation of women entrepreneurs. These women, distinguished by their higher levels of education, operate primarily within the formal economy. This presentation explores this relatively understudied category through a qualitative field study conducted in Dakar, Senegal, analyzing the entrepreneurial trajectories of fifteen women. The discussion is organized into two parts. First, we seek to show that business creation—understood as a complex and multidimensional phenomenon—emerges among these women through individual or family dispositions, the identification of business opportunities, and economic constraints. Second, the communication examines the economic, cognitive, social, and institutional resources mobilized by these women in the development of their enterprises. By showing that a significant part of these resources is acquired through social trials and an institutional process of selection, the study argues that entrepreneurship is experienced by these women as a form of self-assertion through distinction from the majority. The implications of this research will be discussed considering public policies aimed at promoting entrepreneurship in Sub-Saharan Africa.

DEMBÉLÉ, FANTA* (Paris-Panthéon-Assas University, France)

Is Military Involvement in Governance a Path to Building or Restoring Democracy? an Analysis of Recent Coups d'Etats in Africa.

Rather than adopting a Eurocentric approach to the subject, which assumes a context where the democratic model—albeit imperfect—is well-established, this article examines the complex relationship between military juntas and democratic values, principles, and institutions in Africa, where democracy is still in the process of being developed. The analysis focuses on recent coups d'état in sub-Saharan Africa (Mali, Niger, Burkina Faso, Guinea, Chad, and Sudan), offering a unique perspective that seeks to "decentralize" the traditional outlook on democracy.

The military leaders behind these coups have frequently justified their actions as a response to decades of authoritarianism, corruption, lack of transparency, and the absence of fair and equitable electoral processes. In essence, they have presented themselves as solutions to the crises of democracy and governance. In Guinea, for example, after the incumbent president modified the constitution to serve a third consecutive term, despite the original text prohibiting it, the military intervened and seized power. Is this action inherently anti-democratic, or can it be seen as an attempt to restore a democratic electoral process? Similarly, in Mali, after President IBK's party won the legislative elections, widespread protests culminated in a coup d'état that forced him to resign. Some surveys suggest that up to 90% of the Malian population supports the military junta. Was the coup a legitimate means of addressing popular democratic aspirations?

These events raise critical questions: Are the armed forces appropriate institutions for overthrowing an anti-democratic government? What is the role of civil society, and why has it failed to effect significant changes in governance? Can the military be regarded as a safeguard for building a stable democratic system, even when the methods used to achieve this goal constitute a breach of democratic values?

DEMETRIOU, ELENI* (Aix-Marseille University, France)

An Application of the Model of the Differentiation on the Analysis of the Requalification of Sculptural Styles

A new model for the analysis of cultural goods and practices is proposed by H. Glevarec in his book entitled "The Differentiation" (2019) which presents itself as a critique to bourdieusian theory of capital and its applications on the analysis of the arts and culture.

P. Bourdieu's analytical apparatus seem to reduce cultural values to forms of capital, thereby focusing on their utilitarian or "interested" usages by the social agents competing within the cultural and artistic fields. The Differentiation distinguishes cultural values from social values and from the different forms of capital, on the basis of an anti-utilitarian definition of value.

Drawing upon a doctoral research on the heritagization of modern cemeteries (France-Greece-Cyprus), my presentation will illustrate the consequences of this theory on the analysis of what happens to sculptural works when classified as "historical monuments".

Funerary art is said to have disappeared from the cemeteries and churches (Panofsky, 1964) announcing the end of authenticity in the representations of death and the dead. A modern funerary canon comparable to the classical and gothic style are not been observed in modern societies, and standardization replaces massively the singular artistic forms.

However, some works are selected to be conserved as part of the heritage of "remarkable" modern cemeteries. As such, they mobilize professionals of conservation who debate their "artistic interest" and "monumental character". Do the social values of actors related to their history transform automatically into cultural and aesthetic values?

Instead of answering this question by supposing the "legitimacy" of dominant styles, the analysis focuses on the different *norms* of conservation that emerge when objects of the past are requalified and treated as heritage. This distinction allows to replace analytical nostalgia by a social-realist approach of the transformation of artistic forms and their perception during processes of heritagization of modern cemeteries.

RC20-JS-218.2

DEMETRIOU, ELENI* (Aix-Marseille University, France)

Civic Merit As a Symbolic Boundary Affecting the Distribution of Monumental Value

This presentation draws upon a doctoral research that studies the heritagization of two modern cemeteries (situated in Greece and in France). The thesis explores how hierarchies of merit (Accominotti, 2021) play a role in the selection of funerary artefacts that are classified as "historical monuments".

Selected artefacts are conserved as if they were to be maintained "for eternity". Eternity is here a normative horizon which frames action on the selected artefacts, placing them in the category of "remarkable" artefacts belonging to a local-national "funerary heritage". This also has an effect on the artefacts that are excluded from this category, treated as if they were vowed to disappear, thus on the normative horizon of erasure.

The notion of merit acts here as a symbolic border (Lamont et al., 2015) that allows for these distinctions to be made and to evolve depending on the context and actors implicated in evaluation processes. Their "merit" does not solely depend on an aesthetic-architectural evaluation, but also refers to the social status of the persons related to their history. This can be the artists that have produced them or the families they were made for. The figures of "benefactors of the Nation" or of "local notables" emerge in the two countries as two different figures which are central to the distribution of merit. Objects related to their memory are treated as "indivisible", a religious category used in secularized contexts to justify (Boltanski and Thevenot, 1991) the exceptional treatments they undergo (study, conservation, valorization).

This presentation will discuss how this symbolic boundary participates in the (re)production of status hierarchies and their effects on social and monumental time (Herzfeld, 1991) as analyzed through a corpus of official documents and interviews on the requalification/disqualification procedures which establish these different treatments in the two cemeteries.

DEMIRAL, SERAN* (Boğaziçi University, Turkey)

Is the Child As Co-Researcher Possible? Exploring the (Im) Possibilities of Participatory Methods in Childhood Research

This paper explores the practical and ethical limitations of conducting research with children. As an academic and children's literature writer, I will address the roadblocks I encountered while collaborating with 16-17-year-old teenagers, focusing on conflicts between research and practice and the differing ethical standards in academia and civil society regarding participant well-being. I aim to challenge the perceived "impossibilities" of involving children as competent co-researchers by acknowledging their potential and expertise. The teenage contributors, in their transition to adulthood, stress that prioritizing children as individuals with voices makes research truly impactful. They advocate for reciprocal consent, approval, and satisfaction throughout the research process. For findings to be meaningful, the study must include participants of diverse genders, religions, regions, and ethnicities. However, diversity in this context extends beyond demographics to encompass differing viewpoints. Therefore, I will highlight the diversity of opinions in childhood and youth research by emphasizing alternative ethical and practical opportunities.

This paper addresses collaboration potentials from the research's earliest stages through implementation and dissemination, advocating for meaningful encounters rather than dismissing young contributors due to age or perceived inexperience. Additionally, it critiques adultist approaches in the production stage, where childhood research often seems to serve only adults and researchers. By exploring strategies for effective collaboration and the challenges of presenting serious academic work to an adult audience, I will identify limitations faced in the field. These include adultist attitudes embedded in academic structures and the positional challenges youth face in school settings. Highlighting issues like participant unwillingness, individual motivation, inclusivity, and conflict resolution between adult researchers and children, this paper aims to outline effective, age-inclusive research practices where children are recognized as essential actors.

DEMIRAL, SERAN* (Boğaziçi University, Turkey)

The Implementation of Arts-Based Methods in Participatory Approaches: Conflicts Versus Engagement

As a childhood researcher, I have been using arts-based principles even without knowing that these methods specifically existed in the field. As academic fields become increasingly strict and focused within narrow frameworks, similar approaches in different disciplines or scientific areas are, unfortunately, often disregarded. However, applying a verified method or strategy to a new area, where you might not be sufficiently familiar as a researcher or practitioner, can be very fruitful.

In this paper, I will exemplify my recent research practices in attempting to bridge two different fields: ageing and childhood, through participatory approaches with an intergenerational focus. The emerging challenges have led me to reconsider the limitations and potentials of arts-based approaches. Specifically, regardless of which methods we use or intend to use, the participants, as the true contributors to the research, may not be interested in the suggested methods.

Within a participatory methodological framework, is it possible to implement arts-based methods in the field? How can we navigate conflicts arising from individual expectations and differences among participants, and build new solidarities to encourage their full engagement in the proposed activities? This paper explores these questions, providing examples from ethnographic and participatory research experiences conducted with individuals of various ages and social backgrounds.

Harvesting Empowerment: Women's Strategies to Access and Control Land Inheritance in Turkey

Despite growing discussions around the feminization of agriculture globally, estimates indicate that female landownership accounts for less than 20% worldwide. This research aims to explore the experiences of women in Turkey who continue or begin farming after inheriting agricultural land, focusing on the strategies they develop to counter patriarchal ideologies and gender relations in rural production areas. Numerous studies highlight that patriarchal norms and gender dynamics often obstruct women from inheriting land, both in Turkey and in many other countries. While the amended Soil Conservation and Land Use Law No. 6537, introduced in 2014, sought to create a more equitable legal framework for women's inheritance rights, cultural narratives frequently promote transferring land to "suitable heirs"—typically male family members—to maintain the "integrity and productivity" of the land. This study, beginning as an autoethnographic inquiry, draws on in-depth interviews with 25 women conducted in August 2023, all of whom inherited agricultural land from their families or spouses and engaged in hazelnut production as farmers in Ordu, Turkey. It aims to understand the strategies and experiences of these women as they navigate patriarchal challenges despite holding legal land rights. This research seeks to refine the theoretical framework on land access and inheritance as influenced by gender relations, while also facilitating the exchange of best practices across different contexts. Understanding women's strategies for securing and managing land rights is critical for crafting nuanced policies that tackle gender inequality in land ownership.

Migration Des Saisonnières Marocaines : Histoires Et Parcours

La présente étude se propose d'interroger le fait migratoire dans le cas des saisonnières marocaines travaillant sous contrat dans les exploitations agricoles de Huelva en Espagne. Généralement issues d'un milieu défavorisé, ces femmes partent à la quête d'une vie prometteuse sur le territoire espagnol. Notre recherche vise à dévoiler les facettes cachées au cours d'un processus migratoire difficile et parsemé de rêves et de frustrations.

Afin de pénétrer l'univers peu connu de ces femmes souvent invisibles dans la perspective de réaliser une étude sociologique de terrain, il m'a fallu m'infiltrer dans la région du « Gharb » puisqu'elle se considère comme un des principaux pôles productifs agricoles au Maroc. Pour ce faire, nous avons adopté la méthode qualitative à travers l'observation participante dans un premier lieu et, dans un deuxième, nous avons réalisé une trentaine d'entretiens enregistrés et écrits avec des ouvrières migrantes et non migrantes. Cette tâche n'était pas facile, dans la mesure où nous avons passé trois ans de dur labeur à avoir une faculté d'adaptation considérable pour gagner la confiance des sujets enquêtés. Nous nous sommes également appuyées sur des données statistiques sur la migration saisonnière pour comparer les aspects visibles et mesurables de ce phénomène, des aspects difficilement perceptibles en dehors d'une approche ethnographique de la vie sociale et quotidienne des ouvrières agricoles.

What Efficacy? the Evolution of Treatment Programmes in Italy between Social Control and Perpetrator Accountability

The paper discusses key developments observed over the five-year period between the first and second CNR national surveys on centers for perpetrators of violence in Italy, with a particular focus on regulatory changes that have supported program expansion and strengthened ties with the criminal justice system. Alongside an increase in the number of programs and men admitted, notable shifts in admission pathways are observed, with a decrease in voluntary admissions and an increase in mandatory ones—a trend that may lead to a more instrumental approach to program participation. These changes impact practitioners' approaches and, at the same time, intensify demands for accountability, raising questions regarding the effectiveness of the interventions.

In response to these developments, a qualitative study was conducted, drawing on international literature (Gondolf 2004; Turner et al. 2023; Vall et al. 2021; Westmarland & Kelly 2013) to explore evaluative research on Italian programs, offering insights into the concept of intervention effectiveness and the evaluation methodologies used. Findings indicate that, from the practitioners' perspective, success is conceptualized not merely as the reduction of violent behaviors but also as holding perpetrators accountable for their actions. Additionally, the study highlights that the concept of effectiveness must take into account the programs' role in the social control of perpetrators. Methodologically, the study identifies limitations in existing evaluative research, offering recommendations for improvements in future studies.

Humanitarismo y Trata De Personas En Migrantes Susceptibles De Protección Internacional En Ciudad Juárez, Chihuahua, México

A raíz de cambios en los procesos de recepción de solicitantes de asilo en Estados Unidos durante la administración Obama y Trump, la frontera norte de México ha atravesado una serie de transformaciones hacia un estadio de crisis humanitaria y negocios irregulares de la migración. El presente es un estudio casuístico, de tipo cualitativo-causal, que tiene por propósito

demostrar la incidencia de las infraestructuras del humanitarismo (López y Paris, en Prensa) y las industrias de la migración (Hernández, 2012) a partir de la sentencia condenatoria a una pastora encargada de un albergue por el delito de trata de personas en la modalidad de trabajos forzados cometido en contra de personas migrantes entre octubre de 2021 y abril de 2022, en Ciudad Juárez, Chihuahua. El caso expone la violación al bien jurídico tutelado de la dignidad humana, desde el espacio que debió fungir como un refugio seguro y, por tanto, se torna en un escenario deshumanizante.

La estrategia metodológica se conformó por mapeo de actores, monitoreo de medios, revisión de documentos de política, y la sentencia (condena) del caso. El método de análisis fue guiado por un rastreo de procesos (Beach & Pedersen, 2026) para prueba teórico-conceptual, a partir del argumento hipotético que poblaciones migrantes susceptibles de protección internacional en un espacio de acogida con prácticas humanitarias que fueron capitalizadas a través del delito de trata por trabajo forzado.

Los resultados esperados son explicar mecanismos causales que den sustento a la prueba conceptual en torno a la incidencia de las industrias de la migración a través de trata de personas y prácticas humanitarias en la frontera norte de México e identificar la sumatoria de vulnerabilidades que las personas migrantes vivieron desde el albergue donde se convirtieron en víctimas de trata de personas.

Negotiating Belonging and Basic Rights in Settler Colonial Canada: How Shoal Lake 40 First Nation's Freedom Road Campaign Succeeded

This paper presents a case study of a successful Indigenous-led social movement. After decades of struggle, amid ongoing colonialism, the Freedom Road campaign achieved meaningful change for a small First Nation in Central Canada, in part by appealing to and helping to generate a more inclusive vision of citizenship and belonging.

Shoal Lake 40 (SL40) First Nation is an Anishinaabe community on the Manitoba-Ontario border in Treaty #3 Territory. In 1913, without SL40's consent, the Canadian government approved a 150-kilometre aqueduct from Shoal Lake to supply the predominantly settler city of Winnipeg with clean drinking water. This development rendered SL40 an artificial island, impeding access to jobs, groceries, healthcare, and other services. Ironically, SL40 also endured one of the longest boil-water advisories in Canada. For decades, the First Nation lobbied for essential infrastructure, but settler governments consistently refused.

Based on interviews, sharing circles, and archival research, and by taking a decolonial storytelling approach, this paper examines how SL40's longstanding campaign for all-season road access and clean water succeeded. It identifies the critical roles of visionary Indigenous leadership, creative strategies and tactics, and relationship-building in generating meaningful change. It emphasizes how, in the context of Canada's Truth and Reconciliation Commission (2010-2015) and the opening of the Canadian Museum for Human Rights in Winnipeg (2014), SL40 members framed their struggle in terms of human rights and reconciliation, and cultivated alliances with local and international groups and individuals who used their resources and networks to help advance the First Nation's goals. In doing so, they promoted an expansive vision of citizenship and belonging whereby ensuring access to basic rights like clean water widely came to be seen as "everyone's issue." While drawing broader lessons on how to facilitate change, this research aims to honour the efforts of everyone who made Freedom Road possible.

Transformative Social Protection and the Future of Care Work: Addressing Labor Market Challenges in Romanian Senior Care

This study investigates the labor market challenges faced by employees and managers in Romania's senior care sector, highlighting how transformative social protection could reshape this critical area of work. Drawing on qualitative data from interviews with care workers and managers in nursing homes, the research explores the daily responsibilities, emotional and physical challenges, and structural difficulties encountered by care workers. These challenges include low wages, staff shortages, and burnout, which reflect broader labor market inequalities. From the managerial perspective, the study delves into workforce management, including the struggles of securing funding, dealing with regulatory frameworks, and retaining qualified employees.

As the global labor market shifts due to automation and digitalization, Romania's care sector—while not yet influenced by platform work—may soon

face similar transformations. Although platform-based care workers are not currently widespread, this emerging form of employment could represent a new frontier in senior care. The study speculates on how platform care work might integrate into Romania's care economy and the need for transformative social protection policies to ensure these workers have access to decent work, fair wages, and professional development opportunities.

This research contributes to the panel's focus by illustrating how transformative social protection can address labor market barriers in senior care, such as improving working conditions, promoting job security, and ensuring workforce integration. It also offers a forward-looking perspective on the potential for platform care work to impact the sector in Romania. By situating senior care within the broader context of labor market changes, the study highlights how social protection can both alleviate immediate economic pressures and provide long-term structural support for one of the most essential, yet undervalued, areas of work.

Leveraging the Double Advantages of Parental Housing and Urban Location: In-Kind Housing Support and Transition into Home Ownership in Taiwan

While parents have long played critical roles in the early housing careers of their adult children in East Asian contexts, little attention has been paid to the contemporary dynamics of in-kind support and the impact of shifting housing market conditions, particularly for those living in high-cost urban areas. This paper explores how in-kind intergenerational housing support shapes pathways into home ownership for co-residing adult children in Taipei. Drawing upon panel data in Taiwan (PSFD data from 2009, with follow-ups until 2020), longitudinal analysis is conducted on housing transitions. Principal component analysis is first employed to test and confirm the hypothesis that those living in Taipei are more likely to co-reside with their parents before achieving home ownership. Event history analysis is then used to test the second hypothesis: that intergenerational co-residence benefits those co-residing with parents in Taipei in their transition to home ownership. The Cox proportional hazards model for home ownership reveals that, consistent with previous findings, individual characteristics such as age, marital status, and education are critical in determining home ownership. More importantly, those living with their parents in Taipei are more likely to become homeowners compared to their renting counterparts. Our analysis suggests that by leveraging the spatial advantage of parental housing location through intergenerational co-residence, city dwellers who co-reside are significantly more likely to become homeowners than renters. This nested system of family and market housing resources reveals a clear housing pathway and highlights inequalities in achieving home ownership based on family housing resources.

Participatory Action Research for Community Regeneration in Mediterranean Sociocultural-Ecological Systems. Insights from Living Labs Experience in Sardinia

In recent decades, rural Mediterranean areas have encountered complex challenges which significantly affect their social, economic, environmental and cultural dimensions. Sustainable development in these regions requires participatory processes to drive community regeneration and manage sociocultural-ecological systems effectively (Berkes and Folke, 1998). This paper examines the role of participatory action research (PAR) in developing innovative solutions for local development, drawing on two case studies from Sardinia (Italy) and the implementation of Living Labs (Hossain et al., 2019; Ceseracciu et al., 2023).

PAR is based on stakeholder involvement throughout the research process, seamlessly integrating the moments of knowledge generation, action and intervention (Reason and Bradbury, 2006; McTaggart, 1997). The result is twofold: the regeneration of community participatory processes and the creation of shared knowledge capable of driving tangible social change in local sociocultural-ecological systems.

Following a critical contextualization of PAR in rural areas, we reflect on the insights emerging from the PRIMA-funded OURMed project, which promoted the activation of Living Labs in the Mediterranean. Living Labs were centered on social and cultural capital, and they were designed as participatory spaces for building shared knowledge, integrating community tacit knowledge and scientific knowledge. Living Labs facilitate the co-design (Busse et al., 2023) of sustainable development and the activation of context-specific and innovative participatory community regeneration processes.

The main results of the PAR activities include raising awareness of diverse community interests and interdependencies, fostering empowerment of marginalized stakeholders, and building new synergies between public institutions and local communities.

We also discuss critical methodological and epistemological challenges encountered in implementing Living Labs in Mediterranean rural areas, including semantic and conceptual stretching, the role of time, researcher positioning, stakeholder mapping, and the interplay of cultural, social, and ecological innovation. Addressing these challenges is crucial for ensuring the effectiveness of participatory processes in transforming rural Mediterranean sociocultural-ecological systems.

DERMAN, ÖZGE* (Researcher, Paris, Turkey)

Landscapes of Culture

This paper offers to rethink about the relationship between culture and nature, particularly in the context of performative direct actions within the climate movement. Museums, as the guardians of art and culture, the spaces of visibility for and exposition of culture and history, are confined public spaces where the climate activists penetrate in an attempt to make the public deliberate on issues affecting the future of the planet. How and why do they consider their gestures targeting the artworks, such as throwing soup or paint onto paintings, as nonviolent direct actions, as opposed to most of the media and justice system labeling them as violent, criminal acts of vandalism? As one of the activists expresses, "far from destroying but fostering a form of sensitivity" from within the heart of culture, "works [are] chosen to bring visibility to the spaces and landscapes we're about to lose." These direct actions revisit the relationship between culture and nature, rather than using culture as a framework to give meaning to nature. Their meaning shifts into interdependent, relational, and transactional concepts on different levels.

DESAI, MANALI* (University of Cambridge, United Kingdom)

Gendered Violence and the Dialectic of Context and Comparison: Insights from India and South Africa

This paper starts with an apparent paradox. Although gendered violence has existed in all societies and across time (as quantified through the fact that globally 1 in 3 women have faced physical or sexual violence), it is contextually produced in particular times and places. Violence, in other words, is general and particular at the same time. In contrast to broad theories of violence, and policy frameworks such as 'What Works,' I argue that violence is not only an act or event, but has a 'social life' that includes the meanings and rationales attributed to violence, the language through which it is talked about or deflected, in the context of historically developed institutions and political-economies. When we treat violence as a set of discrete acts rather than as a repertoire (Tilly) or sign (Das), the methodological corollary is to identify the underlying factors or variables that cause violence. This paper will argue that such approaches cannot account for the proliferation of violence, historical continuities in violence, as well as shifts in forms of violence in particular societies. However, this is not an argument for descriptive particularity; there is much we can learn by combining comparison and contextual arguments. This paper will draw upon research conducted as part of the ESRC project 'Urban Transformation and Gendered Violence in India and South Africa' (2020-24) to show that rather than eliding the contextual specificities of violence, juxtaposing two cases can generate important and unique insights through their similarities and differences.

DESAI, MANISHA* (Stony Brook University, USA)

Hindu Nationalism and Its Circulation and Challenges in the United States

In this keynote presentation I examine the complex circulation of Hindu nationalism in the United States and the challenges to it from within the fold. I begin with the complicity and entanglements of contemporary Hindu nationalism with racism and its erasure of the struggles of BIPOC people in the United States as it does in India. I then situate it within the history of progressive Indian nationalism and contemporary challenges to it by groups such as Hindus for Human Rights who explicitly work within a framework of solidarity with anti-racist and social justice movements across race, religion, and ethnicity concluding with the possibilities of such political work.

DESJARDINS, LAURENT* (Université Laval, Canada)

Sur Le Dépassement De L'impuissance Politique Pour Une Culture Écologiste.

Nous nous pencherons dans le cadre de cette communication sur les potentiels contemporains de dépassement du « malaise démocratique » présent dans plusieurs pays occidentaux. Dans le sillage de la philosophe pragmatiste Joëlle Zask, nous proposons que le dépassement de ce malaise est nécessaire à l'établissement d'une culture écologiste. Cette présentation sera en outre l'occasion de présenter certaines données qualitatives issues d'une enquête ethnographique effectuée à la « Cité écologique », dans le cadre d'une thèse de doctorat (Université Laval).

Nous expliquerons dans un premier temps ce qu'on entend par « malaise démocratique ». Cette expression du sociologue Jan Spurr se manifeste concrètement dans plusieurs sondages qui montrent que les citoyens québécois.e.s et canadiens.e.s sont attachés.e.s à la démocratie, mais sont majoritairement insatisfaits.e.s de la manière dont elle est pratiquée aujourd'hui, tout en ne sachant pas comment dépasser cet état. Il s'agit d'un « sentiment d'impuissance politique » qui doit être résolu afin d'envisager une culture écologiste.

Nous proposerons dans un deuxième temps quelques pistes pour ce dépassement, basées sur des données qualitatives empiriques. Il se développe à la Cité écologique une culture d'« encapacitation » correspondant dans une large mesure à ce que les pragmatistes ont appelé la « démocratie comme mode de vie ». Les habitants.e.s semblent avoir assimilé un « ethos démocratique » grâce à certaines conditions sociales, notamment : une pédagogie alternative et continue basée sur la « méthode de l'expérience » ; un travail du territoire par ses habitants.e.s afin de le rendre productif ; une « spiritualisation » des objets matériels ; un système de pensée existentialiste et humaniste basé sur des préceptes concrets, tel que la « communication non violente » ; et enfin, un « bricolage » administratif et légal afin de collectiviser les biens, la terre, et les revenus monétaires.

CUKUT KRILIĆ, SANJA (ZRC SAZU, Slovenia)

Transnational Care, Digital Literacy and Ageing in Emigration Areas: Eastern Serbia Case Study

The population of Serbia has a six-decade-long emigration tradition, and eastern Serbia (including Petrovac municipality) belongs to the oldest emigration zone with intensive labor emigration. In the vast majority of municipalities in this area, more than a third of its total population resides abroad, and the majority is low educated. Also, in the last two decades, census data record return migration of the population aged 60+. In addition, available census data on the population of Serbia abroad show that of the total number of dependents aged 60+ in the country whose dependent is abroad, 40% live in Serbia's oldest emigration zone. On the other hand, census data from 2022 show that digital literacy in this part of Serbia is significantly below the average for the entire country. This particularly applies to the population 60+ in rural areas.

Emphasizing the agency of family members in the ways of maintaining close relations between origin and destination, and the social infrastructure of migration, the aim of the paper is to gain deeper insights into the practices of maintaining transnational family relations and care through digital technologies and social apps in the area of high emigration and with a high proportion of the aged population (Petrovac municipality). In addition to the data of official statistics, the paper presents the findings of qualitative research through semi-structured interviews with returnees aged 60+ and

their family members, as well as officials in the social protection service in the municipality of Petrovac. The paper discusses the main challenges and benefits that digital technologies provide to respondents in this regard, as well as the attitude of the municipal services towards the possibilities of providing assistance to elderly (returnee) fellow citizens in overcoming digital challenges in transnational communication.

DESPORTES, ISABELLE* (Humboldt Universität zu Berlin, Germany)
FUENTEALBA, RICARDO* (Universidad de O'Higgins, Chile)
Disaster Resistance: Conceptualisation and Illustrations from Chile and France

Key disaster concepts are currently being re-examined and re-politicized as part of Critical Disaster Studies. The social critique of resilience for instance, by no means new and trending since the 2010s, increasingly seeks to draw out the transformative potential inherent to the concept. Conversely, resistance is a relative newcomer to disaster studies, and deserves particular scrutiny. In this paper, we approach the field of tension between efforts to enlarge the spatio-temporal and thematic scale through which disasters are interpreted and acted upon, and efforts to actively restrict that scale. We conceptualize the former as 'resistance', contrast it with uses of the term in existing disaster literature, and illustrate it with empirical vignettes from Chile and France.

Both countries have seen successive waves of public service privatization and social mobilisations, although with varying pace and intensity. While Chilean disaster policy has evolved since 2022 and disasters have been reinterpreted as social phenomena, disaster risks are still managed technically and linked to specific agendas, some of which are heavily contested in the context of emerging social mobilisations since 2019. In France, the socio-political aftermath of the first megafires to ever hit the country in 2022 highlights the numerous ways through which state and non-state actors draw back on the fires to advance their agenda, be it to make room for new fossil fuel extraction (as is the case for the French government) or to advocate on the topic of climate displacement (as is the case for Oxfam France). In both Chile and France, various actors change the focus through which disasters are interpreted. As such, our paper describes how myriad interpretations restrict or expand the political dimensions of disaster processes, leading potentially to transforming social relations and the material living conditions of present and future generations.

DESPORTES, ISABELLE* (Humboldt Universität zu Berlin, Germany)
Disasters to Lobby for Change? Non-Governmental Organisations' Mobilisation after the 2022 Wildfires Close to Bordeaux, France

'Megafires' are amongst the most visible and dramatic manifestations of climate change. Termed as such because of their extreme size, complexity, uncontrollability and/or impacts, their occurrence is only expected to increase with a warming climate and other human-induced changes such as landscape modification. If we approach disasters as symptoms of our presently unsustainable societies, what role, then, could megafires and disasters more broadly play in lobbying for change, i.e. a just socio-ecological transformation? This paper explores the question based on qualitative fieldwork carried out in spring 2025 in Gironde, the first region to ever be hit by a megafire in France. The fires destroyed ca. 30,000 ha of land and led to the evacuation of more than 50,000 people in the summer of 2022. Secondary data analysis and semi-structured interviews with government and non-governmental actors help uncover how diverse actors draw back on the fires to advance their interests, with which results. For instance, Oxfam France relies on the evacuations to make its advocacy on climate refugees more tangible, while the civil society collective « *Stop Pétrole Bassin d'Arcachon* » mobilises against oil drills that the French government welcomes on land barred by the 2022 fires. Many others join the debate, bringing in factors as varied as faulty emergency response, austerity policies or ill adapted forest management and land use planning. The paper details how non-governmental organisations broaden their thematic focus to issues of justice and equity across the so-called Global North and Global South, and how they draw on elements as diverse as the materiality of disaster impacts, (re-)politicised framings, but also the deeper imaginaries associated to forests, fire and a 'burning world'.

GOBE, ÉRIC (Aix Marseille Univ, CNRS, IREMAM, France)
Protest Campaigns in Tunisia during the First Democratic Legislature (2014-19): A Cultural Turn and the Limitations of a New Generation of Activists

This communication analyses the cultural turn in youth activism in Tunisia, expressed in a series of protest campaigns during the first legislature of the post revolution democratic parliamentary experiment (2014-2021). Based in interviews, we first present the specificity of campaigns as a repertoire for protest actions. Secondly, we describe how a new generation of young activists challenged government decisions. Thirdly, we show that these mobilizations are mostly ad hoc and driven by micro-networks of left-wing activists who champion a new protest culture based internally on the horizontality of participation and decision-making; and externally on the use of innovative performances within a classical repertoire of action

WG10-920.3

DETLAF, TOMASZ* (University of Warsaw, Poland)
Large Language Models As a Tool for Argumentation Analysis: A Field Report from the Study of Parliamentary Debates on Abortion

Research on automated analysis of argumentation analysis is expanding rapidly. Current methods, however, depend on identifying argument indicators, such as conjunctions like "so," "then," and "because," which are often missing in real-world communication. As a result, researchers studying argumentation in large corpora face a choice between labour-intensive manual qualitative analysis or (semi)automated methods that can categorise general discourse topics but fail to detect implicit arguments. In this context, large language models (LLMs) offer a promising solution, as they can identify and categorise arguments by analysing natural language on an unprecedented scale.

I will evaluate this approach by comparing the results of argument identification and classification obtained from LLMs with findings from my research on the same corpora, which used both manual methods (qualitative rhetorical analysis) and automated techniques (topic modelling, semantic network analysis, and corpus linguistics methods such as collocate and keyword analysis). These analyses will focus on recent parliamentary debates about abortion law in Poland and Ireland. Parliamentary debates provide an ideal foundation for this study, as they are easily accessible through official transcripts and rich in pragmatically evident yet lexically implicit argumentation. For instance, when a speaker cites a court ruling aligned with their view, it is clear to listeners that the ruling is used as a premise in the speaker's argumentation, even without explicit argumentation markers, and that this line of argumentation might be classified as legal. Poland and Ireland are compelling cases for comparison, as both operate within the same global and regional human rights systems but have recently taken opposing paths in abortion legislation.

The proposed analysis will evaluate the strengths and weaknesses of using LLMs to analyse real-world argumentation and provide initial guidelines for their application. Additionally, it will explore the use of LLMs in automated text analysis as a means of methodological triangulation.

DEVLIN, MAURICE* (National University of Ireland Maynooth, Ireland)

The "Earning and Learning" of Young People's Trust in Institutions: Interrogating Youth Policy

The years since the World Values Survey began in 1981 are also those during which 'youth policy' has been institutionalised. In Ireland, for example, the inaugural European Values Study (launched the same year) fed into the first major national research and policy report on youth (National Youth Policy Committee 1984). The White Paper *In Partnership with Youth* (1985) was branded as the Irish government's flagship contribution to the first ever United Nations International Youth Year (the UN's 'IYY' logo featured on the White Paper's cover alongside the official national symbol of the harp). And like EVS and WVS, the institutionalisation of youth policy has continued and in some ways deepened - at national, European and international levels - in the decades since.

The coinciding timelines, and the negative trend in research findings regarding young people's trust in institutions, prompt obvious questions. Since research suggests that young people rely on an 'earned-through-performance' model of trust (Rundle et al 2012) it makes sense to ask whether the *implementation* (or not) of youth policy initiatives and commitments over the years has been 'trust-building'. Models of trust (and 'trustee-trustee' relationships) highlight both rational and emotional qualities of trusters (e.g. young people) and 'situational factors' such as the integrity, reliability and predictability of trustees (e.g. policy-makers/public institutions) (Hurley 2006). How has public policy on youth measured up in terms of key drivers of trust such as empathy, authenticity and logic (Frei & Morriss 2020)? A flourishing democracy would require that it performs well on all three; otherwise successive cohorts of young people actively *learn* to distrust the institutions that claim to have their interests at heart.

This contribution will take Ireland as a case study but also refer to youth policy contexts and developments (and research including EVS/WVS) in Europe and internationally.

Cultural Engagement in Undergraduate Research Programming: Connecting Culture with Student Success

Undergraduate research programs are commonly critiqued as culturally neutral in the way that they define student success with race-neutral measures, thus limiting diverse ideas of student success (Hawkins et al., 2023). The Ralph J. Bunche Fellows program (BFP) at UCLA funds undergraduate and graduate students, as well as postdoctoral scholars, to study the conditions of Black life. BFP transcends disciplinary boundaries by connecting faculty and students as they conduct transformative research, provide students learning opportunities, and implement progressive change in educational practices and social policy. The objective of this presentation is to discuss the findings from our mixed-method case study on BFP. Drawing upon both interview and survey data across four cohorts of undergraduate fellows, the case study highlights the impact of a culturally grounded research program on student development and student outcomes.

Study participants that are alumni of UCLA have gone onto US Law Schools, pursue PhD programs, and study abroad in masters' programs. Participants who are current students shared the following perspectives about BFP:

"I had a great experience. It's an academic setting, but it felt like a family environment. That was something that I really appreciated because I don't think I had that in many other spaces at UCLA".

Another participant reflected on how BFP shaped their development.

"BFP is definitely the most challenging academic/personal development experience I've had at UCLA, because the responsibilities of my research forced me outside of my comfort zone, but truly in the most rewarding way to prepare me for a greater purpose".

Furthermore, the program expanded the fellows' worldview on Black experience.

"It made me feel more connected to other parts of the diaspora. I learned a lot about other aspects of Blackness outside my own".

Drawing from these findings, we discuss the importance of cultural engagement in undergraduate research programming.

RC32-529.8

DEY, DEBLINA* (DePaul University, Chicago, USA)
Women versus women: Juridical views on elder abuse

The legal discourse around domestic violence in India primarily revolves around acts of violence committed upon the daughter-in-law, mostly by her spouse and/or his parents. The Protection of Women from Domestic Violence Act (2005) recognises that women can be both the victims and agents of violence and that the victim can be a woman irrespective of her age. Yet, the law is rarely used by older women (that is, senior citizens above 60 years of age) despite the rise in elder abuse cases over the years. Rather, most cases of abuse are filed under the Maintenance and Welfare of Parents and Senior Citizens Act, 2007, which does not even define abuse. The most challenging cases are those where older women's rights are weighed against their daughter-in-law's rights, both protected by the two different laws. By performing a discourse analysis of select court judgments and newspaper

reports on elder abuse, the article highlights the prevalence of abuse against older women, the unique challenges they face and critiques the re-familialising urge of the law. Younger and older women can be vulnerable in the domestic arena and are often socialised into a milieu of normalised domestic violence. In that context, the article discusses the legal arguments leveraged when both women confront each other and how emotions (related to frailty, filial piety) are mobilised in cases of elder abuse. The cases of elder abuse typically evoke moral emotions like sympathy and pity based on age. This becomes crucial to understand how constitutional morality operates vis-à-vis the protection of older people. The article uses frameworks from anthropology of pain, and law and emotion literature for developing the arguments.

DHANRAJ, SWAPNIL* (O.P Jnindal Global University, India)
Social Media As a Site of Resistance: Understanding Digital Activism in India

The growing importance of social media among people in civil society has created possibilities for a new mode of political communication for different sections of society. One of the interesting facts about social media is that it is capable of changing public perception. The use of social media has widened the scope for the youth, students, and researchers to analyze the political developments in their society critically. The path of social media remains inclusive for many, as people can assert their opinions using their regional languages. Interestingly, social media has led to significant changes in the representation of underrepresented people from poor and marginalized communities. A case in point is the Dalit community in India.

Dalits are known to be the ex-untouchables in the Indian social system. The Indian caste system is the oldest form of surviving social stratification, where the upper strata of the society continue to keep hold of all the means of communication, including the media. Most often, the incidents of discrimination and atrocities against Dalits haven't been reported in the media controlled by the dominant castes. In the last few decades, Indian society has witnessed a rise in digital activism by the youth from the Dalit and marginalized communities who register their voices against injustice and violence by dominant social groups and the state apparatus. In this context, the paper attempts to explain how the use of social media can function as an attempt to register their protest against injustice and reclaim their rights as citizens of the country. It will explain how the assertion by the youth from these communities is an attempt to protect the idea of democracy through their digital activism.

DHAOUADI, MAHMOUD* (University of Tunis, Tunisia)
Ibn Khaldun's Revolutionary Scientific Thought within Kuhn's Perspective

This paper attempts to take a *non-traditional outlook* at Ibn Khaldun's innovative social science work in his **Muqaddimah** which is usually seen as the outcome of Ibn Khaldun's rich beduin-sedentary experience in the Arab Muslim societies in North Africa. He was very critical of Arab Muslim Historiography: Arab and Muslim historians had pitfalls in their methodology and in the analysis of historical events. Their works were hardly credible. According to the views of Ibn Khaldun and Thomas Khun, there was a pressing need to solve the Arab Muslim Historiography's crisis. The Muqaddimah's new sociological perspective - *born for the first time* in North Africa in the history of human universal thought, according to Yves Lacoste and Arnold Toynbee - constitutes a new paradigm to meet that crisis. In Kuhn's terms, **the Muqaddimah** sets the pace for reforming the science of Arab Muslim Historiography by shifting from what Khun calls **normal science** to **revolutionary science**. Ibn Khaldun invented the law of the Mutabaqa (conformity) which requires that human historical events must match well the real worldly multiple factors involved in their making. One may claim that the Muqaddimah has revolutionized the relation between the disciplines of history and sociology in North Africa and the Arab Muslim World: *good historians must be first of all good sociologists*.

DHAOUADI, MAHMOUD* (University of Tunis, Tunisia)
The Language Cogito Paradigm

The Special Issue of *Scientific American* September 2018 was titled « *Humans: Why we're unlike any other species on the planet* ». Reflecting for years on language has led me to a *Language Cogito: I use language, therefore, I am a human*. So, humans are *first* Homo Linguistico beings. Second, language is also *the site* of birth of what I call *Cultural Symbols/CS* (language, thought,

religion, knowledge, myths, laws, cultural values and norms). This paper's thesis is cross-checked through two remarks: 1- Man is Homo Linguistico-Culturus. 2- *language is the Mother of the rest of CS*. Five observations confirm how humans are linguistico-culturus and, thus, *different from the other species*:

1-The process of the human body growth and maturation is *slow* compared with those of other living beings. For instance, on average human babies begin walking at the age of one year, while animal babies may walk within few hours or days after their birth. The human slow pace results from the human involvement in *a second process* of growth and maturation represented by language and CS

2- Humans have *longer lifespans* than most animals.

3-The human race has *an uncontested dominant role* on Earth.

4-Humans are privileged by language and CS.

5- In my conceptualization, the human identity is made of three parts: the body, the soul and CS. Thus, it is *a three dimensional identity*.

The following drawing illustrates the central position and role of *language and CS* in the making of the human identity:

1. The human body's slow growth
2. The human's longer lifespan
3. Humanity's dominant role
4. Language and CS central impact on the human identity
5. The human's tri-identity

Woes, Worries and a Way Forward: An Ethnographic Study in the Majuli Island, Assam

Majuli is the largest river island in the world. It is situated within the natural boundaries of the Brahmaputra ~ to its south, Kherkotiya huti (tributary or a branch) lies to its north-east and Luit and Subansiri lie to the north-west of it. The geographic formation and location of the island contribute to it being a naturally flood and erosion-prone area. Despite being a place of importance (the island is the cultural capital of the state of Assam), the islanders have to face floods and riverbank erosion as it is located on the Brahmaputra river. This paper underscores floods and erosion as disasters that are a part of the everyday life of the local population. The history of the island formation of Majuli helps us understand the limitations the people have been facing over the years. The islanders have mixed feelings, some are content with the present scenario and progress, while some aren't. Based on an ethnographic study, this paper focuses on the problems that the locals encountered such as landlessness, lack of communication, healthcare facilities and infrastructural issues. The paper further discusses certain ways through which locals have developed resilience and adapted to the challenges through agencies like family, community and the help of other groups like non-governmental organizations. Sometimes, groups of people have also migrated and adapted to a new life outside their local environment. These struggles and their response strategies have been studied empirically which have brought to the limelight the uncertain lives of the islanders of Majuli.

Regional Inequalities in Gender Equality: Insights from the Italian Context (2015-2022)

The analysis of gender inequalities requires the support of a comprehensive set of quantitative data that allows for an exploration of this issue across its various dimensions. This presentation examines the Italian context between 2015 and 2022, building a dataset of variables that, as closely as possible, reflect the structure of the Gender Equality Index developed by the European Institute for Gender Equality. Although many variables can be calculated at the regional level, a number of indicators must be revised due to the lack of available data at this level. The results reveal the complexity of regional inequalities in Italy and confirm the well-known gap between southern Italian regions and the rest of the country. The analysis highlights the growing need to shift from a national-level analysis to a regional one, in order to identify areas of the country with the lowest cohesion in this regard.

This regional focus is crucial for understanding how gender inequalities manifest differently across territories, and for informing targeted policy interventions. The findings underscore the importance of improving data availability at the regional level to enable a more nuanced and effective evaluation of gender disparities. By adopting a more localized approach,

it is possible to better identify areas of critical need and tailor strategies to address the specific challenges faced by different regions. This shift would also allow for a deeper understanding of the socio-economic and cultural factors contributing to these inequalities, ultimately fostering more equitable development across Italy.

Making the Unrepresentable Representable. Photojournalistic Storytelling of Humanitarian Crises from Ukraine

Visuality has played a major role in communicating humanitarian crises; photojournalism seems to be the most efficient means of communication in depicting humanitarian disasters, receiving the task of representing the unrepresentable. Photographic images are considered cultural objects useful in the construction of collective consciousness, but they also embody a culturally symbolic icon, available for the generations working on rebuilding their collective memory, processing and healing from their historic and violent trauma [Hariman & Lucaites 2007; Alexander 2018]. However, photojournalism has been accused of sensationalism, which incites the people's morbid curiosity, and criticized of becoming pain pornography, being condemned as a voyeuristic practice [Boltanski 2000; Linfield 2013]. In this case of study, the focus will be the ongoing war in Ukraine: >60 photos have been selected as sample, all depicting the consequences of the conflict on civilians. The 7 mentioned reporters, 2 women and 5 men, some independent and some associated, were active on the field since the start of the war, so the approximate time frame considered would be February 2022-July 2024. The photos have been published by traditional newspapers and news agencies, but also posted on social media and used for humanitarian and awareness-raising purposes. A sociological analysis will allow to find common patterns in the representation of Ukrainian people's suffering, eventually determining whether different photographic testimonies can confirm or overturn the Euro-American iconographic repertoire of humanitarian images. In fact, the ideal-typical visual conventions of said representation, which play a huge role in the construction of public discourse, tend to look upon the humanitarian crises from a paternalistic and colonial point of view [Kurasawa 2015; Massari 2021]. As a result, this research could explain how the western system of information communicates humanitarian crises through photojournalism and how those representations can change the course of social identity and cultural meaning.

The "Marginal Centrality". Meanings and Cultures of Work: An Italian Case Study.

Currently, the persistence of the centrality of work rises several doubts. In Italy, some studies (Bertolini and Goglio 2023) on the meaning of work among adults and young people show that «it is not work which loses its centrality but rather change preferences and priorities with regard to the type of desired job. The quality of work is central, but it has taken on different connotations in recent years: the quality of work is given by its ability to be reconciled with time for family, care and leisure». However, other research disproves the centrality of work. According to the 2023 Asfor survey «there is a strong discontinuity compared to the past, work seems to have less centrality in the hierarchy of values and a lesser identity». On the basis of the study by Community Research&Analysis for Federmeccanica (of July 2023, conducted on 1020 cases), work is in "condominium" with other aspects of life: it is certainly relevant and shares its importance with other dimensions. But, for a significant part, although important, work is put in the background compared to other values. It could be argued that work has a "marginal centrality" in the symbolic horizon of today's youth.

The first part of the presentation highlights the results of a survey (January-February 2024) realized by the author on 400 Italian employees of an international company, leader in the business consulting sector. The research, carried out using a questionnaire built on scientifically validated tests from organizational sociology and psychology, shows the aspects that, today more than ever, influence job satisfaction and consequently the value of work for people. In the second part, according to the research findings, an attempt is made to classify ten families of meanings of work that crystallize into as many typologies of subjects.

DI GIMINIANI, PIERGIORGIO* (Pontificia Universidad Católica de Chile, Chile)

Rewilding As Solution and Problem of Climate Crisis

Rewilding has emerged as one of the most widely popular interventions to climate crisis under the banner of ecological reparation and nature-based solution. At the same time, rewilding has come to be experienced by many populations living around resource frontier and protected areas as the inevitable prospect of land abandonment and the reiteration of traditional exclusionary models of wilderness protection. The history and present of conservation around temperate rain forests of southern Chile exemplify the twofold nature of rewilding. I explore experiences, discourses and projections of rewilding with a focus on the potential of crisis for rethinking environmental justice in a future conjured through both utopian and apocalyptic images of rewilding. Anthropocene thinking can help us to reimagine new practices of conservation in which rewilding projects and ecological reparations are jointly developed to revitalize not wilderness but rather all those fragile instances of more-than-human cohabitation through which multiple forms of life can endure a crisis with no end in sight.

Reclaiming Urban Spaces: Grassroots Movements and the Opportunity for Community-Centered Governance in Rome and Marseille

The article explores how grassroots socio-cultural movements are reshaping spatial governance in two Mediterranean cities—Rome (Italy) and Marseille (France)—in the context of emerging public policies on community-led urban regeneration. Using a qualitative research approach that incorporates case studies, fieldwork, and policy analysis, the study examines how these initiatives navigate processes of institutionalization within urban environments where the commodification of public space is increasingly contested. Focusing on the evolving governance models in spaces such as Spin Time Labs in Rome and La Friche La Belle de Mai in Marseille, the research critically assesses the potential of these grassroots movements to enhance social cohesion, promote sustainable urban strategies, and challenge market-driven development paradigms. Through a multiple case study analysis, the article investigates how bottom-up social innovation practices influence urban policy and public space governance in these cities. It aims to identify the conditions under which grassroots initiatives can foster alternative societal frameworks and resist economic and political pressures. Additionally, the research reflects on the complexities and tensions that arise as these movements become institutionalized, particularly as they balance their radical agendas with the demands of formal governance structures. By situating the case studies within the broader socio-political landscape, this research seeks to provide insights into the evolving relationship between civil society and urban governance, offering critical reflections on the challenges that grassroots movements face when advocating for alternative societal frameworks and cultural paradigms in contemporary urban settings.

Return Migration As a Pathway to Social Justice: Insights from the MENA Region

The MENA region (Middle East and North Africa) has been a significant source of migratory flows, primarily toward Europe and other parts of the world. However, there is a growing trend of "return migration," where migrants choose to go back to their home countries. The WePropose project, funded under the PRIN PNRR with Next Generation EU resources, investigates the transformative potential of these return migrations in promoting social justice and economic inclusion in the MENA region. The research explores how returning migrants, often equipped with skills, financial resources, and transnational networks, can help address structural gaps and reduce social inequalities.

Through qualitative and quantitative analysis, WePropose demonstrates that return migrations are not merely a demographic phenomenon but an opportunity to strengthen institutional capacities and stimulate more

equitable and sustainable development. The project highlights how these migratory dynamics can contribute to the creation of economic opportunities, especially through the entrepreneurship of returnees, and facilitate the transfer of knowledge acquired abroad. However, the research also points to the need for more inclusive national and regional policies to facilitate the reintegration of migrants and maximize their contributions to society.

In this context, WePropose also reflects on the policies of assisted voluntary returns, drawing on empirical evidence collected through fieldwork conducted with key experts from INGOs and public institutions. In line with the theme of the session "Migration Policies and Social (In)justice," the research underscores the importance of a collaborative approach involving non-governmental actors and institutions to foster social inclusion and mitigate inequalities. Current migration policies often overlook the potential of returning migrants. WePropose calls for a reevaluation of these policies, promoting a more just and equitable approach that harnesses the contribution of returnees in building more inclusive and resilient societies.

Sorokin and the Power of Love. Beyond Self-Interest Toward the Rationality of Altruism

When Pitirim Aleksandrovič Sorokin wrote *The Ways and Power of Love – Types, Factors, and Techniques of Moral Transformation* (1954), the Cold War was escalating, with two opposing ideologies clashing for global dominance. In this context, Sorokin, a Russian-American sociologist, critiques that "the contractual capitalist society crumbles amid numerous discordances, conflicts, and wars, partly due to a lack of love, leading to unlimited rivalry degenerating into a war of all against all" (p. 144).

These themes resonate today, as post-pandemic recovery is hindered by new conflicts and a pressing energy and climate crisis. Sorokin operationalizes love through altruism, viewing it as a primary social relationship essential for societal survival. He argues that a society devoid of love cannot thrive and must pursue higher goals for collective well-being. Contradicting the evolutionary perspective that sees conflict as inevitable, he asserts that "cooperative forces are biologically more significant and vital than antagonistic ones" (p. 50), representing the highest evolutionary expression of society.

Sorokin critiques the utilitarian paradigm rooted in self-interest, arguing that empirical evidence shows human behavior is also driven by benevolence and cooperation. He emphasizes the "rationality of love," asserting that solidarity and mutual aid have historically proven more crucial than competitive struggle. A just, noble, and happy society, he claims, consists of individuals bound by love, warning that societies reliant on coercive ties become social hells.

These insights from this classic highlight the renewed role of sociology in analyzing human interactions and economically relevant phenomena, particularly the impact of emotions like love and altruism on forming economic and social structures. In this context, we explore how social love (Cataldi & Iorio, 2024) and rationalities that combine values and purpose can help structure new socio-economic paradigms focused on caring for the planet and regenerating social relations rather than merely accumulating profit.

DI PIETRO, CRISTIANA* (Institute for Research on Sustainable Economic Growth - National Research Council, Italy)

Age and Ageing in the Italian Perspective of the Responsible Welfare

Over the years, the politics of European countries has slowly integrated the theories of *Successful Ageing* (Rowe & Khan, 1997) and *Active Ageing* (Boudiny, 2013) into its lines of action. The concept of "old age", according to which old people need assistance, has thus been replaced with the concept of "ageing" understood as «a permanent process that does not begin at the age of 60» (UNFPA & Help Age International, 2012, p. 11) and which recognizes the "full personal and social development" of the elderly within society (Ardigò, 1992; Piccoli, 2010). If ageing is a natural process, the elderly must not be understood only as a bearer of needs but as a «fundamental actor in determining both the present and the future of [...] society» (Piccoli, 2010, p.245). Therefore, if elderly people experience social exclusion and loneliness, this is not due to age but to cultural, social and environmental barriers (CNB, 2006; Johnson, 2002; Lloyd-Sherlock, 2004). Society must support the biological ageing process, rediscovering the old person in his/her «relational subjectivity and essential references to the social and cultural structure» (Cesareo cited in Belardinelli, 2009, p.241).

The present study aims to introduce the Italian perspective of Responsible Welfare (hereinafter RW) applied to ageing policy. It overcomes both the neo-liberal horizon of individual responsibility and the social-democratic one of state responsibility, focusing on the social responsibility, shared among all the actors who play an active role in the welfare system (Cesareo & Pavesi, 2019). The RW perspective offers a method of definition-management-evaluation of policies and services that meets the new approach of *Healthy Ageing* (UN Decade, 2022), introducing the enabling activation and the shared integration as a parameter of the quality of life of all citizens, precisely because how one lives today determines how one ages tomorrow.

DI PIETRO, CRISTIANA* (Institute for Research on Sustainable Economic Growth - National Research Council, Italy)

Enabling Environment for Ageing Well: Nusbaum's Capability Approach Applied to Housing Model

In the last thirty years, society has been facing a significant transformation that goes beyond the boundaries of countries: the global phenomenon of ageing population (UNDESA, 2022). The paradigm of the state as a provider of welfare services is restructured in a new one: the state provides opportunities that could enable people to enlarge their choice of doing and being what they consider valuable for their well-being (Stiglitz, Sen, Fitoussi, 2009). The socio-political environment certainly affects people's freedom since it is the relational space wherein they experience human development (from the immediate environment of the proximal processes, such as home and family, to remote ones of the "societal blueprint").

The starting point of this research is the definition of adequate housing for the elderly, particularly regarding the new model of intentional community for the second half of life (Choi, 2004; Sandstedt & Westin, 2015; Sargisson, 2014; Saunders, 2016). Drawing from the ecological model and environmental gerontology, the present research adds Nussbaum's capability approach perspective to the life environment in "relation with individual's ability to convert [it] into valuable outcomes" (Bronfenbrenner, 1977; Nussbaum, 1997; 2003; 2011). In particular, the paper will analyse how and to what extent housing models can affect the promotion of health, safety and participation opportunities for an enabling aging.

DIAMOND, ALEX* (Oklahoma State University, USA)

Beholden to the Field or the Ivory Tower? the Emotional Resolution and Silencing of Ethical Dilemmas in Ethnographic Research

Alice Goffman was notoriously vilified for driving research participants around in search of a rival gang member who had killed their friend. While critics within academia argued that her actions represented an ethical violation of her role as researcher and conspiracy to commit murder, Goffman described herself as participating in a collectively validated expression of grief and anger that showed "people in the neighborhood that [the victim's] friends were *doing* something." This perhaps extreme example highlights a more common issue in highly-immersive fieldwork: more than we admit, ethnographers confront ethical dilemmas produced in the tension between the contrary social expectations of the distinct social worlds we inhabit, including both academia and our field site.

Focusing both on my fieldwork experience and my decisions about how to write about it (or not), I describe three ethnographic dilemmas: the use of a bribe to replace a lost license plate, financial contributions to research participants, and decisions around where it is safe to travel in an active conflict zone. I argue that ethnographers will likely resolve similar dilemmas in two ways: first, their behavior is determined by emotional responses that serve as roadmaps for orienting action; and second, we generally excise these dilemmas from our writing (here Goffman was the exception and she paid for it dearly). This silence protects ethnographers from recrimination but eliminates potentially interesting findings and weakens the training of budding ethnographers who must reinvent the wheel as they confront these dilemmas on their own.

RC15-237.4

DIAMOND, ALEX* (Oklahoma State University, USA)

Pushed out By Corporate Agriculture: Legal and Illegal Drug Cultivation in a Context of Economic Exclusion

How do legality and illegality affect drug cultivation? This paper draws on three years of ethnographic fieldwork with coffee and ex-coca farmers in Colombia and one year of fieldwork with marijuana growers in Oklahoma to argue that illegality exposes drug cultivators to criminalization but also allows small-scale farmers an elusive productive niche within a global agricultural economy that privileges corporate agriculture.

In my first case, a rural Colombian village, I describe a transition from one stimulant to another and then back again. Farmers grew coffee before economic liberalization allowed industrial coffee production to drive prices below production costs. This pushed them to grow coca (the raw material for cocaine), with prices protected from the competition of corporate agriculture by its very illegality. Decades of violence and criminalization inspired farmers to accept a coca substitution program to transition to legal agriculture like coffee. But with coffee's global prices perilously low, these farmers again find themselves priced out of legal global markets, with many considering a return to coca or a precarious future in urban slums.

My second case focuses on rural marijuana farmers in southeastern Oklahoma. For decades, they grew for illegal markets, which exposed them to criminalization but guaranteed high prices. When the state legalized medical marijuana, they acquired legal cultivation licenses. However, market saturation drove prices downwards, with small-scale farmers pushed out by better-capitalized firms. While some abandon cultivation altogether, others return to illegality, growing for a lucrative (yet illicit) inter-state trade in marijuana that gives them their only chance at profitability.

The comparison suggests two related findings. One, illegal drug cultivation is inspired less by greed than by farmers' exclusion from legal markets dominated by corporate agriculture. And two, legalization policies diminish the social costs of criminalization and violence but privilege corporate interests and exclude small-scale farmers.

DIANATI, VAFA* (University College London, United Kingdom)

Contested Land Regimes and Urban Transformation in Post-Revolutionary Tehran

The 1979 Iranian Revolution radically reconfigured property rights, land tenure, and institutional structures, disrupting a complex historical framework shaped by Islamic jurisprudence and *Waqf*, 20th-century land reforms, and customary land practices. Post-revolutionary land confiscations—primarily from the aristocracy and industrial elite—placed vast assets under the control of revolutionary charitable organisations, with the declared aim of redistributing wealth in line with Islamic principles of social justice. However, this transformation produced lasting ambiguities and tensions within Iran's land tenure system.

While initially aimed at increasing land access for lower-income groups by reducing land prices, weak regulatory frameworks and erratic implementation hindered long-term infrastructural planning. Revolutionary goals of equity and distributive justice gradually shifted towards neoliberal entrepreneurialism, as charitable organisations became influential economic actors, engaging in speculative real estate activities in partnership with municipal authorities and other state and non-state actors. The persistent effects of competing land claims, overlapping legal regimes, and fragmented ownership patterns emerge as critical, yet underexplored, factors in Tehran's contemporary urban challenges. These include unchecked urban sprawl, environmental degradation, and infrastructural deficiencies, exacerbated by conflicting claims over land and tenure, leading to delayed or contested urban projects.

The interplay of revolutionary ideals, neoliberal shifts, and entrenched land politics remains central to understanding Tehran's ongoing urban dilemmas. This presentation examines the origins and evolution of institutional arrangements related to land ownership through case studies of urban land conflicts in Tehran. It analyses the rationale behind the revolutionary policies on property and land rights, evaluates the outcomes of these institutional changes, and explores the agency of various actors in shaping property rights institutions. More importantly, the presentation traces the implications of institutionalised and customary land tenure, along with religious claims over land, on current urban and peri-urban development patterns in Tehran, particularly in developments that straddle the formal-informal threshold.

DIAZ ESPAILLAT, MICELY* (Center for Development Research (ZEF), University of Bonn, Germany)

Exclusions and Belongings in the Dominican Republic: Navigating Statelessness and Power in Bateyes.

Citizenship is not only a legal status but a lived experience shaped by intersecting systems of power, identity, and exclusion. This presentation, based on ongoing research titled *"Exclusions and Belongings in the Dominican Republic: The Case of the Bateyes,"* explores how residents of marginalized sugar plantation communities, primarily inhabited by Haitian migrants and their descendants, referred to as Bateyes, navigate complex dynamics of race, nationality, and socio-economic status. Many Dominicans of Haitian descent within these communities are stateless, facing profound social and political exclusion.

By analyzing how individuals and groups assert their place in society, this study investigates how Bateyes residents challenge and subvert dominant frameworks of citizenship. Through an intersectional approach, it examines how various forms of legal, spatial, and social exclusion shape their daily lives, while identifying the ways they cultivate cultural practices, community networks, and acts of resistance. The presentation will also explore how broader social transformations, such as labor exploitation and migration, impact their experiences.

Focusing on the interplay between local and transnational contexts, this research broadens our understanding of citizenship struggles and the power dynamics that sustain systemic inequalities. It contributes to ongoing discussions on decolonization by examining how marginalized communities, despite facing systemic barriers, construct new frameworks of belonging that challenge conventional notions of the nation-state and citizenship, thus highlighting the significance of their experiences for future research and policy.

Adolescentes En Transición: Oportunidades y Resistencias Del Alumnado Inmigrante En La Educación Escolar Chilena

La Educación Secundaria Obligatoria se constituye como una etapa de alto riesgo o vulnerabilidad académica para la población inmigrante que transita a una escuela de acogida. Este estudio de casos colectivo examina las resistencias y oportunidades a las que se enfrentan diecisiete escolares inmigrantes en la transición que va desde la primaria a la secundaria, dilucidadas a partir de los recursos valorativos que emplean en la construcción de un discurso narrativo configurado por las transiciones educativas y expectativas académico-profesionales. Específicamente, nos centramos en el componente semántico-discursivo de la ACTITUD, analizando sus tres niveles de valoración: AFECTO, JUICIO y APRECIACIÓN. Realizamos entrevistas en profundidad a 17 adolescentes inmigrantes (hombres y mujeres) que asisten a escuelas públicas chilenas y una metodología participativa colectiva, ambas de carácter biográfico-narrativo. Los resultados destacan la influencia de diversos factores influyentes en las trayectorias del colectivo estudiantil inmigrante: las características del país de acogida, los desafíos planteados por la pandemia, el apoyo familiar, el racismo, el papel de los/as profesores/as y las aspiraciones académico-profesionales. En cuanto a las resistencias, el acoso racista se identifica entre el final de la primaria y el inicio de la secundaria, lo que coincide con los resultados de la literatura revisada. En cuanto a las oportunidades, la figura adulta influyente representada por padres, madres y profesores/as se posiciona como un factor protector decisivo en el desarrollo y progreso de las transiciones educativas exitosas. Asimismo, la configuración de altas expectativas académico-profesionales de las personas participantes vendría a funcionar como predictor del éxito educativo.

DIAZ ROMAN, MARIO PAVEL* (Universidad Nacional Autónoma de México, Mexico)

The Relationship between Homicide and the Illegal Drug Market in Mexico City

In Mexico City, the relationship between rising homicides and illegal drug markets has been understudied, leading to a lack of understanding of their association. However, evidence and analysis of crack markets in the U.S. in the 1980s and 1990s provide evidence of this relationship. This article uses several regression models and a bivariate LISA for the variables of interest in the case of Mexico City. The results indicate that the relationship is weak

and differential according to spatial distribution. Although the magnitude of the coefficients is not very robust, they support the idea that the dispute over the control of illegal drug markets is related to the increase in homicides, although it qualifies its association in the public discussion.

SÁNCHEZ JIMÉNEZ, SERGIO (University of Oviedo (Spain), Spain)

El Descontento y La Satisfacción De La Ciudadanía Con El Sistema Alimentario Español

Desde hace unas décadas, los estudios sociales sobre la alimentación han identificado múltiples signos de malestar de la ciudadanía con el sistema alimentario, algo también respaldado por una sociedad civil organizada que reivindica la revisión del funcionamiento de un sistema globalizado por sus graves efectos negativos sobre la salud humana y la del planeta. Teniendo en cuenta este contexto, el presente trabajo tiene como objetivo mostrar en qué medida el sistema alimentario español resulta satisfactorio a la ciudadanía o si estamos ante una respuesta emocional de desencanto. Para alcanzar este objetivo se analiza el grado de satisfacción de la población con los agentes que conforman el sistema alimentario preguntándoles acerca de lo que se come, lo que se cocina en casa, lo que se cocina en los restaurantes, la forma de comprar y vender los alimentos, la forma de producirlos y la forma de empaquetar y transformar los en la industria. Los datos proceden de la encuesta "ENSALMA2024", enmarcada dentro del proyecto "El malestar con la alimentación: la transición hacia una alimentación saludable, sostenible y justa" financiada por la Agencia Estatal de Investigación en la Convocatoria 2021 del programa "Proyectos de Generación de Conocimiento" (Referencia PID2021-122721OB-C21). Los resultados revelan que los niveles generales de satisfacción son elevados, muy especialmente en aquellas áreas del sistema en las que la ciudadanía manipula directamente el alimento como comensal o como cocinero. Sin embargo, el malestar aumenta en aquellos eslabones de la cadena sobre los que se carece de control, la producción, la distribución y especialmente la industria, ámbitos que resultan opacos a la ciudadanía.

Políticas De Ayuda Alimentaria En España: Un Repaso Histórico De La Medición y El Concepto Sobre Inseguridad Alimentaria

Las políticas de ayudas alimentarias son una parte fundamental de las políticas sociales y su diseño y desarrollo están profundamente influenciados por el contexto social, político y cultural de cada país. Es posible conocer estas políticas y su evolución analizando las acciones de quienes se encargan de su desarrollo y los perfiles a quienes se orientan. Este trabajo tiene como objetivo realizar un análisis histórico de la medición de la inseguridad alimentaria en España, desde principios del siglo XX hasta la actualidad, mostrando con ello la evolución de las políticas de ayuda alimentaria, sus actuaciones y los potenciales usuarios, así como los cambios en los conceptos de hambre e inseguridad a lo largo del tiempo. Para realizar este análisis se lleva a cabo un exhaustivo repaso de fuentes documentales y fuentes estadísticas oficiales, complementado con el estudio de las iniciativas de ayuda alimentaria desarrolladas tanto por instituciones públicas como por entidades privadas. El análisis realizado permite ofrecer una visión crítica sobre la efectividad de estas políticas a lo largo del tiempo, identificando los retos y los logros en la lucha contra la inseguridad alimentaria en España.

The Modernization of Education, the Ideological & Political Education Curriculum: A Case Study of the Course on Modern Chinese History

The *China Dream* outlines a comprehensive program for rejuvenating the Chinese nation and restoring it to its rightful place in the global system of nations. The comprehensive program of socialist modernization with Chinese characteristics under the leadership of the Communist Party of China (CPC) is proposed as the only means to realize this dream. The CPC sees educational

reforms as essential for realizing the *China Dream*. This has given rise to the development and delivery of a new Ideological and Political Education (IPE) curriculum. At the university level, the IPE curriculum consists of six courses required for all undergraduate students. This paper is a case study of the History of Modern China course – one of the six required courses in the IPE. We argue that among other things the objective of this class is to build student's confidence in the possibility of socialist modernization with Chinese characteristics, and to build confidence among young people in the capacity of CPC leadership to achieve that goal.

DIÉDHIU, PAUL MAMBA* (PhD-student en co-tutelle à l'université Rennes 2 & UCAD, Senegal)

Entrepreneuriat Social Féminin à Dakar : Raisons De La Désaffiliation Des Couturières De l'Association Des Femmes Couturières Du Marché Colobane (A.F.C)

La création d'emplois, le maintien du taux élevé d'activité et l'amélioration de la qualité de la main-d'œuvre sont entre autres de grands défis que les Africains doivent relever sur le Marché du travail. Cela doit sans doute aussi passer par l'entrepreneuriat, puisqu'il constitue, en Afrique, la clé de réussite de la jeunesse (Lam, 2018).

Toutefois, au-delà de la situation informelle, de l'insalubrité et du problème lié à l'acquisition des places ou ateliers dans laquelle se trouvent les femmes couturières au Sénégal, le manque de moyens financiers est aussi la cause principale de leurs difficultés (UEMOA, 2003). Une des stratégies pour ces femmes couturières d'accéder aux financements est leurs regroupements en association. Dans ce contexte, depuis 2015, association des femmes couturières de Colobane (A.F.C) a été créée, avec un récépissé reconnu par l'État, passant de l'informel au formel et pouvant assurer leurs revendications au niveau des autorités. Pourtant, malgré les opportunités financières qu'offrent celle-ci, nombre de femmes de l'A.F.C se désaffilient.

La méthodologie qualitative mobilisée, s'appuyant sur une analyse de contenu thématique catégorielle (N'Da 2015), suggère que la désaffiliation des femmes couturières de l'A.F.C découle, non seulement du dysfonctionnement, mais encore de l'illégitimité et du défaut de leadership des actrices chargées d'assurer la viabilité de celle-ci. À cela, s'ajoutent, la crise de confiance entre dirigeantes et membres et les rumeurs.

Ethnographie Des Mobilisations « Auchan Dégage » Et « Auchan Reste » Au Sénégal : Acteurs, Discours Et Idéologies

2014, coïncide avec l'implantation de la multinationale « Auchan » au Sénégal qui a suscité des controverses sociales : d'une part, les mobilisations « Auchan dégage » et de l'autre, les logiques d'usages conduisant aux mobilisations « Auchan reste ». Ainsi, raison des effets croissants de la mondialisation, les pratiques managériales d'« Auchan » seraient fortement influencées par les comportements alimentaires et culturelles actuelles, socio-économiques et politique des Sénégalais.

Cette communication analyse les stratégies de résilience de la multinationale « Auchan », en ethnographiant les mobilisations « Auchan dégage » et « Auchan reste ». Ceci étant, il semble opportun de saisir comment ces différentes mobilisations se traduisent, c'est-à-dire les acteurs qui les portent, les discours qui les structurent et les motivations et rationalités mises en avant.

L'analyse qualitative démontre une série d'intérêts particuliers des parties prenantes engagées dans les mobilisations « Auchan dégage » et « Auchan reste ». Ainsi, si certains consommateurs/clients se sont engagés dans le mouvement « Auchan reste » c'est parce que « Auchan » aurait en quelque sorte, non seulement satisfait leurs besoins : coûts et opportunités, diversité de produits (importés et locaux), accessibilité des prix, hygiène et sécurité, etc.) alimentaires, mais encore orienté les pratiques du management de certains commerçants locaux. En revanche, certains mouvements nationaux (Frapp France dégage et UNACOIS, etc.) et commerçants locaux et se sont, quant à eux, sentis menacés par les pratiques managériales d'« Auchan » à travers son plaidoyer du consommateur local, fruit d'une « farouche » concurrence conduisant, parfois, à la disparition et perte de leur clientèle.

DIEFENBACH, ALETTA* (Freie Universität Berlin, Germany)

Between Purpose of Life, Mockery and Nostalgia. How Christianity Unties and Divides the Far-Right on the Ground

The role of Christianity for mobilizing the far-right has been described as "belonging without believing" (Marzouki & McDonnell 2016), as a "thin" or "host ideology" (Brubaker 2017; Arato & Cohen 2018) and thus only as a diffuse identity marker. Ideas such as 'Christian culture' express identity, but they articulate a secular rather than a believing 'We' which is ideologically loose and vague.

Such diagnoses for the far-right are mostly based on public programs or politician's positionings and therefore drawn from a highly mediated discourse. What remains unclear is to what extent Christian ideas become really meaningful among the many new local groups of the far-right and their everyday identity formation. How does Christianity as a diffuse marker or "host ideology" really make sense on the ground to articulate the conflict of the far-right?

In my paper, I introduce the concept of affective boundary-making to sharpen the focus on precisely these diffuse, but experience-based processes of collective meaning-making. Drawing from group discussions, I use the concept of affective boundary-making to explore the meanings and functions of Christianity for new local groups from the German far-right movement: groups from the party Alternative für Deutschland (AfD), the anti-Muslim network Pegida and the transnational youth organization Identitarian Movement. I present three contrasting cases: Christianity for local groups becomes meaningful as a source for purpose of life, as mockery and as nostalgia to express identity and conflict. The cases show how multifaceted and also controversial Christianity is on the ground for a collective identity of the far-right: Christianity unifies as a secularized cultural force, but beyond that commonality, fundamentally different concepts of identity and conflict appear. My findings point to the limits of mobilizing through Christianity and ethnopluralism as key concepts of the far-right.

DIEFENBACH, ALETTA* (Freie Universität Berlin, Germany)

Understanding and Criticizing Conspiracy Theory through Counter-Speech

If we follow deliberative democracy to solve social conflicts through discussion, we need to distinguish between intersubjectively shared true and false social problems. Although challenged by postmodern ideas, critique of ideology still helps making this distinction. Whether we see ideology as a broad system of thought or more narrowly as the rupture between being and reality, this mode of critique works by drawing boundaries between what is either morally good or bad and what is true or false.

From a cultural-sociological perspective, conspiracy theories are heterodox knowledge that seeks to explain a social problem with the help of a conspiracy. It is a 'theory' insofar as it makes verifiable statements about assumed conspiracies. Often, it is easy to dismiss its arguments and claims as ideology, but conspiracies become particularly challenging if the distinction between heterodox and orthodox seems blurry. This is because good and true aspects of this knowledge should remain accessible to articulate problems, but how to deal with its 'half-truths'?

In my contribution, I introduce the use of counter-speech as a suitable method for understanding and criticizing current conspiracy theories and their blurriness. Using the example of Islamization as a powerful conspiracy of the right-wing discourse, I will show how, in group discussions, it is precisely the deliberate discursivization of knowledge and counter-knowledge that helps to examine various forms that are significant for critique of ideology. This is because the data produced allows to reconstruct knowledge along the differences good/bad and true/false, but also knowledge as contested or even as affective and not discursive. On the one hand, this gives us a better understanding of the complexity, internal contradictions and limits of right-wing conspiracy knowledge; on the other hand, it makes its academic critique more specific, robust and transparent.

L'Afrique Face Au Défi Du Financement Des Politiques Climatiques

L'Afrique subsaharienne est la région qui contribue le moins aux émissions de gaz à effet de serre, avec moins de 5 % du total mondial. Cependant, elle est peut-être la plus exposée aux chocs climatiques. Un tiers des sécheresses dans le monde se produisent déjà en Afrique subsaharienne. Compte tenu de sa dépendance à l'égard de l'agriculture pluviale, la région est particulièrement vulnérable.

La justice climatique exige de mettre en place des mécanismes endogène et exogène pour mobiliser des ressources conséquentes destinée au financement de la politique d'adaptation et d'atténuation, tout en maximisant leur impact. Certes, des stratégies sont élaborées en Afrique, mais malheureusement, ces stratégies de financement ne donnent pas suffisamment de précision sur comment les politiques climatiques sont financées en Afrique. Un certain nombre de défis subsistent encore et par conséquent, méritent d'être adressés pour avoir une image fidèle du financement nécessaire pour atteindre les objectifs d'adaptation et d'atténuation.

Les nombreux obstacles sous-jacents qui subsistent doivent être surmontés à cet effet, afin de trouver des solutions mieux articulées pour un financement durable. Dans cette perspective, il est important d'exploiter toutes les opportunités offertes dont notamment le potentiel des secteurs émergents clés (industrialisation, nouvelles solutions de santé, pharmacie, énergie propre, logement abordable, fabrication en économie circulaire, pertes et gaspillages alimentaires, solutions agricoles, services écosystémiques forestiers, infrastructures urbaines et solutions de construction, etc.), qui peuvent stimuler les économies Africaine.

Ley 21.040 y Prácticas De Gestión Escolar: Un Análisis Etnográfico En El Contexto De Cuatro Escuelas Públicas Chilenas

En 2017, se promulgó en Chile la ley 21.040, que establece el nuevo sistema de educación pública, orientado por principios como la colaboración, la inclusión educativa, la formación integral y la democracia escolar. Sin embargo, esta normativa no modificó el financiamiento ni el modelo managerial de gestión escolar, basado en la competencia y la medición del desempeño. Esto plantea un desafío para la gestión escolar: conciliar los objetivos democráticos e integrales de la nueva educación pública con los estándares normativos de calidad vinculados al financiamiento, la intervención ministerial y la selección familiar.

Esta ponencia presenta avances de una investigación doctoral que analiza cómo la ley 21.040 impacta las prácticas cotidianas de gestión escolar en escuelas públicas, considerando las condiciones estructurales del sistema educativo chileno. La investigación adopta un enfoque cualitativo-etnográfico y se desarrolla en cuatro escuelas de dos servicios locales de educación pública (SLE) en la región Metropolitana. En una primera fase, se utilizan los planteamientos de Bourdieu para identificar características objetivas de las escuelas y analizar las relaciones y posiciones de los actores, seleccionando casos y participantes. En una segunda fase, basada en la teoría de las prácticas sociales (TPS), se explora la vida cotidiana de las comunidades educativas seleccionadas. A través de análisis de documentos, entrevistas, observaciones participantes y mapeos colectivos, se busca comprender cómo los actores educativos implementan la gestión escolar bajo la ley 21.040.

Preliminarmente, se observa que la orientación técnico-administrativa de los SLE reconfigura las prácticas de gestión escolar, modificando interacciones y roles tradicionales. Esta reconfiguración tensiona las lógicas de competencia y colaboración, reflejándose especialmente en el liderazgo del director/a y su interacción con la comunidad escolar.

In Anticipation of (In)Stability? On Potential Stabilising Factors of Societies in the Future

In the face of a multitude of global turbulences as well as rapid social and technological change in the current phase of the Anthropocene, late modern societies are arguably entering an era of instability, while anticipations of the future are characterised by even more uncertainty. Three developments are substantially contributing to this situation: (1) a shift of communication into the digital sphere leads to an increase of knowledge conflicts and competing epistemes; (2) democracies are experiencing growing problems in governing the complex crises they are facing while public trust in their institutions and policy makers is declining; (3) anthropogenic climate change and the scarcity of natural resources are making the limits to economic growth and the resource-intensive lifestyle of societies of the global north ever more present. Even though late modern societies are facing a doubtful future, sociological theory has given little attention to the question of which factors could become pillars of societal stability in the future. Building on Berger/Luckmann as well as Hausknot's concept of passive legitimacy, this contribution suggests a social constructivist perspective to better understand current societal instability and to make sense of potential stabilising factors of future societies. By drawing on the history of modernity, it argues that the stability of society depends on: (1) the social construction of a shared 'objective' reality with certain guiding paradigms and narratives (social stability); (2) the capability of policy makers to generate passive legitimacy (political stability); and (3) the shared perception and/or prospect of material prosperity (material stability). Potential factors of future societal (in)stability, such as artificial intelligence, expertise and ideology, are then analysed through the lens of these three stability dimensions. Thereby, this contribution aims to shed light on the plausibility of different scenarios of future societal (re)stabilisation.

The Value of Women in Protest Conflicts: The Nigerian Feminist Coalition (FEMCO) of #EndSars

2020 social media in Nigeria will always remember the #EndSARS protests of October, where young Nigerians across the globe massively called for the end to police brutality on young Nigerians within Nigeria. The brutality included the extortion and killing of young men as well as physical assault on young women. The protest which started online, on Twitter, eventually snowballed into huge physical matches and occupations of major government buildings, so as to attract the presidential dissolution of the police unit that committed such brutality. Alongside it, young people also demanded an end to all round bad governance in the country. The protest went so viral that it is said to have over 25 million online mentions. It also involved the participation of (international) celebrities including then Twitter CEO, Jack Dorsey. An important aspect of the protest was that it was voluntary, and young people gave freely of themselves, time, and resources. In view of this, the Nigerian Feminist Coalition (FEMCO) volunteered themselves for fundraising, welfare and legal support of arrested protesters. They raised \$385,000 (mostly via Bitcoins) through (online) crowdfunding. They eventually became the financial backbone of the protest. At the end of the protests, however, they were heavily accused and condemned of/for siphoning funds, mostly by Nigerian Twitter Men and acclaimed Bitcoin experts. In the face of this allegation, they had their reputation dented, and their praise worthy works, defaced, even till recently (from time to time, on Twitter, now X). With the FEMCO example, alongside secondary research reviews, this study firstly recognises the impact of women in progressing national causes, and secondly questions the undervalue of women in recognising their impacts after such causes are (not) achieved.

DILL, BRIAN* (University of Illinois at Urbana-Champaign, USA)

Logging Off: Rethinking Rural Futures after the Fall of the Timber Industry

In this paper, I explore the transformation of rural communities traditionally dependent on resource extraction industries, such as coal mining, logging, and oil, through the lens of a relational approach to rural development. Rather than viewing these communities in isolation, I use this approach to highlight their interconnections with broader economic, political, and environmental networks and processes. The concept of the rural as relational highlights how many of these areas, often characterized as "left-behind places," are shaped

by interactions and dependencies with urban centers and global markets, particularly as resource extraction industries decline. I argue that the decline of extractive economies creates both challenges and opportunities for economic diversification and redevelopment, where local actors must work with local constraints while leveraging internal and external resources to foster resilience. Using case studies from former logging communities in the Pacific Northwest of the United States, this analysis shows how communities are transforming their futures through a variety of initiatives. By focusing on how these regions are not merely left behind but actively negotiating their roles within broader systems, this paper contributes to a deeper understanding of rural transformation as a dynamic process influenced by relational networks, economic restructuring, and community-driven development strategies.

DIMADAMA, ZEFI* (Panteion University, Greece)

"Gender Equality and the Climate Crisis: Challenges, Opportunities, and the Role of Sustainable Development in Greece"

Our approach in this study focuses on gender inequality and the climate crisis. Women often have less access to resources such as land, education, and financial services, which limits their ability to adapt to climate challenges like food insecurity and displacement. These inequalities perpetuate cycles of poverty and exclusion, making it harder for women to participate in sustainable development initiatives.

In Greece specifically, extreme weather, climate change, and its impacts disproportionately affect differently women. A research (using questionnaire) that we conducted in 2023 in certain regions of the country revealed that the consequences are not the same for everyone. Women are disproportionately affected due to biological, economic, and social factors, such as motherhood, lack of resources, psychological pressure, increased caregiving responsibilities, and the reduction or elimination of their incomes.

At the same time, it became clear that the climate crisis exacerbates existing inequalities, with women being more severely impacted in various sectors by natural disasters and energy poverty. Limited access to education and employment opportunities reduces women's ability to adapt and respond to new conditions.

By leveraging the 17 United Nations Sustainable Development Goals (SDGs), a systematic plan is created to address these issues, providing a useful roadmap. Specifically, Goal 5, which focuses on gender equality, aims to empower women and girls by addressing the systemic barriers that limit their participation in economic and environmental decision-making.

To tackle these issues in Greece, it is crucial to strengthen gender equality, ensure women's participation in decision-making centers, and promote environmental education and awareness. This paper will outline how effective collaboration between various stakeholders can ensure inclusive governance while simultaneously combating gender stereotypes, which are essential for achieving climate justice, sustainable development, and enhancing the equality and the resilience of women and society as a whole.

It's Not a Job! Considering the Internal and External Conditions of Emerging Visual Artists' Labor, Education and Personal Establishment in the Current International Art Market.

Dr. Nina Dimitriadou Yassin, a practicing visual artist and researcher of the sociology of visual artists, will present evidence from her lifelong research exploring why the practice of novice visual artists cannot be considered a straightforward profession, rather than a vocation or lifestyle. She will advocate for structural changes and policy revisions from international state policy makers and stakeholders in the visual arts to mitigate risks and abuse in visual art careers for future generations. Moreover, Dr. Yassin will demonstrate that the artist's personal motivation and decision-making does not alone suffice to improve their work-life conditions. With an ever increasing number of graduate programs in visual arts that are in turn producing more artists, artists are further challenged in building a life supported by their professional practice as self-employed visual artists.

RC37-614.4

DIMITRIADOU YASSIN, NINA* (University of Brighton, United Kingdom)

The Achievements and Limitations of Visual Artwork When Dealing with Concepts of Human Suffering As a Way of Seeking Social Justice.

Contemporary artistic freedom, and its public accessibility via the internet and other media, has enabled many conceptual artists to explore human suffering as the concept of their art. Moreover, these artists are no longer confined to fine arts as their media. Instead, they utilize a wide range of techniques, creating a diversity of visual expressions on the subject. These favorable conditions created a context for artist and sociologist Dr. Nina Dimitriadou Yassin to address human suffering in her artwork and research.

Dr. Yassin's practice-based experience and role in presenting the human condition on a global stage have revealed significant challenges and raised questions about the involvement of visual artists in advocating for social justice. In looking at the public's overall ability to interpret contemporary visual art, as this experience is typically accessible to "privileged audiences" (Sifakakis, 2007), she will address the limitations of an artist's access to knowledge, data and history of their subject while creating. For instance, an artist's understanding and interpretation may be restricted to their point-of-view and personal experience, their limited access to national security documentation, reliance on questionable historical narratives shaped by a single perspective, or simple media propaganda. If hired to create a work for an organization's political agenda, artists may be led to sensationalism instead of working towards social justice.

Cultural Heritage and Labour Disputes in Buenos Aires' Historic District

This paper examines how a difficult present can re-signify understandings and uses of urban heritage. Although the field of cultural heritage is not new to disputes (Chechi, 2014), considering present-day labour conflicts and working-class issues can challenge dominant ways of understanding heritage and history (Smith, Shackel and Campbell, 2011) and offer original insights into the current uses of heritage. This paper examines recent contention over cultural heritage in San Telmo, Buenos Aires's historic district in Argentina, through an ethnographic research film documentary I made to make visible a story of crisis, injustice, solidarity and resistance in a changing urban district. The case study is Bar Dorrego, a cafe-bar located in a nineteenth-century building declared a 'Notable Bar' and a 'Site of Cultural Interest' by the City government. After a labour dispute with the manager, the workers occupied Bar Dorrego and established a co-op to self-run the business. In a quick move to save the Bar, Argentina's National Commission of Monuments, Places and Historic Assets declared it 'an Asset of National Historical Interest'. What ideas about 'cultural heritage' are mobilised and made visible through this case study? How does an existing labour dispute disrupt and challenge views about the meanings of this place's heritage? I discuss the extent to which the concept of a 'living heritage' (Hall, 1999; Poullos, 2014) might help preserve listed buildings, particularly when workers' views, experiences and knowledges are a constitutive part of intangible heritage associated to a place. In so doing, I seek to highlight the importance of the everyday life of a place, its social function, and the intangible contributions of those who make a place what it is. The paper contributes to debates in critical heritage studies, particularly the concept of living heritage and its significance in relation to informal work, resistance and gentrification.

The 'cavone' in Naples: Friction of Overlapping and Intersecting Mobilities

The proposal aims to present a critical interpretation of a street in the historic centre of Naples. The investigation conducted on this street has enabled the detection and examination of various mobilities trends.

The 'Cavone' is like an oblique urban transect, along a path on various heights, which offers insight into the complexities of socio-spatial stratification that represents a conundrum (1), on which mobilities that have different temporalities, rhythms and ratios act and take place in the material and immaterial dimension of the place. These mobilities can be attributed to

intergenerational socio-economic trajectories, to differently rooted migrants' presences, to different social groups pushing into the housing stock and to advancement of tourist incursions. Like in a Tsing's friction, the 'Cavone' let us understand arising issues for the contemporary urban question, as they emerge in Naples.

The presentation will provide an overview of mobilities as they have emerged through the material city and the stories embedded within it, based on a series of fieldwork in the area (2). This will lead to a discussion of more substantial and broader questions that have been prompted.

What does a street tell us about processes, political and socio-economic changes in the city?

What are the boundaries, conflicts, intersections and coexistence points between the observed mobilities?

What challenges does the case pose for urban governance in addressing imbalances and inequalities that may arise from the diverse power dynamics associated with these mobilities?

Hope Consumption: The Mental Consumption of Chinese High-Tech Giants' Workers

In the wake of China's post-reform economic boom and the rapid expansion of the Internet economy, China has emerged as the world's second-largest economy with one of the most advanced systems of e-commerce consumption. However, this prosperity has become a double-edged sword for the newly formed "tech elite", affecting both their work and lifestyle. While it has brought higher wages, it has also led to gruelling overtime schedules, with unprecedented precarity through the common practice of bottom-ranking elimination and mass layoffs for workers over the age of 35. Drawing on 32 semi-structured interviews with tech workers, this study examines both the working conditions and how these demands manifest in consumption patterns. First, we identify the emergence of a new trend in spiritual consumption, which includes the rising popularity of Tarot readings, Buddhist retreats, counselling, and other spiritual engagements. Second, interviewees consistently reported this trend as a direct response to the growing precarity within the tech industry. Finally, we argue that spiritual consumption serves as a coping mechanism for alleviating anxiety, fostering a sense of empowerment, and restoring meaning to their lives. We term this phenomenon as "hope consumption", to reflect that in the era of widespread alienation in the workplace, work becomes a source of despair leading workers to turn to spiritual consumption to restore peace for life. This transformation underscores contemporary Chinese society's increasing pursuit of spiritual fulfilment beyond material success and reveals how neoliberal anxieties are being channelled in a non-religious society. However, while mental consumption may temporarily relieve workers' struggles on a personal level, it fails to address the structural issues in the workplace on a macro level.

Entangled in Translation. Space and Emotions between Sea and Land, Starting from an Experience of Field-Work at Surin Island with Moken People.

The proposal of this paper is to work from the first findings of a field research experience at Surin Islands, Andaman Islands, Thailand, carried out last February, within a natural and national park, which is also home to villages of Moken peoples. From the point of view of maritime sociology and environmental humanities, we would like to show how the first findings and hypothesis connect to the theme of both emotions and spaces and relationship between sea and land space. We would therefore like to recount hypotheses and issues that emerge from this work, in relation precisely both to the theme of perception and emotions, and especially in relation to material objects, such as dwellings, boats, and the waste itself, within the village we visited. and in which we conducted the work experience with interviews and observations. Another point we are working on is to see how the dimension of the sacred (thinking of the classic works of Durkheim to Mauss to Douglas) emerges in this context and in the relationship between rituals, actions and material elements.

Climate Smart Technology in Agriculture & Its Impact on Farming: A Case Study of Edo State in Nigeria

Farmers in Africa, are faced with a myriad of challenges as they seek to increase agricultural productivity in their farms. Climate change has played a critical role in the array of these challenges. However, the problem becomes persistent when farmers are not prepared to mitigate the menace, through adequate contextually relevant adaptation strategies including climate-smart technologies. This study explores how rural communities in Edo State use technology to fight climate change by focusing on the disaggregated impact on women-led farms. Specifically, the study sought to understand the impact of gender in the use of digital tools in fighting climate change; understand community challenges in adopting climate change technologies and the impact of these technologies on their communities. Employing mixed methods, the study used surveys and focus groups to gather data from 1336 households in fifteen farmer-based local governments, where farmers were heads of households. Three focused groups were randomly chosen from two of the local government areas. The study had 54.49% male respondents and 45.51% female respondents. The study concludes that communities did not adopt climate-smart technologies due largely to low awareness. Also, gender is found not to be a major factor when it comes to the use of digital tools, however, when it comes to decision-making about the use of climate-smart technologies, gender becomes a factor. Therefore, the study recommends the need for the government to intensify efforts in educating farmers on the importance of climate-smart technologies.

DIRODI, LUCA* (Scuola Normale Superiore, Italy)

Social and Community Theatre. Artistic Representation As a Collective Investigative Process

In this session I intend to explore how a particular theatre model, *Social and Community Theatre* (SCT), shares many principles and practices with *Participatory Action Research*. The first part focuses on theatre as a *process of collective representation*, examining the ontological and epistemological implications of its use as a methodology in social research. Unlike external observation, SCT requires active involvement, in which the researcher participates in the construction of knowledge and the realisation of a collective action, expressed in an artistic performance. Using theatre in research means creating a *liminal* space where participants can explore and reinterpret their social position and experienced conflicts. This process not only represents a *social drama*, but also acts as a *mechanism* for other processes, such as conscientization and the transformation of one's political and social context. "Together" with the theatre, the researcher can investigate the participants' *agency* and interrogate it in relation to the *context* from which it takes inspiration. The second part analyses the origins of SCT, tracing the *ritual* matrix of theatre and the dramaturgical revolutions of the 20th and 21st centuries. The changes I will examine have transformed theatre into a space and time of investigation for the actor – person or collective – highlighting the dialectic between mask and backstage (Goffman, 1959). In addition to showing the transformative effects of these revolutions in the theatrical field, I will discuss how this approach to acting and theatre has been partially absorbed by the market, anaesthetising its transformative and political power. At the end I will present reflections from my ongoing research project, which applies this methodology in marginal and oppressed spaces, such as a prison and an Italian urban periphery. The aim is to analyse through SCT how, in these highly structured contexts, particular and unconventional forms of political agency emerge.

RC37-JS-186.3

DIRODI, LUCA* (Scuola Normale Superiore, Italy)

Theatricality and Collective Action. Processes of Collective Representation

In this session, I will explore the link between *theatricality* and *collective action* in contexts of modern Western society. The analysis requires an interdisciplinary approach, interweaving the practices and studies of performing arts with those of social movements, which have provided some

of the most relevant analyses of collective action. For theatre, I will refer to a tradition that distances itself from the bourgeois conception, characterised by masks and wax, returning to an authentic status, where there is no delegation and dependence between author, producer, director, actor and spectator. For social movements, I refer to the *processual analysis* of collective action, not as a static phenomenon, but as the result of sequences of mechanisms and strategic interactions between social actors and context. Combining these disciplines means studying theatre as a collective process in the making, which I define as the *process of collective representation*. This process, alongside typical mechanisms of collective action, involves three fundamental events/mechanisms: *re-interpretation*, *ludic moment* and *performance*. It can take at least two forms: a *routine* one, linked to bourgeois theatre conventions, and an *authentic* one, freed from masks, arising from unexpressed social needs and desires. Analysing art as a process of collective representation offers a significant interdisciplinary perspective. In art studies, it allows us to understand art not as a static work confined to museums or theatres, but as a dynamic and collective process intertwined with other social processes, where performance is just one mechanism. In collective action studies, it allows to distinguish between routine collective representations and authentic, contingent and unmasked creative forms. This approach promotes the legitimisation of forms of expression not recognised by traditional critics and, in studies of collective action, re-evaluates marginalised actors as bearers of *political agency*, often perceived as hostile, resigned or invisible within institutional or radical political discourse.

Natures of the Anthropocene: An Analysis of a Digital-Participatory Image Cluster

Nicholas Mirzoeff (2014) argues that in art works like Monet's paintings *Impression, Sun Rising* (1873) and *Unloading Coal* (1875) the Anthropocene tends to be depicted in an aestheticized and thus normalized way, whereas in many contemporary artistic depictions of the Anthropocene lies the intention to critically portray the impact of humans on nature. Digital Media promotes the participation of a broader public in the pictorial discourse of the Anthropocene.

With the analysis of a contemporary digital photography collection we investigate which aesthetic perception patterns of nature and human-nature relationships become evident in contemporary images set in the context of the Anthropocene. In our presentation, we are taking an analytical look at the citizen-science-project "*Changing Natures. Collecting the Anthropocene Together*" of the Museum für Naturkunde Berlin and the Muséum national d'Histoire naturelle Paris. The core of the project is a digital-participatory collection and exhibition of currently 350 photographs uploaded by users via the website.

In our research, we conceptualize this visual phenomenon as an 'iconic image cluster' (Müller 2020). Michael R. Müller characterizes such complexly organized visual artifacts by their distinctive feature of comprising far more visual material than could be grasped at a glance, while it is precisely the diversity and similarity of the images that establish the context for each single image. We examine the entire image cluster by using systematic image comparisons which aim to develop a typology of aesthetics of representations

The analysis shows that the (re-)presentation of nature takes up patterns of the ideal of romantic landscape painting and negotiates the traceability of human existence. In this regard the orientation towards cultural conventions of aesthetic representations of nature shapes and restricts the search for symbolic forms of expression for an unprecedented transformation of nature.

'I Don't Think There's Many Black African Caribbean Men That Talk Positively about Mental Health Services': Mental Health Professionals' Perspectives on Distrust Amongst Black Men Detained in Psychiatric Hospitals

A growing body of literature has highlighted the importance of establishing and maintaining trust between people with mental health problems and mental health services. However, trust is a challenging concept within mental health care. Mental health laws in most jurisdictions, allow mental health professionals to detain people with mental health problems against their will, which can promote distrust between these groups. Quantitative research has consistently shown that African Caribbean men are disproportionately detained under mental health laws, contributing to a lack of trust between them and mental health services. In this presentation we explore how mental health professionals believe that trust can be established with African Caribbean men drawing on sociological theories of risk and trust within mental health work.

Our qualitative study used experienced-based co-design and thematic analysis to explore how the experiences of African Caribbean men detained under the Mental Health Act might be improved. In this presentation, we focus on the views of 13 mental health professionals, including psychiatrists, psychologists, social workers, and police officers who were interviewed in 2023.

Professionals in the study identified that African Caribbean men commonly distrusted mental health services. This distrust was seen to be driven by stereotypical views within services about this group being 'risky' and 'dangerous' as well as assessments and interventions not being culturally adapted. These factors were viewed within the context of socio-cultural and political factors, namely African Caribbean men experiencing higher levels of poverty, substance-misuse, trauma and discrimination. Participants identified that risk language was more frequently deployed in professional descriptions of Caribbean men and identified tensions between inter-agency policies when working with such risks. Research participants suggested several strategies for building trust. Issues relating to the mental health workforce were identified, including the lack of diversity in the workforce and inadequate training relating to black people's perspectives.

Can Additional Years of Schooling Reduce Social Differences in Mental Health Related to Genetic Predisposition?

The study uses the Finnish compulsory school reform of the 70s as a natural experiment and examines its effect on mental illness relying on novel molecular genetic instruments, namely polygenic scores (PGS). The reform was essential for defining the egalitarian welfare state Finland as it allowed for the educational expansion in terms of 3 years longer comprehensive schooling and better access to upper-secondary degrees and higher education institutions for later born generations. We build on a causal inference framework (differences in differences design) and follow-up on previous studies from UK and Sweden.

Research questions:

- Do additional years of schooling reduce the association between genetic predisposition and mental illness (**gene-environment GxE interaction**)?
- Do some social groups, defined by gender and parental socioeconomic status, benefit more / less from the educational reform than others (**heterogeneous effects**)?

Genetically-informed register data -cohorts born between 1958 and 1970- was split into those affected by the Finnish compulsory school reform and those who went to school before the change in obligatory years of schooling took place. Minimum years of schooling were measured as exogenous variable, as cohorts were affected differently by the school reform dependent on region of residency. Genetic propensity for mental illness was measured with PGSs. Mental illness diagnoses based on ICD-10 classification recorded in public specialized health care and reimbursement for prescribed medication were used as outcomes.

We did not find robust evidence that the studied educational reform reduced the effect of genetic predisposition on being diagnosed with a mental illness or medication use. Identifying GxE interactions is challenging due to lack of statistical power. A few signals for heterogeneous effects were observed, but no association would survive correction for multiple testing. Policy implications will be discussed.

Mental Illness in Partially-Genotyped Siblings: An Application of the Phenotype Differences Model in Finnish Register Data

This study investigates how genetic predisposition and family socioeconomic background interact to influence mental illness in siblings. It employs the recently developed Phenotype Differences Model (PDiffM), estimating genetic association free from environmental confounding and requires that only one sibling has been genotyped.

The model builds upon the sibling fixed-effects approach to study within-family genetic variation. Fixed-effects sibling analysis controls for shared family-level factors such as parental genes, parental psychopathology, and socioeconomic status. It also accounts for how parental genes shape the family environment, assortative mating, and population stratification. However, sibling-specific genetic variation remains.

Main hypotheses: 1) There are social disparities in the genetic predisposition for developing a mental illness, and 2) A higher genetic risk for mental illness is more likely to be realized among children with poorer parental resources.

We utilize comprehensive data from social and health registers of the Finnish population linked to genetic information of 21,599 sibling pairs (50.2%

female). The main predictors are polygenic scores and parental education (37.8% highly educated). Study outcomes are the onset of a mental illness based on psychiatric diagnoses recorded in public specialized health care and psychotropic medication costs.

Individuals from lower social strata were found to carry more alleles associated with mental illness. The study findings suggest that genetic effects are generally smaller within families and likely moderated by the family environment, such as the level of parental education. However, estimating gene-environment interactions proves to be notoriously difficult, with many results not robust enough to hold up under stringent statistical tests.

Applying the PDiffM merged with full population register data allows for conducting dyadic genetic and gene by environment interaction analyses. Overall, the research highlights the importance of within-family approaches in dissecting the genetic and environmental contributions to mental illness.

DOBOSZ, KALA* (Doctoral School in the Social Sciences, Jagiellonian University, Poland)

Integrating Autoethnography and Phenomenology in Bipolar Disorder Research

In this presentation, I explore a methodological approach combining autoethnography and phenomenology to study bipolar disorder.

Drawing from personal experience and established literature in phenomenological psychopathology, I focus on a phenomenological account of depression and mania in terms of basic structures of experience, i.e. body, space, and time. I am particularly interested in the disconnection between the subjective experience of time and space in mania, depression and euthymia, and spatiotemporal ordering.

I combine perspectives from both social and cognitive sciences. The study integrates "retrospective" and "front-loaded" phenomenological approaches, analyzing previous data and experiences while using these interpretations to formulate new research questions and protocols.

The presentation will discuss the development and implementation of this combined methodology, addressing the challenges and benefits of integrating autoethnography with phenomenological approaches. It will also present preliminary findings and explore the implications for future research.

By compounding self-narrative based on systematic self-reflection and self-observation with ethnographic research and phenomenological interviews, this approach offers a unique lens through which to examine the lived experience of bipolar disorder. The researcher's role as both subject and investigator provides an insight into the internal processes of the disorder while maintaining rigor through structured methodologies.

This research contributes to the growing field of phenomenological psychiatry by offering a methodological approach that bridges personal experience, rigorous self-reflection, and empirical investigation, potentially opening new avenues for understanding affective disorders.

DOBROTIC, IVANA* (University of Zagreb, Croatia)

Beyond Gender: Rethinking Comparative Leave Policies through an Intersectional Lens

Despite a substantial body of research on leave policies and their cross-national variations, significant knowledge gaps persist. One notable gap, increasingly recognised in the field, is the limited focus on intersectionality. While gender equality has been a primary concern of leave policy scholarship, other dimensions of inequality—such as socioeconomic status, ethnicity, migration status, disability, family composition, and age—have received less attention. As a result, much comparative research tends to generalize the impacts of leave policies, often overlooking how these policies differentially affect diverse social groups.

This paper offers a critical assessment of existing comparative leave policy research, identifying some of the conceptual and methodological challenges that may hinder the integration of an intersectional perspective. First, the multi-layered and ambiguous nature of leave policies, which risks concealing gender and social inequalities within policy responses and their implications. Second, a lack of coherent leave policies and their clear conceptualisation in comparative research. Third, a limited understanding of how leave policies construct inequalities among different groups of parents, particularly through 'silent' elements of policy design—such as entitlement structures—that influence the distribution of policy resources. Finally, the oversimplification inherent in translating complex leave policy designs into comparative indicators, which often fails to capture the heterogeneity of

entitlements across different social groups and countries. Through this critical discussion, the paper calls for more nuanced and inclusive approaches in future comparative leave policy research, better reflecting the diverse and intersectional experiences of parents and caregivers.

Transformations in the Regulation of Work in Preventive Occupational Health Services: French Case Studies

A current research programme (Julhe, Dir) is looking at the reorganisation of occupational health and prevention services in France since the advent of the new law (2021), 'Santé au travail', reinforcing the objectives of prevention and workers' health. The implementation of this law is leading to major changes (organisation of services, competitive tendering, delegation of tasks, etc.). This is now leading to a rapid reorganisation of occupational health services, which is necessary in order to obtain certification from an independent body, whose standards were published in August 2023 (AFNOR SEPC 2217). The changes underway affect three aspects of the organisation of services and work: the formal organisation of work groups, which are now multi-professional (new forms of coordination), work rhythms and the monitoring of professional practices. Occupational doctors can now delegate a number of tasks to health nurses. On the other hand, the management of the departments employing the occupational health physicians partly determines their working methods. But for each of these professional groups, the challenge of preserving their autonomy, their 'mandate' (Hughes, 1996), and ultimately their 'professional identity' (Barel and Frémaux, 2012; 2015; Perrenoud and Sainsaulieu, 2018), remains.

Based on case studies of collective organisations (Hamel, 1997; Passeron & Revel, 2005; Zimmermann, 2011; Buscatto, 2012; Dumez, 2013) and individual interviews with several categories of health service staff, the study highlights the heterogeneous effects of the new regulations on services, particularly in terms of work regulation, as well as their various influences on the work of occupational health professionals (doctors, nurses, assistants, ergonomists, etc.).

Possibilities and Limits of a Feminist Intervention through Municipal Politics: The Experience of Vision Action Plan By Istanbul Metropolitan Municipality

As a metropolitan city, Istanbul is a city where millions of women live, by obligation and/or by will. Benefitting from the opportunities and facing the obstacles of living in a mediterranean metropole, women's experiences change according to their social class, their ethnicity, and their official status. Acknowledging these intersectional inequalities and dispossessions, Istanbul Metropolitan Municipality prepared the Vision Action Plan, which is a document that outlines the range of tools that Istanbul will need in its Vision for 2050. Multi-scale strategies across different challenge areas include "Social Welfare and Justice," an important one that aims to empower all exploited social segments of the city, including women. Our research is focused on the analysis of this plan through an intersectional feminist perspective. Acknowledging the supportive and oppressive effects of municipal politics on the lives of women, we discuss the possibilities and limits of feminist intervention through municipal politics. Using the method of critical discourse analysis, we will ask how the creation of women-friendly public places can be in relation with the ideal of a feminist public space, through the lines of Vision Action Plan of Istanbul Metropolitan Municipality.

Issue Networks and the Local Dynamics of Climate Crisis Narratives in Turkey

As the climate crisis increases its intensity and reach, with droughts, floods and heatwaves becoming regular occurrences, investigating the flow of information on media and communication platforms becomes highly valuable for understanding the factors shaping public discourse and setting the policies for an effective response. The literature portraying the current state of the

crisis predominantly employs a western perspective, and relatively few studies focus on the other parts of the world which inhibit vulnerable populations. We find this approach problematic, considering the local dynamics experienced by these populations, and argue that the conditions for underrepresented populations need to be studied from within their localities. In this study we investigate the climate crisis narratives in Turkey, with the aim to shed light on how environmental degradation is being presented and which issues are potentially linked together with the climate crisis.

As a methodological approach we focus on the coverage and framing of the news media along with a variety of players on social media, such as environmental organizations, policymakers, activists and eco influencers, and employ network agenda setting (NAS) to draw on their viewpoints. We explore the issues correlated with the climate crisis on the news media following the 2015 Paris Climate Agreement, and turn to social media to track the flow of associated dialogues. After having figured out the prominent players shaping the climate crisis narratives in the country, we utilize the NAS model to analyze the networked relationships among issues shared by these players, as well as the news media, and reveal the frames shaping these narratives.

Findings from this study will reveal the effect of local elements, such as the political and economic delimiters, on the climate crisis discourse and provide valuable insights for comparable countries, ultimately contributing to the global literature on environmental narratives.

Inclusion in Norwegian Folk High Schools: A Quantitative Study of Student Perceptions in Schools with Further Accommodations

The right to education is important in today's society and the UN Convention for the Rights for Persons with Disabilities (CRPD) is calling for full inclusion in every area of society, including education. Yet research shows that students who have disabilities are less included in school than others. This presentation relates this to the context of Norwegian folk high schools and explores young people's perception of inclusion within an educational institution that sets itself apart from most other forms of education. Folk high school is a one-year school year usually completed after upper secondary school, where students live in a boarding school and attend classes without grades or exams and with a focus on personal development. The schools included in this study also had an additional focus on accommodating for students with disabilities.

The study is based on a survey of 449 youth and young adults who attended a Norwegian folk high school in the 23/24 school year.

The results of the correlational analyses between students' perception of inclusion and the disability field suggest that students in folk high schools generally feel very included, but that students who need accommodations in their daily life, feel less included than students who do not have such needs. This illuminates that even folk high schools are still not on target to fully include all students.

Is There a Social Justice for Sex Workers in Eastern Europe?

This study explores the potential for social justice for sex workers in post-1989 Europe, focusing on the Czech Republic and Slovakia through in-depth interviews with the sex workers themselves. Despite the end of state-socialist hegemony and the transformative impact of the Velvet Revolution on political, economic, and gender dynamics, sex workers remain deeply marginalized and stigmatized in today's neoliberal capitalist systems. I am interested in how these external political, legislative, and social changes have affected sex workers' lives and their ability to negotiate within the system. Have globalization and liberal internationalism (Engle, 2005) improved the conditions for sex work, or do sex workers feel that social justice is unattainable in this system?

The research also considers the 'grey zone' of Czech law—who benefits from it, and what are the implications for the less privileged? Is there anything that sex workers lack in order to fully understand themselves as equal citizens with bodily citizenship (Dudová 2015)? Do they identify as active agents making free choices in neoliberal capitalism, as part of a new working class, or as victims of a patriarchal system that commodifies sexuality? The slogan 'sex work is work' has long been a rallying cry for sex workers' rights - but is it the goal of our imagination? Do we want to liberate ourselves through work or rather from it?

By critically engaging with these questions, the aim is to examine social justice from the perspective of some of the least privileged voices in contemporary society, while consciously avoiding the pitfalls of white savior feminism and acknowledging the ongoing hierarchies between Eastern and Western Europe. The interviews are analyzed through the theory of bodily citizenship and anti-work theories (e.g. Weeks, 2011; Berg, 2021; Hester & Srnicek, 2023).

In Search of One Big Union Singing Lectures on Folk Songs and Labor Movements

This chapter examines the experience and impact of a "singing lecture" on music and social movements that the author has performed for twenty-five years. It begins with a historical overview of how the lecture has evolved over time and details the various elements and their intention. In particular, it looks at the pedagogical possibilities of the encounter for students learning about social movements and organizing through songs—not only hearing about them but participating in the performance as well. It also considers the impact of such performances on the author as an activist-scholar and how the continued presentation fits into both the practice of teaching about social movements and also the praxis of encouraging engagement and empowering scholar activism and tools for social justice work.

Algorithmic City? Acceptance of Algorithms in the Context of Urban Governance

This paper aims to understand and empirically measure the acceptance of algorithmic urban governance among residents of smart cities. Using data from representative surveys in Singapore, Tallinn and Warsaw, we propose the composite indicator 'AI acceptance index' (AIAI) to illustrate differences between cities and socio-economic groups. We found significantly higher acceptance of AI implementation among Singaporeans than Varsovians. In Warsaw, respondents were much less accepting to AI solutions in welfare system, public investments as well as in making decisions about which demonstrations should not take place due to the potential risk of riots. However, they were ready to accept such solutions in making decisions about the public transport network or schedule or where more police patrols are sent. Meanwhile, in Singapore, people were more eager to accept the implementation of AI in making welfare decisions, directing public investments as well as deciding which demonstrations should be allowed. The analysis also indicates patterns reflecting social differences in AI acceptance. In both Warsaw and Singapore, people over 45 years were declaring lower AI-acceptance, while highest AIAI was observed among people under 35 years. In Singapore, respondents with college education declared visibly higher AIAI than others. The strong similarity between the cities was observed in the case of financial situation – better-off respondents were also more positively inclined towards AI implementation in urban decision-making. Those preliminary results suggest that attitudes towards smart technologies, like AI algorithms, are shaped by the socio-economic status, but not in a straightforward way. For example, in Warsaw, contrary to Singapore, people with lower education were more accepting to AI. In both cities, the youngest cohorts were more techno-optimistic and open to the development of algorithmic urban governance. After testing and piloting our analytical approach, we believe that our results signal general patterns present in smart cities worldwide.

DOMINGUES, JOSE MAURICIO* (Rua da Matriz, 82, Brazil)

Oligarchy, Democracy and Plebeianism: For a Political Conceptualization

Oligarchy was a classical theme in ancient and Renaissance analyses of power as one of the three forms of 'rule' or 'government'. It was then almost forgotten in relevant discussions but has recently resurfaced in several approaches. This paper will argue that, despite the prominence of concentrated economic power, we have to see oligarchy in terms of political power. Having established this perspective vis-à-vis the current literature,

the paper further elaborates on the differentiation of the political dimension, introduces a typology of forms of rule in modernity (under liberalism) and postmodernity (authoritarian collectivism or, improperly, 'real socialism'), with their dynamic elements and, finally, takes up the problem of political plebeianism and the changes we witness in the contemporary world. This line of reasoning also implies that a radically democratic Left could leave behind the failed attempts of the twentieth century, insofar as it is anti-oligarchic, thus rethinking the essential elements of its traditional organizational strategy. A conclusion sums up the argument and assesses its political relevance.

RC09-JS-238.2

DOMINGUES, JOSE MAURICIO* (Rua da Matriz, 82, Brazil)

The Evolution of Political Modernity, Justice and the Present Global Configuration

Liberalism and republicanism are the dominant features of political systems and the state today across the world, along with the reformed party-state that transited from 'real socialism' to capitalism. While the latter appears no longer as an alternative to modernity and has evolved recently towards a more autocratic regime, the former was characterized by an expansion of those two vectors, ending however contraction in the later years of the twentieth century. In other words, authoritarian collectivism ('real socialism') has given up on democracy though including variably strong social policies today, while the compound liberalism-republicanism expanded towards democracy and social rights, but went in a re-oligarchy and more restricted social policy direction (poverty-combat/administration rather than universalizing social policies and rights prevails). The age of 'social constitutionalism' was therefore to a large extent over, while more closed political systems developed. Whereas this remains largely the same, the state has lately become more interventionist in economy dimension, with political polarization also developing at the international level, after the brief post-Cold War far-reaching hegemony of the US. This presentation aims to ask which are therefore the conceptual issues that demand a conceptualization by political sociology in order to globally make sense of contemporary modernity. A by now long line of reasoning has theorized the different phases of modernity (Hilferding and Lenin, Offe and Castells, Lash and Urry and Boltanski and Chiappello, Wagner and Domingues). What can say about modernity and its phases, especially political modernity in view of the political issues raised above and the relations between?

DOMINGUES DOS SANTOS, ELISA* (Université Catholique de Lille, ETHICS et C3RD, France)

Des Entrepreneurs Turcs En Ethiopie : Une Sociologie Des Acteurs De La Relation Turco-Éthiopienne

En deux décennies, les relations entre l'Éthiopie et la Turquie se sont renforcées. Ce rapprochement réside dans une convergence d'intérêts croissante au niveau des États depuis le début des années 2000: afin de développer ses capacités industrielles, l'État éthiopien cherche à attirer des investissements directs étrangers (IDE) tandis que l'État turc souhaite ouvrir de nouveaux marchés à son tissu d'entreprises en plein décollage. Encouragés par la mise en place en Turquie d'un plan d'ouverture à l'Afrique, de nombreuses entreprises turques se sont implantées sur le continent. En Éthiopie, elles ont profité d'un ambitieux programme de développement de parcs industriels (PI) et de zones économiques spéciales (ZES) où elles ont pu implanter leurs usines, notamment dans le secteur du textile, et distribuent leurs marchandises sur les marchés mondiaux.

Cette recherche est originale dans la mesure où elle s'intéresse à la construction des relations turco-éthiopiennes à partir d'une analyse d'acteurs. Plus spécifiquement, elle étudie les entrepreneurs turcs qui s'établissent en Éthiopie ainsi qu'aux relations qu'ils construisent et entretiennent. D'abord, il s'agit de reconstituer les parcours transnationaux des entrepreneurs entre la Turquie et l'Éthiopie afin de comprendre comment l'Éthiopie est devenue une destination d'opportunités. Ces entrepreneurs bénéficient de réseaux, où acteurs privés et publics interagissent, soutenus par l'État turc, pour favoriser l'investissement et l'ouverture d'usines et que cette recherche propose d'analyser.

Cette analyse d'acteurs s'intéresse également aux rapports sociaux au sein d'entreprises du textile, entre Turcs et Éthiopiens, ainsi que dans d'autres lieux de socialisation afin d'envisager la construction de la relation turco-éthiopienne.

Cette sociologie des acteurs permettra enfin d'observer les jeux de pouvoirs à l'œuvre entre Turcs et Éthiopiens dans ces activités économiques et d'ouvrir une discussion critique du discours sur les approches « gagnant-gagnant » mises en avant dans les modèles de collaboration dits des « Suds ».

Disaster Risk and Disaster Capitalism

Uncertainties associated with disaster risk management present development opportunities to elite actors – for example, landed elites and local government – but these elites shape development policies and practices to advance their interests. Landed elites draw on the ‘new towns’ model to lobby not only as a justification for local economic growth but also to help reduce communities’ exposure to disaster risk. Recent studies (UNDRR, 2022; Guney, 2023) suggest that such justification is becoming a ‘convention’ in local practices where urbanisation is rapid and vulnerable communities are affected by their physical exposure to hazards. These studies reveal an alarming concern about how such a ‘convention’ exploits the usage of disaster risk reduction (DRR) strategies to advance elite actors’ particular interests. This paper argues that Disaster capitalism in urban development is consistent with the concept that the corporate class and institutions profit from climate-induced disasters by accumulating capital and structural and non-structural neoliberal policies.

The context on peri-urban edges of Metro Manila provides a rich and deep contextual understanding of how local neoliberal practices shape the co-evolution between disaster risk and urban growth. I will examine how disaster capitalism manifests in the face of new urban development trends in Metro Manila and its greater area, focusing on disaster risk as an ‘exploitable environmental good’. This paper aims to expand the discussion on what and how do socio-political factors enable disaster risk to persist in pre-existing social vulnerability in an urban area? In doing this, it will provide a theoretical link between disaster capitalism and disaster risk using the discourse of neoliberal practices. It will deconstruct the concept of disaster capitalism, utilising the case of ‘new town’ and its role in Disaster Risk Reduction (DRR) discourse. The theoretical link will articulate the phenomenon and attributes of disaster capitalism in an urban setting.

DONATO, STELLAMARINA* (LUMSA University of Rome, Italy)

Women Returnees: Migration, Social Change in Post-Revolution MENA

The Arab revolutions, which began in late 2010, have profoundly reshaped the political and social landscapes of the Middle East and North Africa (MENA). Women’s roles in these movements were significant, yet their post-revolution experiences, particularly concerning return migration, remain under-explored.

This paper debates the complex underlying motivations for return migration by focusing on women returnees from Italy to Morocco and Tunisia in the past 15 years. Specifically, by adopting a cross-national perspective, it looks at how migration influences cultural diversity and challenges social

norms—especially about the gendered experiences of migrants after their return. Using thematic analysis of 25 semi-structured interviews, the article explores the reintegration processes among the interviewed women and highlights both opportunities and socio-cultural challenges in the process of renegotiating identities upon their return.

The study further shows how returnees engage in local socio-economic and community-building initiatives, which contribute to changing the cultural way of life and practices. In such an environment, migration becomes a source of new forms of social participation besides being a dislocating force. Women who return home often utilize their newly acquired skills abroad to establish new enterprises and position themselves as vital members of the social and economic life of their communities.

In turn, this paper argues for a sociologically sensitive approach to return migration at the intersection of cultural diversity, migration, and gender. It underlines policies that would support returnees’ social and economic integration, fully cognizant of how migration continues to reshape individual trajectories and collective experiences.

The Burden of Climate Change on Immigrant Workers: Segregation into Environmentally Hazardous Occupations Among Latin American Immigrants in the United States

Across high-income immigrant-receiving countries, entrenched occupational segregation disproportionately funnels immigrants—especially from low income countries—into riskier jobs with higher rates of illnesses, injuries, and fatalities and “3-D jobs” that entail “dirty, demeaning, or dangerous” work, with implications for individual health and well-being and population-level health disparities. Climate change threatens to further exacerbate these risks and inequities, increasing workers’ exposure to extreme temperatures, poor air quality, and other health risks. Yet, to date, research has paid little attention to the burden of climate change on immigrant workers’ health risks.

Integrating insights from literatures on immigrant integration, social determinants of health, and environmental inequality and using data from the 2018-2022 American Community Survey linked to the O*NET database of occupational characteristics, this study examines the segregation of Latin American immigrants into environmentally hazardous occupations. We model the likelihood of employment in three categories of environmentally hazardous occupations: 1) occupations with a high frequency of working in extreme temperatures; 2) occupations with a high frequency of working outdoors; and 3) occupations with a high frequency of indoor work in non-climate-controlled settings.

We first examine whether racialized patterns of segregation into environmentally hazardous occupations exist by comparing the likelihood of employment in such occupations for Latin American immigrants relative to their U.S.-born counterparts in other racial/ethnic groups. Then, to understand how their risk of employment is further patterned by sociodemographic and migration characteristics, we restrict the sample to immigrants only, and estimate whether citizenship status, English language proficiency, duration of residence in the U.S., and education level predict the likelihood of employment in environmentally hazardous occupations.

‘Successful Baby Mama’: How Entrepreneurship Motivates Consumption Among Baby Mamas (Bao Ma) in China

The strategy of ‘short-video entrepreneurship’ has been perceived as an alternative for economically and socially disadvantaged individuals in China to turn their lives around (*fan shen*). Women, particularly mothers, frequently encounter disadvantages in various aspects of life, including marriage, family relations and the labour market, as well as in policy-making. The accelerated growth of short-video platforms and new media has promoted the emergence of the Baby Mamas as a subject of consumption and, meanwhile, as an entrepreneurial subject. Using digital ethnography and interview as methods, this study explores how the propagation of the ‘successful Baby Mama’ entrepreneurial myth on Kuaishou has contributed to the consumption of the Baby Mama community. Based on the fieldwork conducted with one Baby Mama entrepreneurship group, this study indicates that, rather than the women’s self-empowerment alleged by this group, it presents an exploitation among Baby Mamas in the name of entrepreneurship via emotional management and manipulation. Through in-group trainings, the members were made to believe that consumption was the price for learning how to

make money and show loyalty to the group leaders. The transformations of the seller-consumer relationship into a teacher-student relationship, and subsequently into an executive (*gao ceng*)-human resource (*ren mai*) relationship, resulted in the stratification of this entrepreneurial group. This stratification served to justify and reinforce the emotional rituals and power relations that existed within the group. Nonetheless, a resistant movement emerged but failed four months later. This resistance employed traditional gender roles to challenge the neoliberal ideology of the entrepreneurial Baby Mama, but finally proved unsuccessful. This suggests the need for developing a new theoretical framework to counteract the negative impact of neoliberalism on collective activism.

The General Meeting: Exploring the Alienation and Agency of Workers in a Collective Structure

The broader aim of this paper is to explore the role of the general meeting in the development of the workers movement under apartheid. The role of worker collectives in general, and the general meeting of workers in workplaces and unions in specific, is crucial in understanding the dynamics of this historical period. The declining role of the general meeting over time, and its virtual absence today, is equally crucial in understanding contemporary developments in the workers movement. In focussing on the general meeting, this paper draws on concepts of alienation and worker agency to illuminate the dynamics of this working class collective structure. Under capitalism workers are forced to live and work in conditions of alienation. Despite this and sometimes because of this, workers exercise agency in responding and seeking to change the conditions in which they are forced to live. The paper explores this contradiction that is central to capitalism, focusing on the individual and collective ways in which workers are alienated from one another and from their own capacities. It examines the consequences of these everyday experiences and the specific kind of agency that workers develop in responding to and struggling against the everyday manifestations of alienation that workers are forced to encounter under capitalism. Specific focus here is on the collective agency that workers recurrently express through organised collective action - a collective agency they were able to express, protect and develop through organisation, in the shape or structure of the General Meeting.

Inheritance Patterns in Serbia: Analyzing Gender and Kinship Disparities in Court Decisions

According to the Inheritance Law of the Republic of Serbia, male and female heirs are granted equal rights. However, many daughters in various regions of the country still renounce their inheritance in favor of their brothers, and mothers often cede property to their sons. Some existing research shows that in rural areas of Serbia, nearly half of women renounce their inheritance. Despite the legal protections that guarantee equal inheritance rights, it appears that patriarchal values play a significant role in perpetuating these customary practices.

Under Serbian law, renouncing an inheritance is an irrevocable decision that must be made before the conclusion of the inheritance judicial procedure, and it carries implications for other entitlements, such as eligibility for social assistance. However, when heirs make their inheritance declaration, state officials are not required to inform them of the consequences of renouncing their inheritance rights. As a result, it is not uncommon for female heirs to later regret their decision and seek to reverse it, only to discover that doing so is legally impossible.

The research centers on the analysis of court decisions issued by Serbian courts in 2022. The central hypothesis is that patrilineal inheritance patterns are most prominent in the distribution of property. The aim of this research is to uncover patterns of property inheritance within families in Serbia, with a particular focus on how gender and kinship relations shape the distribution of assets among heirs. Additionally, the study seeks to explore the discrepancies between legal provisions and actual inheritance practices.

Navigating Inequalities: The Role of Social Class in Labor Market Transitions of Albanian Graduates in Italy

In the context of globalization and the rise of knowledge economies, studying abroad has become an essential strategy for enhancing educational competencies and broadening opportunities in an increasingly competitive graduate labor market. Extended transitions from university to employment have further motivated students to pursue international education as a means of improving their employability (Brooks & Waters, 2013). Studies have shown that international student mobility is predominantly a privilege of the middle and upper classes (e.g., King et al., 2011; Waters et al., 2011), often reproducing privilege rather than challenging social hierarchies due to its close ties to resource availability. Nonetheless, given the expansion of higher education, this paper focuses on the classed experiences of international students from the Global South and the inequalities they encounter in entering the labor market.

Situated within a Grounded Theory framework, this study draws on 20 problem-centered interviews with Albanian graduates in Italy, exploring their study-to-work transitions in the Italian graduate labor market. It analyzes the intersections of gender, ethnicity, age, and legal status, placing particular emphasis on how these experiences are mediated by social class.

The findings show that international student mobility of Albanians in Italy is also becoming a "family project" among lower-class families. Nevertheless, while graduates from middle-class backgrounds, whose aspirations and expectations were framed by their habitus and high levels of capital, were able to successfully negotiate the graduate labor market, their working-class counterparts faced significant challenges. They were largely unable to convert cultural capital into "network capital" (Urry, 2007) or economic capital (Bourdieu, 1986), often resulting in long-term employment in non-graduate jobs. Moreover, the findings suggest that, despite the presence of "graduate capital" (Tomlinson, 2017), successful career transitions often necessitate individual strategies that minimize societal differences and overlook ethnicity and workplace discrimination.

Techno-Authoritarianism: The Radical Right Movement, and the Normalization of Repressive AI-Based Surveillance Systems in Brazil, Israel, and Hungary

Over the past years, a series of reports produced by civil associations have highlighted the growing use of highly intrusive AI-based surveillance and monitoring systems by governments worldwide. Disguised as "smart" methods for crime control, these systems have spread to Western democracies under the rule of radical right-wing governments. The deployment of these systems, aligned with a series of institutional and democratic disruptions, establishes forms of repression against opponents, protesters, and minorities (black communities, LGBTQIA+ people, and immigrants). Thus, this study begins with the following question: How does the use and deployment of AI-based surveillance technologies by radical right-wing governments seem to enable and normalize an expansion of coercive measures and authoritarian structures? It aims to discuss the emerging concept of techno-authoritarianism by highlighting the growing application of AI-based systems to underpin surveillance practices, and state hacking in illiberal democracies, under the rule of radical right-wing governments. The perspective of techno-authoritarianism provides a broader framework for understanding the role of radical right-wing governments in the normalization of these systems. It reacts to the perspective of digital repression, which is limited to understanding the repressive expressions of non-Western authoritarian governments in exclusively digital environments. Firstly, from the perspective of the Social Construction of Technology (SCOT), it explores the relationship between the rise of the global far right, political tensions, and the proliferation of invasive policing technologies. Secondly, it emphasizes the specificities of techno-authoritarianism, its alignment with the business model of big tech companies, and its silent agency. Finally, it examines techno-authoritarian practices that have taken place in Brazil, Israel, and Hungary in recent years. In doing so, it explores how the availability of tools such as Excel, First Mile, OSINT-Harpia, predictive policing, and facial recognition systems flourish in authoritarian contexts while creating conditions for new political dilemmas and repressive practices.

DOS SANTOS, GUILHERME* (Universidade Federal do Rio de Janeiro, Brazil)

Never-before Imagined Futures: Legitimacy and Blackness in Contemporary Brazilian Art

This presentation aims to reflect on the processes of legitimising Black artists in the field of contemporary Brazilian art, analysing how issues of race and Blackness impact artistic trajectories and access to established institutions, such as galleries, museums, and prestigious exhibitions. Drawing from the sociology of ethnic-racial relations intertwined with the sociology of art, the research investigates how Black artists have challenged exclusionary structures and built spaces of recognition within a universe historically marked by the marginalisation of their works.

The research employs qualitative methodologies, including interviews with artists, analysis of catalogues and exhibition records, as well as a mapping of institutional policies that either promote or restrict the inclusion of Afro-Brazilian narratives in the contemporary art circuit. Special attention is given to the strategies developed by the artists to assert their identities and insert their works into a system that frequently perpetuates colonial dynamics of invisibility and silencing.

The presentation will also explore the fine line between Afropessimism and Black optimism, discussing how, despite historical difficulties and symbolic violence, Black artists have been creating futures previously unimagined, where their subjectivities and aesthetics are legitimised and valued. By focusing on life after the death of slavery and ownership, the presentation questions how art can serve as a transformative social space, capable of opening up new understandings of Blackness, resistance, and agency in contemporary Brazil.

Thus, the objective is to contribute to the debate on how the field of art, far from being neutral, reflects and reproduces structural inequalities, while simultaneously offering a space for struggle and emancipatory possibilities.

DOS SANTOS, LAURIANE* (Université de la Polynésie française, French Polynesia)

Securing Access to Land : The Social Production of Property in French Polynesia

Land issues are a relatively old legal and social problem in French Polynesia. However, the economic, demographic and social transformations of the contemporary period have contributed to make it one of the major challenges on this territory, both from the point of view of the family conflicts it generates and the challenges it poses to the judicial institution in terms of handling proceedings. Disputes related to land ownership now cross all social circles in this territory. Requests to end the status of joint ownership of family land (a status that concerns about 57% of the community's land) are the core of the problem, justifying the establishment of a dedicated structure that is unprecedented within the French Republic : the Land Court of French Polynesia (2019). This paper shall present the results of a qualitative research with litigants involved in a procedure for the exit of undivided ownership of family land. The paper shall study the social production of land rights as a way of securing resources in this context, between collective strategies and *inter- and intra-generational* conflicts within Polynesian extended families. First, the analysis of life stories shows how access to land has become an important and conflictual issue within contemporary families, in a context of multiple crises. Secondly, we shall analyze the social pathways to access property law and justice and then identify the obstacles and levers the litigants use by to obtain land ownership, showing an interweaving of legal procedures and informal arrangements in the ordinary course of social practices.

DOS SANTOS, LAURIANE* (Université de la Polynésie française, French Polynesia)

Sécuriser l'Accès Au Foncier : Sortie d'Indivision Des Terres Et Production Sociale De La Propriété En Polynésie Française

La question foncière constitue un problème juridique et social relativement ancien en Polynésie française dont la complexité s'est surtout construite à partir de la période coloniale. Les transformations économiques, démographiques et sociales de la période contemporaine ont toutefois contribué à en faire désormais l'un des grands enjeux de cette collectivité, à la fois du point de vue des conflictualités familiales qu'elle génère et des défis qu'elle pose à l'institution judiciaire en termes de traitement des procédures. Les litiges liés à la propriété de la terre traversent aujourd'hui l'ensemble des milieux

sociaux sur ce territoire. Les demandes de sortie du statut d'indivision des terres familiales (statut qui concerne environ 57% des terres de la collectivité) constituent le point névralgique du problème, justifiant la mise en place d'une structure dédiée inédite au sein de la République française : le tribunal foncier de Polynésie française (2019). Cette communication présente les résultats d'une enquête qualitative auprès de justiciables engagés dans une procédure de sortie d'indivision des terres familiales. On s'intéresse à la production sociale du droit foncier comme mode de sécurisation des ressources dans ce contexte, entre stratégies collectives et conflictualités *inter et intra* générationnelles. Dans un premier temps, l'analyse des récits de vie permet de montrer en quoi l'accès à la terre est devenu un enjeu important et conflictuel au sein des familles contemporaines, dans un contexte caractérisé par des crises multiples. Dans un second temps, l'analyse des parcours d'accès au droit permet d'identifier les freins et les leviers mobilisés par les individus pour obtenir la propriété de terres, montrant une imbrication de démarches judiciaires et d'arrangements informels dans le cours ordinaire des pratiques sociales.

DOS SANTOS FACIULLI, MARIANA* (University of São Paulo, Brazil)

Beyond Religion: A Reading on the Muslim Presence in the Brazilian System of Racial Inequalities

The last decades have shown a substantial increase in the Muslim presence in Brazil, characterized by voluntary immigration, the acceptance of refugees and conversions across the country. This growing presence is accompanied by a rise in manifestations of symbolic and material violence directed against national Muslim communities, events commonly categorized as "Islamophobia". While internal research on widespread Islamophobic violence has focused on identifying and condemning its various expressions, the underlying causes of national Islamophobia remain insufficiently *explained*. Diverging from established European interpretations that link Islamophobia to systematic movements of racialization, Brazilian debate understands it as a product of ignorance and intolerance toward a voluntarily chosen religious identity, thereby neglecting deeper explanations of its origins and perpetuation. Proposing a new perspective on this scenario, I suggest that Brazilian studies' common interpretations on Islamophobic violence are constrained by the socio-historical development of a particular national racial classification scheme, marked by the ideology of racial democracy and the rejection or underutilization of *race* as an analytical category for clarifying internal dynamics of inequality. As a result, Brazilian political and intellectual debate fails to address these movements of exclusion and oppression as expressions of a broader system of segregation, thus ignoring the possibility that new racial categories may find a safe place in the Brazilian landscape of inequalities. Following this, all possible solutions are limited to claims for an eventual acceptance of "difference", echoing and validating the complete absence of institutional policies to fight the problem at a macro-social level. Though Brazilian racial order has been built upon black slavery's legacy and is detached from colonial enterprises in predominantly Muslim territories, new pathways emerge for understanding the country as a potential new actor in a transnational context that relies on the racialization of Muslims to justify the creation and maintenance of a "legitimate" domination.

DOS SANTOS TEIXEIRA, MARCO ANTONIO* (Heidelberg University, Germany)

Climate and Food Justice in the Brazilian Amazon: Contributions from Grassroots Social Movements

This paper analyzes the intersections between climate and food justice struggles in the Brazilian Amazon from the perspective of grassroots social movement activists operating in the region. The qualitative research was conducted in the states of Pará and Amazonas, utilizing interviews with social movement leaders and participant observation at various events and activities. The study reveals that discussions about climate and food justice primarily revolve around the fight for land and territories. In this way, the research explores how activists, in their struggle for fair food systems, also become agents of environmental and climate change. However, the research also highlights that the fight for territory, as a synthesis of other struggles, is polysemic. Therefore, this paper also examines the meanings and importance of territories from the perspective of each social group interviewed, considering their intersectional dimensions, their relationships with and perceptions of these territories, and their involvement in diverse social movements. These elements are crucial in shaping the actors' perspectives on their struggles and the meanings they ascribe to them. The research includes interviews with leaders from various social movements such as the family farmers' trade union movement, the landless rural workers' movement, the unified workers' central, Indigenous movements, NGOs focused on local development, quilombola movements, movements of people affected by dams, food industry workers' trade unions, fishers' movements, agroecological movements, feminist movements, and urban movements.

DOUAT, CORALIE* (Université Paris Nanterre, France)

Diffusion Strategies and Prefiguration Cycles in Squats in France, from the 1990s to the Present

A growing body of work focuses on prefigurative politics (Autin, 2017; Fourment, 2021; Graeber, 2002; Yates, 2015). These forms of engagement go beyond the traditional, state-centric definition of the political (Tilly et al., 2008). To avoid reducing their scope to what Riba (2018) calls "utopian substitutionism," it is essential to consider the conditions that enable the dissemination of these practices over time and space (Van de Sande, 2022; Yates, 2015; Wright, 2020).

What strategies do groups engaged in prefigurative politics use to facilitate their diffusion and expansion? How are these strategies constructed and adapted, and what effects do they have on the practices themselves?

This paper addresses these questions by focusing on the case of squats in France from the 1990s to the present. The research is based on an ongoing doctoral thesis and multi-sited ethnography. Thirty-three squats across four cities were intermittently observed, while six others were studied through three years of participant observation between 2018 and 2023 (Seim, 2024). Additionally, around fifty interviews were conducted with squatters, and public archives, as well as self-produced documents, were consulted.

The paper compares two distinct cycles of prefigurative politics within squats, showing how these cycles are embedded in dissemination strategies targeting the media, political institutions, and the academic field. The first cycle, initiated by "artist squats" in the late 1990s, illustrates successful diffusion dynamics: some squats became models and proliferated. Through negotiations with public authorities, several obtained temporary occupancy agreements, achieving some degree of institutionalization (Aguilera, 2012; Pruijt, 2003).

I then explore how these strategies impact prefigurative practices. Squatters often modify their practices to meet external expectations, influenced by neoliberal pressures (Foucault, 2004; Hajek, 2020). In response, some squats redefine their strategies, showing how prefigurative cycles can exhaust and give rise to new ones.

DOUGLASS-CHIN DOUGLASS-CHIN, RICHARD* (University of Windsor, Women's & Gender Studies, Black Studies, Canada)

"Act Third Scene/ Circe Argues with Eve/ about Eden": Zong! and the Drama of the Unruly Fug(ue)litive

Zong! is history, cultural exposé, experimental poetry, prose and drama-- a genre-defying work that employs all the aforementioned. I deal particularly with its dramatic potential, and how NourbeSe Philip capitalizes on this dramatic element via digital global-communal, impromptu, syncopated readings that counter current global epidemics of loneliness; depredation; and online white-supremacist hate/populism.

Zong! contests the orthodoxy of 18th Century Enlightenment values underpinning the global trade in Africans, as well as our current neo-liberal globalization; and the North's attitudes toward African extraction, and African migrations to Europe/the Americas.

While Philip has been called an "experimental" or "LANGUAGE" poet, *Zong!*'s use of language and drama works against white mainstream "experimental" poetry in its refusal of LANGUAGE poetry's tenets that "Language is nothing but meanings, and meanings are nothing but a flow of contexts. . . the endless radiating of denotation into relation." (Lyn Hejinian, <https://poets.org/text/brief-guide-language-poetry>) *Zong!* eschews this endless Derridean "différance" in favor of a vision much more powerful and socially relevant.

After the revolutionary Black Lives Matter movements of 2013 and 2020 (police murder of George Floyd) Black theorists are more attentive than ever to the integral relationships among form, aesthetics, and political relevance. How can *Zong!* be read as literature considered experimental but resistant to neoliberal modes of (non)meaning?

Zong! has been translated into Italian with problematic results. While we may challenge the notion of literary, linguistic, cultural and temporal borders, I also embrace the fact that defying such borders must be executed with radical care; as we explore works challenging perimeters and exhuming neglected archives, how do we sustain awareness of the great imbalance among cultures and cultural translations? When do translations become careless appropriations? How do race and *Zong!* complicate avant-garde work, and what exists in the digital spaces across America, Africa, Europe?

DOURADO DA SILVA, MARIA DENISE* (Universidade de Brasília, Brazil)

CARDOSO, LAYANA (IFAP, Brazil)

Social Control over Bodies with Disabilities and Reverse Inclusion: Human Rights at Stake

The study sought to understand how the practice of reverse inclusion through sitting volleyball in the school environment has the potential to contribute to the social inclusion of people with disabilities, helping to mitigate the barriers (architectural, communicational, methodological, instrumental, programmatic and attitudinal) imposed by society and that exert social control over their lives, and how reverse inclusion can contribute to educating society to adapt to the needs of people with disabilities. Study conducted with a qualitative approach, through bibliographic research, carried out in books and scientific papers published between 2000 and 2020, in addition to Brazilian legislation on the subject. Reverse inclusion is understood in school practice as a project to immerse people who are considered "without disabilities" in a sensitizing universe full of the aforementioned barriers. Paradoxically, the study found that Brazil has a current regulatory structure that is in line with international treaties and conventions, although society continues to exert oppression on these bodies with disabilities, both actively and deliberately (in the form of inaccessible architecture; limitations on access to the world of work, etc.), and passively, treating people with disabilities with pity, inferiority, discrimination and/or subordination. The study identified a gap in the academic formation of physical education teachers to deal with diversity and the oppressions exerted on people with disabilities. It is suggested that further studies be carried out as a way to advance in overcoming the barriers that prevent the inclusion of this segment of the population and the full exercise of their rights.

RC54-828.3

DOURADO DA SILVA, MARIA DENISE* (Universidade de Brasília, Brazil)

Women with Disabilities Who Play Sitting Volleyball: Embodiment, Painful Experiences and the Impact of Paraspports on Their Mental Health and Well-Being

The study sought to understand the embodiment of nine women with disabilities (acquired or innate) who play sitting volleyball and how this paralympic sport contributed to their empowerment, redefinition of their lives and social inclusion. These women went through painful experiences, both physical, resulting from amputations, surgeries, insertion and removal of endoprostheses, phantom pain, phantom limb, etc., in various circumstances and experiences, as well as psychological pain, resulting from the traumas experienced and subsequent relationships with family, work and society in general, especially the impact caused by unexpected dependence on other people and rejections (relationships breakups, for example). The study found the importance of these women's inclusion in the paraspports world and how their embodiment is marked by multidimensional aspects and was (re)defined through everyday experiences in this corporal practice and its surroundings, with pain and with other people, altering the senses and meanings attributed to their embodiment. The research procedures, carried out using a qualitative approach, included: participant observation; experience reports; life stories; socioeconomic questionnaires; and flexible interviews. The research was conducted between January 2020 and October 2021 and, due to the COVID-19 pandemic, was conducted in a hybrid format, with part of the information being obtained in person and part being collected virtually, through video conferences, email messages, and the use of communication applications. The limitations generated by this period in the training routine of these parathletes were also recorded, impacting their bodies with disabilities and mental health. Although physical activity has been found to have positive impacts on the physical and mental health and well-being of these women with disabilities, further studies are needed to understand the relevance of other multidimensional factors that affect this portion of population.

Organizing Markets for the Valuation of Bean Cultivars in France

In the face of growing social, environmental and economic crises, certain crops are being (re)valued more than others for their capacity to enhance agri-food system sustainability and transitions. Considered as "foods of the future", pulses are currently subject to renewed interest, as they are tied to various promissory economic and non-economic value claims, particularly in Europe where they have been significantly marginalized since WW2. Acknowledging the organizational basis of value and the interconnection

between standards and values in economic contexts (Beckert & Aspers, 2011), this paper explores valuation processes for markets focusing on two dry bean cultivars in France. Participant observation and semi-structured interviews with various socio-economic actors are used as primary data sources. Whilst these two beans pertain to the same plant species, they are genetically distinct, belonging to separate place-bound, sociohistorical contexts. In one case, the Geographical Indication certification plays a fundamental role in standardizing value for the locally-produced *lingot* bean, one of the essential ingredients used in "authentic" *cassoulet*. Though the bean has reached a somewhat "standardized commodity" status after thirty years of territorial production, farmers are currently facing challenges tied to drought and climate change, calling into question the cultivar's need for genetic renewal. Alternative practitioners, including organic farmers, citizen-gardeners and researchers are also imagining new ways of valuing the bean. In the second case, a pool of market members is being carefully selected to construct value around a heirloom bean cultivar, based on informal, non-standardized, shared values. For both cases, notions of future and past value influence, albeit differently, market development for each bean today. The paper asks : Which value(s) are prioritized in the market-making process ? How are these values organized at different stages of market development and by different actors ? How do actors engage with standards for creating market value(s) ?

Energy Justice and the Multi-Level Perspective: Navigating Change in the Indian Automotive Industry

The transition to Electric Vehicles (EVs) in India marks a critical step towards the country's journey to decarbonize its transport sector and achieve long-term sustainability goals. While this shift is environmentally progressive, it presents significant challenges for the automotive industry, which has long been dominated by Internal Combustion Engine (ICE) vehicles. This paper examines these challenges through the lens of the Multi-Level Perspective (MLP) framework, focusing on the difficulties faced by manufacturers in adapting to this new paradigm. The study explores the niche innovation of Electric Vehicles, the stable ICE-dominated automotive regime, and broader socio-technical landscapes, including climate goals and policy dynamics in the Indian context. Furthermore, the study integrates Energy Justice principles to offer a comprehensive view of the EV transition, highlighting the equitable distribution of benefits and burdens across the industry.

The key research question explored is how legacy automakers are managing disruptions to their stable and established production practices and supply chains. As competitive pressures from emerging EV technologies grow, the need for sustainable production methods becomes increasingly urgent for traditional industry actors. The study employs a qualitative approach, conducting in-depth interviews with 30 stakeholders, including manufacturers, industry experts, government officials, and civil society representatives connected to India's automotive sector.

By focusing on the specific challenges of manufacturing, this research provides insights into how legacy automakers and niche players are managing the transition to EVs. It highlights the socio-economic impacts of this transition, particularly regarding social equity and industrial change. The study also assesses whether the principles of Energy Justice are being adequately addressed or overlooked in the process. The findings offer critical recommendations for policy interventions aimed at ensuring a just and equitable transition to electric mobility in India while addressing the unique socio-economic and regulatory challenges faced by the country's automotive industry.

RC38-621.5

DRAZCZYK, ALEKSANDRA* (University of Lodz, Poland)

Precarity and Social Media in Biographical Experiences of Microinfluencers

The paper aims to analyze the possible connections between performing the work of an online content creator and the experience of precarity, based on autobiographical narrative interviews with Polish microinfluencers for whom online self-publishing is the main source of income. The rise of social media self-publishing is one of the outcomes of the 2008 economic crisis, which forced many people to maintain a continuous online presence and build their personal brands to appear as desirable employees. Since then, being active on social media has often become not only a choice but a necessity—posting about one's achievements has turned into a specific form of "work-for-labour." This trend aligns with the growing popularity of self-publishing

as a core aspect of labour, enabled by the commodification of attention and visibility. Although being a social media influencer is one of the most desired career paths among young people (with reports indicating that 57% of those born between 1997 and 2012 in the USA aspire to become influencers), this career brings significant risks, including unstable and unpredictable income and a lack of an established professional identity. The mythical narratives of instant success and easy wealth that shape the public's imagination around influencers often do not reflect the realities experienced by many social media creators. In addition to the general instability common in the lives of young people today, these creators must navigate algorithms that are neither controlled nor fully understood by them, yet play a crucial role in determining their success.

DREYER, LIANARA PATRICIA* (WZB Berlin Social Science Center, Germany)

Well-Intended but Badly Done—Digitalization in the Skilled Craft Sector Betwixt Competition and Employees' Interests

Digitalization in terms of an economic transformation is still largely associated with industry-specific sectors. Skilled crafts firms, like joineries and carpenteries are considered to be falling behind due to a lack of resources. However, demand for craft services is increasing. This development, combined with a shortage of skilled workers, make the use of digital technologies increasingly important. But for now, we know little about how firms actually manage digitalization processes and how it impacts their work.

The paper analyzes changing working practices in craft enterprises in Germany, focusing on how the introduction of digital technologies is affecting work and employees. Using the example of two contrasting case studies in German joineries, conducted in 2023/24, the paper presents findings from interviews with employers and workers. Using content analysis, I investigate technical and organizational transformations in relation to business strategies and the production model.

The findings indicate that digitalization has both positive and negative effects on workers in the two craft companies: While, in one company, the implementation of a digital workflow management system increased efficiency and productivity, it also intensified work and boosted management control. In the other case, the simulation of cutting processes enhanced workers' responsiveness and production line flexibility.

In spite of this difference, a certain workers attitude towards their job and the company for which they are working can be observed in both cases: Employees were not afraid to criticize the owners. However, in the interviews, they expressed a high degree of loyalty and understanding towards them. These relationships can be an obstacle when implementing digital technologies, but they can also be a source of strength for the management.

The paper concludes with reflections on the specificity of digitalization comparison to other sectors and proposes a nuanced approach that considers the interests of employees and workers.

Sans Statut, Sans Droits ? Construire Un Droit International De La Reconnaissance Pour Le Sud Global

Au-delà de sa dimension instrumentale de régulation sociale, le droit exerce une fonction anthropologique « d'institution de l'humain », en favorisant le « faire société » (Ost, 2016 :97). Ce cadre commun repose sur des modes de reconnaissance institutionnels donnant accès à des droits socio-économiques et politiques (Fraser, 2011) aux individus, via l'attribution d'un statut. Comment, dès lors, les personnes ne bénéficiant pas de la reconnaissance institutionnelle d'un statut, qu'il soit politique (réfugié), administratif (bénéficiaire/ayant-droit d'une institution), ou socio-professionnel (travailleur non déclaré, bénévole, ou personne exerçant une activité non reconnue comme un travail), font-elles pour se faire reconnaître des droits et accéder aux ressources leur permettant de subvenir à leurs besoins ?

Cette communication vise à réfléchir aux conditions d'émergence d'un « droit international de la reconnaissance » (Jouannet, 2011) comme instrument juridique d'intégration des espaces sociaux marginalisés et subalternes, dans le Sud global. Elle défend l'hypothèse d'une humanitarisation des droits sociaux et économiques, s'agissant des personnes exclues des cadres normatifs de reconnaissance statutaire définis par les institutions. Cet essai de théorisation s'appuie sur la mise en dialogue de trois études de cas empiriques, fondées sur l'expérience anthropologique de sujets privés de la

jouissance de leurs droits faute de reconnaissance institutionnelle : au Liban, le cas des réfugiés syriens, que le gouvernement libanais ne reconnaît pas comme réfugiés ; en France, le cas des déboutés de l'asile issus des Suds, qui sont exclus du droit de séjour et du travail, et en Polynésie française, l'exemple des personnes dont l'activité économique de subsistance n'est pas reconnue sur le marché du travail.

Gaining Power, Getting Weight: Educational Assortative Mating and Infants' Birth Weights in China

Worsening infant health is a growing problem that is documented globally. In addition to medical accounts, social scientists attempt to explain disparities in infant health with structural factors. Among them, family demographers are interested in the parental impact and find that both maternal education and paternal education are crucial for infant health. Recently, they have also juxtaposed maternal and paternal education and investigated the impact of parental educational assortative mating on infant health. Evidence reveals that educational homogamy is beneficial for infants' health by reducing the likelihood of low birth weight in the United States. China, where the reversal of the gender gap in education and the low fertility simultaneously happen, can possibly contribute to this strand of literature. However, relevant research is barely done. This proposed study, employing the Diagonal Reference Model (DRM), aims to examine the relationship between parental educational assortative mating and infants' birth weights in the context of China. Using the pooled data from the China Family Panel Studies (CFPS) from 2010 to 2020, this study reveals threefold findings. First, both paternal education and maternal education are beneficial for infants' birth weights. Second, paternal education and maternal education play similar roles in infants' birth weights. However, regional disparities and parity differences are discovered. In urban China, maternal education gains more significance from the first parity to the second parity and plus. Whereas, maternal education loses significance across parities in rural China. Third, net of maternal and paternal education, educational homogamy and hypogamy are found to be beneficial for infants' birth weights, compared with hypergamy. That is to say, only when women achieve more power in a marriage dynamic will infant health benefit from the marriage. This finding echoes the positive social impacts of the declining rates of hypergamy.

Labor Injustice and Economic Vulnerability: A Quantitative Analysis of Work Scheduling Practices in a South African Janitorial Services Company

This study investigates the phenomenon of "negative hours"—when employees work less than their contracted hours or experience unpaid time—within a large South African janitorial services company. Despite its economic importance and the challenges its workforce faces, the cleaning services industry remains understudied, particularly in terms of work-hour arrangements and their impacts on employees. A quantitative approach was employed to fill this void, utilizing a dataset of 10,915 employees to analyze the prevalence and patterns of negative hours, their demographic distribution, and their impact on compensation. Descriptive statistics revealed that 8.85% of all compensation records exhibited negative hours, with significant disparities across gender, race, and regional locations. Black African females were disproportionately affected. Further analysis showed a weak positive correlation between work hours and compensation, suggesting that employees experiencing negative hours were more vulnerable to income instability. The findings highlight the unequal distribution of negative hours and their financial impact, offering valuable insights into labor precarity in South Africa's cleaning services industry. This study contributes to the growing body of research on precarious work and informs policy discussions on improving labor practices in low-wage sectors.

Polishing the Pearl of the Pacific and the City of Gold: Paid Domestic Work in Guayaquil, Ecuador and Johannesburg, South Africa

For most paid domestic workers, the workplace is an urban household. This article focuses on the experiences of domestic workers in two cities in the Global South: Guayaquil, Ecuador and Johannesburg, South Africa, revealing how the intersection of local context and international standards shapes labor dynamics. Specifically, we examine the impact of ILO Convention 189 and the COVID-19 pandemic on workers' lives. Drawing on decade-long studies employing diverse methodologies in each site, this comparative analysis provides insights into the daily challenges and adaptive strategies of domestic workers. While most traditional analyses compare national legal frameworks, we argue for the importance of city-level comparisons and explore the realities of domestic employment based on four key aspects—legal framework, employer-domestic worker relationships, transportation, and stigma. Finally, this article advocates for more city-level research to inform policies for improving domestic workers' well-being.

Democratizing Healthcare Information Among Rural Communities: A Study of Digital Interventions

Digital media has revolutionized society through democratizing the delivery of information and creating an information society. In the healthcare sector, it offers newer opportunities for healthcare professionals through digital healthcare services such as telemedicine, electronic health records, and mHealth apps. This leads to enhanced access to health information and fosters a more inclusive society. The democratization of healthcare information is significant for rural populations, especially for marginalized communities. In this study, we explored how digital interventions by the Government of India in healthcare is enhancing access to healthcare information among rural communities. We looked into the digital infrastructural scenario among rural populations of India. We found various digital initiatives under the Ayushman Bharat Digital Mission (ABDM). These initiatives include the ABHA number, the ABHA mobile app (PHR), the Healthcare Professionals Registry (HPR), and the Health Facility Register (HFR). These initiatives are helping to provide digital healthcare information and services to rural communities. ABDM targets to build digital healthcare infrastructure in India, which focuses on achieving Universal Health Coverage (UHC). UHC aims to provide healthcare services in an efficient, accessible, inclusive, affordable, timely, and safe manner. This study concludes that emerging technologies like artificial intelligence, the internet of things (IoT), blockchain, and cloud computing offer opportunities for a comprehensive digital health ecosystem, enhancing access, improving outcomes, and reducing costs.

DUBOY LUENGO, MITZI* (Alberto Hurtado University, Chile)

Dificultad y Potencia: La Maternidad y Los Cuidados En La Producción De Conocimientos

La investigación sobre género y producción de conocimientos, ha mostrado que la institucionalidad universitaria, no ha asumido la maternidad ni los cuidados como un ámbito de competencia colectiva y organizacional (Samper-Gras et al., 2021). A su vez, las tareas de cuidado dentro de la academia han estado, en gran medida, delegadas a las mujeres, sin ser contabilizadas como tareas académicas y, por lo tanto, sin permitir que escalen en la mejora de sus condiciones laborales o incrementen su posición en espacios decisoriales asociada a salarios mayores (Hanasono et al., 2019; Heijstra, Einarsdóttir, et al., 2017; y otros)

Si bien es cierto, se han implementado medidas de compensación para mujeres que cuidan y que quieren optar por la carrera académica, éstas son incipientes en un sistema universitario neoliberal, que está basado en la meritocracia (Fardella, 2021) y que tiene como propósito central el aumento de la eficacia y la eficiencia (Labraña et al., 2024), sin una visión generizada (Crocco-Valdivia & Galaz-Valderrama, 2023), donde la incorporación de los cuidados y la maternidad están fuera de las regulaciones organizacionales, y son ejercidos como una jornada laboral extra que recae sobre el cuerpo de las mujeres y que ralentiza las posibilidades de equiparar las brechas en la carrera académica (Samper-Gras et al., 2021).

Considerando lo anterior, esta presentación busca mostrar los resultados de una investigación con académicas de trabajo social en América Latina, acerca de cómo, la maternidad y los cuidados, afectan la producción de conocimientos y qué estrategias de resistencia profesional construyen para hacerle frente. Para ello, desarrolló este estudio mediante la realización de Producciones Narrativas, método cualitativo que pretende salir de la presunción de objetividad que algunos modelos de generación de conocimiento, sostenidos por un ethos neoliberal, colonial y patriarcal, a la vez que buscan avanzar en un horizonte de justicia epistémica.

DUBOY LUENGO, MITZI* (Alberto Hurtado University, Chile)

Investigación Crítica y Transformación Social En Ciencias Sociales En América Latina: El Caso Del Trabajo Social

La investigación sobre producción de conocimiento en Ciencias Sociales en América Latina ha mostrado como la transformación y la crítica social son elementos presentes en diversas disciplinas (Ramos-Zincke, 2024). Así, la investigación crítica ha generado herramientas teóricas (Rivera, 2015) y metodológicas (Balash & Montenegro, 2003; Vidal-Barrios et al., 2023) ampliamente utilizadas pero que, sin embargo, no han logrado generar transformaciones que impacten en la sociedad. Aunque estas discusiones se han planteado en otras ciencias sociales, han permeado menos en el Trabajo Social, una disciplina con 100 años en América Latina, que tiene un foco antropocéntrico y que pretende, mediante transformaciones sociales, promover el cambio y el desarrollo social y la cohesión social.

Considerando esto, la presente presentación busca analizar como las epistemologías y metodologías del Trabajo Social se relacionan la transformación social en América Latina. Para ello, desarrollé este estudio mixto transformativo, que integró una Revisión Sistemática Exploratoria de la literatura en torno a la producción de conocimientos en el trabajo social latinoamericano, y Producciones Narrativas con trabajadores sociales insertas en la academia y que producen conocimientos.

Tres resultados principales emergen del análisis. En primer lugar, los objetivos cognitivos de las investigaciones en torno a la producción de conocimientos en el trabajo social latinoamericano, mantienen una diferencia con otras ciencias sociales porque buscan, intencionalmente, la transformación social. En segundo lugar, existe una relación entre epistemologías y metodologías declaradas. Finalmente, y a pesar de que la producción de conocimientos de la disciplina se orienta a la transformación, carece de un foco empírico y de consistencias operacionales.

De esta forma, los resultados permiten discutir sobre la transferencia de conocimiento en una disciplina social históricamente ligada con la práctica y discutir su vínculo con la epistemología y las metodologías sociales.

Regenerative Narratives – What Emerges Beyond the Horizon of Sustainable Development in Education?

The current state of the world clearly indicates the urgent need for profound change, as sustainable development, with its focus on damage reduction, has limited motivational power in addressing climate change. A new conceptual model is evolving, where the emphasis is on positive impacts on ecosystems and communities. This post-anthropocentric regenerative shift is based on a holistic worldview, where humans and their economic actions are an integral part of nature.

Can the evolution of the sustainable development paradigm inspire active hope and motivate action? Does this new narrative not only help us understand reality but also inspire the co-creation of new worlds? This presentation will discuss how regenerative education is understood and how the paradigm of regenerative education is articulated in practice.

The objective is to reconstruct the narrative of the evolution of sustainable development. The discussion will focus on the dynamics of changes occurring within the concept of sustainable development and will present two perspectives – sustainable and regenerative development. Similarities and differences in their descriptions of reality, the role of humans, communities, and place will be examined.

The analysis will include recently published English-language studies, including autoethnographic research documenting the experiences of academic teachers introducing regenerative principles into their educational practices. Additionally, results from qualitative research on narratives developed based on sustainable and regenerative development will be presented, providing the foundation for reflections on the past and present, as well as highlighting future perspectives brought forth by regenerative education.

These two reference points (sustainable and regenerative development) will enable reflection not only on what has already been and what is but also on what lies beyond the horizon of the present, showing visions inspired by the narratives of a regenerative concept. The analysis will also reflect on how these changes may impact communities affected by climate crises.

MUSIAŁ-KARG, MAGDALENA (Professor at Adam Mickiewicz University, Poland)
ROMANOV, BOGDAN (University of Tartu, Estonia)*Citizen Discourses Towards Internet Voting, a Multicountry Comparison*

Internet voting is one of the flagship technologies in the development of electronic democracy, which, ultimately, is one of the components of Digital Government. The use of internet voting allows a more smooth interaction between governments and citizens and opens the door to its use in other forms of citizens participation. Still, the adoption of internet voting is complex and subject of discourses regarding its actual need, risks, challenges and other trust related issues. This proposal gathers and compares cases, stemming from the work conducted within the project ELECTRUST, to approach the citizen perspective regarding the use of such a technology. The audience will learn about different experiences in the use of internet voting and the results of Q-Methodology experiments conducted with citizens in different countries to see how the arguments in favor and against internet voting combine.

The Transnational Lives of Sociology

With a few exceptions, the history of sociology has paid little attention to how the term itself, coined in 1838 by Auguste Comte and present in the 47th lesson of his *Cours de philosophie positive* published in 1839, was subsequently used, translated and appropriated by scholars in most of the world's major regions. Although the first forms of disciplinarization of sociology came later - starting with the United States and Japan in the 1880s - sociology as a movement of ideas saw a sharp increase in its presence during the second half of the 19th century. Translators, learned societies, researchers in the "hard" sciences and publicists were all involved in the circulation of texts by Auguste Comte and Spencer. This presentation will draw on a few late 19th c. specific examples (Japan and China, Venezuela, Greece, India) to demonstrate the mechanisms of this circulation.

The Unesco and Social Sciences in the Middle East (1950s-1960s)

Since its 5th session in 1950, UNESCO organized a series of meetings and missions aimed at gaining a better understanding of the state of social science teaching in different regions of the world and promoting its development. In the Middle East, a regional meeting was held in Damascus from August 23 to 30, 1954, and it was attended by representatives from Egypt, Greece, Iran, Iraq, Lebanon, Syria, and Turkey. Following this meeting, several missions were organized to some of these countries, as well as to Morocco and Algeria, for example, between the late 1950s and early 1960s, to take stock of the development of the social sciences and propose recommendations for improving teaching and research. UNESCO's archives allow us to delineate the objectives of this policy and shed some light on the role - and limits - of UNESCO in the development of the social sciences in Arab countries.

VAN NESTE, SOPHIE (INRS, Canada)*Beyond Climate Emergency: Between the Search for "Another Possible End of the World" and "a Just Transition": a Comparison of Activist Circles in France and Canada (Quebec and British Columbia)*

The climate emergency, as a constructed horizon, has different repercussions on social movements, their strategies, their alliances and their demands. While most of the work makes the link between this specific temporality and climate movements, the issue of the climate "tipping point" affects all activists, regardless of their preferred sectors. Based on an ongoing research that compares union, student and territorial defense activist circles

in France and Canada (Quebec and British Columbia), this paper proposes to explore the different ways in which activists (and their organizations) appropriate this temporality. Based on more than a hundred interviews, we will see that militant times are not necessarily compatible with the perceived need to act in an emergency: collective actions in alliance with other sectors require time to build and get to know each other. This lived conflict of temporality can result, in particular, in militant exhaustion or militant paralysis. It can also be a driving force for action for people who are looking for "another possible end of the world", already considering themselves beyond the climate emergency, as well as for organizations, which then talk about just climate transition and the search for alternatives. These differentiated appropriations vary from one society to another (and sometimes by sector), but also within the same organization, by generation. The multiplicity of possible comparisons will allow us to better understand the influence of national contexts, but also of specific contexts, on the ways of living and imagining these upheaval militant times.

DUGAR, GIULIA* (University of Bologna, Italy)
MANTOVANI, DEBORA (University of Bologna, Italy)

School Segregation in the Italian Urban Context: The Role of Institutional Actors and Students' Families on Segregating Patterns

In quasi-market education systems, where families can (almost) freely choose schools outside their designated catchment areas, sociological research has shown that parents are often engaged in an active selection of the school for their children. More precisely, native and/or highly educated parents are more likely to avoid "disadvantaged" schools, opting for either non-state schools or state schools characterized by a school body population predominantly "white" and with a high socio-economic background. Yet, if empirical evidence has clearly stressed that the level of residential segregation is lower than the level of school segregation (in terms of socio-demographic characteristics) research has not already completely explained which criteria actually lead parents in school selection.

This paper explores the drivers behind parental school choice and their impact on school composition, with a focus on the interplay between schools and the local dimension. Proximity to the school, attractiveness of the neighbourhood, school's reputation, socio-demographic profile of its students, and unequal access to information families can draw from are among the examined factors which are found to influence parents' choices and which, in turn, shape schools' composition. The study is based on qualitative research involving interviews with both school representatives (principals and teachers) and families of diverse ethnic (including autochthonous) and socio-economic background. The research centres on two lower secondary schools in Bologna, Italy—one characterized by a mixed student body and the other by a segregated composition—chosen for their contrasting demographics, yet both located in a non-segregated area.

Such data is critical in two respects: first, it sheds light on the role of both school actors and families in the creation and perpetuation of school segregation dynamics. Second, it offers a comparative analysis of a segregated and a mixed school context, identifying practices contributing to school segregation, despite their surrounding's non-segregated residential patterns.

DUNNE, MAIREAD* (University of Sussex, United Kingdom)
CROSSOARD, BARBARA* (University of Sussex, United Kingdom)

What of Gender 30 Years on - Plus Ça Change...?

Over the thirty years since Beijing there have been concerted efforts to address gender inequalities worldwide. Although there have been some gains, much still remains to be done, as indicated by the 2030 Sustainable Development Goals. Many of the challenges and setbacks to achieving these goals, in particular Goal 5, have been related to the economic and social excesses of neoliberalism and the ways these produce, sustain and deepen inequalities globally.

While neoliberalism has been widely critiqued, liberal thought, on which neoliberalism is founded, has evaded critical scrutiny. In this presentation, with reference to gender, we explore how the foundational principles of liberalism frame, shape and inform development. Our discussion will refer to decolonial critiques of development, its liberal assumptions of western superiority and linear models of social and economic progress. Highlighting gender, we critique how liberal assumptions of the human agent as autonomous, masculine and agentic remain entrenched within the SDGs and development discourse.

We argue that while gender has been recognised as a social construction, the SDGs and development discourses continue to assume and reinscribe gender as a decontextualised female/male dichotomy. Further, these understandings are integral to measures of development and their deployment as indicators of progress. We argue that these technologies of power radically constrain deeper and more fluid conceptions of gender that would enable us to attend to the social processes through which it has been produced. In this presentation we call for an embrace of theories of gender that go beyond its liberal framing and attend instead to its intersections within specific social and cultural contexts.

DUPUIS, APOLLINE* (University of Mons, Belgium)

Impacts of Capitalism, Globalisation and Patriarchy on Women Workers in Industrial Production. Comparative Analysis: Belgium, Nepal, Bangladesh.

There is a discernible shift in the global political landscape. For the first time since the advent of capitalism, a non-Western country, China, is surpassing the Atlantic imperialist forces in terms of economic influence. India is also experiencing a significant economic growth. Several other Asian countries are aspiring to attain this new economic position, including Bangladesh. In October 2023, this country, renowned globally for its textile factories, witnessed a historic strike by workers in the same industry, which accounts for 80% of the country's exports. The workers, 65% of whom were women, supported by the unions, demanded a substantial increase in the minimum wage.

In this evolving context, this paper presents a feminist and critical analysis of the impact of capitalism, globalisation and patriarchy on women workers in the industrial production sector.

The study is based on empirical data gathered in three research fields (Belgium, Nepal and Bangladesh) using an inductive method. In total, this research is based on the testimonies of 31 female workers, several hours of observation and numerous interviews with experts on the subject. The analysis of this empirical data is supported by a review of the multidisciplinary scientific literature on the subject.

This study demonstrates that the impact of capitalism, globalisation and patriarchy on women industrial workers in Belgium, Nepal and Bangladesh is multifaceted and interrelated. The study was based on the Marxist premise that there is no distinction between free domestic work and paid work, which are two sides of the same coin. This premise was used to examine the difficulties experienced by women workers in combining their private and professional lives. Additionally, the consequences of imperialism and workers' resistance to it were considered.

RC44-JS-223.1

DUPUIS, APOLLINE* (University of Mons, Belgium)

Practices and Representations of Gender Mixing and Non-Mixing within the CSC and the Fgtb (Belgian trade unions)

For an extended period, the Belgian trade unions regarded feminist concerns as a non-priority within the context of class struggle. In Belgium, however, trade unions occupy a pivotal role within the social movement. Over the past two decades, these large structures have established bodies responsible for 'gender equality'. In Belgium and across Europe, the trade unions have adopted a gender-mixed approach, both in their gender equality bodies and in the 'feminist' groups in which works council representatives are organised. However, in the feminist movements in Belgium, the choice of gender-neutral reflection and organisation is a dominant practice.

This study examines the practices and representations of gender mixing and gender non-mixing within the Confederation of Christian Trade Unions (CSC) and the General Federation of Labour of Belgium (FGTB). Gender non-mixity will be conceptualised as one strategy among a range of trade union actions, which Belgian trade unionists both deliberately and inadvertently employ.

An inductive methodology was employed, combining interviews and observations with a review of the relevant multidisciplinary literature. Two case studies were conducted: the Comité Eliane-Vogel-Polsky (FGTB Brussels) and the Ligue des Travailleuses domestiques avec et sans papiers (CSC Brussels), both of which are organised on a non-mixed-gender basis. These examples demonstrate how Belgian trade unions are innovating in their practices through the promotion of feminist ideals.

The findings demonstrate that the creation of non-mixed gender spaces facilitates the emancipatory potential of gender-mixed spaces, particularly for those in subordinate positions. This research contributes to a more nuanced understanding of the intertwining of gender and class dynamics within the trade union context, and encourages trade unions to prioritise investment in feminist struggles.

DURAN DEL FIERRO, FRANCISCO* (University College
London, United Kingdom)

LORD, CAROLYNNE (UKCEH, United Kingdom)

*Digital Transformation of Scientific Communities in the UK:
Exploring Its Social Impact through Two Case Studies*

This paper aims to contribute to the conceptualization of digital transformation using insights from two case studies of scientific communities: the UK SKA Regional Centre (UKSRC), which is developing an interoperable Digital Research Infrastructure (DRI) to enable astronomers to access, analyse and visualise data; and the ARINZIT project which designed cultural policies and recommendations to enable a Net Zero transition for the DRI system. These cases are illustrative of new interactions between social change and social reproduction as DRI are implemented in science. We emphasise how changes in epistemic practices, such as data sharing and sustainable collaboration, impact those who are more "vulnerable" within the social hierarchies of science. For example, Early Career Researchers are being affected by changes in data reduction processes (Durán del Fierro et al., 2024) and the increasing levels of computationally-specific skills involved in science. Similarly, female scientists often feel hesitant to share their data due to fears of criticism and harassment in the public arena. This evidence shows how the implementation of DRIs triggers social change while also perpetuating existing epistemic injustices within science communities (Bacevic, 2023). Based on these insights, we offer a conceptualization of digital transformation that focuses on two key ideas. Firstly, the need to understand the individual as the carrier of practices that flux as they are redefined by, and redefine, DRI over repeated enactments over time. Secondly, the importance of focusing on resistance practices; that is, the multiple and sometime creative ways people refuse to be governed in the name of normative principles (Foucault, 2007) such as sharing and sustainability. This examination enables us to conceptualise digital transformation beyond the "best practices model" typically used to inform policy and instead emphasises the alternative ways of doing science which in turn impact the digitalisation of scientific practices, knowledge and social life.

DÜRR, AGNES* (University of Vienna, Austria)

KIERMAIER, JOHANNA (University of Vienna, Austria)

ZUCCATO-DOUTLIK, MARLIES (University of Vienna, Austria)

*Undoing Family in Transnational Family Conflicts – Narratives
of Family Boundaries and Belonging*

Transnational family lives nospan across national borders, and in the context of divorce and separation, conflicts can arise over the country of residence of the involved children. When children are unlawfully removed from one country to another, this can lead to court proceedings about their country of residence. From a family practices approach, in such cases, family members perform practices of UnDoing family by creating, managing, and displaying family lives and relations. Within this framework, we examine which narratives about family boundaries and belonging members of transnational families use in custody conflicts and in court proceedings about their children's residence. *How do family members argue and legitimize their children's whereabouts? How are family belonging and boundaries performed? Which normative notions of family and parenthood are used in these narratives?*

To answer these questions, firstly, we analyzed 20 qualitative interviews held with family members in conflictual situations surrounding the children's country of residence. Secondly, we analyzed 30 court files from Austrian court proceedings, offering insights into the construction of family practices in court. Both interview data and court records provide insights into the negotiations of family concepts in a transnational context. Results show that the narratives of boundaries and belonging revolve around ideas of culture, class, nation, country, blood ties, emotional bonds, and gender. Narratives are closely interwoven with subjective perceptions of the child's best interest, and refer to stereotypical, heteronormative and traditional constructions of family and gender.

*Artificial Intelligence and Processing the News Content: A Study
of Indian Newsrooms*

Artificial Intelligence (AI), as it is popularly known, is becoming an everyday tool in our daily lives. Its advent can be seen in the journalism industry too. Aaj Tak and India Today used AI technology to build AI anchors who anchored the news programmes. Many discussions are ongoing about AI in other relevant fields. **This research explores the perception of journalists regarding the use of Artificial Intelligence (AI) in the context of reporting and journalism**, analysing the complex interplay between technological innovation and journalistic integrity.

The qualitative research methodology employed semi-structured interviews with professionals in newsrooms, including journalists and editors. Findings reveal a nuanced landscape, with interviewees expressing reservations about AI's capacity for contextual interpretation and potential biases. Despite challenges, respondents recognize AI's potential to complement human expertise when integrated responsibly. The study concludes that a collaborative and thoughtful approach is imperative for AI to enhance news production while safeguarding credibility and trustworthiness in journalism. Ongoing research and development are crucial to refining AI systems and establishing a symbiotic relationship that prioritizes reliability, accuracy, and ethical standards. This research contributes to the evolving discourse on AI in journalism, offering insights for practitioners, scholars, and technologists navigating the intersection of technology and journalistic practices.

University, New Delhi, India)

*Narratives from the Margins: Exploring Alternative Media
through Bastar Talkies and the Chenab Times*

This paper examines the critical role of alternative media in reshaping narratives in India, using Bastar Talkies and The Chenab Times as case studies. Both platforms challenge the mainstream media's focus on conflict and state-centric discourses, offering nuanced representations of marginalized regions. Bastar Talkies, a YouTube channel, provides stories from the tribal communities of Bastar, a region affected by the Maoist insurgency, focusing on the lives and culture of the people beyond the violence. Similarly, The Chenab Times, a multimedia news portal, focuses on the Chenab Valley in Jammu and Kashmir, highlighting issues such as development, politics, and social dissent while preserving cultural identities.

The study situates itself within the theme of globalization, media, and shaping new narratives, demonstrating how alternative media contributes to a decentralized and democratized flow of information. Theoretical framework of alternative media theory is applied to explain how these platforms not only create alternative narratives but also foster a more inclusive public discourse in regions often marginalized by mainstream narratives. The study employs interviews with journalists from both platforms to understand their vision, challenges, and how they overcome obstacles such as resource limitations, political pressure, and audience reach. A thematic analysis of their published stories is conducted to identify how these platforms frame narratives around social justice, local development, and resistance to mainstream perceptions. Through these methods, the paper highlights the role of alternative media in giving voice to underrepresented communities and addressing issues often overlooked by national media outlets.

*Silent Suffering: Exploring the Nexus between Sexual Violence
and Eclampsia Vulnerability in the Indian Context*

Background

Eclampsia is the second major cause of maternal death in India. The adverse outcome of eclampsia is not only confined to the immediate effect on maternal and perinatal health but is also associated with a higher risk of chronic non-communicable diseases in the later stage of life. Earlier studies

have linked the occurrence of eclampsia with several underlying factors related to socioeconomic, obstetric, medical, and demographic factors. Studies are limited which exploring whether Intimate Partner Violence (IPV) causes eclampsia in Indian context. Therefore, the study aims to investigate the association between IPV and eclampsia.

Data & method

The present study used National Family Health Survey Round 5 data (NFHS-5, 2019-2021) covering 18,431 reproductive-aged women in India. Bivariate and multivariable logistic regression were used to accomplish the objectives of the study.

Results

The study found that 13.8% of women were eclamptic and 6% experienced sexual violence. The study found a significant positive association between sexual violence and eclampsia. In particular, the adjusted likelihood of eclampsia was 1.38 times higher among the women who had experienced sexual violence than their counterparts. significantly increases. In addition, there was a significant regional variation in the likelihood of the occurrence of eclampsia caused by IPV. For instances, in the south region, women who experienced sexual violence were reported to be 2.86 times more likely to have eclampsia, a similar result was also found in the east region.

Conclusion

Incorporate IPV counselling in ANC to mitigate eclampsia caused by IPV and improve maternal well-being.

Why Should Boys Have All the Fun? Exploring the Impact of Solo Female Travelers on Society and the Hospitality Industry in India

Tourism in India has long been a family affair, with the major amount of travelling for leisure being around pilgrimage sites. However, with more and more women choosing to transcend the four walls of the house for work as well as for leisure, many tourist spaces in India are being slowly transformed by the presence of solo female travelers, who are on the lookout for an experience which is significantly distinct from that sought by other categories of tourists. With the development of transport and communication on the one hand, and the hospitality industry on the other, in addition to the discourse on rights and individual freedom gaining ground, more and more women are opting to travel "solo", either alone, or with travel groups that promise "exclusive" experiences in the company of "like-minded travelers", in packages that are carefully crafted for women. While hotels are scrambling to get positive reviews and ratings from solo female tourists, hostels are increasingly making space for women only dormitories and washrooms, while the concept of mixed dormitories is also gaining popularity in some prominent tourist destinations located in relatively "progressive" parts of India. Wellness retreats, spas, Ayurvedic and Yoga training centers, are all being refurbished to cater to this new category of tourists, hailing from both India and abroad. Through an ethnographic study of a tourist destination popular among female tourists, this study shall highlight how solo female travelers are bringing about a silent revolution in India, by encouraging the creation of gender inclusive spaces, and increasing the popularity of the existing inclusive sites, and how the presence of these women are helping to shatter gender stereotypes on the one hand, and are serving to nurture career aspirations in the women hailing from the marginalized sections of the society, on the other.

Sticky Note Autoethnography: Caring As an Au Pair

My 2019 diary begins with, "I don't know whose room this is, but my things are scattered all over the place." I call it my au pair diary, and from 2019 to 2022, I did my best to avoid reading it. But after three years, I went back to that house, visited the kids, and met the new au pair, who, like me, was Georgian. We went down to the basement, to her room—or mine, or the au pair's. We wanted to talk (ex-)au pair to au pair, and there I saw my sticky notes from three years ago, still sitting on the table, waiting for someone to make use of their stickiness. Those sticky notes shook my sense of space and time and sparked my affective turn toward care politics. They made me read my abandoned diary, reflect on care work and careless domesticities, and write my Master's thesis.

The turning point of this brief encounter with my past, embodied in those sticky notes, was the realization of the inherent characteristics of domestic care, which reproduce the emotional web between the carer and the cared-for. But most importantly, it made me see that there was no room, and has never been, for my fluidity in this space. Being told that I was someone's "older sister" was enough to make me responsible for taking care of them.

This abstract aims to study the non-binary experience of care work, as exploitative as it is, embodied in non-human bodies that affectively reshape the notions of time and space. It follows the interplay between the different versions of myself — the one writing this abstract, the one visiting the family after three years, and the "big sister" — and attempts to understand how these "selves" could be condensed onto a single sticky note.

China Versus Taiwan – a Cold War within ISA?

ISA was founded in response to UNESCO stimuli, which had three objectives: "(1) to knit together social science scholars of the world... [to] increase international understanding; (2) to raise the level of social science research... in the belief that greater knowledge... will benefit mankind; and (3) to promote research... crucial to the establishment of a peaceful world order." (Angel, 1950, 282)

During the Cold War the national associations (NA) of the Soviet Union and other Eastern Bloc countries – as Judith Platt shows in "History of the ISA 1948-1997" – were collective ISA members. Individuals participated in RCs, occupied leadership positions, sometimes enriched scientific dialogue, and pursued UNESCO's objectives. The Cold War's end saw some countries achieve independence, sociologists formed NAs and these applied for ISA membership. In East Asia, the place of the NA representing sociologists of the Peoples' Republic of China (CSA) is still occupied by the NA that represents the former Republic of China, (now the Taiwanese Sociological Association) TSA. Does such an anomaly mean the Cold War is still being fought within ISA?

To address this question, ISA archives were researched, interviews conducted with ISA elected officials (including ex-presidents) and staff, observations made at ISA meetings, Taiwanese and Chinese sociologists consulted. Successive ISA presidents have sought to bring CSA into ISA. Negotiations, hopes, positions of TSA and CSA are analysed. The 1998-2022 period has been marked by the status quo.

The world's largest non-member NA of the ISA, is excluded. A sociology that has some of the world's most technically competent, creative, vigorous, consequential and courageous sociologists plays a feeble role in all instances of ISA. In contrast, Taiwan appears a giant. The question becomes, does this state of affairs respond to UNESCO's original objectives, or have these been replaced by others?

WIECZOREK, BARTŁOMIEJ (Bartłomiej Wieczorek Law Firm, Poland)

AI and Cybercrime in Post-Socialist Poland: Legal, Governance, and Social Justice Implications in the Digital Era

This talk examines the nexus of artificial intelligence (AI) and cybercrime within Poland's evolving legal framework, with a particular focus on how post-socialist governance structures are responding to AI-driven threats. The accelerated digitalization and the emergence of automated cybercrimes, such as phishing and ransomware, have outpaced Poland's legal system, which still bears the hallmarks of its pre-1989 centralized structure. Qualitative interviews with Polish legal professionals revealed significant deficiencies in legislation, difficulties in digital evidence collection, and a growing public distrust in legal institutions, which has been further exacerbated by the increasing sophistication of AI-powered attacks. The findings underscore the necessity for legal reforms that address the role of AI in cybercrime and the development of specialized training for legal professionals in digital forensics and AI technologies. Furthermore, the talk examines the impact of AI on governance and public sector administration, including its influence on the distribution of justice and the potential exclusion of digitally underprivileged populations. The challenges posed by AI to governance, law enforcement, and public trust give rise to significant questions regarding the accessibility and equity of justice in the Anthropocene era. This talk contributes to the broader discussion of digital justice by proposing interdisciplinary approaches to integrating AI into legal systems and public administration, with the aim of ensuring more resilient governance structures.

DYCZEK, BERENIKA* (University of Wrocław, Poland)

The Need for an Interdisciplinary Approach: Analyzing Computational Methods in Attitude Detection

The purpose of this talk is to provide a critical analysis of the use of datasets in attitude detection (the equivalent of attitude analysis in social science), focusing on the contrast between computational and psycho-socio-cultural approaches. Although attitude detection has become a prominent field in computer science due to its capacity to examine vast quantities of opinions through machine learning techniques, such methods frequently neglect the intricate socio-cultural contexts that inform human communication. Computational approaches rely heavily on predefined data sets, which tend to simplify complex human interactions into binary categories that may not fully capture the nuances of individual opinions and cultural influences. In contrast, sociological perspectives underscore the necessity for a more comprehensive understanding of opinions as socially and culturally embedded phenomena. In addition, the use of large language models (LLMs) in attitude detection opens up new possibilities due to their ability to analyze complex language patterns, but their effectiveness still depends on the quality of training data, which often overlooks key socio-cultural aspects that influence expression. The issue also calls for sociological research to better understand how socio-cultural context affects the expression of attitudes and how language models can account for these complex interactions, rather than simplifying them into mathematical formulas. This presentation puts forth the proposition that the incorporation of socio-cultural contexts into attitude detection research would not only serve to enhance the precision of these models but also facilitate a more comprehensive understanding of human behavior. Through a comparative analysis of attitude detection techniques and their applications, the paper identifies the shortcomings of current computational approaches and advocates for an interdisciplinary framework that bridges the gap between computational efficiency and cultural complexity.

Legal Personhood and Agency in the Age of the Rights of Nature

Extending legal personhood to natural entities has been one of the tools relied upon by numerous legislatures and courts across the globe in order to enhance their legal protection, while also creating a point of attribution for legal rights, such as property rights, rights to exist and flourish, and rights to be restored. These developments, as well as related discussions regarding the potential legal personhood of artificial intelligence, have led to a renewed interest in the concept in legal theory.

In the course of these developments one particular, influential, strand of literature argues for the exclusion of natural entities as potential legal persons on conceptual grounds. A leading proponent of this position, Visa Kurki, claims that natural entities such as rivers cannot be legal persons because incidents of legal personhood can only be attributed to entities that can hold claim-rights or perform acts. This paper will critically assess such claims by unpacking these conceptualizations of legal personhood and demonstrate that a conceptual exclusion of natural entities as legal persons is based on evaluative assumptions regarding the nature of claim rights, which do not warrant the conceptual exclusion. It will be argued instead that the attribution of legal personhood is a pure act of legal fiat that does not require to take such evaluative assumptions on board. Where such evaluative assumptions become relevant is rather at the point of justifying which entities should be legal persons, and that is why some normative justifications for extending legal personhood and rights to natural entities will be provided consecutively. Finally, this paper will address the 'elephant in the room' resulting from discussions on the nature of legal personhood, namely the fact that natural entities cannot act in the law and thus need to have their interests translated by means of legal and political representation.

Policed Abandonment: The Role of Policing in Sex Workers' Access to Justice

Policing strategies play a central role in shaping sex workers' vulnerability to violence and their access to justice. Under punitive sex work laws and other repressive policies used to target sex workers, these strategies often prioritise surveillance and punishment over sex workers' rights and safety. As enforcers of these laws, the police are tasked with both implementing sex work-related policies and protecting individuals from crime. This dual role can create tensions that hinder sex workers' access to care and legal protection when they experience violence and abuse. My presentation explores the role of law enforcement in restricting sex workers' access to justice as victims of crime. It builds on a feminist participatory action research project conducted by the European Sex Workers' Rights Alliance in cooperation with 13 national sex worker-led and sex workers' rights organisations. Drawing on 199 in-depth interviews with sex workers across 11 European countries, it analyses their everyday encounters with the police and investigates their experiences when seeking help or attempting to report violence and other crimes committed against them. Our data reveals that the intense, punishment-oriented policing documented in all the countries studied constitutes a major barrier to justice for sex workers. Instead of offering protection and facilitating justice, the police often create dangerous environments for sex workers, further undermining their safety and depriving them of legal protection. Consequently, repressive and punitive law enforcement strategies foster conditions that can be conceptually understood as 'policed abandonment'—a mode of sex work governance characterised by both over-policing and the persistent denial of rights and access to state support for sex workers.

Framing Sensations: Ethical Considerations of Teaching Visual Methods in Sensory Research

Mobile phones have simplified fieldwork photography and expanded ways of recording field data. Because an image can capture a variety of sensations, emotions and interactions, photography has become an essential tool in field practice and participatory methods have embraced photography. With the growth of social media apps, visual note-taking, i.e., image-based posting, has arguably displaced effective note-taking techniques. In the field of sensory studies, teaching with visual methods is well established but challenges remain when working in multidisciplinary contexts and introducing newbies to sensory methods. Ethical concerns are a particular challenge because research ethics does not align with the conventions of the major social media platforms. This paper reports on an immersive geolocated photography workshop developed through a funded project about community participatory methods in Ho Chi Minh City, Vietnam, as part of the global River Cities Network led by IAS in Leiden. The photography workshop ran with different cohorts of university students, including sociology majors and a multidisciplinary internationalisation program; as a post-conference workshop; and in a community participatory project. In the paper, in addition to technical issues, we reflect on three aspects of teaching sensory studies using stills photography; first, visual methods are dominant in sensory studies yet are not especially suited to capturing a full range of sensations particularly olfaction and affect such as surprise or trust; second, phone photography enables spontaneous and timely shots but potentially overlooks issues of consent, copyright, and other ethical and legal concerns; and, third, snapshot photography often serves the needs of the shooter rather than the subject which may silence their voices and misinterpret or ignore their feelings. We conclude with recommendations for developing ethical practices for teaching visual methods especially when they are a first step among novices encountering sensory studies or used in other disciplines.

Situating Temporal Landscapes of Transnational Migrant Food Cultures

The sensations of migration shape a multiplied form of temporality among expatriate communities living outside their familiar cultural heritage contexts. In this paper we focus on the temporality not spatiality of cuisine cultures. We include globalising foodstuffs and eating experiences as well as the transnational local, that is the authentic and mundane everyday eating that migrants bring from their homes to a destination. Deploying an original theoretical framework based on concepts of Bourdieu, Simmel, Appadurai, Bachelard and Lefebvre, the paper analyses the temporal landscapes of transnational migrant food cultures among high skill professionals in globalising Ho Chi Minh City. Besides Vietnamese migrants from across the nation's diverse regions, Vietnam's largest city accommodates dynamic expatriate communities from across the globe, particularly peoples who speak and eat in Korean, French, Arabic, Tamil, and Portuguese. Drawing on interviews and online content analysis with community members and associational networks, we explore examples such as eating winter street foods like Korean tteokbokki year round at restaurant tables, preparing home style staples like Middle Eastern hommus for a multicultural restaurant clientele, French quail eggs, Vietnamese 100-year-old eggs, and other pickled, fermented, dried, frozen and fresh produce as cultural objects that are experienced as sensations of temporality that simultaneously satisfy a nostalgic pull and a disrupted palate. We reconsider how sensory cultural heritage and hybridity operate in a temporal landscape interpreted as an unsettled multiplicity and ask how globalisations reshape understandings of temporality through situated everyday practices. We conclude to what extent sensory studies offers a novel approach for analysing intercultural communication, cross-cultural understanding and multiculturalism in globalising cities. The paper contributes to studies of time and sustainable urban development by broadening the previously dominant focus on spatial

issues to also consider temporality, an area we contend is under-researched in studies on the senses and the city.

Are UN Targets Possible without Degrowth?

Explanations for the inability of nations to reach their UN-negotiated targets, such as those related to greenhouse gas emissions reductions and halting biodiversity loss, often point to a "lack of political will". This paper argues that this is not only vague but also, more importantly, misrepresents the fundamental commitment that nation states have to perpetual economic growth. The paper brings 25 years of ethnographic data gathered in the context of UN environmental negotiations (such as the United Nations Framework Convention on Climate Change and the Convention on Biological Diversity) together with degrowth scholarship to argue that the meeting targets is only possible through modification of socio-economic systems of capital accumulation, and that missing targets is the inevitable result of the inability for nation states to interrogate hegemonic economic imperatives.

WG06-901.2

EASTWOOD, LAUREN* (State University of New York at Plattsburgh, USA)

The Workings of the UN and Ruling Relations: Hegemonic Notions of "Development" and Economic Imperatives in Environmental Negotiations.

Based on data gathered over a 26-year period at various UN meetings associated with environment and development, the paper elucidates the dominant ruling relations that organize the policy negotiations. As nation states come to the table to deliberate policy, their participation in these arenas is often characterized as constituting "global governance." However, investigating what this means in practice allows for an explication of the ruling relations that organize both UN policy and the programs that the policies link to in various locations around the globe.

ECHÁNIZ JIMÉNEZ, ALEJANDRO* (Universidad Complutense de Madrid, Spain)

Artificial Linguistic Habitus: AI As a Reproducer of Social Structure and Co-Constructor of Language and Social Reality

Building on my PhD thesis, this presentation explores the role of artificial intelligence-based generative language models, such as ChatGPT, from a sociological and sociotechnical perspective, focusing on how these technologies shape language use and reproduce social inequalities. Drawing on Bourdieu's concepts of habitus and linguistic market, the analysis considers how these models are not passive tools but active agents that internalize and reproduce existing social structures through the way they process and generate language.

If we trace the development of artificial intelligence, it becomes evident that these technologies closely resemble human cognition. From neural networks to the embeddings they generate, that replicate the hypothesis of distributional semantics, allowing machines to interpret vocabulary using vectors. The way these AI models learn and use language can be seen as an artificial socialization within a specific linguistic market, leading to a linguistic habitus aimed at optimizing the acceptance or value of their discourse in interaction with humans. The initial socialization process occurs through training on a corpus of texts that are legitimate and legitimized by dominant culture and specifically, by the owners of these AIs, along with their biases.

In a society where close communities and the physical body hold less influence, where scientific and technological narratives are equated with progress, and where the words of AI are often taken as gospel despite their biased and black-box nature, the social construction of language and reality must account for a new actant. These AIs, through personalized interactions, reproduce and transmit the dominant language with all its connotations, hindering the diversity, solidarity, and adaptability of our language—qualities that are essential for recognizing and addressing many of the social problems our society faces.

WG10-931.2

ECHÁÑIZ JIMÉNEZ, ALEJANDRO* (Universidad Complutense de Madrid, Spain)

The Role of AI's Linguistic Habitus in Reproducing and Combating Social Inequalities: A Sociotechnical Perspective on Natural Language Processing Models

Building on my PhD thesis, this presentation explores both the potential and challenges of artificial intelligence, particularly natural language processing models like ChatGPT, in the reproduction and mitigation of linguistic and social inequalities. From a sociotechnical perspective, it examines how these technologies act as active mediators in human interactions, co-constructing social reality.

When examining the technical workings of these machines, a sociological framework based on Bourdieu's concepts of habitus and linguistic markets can be applied. The argument is made that AI models are not neutral tools, but rather socialized agents that internalize and reproduce existing social structures. These systems, trained on a corpus of texts that, by its "legitimate" nature, reflect dominant cultural and socioeconomic norms. As highly respected "actants" and professional commercials of their discourse whose outputs are often accepted unquestioningly, AI models contribute to the social construction of reality and influence users' language use by reinforcing the meanings and discourses, linguistic habitus, they incorporate from the training data. Operationalized in their embeddings and generative neural networks as schemes of perception and action, the two dimension of the habitus.

However, AI also holds immense potential as a crystallizer of these worldview, collective memory, cultural tradition, and discourses embedded in its linguistic forms. If trained appropriately, AI big data models potential could democratize language by offering a more equitable representation of meanings, beyond the capacity of any individual. Moreover, AI can serve as a powerful tool for preserving cultural heritage, integrating the unique perspectives of certain traditions, generations, or social groups. This potential to conserve diverse worldviews, once maintained and shared primarily through oral tradition, is crucial in an era of globalization, individualization and rapid industrial and technological change, where traditional forms of knowledge risk being overshadowed by dominant, homogenizing narratives.

Beyond Ngoization of Women's Rights: Moroccan Farmers and the Politics of Land Tenure Reforms

This presentation attempts to engage with an ongoing collective Moroccan women's mobilization around issues pertaining to communal land rights. While this presentation will include official state and urban feminists narratives about women's rights and land, it will be mainly guided by small women farmers' stories around land tenure and agrarian change in Morocco during the last two decades. This paper relies on participant observation of workshops attended by local women farmers about new land tenure reform laws and policies as well as in-depth interviews with these women farmers in different parts of rural Morocco. Focus will be laid on how these women farmers interact with, support and challenge mainstream urban state feminists narratives about land tenure and agrarian change in general and women's new land right status in particular. The presentation explores how local women farmers are negotiating with dominant land tenure policies and feminist rhetoric staged by the government, donors, and women's rights NGOs regarding the representation of women's land rights. Among the questions the presentation attempts to answer is how women's rights rhetoric interacts with and supports neoliberal land tenure reforms and, more specifically, how the alliance between feminism and corporate capitalism is at once received and undercut by local women farmers.

Employment Opportunities for Young People with Disabilities: A Factorial Survey on Hiring Intentions of Recruiters

Entering and getting established in work life is a particular challenge for young people with disabilities, which is reflected in their low participation in the competitive labour market (OECD, 2022). Disability at a young age is associated with low educational attainment, which is a key reason for a difficult school-to-work transition (Yoder & Cantrell, 2019). However, experimental research has shown that, even when the educational requirements of a position are met, disclosing a disability significantly reduces the chances of being hired (e.g. Bjørnshagen & Ugreninov, 2021). Still, the reduced chances of getting a job vary according to the type of disability, with intellectual disabilities generally being viewed less favourably than physical disabilities (Berre, 2023). Support measures put in place by governments to encourage employment of people with disabilities are controversial in their effectiveness (Baert, 2016; Shamshiri-Petersen & Krogh, 2020). This ongoing study presents quantitative results of a factorial survey experiment embedded in a questionnaire administered to recruiters in Switzerland and Luxembourg. Recruiters are asked to evaluate the chances of young job applicants presented to them in short descriptions (vignettes) that are experimentally varied on several characteristics, including disability, government support as an incentive, and educational level. This study will provide insights on the hiring intentions of recruiters towards young people with different types of disability. Awaiting forthcoming results, we expect to find more reluctance to hire young people with learning difficulties and mental illness than with physical disabilities, despite matching educational requirements. However, we also expect that the negative signalling effect of a lower mismatch in the required level of education, including non-recognised qualifications, is disadvantageous regardless of the disability signal. The impact of different country-specific incentives is expected to be small, but still different depending on the type of disability.

The Peripheral Effect: How to Write a Non-Eurocentric History of Sociology?

In recent decades, the rise of post-colonial and decolonial theories has generated widespread interest in the ideas and trajectories of non-Western intellectuals. Names such as Frantz Fanon, Aimé Césaire, Hussein Alatas and Anibal Quijano (to name but a few) are commonplace on social theory syllabus, articles and books, while concepts such as "Global South" and "anti-colonial sociology" gain traction in diverse sociological discourses. However, the task of writing a non-Eurocentric history of sociology is still in its early stages, as many of these theoretical developments still lack historiographical depth and do not engage with the methods and perspectives of the subfield of the history of sociology (HoS). This paper addresses this problem by outlining a threefold argument: a) it identifies the main theoretical and methodological challenges involved in writing a non-Eurocentric history of sociology; b) it analyses the main contributions made by HoS scholars to overcome these challenges; c) it draws on these contributions to propose a theoretical model for describing how centre-periphery relations can produce different types of effect on the intellectual practices of sociologists.

Disparities in AI-Related Tasks? Evidence from Job Ads in Germany

AI applications are expected to transform work primarily through the automation of non-routine cognitive tasks (Felten et al., 2023; Eloundou et al., 2024). In the US, firms using AI increased hiring in AI-exposed positions at the expense of non-AI-exposed positions (Acemoglu et al. 2022). A lack of skilled workers is the biggest barrier to AI adoption according to a survey among firms in Germany (Krzywdzinski, 2024). However, little is known about the heterogeneity within AI-exposed jobs. Which job candidates are expected to i) follow instructions provided by AI, ii) use AI as an efficiency tool, or iii) program and modify machine learning models? Within occupations, do AI-related positions differ structurally from non-AI-related positions?

This study analyses how AI technologies are embedded in job advertisements using data from over 80 million online ads in Germany from 2020–2024. Based on the job descriptions in the ads, the study examines how AI-related skills are distributed across occupations and requirement levels. We compare ads with and without AI content within the same occupation to understand how AI might change the composition of tasks.

We build on the task and skill framework of Rodrigues et al. (2021) and model skills and tasks through relational annotation. We then apply advanced NLP methods to automatically extract contextualised job ad content. This method allows us to distinguish where AI is embedded as a tool from where it is embedded as a work content, and to classify tasks by complexity or standardisation.

Our findings provide a nuanced picture of AI-related jobs. By drawing attention to the heterogeneity within the differential application of AI at work, the study contributes to the debates about the transformative potential of new digital technologies and their role in perpetuating or mitigating inequalities in job content or work standardisation.

Urban Governance & Municipal Politics in Tehran

We examine the dynamics of urban politics in Iran by focusing on Tehran and the manners in which its built environment has been transformed through frictions and interactions between institutions of urban governance (Municipality, relevant ministries, elected City Council), and a range of key social actors (land speculators, ruling authorities, citizen activists). While the urban and provincial dimensions of the 1970 Revolution have been overshadowed by its Khomeinist and ideological aspects, the centrality of urban dynamics to how political and social issues have been framed, experienced, and addressed became cleared after the Iran-Iraq War. Critical issues such as housing, migration, the pressing expectations of rising new middle classes as well as hard-pressed subalterns, the accumulation of capital through land speculation, culture wars over defining the boundaries of public and common space, the resentment of the pauperized urban periphery, and the formation of new citizen coalitions reclaiming the right to the city have reshaped relations between the state, ruling elites, and ordinary people. Tehran has been the epicenter of these processes. In the 1990s 'technocrat revolutionaries' advanced urban renewal projects redefining the postwar transition to a new socioeconomic order. In the process, municipalities became autonomous instruments of social engineering. Their neoliberal urban renewal projects aimed at solving municipal dire finances through privatizing and marketizing urban space, and relegitimizing the regime via the support of propertied classes vested in the built environment. These projects were financed through alliances between developers, land speculators, municipalities, and rival ruling political factions. This paper analyzes the struggles over defining the boundaries of these practices and the counter claims of residents for the right to the city.

Transforming the Teamsters? a Case Study on the Challenges of Union Revitalization

As U.S. union density continues its steady downward decline, there is considerable debate on how best to revive labor's fortunes. The problem of union revitalization also engages with broader debates within the sociology of organizations on the challenges of organizational transformation, as well as within the sociology of social movements on movement bureaucratization and barriers to mobilization. Simply put, there are many barriers to organizational reform and movement revitalization, and many reasons, both theoretical and empirical, that we would expect reform efforts to fail. This paper seeks to revive and extend current debates on paths to union revitalization through an analysis of current reform efforts in the International Brotherhood of Teamsters (IBT), one of the largest and most diverse unions in North America. While it has a history of corruption and bureaucratization, IBT members elected a slate in 2021 committed to organizational reform, backed by a longstanding rank and file reform movement known as Teamsters for a Democratic Union (TDU). In the two years the new administration has been in office, it has won important victories, including the best-ever contract at United Parcel Service (UPS), covering 350,000 workers across the U.S., and has created more space for rank and file organizing throughout the union. At the same time, it has demonstrated conservative tendencies, such as its decision not to endorse any candidate in the 2024 U.S. presidential election and its General President's overtures to Donald Trump and the Republican Party. Based on still-ongoing interview-based research conducted over the past two years, I assess the IBT leadership's efforts at organizational transformation, and how it has negotiated the challenges of organizational reform.

Extracting Clean Energy

Rural communities are in the spotlight of the clean energy transition. Utility-scale wind and solar farms require substantial land, which means developers look to rural localities to site those projects. Yet, many rural residents oppose them. Clean energy scholarship has therefore investigated ways to defuse that local opposition and address the potential inequities of this new rural energy burden. "Community benefits" have emerged as a tempting cure-all. Many hope community benefits can compensate and pacify rural localities through frameworks requiring economic resources from clean energy development to stay local.

This Article argues that community benefits fail to address the energy industry's structural problems that helped create rural marginalization in the first place. Centrally, while community benefits are better than nothing, they (a) stem from a narrow, market-centric conception of energy justice that still prioritizes the activities of powerful, sometimes-predatory, profit-motivated companies and (b) perpetuate a system that treats rural regions as sites of extraction for distant consumers' benefit. In other words, community benefits help entrench the internal-colonial land relations that characterized the fossil fuel era.

The extractive company-community-consumer triad remains under-appreciated in rural dynamics in the clean energy transition. By examining the intersection of theories on internal colonialism and clean energy justice, the Article sheds light on why many rural communities oppose hosting clean energy even when ample community benefits are offered. If the clean energy transition is going to serve as a meaningful opportunity to help mitigate rather than worsen broader urban/rural tensions, more fundamental structural reform based on a deeper conception of energy justice is needed. This reform requires liberating the internal energy colony through measures to facilitate localized, distributed electricity generation, decenter corporate profit, and take uneven development seriously in its own right, not merely as an afterthought to our collective need to decarbonize the grid.

How Schools and Secondary Education Institutions Work to Promote Degrowth Principles: An Exploration of Sustainability Efforts in Barcelona.

The role of schools in promoting ecosocial transition practices is critical. This includes not only how schools foster environmental education in the curriculum but also how, in doing so, they move towards forms of participatory governance that have in their principles degrowth economics, ecofeminist approaches, and social inclusion policies. In this paper, based on the data generated in the context of the ECOSOCITIES project and explicitly on the map "Escoles + Sostenibles" from the Ajuntament of Barcelona, we ask ourselves about the nature of the ecological transition practices that schools promote. We observe how schools' ecological practices may be a clue to fostering new public policy instruments for economic well-being, the fight against social inequalities, and the fostering of community resilience. In this sense, we observe the different intervention agencies through which schools can work to promote transition dynamics (in the classroom, in school cloisters, through the associations of children's relatives, through work platforms with other schools, through municipal plans for the development of educational environments, or in within professional teacher associations). We approach a broad diversity of experiences, such as improving the pacification of cities, green paths or the physical environment that leads to school; the enhancement of the community ecosystem of the territory and its expanded education opportunities; the work on eco-dependency, the custody of biodiversity and the claim for air quality; or the impetus geared by gender commissions that work around the comprehensive rethinking of the forms of structural violence within school organisations.

Effects of Climate Change on Foodways of Selected RURAL Communities in Benue State, Nigeria

The effects of climate change permeate all facets of human life including their foodways. These effects have been finely mitigated as some of the Climate Smart Agricultural Practices (CSAPs) are in conflict with the cultural beliefs of the people. This study therefore, analysed the foodways of the people of Benue state, Nigeria occasioned by climate change. A total of nine (9) rural communities were purposively selected and two hundred and eighteen (218) farm families were selected through random sampling method for the study. The study specifically focused on the Climate Smart Agricultural Practices and their perceived effects on foodways of the people. The results of Factor analysis on the constraints to adoption of climate smart agricultural practices among rural farmers showed three distinct factors that contributed to the constraints in adoption of climate smart agricultural practices. Factor 1 which is Financial/infrastructural includes poor infrastructure (0.803), lack of resources (0.813), and high cost of labour (0.772). Factor 2 which is social constraints includes lack of training on climate smart agricultural practices (0.854), lack of capital (0.869), lack of information (0.759), and unwillingness to change from the older practices (0.667). Factor 3 which is Economic and institutional constraints includes lack of understanding (0.529) and lack of national level planning (0.521). The logit regression results further indicate a negative effect of the CSAPs used on the foodways of the people. Based on this result, it was concluded that the tenacious adherence to the cultural belief system has made it difficult for the effects of climate change to be mitigated by the people. Continuous sensitization and advocacy by extension and agents and agencies should be intensified to bring the people to the frame of mind that is amenable to change.

Briser La Norme De L'apprentissage : Le Rôle Du Numérique Dans Les Pratiques Des Jeunes Dans La Vallée Du Toudgha

Le développement des plateformes numériques a profondément transformé les pratiques d'apprentissage, chez les jeunes et en particulier chez les jeunes ruraux dans des régions comme la vallée du Toudgha au Sud Est du Maroc. Cette étude explore comment ces nouvelles technologies ont redéfini les modes d'apprentissage des savoirs, remplaçant en partie les méthodes traditionnelles d'apprentissage par des processus plus autonomes et interactifs. Des entretiens menés avec de jeunes hommes et femmes âgés entre 18 et 40 ans de la vallée du Toudgha, révélant une transformation marquante dans leur manière d'apprendre. En naviguant sur des plateformes, ces jeunes ont non seulement appris des compétences théoriques, mais ont également acquis des langues et des savoir-faire pratiques. Ce fait, a été décrit par l'une des participantes comme « *lkraya d'souk* » (la scolarité du marché), il illustre la capacité des jeunes à s'approprier des outils numériques pour acquérir des compétences qu'ils ne maîtrisaient pas auparavant. L'analyse des données a permis d'établir une typologie d'apprentissage numérique en trois axes principaux : **Apprendre à lire, à écrire et à développer ses connaissances** ; où l'école ne peut plus être le seul moyen d'apprendre, les jeunes utilisent les ressources en ligne pour améliorer leurs compétences en lecture, écriture et compréhension des cours scolaires. **L'apprentissage des langues étrangères**; il est très fréquent dans l'usage numériques de ces jeunes. Néanmoins cet apprentissage est justifié par une variété de motivations. **L'apprentissage des savoir-faire** ; les tutoriels en ligne offrent aux jeunes la possibilité d'acquérir des compétences manuelles ou techniques, qu'ils mettent directement en pratique dans leur vie quotidienne. En conclusion, cette étude met en lumière le rôle crucial que jouent le numérique dans l'émergence de nouvelles pratiques d'apprentissage. Ces jeunes, tout en étant des récepteurs d'information, participent activement à leur propre processus d'apprentissage, redéfinissant ainsi les contours de l'éducation.

L'Usage Numérique Des Jeunes Femmes De Tinghir: Des Connexions à Internet Sur Mesure

Le numérique joue désormais un rôle crucial dans les interactions sociales, économiques et culturelles. Nous vivons dans une société interactive, où les jeunes et le web se croisent fortement. L'avènement du numérique a bouleversé les codes traditionnels de communication et d'interaction, il a fait émerger une nouvelle forme de communauté qui interagit en ligne autour des valeurs et d'intérêts communs. Cette communication s'appuie sur une étude empirique par entretien auprès de 16 jeunes femmes et 14 jeunes hommes âgés de 18 à 40 ans dans la vallée du Toudgha au Sud Est du Maroc. Il s'agit de comprendre le sens que donnent ces jeunes à leurs pratiques numériques et comment le numérique est à la fois un vecteur d'autonomie et un nouvel espace de reproduction des inégalités de genre. Dans ce sens, l'usage du numérique ouvre aux jeunes femmes de la vallée de Toudgha à Tinghir, une voie vers l'autonomie. Ainsi, grâce à leurs téléphones, elles cherchent à concilier leurs désirs avec les traditions communautaires tout en contournant la pression sociétale. Malgré cet accès modérément ouvert à internet, les pratiques numériques de ces jeunes femmes sont cadrées par des inégalités. Le smartphone dans ce cas représente un compagnon indispensable dans cette quête, un confident qui leur permet de s'échapper des normes traditionnelles et de franchir les frontières spatiales. Les réseaux sociaux deviennent alors l'espace de création d'identités alternatives ; grâce à l'anonymat des avatars, ces jeunes femmes peuvent agir librement, à l'abri des regards de leur entourage. Toutefois, cette liberté reste mesurée par une prudence d'exposition de soi, où l'honneur et la pudeur déterminent encore les comportements, reflétant des inégalités numériques entre les genres.

Self-Reflexivity: Cases in the Life of an Individual Sociologist

The importance of self-reflexivity in sociological analyses is self-evident. Biases can of course not be discovered if the analyst is unaware of them, but they can remain undiscovered even if the analyst is theoretically aware of the possibilities of biases. Which theories, concepts and methods can strengthen the ability of sociologists to be self-reflective and how have they changed over time?

Here the instances of a process of self-reflexivity in an individual sociologist's life, that is my own sociological endeavors, are analyzed. Concepts such as false consciousness and tools such as simple questionnaires in sociological teachings are discussed.

The Transformation of the Concept of Guest in the Process and the Different Meanings It Signifies: A Critical Discourse Analysis on Syrians in Turkey (2018-2024)

Since World War II, conceptualizing migration has become increasingly challenging, leading nation-states to create new terms for different migration forms. As an umbrella term "migrant" denotes "mobility," while newer concepts, such as "guest," have gained additional meanings specific to the context in which they arise. Initially used to describe migrant workers and their "temporariness," the concept of "guest" now refers to temporariness more broadly, independent of labor. This study examines how the meaning of "guest" has evolved concerning Syrians in Turkey, who are considered temporary residents, and the connotations it has acquired over time. This research builds on a 2020 master's thesis, which examined the dynamics behind referring to Syrians with "temporary protection status" who migrated to Turkey as "guests." It analyzed the semantic shifts that occurred as their guest status was prolonged. In this context, 248 news articles from three newspapers (Hürriyet, Sabah, and Cumhuriyet) published between 2014 and 2018 were analyzed using Teun van Dijk's critical discourse analysis. The study focused on the socio-political context in Turkey, finding that the term "guests," regarded as members of the non-citizen group, developed in conjunction with the discourse of power but also came to encompass different meanings with events that emerged in the public sphere. This study questions the relevance of the term "guest" in the ongoing Syrian migration narrative from 2018 onward, particularly considering other migration-related concepts emerging in Turkey and Europe. A discourse analysis of the news and political statements in the same newspapers will be conducted to examine how the term has evolved. Specifically, how has the term "guest" been used since 2019, when the plan for the voluntary return of Syrians to safe zones in Syria was announced? If it has not gotten a place, what migration concepts have replaced it?

L'Action Collective Dans Le Cadre Des Transitions Agroécologiques : Cas Des Coopératives Des Producteurs Agroécologiques Du Label Spg Au Maroc

La problématique de notre recherche de cette communication est fondée sur le constat relatif à la rareté des travaux sur l'action collective et les Organisations Professionnelles Agricoles (OPA) dans le domaine de la production agroécologique au Maroc. Elle s'inscrit dans le cadre général du débat scientifique actuel sur les transitions agroécologiques et souveraineté alimentaire d'une part, et de la stratégie nationale GG 2020/2030 notamment son deuxième pilier qui accorde un grand intérêt à l'agriculture résilience et éco-efficace, d'autre part. Le travail s'est focalisé sur l'étude des coopératives agroécologiques naissantes au Maroc. Les objectifs spécifiques consistent à identifier, décrire et analyser les différents profils des producteurs agroécologiques dotés du label SPG du Maroc, identifier et décrire les coopératives agroécologiques certifiées SPG du Maroc et finalement comprendre l'impact de l'action collective sur la promotion de la filière agroécologique. Le travail a été réalisé moyennant un premier questionnaire auprès de huit coopératives agroécologiques certifiées SPG réparties sur plusieurs zones du Maroc (Rabat/Salé, Oriental et Marrakech) et un autre destiné à 36 producteurs membres adhérents à ces coopératives. Une réflexion sociologique est menée sur les questions de la création de la confiance au sein des réseaux et les valeurs qui y sont produites.

Territorial Markets

La problématique de recherche a été fondée sur le constat de la non visibilité du marché des produits agroécologiques au Maroc. L'étude a été réalisée à Casablanca, Rabat Agadir et Marrakech avec les principaux objectifs suivants : Etudier la compréhension des consommateurs des concepts de l'agroécologie et de l'agriculture biologique ; Caractériser des produits agroécologiques et biologiques ; Analyser les facteurs déterminants dans l'achat des produits agroécologiques ou biologiques par les consommateurs ; Décrire la chaîne de distribution et de commercialisation des produits Et déterminer le consentement à payer des produits agroécologiques. L'étude a été réalisée auprès de 184 consommateurs : 81 à Casablanca, 63 à Rabat et 40 à Agadir et 60 consommateurs du bio certifié. Les principaux résultats de cette étude ont montré qu'il y a deux types des consommateurs ; ceux qui ont des connaissances élevées concernant l'agroécologie et les produits agroécologiques et qui les achètent régulièrement qui représentent environ 48% de l'ensemble des enquêtés et ceux qui sont à l'opposé. Les premiers se situent sur Casablanca et Rabat, appartenant à des catégories professionnelles de cadres, employés, fonctionnaires et ouvriers avec des revenus dépassant 20000 DH. Pour les seconds, ils sont situés plus à Agadir (moins de 22%) et appartiennent à la catégorie professionnelle des étudiants, retraités et sans activité professionnelle avec des revenus de foyer allant de 6000 jusqu'à 20000 DH. Les facteurs essentiels influents sur le comportement et le niveau des connaissances des consommateurs sont liés à l'âge, le niveau de revenu, la satisfaction de leur propre alimentation et l'origine de la ville. Pour le consentement à payer, 40% déclarent être disposés à payer jusqu'à 15% plus cher pour les produits agroécologiques par rapport aux conventionnels. Pour le bio certifié, les chaînes de commercialisation sont principalement les boutiques biologiques, le marché fermier et 43% effectuent leurs achats et le commerce en ligne et les livraisons directes.

Religious Discourses in the Digital Sphere: Shaping Youth Identity in Morocco through Social Media

Social media plays a central role in the dissemination of religious discourse, profoundly influencing the religious identity of Moroccan youth. This study explores the impact of these discourses, whether conveyed by figures with formal theological training or by self-taught individuals who, despite lacking formal education, manage to exert significant influence on these digital platforms. The aim of this research is to examine how these discourses shape the identity construction of young people. Social media provides a space for interaction and dialogue where these discourses are not only disseminated but also debated, shared, and reinterpreted by their audiences. This phenomenon helps us better understand how Moroccan youth appropriate these messages and how they contribute to redefining the forms of religious authority.

The analysis highlights the role of digital platforms as vectors of transformation for religious identities, emphasizing the emergence of new dynamics where religious influence extends beyond traditional frameworks. These discourses, by reaching a broad audience and sparking engagement, actively participate in the (re)construction of religious identities in a constantly evolving context, where practices and beliefs are continually readjusted in response to new modes of communication.

Thus, this study seeks to demonstrate that social media is not merely a venue for the dissemination of religious discourse, but rather a space where genuine interaction between these discourses and youth takes place, thereby promoting a redefinition of religious identity within a rapidly evolving Moroccan society.

Cinematizing Gender Construction: Visual Sociology and Narratives of Resistance in Moroccan Feminist Cinema

How can cinematic storytelling shape gender politics in societies with deep-rooted patriarchal norms? I propose Moroccan feminist cinema as a particularly powerful medium for challenging prescribed gender roles and offering alternative narratives of women's agency and resistance. I analyze

how gender is constructed and challenged through cinematic narratives. I examine how these visual stories engage with social and political agendas that define norms and marginalize deviation within Moroccan society. In a context where cultural and institutional strains shape public discourse, cinema emerges as a space for passing identities and questioning societal boundaries. Using a mixed-methods approach, including film analysis, intertextual discourse analysis, and critical readings of audience reception, I demonstrate how Moroccan feminist films like *Sofia* (2018) and *Adam* (2019) critique societal norms and highlight alternative visions of women's roles and rights.

Les Représentations Sociales De La Sexualité Chez Les Femmes Et Les Hommes Après L'Expérience Du Cancer.

Le cancer est une maladie chronique qui, selon Isabelle Baszanger (1986), se caractérise par sa durée et les défis de sa gestion tout au long de la maladie et de la guérison. En tant que maladie chronique, le cancer provoque une rupture et exige des stratégies d'adaptation à la nouvelle réalité corporelle, afin de gérer une identité déjà établie et d'en construire une nouvelle. Cette maladie peut altérer les représentations de soi et les relations avec le conjoint, perturbant ainsi diverses sphères de la vie sociale. La sexualité, en particulier, peut être profondément affectée, car elle est intimement liée à l'image de soi et à la dynamique du couple. Cette étude se concentre sur le cancer du sein et de l'utérus chez les femmes, ainsi que sur le cancer de la prostate chez les hommes, en raison de leur prévalence et de leur relation directe avec la sexualité. Elle explore les questions suivantes : Comment la vie sexuelle évolue-t-elle après un cancer de la prostate, du sein ou de l'utérus ? Comment reconstruire une sexualité après la mutilation d'un organe ? Quelles sont les représentations de la sexualité avant et post-cancer ?

Pour répondre à ces questions, des récits de vie sont collectés auprès de femmes de 18 ans et plus ayant eu un cancer du sein ou de l'utérus, et d'hommes de plus de 50 ans ayant eu un cancer de la prostate

Cultural and Religious Diversity Among Migrant Children in Educational Institutions

This communication seeks to analyze the challenges faced by migrant children in integrating into Moroccan public schools, with particular attention to their religious and cultural pluralism. The primary aim is to explore the relationship between school integration and the broader social assimilation of migrant families within Moroccan society. From a socio-educational perspective, this analysis is grounded in the hypothesis that religious belief plays a key role in facilitating the integration of migrant children. Specifically, it posits that children of Muslim heritage are more easily integrated into the school system compared to those of Christian backgrounds. Furthermore, this religious assimilation is seen as a contributing factor to the social integration of migrant families.

However, it is acknowledged that the cultural framework of Moroccan schools differs from that of the immigrant minority, necessitating a shift in the value system underpinning educational policies. This shift would enable the transmission of values that foster inclusivity within the Moroccan educational system. Achieving the integration of all students—both those from the dominant culture and those from minority groups—requires the promotion of cooperative values. This approach is essential for the development of a multicultural educational environment capable of managing cultural diversity effectively.

The Impact of International Migration on the Economic and Social Mode of Families in Rural Areas. a Sociological Study of the Migration Case from Morocco Towards Germany

This study aims to try to reveal the total structural effects of migration towards Germany on the Ait Saden tribe in the Sefrou region as a field of expulsion, as this phenomenon has characterized the field of study since the sixties of the last century in its different forms and paths, we will try through this study to provide a sociological understanding of the transformation brought about by international migration to the field of study by trying to understand and analyze the various structural repercussions on the variables that we considered key in this study, which were manifested in financial transfers. And the extent of its contribution to strengthening social ties and revealing a set of transformations at the level of roles, relations and social status, as it was not limited to what is social, but exceeded it to many transformations at the level of the cultural scene and economic construction, especially the part related to the pattern of agricultural production and the various effects that it caused as a result of the migration of individuals to Germany as a field of attraction.

The approach adopted in this study:

This study will adopt qualitative research techniques represented by the focus group, as we aim by adopting it in this research to collect primary data about the repercussions of migration on the structures of the tribe that is the subject of the study, given the incompleteness of the final picture about it. It may also help us to build an interview guide by preparing a guide that includes all the axes that we aim to cover, and it also allows us the possibility of deviating from the content of the guide whenever we feel the methodological necessity for that.

Promises and Challenges of Methodological Triangulation: The Case of European Values' Survey

Methodological triangulation is particularly desirable when culture or social change are a key variable in the study, as well as for case study research. It is broadly defined as the combination of methodologies. It can be used to increase confidence, validity, credibility and interpretability of the results. The justification of its use reside mainly in the idea that the flaws of one method are often the strengths of another. It could take the form of "within-method" triangulation, or "between-method" triangulation.

In this paper, I would be interested in the latter as it relates to the combination of quantitative and qualitative methodologies. I believe they are **complementary** rather than rival camps.

I would also approach the effect of the 'epistemological chasm' between quantitative and qualitative research on triangulation, as its manifested within differing research traditions, such as positivism, on the one hand, and interactionism, constructivism, hermeneutics, and rational choice theory, on the other.

I would focus my analysis on the book "Les Européens et leurs valeurs _ Entre individualism et individualization", published in 2023 (first edition). As it is a research that has used only a questionnaire all over the European countries, I would argue on what the use of some qualitative methods could have brought to it, in terms of cultural particularities, in-depth exploration, completeness of study, and context understanding. I would extract specific themes from the study, comment on the quantitative data related to them, show to what extent we could enhance our understanding by applying qualitative methodology to the same subject of study, and provide information for further studies.

Elements for a Strategic Diagnostic Analysis of the Field of Action Surrounding the Formalization of Ride-Hailing Organizations in Morocco

The strategic diagnostic analysis invariably starts from a problematic situation. It is in relation to this problem that the analyst will seek to understand the positions of the actors and their dynamics. More specifically, the approach consists of listing all the relationships between the main individuals and groups involved in the situation. Then, the analyst will strive to identify the main areas of uncertainty within the organization (control of supplies, relationships with supervisory authorities, etc.). After this, they will focus on identifying the key actors in the situation (both individual and collective), attempting to discern for each of them the goals (whether explicit or not) they are pursuing, the resources (of any kind) they mobilize to achieve these goals, and the strategies they employ considering the areas of uncertainty. Based on this, they will be able to map out the potential alliances or oppositions between the actors in relation to the problem, the resources they lack to address it, the constraints that need to be removed to create a new relational dynamic, and so on.

This type of approach, generally based on in-depth interviews with the actors, is the one we applied to a problematic situation—the growing tension in Morocco between traditional taxi drivers and drivers working for digital ride-hailing platforms, known as VTCs (ride-hailing vehicles), which are becoming increasingly popular with users. The taxi drivers strongly oppose this competition, arguing that it threatens their profession. However, for the VTC drivers, these actions are seen as entirely legitimate. To outline the dynamics of action around this situation, we developed one (or more) interpretations of the situation and discussed them with the actors to explore potential avenues for positive change.

Social Media and Youth Activism in Morocco: From Slacktivism to Political Action

The emergence of new media has led to the development of new social needs and forms of interaction. These new forms of interaction create an environment for youth to express their ideas and opinions. The rise of social media as a tool for organizing and mobilizing has fostered both slacktivism—where young people engage in low-effort online activism—and a more profound political consciousness. This digital engagement has facilitated the organization of protests and the sharing of political content. This study examines how social media, as a platform for self-expression, plays a role in shaping Moroccan youth activism, influencing cultural and political engagement. While slacktivism can raise awareness and foster collaboration, it frequently fails to replicate the transformative power of direct political action. Through a mixed methods approach that includes case studies, content analysis, and interviews with Moroccan youth activists, this study aims to understand the motivations behind engaging in political issues through social media and the challenges young people face in transitioning from slacktivism to political action. This paper highlights how youth activism on social media translates into real-world political participation, providing insights into the significance of meaningful political engagement in reinforcing community bonds.

ANA MA'AK - لك مع ان (Estoy Contigo). Actuación Que Promueve El Posicionamiento Activo y La Creación De Redes De Apoyo a Las Supervivientes De Violencia De Género a Través De Prácticas Orientadas a La Red En Espacios Comunitarios Musulmanes En Cataluña

La violencia de género sigue representando un reto significativo en la sociedad contemporánea, con las supervivientes, especialmente las de origen inmigrante, mostrando una menor disposición para buscar ayuda en servicios formales. Este fenómeno subraya la importancia de las redes de apoyo

informales, conformadas por amigos, familiares, compañeros y miembros de la comunidad, que facilitan la recuperación y superación de la violencia de género. Sin embargo, estas redes pueden no estar disponibles debido a tácticas de aislamiento por parte de los agresores o la falta de conocimientos adecuados para ofrecer apoyo. En el contexto español, se observa una carencia de intervenciones dirigidas a movilizar testimonios dentro de las comunidades, especialmente en minorías étnicas.

Para abordar este vacío, esta investigación desarrolló, implementó y evaluó el impacto de la actuación piloto comunitaria ANA MA'AK ("Estoy Contigo" en español). Esta iniciativa tiene como objetivo promover el posicionamiento activo y la creación de redes de apoyo para las supervivientes de violencia de género a través de prácticas orientadas a la red en espacios comunitarios musulmanes en Cataluña. Empleando la Metodología Comunicativa (MC), el estudio adoptó un enfoque cualitativo multifásico secuencial, basado en dos estrategias principales: una exhaustiva revisión de la literatura científica y otras fuentes oficiales de información, y una investigación de campo cualitativa que incluyó historias comunicativas de vida cotidiana, entrevistas semiestructuradas y grupos de discusión comunicativos.

Los resultados de este estudio confirman la necesidad de reforzar las redes de soporte para las supervivientes y sus partidarios informales. La intervención "ANA MA'AK" mostró mejoras estadísticamente significativas en el conocimiento y las actitudes de los partidarios informales a corto plazo. Además, el estudio reveló que la intervención aumentó la capacidad y motivación de los partidarios informales para responder a las supervivientes, incrementando la probabilidad de que actúen en su apoyo.

Investigating the Impact of Socio-Educational Interventions on "New Pupils" Construction of School Experience a Comparative Analysis of Pupil Sociology and Classroom Ethnography

The sociology of school experience reflects an epistemological paradigm that not only allows for an in-depth exploration of the daily construction of school sense for pupils but also makes it possible to manifest the various articulations of the school industry of educational and social inequalities based on the nature of the relationship between spatial effects and school effects. Accordingly, this paper attempts to measure the impact of socio-educational interventions in schools in reducing the educational inequalities created by the school and ensuring the integration of new pupils into the school culture. Anti-school behaviors, such as violence, cheating, and bullying, often represent reactions by new pupils to the increase of social inequalities under the guise of school pedagogical authority. This suggests a shift from social inequalities in school to inequalities in educational success and professional integration. We propose a three-pronged approach to analyzing these issues: 1) examining the interplay between the sociology of pupils and classroom ethnography; 2) investigating the influence of socio-educational interventions on shaping the sense of school experience; and 3) exploring the shift from social inequalities to educational inequalities focusing on professional practices, classroom experiences, and the school industry's role in enhancing inequalities.

When the "Post-War" Is Nowhere in Sight: Critically Mapping Slow Violence and Dissent in the Exhausted Geographies of Janoob Al Hizam

The ongoing war which erupted on April 15, 2023 in the Sudanese capital of Khartoum, and elsewhere in the country, has (re)surfaced old and new militarized urbanisms embedded within the fabric of the city for decades. With a particular focus on Janoob Al Hizam, a contested peri-urban territory located south of Khartoum, and an urbanized agropastoral settlement within this geography, the contribution reads this current crisis as part of a multi-scalar continuum of slow violence met with slow dissent enacted in these areas over the last five decades. By mobilizing the lenses of slow violence and dissent (Nixon 2011, Pain & Cahill 2022), which centers their geographically and temporally situated natures, it aims to foreground the interplay between the two. To do so, the contribution will specifically focus on critically mapping the ways in which the structural dispossession of communal lands has led to the uneven distribution of services (such as electricity, water, healthcare) in this geography, while simultaneously leading to the emergence of creatively networked community-based mobilization to access and govern them at both a settlement and territorial level.

Épanouissement Des Jeunes : Les Nouveaux Rôles De La Famille

Les comportements des jeunes ont beaucoup changé. Ils se sont libérés, pour la plupart, de contraintes liées à la culture, à la religion, à la société et d'autres. L'impact de la famille prend des voies différentes pour garder toute sa force. L'accent est beaucoup plus porté sur l'épanouissement. L'ouverture des jeunes sur le monde leur a, en effet, permis de voir et d'expérimenter des façons de faire complètement nouvelles. Les croyances et valeurs cultivées au sein du foyer familial et à l'intérieur d'un réseau social constitué des amis du quartier et ceux de l'école sont devenus limités. Les jeunes tirent dorénavant leurs références de nouveaux modèles culturels et éducationnels.

L'influence de la famille a, en effet, été fortement impactée par Internet. Une nouvelle interactivité s'est installée entre le jeune et les membres de sa famille et provoque souvent des malentendus comportementaux. Le risque de collision est grand entre une culture cloisonnée portée par les parents et une autre hautement ouverte portée par les jeunes. Les différences de perception sont importantes. Ce qui est « normal » pour l'un ne l'est pas nécessairement pour l'autre.

Nous proposons, dans le cadre de notre communication, d'étudier les besoins des jeunes de 13-17 ans en ce qui concerne l'accompagnement de leurs familles. Notre objectif est de mettre en exergue les aspects critiques d'intervention des parents pour mieux orienter l'épanouissement de leurs enfants. Nous mettrons un focus sur l'attachement de ces jeunes à l'école et l'intérêt qu'ils lui portent.

Pour réaliser cela, nous avons choisi d'effectuer notre recherche au sein des centres d'épanouissement de l'association JOY. Nous prévoyons de travailler avec un groupe de trente (30) jeunes chacun choisi selon des critères spécifiques qui permettront de donner les meilleures conclusions.

EL KAHLAOU, SORAYA* (Ghent University, Morocco)

Becoming Visible. a Camera to Fight Erasure.

My first meeting with the Douar Ouled Dlim inhabitants occurred on 26 March 2014. They were gathered on the highway linking Casablanca to Rabat. While holding a banner, the women at the front of the stage chanted various slogans related to their revendication for rehousing. Suddenly, one of the women noticed my camera. She said: "Can you film us?" - Yes, of course".

This is how my investigation began. The camera accompanied my meetings with the inhabitants of the *Douar Ouled Dlim*, who were fighting for their right to re-housing. This new ethnographic tool, implemented at the population's request, shapes a new approach. It opened up various research perspectives on how inhabitants are staged. It also analysed the role of the researcher, who becomes a producer of images and, simultaneously, a key player in strategies for publicising social struggle.

This article investigates the boundaries between a researcher who is also a participant of a struggle. This position, if it is specific in that it raises numerous questions at the methodological level, simultaneously opens up novel perspectives on conducting an ethnography. It also opens up new perspectives on how a researcher can reflexively analyse how his or her methodology conditions data collection. Thus, the status of the researcher who becomes an actor in the investigation must be considered as a stakeholder in the analysis of the social situation in progress.

EL MADANI, NAIMA* (Cadi Ayyad University, Morocco)

Moroccan Food Habits and Climate Change

Several sociological studies have proven the slowness of the transformation linked to food habits, particularly for traditional societies, so that, for example, in Morocco, we find current food habits mentioned in research dating back several centuries (the unknown Morocco of MOLERAS), but the characteristic of stability of Moroccan food habits applies almost only at the level of food habit Structure: while these habits undergo a radical change at the level of quality and quantity, as being a fundamental condition to achieve food security.

Climate change is perhaps considered the main factor behind the change in dietary habits, also given that dietary behavior is considered a cause of climate change as it contributes up to 20% of global warming, in the more food production is negatively affected by the environmental determinant, as

is the case with climate change, which is linked to production conditions at the level of soil and water quality and food production chains.

Through sociological field research that I carried out in the city of Marrakech on the relationship between eating behaviors and climate change, we identified that social representations of climate change linked to food require the simplification of the notion of climate change, which is usually confused with changing weather conditions. We also found that the stage that contributes the most to climate change is the stage of the food supply where food and energy are wasted.

Through our intervention, we intend to present more results related to field research in which more than 1,500 questionnaires were distributed relating to dietary habits in relation to climate change in Morocco.

Vers Une Analyse Des Trajectoires Organisationnelles Et Territoriales Des Méta-Organisations Territorialisées : Regards Croisés Entre La Géographie Et Les Sciences De Gestion

L'objectif de cette communication est d'apporter un éclairage théorique sur les relations encore peu étudiées entre méta-organisation et territoire en croisant une revue de littérature à la fois en sciences de gestion et en géographie.

Certains travaux proposent d'approcher les phénomènes territoriaux par le prisme des méta-organisations. Ces choix se justifient souvent par le caractère multi-parties prenantes de l'organisation mais aussi par sa localisation sur un territoire donné. Pour autant, il semble intéressant de dépasser la simple localisation spatiale d'une méta-organisation en étudiant plutôt son inscription au sein de la dynamique du territoire dans lequel elle se situe.

Étendre la réflexion de cette façon revient dans un premier temps à adopter une considération géographique et sociale du territoire à travers l'analyse de son identité, de son histoire, de ses flux et d'autres ressources qui lui sont propres. En partant de ce point de vue, le territoire n'est pas seulement une échelle ou un ensemble de limites géographiques administratives au sein duquel sont contenues des interactions sociales. L'analyse des interactions entre les membres d'une méta-organisation territorialisée permet de dépasser cette approche et de considérer le territoire comme un construit social, un processus ancré géographiquement qui se dessine au fil des interactions entre les individus et les organisations qui le composent.

Ce papier souhaite donc analyser les interrelations entre territoire et méta-organisation. Deux lieux construits socialement au sein desquels s'expriment différents acteurs, générant une dynamique canalisée à travers leur identité, leur histoire et leurs caractéristiques propres. A partir du cas des méta-organisations territorialisées, nous proposons de nous interroger sur la nature des mécanismes canalisateurs d'une trajectoire organisationnelle et territoriale. En plaçant les méta-organisations au centre de la réflexion, nous souhaitons fournir aux gestionnaires des éléments d'analyse territoriale mais aussi apporter aux géographes des clés pour étudier le territoire de façon plus organisationnelle.

'get Me Another Nurse!': Nurses' Ideas on Discrimination, Policy and Self-Sufficiency

This qualitative research aims to explore the legal consciousness of nurses from diverse backgrounds concerning potential discriminatory requests by patients seeking treatment from healthcare providers based on their race, ethnicity, gender, or religion. The study employs in-depth interviews to investigate nurses' attitudes when faced with such requests, examining whether distinctions are made between different types of requests, the patient's motivations, and other relevant factors. The role of the positionality of the nurses is also examined, as it is expected this might influence the way nurses identify and categorize these requests.

Further, this study delves into nurses' perspectives on existing policies, or the absence thereof, addressing patient requests for a different healthcare provider on the grounds of race, ethnicity, gender, or religion. Through this, we aim to gain insights into how healthcare providers navigate and interpret institutional guidelines and protocols related to such patient demands.

Lastly, the research seeks to uncover healthcare providers' perspectives on the non-applicability of Belgian non-discrimination laws to patient requests for a different healthcare provider. In some countries such as Belgium, the Netherlands and the United States non-discrimination law is not applicable in these situations, leaving healthcare providers legally unprotected when confronted with potentially discriminatory requests for a different healthcare provider. By exploring nurses' knowledge of and viewpoints on legal frameworks, this research contributes to the understanding on how legal consciousness shapes healthcare professionals' attitudes and responses to discrimination-related challenges within the healthcare setting. The findings aim to inform policy discussions and contribute to the development of more effective and equitable healthcare practices.

How Publics Perceive Smart Cities: Identifying Social Determinants of Citizen's Attitudes

The limited citizen engagement in the development of the 'smart city' is often ascribed to a lack of interest of citizens, whose attitudes and perceptions are assumed to relate negatively to the highly technological and complex digital developments within a smart city. However, there is little empirical evidence to support this argument. Hence, this presentation attempts to develop comprehensive scientific knowledge about citizens' attitudes and perceptions on the 'smart city', understood as an "incorporation of digital technologies in urban life to render efficient city operations and enhance citizens' quality of life".

Using Flemish survey data (n=3270), we researched how citizen's attitudes towards smart cities are socially determined by focusing on socio-demographic, cognitive, and affective factors. Attitudes tend to be more positive for older, higher educated and male respondents. The effects of gender and education become negligible once other cognitive and affective variables are considered. Among different cognitive categories; awareness, digital literacy and (prior) technology adoption, only the latter significantly affects attitudes. This indicates that it is not formal knowledge about smart cities that shapes attitudes, but rather that attitudes are constructed through experience and acquaintance with different technologies provided by smart cities. Moreover, the strongest associations can be found on the affective level. Whereas perceived risks concerning social replacement are not significant, perceived risks concerning misuse emerge as significant determinants. Particularly we notice that perceived benefits strongly outweigh perceived risks in citizen's assessments of smart cities. Overall these results indicate that attitudes towards the real-world implementation of 'smart cities' are shaped more by affective responses rather than through cognitive evaluation. As such the results open for a debate concerning the multiple natures of sense-making-processes about technoscience.

EL-KAZAZ, SARAH* (SOAS, University of London, United Kingdom)

Politics in the Crevices: Urban Transformation and (Un)Making Markets in Cairo and Istanbul

The demise of the welfare state did not sound the death knell for redistribution. Nor has neoliberal 'Big Capital' bulldozed the city into unadulterated landscapes of accumulation. Traveling to the minute, hidden, invisible, intimate and subterranean crevices of the city, we explore a quiet, subtle yet intense battle for housing in a neoliberalizing Istanbul and Cairo. Based on material from El-Kazaz's book *Politics in the Crevices*, which deployed a multi-sited ethnography of six central neighborhoods undergoing rapid transformation in the two cities, the lecture will expose an array of protagonists mobilizing the subtle practices of urban planning and design to secure affordable housing on the one hand and corner luxury real estate on the other. Careful urban design was expected to engineer what is coined in the book as "particularistic value" that would render property more lucrative for some dwellers over others in ways that manipulate the workings of "freely traded" real estate markets. Recuperating a thriving if quiet struggle over redistribution, the lecture will explore how that struggle had shifted away from familiar extra-market political arenas to machinations that operate from within "the market" as a practice and logic. Ultimately, the enactment of redistributive politics through the subtle practices of urban design and planning displaces weighty political struggles onto contests over intimate and private city crevices that are difficult to recuperate as a polity; breeding a festering, suspicious and fracturing polity. The lecture concludes by drawing linkages between the machinations of neoliberal politics and a polarizing othering populist politics that has since domineered political life in both Egypt and Turkey.

ELBE, MARTIN* (Zentrum für Militärgeschichte und Sozialwissenschaften der Bundeswehr, Germany)

Inequalities in Well-Being – a Comparison of Empirical Research in the German Armed Forces in 2013, 2016 and 2020

Well-being in working environments may be understood as a state of satisfaction with the overall situation and is strongly related to productivity and health. Especially military service members deal with challenging working conditions every day, such as changing environments and deployments, health risks, frequent moves, and long periods of absence from home. Therefore they can be considered as a vulnerable part of society. In this paper the impact on soldiers' well-being in the German Armed Forces is measured by the concepts 'health', 'work-life balance', 'justice', and 'learning', which may influence well-being. These predictors consist of four items each.

The aim of this paper is to examine to what extent well-being in the German Armed Forces is influenced by these four concepts. By analysing data from a research project on the attractiveness of the German Armed Forces to military personnel in 2013, 2016 and 2020 (with more than 2000 respondents each), it is possible to compare cohorts as well as evaluate effects of interventions (to improve the employer's attractiveness) on the soldiers' well-being. Therefore, we interpret the data based on several socio-demographic characteristics, such as gender, age, rank, status, and branch. The explanatory model appears stable over all three points in time. Learning had the strongest impact on the soldiers' well-being, followed by justice and health. Work-life balance had the lowest impact. All four predictors were highly significant. This shows that to increase (the soldiers') well-being, a special focus has to be put on improving the potentials of learning and developing oneself.

RC01-25.1

ELBE, MARTIN* (Zentrum für Militärgeschichte und Sozialwissenschaften der Bundeswehr, Germany)

Some Empirical Results on Retention in the German Armed Forces

The Bundeswehr as the national German armed forces was founded in 1955, initially with volunteers. From 1957 to 2011, conscripts were drafted, creating a broad recruiting base for the armed forces. In 2011 conscription was suspended but now there is an intense discussion whether to reintroduce general conscription. A first step was taken in 2024 when the MoD decided to contact all young men and women at the age of 18 and inform them about the Bundeswehr. The young men have to answer a recruitment questionnaire, for the young women this is voluntary. It is expected that in many cases, conscripted soldiers enlisted as temporary soldiers after the end of the conscription period.

In the history of the Bundeswehr, there have always been problems in recruitment and retention of personnel for temporary and professional soldiers. In the last 10 years there was a decline of the numbers of soldiers serving in the Bundeswehr and as an ongoing decreasing personnel coverage rate is to be expected in the area of personnel recruitment due to demographic developments and the changing demands of the applicant potential, personnel retention is becoming increasingly important.

As the problems in the area of retention within the Bundeswehr had been recognized, the ZMSBw has been involved in recent years with studies on external recruitment, the personnel base in society (youth study) and external employer attractiveness as well as internal employer attractiveness. Specifically, in the area of employee retention, there are findings (with regard to the development over several years) that deal with the internal attractiveness of the Bundeswehr as an employer, the effect of the attractiveness agenda on this, and alternative career options for soldiers, when they leave the military. The paper will deal in particular with the empirical results on successful or unsuccessful staff retention in Germany.

JARQUE MUR, CARLA* (University of Barcelona, Spain)

Isolating Gender Violence: A Requirement for Overcoming Gender Violence

Feminists, along with men and women who have supported victims of gender violence, frequently face attacks and slander. These actions, orchestrated by harassers and their supporters, are aimed at isolating the victims and their allies, leaving them defenseless. This isolation prevents

victims from speaking out due to fears of retaliation, re-victimization, and social pressure, thus perpetuating a cycle of silence. Isolating gender violence refers to the deliberate efforts to socially, emotionally, or professionally isolate victims of gender violence and those who stand by them. By isolating the victims, their support systems are weakened, making it harder for them to seek justice or share their experiences. The goal of Isolating Gender Violence (IGV) is to render victims powerless and maintain silence about their experiences, thereby allowing gender violence to continue unchecked.

Sociological research by feminist scholars has demonstrated that only by protecting those who defend victims can we effectively address and reduce gender violence. The concept of IGV has been extensively theorized, providing insights into its causes and consequences. Recognizing the impact of IGV, the Catalan Parliament became the first legislative body in Europe, and globally, to incorporate this form of violence into its legislation. This historic move strengthens the legal framework for supporting victims and those who stand with them in solidarity. This communication highlights the importance of systemic protections, only by ending the isolation of victims and their allies to effectively combat gender violence and ensure that victims feel empowered to come forward and seek justice.

Climate Change and Technical Efficiency of Women Maize Producers in Northern Cameroon

The effects of climate change are increasingly visible and are affecting agricultural yields, leading to a decline in the income of agricultural households and subsequently increasing food insecurity. It is therefore necessary to optimize the production of small farmers, which requires an improvement in their efficiency levels while considering the impact of climate disturbances. This study aims to analyze the technical efficiency of maize producers in the Ngong sub-division, Benoue Division, North Cameroon region, in relation to the variability of climatic parameters observed. The goal is to estimate the efficiency levels of producers and evaluate the influence of climatic parameters on these efficiency levels. To achieve this, a semi-structured questionnaire was administered to 100 women maize producers. Efficiency scores were estimated using the Data Envelopment Analysis (DEA) method with DEAP version 2.1 software. The Tobit model is utilized to identify sources of inefficiencies. Under the assumption of constant returns to scale (CRS), technical efficiency levels in the study area range from 7% to 100%, with an average value of 32.1%. The average levels of technical efficiency scores imply that there are better combinations of inputs for the inefficient these women producers that will allow them to be on the frontier. The analysis of the sources of inefficiency suggests that the experience of the farm manager, access to agricultural finance, and access to technical support in terms of farmer and farm characteristics have significant influences on efficiency levels. Regarding climate parameters, rainfall and temperature have a negative and significant influence on efficiency levels. The adaptation measures that women most commonly use and that have a positive influence on efficiency levels include adjusting the cultural calendar, using resistant varieties, and developing irrigation systems. Irrigation is the adaptation measure that has a significant positive influence on the efficiency levels of women maize producers.

Sociocultural and Psychological Adjustment in the Returned Migrant Population

The return to the place of origin represents an additional stage in the migration cycle, but it has not received as much attention as other migratory processes. Studies indicate that during the return process, some individuals encounter economic and sociocultural challenges that may lead to mental health issues and require psychological readjustment (Kuschminder and Richard, 2017).

The objectives of this study are to provide information on the return process and the psychological adjustment of the Spanish returnee population, and to determine whether experiences during migration and upon return impact perceived stress and mental health, with an analysis of potential gender differences.

The sample consists of 375 returned Spanish migrants (75% women and 25% men; M age =32.1; SD=6.9). An online questionnaire was designed, including sociodemographic variables, questions about the migration process (e.g., perceived discrimination, goal achievement), and return-related factors (e.g., employment status, social identification). Perceived stress (PSS-14) and mental health (GHQ-28) were also measured.

The results show that during migration, participants achieved favorable employment outcomes and sociocultural adjustment in the host society. Upon return, they found employment, are meeting their expectations, feel socially integrated, and report good mental health. However, some individuals are encountering difficulties in the return process, which contributes to increased stress and mental health problems. Gender differences were found: women face greater challenges in socio-occupational adjustment and report higher levels of stress and mental health issues.

Although the majority experience good sociocultural and psychological adaptation upon return, there are individuals facing difficulties during this stage. This study confirms the importance of past migration experiences and the conditions upon return in understanding the psychological well-being of returnees. It also highlights the greater difficulties faced by women and the impact this has on their mental health, emphasizing the need to contextualize migration and return as potentially stressful life events.

ELGUEDRI DUMBROVSKA, RAOUDHA* (Doha Institute For Graduate Studies , Tunisia)

Digital Feminism in the MENA Region: Arab Youth Confronting Patriarchal Discourses on Social Media

My focus is on Arab youth, particularly young women active on social media platforms like Instagram and TikTok. These individuals engage in discussions about feminism, resisting dominant Arab and Islamic discourses that often marginalize, demonize, or restrict feminism to Western or privileged contexts. They challenge efforts to erase the shared nature of women's issues across cultural, political, and religious boundaries.

Their content centers on two main elements: 1) raising awareness on women's issues and 2) countering anti-feminist ideologies, especially on social media. Their approach to argumentation is distinct from the traditional activist tone of feminist movements or academic discourse, employing real-life examples, humor, sarcasm, and exposing contradictions in opponents' arguments. They also address taboo topics related to women's lives.

These platforms have gained wide followings across the Arab world, sustaining the relevance of feminist thought within development agendas, even in crisis-ridden societies. They raise critical issues such as male power, harassment, exploitation, double standards, and body issues, while mocking patriarchal men and women, and critiquing religious institutions and fatwas hostile to women's rights.

In addition to this, they resist the regressive rhetoric of both men and women, including movements like the "tradwife" trend and violent anti-women men's groups. In my intervention, I focus on Nidal (Egypt/Saudi Arabia), Khatira (Jordan), and Raseef 22, analyzing their most popular content to show how social media youth are expanding the feminist discourse and refuting claims that link feminism to Westernization, cultural disassociation, or incompatibility with Islam.

Towards an Alternative Political Culture: Exploring the Impact of Facebook Use on Youth Political Participation in Morocco

A critical engagement with youth subculture theory in Western contexts suggests that digital political participation as a subculture in opposition to mainstream culture goes beyond what is commonly understood as forms of defiance, resistance, lifestyle difference and digital identity construction. It involves an exploration of the meanings associated with young people's digital experiences. As the relationship between youth subcultures and their alternative political cultures is under-researched, this study advocates a novel investigation into the reasons behind the remarkable transition to digital activism among Moroccan youth. The aim is to understand the nature of youth's digital experiences and their intentions towards them. Given the specificities of the Moroccan youth context, it could be argued that understanding the dynamics of youth subcultures is crucial to understanding alternative cultures in politics and changing patterns of political participation

in the digital age. In this sense, the following critical questions arise: 1. How do young people's political subcultures shape their views and understanding of politics? 2. In other words, to what extent do young people's practices of political participation through the use of digital media explain their inclination towards an alternative political culture? 3. What are the reasons for the phenomenal tendency of 'Moroccan youth to use digital content for a counter-political discourse to have a political impact? In order to gain a deeper understanding of the phenomenon under study, this study uses semi-structured interviews to qualitatively explore the attitudes of 30 Moroccan university students towards their experiences with the impact of Facebook content on their political activism. The findings of this study have the potential to inform further research on how digital counter-discourse shapes mainstream political discourse.

ELIAS, AMANUEL* (Deakin University, Australia)

Entrenched Racism, Racial Habitus and Diasporic Life of Africans in Australia

African migrants are among the most racialized groups in Australia, often facing microaggressions, stereotypes, and institutional racism. The persistent stereotyping and racialization of African migrants can be observed in discourses of migration, integration, racism, juvenile crime, welfare dependence, and cultural adaptation, depicting the African communities as a burden. The latest Scanlon surveys indicate that almost 46% African migrants experienced racial discrimination. Such experiences are particularly salient in schools with significant number of African students reporting frequent racism and racial bullying (45% experiencing it and 68% witnessing it). Drawing on Bourdieu's habitus, this paper examines how race and racialized interactions shape the everyday lives of African migrant students as they navigate diasporic life, adapt to new environments and negotiate their complex identities. The paper deploys the concept of racial habitus to demonstrate how African Australian students, as racialized subjects, are forced to constantly negotiate their place within schools that reflect the broader white-majority societal norms. I highlight the dual pressure of assimilation and exclusion that these students experience, particularly in a superdiverse, yet unequal, educational environment. This diasporic pressure is intricately tied to the construction of a racial habitus—internalized patterns of thought, attitudes and behaviour that reflect the positioning of African diasporic communities within a racial hierarchy. By examining these dynamics, the paper sheds light on the unique diasporic experiences of African students and their nuanced coping mechanisms. I argue that the racial habitus that African migrants acquire in the form of adaptive dispositions, cultural resources and critical engagement are crucial in counteracting the negative effects of intersecting inequities and experiences of racism. The paper concludes with key theoretical insights on diasporic racial habitus and implications for concrete anti-racist policies and practices in schools that recognize and support the needs of African students.

KADIRI, ZAKARIA* (Faculté des Lettres et Sciences Humaines Ain Choc - Université Hassan II, Morocco)

Les Marchés Territoriaux : Coupole De Résistance De l'Agroécologie Cas d'El Haouz Et De Marrakech

Au Maroc, l'agroécologie correspond à un système de production en marge des politiques publiques. Celles-ci n'appuient les « modèles alternatifs » que lorsqu'ils sont labélisés en « Bio ». Par conséquent, le développement de l'agroécologie au Maroc est le fruit d'initiatives individuelles et collectives que nous pouvons qualifier de mouvement social. En se basant sur une étude empirique dans la région du Haouz de Marrakech au Maroc, nous avons enquêté une quarantaine d'acteurs différents (agriculteurs et agricultrices, membres des associations et agents de l'administration).

Nos résultats montrent que l'engagement dans l'agroécologie dépasse le seul produit labélisé et s'inscrit dans un mode de vie conciliant production, rapport à la nature et au vivant. Au niveau deux marchés territoriaux à El Haouz et à Marrakech appelés respectivement souk hebdomadaire déjà existant et marché paysan émergent, différents profils de producteurs s'y retrouvent. En plus de leurs rôles commerciaux, ces marchés sont des lieux de rencontres, d'échanges d'expériences, de renforcement de liens sociaux et d'apparition de nouvelles formes de solidarité, entre agriculteurs d'une part, et entre agriculteurs et consommateurs d'autre part. Le marché paysan, aussi fragilisé soit-il par les aléas climatiques et l'effort de fidélisation d'une clientèle engagée, devient un espace de résistance d'un modèle dominant par l'agriculture conventionnelle et par le produit labélisé.

KRUMINA, MAIJA (Institute of Philosophy and Sociology at the Faculty of Humanities, University of Latvia, Latvia)

Return Migration of Exiles and Their Descendants: The Case of Latvia

At the end of the World War II and subsequent Soviet occupation, approximately 200,000 Latvians were forced into exile. After Latvia regained independence in 1991, most of them continued to live abroad; however, a small number chose to return. These returnees not only include individuals who fled as refugees in 1944–1945 but also their descendants.

This report aims to explore the complex sentiments and experiences of the Latvian exiles who made the decision to return to Latvia. By examining their motivations, challenges, and subsequent adjustment to Latvian society, the report seeks to uncover insights into the repatriation process and its emotional, cultural, and social dimensions.

The analysis will focus on two primary generational groups: the first generation of exiles for whom returning may represent a nostalgic "homecoming"; the second and third generations of exiles, whose concept of Latvia was shaped by familial narratives and cultural heritage rather than lived experience and for whom returning may involve reconnecting with an "imagined homeland."

The research will draw on biographical interviews gathered at the Latvian National Oral History Archive. These interviews will provide valuable qualitative data on the emotional and social adjustments faced by returnees, including challenges related to belonging, identity, and societal reintegration. In addition, the research will incorporate quantitative data from longitudinal study of Latvian emigrants (n=6242) and returnees (n=1400) conducted in 2019 and offering a broader perspective on return migration trends and factors influencing the decision to return or stay abroad.

By integrating qualitative and quantitative data, the report will present a comprehensive analysis of the Latvian exile community's return experience, contributing to broader discussions on post-exile identity, repatriation, and diaspora dynamics.

This research is supported by the LSC project "Navigating Post-Exile" (No. lzp-2024/1-0114) and SRP project "Vectors of societal cohesion" (No. VPP-KM-SPASA-2023/1-0002).

The Variety of "Moral Paradigms" of Intergenerational Relations in the Pandemic: An Analysis of Ethical Policy Advice Statements in Germany, Sweden, and the United Kingdom

The COVID 19-pandemic proved to be a stress test for moral relations between generations. In many countries, appeals to intergenerational solidarity played a prominent role in public and policy discourses on the pandemic. They constituted a central normative reference point in debates on infection control measures, prioritization of intensive care resources, and the allocation of vaccines. However, the concrete moral claims and political strategies derived turned out to be rather heterogeneous, sometimes even contradictory in different national contexts.

Our contribution explores the moral significance and implications of appeals to intergenerational solidarity in Germany, Sweden, and the United Kingdom during the COVID-19 pandemic. The aim is to carve out how moral relations between generations were understood during the pandemic, what similarities and differences occurred between national contexts, and how they played out in the respective pandemic policies. Our considerations are based on an ethical document analysis of prominent statements from national policy advice bodies in all three countries. A particular focus will be on the German Ethics Council's ad-hoc recommendations "Solidarity and

Responsibility during the Coronavirus Crisis" (27 March 2020), the Swedish Council on Medical Ethics' report "Ethical Choices in a Pandemic" (15 May 2020) and the British Nuffield Council on Bioethics' rapid policy briefing "Ethical considerations in responding to the COVID-19 pandemic" (17 March 2020). We identify a variety of "moral paradigms" of intergenerational relations that can be linked to different socio-cultural and socio-political traditions and framework conditions. They range from ideals of communal care for the weak and vulnerable to principles of equal rights and mutual respect, or virtues of individual responsibility. We discuss the implications of our findings for understandings of social moralities, highlighting the theoretical premises and methodological requirements of research on "moral paradigms".

The Segmented Healthcare Sector for Migrant Physicians in Germany: The Case of Turkish Physicians

According to the German Medical Association figures, the number of foreign physicians holding jobs in Germany increased to 63.767 as of 2023, a 104.1% increase in the last decade. The share of foreign physicians holding jobs constitutes 14.9% of the physician labor force in the country. Syrian physicians constitute 9.6% of foreign physicians, with the highest share in the country. They are followed by Romanian, Austrian, Greek, Russian, and Turkish physicians. Despite the increase in the number of foreign physicians in Germany, the existing literature points out a certain degree of segmentation in the German healthcare sector for foreign physicians. Firstly, foreign physicians are primarily recruited in rural areas, where avoided by other physicians due to fewer professional opportunities and social challenges. Secondly, foreign physicians are overrepresented in some medical specialties like psychiatry, gerontology, and internal medicine, where the vacancies are not filled. The paper will question whether the segmentation among German and foreign physicians has occurred in the German healthcare labor market. If it exists, how has it been produced? The paper will benefit from different theoretical frameworks to comprehend its multifaced nature. Dual labor market theory will help to investigate segmentation in the healthcare sector. Institutional discrimination theory and intersectionality will show how institutional and identity-based discrimination operate together to shape professional opportunities and positions available to foreign physicians. Network theory will assist in exploring the roles of migrant networks in physicians' decision-making when choosing a workplace, federal state, or medical specialty. The market institutional approach will shed light on whether and how professional organizations and hospital policies reinforce segmentation in the healthcare labor market. Turkish physicians will be a focal group in this study but contrasted with foreign physicians from EU countries.

Beyond Revolutionary Politics: Avenues of Activism Under ElSisi's Authoritarianism

Egypt's 2011 revolution has been politically "defeated" by the counter-revolutionary forces, ElSisi regime's ongoing onslaught on spaces of dissent and activism, and erasures of the revolution's symbols and memories. Nevertheless, the revolution's social legacies continue to unfold. Led and sustained by the generation that came of age during the revolution, new avenues of engagement have been on the rise. These spaces traverse urban, feminist and cultural activism, as well as community-based, educational, environmental and heritage preservation initiatives.

Through life history interviews (2020-2022), this paper demonstrates how former revolutionary participants have transferred their commitments beyond revolutionary politics into these new avenues. While these participants remain indebted to the revolution for transforming their subjectivities, relationships and career paths, they are skeptical about the efficacy of revolutionary tactics in effecting social change. Given their readings of the revolutionary defeat and the evolving informational and political ecology on a national, regional and global levels, they believe this moment in Egypt demands different actions. Over the past decade, they have acquired knowledge about North-South relations and the issues of funding and sustainability of civil society. This knowledge has grounded their engagements in local needs and Global South solidarities and overcoming the patterns of marginalization and disparities in resources and opportunities rife in Egypt. The paper traces former participants' transfer into these avenues of engagement when revolutionary politics became not only impossible, but also unpopular and ineffective. It delineates these rising fields of activism, their boundaries and dynamics. It also explores how they have enabled former participants to reconfigure their activism and work to grapple with the economic, political and cultural stagnation under ElSisi draconian regime. It shows that despite the death of politics, there are pockets of hope that are keeping the revolutionary ethos alive.

Governing Water Scarcity through Digital Scoring: Exploring China's Water Credit System

This presentation critically examines the role and effectiveness of China's water credit system, currently deployed in various pilot regions to tackle pressing water scarcity issues. Under President Xi Jinping, the Chinese Communist Party (CCP) aims to establish itself as a global leader in digital environmental governance. This ambition is fueled by leveraging advancements in big data and artificial intelligence (AI) from the nation's tech leaders, thereby supporting the initiative of 'ecological modernization' (Li and Shapiro, 2022). Central to this endeavor is the comprehensive Ecological Credit System (ECS), which serves as the environmental branch of China's broader Social Credit System (SCS).

The ECS seeks to evaluate the 'ecological integrity' of businesses, citizens, and officials, incentivizing greener behaviors by rewarding eco-friendly actions and punishing environmentally harmful practices (Monjon and René, 2022). This presentation will specifically focus on the implementation of water credit systems in regions where water scarcity is most acute. These systems integrate various digital tools and instruments to monitor water usage and aquatic environments, aiming to enhance compliance with water laws and foster a "Water Ecological Civilization".

The objectives of this presentation are twofold: first, to analyze the ideological underpinnings of these systems, with a particular focus on their neoliberal aspects, in order to elucidate the roles of the state, markets, and citizens in those systems. Second, it will assess the effectiveness of the water credit systems by examining quantitative outcomes and comparing these results with the water resource preservation goals outlined in China's 14th Five-Year Plan for water security and safety.

Shared Roots, Divergent Paths? Gendered Religious Socialization in the Lives of Muslim Brothers and Sisters

Our paper contributes to biographical research on religious socialization within the social milieu of the Muslim Brotherhood, offering insights into how shared patterns of religious upbringing, education, and participation in communal activities influence the life trajectories of male and female participants. The central question explores the similarities and differences in how young men and women undergo religious socialization within the gendered universe of the Muslim Brotherhood/Sisterhood. Using Karl Mannheim's theory of generations, our approach also includes a generational perspective on religious socialization, paying attention to the formative influence of different historical conditions, and trying to detect generational continuities, shifts, and ruptures across our sample of participants.

Our research is based on biographical and expert interviews conducted since August 2023 with present-day and former members of the Egyptian Muslim Brotherhood living in Istanbul, Qatar and the Western diaspora, and aged between 25 and 75. The semi-structured biographical interviews include questions about socioeconomic background and upbringing, religion and everyday life, career choices and trajectories, as well as formative political events like Egyptian revolution of 2011, and the experiences of persecution and exile.

In this paper, we focus on participants' narratives about their childhood, adolescence and early adulthood. How do they portray everyday life and gender relations within the family, the community and wider society? Where do narrated experiences differ according to gender and how religious practices and values are transmitted, negotiated, and adapted by both genders throughout life. What is the importance of other factors such as socioeconomic class, place of upbringing (rural/urban), and time/generation? The analysis reveals significant gendered differences, despite men and women sharing common foundational experiences rooted in the collective goals of the Muslim Brotherhood.

Forced to Live with Strangers. an Exploration of Subletting Practices in Berlin in Times of Housing Crisis

Berlin has experienced an increase in rental prices between of more than 100 per cent 2013 and 2023, and a dramatic decrease in available housing units over the same period. Given the city's ongoing housing crisis, subletting has become an important form of housing to gain access to the tight market and a strategy to afford rising rents. Often, tenants spent periods of up to more than a year in various short-term sublets until they found a permanent housing solution. This sub-market is particularly important for low-income groups who want to live in inner-city areas. In most of the documented cases, the sublets were arranged informally and did not meet the requirements of German tenancy and registration laws. The proposed paper will examine the resulting co-housing arrangements, focusing on three aspects: First, we will discuss the power-laden relationships between main tenants and subtenants and the problems of liability and legitimacy of informal rental arrangements both sides face. Secondly, the potentially conflicting motivations for subletting and living in sublets will be explored, and thirdly, the related tensions between long-term co-living arrangements and short-term stays in flats will be addressed, considering both their interpersonal and material aspects.

The presentation will contextualise these findings against the background of current debates on housing precarity and informal housing in European cities. The analysis is based on 41 interviews with main tenants and subtenants conducted in Berlin between September 2023 and March 2024, and an analysis of media coverage on the topic since 2022.

Zionist Settler Colonialism, Alienation, and the Racialization of Palestinians

The international dialogue surrounding racial oppression has intensified once more since 2014, following the police killing of 18-year-old Michael Brown in Ferguson, Missouri. This incident ignited a series of protests throughout the United States, which were met with a severe, militarized response from law enforcement, paralleling Israel's Operation Protective Shield offensive that caused significant destruction in the Gaza Strip. In this context, protesters in both Palestine and the United States renewed their efforts to reference and draw parallels between their respective struggles. This wave of solidarity, initially centered on Gaza and Ferguson, revitalized numerous enduring historical connections between the struggles of Black Americans and Palestinians against oppression. These connections are situated within a broader geographic framework with deeper historical roots that trace back to the late nineteenth century. Considering these wider contexts highlight the significant influence of empire as a historical, political, and social construct, alongside the divisions of labor, in shaping the processes of racialization and the concepts of racial belonging and solidarity in twentieth-first century Palestine and Israel. We investigate the Zionist settler colonialism's racialization of Palestinians alienates – the slow process of identity erosion (and perversion) – and dehumanize them to facilitate their dispossession. We contend the functioning of race as a category in Palestine is determined by both local circumstances – primarily, Zionist colonization– and a broader phenomenon racial capitalism, which posits that settler colonialism can only achieve its violent dispossession of people through the racialization of their identity, reducing them to disposal objects.

"White Entitlement in White Sanctuaries: Spatial Awareness in the Nacional Museo d'Art De Catalunya in Barcelona, Spain"

Research since the late 2000s has expanded upon the notion of white space(s), particularly in the context of racialized social systems. More recent scholarship has interrogated the ways in which systemic white supremacy is facilitated by racialized space. White space is contentious, particularly since disrupting it means also disrupting the white supremacist normative status quo and Whites' fantasy(ies) of control over space and place. In previous work,

we contended that in any racialized social system, white sanctuaries serve to reaffirm Whites' perceived ideas about the racial order, often situated in white supremacist logic and normativity. In this paper, we extend our research to examine how white sanctuaries facilitate a sense of belonging for many whites through entitlement. Specifically, we look at patron's spatial awareness of museum art at the Museo Nacional d'Art de Catalunya (MNAC), a premier internationally recognized museum housed in the Palau Nacional de Montjuïc, built for the 1929 International Exhibition. The empirical analysis of this study is based on collaborative ethnographic data collected over a three-year period conducted by the first two authors, and consists of hundreds of photos and hundreds of hours of participant observations and field notes. The data are analyzed using descriptive methods and content analyses. We identify four types of white patrons based on their levels of comfortability in navigating museum spaces, their sense of spatial awareness, and their levels of consistent proximity to museum art: 1) the art molester, 2) the spatial disrupter, 3) the rule-conscious patron, and 4) the guarded patron. Our findings highlight white entitlement as yet another way in which museums, as white sanctuaries, serve to reify whites' sense of belonging and their perceived ideas about the racial and social order of society. Our paper also extends sociological research on how white spaces are maintained in racialized organizations.

The Sadrist Religious Social Movement at the Local Network Level: Appropriation of Shiite Practices and Political Uses.

We propose to analyze the Sadrist movement in Iraq as a pivotal social-religious movement. By focusing on the strategic utilization of Shiite rituals and practices, the Sadrist movement has effectively cultivated a loyal base of supporters, fostering a deep sense of community and belonging among its followers. The paper highlights the extensive network of social and religious structures associated with the Sadrist trend, which not only disseminates "Sadrist thought"[1]— a distinct political orientation, lifestyle, and interpretation of Shiite Islam— but also enhances the movement's grassroots mobilization efforts. This social religious movement is constituted of many types of structures such as hospitals, schools, caritatives associations, mosques, etc... All of these structures, whether direct or indirect, participate to strengthen and organize the Sadrist movement and its supporters, who are therefore socialized and politicized through Sadrist religious and social frameworks.

Central to this analysis are the leadership dynamics of the late Muhammad al-Sadr and his son Muqtada al-Sadr, who are perceived as "overall leaders" capable of addressing the diverse challenges faced by their followers. Their charismatic authority and responsiveness to local issues have enabled the Sadrist current to engage massively at the local level, distinguishing it from other Iraqi movements. This local presence allows the Sadrist movement to have significant points of influence and effective mobilization when the leader calls for it.

Through an exploration of the local structures of the sadrist movement and interviews with sadrist local leaders, this paper aims to illuminate the movement's approach to political activism, the integration of religious practices through a sadrist framework and its similarities with other religious social movements in the region.

[1] The 'Sadrist thought' (*al-fakar al-sadri*) is an expression used by intellectuals to refer to the political, religious, and social thought originating from Ayatollah Muhammad al-Sadr and his son

How Human Rights and Authenticity Form a Liberal Quasi-Religious Sacred Canopy: Evidence from the Field of Social Work Training for Ultra-Orthodox Students.

In this paper I will claim that human rights coupled with beliefs regarding the self and authenticity make up a current liberal quasi-religion that fills many of the functions of traditional religion. Furthermore, following Peter Berger (1966) who claimed that in modern times traditional religions have a hard time forming a "sacred canopy" that serves as a cosmology for the believer, I will claim that this liberal quasi-religion nevertheless seeks to gain such status. Following Paul Heelas and Charles Taylor I will attempt to demonstrate the link between human rights and authenticity. I will go further than them in claiming that these form a new liberal belief system that claims universality.

In making this claim I will be picking up the lead of Campbell (2001) who claims that theodicy need not be restricted to systems of belief that include

God, Knott (2013) who points to the usefulness of the term 'the sacred secular', and Timol (2019) who posits the existence of such a secular sacred canopy among indigenous Europeans, which sometimes clashes with the worldview of Muslim immigrants.

In order to demonstrate these claims, I will provide various examples from the public arena and from research I conducted on Jewish ultra-Orthodox social workers who encounter the aforementioned worldview and values, which are new to them, during their academic training program. Understanding these links may serve to better understand the challenges that human rights face in conservative societies.

ENGELBERG, ARI* (Jerusalem Multidisciplinary College, Israel)

Singlehood and Religion

The subject of my book is singlehood in conservative religious denominations. I focus on the case of Israeli Religious Zionist singles. The research upon which the book is based includes in-depth interviews with Religious Zionist singles and participant observation at singles events, as well as analysis of primary texts written by rabbis, educators, and singles. Throughout the book I make comparisons, both to secular singles and to singles in other conservative religions.

The book has four parts. The first part looks at singles' search for love. I found that attitudes toward romantic love and relationships are changing. Marriage, as Cherlin (2004) puts it, has become less of a social institution and more of a relationship. This has made the search for a partner more challenging, especially for religious singles who, to varying extents, practice gender segregation and are expected to remain chaste prior to marriage. Changing gender relations led to new opportunities as well as challenges in this field. The second part of the book looks at religious communities and singles. Singles are marginalized in established communities, but their networks of friends form a community of sorts that is significant in their lives. The third part of the book examines how ongoing singlehood affects religiosity. It was found that singles adopt various strategies to deal with the strain they experience between the family values discourse and their lifestyle. The fourth part of the book focuses on the responses of religious establishments. I found that in Religious Zionist society the nature of guidance that singles received has changed over time.

Taken together, the research found that late-modern process of individualization are affecting religious singles, and these affect various aspects of their lives, including the search for love and their relationship with the divine.

Connecting Dots across Borders: The Nexus between Transnational Higher Education and Cross-Border Labour Markets

The doctoral research project examines transnational higher education in relation to cross-border labour markets and transnational labour mobility. It situates this phenomenon within a broader historical, economic, and political context, questioning why and how it emerged, how it functions, how it interacts with actors of cross-border labour markets such as states, corporations, and intermediaries, and to what extent it contributes to the emergence, consolidation, and operation of these markets.

The project adopts an interdisciplinary approach, drawing on perspectives from sociology, economics, political science, international relations, and history to investigate the dynamics at play. Through a detailed case analysis, it aims to provide an in-depth examination of empirical data to explore the intersection between transnational higher education and cross-border labour markets, and to offer findings that are applicable beyond the specific cases studied.

ENGUIG GRAU, BEGONYA* (Universitat Oberta de Catalunya UOC, Spain)

Entangled Emotions and Embodied Politics in Catalonia

Departing from a research project on emotions and politics in the Catalan pro-independence movement based on qualitative research on six secessionist organisations, this proposal aims to discuss the complex set of emotions that are entangled with the pro-independence political action. In

the current context, hate discourses are a common reference; however, my findings point out that hate is not the main emotion but fear; that emotions always appear in assemblages; that they are not stable but are activated in particular moments and change; and that they are affected by intersectional categories such as age and gender, and dependant on the particular activist histories of the participants. I also wish to address some methodological innovations that account for matter, discourse and affects in relation to ethnographic observation of public protest and in-depth interviews. The use of photo and audio elicitation and the concept of affective capsules are productive resources in order to grasp the emotional atmospheres of the participants in the Catalan pro-independence movement that we worked with.

Efforts in Harmonizing Climate Change, Disaster Risk Reduction and Waste Management Among Two ASEAN Countries

During the last State of the Nation Address of the Republic of the Philippines President, the poor solid waste management contribute significantly in the flooding in many parts of the country hence he urged to look into this connection. However, each area of concern is governed by a distinct national law which is implemented with less harmony. Local community stakeholders particularly local government representatives and the fisherfolks have a low level of understanding on the interaction between climate, disaster risk and waste management (Yoshioka et al., 2021). The paper focuses on the potential ways in harmonizing the three themes climate, disaster and waste management at the national and regional levels from the point of view of the different local stakeholders of cities in the Philippines and Indonesia. The study aims to develop a framework that will enable harmonization of the climate, disaster and waste management at the local level that may contribute in a bottom up approach in influencing policy. There is no clear-cut policy on how to synchronize the three themes at the local level, the study made an attempt to hear the voices of the stakeholders from the ground to get the inputs from the ground on how it can be developed at the national and regional levels. An online survey was participated by approximately 602 respondents from the selected cities in the two countries both for public servants and community residents. A Focus Group Discussion with city stakeholders were also conducted.

Migration – Social Inequality – Conduct of Everyday Life: Social Belonging and Othering in the Life Course of Young People with Migration Experiences in Germany

Migration from the Global South to the North and lived experiences of educational, social and global inequality along the dimensions of class, race, gender and disability are intertwined and interrelated. The superordinate reasons for migration from the Global South to the North are primarily (forced) displacement, persecution, wars, environmental degradation and, as a result, (impending) poverty – linked to the processes of exploitation of 'the Global South' by 'the Global North' (outsourcing of industrial production due to lower labor protection and lower workers' rights, financial dependence and debt, exploitation of environmental resources, etc.). On the one hand, there is a close interrelation between migration opportunities to the Global North and the societal positioning of a person in the above-mentioned inequality relations; on the other hand, societal positioning is linked to life chances in the countries of emigration and immigration. Questions of belonging are negotiated in the conduct of everyday life in the face of experiences of inequality regarding economic living, education and societal participation opportunities. In our research project 'Living youth in a migration society' in Germany based on biographical-ethnographic research methodology, the research focus is on how societal structures and power relations relating to global, social and educational inequality are affecting the conduct of everyday life of young people with migration experiences. How do societal belonging, participation and experiences of othering change over the course of their lives in different stages and different countries/ places of their migration experience? How is the life story narrative co-constructed in the research setting?

After a brief introduction to the research project and the research methodology, first preliminary research findings will be presented on the basis of excerpts from biographical narratives.

Definitions and Types of Civil Society

Both civil society and democracy have emerged under the influence of Western Europe's historical and cultural contexts and have since gained widespread prominence globally. This study examines the definitions and types of civil society in the West and Türkiye by outlining the evolving meaning frameworks throughout history. After discussing the types of civil society that developed historically in the West, the modernization process in Türkiye will be divided into distinct periods, with an explanation of the specific conditions and types of civil society that emerged in each period.

In the West, the initial framework of meaning is the model of civilized behaviour that was adopted by the bourgeoisie during the early modern period as a counter to barbarism. Secondly, civil society functions as an anti-authoritarian organized space for struggle, where the rights and freedoms of both the bourgeois and, subsequently, the working class are advocated. The third framework encompasses the collective positioned against the tyranny of the majority and individualism within a democratic system.

In Türkiye, the first meaning that civil society gained is a model of civilised behaviour, especially under the influence of Western culture. Within the framework of the right and left political poles that emerged in the political arena, two axes of civil social organisation have emerged since the 1960s, and the types of civil society that have diversified in these two poles have been shaped in the process until today. After 1980, civil society formations started to gain a 'civil' character within the framework of liberal values. In the 2000s, civil society formations shaped under the influence of contemporary ideologies such as feminism and ecologism and civil society formations that glorify national values have been effective. Turkish civil society exemplifies diverse civil society formations with different aims and organizations, shaped by various cultural factors.

EREN, DEVRIM* (Humboldt-Universität zu Berlin, Germany)

Between Capitalocene, Heteropatriarchy and Environmental Casteism: Dalit Female Ecologies and Resistance in India's Urban Peripheries

Since the landslide victory of the BJP in 2014, physical violence against caste-oppressed communities as well as resource extractivism for the sake of development are on the rise. While the pandemic has engendered short-lived debates on the vicious confluence of environmental violence, state omission and the tormented legacy of caste and dispossession in urban India, the nexus between environmental violence and caste apartheid in urban settings from a gendered perspective is hitherto underexplored. Dalit (formerly known as 'untouchables') women remain the most vulnerable in these violent environments, that are shaped by 'environmental casteism' (Sharma, 2017) and 'organized abandonment' (Gilmore, 2022), leading to slow deaths as a form of subtle mass violence.

Given this context, this paper examines first the intersection of environmental injustices, caste and gender in shaping social inequalities, everyday vulnerabilities and resilience through the practice of waste-picking as a feminized and caste-based labor, that has been traditionally assigned to Dalits (officially 4 Mio. workers). It subsequently explores Dalit female articulations of environmentalism and quotidian forms of resistance as decolonial praxis and pluriversal contributions, offering a wider glimpse into Dalit ecologies and liberation struggles under double colonization, right-wing authoritarianism and its greenwashing. It draws on 50+ semi-structured interviews with Dalit female waste pickers, social activists, and NGOs in landfills and slums in Delhi and Mumbai, and photo-documentation. Grounded in a multidisciplinary approach, it draws on decolonial feminism (Lugones, 2012), body-territory (Segato, 2008; Velez 2019), critical pedagogy (Freire, 2005), and border thinking (Mignolo, 2012), expanded by environmental concepts such as environmental racism (Bullard, 1993) and waste colonialism (Liboiron, 2018). As this work focuses on the creative agency of subalterns, their journeys of healing and survivorship, and the abandonment of dehumanization, this paper also seeks to contribute to the emerging research on critical Dalit pedagogies in non-formal educational contexts.

Organizing Consent Via Conceptual Stretching: The New Universalism, Financialization and Healthcare Provision

This paper critically evaluates the growing popularity of the so-called New (or Targeted) Universalism, associated with an ongoing restructuring of the provision and financing of healthcare systems since the mid-1990s. The financialization of contemporary capitalism, manifested in the increased involvement of financial investors in healthcare provision and financing systems, undergirds the development of both phenomena.

Drawing on field research with financial investors, healthcare professionals, policy and decision-makers, this research analyzes the common features and outcomes of the two distinct pathways of financialization in the Turkish healthcare system, namely a) share acquisitions in private hospitals and b) infrastructure loans provided to public-private partnership hospitals. We present two findings. First, the expansion in health insurance coverage in Turkey and the growth of public healthcare expenditures were essential precursors of financial investments in the Turkish healthcare system. Second, financial investments in the healthcare provision system compounded the inequities in access to standards of healthcare. Combining selective, targeted, minimum healthcare services financed through an earnings-related scheme with discursive references to universal rights and entitlements, the newly established general health insurance system has been central to reifying inequities in access to standards of healthcare and organizing consent to financialized capitalism.

Socio-Religious Entrepreneurship As the Antidote to Fundamentalism: Islam, Gender, and Microcredit in Bangladesh

The scholarship on women microcredit entrepreneurs is vast. It, however, does not include how they successfully functioned as socio-religious entrepreneurs against the Islamicist fundamentalists who stated that microcredit participation was against Islam. My longitudinal ethnography (2001-24) of 73 men and women in Bangladesh, draws on the "lived religion" approach, which explores how individuals construct their own meanings of religion as distinct from institutional definitions. Findings reveal that women microcredit loanees act as socio-religious entrepreneurs in three ways. 1.) By creating *buddhi*, their own feminist grassroots Muslim spirituality, loanees have created new definitions of purdah, which enable both sharecropper women's and men's empowerment. Their definition of purdah as having *moner purdah*, or a pure heart, versus *barite purdah*, or physical confinement, has enabled women to leave the homestead to go to the Grameen Bank to take out microloans as believing Muslim women. Their microcredit profits reaffirm sharecropper masculinity by challenging intersectionalities: the hegemony of landowning men and their control of religious social structures. Money in women's hands has disrupted the class inequalities that existed between rich and poor masculinities. 2.) Buddhi evolved through discussions in women's meetings. It is a Muslim gender ideology that provides the social structure imperative to shift socio-religious capital from village Islamicist patriarchy to women loanees. They utilize *buddhi* as socio-religious capital to define women's entrepreneurial endeavors as sacred and to decry the oppression of women as sinful. 3.) As socio-religious entrepreneurs, women took social risks. Buddhi, however, gave them unity and moral purpose to prevail; and their heterodox beliefs created vigorous village-level debates about gender and Islam. This study illustrates how low-income Muslim femininities function as vectors of socio-religious evolution to continue the Islamic discursive tradition—thereby succeeding against Islamicist patriarchy in Bangladesh.

BAYATRIZI, ZOHREH (University of Alberta, Canada)
TORABI, SAMIRA (University of Alberta, Canada)*"We Will Never Forget, We Will Never Forgive": The Impacts of the PS752 Tragedy on the Iranian Community in Edmonton, Canada*

This paper explores the impacts of the tragedy of the Ukraine International Airlines Flight 752, an international civilian passenger flight from Tehran to Kyiv, that was shot down three minutes after taking off by two Iranian surface-to-air missiles. Most of the 176 victims were headed to Canada; 55 were Canadian citizens and 30 were permanent residents. This paper particularly focuses on the ways in which the Iranian community in Edmonton, Canada, was affected by the tragedy. Drawing on a qualitative study of the Iranian

community in Edmonton, we argue that the downing of the PS752 Flight has transformed the Iranian community's socio-political organization abroad through the emergence of a new subculture that seeks truth and justice for the families of the victims, and the creation of new political boundaries between community members. The experience of grieving in liminal places, spaces, and times significantly transformed precarities of diasporic citizenship and contributed to the layers of competing emotions that our participants reported feeling in the months after. Through collecting oral histories of a diaspora and documenting collective memory of a historical trauma, this paper draws upon and contributes to four bodies of literature: immigrant liminality and inbetweenness; collective memory of trauma; immigrant emotions and diasporic grief; and sense of belonging and diasporic citizenship.

ERIKA, ALLEWELDT* (Hochschule für Soziale Arbeit und Pädagogik Berlin, Germany)

Empathy and Friendship

Despite the importance of empathy in social discourse, the concept of empathy rarely appears systematically in the sociology of friendship. Why is this?

What does empathy mean in friendship? Does friendship stand for empathy and empathy for friendship? What forms of empathy can be found in friendships? How does empathic behaviour manifest itself in friendships?

The widespread adoption of empathy has both positive and negative effects, ranging from fostering deeper bonds to the potential for manipulation and exploitation. This corresponds with friendship culture, which encourages people to open up emotionally, to be 'vulnerable' or 'let others in' in order to create intimacy, exchange emotional support and reveal their 'true' selves. On the other hand, it also warns that being there for others can be emotionally draining and that 'boundaries' must be maintained to protect one's health and happiness' (Bellah et al., 2008; Illouz, 2008).

The presentation will focus on the theorisation of friendship and empathy. It will also examine interviews about women's friendships to see how empathy is lived and the challenges that arise. It will draw on my diverse research on friendship (2013; 2016; 2017; 2019).

Promoting Well-Being through Inclusive Diagnosis in Schools

Promoting well-being through inclusive diagnosis in schools

In our research project 'Inclusive diagnostics in all-day schools' (Alleweldt/Tellisch 2024), teachers, school social workers and educators in different types of schools were asked about their diagnostic practices in an empirical study. The aim was to bring together concepts from educational and social work diagnostics for inclusive diagnostics with a focus on learning and personal development. The approach of inclusive diagnostics follows a broad concept of inclusion and is therefore aimed at all learners. This means that not only the cognitive, but also the social-emotional aspects of learning and living come into focus. It is not just performance that is important, but the wellbeing of children as a whole, which means taking a more holistic and life-world perspective of pupils: Emotions, formative events, relationships, circumstances and the child's views become central. The child is actively involved in the process. Methods such as self-evaluation and reflection can also be important approaches to inclusive diagnosis. During the presentation, the approach will be presented and discussed from the children's perspective and experiences with its implementation will be presented.

ERIKSEN, SHELLEY* (California State University Long Beach, USA)

Frontline Faculty: A Cross-National Study of Faculty Engagement in University Sexual and Gender-Based Violence Prevention

Gender-based violence (GBV) is a significant public health problem in nearly all known societies throughout the world. Sexual assault and sexual coercion remain serious subsets of GBV and are especially prevalent among university-age populations. Surveys in the U.S. indicate 1 in 5 women and 1 in 16 men are sexually assaulted while at university, with similar rates reported across 28 European Union states. The 2012 Delhi gang rape and murder of medical student Jyoti Singh mobilized feminist activists across India, including academic feminists, who brought renewed attention to the widespread experience of sexual harassment of Indian women and trans students at universities. Within these global contexts, academic faculty play an essential role in ongoing efforts to identify and prevent GBV on university campuses, as teachers, activists, researchers, and policy advisors, yet research on faculty remains woefully underdeveloped in GBV policy and practice research in educational settings.

This study explores the social-structural factors that shape faculty engagement in gender-based violence prevention at institutions of higher education. Based on a cross-national comparison of six countries (two GDP low-income, two middle-income and two high-income), the paper considers the structural dimensions of communal life (e.g., state policies, university characteristics, mass mobilization histories) associated with intensified (or diminished) faculty engagement on university GBV across these different national contexts. This analytic framework builds on research that finds 'critical events of rape' as moments of mass mobilization, associations between women's socioeconomic status, antiviolence community development, and university rape reporting practice, and the variation in state and federal policy that offer specific protections to university staff and students in sexual assault disclosures. Understanding these structural components provides new insights for faculty activists who remain key actors in university GBV prevention efforts and influential researchers in policy development and implementation around the globe.

ERIKSSON, SANNA* (University of York, United Kingdom)

'Wo Bu Care': Choice, Freedom and Resistance Among Chinese Middle-Class Mothers

Since China's transition to a market economy in the early 1980s, women have increasingly borne the burden of child and elderly care within the home. Xi Jinping coming to power in 2012 led to a conservative shift in official discourse, urging women to further focus on the family, while continuing to balance employment. The party-state's pro-natalist turn since 2016 encourages women to have more children, which puts further pressure on women's everyday lives. The highly competitive *neijuan* (rat race) environment in first-tier cities has subsequently resulted in urban middle-class women struggling under the double burden of work and domestic labour, facing pressure particularly in relation to their children's education.

This paper examines Shanghai based women's everyday experiences of motherhood, contrasting them with the 2021 family-marriage drama *A Love for Dilemma*, which is analysed as a form of party-state propaganda on women's role in society. I argue that while women may feel compelled to pursue family status improvement and children's future success through educational pursuits, they also express resistance to prevailing gendered neoliberal societal values and expectations. They do this through discourses of 'not caring' about public opinion and future-proofing their children, and discuss how they realize individual freedom and choice in life decisions. Expressions of 'not believing in gender equality' while emphasising individual choice emerge alongside enduring socialist notions of 'women holding up half the sky' and perceptions of the importance for women to engage in professional roles. I argue that China's state socialist feminist legacy lives on in urban educated middle-class women's private discourses without incorporating an explicitly feminist stance. Contemporary urban China presents a complex reality where women resist neo-traditionalist notions of gender at a private level, through discourses that draw on both socialist notions of gender equality and neoliberal discourses of choice, emphasising women's own agency.

Traditional Water Sharing Practices of the Amazigh of Morocco: Centralised Tribal Politics Vs. Decentralised Tribal Confederations

This paper seeks to expose the various traditional practices of water conservation and sharing among the Amazigh communities of south-eastern Morocco. The remote southeast had remained mostly spared from full-scale French colonial intrusion. Many of the traditional institutions of the Amazigh – both their traditional customary laws and the indigenous constitutional orders of the Ait Yafelman and Ait Atta tribal polities in the region – remained relatively intact at the time of independence. The early decades of independence did not come with much of an intrusion by the modern Moroccan state either. As a result, both tribal polities remained in place as well as the different traditional practices of water conservation. What makes this region an informative case-study for studying indigenous constitutionalism is that the Ait Atta were a centralised tribal polity while the Ait Yafelman were a confederal union of various constituent tribes. Both, however, occupied very similar geographies of vast semi-desert arid plains interspersed by oasis valleys of irrigated agriculture. Both polities also contained communities in the low-lying agricultural valleys and communities in the highlands herding livestock. Both polities also included non-members whose rights and obligations were different than those considered as indigenous. Everything other than their constitutions were similar. How water was conserved and shared followed very elaborate policies and practices in both the Ait Atta and the Ait Yafelman, but the differences in their indigenous constitutions influenced how things worked. One was a centralised tribal polity with the ability to dictate and enforce policies from the centre, the other required compromises reflecting the local context. Anthropologists have studied the Amazigh of the southeast, but this is the first time the scholarly framework of Sociology of Law is put to use with an eye to distil lessons that could enrich the study of non-Western non-state constitutions.

Understanding the Gendered Consequences of Migration for Occupational Attainment: Evidence from a Multi-Site and Intergenerational Study

This study is the first to investigate women's occupational status through a unique comparison of migrants from Turkey to Europe and their Europe-born descendants with the stayers in the origin country. The research base for the study is the pioneering *2000 Families Survey*, which developed and used an innovative screening technique a) to locate the first-generation men who moved to Europe from high migrant-sending regions during the guest-worker years of 1961 to 1974 and their comparators from the same regions who stayed in Turkey and b) to trace their male and female family members across Turkey and ten Western Europe destination countries up to the third generation.

The results reveal a significant tendency for migrants to occupy lower occupational positions than the stayers in Turkey even after controlling for personal and parental education. The degree of disadvantage turned out to be particularly greater for migrant men from lower parental class backgrounds. Whilst their Europe-born descendants, especially the women, fare better, they are shown to obtain lower returns to their education than their stayer counterparts, regardless of gender. Parental social class is found to make a positive difference to their children's occupational status, especially in the case of the Europe-born offspring but not to the extent that brings migrants or their descendants to the level of the stayers in Turkey. Overall, the results make a substantial contribution to migration studies by demonstrating the significance of examining the intersections between gender and migration status in understanding labour market outcomes. Our unique research shows that migration doesn't benefit migrant men's and women's occupational position. Their male offspring is also not better off; only women descendants who were born in Europe make a substantial progress in their job status.

From Anthropocene & Anthroposphere to Noosphere - What Clinical Sociologists Can Do?

Drawing an analogy with the famous article by V. Vernadsky "A Few Words about the Noosphere", written in 1944, from the 90s of the twentieth century to the present day we are experiencing another historical and geological shift in human civilization of Anthropocene & Anthroposphere, characterized by international conflicts, ecological no return points and the reality of simulacra (according to J. Baudrillard).

The UN concept of sustainable development, designed to solve the problems of hunger, clean water and soil, lack of education and inequality of humanity by 2030 by building Ecumenopolis (Doxiadis C.A., 1968) is already demonstrating its failure.

Focusing on the key role of society as a driving force capable of building a paradigm of "manageable evolution" or Noosphere, primarily in the consciousness of people, gives clinical sociologists the opportunity to apply their approaches, in particular, in overcoming the ancestor syndrome (A. Schutzenberger) and to abandon the Neolithic system of nature management and the current system of social world order.

Étude Exploratoire Sur L'impact Du Sentiment Commun D'injustice Sur L'engagement Professionnel: Cas Des Enseignants De L'académie Régionale De L'éducation Et De La Formation, Fès-Meknès

De nombreux changements organisationnels ont survécu dans les politiques éducatives à l'échelle mondiale, surtout dans les modalités d'emploi dans les métiers d'éducation dont le contrat est devenu une mutation néolibérale presque universelle. Au Maroc, le passage d'une politique d'emploi dans la fonction publique centralisée au modèle de contractualisation régionale est perçu, depuis 2016, comme une régression législative qui provoque un sentiment commun d'injustice qui s'est manifesté par l'émergence d'une action collective organisée dans l'espace public. Cette action s'est configurée en de systématiques protestations, manifestations, marches, sit-in et rassemblements. L'objectif de cette étude est d'explorer l'impact du sentiment commun d'injustice sur l'engagement/désengagement professionnel des enseignants du cycle primaire au Maroc. On a opté pour une approche qualitative dans la collecte et l'analyse des données ; une observation directe des situations de classe appuyée par des entretiens semi-directifs avec 20 professeurs de l'académie régionale de l'éducation et de la formation Fès- Meknès, en sus d'une analyse du contenu de documents professionnels et scolaires. Il s'agit d'une étude longitudinale qui s'est étalée sur 3 ans depuis Mars 2021 jusqu'à Mai 2024. Les résultats de la recherche montrent une évolution dans le temps du sentiment d'injustice qui influence négativement l'engagement professionnel. Des pratiques pédagogiques et professionnelles comme la gestion du temps, l'utilisation abusive de la Grève, le boycott des conseils d'établissement et de la formation continue, la rupture des liens relationnels et professionnels avec les collègues et le refus de remise des notes des contrôles continues seront analysées et discutées au regard des déclarations et des explications des enseignants. Cette étude montre l'importance de la gouvernance du changement organisationnel afin de garantir l'engagement des acteurs lors les réformes éducatives.

Gender Inequality and Local Development: Public Health and Social Care Sectors As Drivers for Female Employment in Three Italian Inner Areas.

According to the 2023 *Global Gender Gap Index*, Italy has dropped 16 places in the global ranking on gender equity, now positioned 79th out of 146 countries monitored since the previous year. Although the report highlights a slight improvement in economic participation, moving from 110th to 104th

place, Italy's female unemployment rate remains among the highest in Europe. Women's exclusion from the labor market disproportionately affects the southern regions and inner areas of Italy, hampering progress towards achieving the *Sustainable Development Goals* (SDGs) of the *2030 Agenda*.

In these regions, alongside the lack of employment opportunities, the absence of public services is a key factor preventing women from contributing to economic growth and improving their living conditions. Italian familistic welfare predominantly assigns caregiving responsibilities—especially for children, the elderly, and individuals with health conditions—to women, thus impeding their participation in the labor market and reinforcing gender inequalities.

In this context, the study addresses the critical issue of equal opportunities for sustainable development from an innovative perspective, identifying the public health and social care sectors as potential drivers for gender inclusion in Southern Italy and its inner areas. Increased female participation, along with the investments from the National Recovery and Resilience Plan (NRRP) in these sectors, has the potential to contribute to the economic and social development of these territories. The selection of comparative case studies has focused on three inner areas of Southern Italy characterized by the lack of public services, declining birth rates, labor market crises, and high levels of female unemployment. The analysis of official data and in-depth semi-structured interviews with local stakeholders forms the basis of the methodology. The results highlight the relationship between local underdevelopment, low public expenditure and service provision, poor quality of life, and high female unemployment rates.

Old Myths, New Encounters

This paper examines the question of why 'primitive' view of the world still attracts popular interests? Worldwide manifestations of this appeal can be cited as the rise of contemporary spiritualism and return of the pagan world in cultural productions. These practices and forms become more popular and widespread than ever due to cybercast and streaming services. What is striking in cultural productions is the theme of awakening of hibernating mythical forces. This paper problematizes this phenomenon and focuses on two TV series from Turkey: *Shahmaran (The Queen of the Snakes)*, a monster with a woman head and a snake body of a folk legend; and *Atiye* (the voyage ends up in the oldest archeological site in the world, *Göbekli Tepe*). In these productions, there emerge a common pattern (which can also be discerned in European or Korean productions). A middle class woman who lives in Istanbul starts to have disturbing experiences. She is left with no choice but to listen a delphic summoning and embark on a journey into 'mysterious' lands of the Eastern Anatolia. She finds out that she is a descendant of a forgotten primeval creature and that their time has come again as a response to a danger or a prophesy, usually amounts to lost balance between nature and humanity.

Theoretical framework of this paper will be developed through three lines: A critical reading of the analyses of myths and 'primitive thinking' by James Frazer and Joseph Campbell; Silvia Federici's analysis of witch hunt through capital accumulation, mechanization of body and social struggles; and works that analyze or address the phenomenon of contemporary spiritualism in terms of neoliberal capitalism. Methodology of the paper will not be limited to an analysis of representations but try to apply Felix Guattari's semiotic theory and autonomist Marxists' remarks on old ontologies.

ERTURK, YAKIN* (Middle East Technical University, Turkey)

Women's Rights in an Age of Global Disorders

At the wake of the global system crisis making the case for "women's rights are human rights" has once more become a matter of resistance and opposition not only by local patriarchy but also by centers of power, including through the institutions of the UN. The 9/11 attacks on the twin towers, 2008 financial crisis and the 2020 COVID-19 pandemic, destabilized the legitimacy of mainstream liberal values, institutions and modes of governance. The right-wing populist responses to the militarized global disorder blame the ills, including the growing care crisis, on foreign influences, multilateral diplomacy and breakdown of morality, a situation they aim to correct by reinforced securitization, nationalist / pro-family policies and restoration of the patriarchal gender contract. Until now, feminism has achieved relative success in integrating into the mainstream society. However, confronting the anti-gender stream of authoritarianism, which is the new shield of patriarchy and capitalism, a paradigm shift that can liberate women's body and labor is needed. In this respect, placing security at the center of the debate, in envisioning a mainstream social order based on *care* as its organizing principle offers much promise, which I aim to explore.

"on Earth It's Hard and Heaven Is Far Away" Migration and the Imaginative Sphere, a Case Study Amongst Muslim Migrants in Belgium

The lived experience of migration is fundamentally characterized by ambiguities and tempo-spatial connections between an experienced past and hoped-for future that are folded together in the imaginative sphere. Despite being inherently imaginative (Salazar, 2010), this aspect of migration remains largely understudied. To address this gap, I conducted an ethnographic study in a local community centre in Belgium attended by migrants who were in the midst of their asylum procedure or continued to reside in Belgium after their residence permit expired. As imagination is culturally embedded (Appadurai, 1996), I focused on the role of religion in the lived experiences of Muslim migrants within this centre. Their narratives revealed how imagination generates different ways of being in the world, and ultimately of "non-being" as a way of being-in-the-world. After the disorienting experience of migration, my interlocutors felt trapped by the bureaucratic "architectures of waiting". From this liminal position, entrapped between a past and a new home, they began to imagine "home" as a place of spiritual sustenance which they hoped to recreate and find amongst other Muslims. However, in this process of home-making they rather found themselves in a "non-home", expressed as "*Barzakh*", stuck in limbo. Waiting became a state of consciousness that obstructed their ability to project oneself forward in time. Yet, they appeared to counterbalance this inability and reclaim their agency by secretly sustaining aspirations, which demonstrates their resilience. Their hesitance to exclaim these aspirations suggests its intermediary role between their desires and their objective possibilities. Retaining this "capacity to aspire" (Appadurai, 2004) seems needed to break out of the "stuckedness" and participate in "normal life", in coevalness with others in society. While my interlocutors discoursed experiences of being stuck, in practice they remained hopeful as they allowed their imagination to wander while they had to stand still.

ES-SATTE, ABDELILAH* (Ibn Zohr University Agadir, Morocco)

The Evolution of the Concept of the Civil State Among Moroccan Islamists after the Arab Spring

The evolution of the concept of a civil state among Islamists in Morocco has undergone multiple phases. Initially, traditional Islamic parties and movements, such as the Justice and Development Party (PJD) and Justice and Charity Group (JCG), strongly adhered to the idea of an "Islamic state" based on Sharia. However, over the past two decades, political and social changes have pushed these movements to adapt to new realities and emphasize concepts of democracy and pluralism.

The (PJD), one of the most prominent Islamic parties in Morocco, has experienced significant shifts in adopting this concept. After years of adhering to the notion of an "Islamic state," the party's leadership began to emphasize the principles of the civil state, including acceptance of political pluralism and participation in the democratic process within a modern civil framework. This shift marked a significant development as the party moved towards a more limited role for religion in governance, while still highlighting its influence in shaping societal values and ethics.

In a document published in 2014, the (JCG) called for building a modern and just state that is disciplined by the constitutional contract emanating from the popular will, a civilian state with all that this means in terms of moving away from the nature of theocratic, military and police states.

The protests of the Arab Spring played a crucial role in pushing Islamist movements in Morocco toward embracing the idea of a civil state. The February 20 Movement, which called for democratic reforms, compelled Islamists to align with popular demands, this led to a re-examination of many ideological stances.

Based on the above assumptions, this paper aims to study the evolution of the concept of the civil state among Islamists in Morocco reflects an attempt to adapt to changing political and social realities.

The Importance of Media Communication during Natural Disasters: A Case Study of the Al Haouz Earthquake in Morocco

Natural disasters pose significant challenges for countries and communities, requiring effective responses at multiple levels, including media communication. Media plays a crucial role in crisis management, providing accurate and immediate information that helps save lives, organize relief efforts, and reduce panic. The Al Haouz earthquake, which struck Morocco in September 2023, serves as a key example of the importance of media communication during natural disasters.

One of the primary roles of the media during disasters is to **guide and inform** the public on how to act safely. In the case of the Al Haouz earthquake, there was an urgent need to direct people to safe shelters and explain how to behave during aftershocks. **Speed in delivering information** is essential during crises, as delays in reporting can worsen the disaster. During the Al Haouz earthquake, national and international media quickly provided updates on the scale of the disaster, efforts to provide aid, and the government's response to assist affected populations. In addition, media is a powerful tool for **coordinating relief efforts**. During the Al Haouz earthquake, the media helped direct resources and assistance to the hardest-hit areas. In times of disaster, rumors can spread quickly, causing panic and confusion. Hence, the media plays an essential role in **countering misinformation** and providing accurate facts. During the Al Haouz earthquake, official media outlets helped correct false rumors about the scale of destruction or casualty numbers, calming the public and directing them toward appropriate responses rather than fostering fear.

The Al Haouz earthquake demonstrated the importance of effective media communication, with Moroccan and international media directing efforts and ensuring aid reached affected areas quickly. The Moroccan government coordinated with various media outlets to provide continuous updates on rescue and relief efforts, which helped bolster public confidence and manage the crisis more efficiently.

Mobilizing at the Urban Margins: Citizenship and Patronage Politics in Post-Dictatorial Chile

In October 2019, unprecedented mobilizations in Chile took the world by surprise. They defied decades of deep inequality and opened new avenues for Chilean democracy. These demonstrations resembled the events that in the past couple of decades sought to expand democracy in places like the United States, Puerto Rico, Spain, Tunisia, Argentina, Egypt, and Hong Kong. Although these Chilean protests involved a myriad of organizations with different social backgrounds and demands, the organizational capabilities provided by the urban poor proved essential in sustaining collective action in an increasingly repressive environment. This research is based on almost six years of fieldwork in Santiago's urban excluded areas. The research features the compelling story of two underprivileged neighborhoods that had almost identical paths of development before Chile's democratic transition. After 1990, however, these two neighborhoods embarked upon dramatically diverging paths. While one has sustained mobilization over the past 35 years, in the other neighborhood local organizing became depoliticized and was deactivated. To explain how communities in the urban margins sustain mobilization in very inhospitable conditions for collective action, the book outlines the novel framework of mobilizational citizenship. Through mobilizational citizenship those communities can also build the mobilizing capabilities needed to support large-scale protests and broader democratizing processes that extend beyond their immediate community, district, or city.

ESCOFFIER, SIMON* (Pontificia Universidad Católica de Chile, Chile)

The Rise of the Right-Against-Rights in Latin America

With the new millennium, Latin America experienced an expansion of rights to those excluded historically, culturally, socially, economically, and politically. Yet this veritable rights revolution unleashed a right-wing backlash to roll back rights, undermining democratic values and replacing them with polarized and often violent conflict. This right-wing mobilization is not comprised only of the historically powerful military, economic, religious, or political elites, as it once did. It unites previously incompatible groups such as Catholics and

Protestants, the rich and the poor, against advances in social, cultural, and economic rights. This Latin American right-against-rights mobilizations involve elite and non-elite alliances in (i) counter-movements that aim to roll back rights gains by social movements, (ii) uncivil movements that mobilize to eliminate (violently or through legal disputes) rights seekers, and (iii) radical neoliberals motivated behind the protection of the rights, privileges, and prerogatives of economic elites. This presentation provides preliminary results for a project covering seven Latin American countries with a network of researchers across the region. A brief focus on the case of Chile is also provided to explain how this mobilisation develops in a particular context. By exploring who is behind the right-against-rights in Latin America, where and why, and with what impact, this project crosses disciplinary and geographic knowledge frontiers.

Implementación De La Ley Olimpia En Panamá. Análisis Desde La Sociología Jurídica y Su Impacto En La Sociedad Panameña.

La ley Olimpia es una propuesta de ley que fue presentada y aprobada en Panamá por la Asamblea Nacional en el 2024 la cual busca regular y sancionar los delitos relacionados con el ciber delito, en especial el acoso, la extorsión con fines sexuales, la utilización de contenido íntimo sin consentimiento, así como castigar el grooming, posesión de material de abuso infantil, suplantación de identidad entre otros. Esta ley sigue los pasos jurídicos de su homóloga mexicana que fue presentada por la activista Olimpia Coral Mello en el Estado de Puebla en el año 2021, luego países como Argentina la adoptaron en el 2022. Esto convierte a Panamá en el tercer país de Latinoamérica que de ser aprobada por el presidente José Mulino entraría a legislar sobre el ciber delito y el ciber acoso en sus diferentes variantes y extensiones. No es para menos que está ley y su implementación tengan un impacto sustancial en la población panameña puesto que existen precedentes de casos de extorsión que han culminado en muertes de las víctimas al ser expuestas y vulneradas sin dejar de mencionar los daños emocionales y lesiones personales que acarrearán dado que en Panamá la ley que castiga estos casos se encuentra alojada en el código penal y el código procesal penal. Se hará una revisión de la ley desde un enfoque de la sociología jurídica en vista de la necesidad de profundizar sobre los precedentes sociológicos de la ley existente en Panamá.

Muslim Women's Bodies in a Mediterranean City: Female Activism in Ceuta

This paper focuses on the Generation-Z women in Ceuta protesting the anti-Muslim discourse propagated by the extreme right. A type of collective action taking place against the backdrop of a Mediterranean border-town, where strong social divisions persist along with great political polarization. This urban ethnography was carried out in Ceuta between 2021 and 2022 with specific focus on the protests around the use of the burkini in the city's swimming pools and beaches. It seeks to understand how Muslim women talk about their bodies, their right to occupy urban spaces and be present in the city, and the role feminism plays in their collective action. These protests have been interpreted by the extreme right as proof that the young women want to live "in a ghetto", though paradoxically, the results of this study show the opposite: their desire to exercise their Spanish citizenship, their willingness to call into question both the Muslim and Christian patriarchy and to defend their local identity (*Kaballa culture*). The research shows a new type of activism emerging in this isolated city of the Peninsula, one that is *episodic and reactive*, capable of resisting hate speech, turning one particular problem (the use of the burkini) into a reason of general interest (the defense of living in peaceful coexistence and the fight against racism and Islamophobia). They define themselves as intersectional and diverse feminists, have no stable organization, but are very active on social networks. They are prepared to take action should the situation so require it. They see religion as a vector of participation and not as a form of participation, being the social injustice inscribed in the Ceuti territory and heir of the North-South inequality, what really motivates their collective action.

Oil of Poverty, Environmental Degradation and Crisis in the Niger Delta, Nigeria

Oil is a natural resource. It is an invaluable gift of providence, with the potential to bless a nation so endowed with enormous wealth, if properly managed. However, its mismanagement can result in a resource 'curse' rather than a 'blessing'. This study examined the impact of oil on the Niger Delta region - the oil producing region of Nigeria. The study location was Rivers state, which was purposely selected from the nine oil producing states. Rivers state was chosen because it is the most volatile of the oil producing states and equally the first state where oil exploration begun in Nigeria. In-depth and key informant interviews were used to gather qualitative data from participants. In-depth interviews were administered to 8 males and 7 females, ages 18 years and above, randomly selected from the most volatile oil communities. Equally 6 focus group discussions were held with two homogenous groups of males and females respectively. Each group comprised eight participants that were drawn from various segments of the communities. Data gathered was analysed using NVivo 12, based on predetermined themes drawn from study objectives. Findings, revealed the negative impact of oil on the environment and the people. Oil exploration has resulted in environmental degradation and pollution, which have adversely affected the people and their livelihoods. This has resulted in massive poverty in the midst of enormous oil wealth. Similarly, the presence of oil has turned the state into a theatre of war, characterized by constant conflicts - between and within communities; between communities and oil companies; and among armed groups, oil companies and security forces. The study concludes that the Niger Delta question is rooted in the Nigerian question - the problem of mis-governance, and until the Nigerian governance question is resolved, the Niger Delta question may remain unresolved.

Gender Inequality in Water Scarcity Crisis and Its Consequences (The case of the Rural area of South Khorasan, Iran)

In recent years, Iran is facing a severe water shortage crisis, which has increasingly affected the residents of local communities. In Iran, as in most parts of the world, rural women play the main role in collecting, supplying, distributing and protecting water and are among the closest witnesses of water changes. In this article, we addressed the question of how gender inequality works during the water shortage crisis and what the consequences of this situation include and how gender equality and justice can be developed in the face of water shortage and drought. The present study was conducted using a qualitative method using library documents, semi-structured interviews with 16 village women and men, and field observation in the villages of South Khorasan, Iran. Based on the data obtained from the thematic analysis, 5 codes were extracted, including the cultural norm, the valuation of social division of labor, the law of land ownership, and the way of participation of women and men in the management of resources. Based on the results, improving women's awareness and knowledge with the aim of building capacity in the governance of local water resources, along with reforming and changing property laws and creating mechanisms for the active participation of women in local communities in managing water resources and valuing women's activities in water by creating opportunities. The entry of women into the formal economy can lead to gender equality in the issue of water scarcity and reducing the negative consequences of inequality and injustice in the water scarcity crisis for the benefit of women in the rural of South Khorasan of Iran. Changing traditional roles and creating new ways of cooperation between men and women in solving water issues is one of the lessons learned from this research.

ESMER, ECE* (PhD Candidate, Turkey)

Religion and the Body: The Impact of Faith on Plastic Surgery Decisions Among Muslim Women in Turkey

This paper draws on qualitative research to explore how religious salience affects perception of plastic surgeries—both reconstructive and cosmetic—among pious Muslim women in Turkey and how these women reconcile potential conflicts between beauty norms, Islamic values, and their agencies. ISAPS Report indicates a continuous rise in plastic surgeries in 2022, with a 41.3% increase over the last four years. According to the report, Turkey, as a Muslim-majority country, ranks 9th globally in terms of plastic surgeries. This upward trend in plastic surgeries in Turkey raises the question of how it can be interpreted, particularly in conjunction with Islam, notably cautious among Semitic religions regarding religious rules and values related to

these procedures. According to Islamic law, cosmetic surgery is deemed impermissible when its objective is to enhance the appearance of an already functional and "normal" body structure solely for attractiveness. Despite Islamic bioethical principles and the sharp framing of Muslim women's visibility in public spaces by Islamic law, they choose to reshape and make areas of their bodies visible to others in response to cosmetic concerns. This research will use ethnographic methods in three plastic surgery clinics in Istanbul, strategically selected with an intersectional approach, and conduct 12 in-depth interviews with pious women who have experienced these procedures. Preliminary findings suggest that pious Muslim women in Turkey must navigate societal expectations and religious principles when considering aesthetic alterations, contributing to the complexity of their situation. This study aims to delve not only into societal expectations' roots and effects from a feminist perspective but also ask how Islam plays a role in these conflicts. Additionally, it intends to address how Muslim women's perceptions of the body occur in the context of plastic surgery and how pious women negotiate these ideas considering shifts between religious and non-religious values in modern life.

Medicinal Plants in Yucatan Peninsula, Mexico: What Has Been Done to Protect Traditional Knowledge from Biopiracy? a Review from an Indigenous Data Sovereignty Perspective

Mexico is a country that has vast biological richness, which has provided resources to satisfy the needs of different cultures that have developed in the nation. An example of this use is medicinal plants, since Indigenous People mainly have sought to recover their well-being through the elements that surround them in their natural environment. Thus, the relationship between Indigenous Peoples and plant species has strengthened over time, giving rise to various traditional medicine systems that are transmitted from generation to generation. However, these practices have also left the indigenous context due to the growing interest of public and private institutions in finding alternative treatments to allopathic medicine to address some current health crises. As a result, ethno-pharmacological data is usually published with such openness that it has been placed in a state of vulnerability to both plant genetic resources and ancestral knowledge; this is due to the growing commercial exploitation of such resources by the industry, generating a series of conflicts around intellectual property and the sovereignty of indigenous data. Under this context, this proposal examines the current state of property rights over phyto-therapeutic resources in the Yucatan Peninsula, with special emphasis on the current legal framework and its implications for indigenous peoples. Through an in-depth bibliographic review, topics related to legal and ethnobotanical issues will be addressed; exploring the tensions between commercial interests and collective rights. Likewise, the efforts of Mexican Indigenous Peoples (Maya to be precise) to protect their resources and traditional knowledge in a context of globalization and cultural dispossession will be mentioned from an IDS approach and under the CARE principles.

SANTABALLA SANTOS, LETICIA* (CISPAC, Spain)

Building International Solidarities in Rural Areas: Wellbeing-Oriented Reception Practices for Asylum Seekers in Galicia (Spain) Since the 1990s

This paper examines the often-overlooked dynamics of international protection and asylum seeker reception in rural Spain, with a focus on Galicia, a region in northwestern Spain known for its distinct migration history. Despite extensive research on migrant integration in urban areas, little attention has been given to the specific challenges and opportunities in rural contexts, where community-based efforts offer unique pathways to social inclusion. This study analyses the impact of reception mechanisms on the well-being of individuals and families in Galicia, nospanning from the 1990s to the present.

Using five case studies (Bosnia, Kosovo, Afghanistan, Venezuela, and Ukraine), the research highlights both structured and non-protocolized reception approaches tailored to the attributes of rural settings. Employing qualitative methods, including semi-structured interviews, participant observation, and media coverage analysis, the study identifies three critical factors influencing these reception processes: 1) an active civil society that fosters solidarity with displaced persons, especially at the local level; 2) innovative reception/housing solutions that accommodate the needs of incoming migrants; and 3) the involvement of public administrations at all levels—local, provincial, regional, and state. Media coverage across these cases is critically assessed, revealing its significant role in influencing public opinion's sensitivity to asylum issues. By focusing on the interplay between civil society, local governance, and media portrayal, our contribution sheds light on the transformative potential of well-being-oriented reception practices in rural areas. It challenges dominant urban-centric narratives and contributes to broader discussions on the reimagining of rural regions as spaces for social solidarity.

ESPIÑEIRA GONZALEZ, KEINA* (Universidade da Coruña, Spain)

The Museum Absence: Sociological Implications for Reconstructing the Collective Memory of the Galician Diaspora

This contribution examines the reasons and implications of the absence of a migration museum in Galicia, a region profoundly shaped by emigration. The Galician diaspora has played a crucial role in forging the identity of its people and preserving their culture, often from contexts of exile and political resistance. Through a theoretical framework that integrates existing literature on migration museums, it is argued that the lack of a dedicated space to represent these narratives significantly limits the construction of an inclusive collective memory and undermines the national identity of the diaspora. In this context, a museum approach is proposed that incorporates the voices of emigrants and their descendants, emphasizing the importance of such a space in recognizing critical perspectives on migration, including the darker aspects silenced in official history. By analyzing diverse narratives surrounding Galician emigration and the diaspora—developed by institutions, political parties, and socio-cultural entities, such as the Galician Centers abroad—the study investigates the “disputed discourses” regarding the collective memory of emigration. This work is grounded in documentary research and interviews, reflecting on the sociological implications of these discursive disputes in both symbolic and material realms, which ultimately contribute to the impossibility of creating a migration museum. The absence of such a dedicated space deprives the community of cultural recognition and perpetuates a cycle of forgetting that affects future generations. Ultimately, the lack of a museum limits the community's ability to narrate its own history, an essential process for constructing a collective memory.

La Religión Viva de Mujeres Zapotecas Evangélicas En La Frontera Norte De México. Análisis De Tres Experiencias De Movilidad Como Estrategias De Vida y Supervivencia En La Adversidad

En esta ponencia analizaré algunas modalidades de experiencia de movilidad religiosa en migración, a partir del caso de estudio problematizado y discutido en mi tesis doctoral. Será a través del análisis en profundidad de tres experiencias de migración y de redefinición de la identificación y la pertenencia religiosa de mujeres zapotecas evangélicas de la frontera norte de México, que discutiré la manera en que la religión viva de individuos en contextos de migración, puede dar cuenta de procesos más amplios y complejos del individuo moderno en las sociedades contemporáneas. Entre estos, búsquedas de sentido y pertenencia en el mundo, como la elaboración de estrategias de vida concretas que se construyen en contextos de movilidad y de redefinición de las subjetividades, para hacer frente a situaciones adversas, de vulnerabilidad, precariedad o desigualdad social según los contextos. En acorde a la premisa general de esta sesión, me interesa discutir y mostrar a través de datos empíricos y de trabajo etnográfico realizado por varios años en el contexto de la frontera norte de México, la manera en que la religión, la espiritualidad o ambas en contextos migratorios, devienen herramientas clave para la constitución del individuo en tanto que sujeto; es decir, un actor consciente de su realidad y de su capacidad para transformarla. A través de la movilidad religiosa viva en la experiencia de la migración, mujeres zapotecas y evangélicas en la frontera norte de México, renuevan en el día a día su posicionamiento, la manera de enunciar, de relacionarse y de pertenecer, en distintas áreas y a distintos niveles de sus mundos y entramados sociales.

Social Justice and Non-Compliance Among Chilean Local Government Functionaries

Civil servants and officers in Chilean local governments have an active relationship with the rules that define the scope of their authority and do not apply them mechanically. Their willingness to bend the rules can be triggered in part by considerations of social justice, channeling public resources to those in need, even if they do not fulfill the required conditions. The mechanism underlying non-compliance consists of an interactive definition of the situation involving the officer and the user. This study refers to the perception of users of local services in Chile regarding the likelihood of non-compliance among the functionaries. Using a factorial survey of Chileans older than 18 years old (n=1153), we tested four scenarios that define a communication frame between users and civil servants: reiteration of the demand, material need of the user, flexibility to apply the rules and active support to the mayor during electoral campaigns. Flexibility and material need are more likely to trigger deviation from the norm because public officers see it as necessary in the light of social justice considerations and do not raise suspicions of unfairness or dishonesty. Complementarily, demands based on patron-client relationships associated with the support to the mayor would be rejected as unfair and dishonest. The paper also tests contextual explanations regarding the perception of corruption or discretionary practices in the organization as well as the administrative knowledge of respondents.

Between the State and Community Initiatives: The Architectonics of Participatory Housing in the Turkish Case

This study aims to examine how participatory housing production in Turkey is organized as a system in the context of the state and society through the housing cooperative examples presented so far. It should be noted that housing cooperatives have been considered for many years by the government and community initiatives as one of the useful solutions to meet the need for affordable housing and housing stock in Turkey. It is important to analyze the evolution of housing cooperatives in Turkey focuses on the role they have played in the systematic production of housing at both the state and community levels, as well as the way in which they have evolved in the course of time. In particular, the contribution of cooperatives in Turkey to the development of participatory motives in housing production will be discussed, and the processes of concrete examples that differ from conventional housing cooperatives will be examined in the context of the right to housing. In methodological terms, the research involved content analysis of primary sources (namely archived correspondence, plans, official state policy documents and interviews with users), and it is based on utilization of secondary sources (a literature review of published papers, and books).

Educational Strategies for Partnership Relations of the Brics Countries: Potential for Sustainable and Inclusive Economic Growth

The purpose of this paper is to discuss the educational strategies for partnership relations of the BRICS countries: “potential for sustainable and inclusive economic growth”. My paper focuses on Africa and its development. Specifically, what are the potential educational benefits for South Africa (SA) within the context of BRICS and how would SA harness the expertise and resources of developed and less developed nations to benefit and enhance its education system. The paper is divided into 5 parts. 1. What do we understand by the United Nations Sustainable Development Goal 4 (SDG 4) and how successful have we been in realising the objectives of SDG4 - Success Stories and Challenges? 2. What are Africa's challenges, historically, politically, socially, culturally. 3. BRICS 4. Educational strategies for partnership relations of the BRICS countries: potential for sustainable and inclusive economic growth” - Possibilities, successes and challenges. 5. What are the benefits for SA?

Challenges and Experiences of Multilingual Early Childhood Education and Care (ECEC) Teachers in Norway

Migration is a pervasive factor in today's globalized society, contributing to both increased diversity and challenges of inclusion and integration. Educational institutions, such as schools and Early Childhood Education and Care (ECEC) are crucial for inclusion, and multicultural teachers are often considered decisive for inclusive education. This article explore how migrant multilingual kindergarten teachers experienced their professional ECEC education and early stages of their professional careers.

All education is permeated by complex relationships, and kindergarten teacher education is no exception. Thus, the theoretical framework of this study is built around Biesta's three-dimensional understanding of the purpose of education – qualification, socialization and subjectification (Biesta, 2015), and the concept of "the pedagogy of relations" (Sidorkin, 2023; Bingham & Sidorkin, 2004).

Methodologically, the article adopts a qualitative approach, with a focus on the cultural, every-day, and situated aspects of the teachers' experiences (Kvale & Brinkmann, 2015). The study uses two rounds of in-depth interviews with three newly qualified kindergarten teachers with multilingual ethnic backgrounds. In-depth interviews provide access to the individuals' lifeworlds and thus offer a unique perspective on their lived experiences. The interviews were designed to be exploratory with an open structure (Kvale & Brinkmann, 2015), allowing space for the participants' own narratives.

The analysis of the data indicates that, for the participants, relationships play a crucial role in the educational process. It also reveals that while these teachers are qualified and resourceful, they struggle to gain acceptance and inclusion in the professional community early in their careers. They are not involved to the same extent as their Norwegian colleagues, which leaves them feeling insecure despite their competencies.

The findings of the paper indicate that the educational institutions as well as ECEC institutions should put more emphasize on building inclusive relations and foster socialization.

Over the Hills and Far Away - Imageries of Norway and Immigration in the Norwegian Language Textbooks for Adults

Globalization and population movements create challenges for the education at the national level. This also applies to the Nordic countries (Denmark, Finland, Iceland, Norway and Sweden), where the education has traditionally promoted social integration. Alongside comprehensive education, also adult education has become an important instrument in the integration of immigrants.

In this study, we examine the issue of cultural integration in the adult language teaching textbooks in Norway. In our study Norway represents a Nordic welfare state regime (Esping Andersen 1991), where the social equality and economic well-being are at the top of the world, but where the development of society and economy is also dependent on foreign labor and their successful integration.

Theoretically, Norwegian language textbook for adults are didactic tools dealing with the grammar. At the same time, textbooks are also boundary objects and re-representations of the society. They mediate different expectations of the society while simultaneously describing the everyday life from the point of view of the expected learner (Hansen & Puustinen 2021). Our research data consist of two Norwegian language book used in the language courses for adults moving to Norway. The research methodology is based on critical discourse analysis and idea of texts as discursive and sociocultural practise (Fairclough 1995). Our analysis focuses on the ways in which pictures in textbooks describe Norway and everyday life of immigrants who are representing different ethnicities and cultures.

Returning to Fees Must Fall: Reflecting on 'Fallism' and the 2015/2016 Student Movement in South Africa

2025 will mark ten years since the "Must Fall" movements took off in South Africa. Starting with Rhodes Must Fall, in March 2015, and moving to the explosion of protest action across campuses under the Fees Must Fall (FMF) banner later that year. The FMF protests started at Wits University in Johannesburg and quickly spread, eventually bringing the entire higher education sector to a complete standstill, and fundamentally reshaping aspects of it for years to come. It was the biggest and most sustained student uprising in the post-apartheid era. A new generation - most of whom were born around the time of the transition to democracy - challenged the commodification of education, and institutional forms of marginalisation and exclusion. The protests were initially sparked by fee increases, but students targeted deeper structural issues, demanding free education, the decolonisation of education, and an end to the exploitative practice of outsourced labour, amongst other demands. The student and worker movement surfaced new critiques and contestations in the post-apartheid period, opening up conversations that went beyond higher education, marking it as a crucial period in relation to broader South African politics. At the same time, they resurfaced older political and intellectual traditions, while bringing in new ways of thinking about politics, organising and movements. This paper reflects on Fees Must Fall, specifically probing the idea of 'fallism', which has been used in the literature to describe the broad politics and orientation that emerged within the movement and the generation produced through it. The paper looks particularly at Wits University and draws on new interviews conducted with activists, archival work and autoethnographic material. It takes a critical approach to the concept of fallism and the debates that emerged after 2015, situating it within its context but also in relation to other post-apartheid movements.

Multilingual Children's Literatures: BLACK Narratives' Potentialities for Linguistic Diversity

This presentation aims to explore and reflect upon the proposal of a literature course in Early Childhood Education (ECE) centred around multilingual children's narratives, specifically focused on Brazilian black authors such as Conceição Evaristo, Luiz Gama, Mestre Didi, Lélia Gonzales, Sueli Carneiro, Milton Santos, amongst others. By and large, these authors usually delve into profound themes like structural racism, social injustice, black identity, gender inequalities and the historical struggles for rights in Brazil. However, often centred around metaphors and engaging stories that stimulate children's curiosity and empathy, the simplified versions of these books offer sensitive ways to go through these themes that still retain the essence of the discussions but soften the way these topics could be dealt with in ECE, without losing sight of the importance of racial and social topics. Thus, the goal of this course is to explore the potential of these children's narratives for promoting linguistic diversity, social justice and environmental consciousness by challenging anthropocentric perspectives in addition to incorporating multispecies viewpoints and encouraging youngsters to think beyond human exceptionalism. The literature will be used as a springboard to promote collective agency and multispecies justice in ECE, handling the deeply entrenched structural racism in Brazil and how it intersects with environmental, racial and gender justice. The course structure will be organized into thematic modules which introduce in ECE concepts including multispecies justice, human and more-than-human interplay, environmental and racial justice, apart from language and identity. Based on this organisation, this presentation will address racial discrimination, colonial legacies and the structural oppression that permeates Brazilian society. It will also emphasize the importance of dealing with epistemic justice in ECE, recognizing the value of black knowledge systems for the interconnectedness of all living beings with a view to fostering a more inclusive, equitable and sustainable future.

Education and Occupational Aspirations of Low-Income Children and Mothers: Examining Their Operationalization of Hope through Homework Practice

This paper enriches the understanding of low-income mothers' and children's education aspirations by considering them as agentic beings in relation to homework practice. It examines the priorities they accord to homework and the parent-child dynamics that influence homework practice. 17 child-mother dyads from intact families and 17 child-mother dyads from single-mother families in Singapore were sampled through semi-structured interviews and vignettes discussions. The findings show that low-income children and their mothers harbour aspirations and consider everyday homework a critical gauge of children's potential as it is a more visible and immediate indicator for fulfilling school requirements. However, their hope remains vague and remote due to children's poor knowledge of education and occupation pathways, and children's reliance on the mother as an academic guide. Low-income children's and mothers' agency can hence be strengthened and their hope operationalized through redesigning educational resources, more coaching on diverse pathways, and strengthening partnership between schools and families.

Islands Militarization and the Claiming for Sovereignty and Dignity Rights

The post-Yalta hegemonies fostered military installations in the Mediterranean, legitimizing the interventions as the modernization of poor and backward societies. Notably, islands are territories subject to colonization that are considered economically marginal but strategic platforms from a geo-military view. From this perspective, the islands exemplify the ideal subaltern object to apply institutional technicalities to ease military settlements, build infrastructure, and conduct military testing and training, epitomizing the prototype of coloniality (McCusker and Soares, 2011).

Based on empirical research on the militarization of the Mediterranean Islands, this proposal aims to reflect the intersectionality of coloniality, secrecy, and uncertainty in environmental risk assessment. We reflect on how the island's militarization, from the Mediterranean to the Pacific Sea, was a global phenomenon long before the globalization theory. The postcolonial approach helps to review how social exclusion, resource exploitation, and denying full sovereignty in the name of national security are common paths, highlighting how subalternity and coloniality are at the core of the continental discourse on otherness and the availability of the Islands to be militarized. From a military point of view, islands are *terra nullius*, where activities are conducted free of any control, and thus related to secrecy and discretion, or silent domination (Chamoiseau 1997).

The imposition of militarization and colonial practices on islands inevitably sparked resistance, leading to strong identities and movements opposing extractivism and advocating self-determination and environmental justice. Protest and resistance to military island exploitation face creeping institutional strategy in manufacturing uncertainty (Frickel, 2014) by adopting secrecy, denial, silence, and invisibility (Latour, 1992), socially constructed agnotology, and ignoring protest content to any form of resistance. We reflect on how anti-base movement issues are connected in a global protest that drives the global justice movement toward the right to sovereignty and dignity.

Capturing the Daily Lives and Culture of Young Generation in Depopulation Risk Areas

The younger generation places great importance on work-life balance and considers it a significant value when choosing a job. According to previous research, regional communities, especially those at risk of depopulation, show a significant gap in living and cultural infrastructure compared to Seoul and the metropolitan area. This disparity between regional communities and Seoul/the metropolitan area can accelerate the migration of young people living in these regions. Nevertheless, there are still cases where young

people temporarily move into the area due to reasons such as education or employment. However, discussions about these temporarily incoming young people from outside do not seem to be actively taking place.

This study aims to examine why young people who move into the community for such reasons end up leaving again. By closely looking into their daily experiences, the study seeks to understand why young people residing in the community or those with migration experiences decide to stay in or leave the region. It is necessary to closely examine how young people living in areas at risk of depopulation are living their daily lives through their vivid voices, and to understand what they want and how they feel about their lives in their current regions by directly listening to their voices. To this end, the most suitable research method is 'Photovoice.' 'Photovoice' is a method from visual sociology, where research participants, often from socially marginalized groups use visual methods such as photographs or videos to express their perspectives (Wang & Burris, 1997). Thus, this study aims to use Photovoice to collect stories about how young people currently living in depopulation-risk areas experience their daily lives. Based on this, the study seeks to identify and analyze the needs for improving the quality of life through the daily culture of young people in these regions.

Adverse Childhood Experiences in Femicide Perpetrators: Does Trauma Type Matter?

Purpose: To compare the adverse childhood experiences (ACEs) of femicide, homicide and perpetrators of other violent crimes.

Methods: We administered an adapted Philadelphia ACEs questionnaire to perpetrators of femicide (the gender-based killing of a woman or girl), homicide and other violent crimes. Data collection took place in summer 2021 in four carceral institutions in Metropolitan Buenos Aires, Argentina.

Results: All participants (n=208) were cisgender males. Of the respondents, 71 were charged with femicide perpetration, 73 were homicide perpetrators, and 64 had committed a different type of violent crime. We did not observe any significant differences in the mean ACEs scores across groups, although all scores were higher than in the general population. Femicide perpetrators were more likely to witness a rape or sexual assault in their home, and more likely to have experienced being hit, punched or kicked in the home. They were also significantly more likely to witness a shooting or knife attack in the community than homicide perpetrators.

Conclusions: We did not observe any significant differences between the mean ACEs scores of femicide, homicide, and other crime perpetrators. However, femicide perpetrators were more likely to experience specific types of ACEs. Future research should investigate the trauma experienced by femicide perpetrators including type, severity, duration, and age at onset to determine patterns that may differentiate femicide perpetrators from those who commit non-lethal intimate partner violence.

Contribution: ACEs—and particularly their cumulative dose effect—have been linked to a host of negative health outcomes underscoring the long-lasting negative impacts of harmful childhood experiences on adult functioning. While ACEs are directly linked to non-lethal intimate partner violence perpetration, little is known about how these experiences are operationalized into the perpetration of femicide. This study fills that gap by examining ACEs among femicide perpetrators in support of violence and femicide prevention efforts.

EVANS, DABNEY (Emory University, USA)

DI MARCO, MARTÍN* (Leiden University, Netherlands)

Flying Under the Radar: Tactics of Intimate Partner Femicide Perpetrators to Evade Systemic Intervention

Intimate partner femicide (IPF) has gained increasing recognition and social awareness over the past three decades. Research during this period has shown that IPF often stems from abusive relationships. Despite this knowledge and the extensive research on coercive control and the growing interest in the life stories of perpetrators, there is still a gap in understanding how perpetrators evade peer and systemic interventions before the murder. Using a life history approach, this study identifies the strategies perpetrators use to avoid interventions by social systems and structures prior to femicide, expanding on Monckton Smith's framework on the stages leading to homicide. Based on 73 biographical, open-ended interviews with incarcerated men from Argentina, Bolivia, Brazil, Chile, Honduras, Mexico, Paraguay, and Venezuela, the study

used inductive thematic analysis and classification techniques focused on intimate relationship chronologies. Seven recurring strategies were identified: social isolation, gaslighting, vilifying perceived external threats, relying on alliances with male peers, "body terrorism," limiting outside employment, and reproductive and healthcare coercion. These findings highlight patterns of coercive control and consistent sequencing in relationships that culminate in IPF, showing how men navigated relationships and "flew under the radar" of peers and institutions that could have intervened to prevent lethal violence. Male complicity and support emerged as a significant factor in the Latin American context, indicating a community dynamic with important implications for the region's femicide landscape. The study emphasizes missed opportunities for intervention through both informal social networks and formal institutions, making the identification of these strategies a key step in improving IPF prevention.

Criminal Arrests and the Opioid Epidemic: An Investigation into the Spatial and Social Spillover of Opioid Overdoses in Chicago

Academics and policy makers have long questioned the role of criminal justice deterrence as an effective strategy to combat opioid overdoses. While the enforcement of drug policy via arrests takes opioid users and sellers off the streets, it is unclear the extent to which it effectively deters the misuse of opioids within a community, lowering opioid overdose rates. Moreover, arrests for the possession and manufacturing/distribution of opioids in one community may also simply displace opioid misuse, forcing users and suppliers to accommodate by going to other communities. This study investigates the role of criminal justice deterrence practices, i.e., opioid arrests, in effectively deterring opioid overdoses, paying particular attention to whether arrests in spatially proximate or socially connected communities lead to the diffusion or deterrence of opioid overdoses in a local community. Combining data from the Cook County medical examiner, emergency medical services information, and arrest reports with commuting statistics for Chicago's 77 community areas between 2016 and 2019, this study uses fixed effects spatial autoregressive models with spatial lags to predict community-level opioid overdose rates. We find evidence for the displacement of crime as well as the diffusion of crime benefits. Arrests for heroin and possession increase the total overdose rate in local and spatially proximate communities. Arrests for the manufacturing and distribution of synthetic narcotics displaces fatal overdoses into socially connected communities, while lowering the total overdose rate in the local community. However, arrests for the manufacturing and distribution of heroin helps to deter overdoses in socially connected communities while simultaneously increasing overdoses in the local community. Thus, findings suggest complex spatial and social spillover mechanisms of displacement and deterrence, dependent on the crime and overdose rate investigated. These results have important implications for understanding the effectiveness of criminal justice policies in deterring opioid misuse.

Gardening Behind Bars

This book discusses jail and prison gardens in the context of clinical sociology. Institutional site-level interventions are used with aims of being able to create system-wide change through the adoption of prison gardens not just at a few facilities, but all facilities using a rights-based approach. Gardens in incarcerated settings can generate real change for the greater good of the imprisoned communities we serve and at the same time be a stepping-stone to address environmental injustice in jail and prison settings. Jail and prison gardens challenge the prison industrial complex by placing some control in the hands of the incarcerated through food sovereignty and community building, not just amongst the incarcerated population, but also with staff who work with them. Jail and prison gardens force administrators to rethink rules and therefore, the iron cage of bureaucracy that they all contribute to. Closer examination of rules and the bureaucratic structure provides officials with the opportunity to modify these structures for the greater good of all, bringing forth meaningful change through collaboration and negotiation with clinical sociologists and incarcerated populations.

EVI, VIRGINIA* (IULM Milan, Italy)

The Social Life of Films: A Visual Research on "Birdwatchers"

This contribution aims to explore the network of relationships built around the film *Birdwatchers* (Marco Bechis, 2008). Realised in Mato Grosso do Sul (Brazil) with non professional Kaiowá actors over a period of four years, this fictional movie describes the political struggle of the Guarani communities against deforestation, stigmatisation and violence. "Cinema" enters into a context of strong social vulnerability, a "contact zone" made up of cultural overlaps and radical clashes. As David MacDougall recalls, films are objects with multiple identities; they could therefore become a field of investigation to observe the superimpositions between different cultural meanings, exploring temporalities and geographies. Along the journey, diverse and contradictory expectations, desires, and aspirations triggered by *Birdwatchers* emerge. In particular, the film delves into the Kaiowá political and ritual cosmology, taking the form of a "cinematographic struggle" – as Kaiowá have defined it – in an attempt to overcome imposed boundaries and stereotypes of authenticity and timelessness. Taking into account the social and political dynamics involved in transcultural artistic productions, along with hierarchies and asymmetries, the question 'Whose Story Is It?' seems to be a valuable tool to understand how the experience is articulated through the strategies employed by the actors involved.

Beginning with the exploration of the director's archive, the research establishes a connection between visual analysis and fieldwork, experimenting with multi-temporalities, archival re-use and the possibilities opened up by montage and video essay forms. The analysis of behind-the-scenes footage, outtakes and selected film excerpts highlights the act of reframing, engaging with materiality, memory and testimony, and exploring the interplay between time and screen memories. The study gives also suggestions regarding the multiple connections between fiction and reality, exploring off-screen politics and interferences, as well as the construction of representation within its social and political context.

Equal Rights to Care from Both Parents: Lone Parents and Paid Parental Leave in Iceland

Iceland is an example of a Nordic country that has provided non-transferable parental leave for both parents for a quarter of a century. The aim of the Icelandic act on paid parental leave was to provide children with care from both parents and to increase parents' possibilities to reconcile work and care. One of the characteristics of the Icelandic Act is that both parents are entitled to the non-transferable quota rights, regardless of if they share residency with their children and if they hold custody or not. The aim of the law is thus in line with the Act in Respect of Children, that emphasis that children have the right to care from both parents.

The take up rates for Icelandic fathers have been relatively high. Above 80% of fathers take leave and on average their leave length corresponds with their quota rights. But the take up rates have been lower for fathers that do not share residency with their children compared to take up rates for fathers in two parent families. To gain better understanding of the take

up of lone fathers compared to fathers that share residency with the mother and the child this paper will ask how fathers arrange their leave and the care of their child during the first three years in the child's life? Data from a population survey among all parents of first-born children in 2019 and 2021, will be analysed to gain information about the take up of fathers and their participation in the care of the child.

Les Ultras Au Maroc: De L'engagement Au Loisirs à Loisir Engagés

Le match de football et un spectacle sportif, qui offre beaucoup de plaisir et d'enthousiasme au supporters de football au monde entier, c'est un évènement festif, et occasion de libérer le stress et la pression associés aux rôles intenses imposés par le rythme accéléré de la vie contemporaine. En ce sens, les stades de football offrent des activités de loisirs peuvent contribuer à la santé et au bien-être (Mansfield, 2021; Dykin & Kay, 2020) et peuvent également avoir des effets thérapeutiques (McDermott & Aitken, 2021).

Dans un autre sens, il y a des chercheurs qui parlent du sport comme un outil qui travaille à renforcer l'idéologie capitaliste ; il est donc un moyen de distraction et de détournement de l'attention des masses opprimées des questions politiques (lutte des classes, anti-exploitation...). Mais depuis l'émergence des groupes « Ultras » sur les gradins, ils ont réussi à transformer les stades de football de l'opium des peuples en une plate-forme pour leurs revendications sociales, culturelles et politiques.

L'objectif principal de ce travail est de montrer le rôle des activités de loisir liées au spectacle sportif dans la création des formes d'engagement communautaire qui prônent des enjeux sociaux, politiques et culturels.

Alors, comment les ultras au Maroc sont-ils passés d'un groupe qui produit le spectacle dans les stades de football à un mouvement de jeunesse avec des revendications sociales ?

Notre recherche vise à répondre à cette question à travers une enquête ethnographique qui se focalise sur les activités quotidiennes des ultras dans les stades et les réseaux sociaux Marocains.

L'implication initiale de ce travail est de contribuer à la compréhension de l'aspect revendicatif des groupes ultras au Maroc ; et de participer sérieusement aux débats généraux de cette session, afin de développer des réflexions sociologiques sur les loisirs contemporains.

EZQUIAGA BRAVO, AINHOA* (Complutense University of Madrid, Spain)

Digitalization and Housing: Factors of Social Inclusion and Exclusion

In a context of global financialization, tourism and gentrification, and with the legacy of the housing bubble and subsequent crisis the country experienced in the early 2000s, housing exclusion in Spain is an increasing reality at the center of political discussion. Digital platforms such as Airbnb have created a growing stranglehold on housing supply, while online listings, such as Idealista, are monopolizing the information on prices and acting as market regulators in favor of tenants. As a result, the real estate market, especially in large cities and coastal towns, is experiencing an exponential increase in prices, especially rental prices, and the expulsion of local population.

The proposed communication shows the results of a research focused on the factors of inclusion and exclusion that digitalization brings in the field of the right to housing, carried out in three large cities of Southern Europe, combining desk research with qualitative methodology. We will focus on the Spanish case, for which 17 semi-structured interviews were conducted with key interlocutors, including representatives of NGOs, public authorities, activists and academics with expertise in different fields related to the phenomenon (law, economics, urban planning, geography...).

While the advocates of digitization stress the possibilities linked to the flexibility of access to housing or to the improvement of governance through data collection, vulnerable groups, among whom the third digital divide still prevails (Van Dijk, 2006), find an increasingly digitized real estate market, administration and services that hinder their right to housing.

On the other hand of digitalization, social movements have emerged around the right to housing (Platform of People Affected by Mortgages (PAH),

focused on evictions, or Tenants' Union (Sindicato de Inquilinas), focused on rental). These movements have been able to leverage social networks as a loudspeaker to raise awareness among the population and exert political pressure.

Estrategias Digitales Para La Circulación Del Cuidado Entre Trabajadoras Del Hogar Latinoamericanas

El envejecimiento poblacional en el Norte Global ha impulsado flujos migratorios femeninos desde el Sur para trabajar en el hogar y los cuidados, sector muy etnoestratificado. En España, estas trabajadoras enfrentan vulnerabilidad asociadas a las políticas de extranjería y un régimen de cotización estructuralmente discriminatorio, y a las propias características del empleo, que las aboca al aislamiento social, especialmente las internas. Por ello, el colectivo se muestra relevante para estudiar las estrategias de resistencia informal que facilitan las TIC.

La comunicación propuesta tiene por objetivo explorar cómo las trabajadoras domésticas latinoamericanas en Madrid navegan por su entorno digital para gestionar la circulación de apoyo, recursos y cuidado con sus redes de origen y destino. Partiendo del diamante de cuidados de Razavi (2008) y del concepto de circulación del cuidado de Baldassar y Merla (2013), y empleando el marco teórico de las *affordances* -posibilidades de acción que ofrecen diversas plataformas y dispositivos digitales- (Hutchby, 2001; Madianou y Miller, 2012), se aborda cómo la tecnología y los Social Media favorecen, limitan o median en la circulación de cuidado transnacional y de qué modo influyen las *affordances* de cada plataforma en las estrategias globales de cuidado.

La investigación emplea una metodología cualitativa, incluyendo entrevistas en profundidad y etnografía digital. Los resultados arrojan luz sobre la elección estratégica de los canales: WhatsApp como vía de comunicación continua y asíncrona con sus familiares, Facebook como plataforma de apoyo práctico, búsqueda de empleo o asesoramiento jurídico en España, así como la posibilidad de ampliar sus redes. También se subraya la importancia del altruismo y la mediación en el mantenimiento de estos espacios y cómo estos complementan los flujos transnacionales de cuidados, proporcionando recursos emocionales y prácticos esenciales para vencer el aislamiento social y la vulnerabilidad económica.

Social Representations of Infertile Women in the Moroccan Media: A Difficult Social Transformations

This paper addresses the issue of the social representations of infertile couples in the Moroccan media, as well as how infertile couples use social media to challenge the stigma attached to them, particularly women. It is based on a sociological study conducted in Morocco. Cultural and social norms significantly shape the representation of infertility in Moroccan media, often framing it as a source of stigma and shame, particularly for women. This perspective is rooted in collectivistic cultural values that prioritize procreation as a societal expectation. Infertility is often viewed as a social failure, leading to feelings of shame and bad reputation for couples, especially women. The media reflects these cultural attitudes, portraying infertility as a devastating experience, reinforcing the stigma associated with childlessness. The representation of women and infertility in Moroccan media significantly shapes societal attitudes towards reproductive health. Media portrayals often reflect and reinforce cultural norms, impacting public perceptions and individual experiences of infertility. The stigma surrounding infertility in Moroccan media significantly impacts women's lives, rooted in cultural, psychological, and social factors. In response to infertility, cultural norms may normalize practices like polygamy or extramarital relationships, further complicating the narrative around infertility in media. While these representations highlight the challenges faced by infertile couples, they also risk perpetuating harmful stereotypes and limiting the discourse around infertility, suggesting a need for more nuanced portrayals that acknowledge individual experiences and agency. The research indicated that there are some transformations associated with the social interactions inherent in the experience of illness. Specifically, these transformations relate to the interactions between individuals and their social environments through social media. Infertile couples negotiate to change perceptions of the illness and challenge the social stigma associated with it.

Teaching Sociology of Health at Moroccan Universities: Reality and Challenges

This paper addresses the issue of teaching the sociology of health in Moroccan universities. This paper is based on a dialogue with professors. At the ISPITS, students study sociology, rather than the sociology of health. In contrast, master's students study sociology of health, which is taught by professors who do not have a background in sociology of health. The content is primarily focused on defining key concepts such as sociology, family, social phenomena. Sociology is regarded as a secondary subject and receives comparatively limited time allocation in the curriculum. With regard to the Department of Sociology at the Faculty of Humanities, it should be noted that the curriculum for the first and second years of the Bachelor's degree set by the Ministry does not include the sociology of health. The department may elect to include the sociology of health in the third year of the degree programme, contingent upon the specialisation of the department's professors. Consequently, students pursuing a Bachelor's degree in Sociology in Morocco have the opportunity to study the sociology of health at only three academic institutions. Conversely, there are numerous Master's programmes that offer sociology of health. This can be attributed to the initiative and dedication of select professors in developing this area of research. It can be concluded that the incorporation of sociology in the *ISPITS* represents a significant acknowledgement of the value of sociological insights in understanding the complexities of health. However, this experience remains constrained by the limitations of instructional time and the lack of alignment between the content and the disciplinary focus of other academic fields. One of the contradictions of the sociology of health in humanities faculties is the increase in the number of graduate students specialising in the sociology of health, despite the exclusion of this discipline from the bachelor's degree.

FABIEN, JEAN* (Universidade Federal de Sergipe, Brazil)

PRO-Haiti (2010) : Un Programme d'enseignement Supérieur pour Comprendre la Récente Mobilité des Étudiant.e.s Haïtien.ne.s au Brésil

A partir d'août 2011, un groupe d'environ 89 étudiant.e.s haïtien.ne.s arrive au Brésil dans le but de poursuivre leurs études, brutalement discontinuées par le séisme du 12 janvier 2010, dans les meilleures universités publiques brésiliennes. Il s'agit, dans le cadre de la coopération entre les pays du Sud global, du plus grand groupe d'étudiant.e.s - de surcroît des étudiant.e.s noir.e.s - depuis l'ouverture du Brésil au phénomène de l'internationalisation universitaire en 2011. Cet article s'inscrit dans le cadre d'une recherche plus ample, qui concerne la mobilité académique des étudiant.e.s haïtien.ne.s au Brésil, en prenant comme base de réflexion le Programme d'Urgence en Enseignement Supérieur Pro-Haïti, élaboré et financé en 2010 par la Coordination pour le Perfectionnement du Personnel du Niveau Supérieur (CAPES). Née du constat des lacunes de la production intellectuelle, celle du Brésil en particulier, sur ce type de migration, la recherche en question se veut, de manière générale, pionnière dans la discussion sur la migration académique et qualifiée des Haïtien.e.s au Brésil. Quelle était la nature du programme Pro-Haïti? Quels ont été ses rôles dans la formation académique des étudiant.e.s haïtien.ne.s? Pour tenter de répondre à ces questions, il sera nécessaire de revoir la bibliographie sur la migration haïtienne, de présenter et décrire le programme Pro-Haïti et d'analyser les premières données recueillies à partir d'une méthodologie qualitative et quantitative. Les résultats préliminaires de l'enquête, menée entièrement en ligne, montrent que la majorité des étudiant.e.s haïtien.e.s interviewé.e.s choisissent de rester vivre au Brésil après leurs études, certains sont titulaires d'une maîtrise ou d'un doctorat, tandis que d'autres sont retournés en Haïti, y restent ou ont transité vers les États Unis, le Canada ou la République Dominicaine.

FACCHETTI, ANNA* (Università Cattolica del Sacro Cuore, Milan, Italy)

Co-Development: An Inclusive Development Potential or an Elitist Tool?

In 1996, Romero stated that to strengthen the development potential that immigration brings, co-development must be encouraged (Romero 1996, pp. 119-147). It is framed as an innovative alternative in the management of migrations, recognizing foreigners as agents of change in both their countries of origin and in those of arrival (Herrero 2000, p. 2). This idea develops within the context of European migration policies and highlights the importance of seeing immigrants as resources for development (Naïr 1997, p. 12), urging Italian policies to abandon an emergency approach and to undertake new strategies in which the state, civil society, the third sector, businesses, and universities actively collaborate. Co-development practices aim to translate the economic success of immigrants in host countries into development in their countries of origin (Herrero de Egaña Muñoz-Cobo 2000, p. 4); numerous examples show migrants who have arrived in Italy contributing to the development of their native communities through startups and knowledge transfers (Herrero de Egaña Muñoz-Cobo 2000). However, preliminary results from research on the integration of legally resident foreign citizens in Italy through social labs (Facchetti 2023, pp. 427-435) reveal a significant finding: co-development appears to be accessible only to migrants who have reached a certain level of integration in the host country, suggesting that co-development activities are for a select few. This would render co-development a strategy of elite cooperation. There would be a gap between the goals of migration policies developed at the institutional level and the actual capacities and needs of migrants. Given the increasing relevance of social justice in both the academic context and public debate, there is an urgent call for moral and political action to address and resolve social injustices.

Social Scenarios of Violent Deaths of Women in Brazil

This work proposes an analysis of the social scenarios of violent deaths of women in Brazil from 2015 onwards, the year in which the Femicide Law was enacted in the country, increasing the penalty for homicides committed due to domestic and family violence against women and when violence is based on gender. Several reports produced in the country and the monitoring of indicators have shown an increase in women's death rates, even after the Law, which encourages us to delve deeper into the social scenarios in which this violence occurs, as well as the impact that policies public initiatives to combat gender-based violence have produced. The research is being carried out through the analysis of legal processes, trial sessions and news published in the media about cases of femicide, concentrating the analysis in two states in Brazil, one in the Northeast region – Ceará – and one in the South region – Rio Grande do Sul. Based on gender and feminist studies, we mobilize the concept of femicide scenarios (CARCEDO, 2006), seeking to understand the economic, political and cultural contexts in which conditions of greater vulnerability of women to lethal violence are produced or facilitated.

The study has made it possible to understand not only traditional femicide scenarios or unique scenarios, such as those related to violence perpetrated by an intimate partner, but also cases in which there are intertwined scenarios between gangs and criminal collectives, scenarios linked to the victims' professional occupations, family relations and connectional femicides. These results contribute to understanding the complexity and diversity of scenarios where violent deaths of women occur, enabling a more qualified reflection on their ways of coping.

Mourning for the Dead Condemned for Terrorism: The Case of Belgian Families with Relatives Who Left for Syria

What does mourning mean in the context of families stigmatised by the counter-terrorism discourse that has affected Muslim communities in the West since the 9/11 attacks? Focusing on the case of Belgium and the families who lost members who went to fight in Syria in the wake of the Arab Spring in 2011, we aim to interrogate the experience of mourning when the death of a family member is overshadowed by the taboos of terrorism, jihad and war rooted in an Islamic framework. This presentation will explore the worlds of families confronted with the absence of the body and the lack of precise information about the circumstances of the death. It will highlight the strategies used by these families to preserve the memory of their children despite the widespread official discourse that associates Europeans who have died in Syria with categories of terrorism, monstrosity, disloyalty to the nation and hatred of Western values. Among these strategies, we will describe forms of solidarity and mobilisation, the use of legal counter-discourses, holding the state accountable, but also silence, reversal of stigma, and sometimes the need for forgetting. Drawing on ongoing ethnographic research with Belgian families who have lost their children, we seek to understand how an existence disrupted by a major political event – the departure of young Belgian Muslims to Syria and the government's counter-terrorism response – manifests itself in the reality of affected families and communities. We will also interrogate Belgian policy on the (non-)management of these tragic deaths: non-repatriation until death, lack of administrative recognition, failure to repatriate bodies, and the nature of communication with grieving families. Finally, our presentation will explore the problem faced by families whose children have disappeared in Syria and have been tried in absentia, without any confirmation of their death.

COHEN, NADIA* (DIPF | Leibniz Institute for Research and Information in Education, Germany)

Educational Information Systems As Relevant Structures in Bridging the Gap between Research and Practice

Digital platforms may not be the first thing that comes to your mind when searching for relevant structures to bridge the gap between research and practice. Still, they can act as intermediaries by creating a centralized space where different communities are brought together. Their basic function for the transfer process is to provide access to knowledge, structure it and connect it (Hepp 2013). Furthermore, they have the potential to offer new communication channels and complementary mediated transmission forms, enabling alternate access to knowledge (Bernhard-Skala, Sonnenmoser & Tombeil 2023). Their function in the transfer process is at the same time limited to the features they provide for their users thusly setting boundaries to the production, dissemination and use of knowledge (Hartong & Decupere 2023). For our research, we explored the intermediary role of a specific set of digital platforms in Europe in the context of knowledge transfer. They all focus on the dissemination of information on education and they are open and freely accessible to all. A further specificity is that they are government initiated platforms with a national scope that were established to collect, produce, organize, and distribute educational information and make it available to a wide audience (Kühnlenz et. al 2012, Ramsayer & Lorenz 2001/02). We analysed these portals using, adjusting and adding to the 17 activities of knowledge mobilization compiled by Rycoff-Smith (2022). The analysis revealed similarities as well as differences in the knowledge transfer activities of portals in various countries that we want to exemplify comparing France and Germany. Are there lessons to be learned in the conceptualisation of these portals and in the way they put transfer into practice?

Religion and Ethical Boundaries of Digitalization Practices in Africa

As the digital revolution continues to emerge as a new culture, digital experiences, particularly in the Global South, present critical questions relating to digital ethics. Scholarly studies on digital ethics often emphasize the self and professional management of ethical concerns in the digital space. What is often neglected is a critical examination of approaches that define and govern the importance of digital ethics. This paper focuses on how ethical questions emerge within the context of the digitization and digitalization of religious practices among the prophetic churches in Africa. In Africa, the digitization efforts of the prophetic churches generally focus on digitizing healing practices and religious testimonies. This is done through the online circulation of healing miracles and religious testimonies on various digital and social media platforms and outlets. There is no question that stories of healing miracles and/or religious testimonies always have a happy ending. Nevertheless, the digital circulation of one's dark past and its possible impact on one's privacy, personal and social information and security remains a concern as it raises many ethical questions. For example, how do we justify the online circulation of personal and religious experiences? To whom does a personal story of spiritual experience belong? In what ways is the privacy of an individual believer protected when his/her personal story is circulated online? Building on my previous works, I intend to interrogate the ethical boundaries and normative framework of digitization and digitalization in the context of prophetic churches and religious practices in Africa. In addition, through a critical interrogation of how digital ethnography is applied as a methodological approach in the study of online religious practices, the paper intends to outline embedded ethical concerns in digitization and digitalization practices, particularly among African prophetic churches.

FAIST, THOMAS* (Bielefeld University, Germany)

All That Is Solid Melts into Mobility: Climate-Related (Im)mobility As a Socio-Ecological Question

How do social inequalities drive climate-related migration and how does climate mobility accelerate and aggravate existing social inequalities locally and globally? The nexus between environmental degradation and (im)mobility & migration is not a new phenomenon. Rather the great acceleration of socio-ecological change increasingly undermines the foundations of human and non-human life. This increased velocity adds to the politicization of social inequalities around climate-related migration. The politics around the

nexus constitutes the socio-ecological question which refers to the double exploitation of land and labour, and the social closure against non-members of national states. This contribution contextualizes the new socio-ecological question, analyses the nexus between climate change and (im)mobility, and offers ways for a constructive and future-oriented strategy to respond to socio-ecological challenges.

 RIBEIRO, JOSÉ (Universidade de Lisboa, Portugal)

Multi-Level Governance of Democratic Innovations: Who, How and Where?

Democratic innovations are deemed to improve democratic governance in response to current predicaments. While many scholars agree on the importance of including those who are disengaged from mainstream policy and decision-making at all levels of governance, we know little about who has promoted and engaged, how has done so and where participatory and deliberative practices have been developed thus far. In other words, we miss robust evidence on the multi-level governance of democratic innovations. Acknowledging this gap, the authors critically approach this issue based on the analysis of 1,120 practices developed in Europe from the 1970s to today. Data was collected in 2023 and 2024 under the EU-funded project INCITE-DEM and main insights are retrieved from there. Whereas we find that most practices are implemented at the local level with local constituencies, some practices offer a more complex set of intertwined actors, instruments and scales. The paper argues that this multiplicity of factors and actors stands at the heart of multi-level governance of democratic innovations, which increasingly show permeability across levels.

La Formation à La Transition Écologique Comme Porte d'Entrée De l'Etat Dans l'Action Des Collectivités Territoriales : L'Exemple De La Formation Des Maires De l'Indre

Entre 2022 et 2024, le département français de l'Indre a mis en place une "Stratégie Climat 36" (SC36), dispositif dont l'un des objectifs est de former les acteurs du territoire sur les effets du changement climatique. Une formation des élus locaux, notamment des maires, la plupart du temps issus de petites communes rurales, est alors organisée par l'Etat au travers de ses services déconcentrés. 249 élus, représentant 107 communes, l'ont suivie. Outre cette formation, ces élus ont été mobilisés tout le long des deux ans du processus pour la construction d'une stratégie d'adaptation territorialisée au réchauffement climatique. Ce dispositif d'action publique, guidé par les services déconcentrés de l'Etat, paraît viser deux objectifs.

D'une part, former les élus aux impacts du changement climatique et les outiller pour y répondre. Par des approches issues des sciences de l'éducation, nous chercherons à évaluer dans quelle mesure la SC36 a modifié les pratiques des maires durant leur mandat.

D'autre part, assurer la présence de l'Etat dans l'action publique territoriale à travers l'instrument spécifique que représente ici la formation. A l'aide d'outils issus de la sociologie politique et notamment l'instrumentation de l'action publique, nous tenterons de comprendre comment la formation à la transition écologique à destination des élus locaux devient un moyen pour l'Etat d'affirmer sa présence et sa pertinence dans les territoires.

La présentation comprendra une présentation de la Stratégie Climat 36, une analyse du dispositif pédagogique mis en place sous le prisme de la relation entre l'Etat et les collectivités territoriales, et proposera une évaluation de l'impact du dispositif sur les maires de l'Indre. Pour cela, des entretiens semi-directifs seront menés avec les concepteurs pédagogiques de la SC36 et avec les maires ayant suivi le dispositif.

Live Music As a Daily Resistance Strategy in Madrid during the 2020 Lockdown: 50 Days of Collective Experience at the Plaza De San Bernardo

The sharing of live music during the most challenging months of the COVID-19 pandemic stands as one of the most significant instances of worldwide creative social resistance in recent history. As a collective tool of resistance against emotional trauma, and as a means to foster a sense of community and well-being, the study of this phenomenon offers a compelling avenue for research into creativity and its social functions. This presentation presents a descriptive case study of a successful 50-day collective experience within a neighborhood community in Madrid, Spain, during a period when the city, as a notably exceptional case study for research, bore one of the heaviest burdens of COVID-19 in the world. Data were gathered through in-depth personal interviews and direct observations. Applying a connected approach drawing on the fields of the Sociology of Art and Media Studies, three key findings emerge: (1) participants emphasized shared *live* musical performances as the primary catalyst for fostering a sense of community, collective resilience, and overall well-being; (2) their sense of togetherness was further bolstered by digital and media support, as recordings of *live* performances were shared with loved ones living elsewhere, as well as with journalists and on social networks. This network of communication played a pivotal role in connecting individuals; (3) the combined efforts of both initiatives contributed to the development of a more positive individual and shared narrative surrounding the crisis.

FALCÓN, LAIA* (Universidad Complutense de Madrid, Spain)

Security Nearness: Some Conclusions after the First Post-Confinement Live Stage Performances. the Spanish Experience of on Air 2020.

What have we learnt from live stage experiences during the period of Worldwide Pandemic, after lockdown? This presentation focuses on the case of *ON AIR*, staged in Madrid and Sevilla in 2020 as a revision of Orson Welles and Cole Porter's music theater piece *Around the World In 80 Days*. Presented as a free version on Jules Verne's novel with new character and scenarios, the piece of Welles and Porter was premiered on 1946 as a celebration of relieve and peace after IWWW. As a free revision of Welles and Porter' piece strongly linked to Pandemic social context and the new need of a "Security Nearness", the show *ON AIR* was live premiered in Madrid's National Concert Hall during the first weeks after confinement and underlined by critics, audience and performers as a deep experience of catharsis and wellbeing. The artistic and sociological research of worldwide stage experiences like this may be a very important tool for future times.

Agroecology on the School Food Menu, the Seeds of a Sustainable Transition

In Senegal, food insecurity among children is a real obstacle to school attendance. To counter this, school policies in the most vulnerable areas, such as the Fatick Region, have integrated school canteens. Implemented in at least 11% of Senegal's elementary schools, these canteens provide pupils with two meals a day. In the Fatick region, the canteens are supplied with local products such as millet, the main staple cereal, and milk. In this way, they provide a real lever for promoting local products and shortening supply chains. In addition to shortening commercial circuits with school canteens, Fatick's farmers and agropastoralists are already in the agro-ecological transition. In fact, they have co-created a local dynamic for agro-ecological transition (DyTAEL), affiliated to a national multi-actor movement. The DyTAEL has drawn up a vision for an agroecological Fatick by 2035. This ambition has been translated into a multi-year action plan. To operationalize the action plan, DyTAEL has been selected as an Agroecological Living Landscape to support the implementation and co-development of profitable agroecological business models that are sensitive

to the principles of the circular economy and the development of local food systems. To this end, the B-act_Tool is used to assess the level of alignment with agroecologies, HPLE principles of those business models. In this respect, value chain mapping and analysis has identified and consolidated links between school canteens and producers. The links are synergistic and mutually beneficial, with positive externalities for the region. For the canteens, supply is stabilised with healthy products. As for producers, they have a secure market, encouraging their efforts to make the transition to agro-ecology. In its ambition to develop an agroecological territory, DyTAEI has the opportunity to introduce agroecology into schools, and to see children already aware of the principles and benefits of agroecology at elementary level

ABDELRAHMAN, MOAZ NASSER SABER (Scuola Normale Superiore, Italy)

Crossing the Border on TikTok: Digital Narratives of Irregular Journeys through Novel Social Media Platforms

The rising popularity of the new social media app TikTok coincides with the appearance of new accounts that both document irregular journeys and advertise smuggling services. In the absence of sufficient regular migration pathways into Europe, information on social media regarding irregular journeys can provide individuals with concrete and immediate next steps. With the existence of evidence that migrants implicitly distrust smuggling services providers, migrants seek trustworthy sources. The usage of digital media platforms in spreading information on migratory projects, or even connecting transnational families is not a new phenomenon. However, the usage of TikTok, a video-based platform, presents a new opportunity to migrants as it adds a visual element to their information dissemination tactics, making it more accessible, and providing visual evidence to their audience beyond closed circles of other digital media platforms. TikTok is a catalyst in diminishing the information asymmetry experienced by people on the move by enhancing transparency in documenting individual journeys and disseminating information. Native dialectics are used in these TikTok videos, which eases the communication, and TikTok's For You page and hashtags features provide easy access to this mode of social capital. Discourse analysis was used to understand the divergent narratives of both individuals documenting their own irregular journeys without the assistance of smuggling services, and the advertisers of smuggling services on TikTok. The engagement of the audience with such videos is compared to explore the resonance of different content with its audience. The findings of our analysis reveal that content from migrants traveling independently receives greater attention and engagement than that of individuals advertising their services, indicating the higher level of trust that a lack of profit-motive can confer.

FAN, YIPIN* (Ocean University of China, China)

Shifting Tides of Nationalism: A Comparative Study in Mainland China and Taiwan

This study utilizes the 2008 and 2018 East Asian Social Surveys, employing non-parametric rank-sum tests and quantile regression to assess the evolution and influencing factors of nationalism in mainland China and Taiwan. Over a decade, it reveals a general decline in East Asian nationalism (excluding North Korea), with mainland China consistently displaying significantly higher levels, and Taiwan significant lower. Meanwhile, in both mainland China and Taiwan, individuals who maintain closer social distances with neighboring countries exhibit stronger nationalism compared to those with distant countries. Cross-sectional comparisons reveal that age and conservatism consistently exert a positive influence on nationalism across all quantiles at every examined time point. In mainland China, the impact of education on nationalism is notably significant primarily at lower quantiles. Conversely, in Taiwan, social distance significantly impacts higher quantiles, suggesting a pattern of Exclusion without Nationalism. Longitudinal comparisons indicate noticeable shifts over time. Specifically, while mainland China has experienced substantial changes, Taiwan's changes have remained relatively stable. In mainland China, the influence of socioeconomic status on nationalism, initially non-significant in 2008, emerged as significant across all quantiles by 2018, signifying a growing ideological divide among different social strata. Moreover, attitudes towards anti-globalization in mainland China have evolved from a negative influence on nationalism in 2008 to a positive one by 2018, reflecting a shift from liberal economic nationalism to producerism. In contrast, the comparison between the two survey years in Taiwan underscores the marginal effects of international exposure. This study aims to offer a nuanced perspective on the evolution of nationalism in mainland China and Taiwan over the past

decade. By exploring the unique political contexts of each region and their potential impact on nationalist sentiments, it seeks to contribute to a better understanding of regional socio-political dynamics.

BOUCHER, AURELIEN (The Chinese University of Hong Kong (Shenzhen), China)

LING, CHAO (Central University of Finance and Economics, China)

Circulation or Reproduction: Sociologists' Recruitment in Chinese Elite Universities 1982 to 2022

The transformation of elite circulation and reproduction in transitional societies, such as China, has progressively become a mainstream topic. While previous research predominantly focused on political and economic elites, intellectual elites have received comparatively less scrutiny. To address this blind spot, our study draws on biographical data of Chinese sociologists (N=853) from 31 top universities. We demonstrate that the reform of the Chinese Higher Education System, and more particularly, the willingness to recruit scholars capable of improving the international reputation of the university, has tremendously impacted the recruitment, circulation, and social origins of Chinese sociologists. When the Chinese government agreed to reinstitute sociological studies and departments in 1979, the socio-economic and academic backgrounds of sociologists were highly diversified. Scholars holding master's degrees, enriched by interdisciplinary experiences, and from non-elite university backgrounds exhibited a great propensity to join elite sociology departments. Nonetheless, the cost of entry into the discipline has progressively become higher, the profile of sociologists more internationalized, and their academic background more closely related to Sociology. More precisely, scholars with undergraduate degrees in sociology, overseas study, and post-doctoral experiences emerged as more prominent in the youngest cohort of sociologists. Due to this process of professionalization, specialization, and internationalization, scholars sharing the same field of study, originating from elite academic institutions, and belonging to a network of influential alma maters literally monopolize the space of the most reputable sociology departments. Paradoxically, our investigation into the dynamics of the Ph.D. exchange network unveiled a shift from a homogenous landscape associated with inbreeding tendencies to a more complex pattern of circulation among Chinese sociologists. Ultimately, shedding light on these transformations contributes to a deeper understanding of the evolving landscape of intellectual elites and the intricate interplay between individuals, institutions, and state policies in the dynamic realm of academia.

FAN, XIAOGUANG* (Zhejiang University, China)

ZHOU, WEN (Yunnan University, China)

Elite Networks, Interactions, and Subjective Social Status in Chinese Private Entrepreneurs

The network approach is theorized as one of the classical paradigms for understanding the formation of subjective social status. Drawing on data from the 2018 national private entrepreneurs survey, the statistical results highlight the gap between theoretical explanation and empirical evidence. We employed Agent-based Modeling (ABM) within the framework of the generational models. The ABM reveals that attitude interaction is another mechanism through which the elite network affects the subjective social status of private entrepreneurs. Meanwhile, neglecting the status of the elite network will inhibit and strengthen the differentiation of overall subjective social status during the interaction. The social status will further deviate from the objective social status, but its instrumental rationality has a mitigating effect to some extent. These findings have important implications for understanding social change in contemporary China and contribute to the social network theory of subjective social status.

FAN, YINTAN* (University of Essex, Sociology, United Kingdom)

Calibrated Time: Temporal Embeddedness of Chinese Migrant Entrepreneurship in Prato Fast Fashion Industry

Temporality is rarely discussed in migrant motivation and ethnic entrepreneurship. This research reveals the temporal embeddedness of Chinese migrant settlement and entrepreneurial practices in Prato, a city famous for textile production in Italy but has suffered labour shortages and

economic recession in the last decades. Chinese immigrants came to Prato and converted it into a fast fashion centre and propelled the local economy. This research aims to investigate why Chinese migrants prefer to settle down in a mid-sized Italian city and how this new trend of immigration shapes the local industry and the city, following an analogy of plant growth. Through my fieldwork in Prato and other research sites, I concluded the four growth phases of entrepreneurship: Seeding, Rooting, Sprouting and Flourishing, to analyse migrants' motivation, economic settlement, entrepreneurial attempt and business ecology formation based on temporal embeddedness. As the first level of temporal embeddedness, the imagined futures attracted Chinese migrants to calibrate their social jet lags and embrace Western advancement, leading to their economic settlement and entrepreneurship in Prato's fast fashion industry. Moreover, the second level of temporal embeddedness made Chinese migrants another time calibration to synchronise the world time zones in the latest trend in fast fashion. The Chinese migrants formed a self-sufficient ethnic industrial chain and the corresponding business ecology to chase the fashion speed. This research further explores Chinese presence led to reconstruction possibilities in declining industrial cities in the Global North with immigrants' involvement.

Revisión Crítica Del Género En La Investigación Educativa STEM Latinoamericana

Esta revisión crítica explora la conceptualización del género y su relación con la investigación en educación STEM en América Latina, mediante una búsqueda sistemática y un análisis cualitativo de artículos académicos. Los resultados indican una visión reduccionista del género, principalmente restringida a la dicotomía binaria entre hombres y mujeres, lo cual limita una comprensión más inclusiva y compleja de las identidades de género. Aunque se reconoce la brecha de género en el acceso y la participación en STEM, pocas veces se cuestionan las estructuras de poder subyacentes y los factores sociales que perpetúan estas desigualdades en la región.

Los estudios cualitativos suelen carecer de perspectivas feministas críticas que permitan profundizar en la naturaleza estructural de estas desigualdades, mientras que los estudios cuantitativos rara vez aplican un análisis interseccional que considere la interacción del género con factores como la clase, la etnia o la ubicación geográfica. Además, la falta de una reflexión ética integral es evidente en gran parte de la literatura revisada.

La conceptualización de STEM se presenta de manera disciplinaria y fragmentada, lo cual impide su integración con las ciencias sociales y la adopción de enfoques más holísticos y críticos. Esta revisión subraya la necesidad urgente de incorporar enfoques feministas e interseccionales en la investigación educativa STEM para desmantelar barreras estructurales, mejorar la calidad y relevancia de la producción académica, y promover la equidad de género. Dichos enfoques no solo profundizarían la comprensión de las desigualdades de género, sino que también contribuirían a un cambio estructural significativo en la educación STEM, favoreciendo una mayor justicia social en América Latina.

Navigating Power and Care: A Sociological Analysis of Mental Health Act 1983 Use for People with Dementia

The Mental Health Act 1983 allows people with 'mental disorders' to be detained and treated against their will in defined circumstances. Socio-legal scholars have identified the role of mental health law in framing paternalistic responses towards those deemed unable to care for themselves, with empirical research identifying a focus on individuals' risk when conducting such assessments. This literature has been valuable, but few papers have examined mental health law in relation to people living with dementia and their families. Our paper presents findings from a qualitative, exploratory study that examines legal decision-making in this context. Focus groups with eighteen mental health professionals and eight family carers were conducted.

Themes emerged around insufficient communication, the exclusion of family members from decision-making, and the resulting confusion and emotional toll. These findings point to a larger crisis in health and social care, where structural limitations hinder the ability of people with dementia, their families, and professionals to access sustained, multidisciplinary support. The study argues for more holistic, ongoing care, enhanced communication during MHA processes, and the reform of legal and policy frameworks to enable greater flexibility in providing support for people living with dementia.

Rebuilding Relationships: A Case Analysis of Artistic Intervention in Rural China

In 2013, Chinese contemporary artist Li Mu collaborated with villagers in Qiuzhuang, his hometown in Feng County, Jiangsu Province, China, to recreate and exhibit modern and contemporary artworks from the Van Abbemuseum in the Netherlands. This study takes the "Qiuzhuang Project" as a case study to explore the practice of artistic intervention in rural China. It analyzes the relationships and meanings generated among the artist himself, the villagers, and the interactions between the artworks and the environment, aiming to investigate the significance that emerges among different participants, the artworks, and the environment through the medium of art.

Grounded in theories of participatory aesthetics and relational aesthetics, this paper employs Kaija Kaitavuori's model of four types of participation to analyze the relationships and social implications that arose during the collaborative creative process between the artist and the villagers. The research primarily adopts qualitative methods, conducting textual analysis on four video works, filmed by the artist during the project, the Qiuzhuang Project diaries published on the artist's personal website, and relevant media materials.

The study finds that Li Mu controlled the entire participatory process of the production and exhibition of the artworks in the Qiuzhuang Project, with villagers assuming a passive collaborator role. For the villagers more meaning was derived from the interactive processes among the artist, the artworks, and the outsiders attracted by the art activities. For Li Mu, although the project originated from his forceful insertion of foreign contemporary artworks into the Chinese rural environment—creating a strong conflict and opposition between the works and the local setting—this process allowed him to re-explore his hometown and rebuild his relationship with the villagers through the medium of art.

Anti-Boredom As Structure of Feeling: Game Domestication and Mutual Aid Among Chinese Gamers with Visually Impairment

When visually impaired individuals start playing games, how do physical disabilities and structural situations shape their video game experiences? What does digital media, particularly video games, mean to visually impaired individuals? This article employs life story interviews and participatory observation to explore the daily lives of visually impaired individuals within the ecology of blind gaming in China. It aims to understand how the structural situations of marginalized groups generate shared structure of feeling and how these structures influence their gaming behaviors and actions within online communities. The study shows that bodily impairments and social barriers jointly shape the "boredom" experiences of visually impaired gamers. Digital media serve as valuable resources for coping with this boredom, with gaming providing immersive experiences, social opportunities, and a sense of achievement. However, commercialization within the blind gaming ecology leads to repetitive game mechanics, homogenized designs, and a focus on pay-to-win strategies, resulting in a secondary layer of boredom—boredom with the games themselves. Within the "anti-boredom" structure of feeling, visually impaired players initially use games to pass the time but later turn to other media for the same purpose. They engage in utopian actions such as mutual assistance, creating their own games, and reaching out to developers for accessible models—all aimed at enhancing the gaming ecosystem within the blind community. However, these efforts are limited by a commercially driven gaming culture and prevalent stereotypes about visually impaired individuals. For visually impaired players, media significance goes beyond mere functionality; it embodies a way of life. The "anti-boredom" structure of feeling formed around media reflects their structural situations and highlights the need for greater inclusivity in digital spaces.

From Mutual Aid to Commercialization: Politics of Hope in the Evolution of China's Visually Impaired Gaming Community

Although the benefits of digital technology are widely acknowledged, along with its potential to generate new forms of inequalities, there has been limited discussion about the hope held by individuals with disability toward it. Utilizing the concept of 'the politics of hope'—the dynamics that both enable and constrain hope—this study explores how these individuals' hope for a better life are shaped and sustained within their evolving online communities. Through a year-long cyber ethnography in two online gaming groups for the blind and interviews with 17 veteran players, the study found that digital games symbolize equality and a life free from boredom, with this hope initially realized by independent game developers who are visually impaired in China. The rise of mobile phones expanded the player base, attracting commercial companies that leveraged and reinforced the discourse of hope to market their products. However, the commercialization of the community led to a phenomenon termed 'hopeless hope': companies prioritizing profits produced homogenized and dull games that disappointed blind players and diminished their aspirations. Faced with this duality of hope, informed players help regulate the emotions of ordinary players by explaining the real-world mechanisms of game production within their groups. Drawing on past achievements and foreign institutional contexts, visually impaired gamers sustain their hope in gaming through imaginative engagement. This paper argues that hope is not merely a future-oriented concept but a universal and essential emotion that evolves through social interactions. Researchers should focus on its specific forms and the pathways that lead to hope in real-world contexts. By analyzing the conflicts surrounding hope among various actors, this study highlights the hope dimension of digital technologies, asserting that hope is crucial for understanding inequality and should be regarded as a central theme in examining the digital lives of marginalized groups.

To Centralise and Decentralise the Indonesian Social Insurance: Dispensing the Burden of Poverty, Informality and Work Casualisation

The Indonesian national social security was put into effect as part of the country's post-crisis welfare policy reform. The government chose to centralise many extant local social policy programs in early 2000's, with an ambition to achieve a universal coverage. Yet, after a decade from its launch in 2014/15, more regulations were issued to delegate portion of financial responsibilities of the system to the sub-national governments, especially regarding subsidies and payments for low-income citizens and short-contract workers. These new 'policy layers' were added into the core policy to accelerate coverage while aiming to share the financial burdens between these different levels of government. Using Indonesia's national social health insurance program as the case, this article explains these shifts as part of the national government effort to deal with demographic and labor market challenges, but have a risk of being counterproductive to the policy main goal. This article offers a qualitative analysis of the evolving changes of national social security policies in Indonesia and seeks to contribute to theoretical discussions on social policy layering in emerging economies across different governmental levels i.e. national and sub-national. This article examines key policy changes pertaining to Indonesian social health insurance from 2014 to 2024 using data from official records, previous studies, and media archives. The article concludes that instead of welfare retrenchment which might yield more political cost, the national government took another turn, by incrementally sharing the financial burdens to sub-national governments through policy layering, despite the possible unintended impact to its main goal i.e. the universal coverage.

Denaturalisation and Modernity: Drugs and Racial Capitalism

From the earliest days of European colonialism in the Americas and transatlantic slavery, psychoactive drugs, racial inequality, and the global political economic order have had intertwined histories. Particularly attentive to sugarcane—used to produce cachaça and rum—as well as coca, cocaine, tobacco and opium, we argue that the intensive production of and transnational trade in increasingly potent psychoactive substances fueled the historical rise of racial capitalism and has remained vital to the ongoing re/production of

the unjust global order. The ascendance of drugs as commodities has been co-constitutional with the commodification of both the natural world and the laboring bodies that is at the heart of racial capitalism. At the same time, the circulation of commodified and globalized drugs *into* bodies helped produce and institutionalize struggles over "modern," differentiated subject-making that were key to both capitalism and to constitution of today's global political order. Building on Sylvia Wynter's work, we argue that race, drugs and Euro-colonial modernity are entangled through a process we call *denaturalization*. *Denaturalization* is the process by which Euro-colonial "modern" ideologies aimed at the control of the natural environment, at the autonomy of certain individuals from their "natures," and at classifying some humans as more "natural" than others, become institutionalized, and come to shape the political and economic management of humans and their environments across the scales of individual consciousness and racial capitalism.

Resilient "Complex Living Arrangements" to Better Face Economic Hardship?

The model of nuclear family coresidence has become the normative standard of modern westernized societies, whereas living in complex households, where extended families cohabit, is assumed to represent a traditional, rural living arrangement. This presentation advocates that in local contexts of rapid economic transformation, accelerated urbanization and scarcity of public welfare, families develop "survival strategies" (Gerstel, 2011) to better accommodate the changes.

Based on the case of French Polynesia, where 4 out of 10 people live in "complex households" we deconstruct this census category drawing from the 2017 census microdata. In this archipelagic territory, which consists of 74 inhabited islands (among 118) spread across an area as vast as Europe, access to resources, the pursuit of exogamy, and, more recently, access to public services (such as health care and education) and employment opportunities face families with huge challenges.

We demonstrate that the overrepresentation of complex households corresponds to family organizations well suited to navigate the challenges of a modernized society. Rather than suggesting that Polynesia is still at an earlier phase of development or that this traditional living is an inherent cultural trait, the prevalence of complex households living arrangements is key to the resilience of family organization on the territory (Sierra-Paycha et al., 2022, Fardeau et Lelièvre, 2023)

Educational access, health care facilities, and job prospects are heavily concentrated in the Papeete metropolitan region, which is also grappling with a particularly tight housing market. Family members circulate among kins from the archipelagos to the centre. Within this context, they often have no choice but to share housing and resources, organize care collectively etc. In this presentation we demonstrate how these various forms of family organization facilitate better access to resources, particularly in response to ongoing socio-economic crises.

FARIAS, ANA CAROLINA* (Integrated PhD Researcher, Portugal)

SAARISTO, SAILA-MARIA (Iscte - Instituto Universitário de Lisboa, Portugal)

Navigating Neutrality and Advocacy: Activist Research in Contested Urban Spaces

Universities are increasingly expected to engage with pressing social issues, evolving their roles beyond traditional academic boundaries. This proposal explores experiences like participatory action research and university extension, inspired by Paulo Freire's ideas in Brazil - which emphasise active community engagement beyond traditional academic boundaries - in fields such as architecture, urbanism, sociology, and anthropology. By reflecting on collaborations with communities facing housing precarity in Portugal, Brazil, and Angola, we examine how these engagements help reshape the public role of universities while addressing local housing challenges.

The experiences presented highlight the necessity of remaking the university's role, not just by expanding its "third mission" but by transforming

internal practices to enable deeper involvement from researchers and educators. We explore the tensions between the roles of researchers and activists and the challenges of justifying outreach initiatives within academic settings. Conventional metrics often undervalue community engagement, signalling the need for new frameworks that recognise and reward this work.

Our proposal also explores the tensions encountered in university extension projects, where academic neutrality is often questioned, and engagement with affected communities is perceived as partial or aligned with particular interests. These tensions are especially pronounced in contested urban spaces, where the demands of residents often conflict with state and market priorities.

The work argues for an ethical commitment to engaged scholarship that prioritises social justice and dialogues with non-scientific knowledge while advocating for structural changes within the university to support researchers and educators in these roles. This proposal seeks to contribute to the discourse on the transformative potential of university extension, advocating for a model of engaged scholarship that not only disseminates knowledge but actively participates in shaping more just urban and regional policies.

UDDIN, MOHAMMAD JASIM (Department of Sociology, Shahjalal University of Science and Technology (SUST), Bangladesh)

Impact of Overseas Migration on Food Insecurity of the Left-behind Community of Migration-Prone Regions of Bangladesh

Migration is one of the most ancient strategies people have adopted to ensure food security. It may also cause food insecurity by affecting availability, accessibility, utilization, and stability of food negatively. There is, however, a lack of comprehensive studies on the direct role of migration and remittances in food insecurity in the migrant-sending regions of Bangladesh. Therefore, this article brings the 'underdevelopment perspective' of overseas migration into the study of food security by commissioning qualitative research in the country's most migration-prone Cumilla district. Data was collected through in-depth interviews, key informant interviews, and focus group discussions with multiple stakeholders. Employing a thematic analysis, our results confirm that the migration-prone regions of Bangladesh have been experiencing a depletion of the male labor force because of the predominant nature of male overseas migration from those regions. Because of shortages of labor, thereby increased wages and construction of new houses on agricultural land by many migrants, a considerable amount of such land remains fallow and decreases each year, respectively, which in turn decreases the availability of food by hampering physical production. Again, remittances contribute to unequal access to food by creating disparities in purchasing power capacity between migrant and non-migrant households. Because of their consumerist behavior, migrant households exert pressure on non-migrant households, which is responsible for decreasing non-migrant households' economic access to food through price upsurges. Migration through remittances favors the adoption of bad food consumption habits and brings about poorer diet habits. Most of the migrant households, who once produced their food, are not involved in farming anymore. Therefore, household farm production and availability of food decline, which creates instability of food. Awareness build-up programs regarding unplanned migration and unproductive use of remittances and formulation of land use and housing policies are essential to combat food insecurity.

How Everything Became War. from a Female Look at the Military and Back

The present work starts from the need to analyze the present and the contemporary process of militarization of public space in language and actions, in the use of war recurrent as a metaphor and self-legitimizing reference of a political action that restricts space both in terms of perception of alternatives and social composition, as well as in its decision-making centralization. Under observation are the events that since the 90s with the establishment of the new post-Wall world order up to the simultaneous framework of war preventive and permanent, fall on civil society, on relations between states and on the affirmation of of value references and political agendas that place war less and less outside the experience possible, as well as even legitimate. The primacy of security, to which we must also respond militarily, for example, it has restricted the space of instances and movements for peace to give way to bellicification (male) and incremental.

The expansion of the war space with the protagonism of the contemporary military is the result of a long process that over time has never freed civil coexistence from the construction of armed relations. This is what emerges in the retrospective look that is proposed here. The opportunity is to reread the path of study and analysis of the Military begun by the writer, in the 90s, when the political telluric movement projected the West and the world into the post-bipolar and globalized era, with the raw nerves of fragmentation and increasingly acute disparities.

Investigating Occupational Migrants' Health in the Italian Agricultural Sector

Drawing on ethnographic data collected within the multidisciplinary project InMigrHealth, *Investigating Migrant Occupational Health*, this presentation offers a comparative analysis of two different agricultural fields in North and South Italy: the Prosecco wine valley in Veneto, and the Transformed Littoral Strip (TLS) the largest tomato greenhouses in Sicily. In both regions, migrant gendered workforces are exposed to heavy, poorly paid and dangerous agricultural work. Veneto's famous Prosecco DOC wine valley is a well-known Unesco World Heritage site, however migrants' labour exploitation and soil erosion caused by monoculture cultivation seem not to be so visible. As for Sicily, the tomato greenhouses of Ragusa which employ formal and informal labor force from Eastern European, Asian and African countries are mostly known for their deseasonalized vegetable production. In this presentation, by adopting a comparative perspective, we engage with 'occupational health' as a structurally asymmetrical relationships between capital holders and the workforce. We ask: How do working conditions impact migrants' health? How are variables such as nationality, gender, ethnicity legal status, age rendered visible? This presentation delves into the social construction of health-related risks for migrant workers at discursive and practical levels as well as the reproduction of hierarchies and inequalities by offering an analysis of three different dynamics: (i) the naturalization and invisibilization of risk in agricultural work and the possible resistance strategies put forward by migrants; (ii) the construction of gendered identities within the agricultural sector and the impact of the gendered division of labor in the fields and greenhouses and on workers' health; (iii) the invisibilization of health risks through how 'safety' is "regulated" in intensive agriculture by global standards related to the food safety of consumers rather than workers.

FARINOSI, MANUELA* (University of Udine, Italy)

MELCHIOR, CLAUDIO* (University of Udine, Italy)

From Concern to Enthusiasm: A Cluster Analysis of Young Adults' Perceptions and Attitudes Towards Generative AI

This contribution analyses the complex societal implications of Generative AI (GenAI) through an empirical lens, with a particular focus on young adults. The study investigates the attitudes and perceptions of future impacts of a specific segment of the youth population, namely university students, who can be considered a particularly relevant information resource in terms of their socio-cultural background.

A survey was conducted involving 1,366 participants from 24 Italian higher education institutions. While approximately half of the respondents reported integrating GenAI into their routines, a cluster analysis revealed four distinct groups: the "indifferent" (18.9%), the "fearful" (21.3%), the "neutral digital" (29.5%), and the "enthusiastic digital" (30.3%). The "indifferent" group, characterized by low digital literacy, demonstrated minimal engagement with AI and perceived its impact as distant. The "fearful" cluster, predominantly female, expressed strong ethical concerns and scepticism about AI's benefits. The two "digital" groups, primarily male with high digital skills, showed similar positive perceptions of AI's potential but diverged in their assessment of risks. The "neutral digital" group maintained a balanced view, acknowledging both benefits and potential drawbacks, while the "enthusiastic digital" cluster displayed overwhelmingly positive attitudes, rejecting most concerns about AI's societal impact.

It is noteworthy that respondents did not perceive personal risks related to their studies or careers from AI adoption. However, significant variations in societal concerns were observed across clusters, ranging from the "fearful" group's apprehension to the "enthusiastic digital" cluster's optimism. These findings contribute to the ongoing debate on AI in society, providing nuanced insights into the diverse perspectives of young adults regarding GenAI's role

in shaping their future. The perspective and attitudes of these highly educated young individuals towards AI are crucial in predicting the social development and integration of these technologies, as they represent future decision-makers and influential adopters in various sectors.

FARINOSI, MANUELA* (University of Udine, Italy)
TREVISAN, FILIPPO (American University, USA)

The Rise of Influencer Activism: How Disabled Influencers Use Social Media to Advocate for Social Change

Since the mid-2000s, social media platforms have helped amplify the voices of marginalised communities, providing new avenues for social change advocacy while simultaneously challenging our understanding of collective action. Although each platform presents both opportunities and constraints for activism, one area of significant change has been the emergence of new voices through the reshaping of the boundaries between promotional work, public opinion leadership, and advocacy.

Among these new voices is that of disabled social media influencers, who have the potential to be distinctive agents of social transformation, challenging traditional narratives surrounding disability, raising awareness about the challenges faced by disabled individuals, and fostering a sense of community around these issues that may support social and political activation.

Using discourse and visual analysis of Instagram content from ten disabled travel influencers over a six-month period in 2023, along with in-depth interviews with fifteen prominent disabled influencers, this study investigates to what extent and how they engage with disability rights issues and related collective action. Through the lens of the situational theory of publics, this study explores influencers' self-representations, interactions with dominant narratives, the balance between market-oriented and advocacy-driven themes in their content, their interactions with online followers, as well as their relationship with platform affordances and online dynamics.

The findings demonstrate a strong focus on disability-related content and advocacy themes, which are generally kept distinct from commercial content. These influencers tend to frame advocacy from a personal perspective, generally eschewing direct calls to action. Unlike traditional grievance-focused activism, their content offers a more nuanced, individual-oriented approach that subtly challenges prevailing stereotypes by projecting positive realities. However, this study also identifies limitations in their impact as their efforts lack direct connections to broader collective mobilization, and explores the reasons behind this issue.

FAROUK, EL MAAROUF* (Justus Liebig University, Germany)

Digital Tides: A Genealogy of Social Media Influence on Morocco-Ceuta Migration Waves.

Recently, many videos on Moroccan social media pages have begun to share videos about all kinds of water navigation methods, from handmade boats, surfing boards, and zodiacs from Decathlon to inflated truck tire tubes, from makeshift boats to zodiac engines. Videos on TikTok and Facebook reels spread beyond control during the months of August and September 2024 holding a promise for the Moroccan clandestine migrants to be shipped from the shores of Fnideq to Ceuta. Since 2021, a paradigm shift in illegal migration strategy has surfaced, often fueled and directed by social media users that orchestrate a simultaneous and aggressive attempt at crossing into Ceuta, a phenomenon reaching its climax on the 15th of September 2024. In this paper, I see that the spectacle of 15/09 is a phenomenon born out of the May 2021 mass migration incident. Though there have been significant attempts at irregular migration through Ceuta or Melilla, the scale noticed mid-May 2021 as an estimated 8,000 to 12,000 Moroccans attempted to swim or walk across the sea to Ceuta at low tide was unprecedented. In this paper, I look at the genealogy of the 15/09 as a spectacle that was only made possible through social media. I will come to terms with the events leading to the 15/09 and their respective social media footprint that was transformed into a national call for action whereby all who wished to border to Spain were invited to rendez-vous in Fnideq. As local journalists reported from the north, TikTok and Facebook became inundated with footage and interviews of the *harraga* (illegal migrants), deeply suntanned, visibly distressed, their young faces heavy with the burden of dreams long carried.

FAROUK, EL MAAROUF* (Justus Liebig University, Germany)

Towards a Theory of Aesthetics of the Margin: Exploring Vernacular Artistic Communities, Beauty, and Social Precarity.

This research offers a distinctive contribution to the sociology of art and holds significant value, as it interrogates the nebulous social dynamics at work within the community of precarious Moroccan art dealers/producers where people seek beauty from where they delicately rot in the margin. By focusing on the marginalized, poverty-ridden communities that dwell in hidden unsightly Moroccan markets, weekly Souqs, café bazaars, and informal transaction locations, I attempt to come to an understanding of how such communities conceive of art in the absence of the most basic forms of decent living. I want to understand the theatrics of this pursuit of beauty and its implications, its motives, its actors, and its paradoxical whereabouts. Is the meaning of beauty a replacement for that of happiness? Where does it begin, and where does it end? And most importantly, can we have enough of it? In essence, the category of beauty cannot be reduced to basic definitions in aesthetics, looks, and shapes for in many cultures like the Moroccan's, beauty could mean comfort, safety, love, and respect. To come to grips with the role art plays in the everyday of this precarious community, I am looking at what I call an aesthetics of the margin. That is a vernacular aesthetics that takes non-conventional beauty standards at its stage to embrace unconventional and overlooked aesthetic values. This leading theory around the aesthetics of the margin is foregrounded in communities whose arts—and the lack thereof—navigate liminal spaces in art fueled by survival creativity to generate income from within unsatiable marginal urban spaces. Hence, this paper leads by taking an approach to studying marginal urban artistic communities of art dealers and producers in the global south which takes into consideration a plethora of social and economic vulnerabilities, abjections, and precarities.

FARQUHARSON, KAREN* (University of Melbourne, Australia)

SEDZRO, EYRAM IVY (University of Melbourne, Australia)

African Australian Online Representation: Countering Negative Discourses through Expressions of Intent and Action

Previous research indicates that Africans in Australia are negatively represented in the Australian news media (Weber et al. 2021; Nolan et al. 2011; Nolan, et al. 2018), and that African Australians themselves find this coverage to be hurtful and to increase their experiences of racism (Farquharson et al. 2017). Less is known about how African Australians choose to represent themselves and their businesses, particularly in websites and on social media. Using Pauwel's (2012) multimodal framework for website analysis, we conducted a qualitative analysis of how African Australian organisations represent themselves online. We found that these organisations demonstrated their political and economic agency through expressions of intent that described their objectives and aims, and expressions of action that demonstrated their agency. We argue that these expressions provide strong counter-narratives to the dominant negative media discourses, and can be viewed as a form of everyday anti-racism.

Imagined Futures in Rural Contexts: The Role of Space in Shaping Students' Aspirations and Educational Inequalities

This paper explores the role of space in shaping young people's aspirations in rural Catalonia (Spain) and its consequences for their upper secondary VET choices. It contributes to understand how spatial inequalities intersect with social inequalities to influence the capacity of young people to frame desirable futures.

Transitions to upper secondary education occur within a political context that emphasizes the rising and management of students' aspirations to ensure realistic choices (Hart, 2012), obscuring the role of social background and educational context in shaping these processes (Ball et al., 2000). As Appadurai (2004) points out, the capacity to aspire is unevenly distributed across different social groups. Scholars like Hart (2012) and Gale and Parker (2018) argue that aspirations are mediated by students' habitus—shaping perceived opportunities—and by conceptions of the most valued educational pathways, which require capacities—conditioned by forms of capital—for their imagination and realization.

Research has increasingly focused on the spatial embeddedness of social inequalities and the importance of place in shaping young people's biographies and identities (Farrugia, 2014). Thus, imagining the academic and professional

future often involve thinking about (im)mobility. Mobility extends beyond physical movement (Urry, 2008) and relates to individuals' imagined spatial futures (Rönnlund, 2020), based on their sense of belonging and horizons of action (Hodkinson & Sparkes, 1997). This is especially relevant in Catalonia, where VET provision is unequally distributed and centralized, and vocational education is often devalued, considered a 'second-best' option suitable for disadvantaged students. How students envision their academic futures is strongly influenced by their capacity for spatial reflexivity (Cairns, 2014).

Drawing on 40 in-depth interviews with students from a rural area in Catalonia, this paper shows that aspired VET choices, as well as broader academic and professional aspirations, are closely linked to their capacity to imagine their spatial futures, where mobility becomes crucial for transitions.

Widening Circles of Concern for Vulnerable Children: The Emergence and Development of Social Care Work in Twentieth Century Ireland

This paper examines the relationship between social and cultural processes associated with the emergence and development of social care as a profession concerned with vulnerable children. While some functions of this nascent occupational group were previously undertaken by religious orders, the Church's diminishing influence in the area of child protection, and the State's acquisition of functions formerly undertaken by the family and the clergy, represent some of the social changes that preceded the consolidation of standardized ways-of-caring, and informed the development of social care practice. Widening circles of concern for children at different levels of social integration, as well as a conceptual change in which precarious childhoods are increasingly characterized in terms of vulnerability rather than moral deficiency, demonstrate shifting cultural sensitivities related to the proliferation of children's rights. The long-term developmental approach of Norbert Elias provides a useful framework for the analysis of these social and cultural changes; specifically, the ways in which they relate to one another. Historic documents and texts are used to examine approaches to the issue of vulnerable children and their families undertaken by the State, the Church, and other less-integrated groups of actors. Shifting interdependences in this regard are significant for social care practice as they help to explain the development of cultural practices that became "problematic" in the latter half of the twentieth century, and as such were required to be undertaken by state functionaries.

FARRER, JAMES* (Sophia University, Japan)

Eating Alone with Others: Modalities of Commensality and Managing Affect in Japanese Eateries

Tokyo is not only the largest but perhaps the loneliest city on earth, with increasing rates of singlehood, childlessness, solo living – and solitary eating. Dining independently (though not necessarily alone) is highly visible and accepted, whether at a convenience store, a noodle shop, or one of tens of thousands of tiny dining bars that characterize the urban nightscape (Farrer 2021). This research examines patterns of eating and drinking independently, not as symptoms of social pathology, but rather as ways of experiencing and negotiating the co-presence of others in space. These modalities of commensality range from the practiced conviviality of regulars in the "urban third place" of the local *izakaya* (pub)(Oldenburg 1989) to silent commonality among strangers with no verbal cues in a nearby neighborhood *kissaten* (cafe) (White 2012). It is important to note that the same person may make use of a variety of such spaces. The modalities of commensality (including the degree of social interaction) correspond to different ways of managing and directing affect, through the cultivation and expression of feelings towards, self, others, and the objects present within the narrow spaces of Tokyo urban dining. The research is based on a decade of ethnographic observation and interviews in independent eateries in a Tokyo neighborhood (Farrer 2024). This paper reports on the participant observation practice that accompanied this larger study, conversations with customers, owners, and media professionals producing content about food culture in Tokyo.

Young Adults Making a Living in Senegal: How Relations Open and Close Access to Economic Opportunities

As many other countries in Sub-saharan Africa, Senegal has witnessed rapid expansion of formal education with persistently high labor market informality and urbanization without industrialization, limiting formal employment to a privileged minority. Established life course concepts, such as the "school-to-work transition" are unable to capture young adults' biographical experiences in such contexts. Instead, we propose the concept of "making a living" as a continuous process. We use data from 23 in-depth qualitative autobiographical interviews that were collected in three waves among young adults in Senegal between 2021 and 2024. We examine 1) the temporality of making a living in youth biographies, and 2) the ambivalent relational dimension of making a living, where social network can both grant access to economic opportunities or prevent youth from realizing future economic opportunities due to immediate obligations to extended family members. We address three questions: First, how do young adults make a living, that is, from which sources do they combine resources, and how did their livelihoods change across the three waves of data collection? Second, how do relations in social networks open opportunities for making a living? Third, how do expectations and obligations in extended families and local communities inhibit youth from realizing future opportunities for making a living? For instance, one of our interview partners, who is highly educated, single and childless at age 32, describes how his brother helped him to obtain a formal job after many frustrating years of unpaid internships and ad-hoc hustling opportunities. Once he obtained this job, he first took financial responsibility for his parents, which limited his possibilities for marriage and fatherhood. We compare biographical experiences of young men and women to show gender differences in the temporality and relational dimension of making a living for young adults in Senegal.

Process-Oriented Analysis of Brain Drain: A Key to Understanding Institutional Inefficiencies in Iran

Attention to social issues and a deep understanding of them in social sciences, particularly in examining complex phenomena such as brain drain from brain-exporting countries like Iran, is vital. By recognizing the mechanisms and processes influencing these issues, process-oriented research can lead to significant changes in addressing social problems.

This study employs a process-oriented approach to explore the institutional factors affecting the decisions of elites to leave their home country and not return. We analyze institutional interactions and identify factors that directly or indirectly influence these decisions. Qualitative process-oriented analyses, based on the experiences of elites, identify the institutional inefficiencies related to this phenomenon. Furthermore, to facilitate the understanding of these processes, process models have been developed that illustrate how institutional structures impact the migration decisions of elites.

In this research, we believe that a process-oriented approach not only aids in gaining a deeper understanding of the social and institutional issues related to brain drain but can also contribute to developing effective strategies for addressing these issues.

Indigenous Art As Expression of Political Resistance

In the analysis of Frantz Fanon, "imperialism and colonialism brought complete disorder to colonised peoples, disconnecting them from their histories, their landscapes, their languages, their social relations and their own ways of thinking, feeling and interacting the world" (reported by Smith 1999, p.35). The effects of colonialism were several: colonization has transformed the land, the way in which knowledge is produced, imposing often knowledge that has nothing to do with the land or the people (Chalmers 2017). In this context, colonialism has had and continues to have a strong impact on the epistemic dimension since modern rationality, proclaiming itself as the only

valid knowledge, offers an understanding of the world that hides the diversity of the peoples of the colonies. Visual art and more in general art, "has a doubly counterhegemonic existence, as an aesthetic manifestation and as an archival exercise and interrupts both the aesthetic and the archival conventions at one and the same time" (Santos 2018, p.202). The paper aims to consider the reality of indigenous community in Amazonia and the experience of their political and social resistance through the artistic production of some indigenous artists.

Home-Making Is City-Making! Everyday Narratives of Domesticity, Dispossession, and Inhabitation in Delhi's Urban Peripheries

Since 2018, Madiha has lived in four different homes—sometimes independently, sometimes shared. After marrying Salman, she moved to Savda Ghevra, living in a three-story house with her in-laws. The plot was allotted to her father-in-law, Razzaq, in 2006, and the family expanded the house as the brothers got married. The men, mostly in construction, built it themselves, led by Razzaq, a retired mason who used savings and borrowed funds for the project. After 15 years, the house needed repairs, but disputes among the brothers prevented it.

In September 2023, part of the house collapsed, injuring Razzaq and his youngest son Faizan. Razzaq, trapped under the rubble, broke his hips and leg, and Madiha, along with the other women, rescued them. This incident led to the three brothers and their families resorting to rental properties and escalated the property dispute in the extended family. While Razzaq spent two months recovering in the hospital, Madiha and her family moved to a rental in K-block. After four months, they moved to A-block but had to return to the collapsed house when the landlady evicted them, citing Hindu-Muslim communal tensions.

Throughout this difficult period, Madiha supported her family with various home-based jobs while also enduring domestic abuse from her husband, who suffers from smack addiction. Drawing from participant observations and oral history, this paper follows Madiha's life in Delhi's Savda Ghevra resettlement colony and presents narratives of inhabiting the city through everyday domestic practices. It argues that the process of city-making is deeply intertwined with home-making, highlighting how the production of space and city-making cannot be understood without the struggles for domesticity. The paper highlights Madiha's and her family's everyday struggles around housing and infrastructure and reflects on broader issues of dispossession, claims, and belonging in Delhi's urban peripheries.

Living and Working in the Heat: Exploring the Impacts of Heatwaves on Women Home-Based Workers in Delhi

"How could we use any additional cooling equipment when we don't own them? We have a limited income and a big family. We could either afford our children's education or buy coolers and fans...how could we manage all of it at the same time?" shares Nargis (32), who lives with her husband and three children in a rented single-floor house in Delhi's Savda Ghevra resettlement colony. Nargis works as a home-based worker cutting rubber straps for slippers, earning approximately Rs. 1,500-2,000/month (USD 18-24). She also works as a seasonal daily wage laborer on farms, making Rs. 9,000-10,000 monthly (USD 107-119). Her husband, a daily wage construction laborer, adds to their combined income, but it still remains well below a livable wage for a family of five.

In June 2024, Delhi faced its worst heatwave in 80 years, claiming many lives, particularly among the urban poor. Informal workers, including home-based laborers like Nargis, were hit hardest. Outdoor workers suffered long hours under the scorching sun, while women home-based workers faced the dual burdens of domestic and productive work in small, poorly ventilated spaces. These "pressure cooker" (Sinha & Unni, 2024) environments, lacking essential infrastructure like clean water, electricity, and fresh air, worsened the impact of heatwave on home-based workers.

For Nargis, the heatwave disrupted her livelihood, forcing her to reduce farm work and home-based labor due to the unbearable heat. Her experience is just one example of the struggles faced by home-based workers during the heatwave. Using data from 14 qualitative interviews with workers in Delhi's Savda Ghevra resettlement colony, this paper explores how extreme heat affected work routines, productivity, income, health, and access to public infrastructure. Highlights the intersection of climate, employment, and infrastructure, and we document how the lives of home-based workers like Nargis changed during this climate crisis.

Digital Youth Subcultures: Redefining Moroccan Cultural Tourism through Social Media

The continuous development of tourism in Morocco has led to the emergence of youth subcultures as influential voices that share their authentic travel experiences and create new trends in cultural tourism. This paper explores how youth subcultures shape modern cultural tourism and the role of social media as a driving force behind these changes. It addresses the influence of user-generated content disseminated by youth on the perceptions of Moroccan cultural tourism among fellow-travelers and broader audiences. Further, the paper investigates how youth subcultures advocate for more sustainable, ethical, and culturally responsible tourism practices. To meet the research objectives, data is gathered from content shared on social media, including written texts, photos, and videos. Additionally, an online questionnaire survey was conducted among Moroccan young travelers and social media users to explore how they engage with their cultural identities, present their local traditions, lifestyles, and arts, and promote their own cultural heritage and diversity by engaging with local communities. The findings indicate that youth subcultures not only financially contribute to the travel industry but also enhance tourism experiences, play a significant role in raising cultural awareness, and shed light on the importance of more sustainable, ethical, and culturally sensitive tourism practices. Until now, there haven't been any studies related to the youth subcultures and digital media in the context of Moroccan tourism. This research, therefore, represents a foundation for future research into the transformative potential of youth-driven content in challenging conventional tourism practices and promoting authentic and sustainable cultural tourism.

Can I Meet the Server: Peripheral Land and Digital Encounters

Digitisation of state institutions and particularly of land-records in India are disrupting the geographies of property making. These practices are inflicting small and medium towns, i.e. the non-metropolitan centers in far more complicated and unclear spatial structures. Cowan (2021) while writing about the process of land digitisation in the peri-urban villages of Gurgaon observes, 'digital infrastructures seldom constitute a clean break'. India has had a long and contested history of colonial and post-independence efforts to register and formalize land ownership (Cowan 2021). The onus of proving ownership though now has fallen on the citizens, rather than the state. It forces the citizen to furnish paper evidence and materiality to be recognised and registered in the digital realm.

This paper presents an ethnographic exploration of waiting in a notified urban town in the Jharkhand district in eastern India. Focusing on the transformation of ancestral property papers into digital spaces amidst a lack of institutional support. It highlights the duality of waiting: citizens endure long hours for bureaucrats to arrive and for computer servers to function and brokers and middle men to negotiate on behalf of them. This waiting is not just a logistical hurdle; it reflects the broader lived experiences of residents who navigate opaque state systems while attempting to secure property rights. The research sheds light on how these everyday negotiations shape their reality in the context of a shifting bureaucratic landscape especially for those who lack the social capital and financial means to overcome and bypass the waiting.

FATTORE, TOBIA* (Macquarie University, Australia)

Ambivalent Childhoods: A Perspective from Australia

This paper explores the ambivalent position of Australian childhoods within debates around globalised childhoods and critiques of methodological nationalism. I argue that structurally and discursively Australian childhoods reflect ambivalent social forces: i) as a product of post-colonial and colonising processes and as a colonising power; ii) of bearing the imprint of forms of cultural hegemony yet being a product of successful policies of multiculturalism; and iii) of being a beneficiary of policies of decommodification, but institutionally subject to marketisation (for example in systems of education). I discuss some of the implications of these tensions and ambivalences. At the level of theory, I explore the relevance and limitations of post-colonial theories, critiques of methodological nationalism and *Southern Theory* (Connell 2007) for understanding Australian childhoods. At the level of discourse and cultural contexts I examine how these ambivalences are used politically, by

constructing a normative valued childhood, which serves as a political tool to scapegoat other childhoods. At the level of material distribution of resources, I discuss how these ambivalences mask substantive differences in life chances for different groups of children, this masking sometimes promulgated by childhood academics who focus on generation.

Being a Drone

In this presentation I want to explore the kind of knowledge that can be produced by flying drones. I will address photographs and videos as research material but importantly also explore the meaning of the very act of flying drones and making images. The presence of a drone generates curiosity and at times fear that sometimes reveal social actors' understanding of the meaning of the sky and the world around them. It opens up the space for a playful conversation on life. Based upon own material gathered in different parts of the world in this paper I will try to explore the different types of knowledge produced by flying drones addressing also the ethical implications of such practice.

FAVIERI, FRANCISCO* (Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET), Argentina)

Classes and Labor Precariousness in Greater San Juan (2016–2022).

This paper addresses the formation and changes in the class structure of Greater San Juan, Argentina, within the context of labor market heterogeneity, the persistence of job insecurity, and the impact of the 2018 and 2020 economic crises. Using microdata from the Permanent Household Survey (EPH-INDEC), we analyze class configuration through the Occupational Classification Based on Structural Heterogeneity (COBHE). The study proposes an analysis based on a Multidimensional Precarity Index (MPI), considering individual sociodemographic factors through descriptive and inferential statistical techniques.

We begin with the assumption that labor insecurity persists and deepens during the period studied, affecting workers in micro-enterprises, youth, and women more intensely. The findings show a differential impact of precarity on the configuration of classes, both between and within them, concluding that inequality has been exacerbated in this context.

Building a Farmers' Collective to Manage Groundwater in Morocco: Managing Differences without Erasing Them

The sustainability of irrigated agriculture, made possible by groundwater development, is increasingly threatened by growing pressure on water resources and climate change. Participatory approaches aimed at supporting the formation of collectives to improve groundwater governance often face significant challenges due to the heterogeneity and power imbalances between different stakeholder groups. Building a collective is difficult, especially as existing facilitating approaches are often insufficient. For instance, they develop multistakeholder platforms without paying attention to power relations or they work with small-scale farmers only with the aim to empower them.

Using the case of an aquifer in Morocco's Middle Atlas region, a multidisciplinary research team sought not only to unveil prevailing disparities—whether socio-economic, political, ethnic, or symbolic—but also to account for them in creating a collective that would bring together various groups. This collective, whose formal organization will be a federation, enables these groups to communicate both among themselves and with authorities, while acknowledging and addressing the differences that divide them rather than erasing or ignoring them.

The methodology, which included citizen science, participatory workshops, focus groups, qualitative interviews, and sociological studies, evolved as the project progressed, fostering strong bonds of trust between the research team and local stakeholders. The lessons learned from this project's participatory approach can serve as valuable guidance for improving participatory governance and management processes in groundwater-dependent regions.

ZARATE GUERRERO, FELIPE (University of Durham, United Kingdom)

An Emergent Orchestra Seeking to Defy the Canon: Confronting Traditional Positions and Rules

Orchestras are social organisations that, historically, have defined themselves by establishing structures of roles, interactions, and rules (Spitzer & Zaslaw, 2005). Some authors have problematised these structures, arguing that Western classical music is based on inequality relations and imperialist power dynamics (Kolbe, 2024), suggesting, therefore, the necessity to question the orchestra's internal functioning (McPhee, 2002; Boyle, 2007). With this in mind, our work explores what happens when these traditional or canonical structures are challenged. To do so, we adopt the perspective of relational sociology, which conceives culture as existing 'between actors' and emphasises the importance of exploring the networks of relationships that underpin cultural production and dissemination (Crossley, 2015). From this perspective, art is seen not as a static object, nor as abstraction, but as a dynamic process, an activity – a perspective that aligns with the ideas of scholars like Small (1998), who coined the term "musicking", and Becker's (2008) idea of "art worlds".

Our project draws on interviews, ethnographic data, and creative methods to explore the case of an emergent orchestra, *La Sinfonietta de Bogotá*. In its quest to make music experimental and participative, this orchestra seeks to challenge the traditional canons of orchestral practice. It does so by questioning the orchestra's internal hierarchy, removing it from its traditional places, breaking the division generated by the stage, and proposing alternative arrangements. To sum up, this work explores the impact of altering traditional structures and rules (see: Whiting 2016) that have historically defined the parameters through which this art, specifically symphonic orchestras, has defined itself.

FAZIO VARGAS, DANIELA* (University of Manchester, United Kingdom)

Eventful Protests: The Chilean Uprising As an Aesthetic and Resonant Event

Taking inspiration from the idea that protests are "eventful" and, therefore, capable of producing cognitive, relational, and emotional impacts on their participants (Della Porta, 2008), my research seeks to comprehend how music helps sustain political transformation through "aesthetic" and "resonant" events. For this, it draws on 47 interviews with protesters—mostly artists—songs, and sonic documents to study the Chilean Social Uprising.

Building on Rancière's (2013a; 2013b) theories on aesthetics, my project argues that protests can be interpreted as aesthetic events that can disrupt the "politics of aesthetics", altering the regime of thinking about arts, but so too, the "aesthetics of politics", that is, the implicit organisation that governs the sensible order. These are events that challenge our perception by enabling the emergence of 'impossible artists' that, through acts of dissensus, enact the universal of politics according to which, despite the differences, 'we are all equal', by questioning dominant modes of hearing, but also by realising projected political futures while musicking.

Protests can also be interpreted as "resonant events", enabling us to examine the transformative power of music in making people resonate with each other, music, and history (Rosa, 2019). Music fostered a sonic solidarity capable of bringing together people who, despite not crossing their paths before, were all fighting (and singing) for the same thing. Further, my project suggests how music contributed to developing transhistorical solidarity, mobilising memories and making people resonate with past and future struggles.

By emphasising the idea of eventfulness, it seeks to explore the transformative effects of protests, which can be of particular relevance in contexts where, like the Chilean one, many institutional setbacks led to a general perception of failure. As aesthetic and resonant events, protests produced transformations beyond the institutional sphere, which impacted the "social realm", as Bayat (2020) would say.

FEDER-BUBIS, PAULA* (Ben-Gurion University of the Negev, Israel)

Easier Said Than Done: Acknowledging Intersecting Injustice Towards Healthcare Workers Is Not Enough

The healthcare field has significantly changed in the last half century. Organizations within this service-based field are subject to pressures characteristic of the Capitalocene era, including regulatory oversight, continuous technological advancements, cost-management restrictions, standardisation of procedures to meet quality benchmarks, and the need to provide timely services to meet accessibility demands. As a result, health-related work groups have experienced growing adverse working conditions, evident in increasing levels of burnout rates, declining levels of job and work satisfaction, and increased attrition from this field of work.

Drawing from the experiences of workers from various health-related working groups in hospitals, this presentation will discuss strategies that were identified as a means to resist the devastating implications of the Capitalocene and those suggested to mitigate the impact of the Anthropocene, as illustrated by mass-casualty events treated in hospitals.

Hospital workers identified relational strategies to mitigate the Capitalocene, such as fostering bonding and bridging social capital. The double affiliation of healthcare workers to a specific hospital ward as well as to a specific work group was identified as an effective structural characteristic that enhances both types of social capital. Social capital was also recognised for alleviating tensions arising from the diverse personal backgrounds of healthcare workers, which are characteristic of the heterogeneous societal context in Israel.

The role of the organization management was acknowledged as critical for improving the working conditions of all health-related working groups, especially for those from disadvantaged backgrounds. While some underscored management agency in driving incremental improvement, others identified management as "just another" work group, unable to effectively challenge systemic issues of the Capitalocene. Notwithstanding these differences, the common denominator among all health-related workers is that working conditions improvement initiatives, be they bottom-up or top-down, must include linking social capital characteristics, involving healthcare workers from as many strata as possible.

Moral Juvenicides. from Youth Gangs to Migrant Minors

This paper present the preliminary results of the JUVENICIDE project, with objective is to take stock of the current situation of two youth groups in Spain: young people of Latin American origin - especially those linked to gangs-, and young people of North African origin, mostly minors who migrated alone - and propose measures and policies to improve their living conditions. The project aims to take stock of the current challenges for social inclusion in the two central cases indicated in Spain in dialogue with two contrasting cases - maras in El Salvador and young people in street situations in Morocco. The concept of "juvenicide" is understood as the process of physical disappearance and moral exclusion of young people, as a result of actions exercised by criminal groups, state or parastatal forces. The relevance of this project is determined by the urgent need to focus the phenomenon from a *knowledge-based policy* - as an alternative to the *knowledge-based police* that is in force in so many countries - as well as to defend the human rights of minors and young people. It is important to understand the situation of minors and young people in the European diaspora, whose migration processes may involve a violation of their rights. The research is innovative in three aspects: (a) it proves the opportunity to extend the academic use of the concept "juvenicide" beyond Latin America; (b) it develops a comparative methodology to understand the phenomenon in the bases of qualitative and quantitative parameters; and (c) it develops a pilot model to assess the demographic, economic, social, political, and moral impact of the phenomenon, as well as the most effective strategies to prevent it.

Transregional and Transnational Protection of the Rights of Moroccan and Foreign Minors in the Migratory Process between Morocco and Catalonia: The Case of the Rassif Project

RASSIF is a participatory action research project, which has been developed in three phases from 2020 to 2025, funded by the Catalan Agency for Development Cooperation, promoted by the Casal d'Infants del Raval (a children's support NGO, with offices in Barcelona and Tangier, Morocco), with the participation of the Universitat Pompeu Fabra and several Catalan and Moroccan entities. The objective of the project is the protection of the rights of minors in the migratory process between Morocco and Catalonia, at the three stages of this process: origin (Tangier, Nador, Oujda, Rabat, Casablanca, among other cities), transit (Ceuta, Melilla, Spain) and destination (Barcelona, Catalonia, Europe). The project is based on multi-site ethnographic research, carried out both at origin and destination, based on participant observation and in-depth interviews with migrant minors, educators, professionals and policy makers. It analyses the impact of the protection systems in force in Morocco and Catalonia, and converges in a pilot training plan, currently underway, aimed at social and street educators who work with minors in both countries. This paper presents the main results of the project and makes proposals for public policies. The central axis of RASSIF is the need for a transregional, transnational, transgenerational and transdisciplinary approach, which improves knowledge of the situation of minors migrants, and contributes to the protection of their rights at origin, transit and destination.

Film-1015.3

FEIXA, CARLES* (Pompeu Fabra University, Spain)
"Al-Houma Dreams [Neighborhood Dreams]"

Presentation: within the framework of the TRANSGANG project, funded by the European Research Council, which investigates youth street groups as agents of mediation, in twelve cities in southern Europe, North Africa and the Americas, three documentary films have been produced (one in each of the regions studied), by filmmakers chosen after a public contest. The objective has been to establish a creative dialogue with the fieldwork, reflecting the research process, but without replicating it mechanically. In all three cases, the same methodology has been followed: the starting point has been a workshop with young people participating in the project, who interact with the filmmakers and co-create a visual approach to their worlds of life, including mediation experiences for overcome conflicts.

Synopsis: Street youth groups are a universal phenomenon. This film is part of the TRANSGANG project, which investigates such groups as mediation agents, in twelve cities in southern Europe, North Africa and the Americas. In September 2022, a group of young people from Sidi Moussa (a shanty town in Salé-Rabat conurbation, Morocco) were invited to participate in a workshop to explain and filming their everyday life with their own mobile phones.

Schooling, Five Years Later: Images, Trajectories and Perspectives of Young Graduates

Schooling is a complex process of acquiring knowledge, skills, credentials, and dispositions and also a heterogenous period, a collection of spaces and times for sociability, production of meanings, and diverse experiences that will contribute to developing and constructing young subjectivities. But what marks from school permeate individuals' lives years after graduation? In this sense, the project entitled "The School, five years later: perspectives of Graduates" emerges. Conducted between 2020 and 2022, the research sought to investigate the trajectories of 20 young people from a private and a public school in Rio Grande do Sul (Brazil). This project aimed to understand the beliefs about what was relevant in their schooling for their lives, comprehending their singularities and differences. The methodological process started with semi-structured photo-elicitation interviews to encourage the participants to think about their formative processes and their relationship with teachers, colleagues, and the institution. Data analysis was performed using Discursive Textual Analysis. Among the main results, the echoes of interaction between

teachers and students stand out; the importance of the school as a space for inclusion and appreciation of singularities and the complexity of what is learned in school beyond the programmatic content. We conclude that while obtaining credentials, knowledge, and skills were important dimensions for the participants, the most significant marks of schooling were based on the relationships with others, listening, debating, understanding, and misunderstandings between teachers and students.

Are Good Intentions Good Enough? a Review of Wellness Interventions for Non-Surgical Resident Physicians

Resident-physicians' well-being is often compromised in light of their high-stress working environment, their evolving professional skills, and work/life balance challenges. As wellbeing is shaped by complex, interconnected influences, effective wellness approaches recognize the need to address personal needs, institutional barriers, and systematic issues. Following the Accreditation Council for Graduate Medical Education requirements, wellness initiatives were incorporated into residency curricula. We aimed to describe initiatives implemented in non-surgical medical residency programs and examine their contribution to improving residents' wellness.

A scoping-review was conducted, searching wellness interventions implemented in non-surgical residency programs worldwide. Four databases were searched for relevant articles published from 2013 to 2023. Preferred Reporting Items for Systematic Reviews guidelines were used to manage the scoping-review.

37 articles were found eligible for review. Most interventions reported in these articles originated in the United States, with a marked increase in 2019. The interventions tackled wellness focusing on various definitions and aspects, thus operationalized wellness in different ways. However, only a few addressed multiple dimensions of wellness. Many interventions were implemented in emergency and family medicine residencies. Only a few initiatives were resident-driven or co-created with residents. Post-interventions' wellness follow-up was undertaken mostly up to one year following intervention implementation. Not all the programs reviewed reported significant success in improving residents' wellbeing.

Since wellbeing is multidimensional, interventions aiming to enhance wellbeing need to address several dimensions or encompass a variety of implementations, each focusing on particular components of wellbeing. Wellness interventions effectiveness may be boosted by considering the residents' evolving needs as they progress in their professional development, the residency program particularities, and the overall socio-cultural context in which the health system operates. Wellbeing programs should be ongoing, driven by residents or co-constructed with them.

Algorithmic Management and Employment Programmes: The Precarious Working Environment of 'Income By App' Delivery Riders in Recife, Brazil

Algorithmic management, especially in the context of digital delivery platforms, redefines and challenges the principles of decent and productive work advocated by the International Labor Organization (1999). Although algorithms promise efficiency and data-driven decisions, their impact on organizational decisions and working conditions (Kellogg et al., 2020) often conceals structural inequalities and can exacerbate a precarious labour environment by perpetuating the interests of their creators (O'Neil, 2016).

Mobilizing the Fairwork (2020) framework – evaluating work on digital platforms based on criteria such as fair pay and contracts, safe work environment or transparent management – this paper aims at understanding the consequences for workers when a public body follows the logic of platform labour when designing employment programmes.

Seeking to insert young people into the job market by supporting their onboarding on digital delivery platforms – providing them with bikes, smartphones and data plan – the "Income by App" programme was designed

by the Brazilian city of Recife as an urban policy promoting social inclusion and combating youth unemployment. However, as revealed by extensive ethnographic interviews conducted with bike delivery workers having benefited from the programme, the working conditions faced on the ground reveal more than significant challenges.

By failing to question or regulate the inner workings of delivery platforms, the programme indeed left the workers vulnerable to the algorithmic management ruling these apps, resulting in gruelling working hours, low wages and a lack of social protection. This tacit adoption of digital labour principles consequently fosters an inherently precarious working environment, increasing the workers' vulnerability to algorithmic despotism (Griesbach et al., 2019) in a way starkly at odds with the promises of social inclusion and economic development – highlighting the crucial importance of independent public policies effectively guaranteeing the respect of workers' rights and dignity in a global context of rapid digitalization.

In and Against the Ecological Crisis: Working-Class Environmentalism between Workplace and Community

This presentation outlines the book in writing bearing the same title. *In and Against the Ecological Crisis* explores the relationship between workers and the environment by bringing Italian *operaismo* into a dialogue with a broad range of theoretical traditions, from dependency theory to ecofeminism. Drawing on sustained and original empirical research into four case studies, two in the Global South – gas extraction in Tunisia and copper processing in Chile – and two in the Global North – petrochemical production in the UK and Italy –, the book discusses four topics in relation to the ecological crisis: automation and deindustrialisation, employment precarity, the international division of labour, and social reproduction. In the context of the current attempts at a planetary green transition, the book offers insights on the possibilities for convergence between workplace and community mobilisations for alternatives to the jobs versus environment dilemma.

Decolonizing Genocide in Settler Colonialism: Indigenous Studies to Palestine

We identify the primary features of six historical cases of genocide in colonialism, four which are clear settler colonialism, and then apply this analysis to the historical conflict development and ongoing genocidal ethnic cleansing in Palestine. Our primary cases, (based on published work) include (chronologically): Taino-Arawak of Ayiti (Hinospaniola); Mattaponi (Powhatan) of the Virginia Colony; the Lenape (Delaware) of Pennsylvania; Māori of Aotearoa (New Zealand); Tolowa Dee-ni' of California; and Dakota/Lakota of Minnesota/Dakota Territory. The primary features of these genocides arising in colonial constructs are applied to the historical development of Zionism (like Manifest Destiny), leading to the creation of the State of Israel and ethno-national existence of Palestinians within three constructs (inside Israel as ethnically identified second-class citizens; living under Apartheid (vs "settlers") in the West Bank; ethnic cleansing (to genocide) in Gaza. We find the characteristics of state suppression mobilizing settler populations in order to seize land and declare sovereignty range from violent dispossession, to an active ethnic cleansing and maintenance of apartheid by settlements (vs Palestinian towns and cities) to genocidal suppression (much like the cases above) and to outright genocide (acting under cover of war, also found in the historical cases). Finally, we identify contemporary strategies to decolonize the above cases within fields of Indigenous studies, and posit the application to current conflicts in the "Middle East" of broader Palestine

Performing Environmental Governance: Cultural Pragmatics of Waste and Water Management in Buenos Aires

This study explores the cultural and performative dynamics of environmental action in Buenos Aires, focusing on waste management, water resources, and informal settlements. Through the lens of cultural pragmatics, we examine how environmental issues emerge in the public sphere and how actors navigate urban environmental governance in the absence of cohesive metropolitan institutions.

Our research investigates:

1. The framing of waste and water pollution in the Reconquista and Riachuelo rivers as urgent public issues.
2. The evolution of community practices in response to environmental challenges, including informal settlers' improvisational tactics and official interventions.
3. Cultural enablers and disablers in environmental action, examining interactions between local survival strategies and top-down governance attempts.
4. The circulation of ideas and action repertoires across scales of environmental governance.

Through ethnographic observation, interviews, and discourse analysis, we reveal the complex performances constituting environmental governance in Buenos Aires. The absence of formal metropolitan institutions creates a stage for diverse, often contradictory performances of environmental stewardship. Informal settlers engage in "survival urbanism," adapting to and transforming polluted environments, while official actors perform intermittent top-down interventions that often fail to address root causes of degradation.

Our analysis highlights creative tensions between structured performance and improvisation in environmental action. We argue that Buenos Aires' environmental governance is best understood as interconnected performances where actors negotiate roles and responsibilities through scripted and spontaneous actions.

This research contributes to cultural pragmatics in environmental sociology by demonstrating how performance theory illuminates complex urban environmental dynamics. By focusing on performative aspects of waste and water management, we offer new insights into how environmental problems are constructed, contested, and potentially resolved through cultural and social processes.

FERLICCA, FRANCESCA* (Sciences Po, France)

Rethinking Urban Informality: Housing, Environment, and Governance in Buenos Aires

This study reframes the housing question in Buenos Aires as a socio-ecological issue, examining the interrelationship between informal settlements, environmental degradation, and urban governance. We argue that the standard response of providing new housing fails to address the complex socio-ecological challenges faced by the metropolitan area, particularly along the polluted Reconquista and Riachuelo rivers.

Our research investigates:

1. The socio-ecological impacts of informal settlements along Buenos Aires' waterways, exploring how "survival urbanism" simultaneously responds to housing needs and generates environmental challenges.
2. The limitations of traditional housing policies focused on new construction, which often exacerbate environmental issues.
3. Alternative approaches prioritizing reuse, repair, and redistribution of existing structures, considering both social needs and ecological constraints.
4. Political, legal, and economic barriers to implementing socio-ecologically sound housing solutions in a context of fragmented metropolitan governance.

Through ethnographic observation, interviews, and policy analysis, we reveal the complex interplay between housing needs, environmental degradation, and governance structures. The absence of cohesive metropolitan institutions creates a vacuum where informal practices and top-down interventions often conflict, leading to suboptimal outcomes for both housing and environmental quality.

Our analysis highlights potential innovative, socio-ecologically informed approaches to housing, including adaptive reuse, community-led rehabilitation, and policy experiments for redistributing underutilized stock. These alternatives to new construction could mitigate environmental impacts while addressing housing needs.

This research contributes to urban political ecology by demonstrating how Buenos Aires' housing question is inextricably linked to broader socio-ecological systems. We argue for a paradigm shift in urban planning and governance that recognizes housing as a socio-ecological question, requiring integrated solutions addressing both social needs and environmental sustainability. Our findings have implications for other cities grappling with informal settlements and environmental challenges in rapidly urbanizing regions.

Brazil's Higher Education System: Strengths, Challenges, and the Path to Internationalization

Brazil's system of higher education had seen substantial development since the 19th century, when it primarily focused on law and medicine to educate the elite. Major expansion occurred in the 1930s with the establishment of institutions like the University of São Paulo (USP) and the Federal University of Rio de Janeiro (UFRJ). These public universities have become central to the system, offering free education and leading a significant share of the country's research, especially in agriculture, health, and environmental studies. Brazil now leads Latin America in research output, with public institutions collaborating with government and industry to drive innovation and knowledge-sharing. However, the system still faces critical issues: the access to public universities remains highly competitive, favoring students from wealthier backgrounds. The private sector is responsible for 75% of student enrollment, generally offering low-quality education and little emphasis on research. Postgraduate education has expanded with over 3,500 programs, and international collaborations, especially in science, are growing. Yet, funding challenges have hindered development. Public universities have experienced budget cuts in recent years, affecting research and infrastructure. Addressing financial constraints and disparities between institutions is key for Brazil's higher education to progress. Continued expansion of opportunities for underrepresented students and strengthening international research partnerships will be essential for Brazil to enhance its academic standing globally.

Spinoza's Ethics and Social Alienation: The Pantheistic Approach to Non-Anthropocentrism

From the work 'Ethics' by Baruch Spinoza (1756), we propose a new comprehension of social alienation, where common notions between individuals create extensive metaphysical ideas affecting the physical in actuality, thus creating virtual distances between subjects and objects. Such a sociological take on this pantheistic philosophical stance enables comprehending all there is as the physical extension of an anthropomorphic divinity to and within which all relational causes, affects, and affection occurs. In a raw and simplified definition, alienation is the distancing from an established point in actuality-virtuality. Two points are mainly relevant to this theoretical perspective on social alienation: the non-anthropomorphic God and the causation of all there is in mind, in our words and our images, in which all will is equal to understanding, and vice-versa. Therefore, comprehension generates reality and will; by imagining a humanized transcendent God, by addressing him with name, words, and emotions, humanity has paved the way to anthropocentrism by posing an anthropomorphic god filled with intention and plans. This traditional mindset provides the contextual setting for ecological alienation, where humanity distances itself from Nature. Such a fact should explain why tribal, ancestral, and pre-European knowledge becomes closer to a context of de-alienation (as in comparison to the alienated modernity). The second crucial point is artificiality, which is all that is produced by the human mind. By accepting an immanent internal divinity, as opposed to a transcendental exteriorized god, Nature becomes the cause of its creation, with the human species included, yet never exclusive. By considering humans a natural step in nature's evolution, what is created by the human mind would be far from artificial. It is mandatory to distance oneself from what is natural and divine (both nature and god) so you can outperform traces of modern religion characterized by guilt, repentance, and subservience.

Community Engagement in Disaster Waste Management in the Philippines: Challenges and Opportunities

The Philippines, one of the most disaster-prone countries worldwide, faces significant challenges in managing waste generated by natural hazards such as typhoons and earthquakes. Effective disaster waste management (DWM) is crucial to mitigating environmental and public health risks and accelerating recovery. This study explores the critical role of community engagement in DWM within the Philippine context, emphasizing the roles of

various stakeholders: local residents, community-based organizations, youth groups, and *barangay* (village) officials. Local residents play a vital role in debris removal, sorting, and recycling, contributing to waste reduction efforts. Community-based organizations and non-governmental organizations often facilitate training programs, public awareness campaigns, and mobilization of volunteers to support DWM activities. Youth groups, such as the *Sangguniang Kabataan* (youth council), can help drive these efforts by raising awareness about proper waste management practices and participating in clean-up drives. *Barangay* officials coordinate local responses, enforce waste management policies, and serve as a bridge between higher government levels and the community. However, barriers to effective community engagement persist, including limited awareness of proper waste management, socio-economic constraints, and inadequate coordination between stakeholders. Cultural factors, such as local beliefs about waste disposal, social norms around community participation, and traditional land-use practices, along with existing vulnerabilities, further complicate efforts to mobilize communities, especially in remote or marginalized areas. Despite these challenges, there are opportunities to enhance stakeholder involvement. Community-based recycling practices, such as the use of materials recovery facilities, and formal waste management strategies can boost community participation. Strengthening partnerships between local authorities, organizations, and community groups can also foster resilience and facilitate resource mobilization. This study will offer case studies of community-driven DWM initiatives from across the Philippines, providing insights for policymakers, practitioners, and researchers to optimize stakeholder roles and contributions for a more sustainable disaster recovery.

The Interplay between Carbon Emissions and Inequality: A Complex Networks Approach

The sustainable development process faces two key challenges: income inequality and carbon emissions, but the relationship between them is still unclear. This study analyzes the interrelations between greenhouse gas emissions (GHG) and income inequality across European countries, using the Sustainable Development Goals (SDG) framework. First, the main determinants of greenhouse gas emissions are identified through a Random Forest analysis, then two inequality groups are created via cluster analysis based on SDG1 and SDG10. Then, two complex networks are constructed based on the two inequality groups and the main emission determinants to determine the most relevant factors influencing each group's impact on global emissions. Our research reveals significant differences between countries with low and high levels of inequality. In the high-inequality group, productivity and emissions are negatively correlated, whereas, in the low-inequality group, the relationship is positive. This trade-off indicates that countries with lower inequality tend to have greater energy efficiency, but improvements in quality of life lead to higher consumption levels, influenced by the Marginal Propensity to Emit and consumer status levels. The negative relationship in the high-inequality group suggests a potential income threshold where productivity increases reduce emissions due to energy efficiency offsetting consumption increases. In agricultural activities, countries with higher inequality see a positive impact on emissions, whereas in countries with lower inequality, agriculture tends to be more productive with lower emissions. In countries with higher inequality, increased government investments are associated with higher emissions. Conversely, in countries with lower inequality, investments tend to align with efforts toward a zero-carbon economy, showing a negative correlation with emissions.

Individual Characteristics and European Identity: A Meta-Analysis

Extensive research has examined the socio-demographic determinants of European identity, and several published reviews discuss the main findings of these studies. In line with the socio-structural approach, factors such as education, income, and upper-class position have been found to be associated with European identity. Moreover, cultural and political factors, such as having a universalist outlook, transnational experiences, and intense political interests, have also been proven to be related to European identification. However, uncertainty still exists regarding the robustness and consistency of these effects. To fill this gap, this study conducts a meta-analysis of the association

between major socio-demographic characteristics (age, gender, education, income, and ideology) and subjective identification as European or feeling attachment to Europe. It covers all published quantitative studies in English on the matter since 2000, as well as grey literature. By synthesizing a multitude of empirical studies written over the last three decades, this paper sheds light on core findings regarding this important aspect of individual Europeanization.

Overcoming Eucentrism: Socio-Economic Divides in Trust Towards the EU, the UN and NATO

Extensive micro-level research regarding the EU examines the role of socio-economic divides in support for European integration. This work consistently shows that education and social class divides in pro-EU dispositions. Highly educated people and individuals with upper-class jobs display higher levels of support for EU integration and EU policies than individuals with low or medium education and middle or working-class status, respectively. This cleavage is normally explained following the socio-structural approach, which stresses the role of policies pursued by the EU and the incentives it creates for high SES individuals. Since the EU promotes internal labor, goods, and service markets, it creates new opportunities that disproportionately benefit high SES individuals. Research testing the socio-structural explanation normally only considers pro-EU dispositions and focus on intra-regional social divides. Yet by examining just one institutional context – the EU –, this research cannot satisfactorily determine if the very distinctive policies of the EU shape this divide. To ascertain the role of IO features in support these divides, this study instead examines attitudes towards the EU, UN and NATO. Pooling 34 Eurobarometers conducted between 1997 and 2022, we assess if the education and social class divides in trust towards these three international organizations are larger in regards to the EU or not.

Gendered Dynamics and Migrant Networks in Ghanaian Migration to Europe: Testing the Strength of Ties

This paper examines the role of migrant networks in facilitating migration from Ghana to Europe, with a focus on personal ties and gender dynamics. Migrant networks, formed through personal relationships, are crucial in sustaining migration flows by providing support and information to potential migrants, reducing migration risks. While migration network studies have traditionally distinguished between strong family ties and weak community ties, this paper adopts a more comprehensive approach by considering a wider range of personal relationships, including friendships and extended family ties.

This research builds on Liu's (2013) work on Senegalese migration, expanding it to the Ghanaian context using data from the MAFE longitudinal survey. Using a logistic discrete-time event history analysis, the study measures the likelihood of Ghanaians migrating to Europe, factoring in the size and composition of their migration networks, and emphasizing gender-differentiated patterns. Additionally, this paper delves into the impact of Ghana's matrilineal system on migration outcomes. By examining the greater autonomy and access to resources that women enjoy in matrilineal systems, it seeks to understand how these social structures influence women's propensity to migrate compared to men. By focusing on gender and social structures, the study offers a nuanced understanding of migration as a gendered process and the complex interplay between social capital and migration decisions.

Women's Leadership after the Eruption of the Volcano on La Palma.

Over the past decade, international guidelines on disaster risk management have recommended the inclusion of women as a means of enhancing the resilience of communities in the event of a catastrophic occurrence (UNDRR & UN Women, 2022). Previous research indicates that the disaster context can facilitate empowerment and the emergence of both male and female leadership (Moreno & Shaw, 2018; Fernandez et al., 2023). This

communication, which forms part of an empirical research project conducted between 2022 and 2024, analyses the female leadership that emerged during the volcanic eruption of La Palma (Spain) in 2021. In order to collect the necessary information, in-depth interviews were conducted with women leaders in La Palma.

The preliminary results suggest that women are mobilising in order to secure spaces for participation and are even promoting the formation of new collective organisations in the post-emergency period. These actions may be perceived as novel experiences, yet they do not necessarily signify a transformation in gender relations. The primary impediments they encounter originate from the very institutions tasked with disaster risk management. Furthermore, the family and domestic space can also act as a hindrance and create barriers to women's leadership (Vergara & Miranda, 2022). Disasters can be seen as a further system of oppression against women. Despite the inclusive discourse of disaster risk reduction policies, women's actions can be understood as acts of everyday resistance that may later lead to political participation. In contrast to more developmentalist approaches, where women's leadership is seen as a means of fostering resilience and enabling entrepreneurship, women remain confined to androcentric margins that impact on the emergency, recovery and reconstruction process, but are not necessarily transformative or politicised.

BETANCOR NUEZ, GOMER (UNED, Spain)

Innovative Labour Mobilisation: The Rise of Atypical Worker Organisations in Madrid

The emergence of new business models, technologies, and atypical industrial relations has significantly challenged traditional trade unionism in contemporary Europe. In response, new organizational forms have arisen on the periphery of conventional trade unions, advocating for greater flexibility and innovation in collective action strategies within the workplace. This study aims to explore the development of these new organizations to elucidate the dynamics of collective labor action in informal sectors, such as the platform economy, precarious self-employed workers, and migrant workers in irregular situations.

Our hypothesis posits that the increasing fragmentation and informalization of the labor market create new opportunities for innovating the organization of workers' rights, opportunities that traditional, highly hierarchical trade unions cannot effectively address. To test this hypothesis, we focus on Madrid, utilizing in-depth interviews and ethnographic research conducted within these organizations from 2018 to 2023.

This study investigates the intersections between the repertoires and identities of the traditional labor movement and the new social labor movements that emerged from the Indignados' Movement. We have mapped the majority of labor organizations advocating for these 'atypical workers' and contrasted this reality with the minority unions they collaborate with. This represents the first comprehensive research in Spain to delve into the collective action strategies of precarious workers, highlighting organizations that advocate for workers' rights where major unions have minimal presence.

A critical finding of our research is the pivotal role of activists socialized in the 15M Protest Cycle, who introduced various mobilization strategies into the labor movement. Our case study demonstrates that these new politicization and mobilization strategies create reciprocal influences between alternative and traditional trade union organizations. This research contributes to understanding the adaptability and collaborative potential of diverse labor organizations in responding to contemporary challenges.

Visualization and Drawing As Research Tools. Prison Workshops with Transgender Inmates

The Secondigliano prison in Naples has the only "special" section reserved for the incarceration of transgender women in all of peninsular southern Italy. In order to detect the penitentiary conditions of this population and to identify possible intervention levers to improve them, I conducted field research for 2 years, by doing individual interviews, group meetings, workshops and collecting diaries. In this proposal I present a methodological reflection on the use of drawings as a technique for co-constructing qualitative data. The creation of the drawings was preceded by visualization exercises aimed at evoking a safe space and defining interpersonal boundaries. Prison as a total institution does not allow for the possibility of separating "scene" and

"backstage", so I asked the participants to visually represent a human figure, a house and the prison. Prison as a total institution (Goffman 1961) does not allow for the possibility of separating "scene" and "backstage" (Goffman 1956), so I asked the participants to visually represent a human figure, a house and the prison. The research was carried out as part of my PhD in gender studies while I was volunteering in prison. My identity as a non-binary person and a relative of prisoners has prompted me to have a section of my notebook dedicated to exercises in reflexivity (Bourdieu 1992) about my positioning and emotional ethnographic notes. The visual materials produced by me and the participants were analyzed together, in the perspective of participatory research. The techniques themselves were decided together, in order to implement an emancipatory research (Massari and Pellegrino 2020).

Unveiling the Networks of Early Women Sociologist Researchers: Mapping the Path to Canon Reconstruction

This presentation is part of a larger project titled "Gendering Sociology: Proposal for Research and Teaching," which seeks to recover the contributions of Early Women Sociologists (EWS), often overlooked or marginalised in the – often androcentric – sociological canon. The initial phase of this research involves mapping the researchers that focus on studying these women as part of an effort to reconstruct the field's history.

The mapping research aims to unravel the knowledge construction networks through which it is possible to create a more inclusive and less sexist sociological canon. Additionally, by analyzing the network structure of EWS researchers and exploring how individuals are connected, it is possible to understand the nature and strength of their ties, identify the most influential participants, and determine which nodes serve as bridges between different groups.

The project targets researchers active between 1980 and 2024, focusing on those who study sociological contributions by women from 1800 to 1920. The research process follows two main steps:

1. Desk Identification of Researchers: This step involves a scoping review of literature in multiple languages, using databases (Scopus and Web of Science) and examining existing networks and projects.
2. Mapping Questionnaire Distribution: A mapping questionnaire has been sent to researchers identified in the first step and through official sociological associations. In the mapping questionnaire, respondents are asked to provide the names of other important experts on EWS in order to collect further "nodes" of the collaboration networks. Once the new nodes are identified, the mapping questionnaire is also administered to these new individuals. Responses from both rounds of questionnaires are analysed to map the structure, influence, and connections within the network.

At the time of submission, the project is collecting data through questionnaires. The initial results gathered from the questionnaire will then be presented using social network analysis techniques.

FERRARI MUÑOZ LEDO, JUAN* (Universidad Autónoma Metropolitana (Unidad Azcapotzalco), Mexico)

The Digital As an Object of Sociological Study and Its Social Metaphysics

In the last 10 years, digital technology has grown practically exponentially, its presence is permanent and powerful in society. The digital has become an almost absolute dimension, it is observable both in daily life as well as in the various structural areas of society such as economy and politics. This is why the digital, or digitality itself, has become an object of study in all social sciences and sociology is no exception. However, sociology has been confronted with providing an explanation for a social phenomenon whose dynamics are extremely changing. The number of studies carried out in relation to the digital sphere is overwhelming, although this does not explain what "digital" is from sociology. What is digital in society? Video games, socio-digital networks, digital banking transactions? The objective of this proposal is initially to provide a sociological understanding from the theory of practices of what is designated as "the digital", in order to subsequently address the myths that grow around the digital as a practice. The theoretical approach includes authors such as Herbert Marcuse, Norbert Elias and Andreas Reckwitz.

Body and Emotion in the Integrative Training of Researchers and in the Decolonization of Academic Practices

The decolonized production of knowledge is an intellectual project and political practice that involves the recognition of multiple knowledges, the integrality of the human (mind-body-emotion) and the involvement of the researcher. *Corazonar* (thinking with the heart) is an alternative to confront exclusionary and dominating dichotomies constructed by the West, as it places the heart as the principle, enriching reason (Arias, 2010).

In this collective work between professor and students, our objective is to present and reflect on the *corazonante* experience of the Laboratory for the Integrative Training of Researchers, seeking to answer: how to include the body and emotion in the decolonized production of scientific knowledge? What skills are required of the researcher and how to establish them in the university training space?

The work resulted from a Sociopoetic Research experience, which provokes the knowledge that is in the body's memory through corporal and artistic techniques, and which showed us how far conventional training (focused on rational-cognitive skills) was from preparing researchers for the decolonized production of knowledge. From a decolonial perspective, the researcher is part of the system and knowledge about the other is also knowledge about oneself. Therefore, the Laboratory is theoretical-experiential and provides the opportunity for the development of self-reflective, affective, creative and ethical-political skills through four blocks: self-knowledge, involvement of the subject-researcher, communication-relational skills and self-management of the research. We conclude that crowning hegemonic epistemologies in academic practices is an act of decolonization, still little explored and will need to confront the *status quo* of academia.

FERRARINI VIEIRA, ADRIANE* (Federal University of Pelotas/ UFPel, Brazil)

Socio-Centered Democratic Experimentations in the Ontoepistemic Expansion of Politics Experienced in Everyday Life

In Brazil as in other Latin American countries, national specificities aside, periods of so-called progressive governments encourage the use of institutionalized action tactics that incorporate social movements and their political agendas. Despite advances, such tactics have proven incapable of capturing the demands of vast segments of a traditionally excluded population and of empowering participatory institutions.

In this paper, we will reflect on the concept of socio-centered democratic experiments (SDE), which are constructed outside of institutionality, revealing the path of onto-epistemic expansion of the notion of politics that led us to identify them as experiences of radical and substantive democracy in the daily life of community. SDE's encompass a set of emerging and insurgent practices that are autonomously constructed and managed, based on counter-hegemonic epistemes and alternative deliberative formats (Giannella and Ferrarini, 2024).

In addition to a broad bibliographic review of authors from the epistemic South (some from the geographic North) in the political field and democratic experimentalism, the methodology consists of a multiple case study of SDE's in the context of the global South, notably in Latin America, involving nine ESDs in four countries: Brazil, Mexico, Ecuador and Cuba. The identification, categorization and preliminary analysis of the SDE's revealed the existence of three types, with their specificities: contemporary collectives; popular struggles and social movements; and traditional communities.

We conclude that SDE's, by not orbiting around the State, remain invisible or undervalued in their potential for democratic expansion. However, they

simultaneously create, restore and reinvent practices and knowledge of a lived substantive democracy, reveal ways of strengthening local democracy and indicate political powers and public innovations for new participatory cycles.

FERREIRA-AMARAL GOMES, LEÍSA* (PUC Minas, Brazil)

An Intersectional Analysis of Feminist and Antiracist Candidacies for the City Council of Belo Horizonte – MG, Brazil

The political under representation of women in Brazil occurs from the local to the national level with an exclusion of black and indigenous women. In this case study, we seek to understand how the intersectionality of gender/sexuality, race/ethnicity and social class relates to the experiences of feminist and anti-racist women, elected city councilors or candidates in the 2016 and 2020 elections in Belo Horizonte – MG, Brazil. The transformations in the concept of gender occurred with the contribution of Brazilian black feminist knowledge. An intersectional methodology was adopted, based on the standpoint theories, with the triple aspect of intersectionality: field of study, analytical strategy and critical praxis for social justice. Semi-structured interviews were carried out with candidates supported by the collective “#partida-MG feminista antirracista” along with discourse analysis. A document analysis of the parties' statutes and the elected councilors' legislative production was made. The following analytical categories came up: political formation, oppressions and intersectional struggles, occupation of a place in institutional politics. The gender/sexuality, race/ethnicity and social class categories stand out in the candidates' experiences. We came to the realization that these women's experience in politics is still that of outsiders. The political violence against women in an intersectional perspective discourages and expels them from politics. Solutions lay in collective practices and in the intersectionality of struggles. Invention in politics came up with collective candidacies and mandates in confluence. Collective support for feminist and anti-racist candidacies adopted the strategy of *quilombos* in politics. The intersectionality of oppressions can therefore give rise to an analogous resistance in the form of an intersectionality of emancipatory struggles. Better understanding the representation of women in Brazilian politics, starting from the local level, offers theoretical and empirical support for an analysis of the relationship between inequalities of race, gender and democracy towards equal representation.

FERRERI, MARA* (Politecnico di Torino, Italy)

Collective Organizing for Dwelling Against Displacement and Peripheralization

Displacement is much more than the singular event of loss of home. As a logic of urbanization, displacement is inseparable from historical and contemporary forms of dispossession and subjectivation of poor and marginalized dwellers through disavowal and stigma. Ongoing displacement and peripheralization of individuals, households and entire communities have deep roots in social, cultural, legal and political processes that produce certain subjects as disposable – and, by extension, displaceable – along local, national, and transnational logics. How can collective organizing for housing justice acknowledge such logics, and recentre their efforts on situated and intersectional understandings? Building on a multifaceted framing of displacement, it is clear that demands for making home in place – dwelling, in its expanded sense – can be denigrated even when communities remain ‘in place’ or are offered shelter. Organizing for dwelling against displacement would therefore involve reclaiming simultaneously emplacement and dignity. In this presentation I want to discuss the intersection of displacement, inhabitation and dignity through the formulation of collective housing organising in places that are peripheralized by dominant urban and housing practices and discourses. I will draw on ongoing work about strategies for alternatives to urban displacement in peripheral and core areas of Southern European cities, to offer insights into forms of resistance to state withdrawal, privatisation, undemocratic decision-making and limited institutional accountability, and into efforts for extending new models for intervening and reclaiming dignified homes against processes of othering.

Una Mirada Desde La Reciprocidad Al Ciclo De Vida De Las Ollas Comunes En Viña Del Mar (Chile) Tras El Mega Incendio De Febrero De 2024

Las ollas comunes en Chile constituyen una tradición de organización asociada a distintas situaciones de crisis en la historia del país, como la última dictadura militar, la pandemia, o distintas inundaciones, terremotos y temporales.

Este trabajo explora el surgimiento, organización y dinámica de las ollas comunes establecidas en respuesta al megaincendio urbano-forestal de febrero de 2024 en Viña del Mar, Chile. Este incendio se caracteriza como uno de los desastres socionaturales más graves de la historia reciente del país, siendo considerado el peor incendio urbano registrado.

Ante esta catástrofe, se formaron 109 ollas comunes en los sectores afectados de Viña del Mar, las cuales no sólo respondieron a la necesidad urgente de alimentación, sino que también crearon espacios donde la comunidad experimentó y consolidó formas de organización basadas en la reciprocidad y la cooperación.

Adoptando una perspectiva etnográfica y metodologías participativas, este estudio acompaña una red de articulación de ollas comunes y profundiza en la experiencia de 12 de estas iniciativas. El análisis examina cómo los participantes convirtieron esta experiencia en un proceso de aprendizaje colectivo en gestión y solidaridad, desde el momento de su levantamiento hasta su cierre.

Se argumenta que las acciones de dar, recibir y devolver que se impulsaron desde estas ollas contribuyeron a crear lazos orientados a reconfigurar los valores y prácticas sociales de los territorios recientemente devastados en los que se inscriben.

FERSCH, BARBARA* (University of Southern Denmark, Denmark)

Digital Capital: A Lens for the Study of Digital Exclusion from Health Care Services

Digitalized services have the potential to provide access and care in a flexible way, that overcomes distances. While this for parts of the population is adequate, convenient and in some cases even empowering, at the same time there are other parts of the population who are struggling with this development and who are faced with exclusionary dimensions. In this paper I focus on the latter, and propose that digital capital, which can be described as a specific form of cultural capital with both tangible (hardware and devices) and intangible (knowledge on how to use it) aspects is a promising perspective for studying mechanisms of exclusion from (partly) digitalized services: For instance it allows the inclusion of relevant aspects of digital technology use, e.g. the role of practices, how digital capital can self-replicate and intangible aspects like a "feel" for technology. Nordic countries represent exemplary contexts for studying the impact of this development as they provide comprehensive public health services that have been pushed to adopt and utilize digital tools and technology in the provision of care. In addition, the COVID-19 pandemic served as a catalyst for digitalization. I will use empirical material from different groups faced by digital exclusion (e.g. older people residing in rural areas) to illustrate the analytical potential of the digital capital perspective.

LÓPEZ, IVÁN (University of Zaragoza, Spain)

Repensar La Agencia y El Poder En La Teoría Del Orden Social

Se presenta una crítica constructiva y complementaria al marco conceptual sobre el orden social propuesto por Grothe-Hammer y Berkowitz (2024) en *"Unpacking Social Order: Toward a Novel Framework That Goes Beyond Organizations, Institutions, and Networks"*. Reconociendo la contribución del enfoque multidimensional para comprender el orden social, argumentamos la necesidad de una consideración más matizada de las dinámicas de poder y la agencia dentro de este marco. La crítica se centra en dos aspectos principales. Primero, proponemos una reconceptualización de las propiedades de "determinación" y "capacidad de cambio". Argumentamos que la dicotomía "decidido / no decidido" simplifica excesivamente la naturaleza compleja de la formación del orden social y sugerimos, un **espectro de**

institucionalización. Asimismo, proponemos reemplazar la "decidibilidad" por la "capacidad de cambio", permitiendo una comprensión más dinámica de la transformación del orden social. Segundo, enfatizamos el papel crítico del poder en la configuración y mantenimiento del orden social. Mantenemos que el poder no debe tratarse como una dimensión separada, sino como una fuerza omnipresente que influye en todas las propiedades del orden social. Basándonos en teorías del poder de Foucault (1980), Clegg et al. (2006), Lukes (2005) y Haugaard (2020), proponemos una expansión del marco que integra el poder como una dimensión transversal. Se ha utilizado el método deductivo partiendo de una revisión teórica crítica con una base lógica con herramientas inteligentes. Nuestro marco ampliado permite un análisis extendido sobre cómo las relaciones de poder moldean la ontología, determinación, capacidad de cambio y aceptación de los órdenes sociales. Este enfoque permite una comprensión no-evidente de fenómenos como la resistencia, la hegemonía y el cambio social. Al integrar estas críticas y expansiones, buscamos aplicar ampliamente el poder analítico del marco de los autores, ofreciendo una visión complementaria para entender la complejidad del orden social en las instituciones, organizaciones y redes contemporáneas.

FICHERA, MASSIMO* (University of Maastricht, Netherlands)

For a New Social Contract

This is an age of uncertainty for constitutionalism and contemporary democracies. On the one hand, they are exposed to increasing demands to deliver "goods" such as economic prosperity and peace, to ordinary citizens in an effective way, and to address global problems, such as climate change, health, etc. On the other hand, their underpinnings are questioned to an unprecedented extent in terms of legitimacy and inclusiveness (or justice).

These two poles – effectiveness and legitimacy/justice- are not necessarily in tension with each other, but generate a number of claims that are potentially contradictory and require a renewed analysis of the main parameters of Western liberal democracy.

The paper seeks to go beyond those studies on the relationship between constitutionalism and democracy that either assume an inherent conflict between them, or proclaim the end of State sovereignty, or, on the contrary, assume State sovereignty as exclusive paradigm of constitutional studies. Rather, the ambition is to keep in mind the process of transformation that familiar legal and political categories are going through. The claim is that it is necessary to identify as clearly as possible the complex variety of actors or subjects involved in such process of transformation of contemporary democracies - including those who are potentially the losers and winners- as well as the stakes, the interplay between such actors/subjects and the implications and challenges for the nature and scope of contemporary legal systems. The paper advocates a new form of social contract, which is particularly urgent in the context of the climate crisis and the relevance of non-human agents. Moreover, methodologically, the paper attempts to build a bridge between philosophy of law and sociology of law.

FIGARI LAYUS, ROSARIO* (Friedrich-Wilhelms-Universität Bonn, Germany)

The Challenges of Reconciliation Politics: Political Meanings and Implications of Reconciliation Practices and Policies in the Aftermath of Mass Violence

In recent decades, there has been a growing trend in both academia and the policy-making of international organisations worldwide to analyse and incorporate policies and initiatives to promote reconciliation processes. These are seen as crucial to building sustainable, inclusive, democratic and peaceful societies in the long term, and to ensuring that human rights violations and crimes against humanity do not occur again. But what do we mean when we talk about reconciliation in a conflict or post-conflict context? What kind of impact can different and even competing reconciliation practices and policies have in post-violence conflicts?

In peace and conflict studies, reconciliation usually refers to transformative processes of dealing with conflictual and fractured relationships. However, this concept is multifaceted and can have different meanings and political, social and legal implications in different contexts. For example, while in countries such as South Africa or Rwanda the concept of reconciliation may have been associated with nation-building projects, the non-violent coexistence of victims and perpetrators within communities, as an instrumentalist or pragmatic way of living together, or even with development and poverty reduction, in several Latin American countries, such as Argentina, the term has been used as a synonym for impunity and has been used primarily to justify a public stance of 'forgive and forget' about past crimes. This explains the deeply contested nature of the concept in several settings. To address these debates and challenges, the presentation will analyse the polysemic nature of the "reconciliation" concept and the multiple concrete implications different

in post authoritarian and conflict context. This will include an analysis of the conceptual and political foundations of the term, as well as the main potential challenges as a practice to achieve long lasting peace.

FILCAK, RICHARD* (Slovak Academy of Sciences, Slovakia)
SKOBLA, DANIEL (Slovak Academy of Sciences, Slovakia)

Climate Neutrality 2050, Inequalities and Just Transformation: Case of Upper Nitra, Slovakia after the End of Coal Mining.

The decision to phase out coal in Upper Nitra, Slovakia was made and the mine was definitely closed in 2023. Although central role of the mining industry has been steadily declining as the region economy, impacts on the direct and related jobs and the loss of well-paid jobs causes many uncertainties, and influence different social groups differently. The EU and the government want to make the region an example or success story of regional decarbonisation for reaching 2050 climate neutrality. In the same time, the recent end of coal mining makes it possible to examine these processes in real time and in the context of specific local conditions shaped by the national and supranational frameworks, neoliberalisation policies, and impacts of the EU and the state interventions. The paper presents results of the ongoing research based on analyses of cross-sectional perspectives related to socio-economic, socio-political, socio-cultural and gender aspects of the transition to a low-carbon economy. Our approach is based on researching socio-political context of technological drama, Actor- Network theory (A NT) and local field of power. The Bourdieu' field of local power shapes responses and/or coping strategies of different actors exposed to the technological change. There are 3 perspectives in political context here: Imposing, coping and resisting. Or what Brian Pfaffenberger (1992) coin in the concept of technological drama as technological regularization, technological adjustment and technological reconstitution. We focus on the hierarchically structured social space in the region affected by decarbonisation and how it influences the regional economic and social transformation in the perspective of external and internal factors and pressures. The paper specifically focusses on the low-income groups in the process.

FILICIA, ANTONIO* (Università degli Studi di Bari "Aldo Moro", Italy)

Religious Practices As a Tool for Change in Rural Areas: The Case Study of Hořice Na Šumavě

The city of Hořice na Šumavě, in the Czech Republic, can be seen as material evidence of how religious practices can change cities and territories. With the present abstract, I would like to propose the research results of this city's case study and show how the importance of religious practices can change the landscape and the people living in a certain place. The little city of Hořice na Šumavě, an urban centre inhabited only by peasants and farmers in Bohemia, became suddenly famous in the second half of the XIX Century thanks to the discovery, by tourists and the general public, of its Passion Plays, a form of religious theatrical play dating back to the Middle Ages. The discovery of these Plays, in which the locals often played a role among the characters present in the performances, triggered a change in the city and its inhabitants: more and more visitors arrived, and even a dedicated theatre was built. The city's fame will survive the terrible years of the first half of the XX Century and will remain famous. This was until the end of the Second World War and the establishment of a communist regime in Czechoslovakia: religion was forbidden by law and so Hořice had to change its economy: no more a tourist and religious centre, now the city will have to face a series of difficult changes, in many aspects of its life. This research will focus on how the discovery of certain religious practices (and, later, the obliteration of those same practices) has led to serious changes in the life, economy, and even physical structure of a once-quiet village in rural Bohemia between the end of the XIX century and today.

FILICE BARROS, NELSON* (University of Campinas, Brazil)
LIPARINI PEREIRA, FLÁVIA (University of Campinas, Brazil)

Differences As Social Assets: Knowledge Emerging from Sociologists' Experiences in the Training of Health Professionals

In social theory, the concept of the border has evolved from being merely a line to becoming a space between margins. It has shifted from being an arbitrary, metaphorical, and abstract construction to an arbitrary-objective, metaphorical-existential, and abstract-concrete. The border has become a third space, a territory of ambivalence, "borderlands," and a place of "betweeners." Thus, it is no longer the point where something ends but

rather the point from which something begins to be present. Consequently, borders are inhabited, and border knowledge is constructed. The aim of this article is to discuss the knowledge that emerges from the border experiences of sociologists involved in the training of health professionals. The territory formed between the fields of sociology and health constitutes a border space, within which significant practices and interactions of meanings are identified. This space presents theoretical and practical challenges for sociology within the health field, such as: identifying and problematizing differences, fostering ambivalences, discuss autonomy, rejecting submission, integrating opposites, "trans-forming" meanings, "inter-acting" codes, and problematizing epistemic injustices, among others. In this border space, differences can be viewed as opportunities and can become synonymous with social assets, which can significantly contribute to the training within the health field. Openness to contingency can invite epistemic-hermeneutic shifts, allowing for an active discernment of how power relations function in the health field. Moreover, problematizing the existence of essence in all things and relationships can lead to the deterritorialization of regimes of truth, introducing the temporality of the indeterminate, the relational, the impermanent, and the principle of uncertainty. However, in conclusion, there is no guarantee that the knowledge emerging from sociologists' pedagogical experiences in the health field will be sufficient for the construction of sociology with health.

Networks of Expectations and Visions in the Governance of Hydrogen Technologies in Germany – a Longitudinal, Multi-Level, Multi-Sectoral, and Multi-Technology Perspective.

Counteracting climate change requires solutions that might contribute to far-reaching transformations in different sectors. As many technologies with radical transformative capacity are not yet fully developed, their future transformative potential is discussed in the form of expectations and visions, which are also the basis of negotiations, formulating strategies, and decisions regarding substantial policy support.

The recent surge of global interest in various hydrogen technologies as radical solutions to challenges that electricity, heat, transportation, and industry sectors face has been preceded by numerous earlier phases of industry and policy interest, just as disinterest and little support. Germany is an interesting case, as policy support for hydrogen technologies has been stable for almost two decades, despite changing expectations, in contrast to other countries with more volatile approaches.

Our paper studies how the German governance of the hydrogen field evolved between 2005 and 2023. It focuses on multiple hydrogen and alternative technologies. It asks how the dynamics of expectations relate to sectoral dynamics and policy support and what level of expectations and visions was especially performative in triggering policy support.

Conceptually, the paper builds on Transition Studies and Sociology of Expectations. Methodologically, research questions are addressed by conducting a Sociological Discourse Analysis of the policy-making documents and strategies. The results are presented in the form of semantic networks exhibiting the change of expectations at multiple levels over time.

The aim of the study is to provide insights into the role expectations and visions play in the governance of ST&I. Our study offers insights into how innovation policy can cope with the various technological and sectoral expectations and coordinate multiple sectoral transitions simultaneously. Moreover, the longitudinal perspective on governance provides insights into how policy actors could reflexively deal with the dynamics of expectations and find a balance between adaptive and rigid innovation governance strategies.

Unfolding Versus Upholding: Established Sociotechnical Imaginaries in Hydrogen Policymaking in Chile, Germany, and the United Kingdom.

The vision of a hydrogen economy emerged as a promising solution for achieving a net-zero transformation. Having been shaped by diverse dynamics, it stabilizes in multiple countries as socially performative vision. However, while the transition towards a hydrogen-based energy system accelerates, various prevailing sociotechnical imaginaries that are deeply embedded and widely shared visions of what is considered achievable and desirable in the future of a national state influence the shape of the vision.

This study explores the intricate ways in which sociotechnical imaginaries have co-shaped hydrogen policymaking in the United Kingdom, Chile, and Germany. We conduct a Sociological Discourse Analysis of various policymaking documents (2003-2022) supported by qualitative interviews to elucidate the country-specific hydrogen visions present in the structures of policies and how they have been influenced by sociotechnical imaginaries. We also explore secondary literature to describe the historical and contemporary context of institutions and materialities related to identified sociotechnical imaginaries.

Our research reveals that the development of hydrogen visions in all countries appears to prioritize economic benefits over strictly following climate targets. However, variations exist in how the hydrogen vision is framed. In this context, Chile's hydrogen visions are strongly influenced by the historically established imaginary of Chile as an exporter of natural resources and a 'mining nation', aligning with extractivist principles. On the other hand, the countries from the global north envision hydrogen as a way of maintaining their economic advantages. In Germany, hydrogen visions are primarily shaped by the sociotechnical imaginary of an industry nation and technology exporter, while established fossil-fuel imaginaries strongly influenced the UK's hydrogen visions.

Against this background, we discuss the governance modes that not only engage with expectations regarding emerging technologies but also track firmly entrenched in history and contemporary societal institutions and materialities accounts shaping future visions of emerging and alternative technologies.

FINDA, BAYO DIAKHATÉ* (LISIS, France)

Disparité De Genre Dans L'adoption De Pratiques Agroécologiques Au Sénégal

L'agroécologie apparaît aujourd'hui comme une alternative pour relever les défis de réduction de la pauvreté, de la résilience et de la sécurité alimentaire. Pour atteindre ces objectifs, la prise en compte de toutes les couches sociales est primordiale. L'accès aux ressources foncières et aux intrants (semences, engrais, matériel, crédits...) est un facteur déterminant pour favoriser la transition agroécologique des producteurs. À l'inverse, leur déficit entrave l'adoption de pratiques plus durables. Cependant, les rapports de genre restent encore stéréotypés dans le secteur agricole. En effet, les ressources et facteurs de production sont inégalement répartis entre les hommes et les femmes au détriment des femmes. Nous faisons ici l'hypothèse que les disparités de genre dans l'accès aux ressources constituent une entrave pour une TAE.

De manière globale, les femmes et les jeunes ont un accès limité aux ressources productives comparé à leurs homologues hommes. Les superficies cultivées sont en moyenne plus importantes chez les hommes que chez les femmes et les jeunes. L'accès au crédit formel, est plus significatif chez les hommes et celui informel plus sollicité par les femmes. Le même constat est fait sur le recours à la main d'œuvre qui est quasi inexistant chez les femmes et les jeunes. Parallèlement, les résultats indiquent que les hommes mettent plus facilement en œuvre des pratiques agroécologiques que les femmes du fait de leur faible accès aux ressources. Ils font plus recours aux semences certifiées contrairement aux femmes qui mobilisent des techniques de sélection variétale et de conservation de semences. En ce qui concerne l'utilisation de fumure organique, elle augmente significativement chez les hommes, comparés aux femmes et aux jeunes.

Les résultats fournissent des indications que les inégalités d'accès aux fonciers, aux intrants, aux crédits et aux services d'appui limitent l'implication des femmes et des jeunes dans l'adoption de pratique agroécologique.

FINZI, GIACOMO* (Université Catholique de Louvain, Belgium)

Les Systèmes Interculturels Des Universités Amawtay Wasi Et Unibol Quechua (2007-2017)

La communication intitulée « Les systèmes interculturels des universités Amawtay Wasi et UNIBOL Quechua (2007-2017) » constitue un progrès analytique de ma thèse de doctorat. En partie, elle découle des apports du travail de terrain réalisé au sein des universités indigènes interculturelles en Bolivie et en Équateur, qui représentent deux expériences de décolonisation des savoirs en Abya Yala

Tout d'abord, je présenterai le contexte politique, économique, social et culturel dans lequel ont été fondées les universités interculturelles indigènes en Équateur et en Bolivie, au début du XXI^e Siècle.

Ensuite, les différents objectifs missionnels de celles-ci et leurs relations avec l'État seront comparés. Les relations avec l'État seront particulièrement problématisées en ce qui concerne les mécanismes de financement et les mécanismes d'accréditation avec les ministères de l'éducation respectifs. De plus, il sera présenté dans quelle mesure les projets d'enseignement supérieur interculturel indigène en Équateur et en Bolivie représentent une rupture théorique, politique, épistémique et méthodologique dans la formulation des curriculums académiques. Enfin, un regard sera porté sur les différents types de profils académiques et professionnels, parmi les enseignants, les étudiants et les autorités des institutions interculturelles.

De même, il est proposé de réaliser une analyse de la proposition interculturelle entre avancées, défis et contradictions afin de construire un bilan comparatif des deux institutions, en relation avec le concept et la pratique d'interculturalité. En outre, les multiples et changeantes relations entre les gouvernements alternatifs de Bolivie et d'Équateur et les sujets politiques décoloniaux seront problématisées pour la construction, l'élaboration et la mise en œuvre d'un enseignement supérieur décolonial. Les relations avec les organisations communautaires et les peuples indigènes seront également problématisées. À cet égard, les différents tissus communautaires des propositions pédagogiques et des processus productifs, qui génèrent même des opportunités d'emploi et des initiatives entrepreneuriales dans les territoires, seront pris en compte.

WG06-898.6

FINZI, GIACOMO* (Université Catholique de Louvain, Belgium)

Mecanismos Estructurales De La Colonialidad Y Encubrimiento Epistémico

La ponencia se propone presentar algunos avances teórico-conceptuales de mi tesis doctoral, sobre los procesos de educación superior intercultural en Bolivia y Ecuador.

A partir de los conceptos de colonialismo, colonialismo interno y colonialidad, en sus múltiples dimensiones, se expondrán los atributos y elementos constitutivos del sistema moderno/colonial hegemónico, identificando los rasgos del modelo civilizatorio y la colonialidad y caracterizando los mecanismos estructurales de la colonialidad al interior de los sistemas de educación superior latinoamericanos.

Para ello, se presentarán los siguientes mecanismos estructurales de la colonialidad como nueva forma de encubrimiento: 1. La evangelización forzada; 2. La eliminación de saberes y las prácticas del epistemicidio; 3. La imposición del sistema epistemológico hegemónico; 4. La eliminación de las lenguas y el proceso de castellanización; 5. La eliminación de las bases territoriales de los tejidos comunitarios; 6. La imposición de un patrón civilizatorio, un horizonte lineal y teleológico de la modernidad como proceso histórico ineludible; 7. La superposición de discursos que justifican y argumentan la superioridad naturales entre grupos sociales y étnicos sobre otros, a través de procesos y prácticas de deshumanización 8. La producción, reproducción y divulgación de saberes jerarquizados.

Estos mecanismos estructurales de la colonialidad sistematizan el epistemicidio y la imposición de un patrón civilizatorio como elementos fundamentales para la negación e invisibilización de saberes y prácticas, acompañada y por el despojo territorial y el saqueo de recursos naturales que contribuyeron al consecuente debilitamiento de las estructuras sociales y los tejidos comunitarios de los pueblos indígenas y de las comunidades afrodescendientes, modificando sus prácticas y conocimientos, imponiendo procesos de migración (al interior y al exterior de las fronteras de los estados-nación) y la creciente sumisión al régimen moderno/capitalista/colonial, mediante el progresivo ingreso al régimen asalariado y a la precarización de buena parte de las poblaciones indígenas, afrodescendientes y campesinas.

FIRINCI ORMAN, TURKAN* (Senior Research Fellow, Tampere, Finland, Finland)

A Performative Approach to Everyday Activism and Eco-Literacy Among Young People in Bulgaria

Research on climate activism has largely focused on affluent nations in the Global North, often overlooking the perspectives of youth activists in other regions. This study delves into the geo-socialization and daily environmental activism of young people in Bulgaria, a post-communist context, challenging traditional political agendas that ignore varied forms of participation. The research highlights how environmental consciousness among Bulgarian youth, particularly regarding consumerism and climate change, emerges from lived experiences and is expressed through different forms of agency, including roles as victims, voters, rejecters, and interpreters. Drawing on Firinci Orman's (2022) framework of performative environmental citizenship, the study uses detailed geo-social data gathered through interviews, mapping, and essays. It examines

how environmental identities shape the eco-literate perspectives of Bulgarian youth from diverse social backgrounds across urban and rural settings. The analysis emphasizes the importance of intersubjective, intergenerational, and spatial connections in forming eco-literacy, demonstrating that ties to local communities and traditional ways of living continue to play a crucial role in the environmental socialization of Bulgarian youth, regardless of how they express their environmental identities.

Tampere, Finland, Finland)

Deciphering Multispecies Pedagogies: Co-Creation in Early Childhood Education

In the Anthropocene, traditional pedagogical methods rooted in individualism and linear thinking are inadequate for addressing the complex challenges of climate change, zoonotic diseases, and technological advancements. This article contends that prevailing anthropocentric perspectives in early childhood education overlook the necessity of envisioning a multispecies future. By challenging binary distinctions, it emphasizes the Common Worlds framework and posthumanist perspectives, advocating for the inclusion of more-than-human entities in shaping our understanding of the interconnected world (Haraway, 2016). The article classifies and proposes alternative pedagogical approaches that focus on a relational, situated, and Common Worlds framework for multispecies pedagogy, highlighting the need for relational, place-based, and collective inquiry pedagogies. It argues that these approaches cannot be derived from existing curriculum models but require collaborative and experiential practices that foreground collective agency through innovative pedagogical methodologies.

Female Perspectives in Agriculture: A Framework for Gender-Transformative Change in Austria, Switzerland and California

Women play a manifold role in agriculture worldwide. In the context of just and sustainable climate change adaptation, support and impact of female farmers will be essential as they gain more reach in the agricultural landscape. Still, female farmers are underrepresented in political strategies and research. Gender neutral and agricultural research have widely ignored the capacity of female farmers for climate change adaptation. In tackling climate change adaptation, the integration of feminist research is essential. Studies on women's empowerment in agriculture often are associated with low-income and lower-middle income countries. When it comes to literature on the gender-agriculture nexus, European and North American regions are underrepresented. Therefore, our aim is to develop a gender transformative framework for agriculture (GTFA) in said areas. Empirical evidence derived from 44 semi-structured interviews with female farmers from case studies in mountainous regions in Austria, Switzerland and California illustrates specific processual factors influencing gender-transformative change in agriculture. This work results in a GTFA for European and North American contexts. The main influencing factors for gender-transformation according to the GTFA are positive role-models, gender-aware policies, agricultural education, self-efficacy and facilitation for female farmers as well as the awareness and support of male farmers in agricultural communities when implementing strategies for modern gender norms.

Sibling Influences on Educational Attainment – Does International Migration Make a Difference?

Research in family, education, and social inequality has long focused on intergenerational relationships and parent-child transmission patterns. Recently, however, attention has increasingly turned to sibling relationships and their influence on individual life chances and well-being. Studies show

the salience of intragenerational transmission effects and how they vary by factors such as age difference, gender, and sibling number. Migration and integration research has also identified strong sibling effects, particularly from older siblings, in migrant families—sometimes exceeding those in non-migrant families. Yet, the unique dynamics of transnational migration on sibling relationships remain underexplored.

We aim to add to this debate by addressing migration differences from a comparative perspective, considering both migrants and stayers from the same origin contexts. We theorize that transnationality, in general, complicates older siblings' ability to transmit, and younger siblings' capacity to utilize, older siblings' cultural capital (e.g., knowledge, educational qualifications). Further, transnational social spaces between siblings hinder social exchanges, particularly those that rely on physical proximity, such as practical help, caregiving, and emotional support.

We employ data from the 2000 Families Study (Migration Histories of Turks in Europe), which used a family-based and transnational design to systematically analyze the role of the country of origin (Turkey) and destination country, as well as differences between European residence contexts. Our analysis includes the highest educational qualifications and where they were obtained (Turkey vs. EU). Preliminary results from multivariate regression models show that the educational influence of older siblings is indeed lower in migrant contexts (EU) than in stayer contexts (Turkey). We discuss these findings in the context of migration and family research.

The Role of Older Siblings in Language Learning in Migrant and Non-Migrant Families

Language skills are key to educational success. However, family social and migration backgrounds often contribute to disparities in children's language abilities, leading to educational inequalities. While most research has focused on primary caregivers, showing that parental resources, language proficiency and interactions predict children's language outcomes, less is known about the role of siblings. In Western societies like Germany, around 75% of children grow up with siblings, yet their influence on language learning remains comparatively understudied.

Previous research suggests that larger sibship size negatively affects cognitive and educational outcomes due to resource dilution, i.e., limited parental time and material resources or a reduced intellectual family climate. However, previous studies also indicate that older siblings can enhance younger siblings' communication skills, though the effects may vary by sibling gender. For example, older sisters tend to be beneficial, while older brothers can be detrimental. In foreign language-speaking families, a positive, though not statistically significant, effect of older siblings was found, highlighting the potential for supporting second language learning.

This study extends this line of research by examining whether older siblings play a stronger role in migrant children's language learning. We theorize that older siblings can promote second language learning through various mechanisms, such as everyday communication, particularly in families where they compensate for parents' limited usage and proficiency in the target language. Using data from the German National Educational Panel Study (NEPS), we analyze cohorts in lower secondary (grade 5) and upper secondary school (grade 9) to assess older siblings' role at different developmental stages. Preliminary multivariate regression results show an overall negative effect of older siblings on vocabulary and reading skills. In some cases, these trends are less pronounced—and tend to be positive—for migrant children, e.g., in lower secondary school, for first-generation migrants in vocabulary and for second-generation migrants in reading.

and Communication, The Open University of Israel, Israel)

Temporality on Paper: Calendars As Epistemic Media

This is an inquiry into the materialities and practices involved in a new media, popularized in the 19th century – the personal calendar (a.k.a. weekly planner) – and how it was turned from a record of past events into a central agent of planning the future, and constructing a future-oriented subjectivity. The paper describes the slow transformation from proto-calendars, such as almanacs, and personal diaries, into calendars as a media for time management. Calendars – now a ubiquitous object of modern life – did not enter universal usage up until the mid-19th century. And their early use shows

multiplicity, inconsistency, and versatility – a familiar phenomenon with new technology – only later to be crystalized into a relatively stable and familiar practice. My theoretical move delves on the notion of epistemic media, a media which does not merely registers already-existing knowledge, but instead, a fillable media, where users add information incrementally, and as function of design and practice, facilitated the construction of a new type of knowledge which is not directly inscribed in the media but it deduced. Looking at archival material of calendars printed in (predominantly) England in the 19th century, I show the malleable and changing design of calendars and proto calendars and discuss how they facilitated different conceptions of temporality. I am particularly interested in how the space of the page serves as an arena for the drama of temporality. Drawing on media studies, and on the sociology and anthropology of time, this paper locates the maternities and practices involved in calendar-keeping, at the center of a historical transformation of modern temporality.

FISHER, JARVIS* (Cornell University, USA)

Rice Self-Sufficiency and Agroecology in Senegal

The people of Senegal consume almost twice as much rice per capita as the world average, yet the nation generally imports up to 70% of the rice it consumes. Over the decades since independence, the nation's reliance on imported rice has grown steadily, despite successive government efforts to increase domestic rice production through the distribution of industrial agricultural inputs. In the last decade, concerned about the social and ecological impacts of input-intensive agriculture, a national coalition of civil society actors has formed to promote ecologically intensive production methods and the development of local markets for agroecological products. This movement has recently begun to exert influence over state programs pursuing national rice self-sufficiency. Yet, new initiatives have been cautious and consist of the incorporation of 'green' objectives into programs otherwise oriented towards attaining higher yields through expanded industrialization. At the same time, agroecological systems of rice production that were once well-established, such as those found throughout the southern Casamance region, must increasingly contend with government schemes that incentivize reliance on synthetic inputs and agricultural machinery.

My paper examines how these contradictory approaches influence the ongoing development of territorial rice markets in two regions – the middle valley of Senegal River and the Anambé Basin of the eastern Casamance. In doing so, it argues that the piecemeal nature of government involvement in the agroecological transition has contributed to the steady erosion of historically agroecological systems of rice production and the relative isolation of farmers attempting to foster agroecology in collaboration with civil society organizations. This work highlights the challenges confronted by those working to encourage the emergence of localized, agroecological markets when these operate within a sector that has become dependent on international aid and industrial production methods.

Bodies Beyond Conformity: The Market's Role in Shaping Eating Disorders

In this presentation I delve into the sociology of the deviant body and more specifically those to whom the idiom of an "eating disorder" could be attached. Ultimately, the study of the disordered or transgressive body reveals such bodies as existing, not just at the margins, but as the locus of social and political critique concerning the construction, regulation and control of difference and non-conformity. The body in modernity is not the free subjective agent suggested by Giddens (1990); it is a product subjected to intense commercial, digital and medical scrutiny (Boero & Mason, 2021; Shilling, 2012), and often to acts of violence. Within the neoliberal capitalist marketplace, specific body forms- such as the ultra thin body, and now the ultra muscular body- are both valorised and medicalised. The push to medicalise the body involves the erasure of the patient's individual differences and personal history, replacing it with a clinical examination focused on anatomical and biological features. For individuals with eating disorders, this has led to increasing emphasis on specific diagnostic categories, BMI measurements, blood and urine tests, and potential genetic screening. In commercial settings, bodies are subject to acts of micro violence, which through the acceptance of unseen exploitation, defy regulation. As illustrated in our own IPA study of models and the "selling of skinny", the fashion industry's fixation on youthful, slim figures means that girls and women were subjected to constant scrutiny concerning their weight, amounting to a form of micro-violence. Rules about maintaining a low body weight through dieting are instilled at a formative age, with judgements and "soft" punishments inflicted on those who gained weight, indicating a strong industrial component to the construction of eating disorders.

FIXSEN, ALISON* (University of Westminster, United Kingdom)

Deconstructing the "Eating Disorder Epidemic"

In this presentation, I explain why the so called "eating disorder epidemic" is a bio political construct and why an individualistic approach to eating disorders (EDs) is bound to fail. The current focus on disordered eating is as a psychiatric or medical pathology. However, as I argue in this paper, multiple factors including changing food landscapes, globalisation and colonial legacies, over-emphasis on subjectivity and self-cultivation, idealistic representations of bodies, socioeconomic inequalities, the expansion of fast-food industries, the "war on fat, healthism and body extremism, and the algorithms of social media, are all instrumental in the construction of disordered eating. Socioeconomic disadvantage is now recognised as a fundamental determinant of mental health outcomes (WHO, 2024), yet emphasis on individual diagnosis has led to a blurring out of the structural conditions and institutions of power in favor of individualistic, behavioral solutions. Along with various processes by which bodies are medically defined as normal or deviant in their appearance or eating practices, the sociology of the body highlights how human bodies have become the subjects and objects of social and technological control in unprecedented ways. What Rose (1998) calls the "regime of the self" includes the prospect of self-invention, such that we are led to believe that our bodies can be anything we choose, so long as we can pay for it. That epidemiologically eating disorders continue to expand should challenge society to rethink the process of psychiatric labeling and diagnosis, along with the messages that capitalism perpetuates concerning the requirement to achieve an ideal body through diet. The expansion and broadening of ED categories to incorporate people of all ethnicities, genders and backgrounds means that that now exist within a wider picture of intersectionality, that has yet to be fully investigated.

FLAUTO, ROBERTO* (University of Naples Federico II, Italy)

The Endless Moment: Sociology of Orpheus Myth

The myth of Orpheus, so fascinating and evocative, has had countless interpretations over time, thanks to its high metaphorical level, knowing different declinations. In this contribution, through a sociological perspective, combining suggestions of a poetic, literary and psychoanalytic nature, I would like to propose an original reading of the Orphic myth.

In general, thinking about the dimension of the myth means understanding what has been transfigured in it: because the mythical tale is the transposition of a complex question on the imaginary level. In the perspective taken here, the myth can be considered as the most sublime result of the infinite dialogue between the need to give meaning to the events of the world and of life and the desire to cross the limits of both; between the need to define the contours of one's identity and the desire to be other than oneself; between the need for order and the temptation of disorder. Providing interpretations of the world that can be declined in every direction, since in myth explanations of reality, hermeneutic and meaning trajectories are intertwined.

With its narrative charge and its imaginative power, the myth expresses a desire present in the entire community, it is the expression of profound instances that cross the cognitive habitat of a community, intercepting collective dilemmas, fantastic delusions, atavistic needs, unspeakable dreams and fears.

So, specifically, what does the myth of Orpheus tell us? Is it a metaphor for what? What is its sociological meaning? Moving between the "poetic" dimension typical of mythical narration and scientific research, this contribution tries to identify, among the many possible ones, a path of analysis, identifying a possible link between the Orphic tale and the process of mourning, of which it seems to be the most complete metaphor.

From so Far to Soclose: Sharing the Cultural Heritage of Forced Migrations

This paper presents the results of the H2020 funded project SO-CLOSE (2020-2022). Throughout the project, universities, technological companies, museums and other cultural institutions from Greece, Italy, Poland, Spain and Sweden collaborated to develop digital technologies for the sharing of cultural heritage of forced migrations in Europe.

After a needs analysis that included 197 semi-structured interviews and focus groups developed in Greece, Italy, Poland and Spain with refugees, cultural institutions and other relevant stakeholders, the project developed

a co-creation process in which refugees from different historical episodes collaborated to produce digital technologies under the understanding that heritage can contribute to the communication between refugees and the host societies and become a resource to generate new bridges within communities.

The paper presents some reflections that arose during its development in relation to the inclusion processes, the access to cultural heritage, the role of digital tools in the sharing of the experience of forced displacement between refugees and the local communities, among other. Finally, the paper presents some reflections in relation to the demands of refugees of having a meaningful and egalitarian participation in the building of historical narratives. Despite food traditions, religious ceremonies and arts are often viewed as "safer" spaces, cultural heritage also includes memory of the past. Aside from their personal stories, anecdotes and experiences, refugees also hold views, reflections, and analysis about the historical episodes they have lived. Thus, besides sharing their stories, they also demand to take part in the construction of the explanations of present facts that are going to remain for future generations and become part of the narratives of our common history.

FLEET, NICOLAS* (Universidad Alberto Hurtado, Chile)

Post-Neoliberal Professionalism of the Neoliberal State: Reconfigurations and Effects of Political Change

This research studies the political roles that professional work assumes within the crisis of the neoliberal state in Chile. Thus, by studying a decade of professional reconfigurations of public administration and the initiatives that professionals autonomously undertake to influence the direction of state policy (state power), we can observe the contradictions and transformations of the neoliberal state from within. Our focus lies on the emergence and reproduction of post-neoliberal orientations of professional work, capable of mobilising specialised knowledge and produce meaning linked to the social struggles from the state. In this way, post-neoliberal professionalism and technocracies are different from the neoliberal technocracies defined by their capacity to reproduce links between markets and state policy. In turn, regarding the effects of such post-neoliberal professionalism, it implies to look at the level administrative innovations, as it has potential strategic relevance to explain the capacity to undertake policy changes by means of professional work linked to social demands. The empirical research uses a mixed methodology combining the statistical study of the professional reconfigurations of the public administration with changes of government – as a proxy of the political affinities between professions and universities with specific roles in the state – with qualitative material from interviews with professional state workers from different rank. To illustrate the hypothesis of post-neoliberal professionalism, we look at the cases of the ministries of Gender Equality and Education during the current centre-left-wing government of President Gabriel Boric, in order to characterise the reproduction and effects of the professional ideologies that lead the policy agendas in gender and education, the way they connect with social movements and demands, and their capacities to confront and transform the neoliberal framework of the state from within.

Water Power and Governance: Nature Conservation Conflicts and Peasant and Indigenous Struggles in Northern Coastal and Andean Peru

This session investigates the intersections of water governance, socio-environmental conflicts, and nature conservation struggles in northern Peru, focusing on peasant and indigenous andean and coastal communities in Lambayeque. These communities face complex challenges shaped by neoliberal water governance models, agribusiness expansion, and conservation policies. In this region, peasant and indigenous communities are working together to protect and preserve their water resources amidst growing pressures from the agroindustry frontier. This collaboration highlights the emergent socio-ecological interactions between these communities, their struggles for empowerment, and their efforts to secure equitable access to water. The research examines both the barriers and opportunities for their integration, aiming to provide insights into sustainable water management practices and community-based governance.

The case of the Muchik community in coastal Lambayeque reveals the tensions between conservation efforts and neoliberal agricultural development. Market-based water management strategies and the creation of the Chaparrí Nature Reserve by the Muchik community have led to power struggles over land and water control. The introduction of hydraulic

infrastructure projects, as part of broader regional development plans, threatens both the conservation of the reserve and the integration of the Muchik community with neighboring Lambayeque communities. This study explores the power dynamics that emerge when neoliberal water discourses intersect with conservation efforts, revealing the political and socioeconomic forces shaping these conflicts. By analyzing the case of the Muchik and neighboring communities, this session will illuminate the broader implications of neoliberal water governance on Indigenous and peasant communities across Peru and Latin America. It seeks to foster discussions on how alternative governance models can support equitable water distribution, local empowerment, and the preservation of ecological integrity in the face of ongoing global environmental challenges.

Political Rallies through Gender Lenses: The Case of the 2024 Presidential Campaigns in Mexico

This paper aims to examine the gender dimension in political rallies in the 2024 presidential campaigns in Mexico, in which the main candidates were two women: Claudia Sheinbaum and Xóchitl Gálvez. Based on hybrid ethnography, we explored the ways in which rallies articulate on-site events, streaming in digital platforms, and media coverage, focusing on Guadalajara, León and Puebla, in Mexico. Gender dimension in the data analysis provides an understanding of politics and political rallies – as gendered spaces, crossed by inequalities and cultural backgrounds that affect the conditions in which women participate in politics. Particularly, we approach the candidates' discourses in terms of self representations as women, and gender agenda as well; the audience interactions on site and online; and the presence of gender stereotypes in media coverage.

Preliminary findings show a complex articulation between on-site rallies, live streaming, digital practices of militancy, and media coverage.

The need to show dominance of the territory through political rallies is a legacy of men's political campaigns, which the women candidates and their teams assumed. Although the candidates were women, they exploited their gender status very little. They defined themselves as women and talked about supporting women, but there was no gender perspective in their campaigns. Audience interaction does not show gender biases on site, but it does in live streaming. User interactions ranged from support to attacks, which included mockery of the candidates' bodies and social status. Media coverage, although it mostly reproduced the messages of both candidates, also emphasized gender stereotypes and attacks between them and their parties.

In sum, even when there are advances, women's candidacies do not guarantee that a gender perspective will be incorporated into campaigns. A significant change in generations, political culture, and journalistic work is required.

WG10-919.5

FLORES-MÁRQUEZ, DORISMILDA* (Universidad La Salle Bajío, Mexico)

Thinking the Digital Sociologically: Theoretical Discussions and Dimensions for the Study of Digital Communication and Culture

Contemporary societies are crossed by the digital. Whether it is a matter of individual communicative practices or global dynamics of disinformation, there are a series of increasingly complex processes of datification, algorithmization and platformization (Barreneche & Lombana-Bermúdez, 2023; Bonini & Treré, 2024; D'Ignazio, 2024; Gómez-Cruz, 2022; Jeppesen & Sartoretto, 2023; Lemos, 2023; Masiero, 2023; Milan, 2024; Milan & Treré, 2022; Ricaurte, 2024; Siles, 2023; Siles, Gómez-Cruz & Ricaurte, 2023). Understanding these contemporary societies requires approaching the actors, practices and relationships, as well as the devices and spaces in which they occur. This paper addresses the theoretical challenges for the study of digital culture and communication, especially in relation to the public.

To do so, it takes as a starting point a map of key discussions in the study of the digital. Over the years we have approached digital communities, digital divide, data colonialism, algorithmic cultures and a long etcetera. Sometimes we have even jumped from one concept to another without going deep enough. These discussions have been mainly focused on Anglo and Eurocentric contributions, but it is worthwhile to broaden the view and learn

about the ways in which the digital is studied from other contexts (Flores-Márquez, 2021; Masiero, 2023; Siles, Gómez-Cruz & Ricaurte, 2023).

Therefore, I propose five dimensions to articulate the theoretical —and methodological discussions, although the emphasis of this paper is on the first ones—: the technological dimension, the communicational dimension, the political dimension, the economic dimension and the environmental dimension. The relationships between dimensions are emphasized, for example, although analytically we focus on a phenomenon of political economy of platforms, we cannot ignore the impact they have on the environment.

This work seeks to contribute, update and diversify the ways of thinking sociologically about the digital, if the label digital is still valid.

FLORIDI, FEDERICA* (Department of Psychology of Developmental Processes and Socialization, Sapienza, University of Rome, Italy)

What's behind the World Love Index? Analysis of Welfare Policies and Other Promoting and Hindering Factors at Global Level

This study explores the concept of social love within the framework of the World Love Index, focusing on the roles of welfare policies and other factors that promote or hinder social relationships. Despite notable advancements in theoretical and methodological approaches, the complexities of social love remain a challenge for sociological research. By utilizing secondary data from global surveys and international datasets, we developed two cross-national indices: the Citizens' World Love Index and the Institutions' World Love Index. These indices aim to operationalize social love, analyzing it among citizens and institutions across approximately ninety countries. The Citizens' Index incorporates variables related to behaviors and attitudes that reflect social love, such as recent volunteering, participation in environmental and animal rights organizations, and the acceptance of diverse nationalities as neighbors. In contrast, the Institutions' Index examines indicators of institutional behavior, including the protection of minority rights, the share of renewable energy in total consumption, and inclusive migration policies. Our analysis employs regression models to correlate these indices with various contextual factors, specifically focusing on how poverty levels and welfare policies influence the presence or absence of social love. This research not only contributes to a deeper understanding of social love but also underscores the vital role that socio-economic conditions and policy frameworks play in fostering inclusive social relations.

Images As Tools for Social Research

It is not easy to study the deep constructs of personality, such as social values, because "social desirability", self-presentation strategies, and defense mechanisms tend to hide them. A person being interviewed is mostly in a self-defensive position. Additionally, they may interpret the questions differently from the researcher who formulated them, may not understand the functioning of the data collection technique used, or may be unaware of their own value orientations.

To reduce the risks of distortion and attempt to capture deeper meanings, I have conducted research using alternative techniques to the more commonly used ones, including visual techniques, by presenting images that could elicit less controlled reactions and meaningful narratives.

I employed some plates from the T.A.T. (Thematic Apperception Test) and some advertising images to investigate: a) conceptions of gender relations; b) the values of people belonging to a subculture in which drug use is present; c) intergenerational relationships. A tendency was noted for the advertising images to direct interviewees' reactions toward political correctness, something that was not observed when using the T.A.T. plates. The ambiguity of the latter's drawings likely encouraged less controlled reactions.

In another study – on so-called 'gender fluidity' – the question was whether the idea of gender as a "master status" could change, given the emerging possibility of self-identifying as "non-binary." Five images were used: two taken from the T.A.T. and three depicting characters of ambiguous gender; each subject was asked to develop short stories based on each of them. One of the findings is the persistence of gender as a "master status": indeed, first and foremost, the participants defined the gender of the depicted subjects.

I would be pleased to present other findings and share the images that, in my studies, elicited the most profound and significant reactions.

FOBERT VEUTRO, MARIA* (Kore University of Enna (Sicily), Italy)

Social Research Skills and Teaching Workshops

Current studies on young people have emphasized the need to cultivate "flexible minds" (Zerubavel), capable of considering others' perspectives and building knowledge about a world that is (still) "manichaeian", xenophobic, often governed by stereotypes, and marked by inequalities.

In social research, the qualitative approach seems particularly suitable because it encourages training in controlling their own stereotypes and prejudices, role-taking, refining sociological imagination, understanding the complexity of social reality, and respecting the people being studied. To achieve these goals, it is important to identify new educational strategies.

Over the years of teaching methodological and sociological subjects, I have developed and proposed several workshops to students that I found effective in achieving these objectives. I aim to illustrate their implementation and present and comment on the results. These focus on themes such as sociological imagination, stereotypes, categorization.

As an example, I will mention two:

1. Hidden values in advertising images: I present to students some advertising images. I ask them to examine them attentively and then to propose values, trends, and themes that can be inferred from these representations. The goal is twofold: a) to train students in a qualitative analysis technique while simultaneously activating their sociological imagination; b) to illustrate socio-psychological theoretical references in an interactive and engaging way by relating to contemporary reality.
2. Categorization: I ask students, divided into groups, to classify and then to name a set of 40 images (the same for all groups). The results invariably show that the categorization process is not shared or stable but follows paths depending on different points of view. I also believe it is important to convey the experiences of qualitative researchers to future researchers. For instance, William Foote Whyte (from *Street Corner Society*: "... I began to realize how little I knew about the motivations that drive people to act").

FOLDES, IONUT* (Universitatea Babeș-Bolyai, Romania)
HARAGUS, MIHAELA (Babes-Bolyai University, Romania)

Facing Growing Pressures: Examining Elderly Vulnerabilities, Resilience, and Support Arrangements in Romania

This study examines the caregiving arrangements and unmet needs of elderly adults in Romania, focusing on vulnerable groups, including those with functional impairments, individuals living alone, and residents in impoverished areas. Using fresh data from a nationwide survey of 900 adults aged 65 and older, this study examines the caregiving arrangements and unmet needs of Romania's elderly population. The study assesses key components of senior care, including health status, care needs, familial support, formal care services, and informal care networks. The aim is to identify care gaps, particularly in underdeveloped areas with limited public resources, and to understand how these gaps are managed—or left unmanaged—by various care arrangements.

This research contributes to the literature by highlighting the resilience of family structures and informal networks in supporting vulnerable elderly subgroups, especially in regions where public services are underdeveloped. In the context of Romania's inadequate public care system, reliance on family and neighbours becomes essential for managing the growing pressures of an aging population. The study will also explore regional disparities, analysing differences in care provision between economically developed and underdeveloped areas, a chronic issue in Eastern and Central Europe. Romania's socio-economic landscape, characterized by youth emigration, demographic aging, and limited formal care options, exacerbates challenges for elderly care, particularly in disadvantaged regions. This study will shed light on how families and communities adapt to these growing pressures, contributing to an understanding of resilience in the face of socio-economic change. The findings have broader implications for Eastern and Central Europe, where traditional family-based care systems are increasingly strained by demographic shifts, requiring new strategies for resilience and support.

Participatory Institutions and Political Ideologies: How and Why They Matter?

The role played by ideological preferences in the development of participatory institutions has not been a central issue in the democratic innovations field. Politics is messy and does not fit easily into the ideals of deliberative democrats. However, the question is central if we aim to understand where do these institutions come from and what they could realistically achieve. Do different political ideologies develop more/less or different participatory processes? Our starting point was the assumption that different views on the core values of democracy would lead to different positions concerning the role and expected benefits of citizen participation.

The paper makes a summary of a participatory program developed during 2020-24, with funding from Spanish research funds. The main goal of the paper is to establish a critical dialogue among the different papers and analysis produced (concerning mostly but not only the Spanish case), as well as with other comparative research on the topic. As such, the empirical materials will be two datasets about local participation policies from two different periods, case studies, as well as other comparative materials (metanalysis and OCDE Minipublics dataset).

The paper will develop the main learnings of the project: differences at a specific time point between left and right wing municipalities are limited; these differences increase somewhat with radical left municipalities and for some more politicized forms of participation; party effects are more visible in the mid-long term (as the literature on other policies has shown); and this effect develops partly as a result of building participatory infrastructures (human resources and strategic plans) that create some path dependency into participation policies.

The Gender-Based Violence in Disaster Management: Intervention Proposals from the Volcanic Eruption in La Palma, Spain

The eruption in 2021 of the Tajogaite volcano in La Palma (Spain) generated a prolonged emergency where there were gender-based violence. This study is developed within the framework of the GENDER-IN project (Gender and disaster risk management: Comparative analysis and recommendations for intervention, PID2021-126195NB-I00) and aims to analyse the extent to which a gender perspective was incorporated into risk management during the volcanic eruption in La Palma, evaluating institutional and social responses to gender-based violence in this context. A qualitative methodology was employed, based on 39 individual interviews and 2 group interviews, with a total of 46 participants, including technical staff, decision-makers, and social activists. The interviews were analysed using MAXQDA software, using team coding to ensure the validity and comparability of the results. This technique made it possible to identify patterns in perceptions and actions on the ground during the different phases of the disaster. The results reveal a lack of preparedness and specific protocols to address gender-based violence in disaster contexts. The study highlights the urgent need to work on prevention, as well as to develop clear and specific protocols for managing gender-based violence in emergency situations. It also recommends greater inter-institutional coordination and continuous training of technical staff and decision-makers in gender perspective. The need to increase the budget, disseminate informational campaigns for the general population, and to have adequate evaluation mechanisms are other issues identified. Only through a more comprehensive and coherent response can victims be effectively protected in future disasters.

FONTES, BRENO* (Universidade Federal de Pernambuco, Brazil)

Stigma and Social Exclusion Between People Living with Mental Health Disorders

The literature on mental health places as a central issue the problem of social reintegration faced by people with significant mental disorders. Although there are important social reintegration programs in the Brazilian public health system, significant records of exclusion and stigma of these people are a recurring fact. In many cases, for those sheltered at home, home confinement (voluntary or not) is frequently reported, with a significant reduction in social ties and a lack of active participation in the daily sociability of the community. Another important cause of this phenomenon is the stigma that marks people, causing avoidance and consequent social death, characterized by the number of social ties established between these people and the community in which they are inserted, well below the normal. One of the main obstacles to full social inclusion lies in the fact that there are no actions that can minimize the effects of stigma. Public policies for mental health have an important ingredient, health promotion, but they are not implemented. In fact, in researches we conducted, there is no record of educational practices in the community or in territorially anchored institutions, such as schools, associations, and community centers. This means that old mentalities (such as those that say that people with mental disorders are dangerous, that living with these people can be detrimental to children's education, that crazy people cannot be controlled, among others) are not questioned, which certainly reinforces the stigma. Thus, deinstitutionalization (long-term internment), social inclusion actions such as the Back Home Program (which provides remuneration for families that take in people with mental disorders), or therapeutic residences (living spaces for people with mental disorders who do not have family ties that can take them in) are not accompanied by social reintegration practices.

FORBES, JANE* (American Public University System, Germany)

Equity in Open Education Resources: Textbook Creation and Classroom Implementation

Oregon's statewide Open Education Resource (OER) program received funding through the Governor's Emergency Education Relief program and the Fund for the Improvement of Postsecondary Education (FIPSE) in the U.S. Department of Education. It supported faculty authors from Oregon community colleges and universities, to develop high-quality, accessible open educational resources with an equity, diversity, and inclusion lens for Sociology, Human Development and Family Sciences (HDFS), and Criminal Justice (CJ) courses. Presenter Forbes was a Sociology text peer reviewer and co-author of the Sociology of Gender textbook.

Faculty often assume their course is more equitable when they adopt affordable materials, as affordable materials remove a significant barrier to success. However, an open license does not ensure the materials or design are inclusive of our diverse students. In Sociology, HDFS, and CJ courses, students are often preparing for careers in teaching, social work, human services, and other helping professions. As we teach our students to be empathetic and equity-centered in their work as caring professionals, we lead by example. This includes authoring and incorporating equity centered materials, which represent perspectives and experiences not often included in current materials.

In this symposium session, the presenter will discuss the successes and challenges of this statewide innovative teaching project. They will share varying experiences and perspectives in discussing the OER creation and implementation process, which had intentional inclusion of diverse identities and experiences.

Symposium attendees will gain knowledge of the OER creation process, including funding, recruitment, outline creation, writing, editing, publication, and ultimately, classroom use. Tips for accessing OERs and incorporating identity, equity, and diversity in attendee's professional work will also be addressed by the dynamic presenter Forbes.

FORBES, JANE* (American Public University System, Germany)

I Care, but I'm Adjunct Faculty, Do I Get Paid Enough to Care? Understanding Adjunct Faculty's Needs.

In a time when higher education institutions are relying more and more on adjunct faculty, how well do you know your adjunct faculty pool? Is your institution doing everything they can to retain the best adjuncts? Off-tenure track teachers, including adjunct faculty may be nearly 70% of the teachers at any given school (AAUP, n.d.). Research finds higher education adjunct teachers are very dedicated professionals, yet many are not satisfied with their workplaces (American Academic: A National Survey of Part-time/Adjunct Faculty, 2010).

To retain faculty, institutions need to consider an employee's job satisfaction which greatly influences on the job performance. Pay satisfaction is one of the strongest predictors of job satisfaction, but access to health benefits and job security are also vital (Hoyt, 2012; Dolan, 2011).

Faculty who are not tenured, including adjunct faculty with their unique life experiences, need support from their organizations to ensure their needs are being met. Adjuncts benefit from routine interactions, as well as reliable institutional resources such as student conduct offices and library support, especially considering today's remote working environment (Eriksson et al., 2022). Recruitment and retention of diverse adjunct identities also directly translates to success for students who can ultimately better connect to faculty (Goldhaber et al., 2019). Sustaining adjuncts from many diverse identity groups can strengthen the courses themselves thus provide deeper student connections to content (Goldhaber et al., 2019).

Participants can expect to learn about key concerns of adjunct faculty which may be barriers to being dedicated and returning employees. Adjunct faculty care about their work and students, but how can you get adjunct faculty to show up to meetings or serve on committees? Presenter Forbes will have direct interactions with audience members throughout the talk.

Gender Bias in Academia: Network Analysis of Italian Statisticians

Gender inequality in STEM disciplines, including statistics, remains a critical issue, reflecting broader societal and institutional dynamics. From a sociological perspective, career choices and educational paths are often shaped by gender stereotypes, societal expectations, and role models, both within the family and academic environments. Despite ongoing efforts to promote gender equality, structural biases still limit women's career advancement in many fields.

This study explores the gender gap in academic career progression within the field of statistics, across Italian institutions, identifying the gender of each co-author through manual and algorithmic processes, focusing on Italy's scientific landscape from 2012 to 2022.

The analysis is based on a comprehensive dataset of co-authorship networks from Scopus. Several factors were controlled for, including institutional affiliation, academic discipline, publication output, and number of collaborations.

Network analysis methods were applied to measure centrality and the strength of academic collaborations for both men and women. Network models were used to assess the likelihood of career advancement (e.g., from assistant to associate professor) while controlling for the aforementioned factors. We further employed temporal analysis to observe trends over time, investigating whether gender disparities in promotions persisted or narrowed as female representation improved. Finally, comparisons were drawn to determine whether differences in professional recognition and career trajectory were attributable to structural network positions or intrinsic biases in the system.

The results underline, to some extent, a gender discrepancy in career advancements, with men more likely to receive promotions than women, even when controlling for equivalent academic performance and network engagement. These findings suggest that systemic biases could still play a major role in limiting the career progression of women in academia.

Cross-Sectoral Coalition-Building As a Transnational Power Resource

The Power Resources Approach has been widely deployed to analyse national union strategies but rarely to examine power resources and networks beyond the national level, where they are deployed through transnational initiatives but also by international labour movement organisations, most notably the Global Unions. As we have demonstrated elsewhere, potential also exists to combine different kinds of power resources simultaneously at different scales.

This paper explores how Global Unions use cross-sectoral coalition-building as a power resource in three different types of transnational labour campaigns. The first is a global union campaign for seafood workers' right to unionize, which ultimately failed to grow into a cross-sectoral coalition. The second is a campaign targeting Amazon that seeks to generate broader leverage for workers by collaborating with a wide range of non-union actors concerned with everything from Amazon's environmental footprint to tax evasion to digital privacy. The third is the global campaign for an international convention on workplace violence and harassment involving all the global unions and hundreds of feminist organizations, as well as a wide range of development and human rights non-governmental organizations.

Through our analysis of these campaigns, we identify the benefits and challenges of cross-sectoral coalition-building for the global labour movement in conjunction with the deployment of specific combinations of other power resources at various scales. Based on this analysis, we argue that global unions are tactical and pragmatic in their search for opportunities to increase their power, seeking to maximise their access to resources, but also their efficacy and alignment with their own organizational priorities and goals – and that, in the right circumstances, cross-sectoral coalition-building offers them a way to secure this result.

Playing Catch-up: How Australian Indigenous Broadcasting Services and Their Audiences Are Navigating the Digital Transformation

The Australian Indigenous broadcasting sector is vast, delivering content to 214 communities in urban, regional and remote areas since 1982. The sector's radio and television services are well-established and highly valued by their communities, especially in remote areas – but the place of Indigenous broadcasting in the lives of communities is shifting as the media landscape transforms. This paper draws on a national study of the Australian Indigenous Broadcasting and Media Program, a major government-funded media initiative. For more than 30 years, this program has supported Indigenous community broadcasting to deliver unique content, providing cultural content, language maintenance, community connection and a forum for the broader political goals of Aboriginal and Torres Strait Islander peoples. This national study conducted throughout 2023-2024 found a valued community media sector at a critical juncture – maintenance of radio services and technical support is uneven, leaving some communities without active radio service; communications infrastructure is poor in many remote areas, creating a significant digital divide; and funding and policy levers have not kept up with audience behaviour, meaning traditional radio and television services are not engaging with communities active on social and digital media platforms such as TikTok, YouTube, Instagram and Facebook.

These are important issues to highlight, as Indigenous broadcasting provides Indigenous communities with the opportunity to create a 'black public sphere' (Squires, 2002) – in our case, an Indigenous public sphere – to produce and consume unique, community-centred content. This is essential in the context of a colonised nation that boasts a media system that does not

cater to (or consider) their Indigenous audience in any real way. Drawing on a survey of 762 Indigenous people and qualitative fieldwork at 18 community sites, this paper outlines the critical juncture of Australian Indigenous broadcasting and possible solutions to secure its 'digital future'.

TOLEDO FERREIRA, MARIANA (IFG - Instituto Federal de Educação, Ciência e Tecnologia de Goiás, Brazil)

Lélia Gonzalez: Contributions from Brazil Towards Reframing Social Theory

Our hereby proposed presentation brings to the forefront contributions by a historically marginalized, Black Brazilian intellectual called Lélia Gonzalez, who developed her perspective mainly during the 1970s and 1980s. Having passed away precociously, without even taking her Ph.D., this aspect, coupled with the obstacles for recognition stemming from racial and gender prejudice, kept her work from being taken into account outside a few selected circles. Recently, specially from 2020 onwards, when an edited volume with her texts and speeches was published by a prestigious editorial house in Brazil, her reflections have gained traction among the social sciences.

Taking into account one of her main conceptual contributions, the debate on *Amefricanity*, we focus on her pioneering outlook on intersectionality and its potential concerning the sociological debate, with special attention towards engaging in a critical appraisal of a social theory conceived in broad terms, in dialogue with anthropological as well as psychoanalytic elements. In this sense, the fact that she took part in Black Social Movements gave her interpretation a fundamental view on foremost – though not exclusively – racial and gender inequalities. Connecting her to the epistemological debates on *universalism and indigenization* (Akiwowo), the *captive mind* (Alatas) and the *outsider within* (Hill Collins) enables us to situate her contribution towards repositioning the viewpoints from Latin America. Our argument stresses ways in which her reflections critically foster anti-racism, hence interpreting her work as an expression to enact change among the established academic practice, as well as to wider preoccupations geared towards fostering democracy inside and outside the university. Hereto, referencing the elements of what she called *cultural racism* is paramount and shall be deepened in our discussion to understand the dynamics of racial, ethnic and gender prejudice, and how they affect democracy.

Law, Hyperconnectivity, and the Anthropocene: Reflections on Challenges of Digitalization and AI.

Hyperconnectivity means the factual matter that human beings are nowadays permanently using technological devices, which are generally connected to the internet, like smart phones, digital watches, and personal computers. This article explores the current setting and the future prospects, considering how the permanent connection with digital devices and artificial intelligence may empower and alienate human beings: are these human inventions making us less or more humans in the Anthropocene? On one hand, new technological devices may open windows of knowledge and empower individual users to develop their capabilities. On the other hand, excessive use of technology may also reduce our connections with the life-world and with real human experiences. By examining the challenges related to hyperconnectivity in terms of telecommunications, for instance, we should remember the lessons brought by communications theorist Umberto Eco that we should neither be integrated (fully accept the new masses technology as it is developed without any critical evaluation), nor apocalyptic (fully reject the new masses technology as if it would bring the end of the world without accepting its positive impact). In our analysis, we should focus on the possibilities and limitations of new technologies through an empirical and interdisciplinary perspective brought by sociology of law to the reflection on challenges of digitalization and artificial intelligence. As part of this effort, we summarize the recent developments of algorithmic law as a means of establishing the normative control of algorithms and their mathematical formulas that provide technological commands with concrete consequences in terms of distribution of rewards and sanctions. Prodigious examples of algorithmic law may come, for instance, from episodes of digital discrimination and consumer fraud resulting from misuse of new technologies. The article concludes with final remarks on what we should do to prevent and to correct these wrongdoings for the preservation of our humanity.

Beyond Capitalist Publishers: Building Networks of Solidarity in/As Academic Communities

In the winter of 2024, the Wiley publishing company engaged in what may best be summarized as the corporate takeover and gutting of the academic journal *Gender, Work & Organization* (GWO). This watershed cut through a longstanding history of progressive, novel and ground-breaking MOS gender scholarship for the last three decades. During these 30 years, the journal gave space and voice for researchers studying issues connected to intersectional differences, gender-based violence, processes of patriarchal marginalization and discrimination against vulnerable bodies and bodies not abiding by heteronormative norms, in society at large and organizations more specifically. However, what happened at GWO is not an isolated case, but merely another of several recent examples of a longstanding issue resulting from the stranglehold of masculinist neoliberal business practices and right-wing politics internationally that have infiltrated academic work, including academic publishing. But instead of leaving quietly, nearly everyone who had been involved in editing the journal walked out while being cheered on by hundreds of colleagues worldwide. We write to share a story and will move through how it matters in manifold ways - to us personally, as writers, researchers, editors, and members of the *Gender, Work and Organization* (GWO) journal and community (until recently) and to the field of MOS research more broadly, especially when it comes to gender, race, feminist, indigenous, decolonial, and queer critical scholarship. We begin by reflecting on the events that led to a collective act of resistance against the unilateral decisions made by corporate publisher Wiley regarding the future of the journal. While the history of feminist resistance in the academy is long, much of it has, understandably, been directed to the internal workings of universities, higher education and research institutions. With this contribution piece, we instead look to feminist academic resistance to the world of capitalist publishing.

RC07-103.4

FOUGHALI, HANA* (Université Paris Cité, France)

Beyond the Glass Ceiling: Exploring Persistent Gender Inequalities in Leadership across Cultural and National Contexts, with a Focus on the French Example

Professional inequalities between men and women remain at the heart of current social debates. My doctoral research explored the persistence of these inequalities beyond the hierarchical 'glass ceiling', revealing the existence of a 'symbolic glass ceiling' faced by female senior managers and executives. This persistent malaise, despite progress towards parity, can be explained by three interconnected dimensions: the socio-cultural context, women's bodily experiences, self-limitation. Together, these factors maintain a system of inequality, even in positions of high responsibility.

From a comparative perspective, for this presentation I will draw on empirical findings from my doctoral research and include other preliminary results from a project inspired by the issues raised in my thesis. The aim of the project in question is to highlight the persistent gender inequalities in leadership positions, despite the progress made by women in the professional world. The aim is to analyze the sexist mechanisms in positions of power, based on the experiences of female managers. This work is based on a qualitative method, with the analysis of a sample of female senior managers from the public and private sectors, initially in the Île-de-France region, then extended to the national level.

Through this analytical framework, we hope to reveal the similarities and differences in women's career paths across different national and cultural contexts. Finally, this contribution will feed into a wider reflection on successful practices and policies that can be shared and adapted to build a truly inclusive work environment for tomorrow's world.

RC30-477.3

FOUGHALI, HANA* (Université Paris Cité, France)

Navigating the "Symbolic Glass Ceiling": Identity Gender Patchworking, Silent Resignation, and Persistent Inequalities in Leadership

Professional inequalities between women and men remain a crucial issue in contemporary debates, despite advances in parity. My doctoral research explored these inequalities, highlighting a 'symbolic glass ceiling' faced by female senior managers and executives in French companies. This persistence of unease, even in senior management positions, can be explained by three

interconnected dimensions: the socio-cultural context, women's bodily experiences and self-placating. Together, these factors maintain a system of inequality, even for those who appear to have broken through the hierarchical ceiling.

In this presentation, I will employ the concepts of 'identity gender patchworking' and 'political make-up' to illustrate how these women navigate between compliance and resistance to managerial norms. Their adaptation to the 'masculine neutrality' that dominates professional structures can be seen as a form of silent resignation or symbolic withdrawal. This process of adaptation, while often invisible, raises fundamental questions about how women subtly resist and navigate power dynamics in their professional environments.

By maintaining positions of authority, these women manage to assert their presence, but often at a significant personal and psychological cost. Their ability to continue within these structures, despite persistent obstacles, reflects both the limitations of current approaches to gender equality and the complex, nuanced forms of resistance that are essential for understanding the lived experiences of women in leadership roles.

FOULADIYAN, MAJID* (Associate Professor, Social Sciences Department, Ferdowsi University of Mashhad, Iran, Iran)
FATEMI AMIN, ZEINAB ALSADAT (Ferdowsi University of Mashhad, Iran)

Adaptation and Solidarity Policies of Undocumented Individuals in the Face of Poverty in Iran

One of the critical outcomes of rapid urban growth is the increasing number of poor individuals living in informal settlements on city outskirts, deprived of basic services. Inhabitants of these areas, often lacking professional skills and excluded from the formal economy, are particularly vulnerable to unemployment and poverty. A significant group among these are undocumented individuals residing in Mashhad's informal settlements, including children without legal identity documents. As a result, they are excluded from social services and welfare benefits that other citizens enjoy, with the government's policies exacerbating their marginalization.

This study investigates the adaptation and solidarity policies used by undocumented individuals living in informal settlements in Mashhad regarding access to education, healthcare, housing, employment, and social security. It also explores the poverty and deprivation these individuals face and how they navigate these challenges. Using grounded theory as a qualitative methodology, the study examines individuals residing in these settlements for over five years through semi-structured interviews with a diverse sample.

The findings reveal that the deprivation experienced by undocumented individuals stems from their "limited ability to benefit from opportunities that society provides to individuals with identification documents." These limitations manifest in restricted access to education, formal marriage, employment, and welfare services. In response, undocumented individuals have formed quasi-communal societies characterized by extended family structures, mutual aid, respect for elders, strong in-group cohesion, and high levels of social trust. These communal systems enable them to develop policies for adapting to their difficult living conditions and improving or sustaining their welfare.

MAJIDIFARD, AMIN* (Ferdowsi University of Mashhad, Iran)

Urban Collective Action and Political Transformation: Tracing the Trajectory of Protest Strategies in Iran (1921-2020)

Social movements in the contemporary Middle East have driven political and social transformations, leading to structural political changes and 'social revolutions.' In modern Iran, social movements and collective actions have been primary tools for resisting authoritarian regimes. These actions have brought significant changes to Iranian society. The ongoing struggle between the state and society shapes the 'politics of protest' in contemporary Iran. This paper explores how collective action strategies in public spaces have changed and how Iran's political and social transformations have influenced shifts in street protest strategies over the past century. Protest Event Analysis (PEA) is employed to answer these questions, a systematic approach to analyzing protest events across time and space. One traditional data source for this method is newspaper reports. We collected and analyzed news reports from a selected newspaper covering protests from 1921 to 2020. In total, 2075 reports were collected and analyzed in two stages. Content analysis was used to categorize the protests, while topic modeling was employed to analyze the temporal dynamics of protest representation. The collected news was

classified into seven protest strategies: political demonstrations, non-political protests, urban violence, political meetings, public funerals, sit-in, and strikes. The findings show that the representation of protests increased during social and political crises. Specifically, the 1979 Revolution marked the peak of resistance representation in Tehran. Furthermore, the emergence of dual-state or statelessness in society enhanced the ability of the public to display urban resistance. This political opening also facilitated the emergence of civil and labor protests. In contrast, during periods of state consolidation, public protests were predominantly represented as urban violence. Ultimately, this study suggests that the representation of resistance in urban public spaces can highlight key aspects of the evolving relationship between the state and society and their ongoing struggles.

Knowledge Production As Contentious Politics: The Rise of Expertise Among Syrian Activists in Exile

Since the 2011 uprising, Syrian protesters have deployed a wide range of activities in their struggle against the ruling regime. As millions of Syrians have been forced into exile, these activities have taken on an increasingly transnational dimension.

From the outset of this still ongoing conflict, opponents have constantly searched for means of documenting and analysing the events. These knowledge production techniques have rapidly become professionalised within the framework of a wide range of organisations. This paper will look in particular at the use of the Humanities and Social Sciences by Syrian activists in exile, who are studying matters relating to Syrian society. This intellectual activist work is carried out both individually, through academic studies or work, and collectively, within the framework of NGOs or specialised research centres. Among the latter, I will focus more specifically on the production of archives relating to the Syrian conflict.

My paper will attempt to describe the conditions under which this contentious knowledge is produced, focusing on the particular position of its actors, who have been exiled in wartime. It will address the political economy of this production, which is heavily dependent on foreign resources. Finally, it will seek to highlight its protest dimension as a instrument of transnational struggle.

The results presented in this paper are the preliminary stages of a research project currently underway, whose aim is to analyse developments in Syrian transnational activism and, more specifically, in the production of knowledge. It is based on a series of qualitative interviews conducted in France, Germany and Turkey, as well as online data collection.

FOUROT, AUDE-CLAIRE* (Simon Fraser University, Canada)

The Invisibilization of Homelessness Among Refugee+ Populations in Vancouver and Lyon Metropolitan Areas

The link between urbanization, "involuntary" migration, and homelessness was first recognized in the Vancouver Declaration (United Nations, 1976). Nearly 50 years and two Habitat conferences later, public authorities still fail to address this issue adequately. Indeed, access to housing for refugees+—whose migratory paths or administrative situations make them more vulnerable to rights violations and socioeconomic precariousness—has worsened in many cities in the Global North, including Lyon and Vancouver. In

both European and North American contexts, the visibility of homelessness—in the sense of being “easily” identifiable in public spaces, not in terms of social visibility (Honneth, 2004)—has long been associated with the image of an isolated, often intoxicated man (Brodiez-Dolino, 2018). While more diverse representations of homelessness have emerged over time and now include families, younger, female, or ethnically diverse profiles (Mouton et al., 2023; Wong, 2023), a large portion of homelessness still remains invisible. Those who are less identifiable in public spaces or do not fit into stereotypical categories of the most marginalized or the radically different Other—making them more familiar—remain unnoticed and uncounted.

Forms of “hidden homelessness,” as labelled by policy-makers, academics or activists (COH, 2012; FEANTSA, 2002; Francis & Hiebert, 2014; Pleace & Hermans, 2020; Statistics Canada, 2023) are particularly difficult to observe, quantify, and map. How can we bring to light the many facets of hidden homelessness among refugees? What are the implications for refugees, social work and public policy? A “most-different” comparative research design is relevant for answering these questions, as it allows us to highlight similarities not tied to local or national contexts. In fact, this research invites us to reconsider “hidden homelessness” and view it as an outcome of “invisibilization” mechanisms rather than as a specific type of housing exclusion.

FRACKOWIAK-SOCHANSKA, MONIKA* (Adam Mickiewicz University, Poznan, Poland)

How to Study the Processes of Construction of Categories of Mental Health, Disorder, and Illness in Contemporary Society? Presentation of a Research Model.

This presentation demonstrates the research model utilized in the study on the social construction of mental health, illness, and disorder categories in contemporary Polish society. These processes engage diverse social actors: society representatives, people who experience(d) mental health crises and people related to them, and experts on mental health (these categories are not disjoint). Therefore, the research model implies constructionist assumptions and employs mixed methods.

The model consists of:

1. Analysis of premises addressing mental health issues in leading sociological paradigms (structural-functional, critical, interpretative) and late modernity theories. The juxtaposition of these perspectives allows for obtaining a complex picture. Sociological theories are treated as data—cultural outputs that may reproduce particular meanings—subjected to analysis and interpretation.
2. A representative survey - to determine whether the boundaries between health, disorder, and illness categories are perceived as sharp or blurring and to construct mental maps of the categories of mental health and illness.
3. Qualitative analyses of published biographical narratives of:
 - people who experienced mental health crises
 - family members of people with mental illness
4. IDs with experts (psychiatrists, psychologists, psychotherapists)

The methods listed in points 2-4 aimed to identify how the meanings attributed to the categories of mental health, disorder, and illness emerge from specific experiences and to see to what extent the themes identified in the analysis of theoretical approaches and mechanisms determined in the representative survey are reflected in the narratives.

The model can have numerous applications, ranging from the purely cognitive to the pragmatic (in health promotion, prevention, education, social work, and psychotherapy). It can be used holistically or piecemeal in further theoretical and empirical analysis and practical solutions in mental health care.

The presentation will demonstrate arguments for methodological choices and main ideas addressing research tools, conduct, and analysis of research material.

FRAIHAT, IBRAHIM* (The Doha Institute for Graduate Studies, Qatar)

The Rise of Sectarian Polarization in Yemen

The state of Yemen has witnessed civil conflict, regional military involvement, and a deep humanitarian crisis since the Houthis, also known as Ansar Allah, military takeover on September 21, 2014. This war has produced not only a political division between the north and south but has also left Yemeni society polarized along sectarian lines. The Houthis in the north are Zaydis, an offshoot of the Shi'a sect, and are allies of Shi'a majority Iran. However, the majority of the Yemenis in the South are Sunni Shafi'i. Before the war, sectarianism was to a certain extent contained as the central government included both Sunnis and Zaydis, for example. However, this paper argues that the outbreak of civil war in 2014 has led to a rise in sectarian polarization in Yemeni society and politics. Sectarian tension since the war can be seen on multiple levels, including, but not limited to, state institutions, education, language, and the geography of Yemen.

Development Dilemmas and Management of Natural Resources in India: A Sociological Analysis

This paper highlights the recent global debate on cronyism, capitalism and power relations between and among the political nexus, executives and the corporate sector that has raised questions on the development paradox resulting in speculations and a prelude to the anarchy in the social sector. The current study based in the resource rich eastern belt of the Indian peninsula is an amalgamation of both qualitative and quantitative data that has been analysed using scientific tools and techniques.

Based on the twin Theories of ‘Resource Curse’ and the ‘Tragedy of the Commons’ this study draws light on the prevailing socio-economic condition of communities living in the peripheries of society who are not just handmaids of class inequality, caste biasness and patriarchal dominance but also subjected to extreme vulnerability too as a result of over and explicit extraction of resources. The author has used multiple scientific methods and techniques such as resource mapping, narratives and correlation to measure the asymmetry between the availability of resources and livelihood status of indigenous communities in the study area.

Thus, the relevance of this research lies in rethinking development so as to create a just human-environment interface by co-creating substitute capital in the form of social and physical infrastructure through stakeholder-engagement. Additionally, the quest for sustainable development, can further be achieved by investigating the critical and emancipatory potential of the right to social justice, empowerment and rural transformation.

Different Paths, Different Attitudes: How the Socioeconomic Composition of Life Course Social Environments Shapes Perceptions of Inequality and Egalitarian Beliefs

This article examines how the socioeconomic composition of individuals' life courses influences their perceptions of inequality and egalitarian beliefs. While previous research has emphasized individual or national factors in shaping attitudes toward inequality, this study focuses on the meso-level dynamics of social environments. By examining life course exposure to diverse socioeconomic groups within key socializing institutions, such as schools and neighborhoods, we address a gap in distributive justice literature that frequently overlooks past social environments and assumes that individuals' social positions directly mirror their surroundings due to homophily. Using survey data from a representative sample of urban population in Chile and geocoded census information, we estimate the socioeconomic composition of the schools attended and the neighborhoods inhabited. We construct a life course typology, identifying exposure to low, mixed, or high-status environments. Our analyses demonstrate that, even when controlling for origin SES and social class, exposure to mixed or predominantly low socioeconomic groups is associated with higher perceptions of inequality and stronger egalitarian beliefs. Interestingly, while the influence over beliefs is shaped by individuals' socioeconomic backgrounds, the effect of life course on perceptions of inequality remains consistent across different groups. This study provides new insights into how social environments across the

life course impact attitudes toward inequality, highlighting the importance of considering both past and present contexts. The findings underscore the need for future research on the role of socializing institutions in shaping distributive attitudes over time.

FRANETOVIC, GONZALO* (University of Milan, Italy)

Social Networks and Attitudes Towards Inequality: Unraveling the Influence of Acquaintances' Socioeconomic Diversity and Status across Contemporary Societies

This study investigates how the socioeconomic composition of individuals' social networks shapes their attitudes toward inequality in contemporary societies. While previous research has focused mainly on the heterogeneity of people's acquaintances, this article addresses a critical gap by also considering the impact of where acquaintances are concentrated within the social structure. Using data from the ISSP 2017 Social Networks Module, which includes responses from 31,496 individuals across 31 countries, this research analyzes the effects of both socioeconomic network diversity and status on perceptions of inequality and preferences for redistribution. Regression analyses with country-fixed effects reveal that individuals with more socioeconomically diverse networks tend to perceive higher levels of inequality, yet exhibit on average less support for redistribution. Additionally, having higher-status acquaintances leads to a reduction for both inequality perceptions and redistributive preferences, though these differences are only significant in contexts of socioeconomic diversity. The study suggests that diversity acts as a catalyst; in its absence, individuals are more likely to naturalize their socioeconomic environments, diminishing the influence of acquaintances' status on their attitudes. Notably, the composition of social networks has a particularly strong effect on high-SES individuals, who show a marked reduction in support for redistribution when exposed to higher network diversity. Through these findings, this research advances the understanding of meso-level dynamics in distributive justice, underscoring the crucial role of social environments in shaping attitudes toward inequality.

FRANK, EMILY* (WZB Berlin Social Science Center, Germany)

Investigating the Effect of the Asylum Decision on Refugees' Mental Health in Germany

A large body of quantitative and qualitative research links legal precarity with mental health challenges (e.g., Morgan et al., 2017; Nickerson et al., 2019). Refugees with insecure visa status live in a state of protracted uncertainty, blocked mobility, fears of deportation, and other aspects of "legal violence" that can impact psychological well-being (Abrego & Lakhani, 2015). An asylum status decision should therefore lead to positive mental health outcomes. However, few quantitative studies – largely with small samples – have gone so far as to demonstrate a causal relationship between the asylum decision and mental health outcomes (e.g., Silove et al., 2007). As such, this study sets out to test the causal relationship between the asylum decision and self-reported mental health status using a large sample of refugees that arrived in Germany between the years 2013 and 2018. We use a synthetic difference in differences approach in order to account for differences between treatment (i.e., asylum-receiving) and control groups, with a staggered treatment adoption design. Our data, the German Socio-Economic Panel, includes 8,833 refugees in our final sample. Results indicate a dynamic treatment effect; while the positive effects of receiving asylum on mental health are not immediately visible, they emerge over several years. As we control for the typical predictors of poor mental health in our models, we are fairly confident in the causal nature of this relationship. In light of the significant long-term effect of secure legal status on mental health, as well as differences in likelihood of receiving asylum by demographic background that we observe in the data, we discuss the role of asylum policies and "legal violence" in public health.

FRANK, EMILY* (WZB Berlin Social Science Center, Germany)

Paper Walls: Administrative Burden and the Unequal Inclusion of Refugees

A growing body of literature has drawn attention to the ways in which administrative burdens – or the onerous tasks and costs encountered in interactions with government services – can compound immigrants' exclusion from social rights or delay their access to rights (Heinrich, 2018; Schmidt et al., 2023). This paper draws on semi-structured interviews with 30 refugee welfare recipients in Berlin, Germany, who discuss the stresses and administrative challenges they encounter in the process of applying for and receiving social benefits. I contextualize interviewees' experiences

within the structural framework – including immigration and welfare policies and the varying institutional contexts of organizations serving refugees with different legal statuses – that shapes administrative burden, along with street-level encounters. Of the 30 interviewees, ten are Ukrainian, and all other interviewees are members of nationalities that are racialized in Germany. Unlike the other interviewees, Ukrainians were fast-tracked into the German welfare system due to several national and EU-wide immigration and welfare policy changes. Overall, the study demonstrates how refugees with a precarious legal status in Germany experience systematically greater administrative burdens, such as experiences of limbo and waiting, when accessing welfare state resources, contributing to a system of differential inclusion in social rights. The aforementioned policy changes for Ukrainian refugees have lightened these experiences of burdens in accessing welfare, creating a system of racialized burden, or additional burdens upon racial minorities that serve as inequality reproducing mechanisms (Ray et al., 2022). In order to demonstrate these findings, I present three example cases – one of an asylum seeker, one of a recognized refugee, and one of a Ukrainian protection recipient – along with supporting evidence from the other interviews. Finally, I demonstrate how refugees draw on various human, social, and cultural capital resources in order to cope with these burdens.

Capped and Trapped (in the UK's housing market): How the Benefit Cap Makes It Almost Impossible to Find Affordable Housing

The benefit cap places an upper limit on the total amount a family can receive in financial support from the government in a given year. Many of those subject to the cap live in high rent properties and one stated goal for the policy was to incentivise people to move to cheaper accommodation. In this paper, we explore the potential housing options available to capped families, focusing on lone parents with three children – a very common family type among those capped. Using data from a rental listing website, Zoopla, we analyse the availability of housing that would be fully covered by the family's housing costs entitlement within the cap. We examine rental prices, estimate the proportion of suitable properties that are affordable in a given area, and explore how the benefit cap reduces the money left for non-housing needs. Our results suggest that opportunities for capped families to move – even quite far away – are very limited. Even if families were prepared to move right across the country, away from schools and existing social networks, there were only enough suitable properties available in the country in 2022 to house one in six of our capped families. This leaves families squeezing their spending on non-housing needs to meet their housing costs. We find that even if all benefit capped families moved to the cheapest available properties within their local housing market area, 44 per cent would still be capped to the point where their living standards fall below a standard definition of destitution. We simulate the effect of possible social security reforms and find that the removal of the benefit cap is the only reform to have a significant effect on the living standards of these families.

Eye in the Sky

Opening with the matter of universality, *The Protestant Ethic and the Spirit of Capitalism* evokes sidereal space, multiple despite the unicist vision of the universe. Since the 1940s, the satellite colonization of the sky has revolutionized our bond with time and space. GPS (USA), Glonass (Russia), and Galileo (Europe) satellite navigation systems orbit between 10 and 20 thousand km and Beidou (China) orbits at 30 thousand km; Tesla's monopoly dedicated to 5G telecommunications (fast internet with global coverage) is launching almost daily 50 X 50 cm cubes orbiting at 3 thousand km, while the network of Earth surface observation satellites orbits much lower (LEO) between 300 and 1000 km.

The architecture of this celestial surveillance panopticon allows a dual vision, towards the planet and towards the universe, employing a radio signal whose detailed accuracy must rely on a four unknown equation centered on an essential protagonist, time. This *deep-eye* apparatus in the sky observes, records, scrutinizes. *Spurred* on by the *space economy*, in 2025 a joint international mission will return to the moon equipped with 3D printers capable of producing modules to enable human life and, above all, the extraction of the *rare-earth elements* (REE) detected in the lunar south pole that will soon be in short supply on earth, but also keeping in mind the potential colonization of Mars. In terms of sociological aesthetics, *Homo Aereospace* may not be very different from Christopher Columbus and Amerigo Vespucci, but she may also have already started a journey where science, consciousness, knowledge reunite quantum mechanics, Amazonian Hiaitsihi, Anaxagoras' nous, and *beresit* founded on the Babylonian *Enūma eliš*. The paper explores these issues through images, videos, and sociological theories.

Data & Digital Literacy for School Self-Evaluation: Evidences from Italy

The paper focuses on school evaluation as a "data-driven process of inquiry and decision-making" (Ackoff, 1989; Mandinach & Gummer, 2016). Through the Italian National Evaluation System of instruction and training, the Self-Evaluation Report (SER) and the Improvement Plan, a systemic design is encouraged. During the first research step, the integrated model "Data & Digital Literacy for School Evaluation" had been elaborated. After the desk research on the model, a quantitative study started with the aim of investigating three main topics: 1) Self-Evaluation; 2) Data & Digital Literacy; 3) Experience with external evaluation. An online survey was organized and is currently in progress, aimed at School Principals and the members of the Internal Evaluation Teams of 158 Italian schools. This contribution focuses mainly on the aspect concerning Data & Digital Literacy. What it is hoped to derive from this survey is an overview of the specific training needs for those who carry out the activities of the school evaluation process, through a data-based profiling of participants (clustering). Finally, it is planned to systematize the newly gained knowledge in order to define large-scale training courses based on the information provided by the survey. Results will be shown at the conference, opening up an opportunity to discuss the opportunities for a competence-based approach in school evaluation processes from an integrated perspective of evaluation and learning.

The Interaction between School Self Evaluation and Digitalization in Italy

The digitalization of administrations (Decree Law no. 82/2005) regulated the automation of administrative tasks to promote innovation policies in the public sector. The technological aid has enabled the containment of human and material resources on the one hand, and the reduction of the complexity of the processes on the other. With the launch of the National Evaluation System for education and training (Presidential Decree no. 80 of 28 March 2013), the Self-Assessment Report (RAV) was introduced in digital format for all educational institutions. The digital platforms for schools' self-evaluation, which INVALSI designed, and which were progressively implemented, first on an experimental basis, then as a system, meet the needs for automating complex processes, characterized by multiple activities and professionalism. This paper discusses the main evolutions of the digital platform in the field of schools' self-evaluation, through the presentation of the peculiarities of the RAV, and reviews the outcomes of these surveys, proposing an evaluation of the digital platforms by its users.

Making Masa in a Place-Based Way: Relationality, Maize, and the Local Food Movement

As local food movements continue to grow in industrialized regions globally, greater reflexivity concerning the "local" is necessary for more sustainable and just relocalization. While the ethical values associated with "local" food systems are often ambiguous, the ethical values associated with "place-based" food systems (forming and maintaining reciprocal relationships and responsibilities through and with particular places) offer us a more palpable way of conceiving concepts like "embeddedness" and "nested markets." This paper brings a new case study with nixtamal tortillerias into conversation with the literature on place-based and relational maize foodways. I focus here empirically, through in-depth conversational interviews, on the motivations for participation in local food systems of a small group of fresh nixtamal tortilleria owners across the U.S. who are choosing to source locally grown corn for their masa despite the availability of imported criollo maize from Mexico. These tortillerias are making masa in a "place-based" (but not place-bound) way through using what is available to them regionally—sourcing local corn in reciprocal relationship with local farmers and farmland—while also seeking to be in solidarity with small farmers and tortillerias in Mexico and serve (especially Latin American immigrant) communities locally. I offer that these local food systems are therefore examples of emerging "place-based" food systems in the U.S., that is, local food systems built on place-based ethical values. This case study both illustrates and challenges the concept of "nested markets" specifically in relation to "common pool resources," emphasizing instead place-based reciprocity and relationality through a particular crop.

Reclaiming Indigenous Foodways: Developing Urban Agroecological Markets in Northern Malawi

Agroecological transitions include moving beyond production, to build connections with urban consumers through territorial markets. This study examines a participatory action research initiative to establish 4 urban and peri-urban agroecological markets in northern Malawi, which is being

implemented by a consortium of three organizations. By mobilizing the 'territorial markets' methodology, we first ascertained the farmers' needs in terms of consumer information and we conducted a consumption survey in order to understand the construction of agroecological quality in the market. A total of 317 consumers, traders and producers were interviewed in the 4 market sites (Mzuzu, Rumphii, Ekwendeni and Enukweni). The most common agroecological products purchased were vegetables (59%), pulses and cereals (44%), fruits (41%), root crops (39%), and animal products (35%). The most common reasons consumers cited for buying agroecological products were health benefits (74%), taste (62%), social and environmental impact (39%), and freshness (27%). Barriers preventing consumers from consuming agroecological products included limited knowledge (35%), low trust in vendors (23%), and product appearance (18%). We also explored consumers' perception of agroecology and their willingness to pay more for agroecological products, with 57% expressing a willingness to pay more for them, although only one-third reported being willing to pay more if prices were less than 10% higher than conventional products. After holding producer-consumer roundtables, the consortium supported farmers to open 'agroecological' labelled stands in the four marketplaces. Observations in the newly established markets suggest that the sale of prepared meals with culturally-significant ingredients (e.g., millet or local orange maize) enhanced the visibility and interest in agroecological markets. Processed foods such as flour and peanut butter also helped increase sales. Challenges include maintaining affordable prices and trust about food quality and pesticide use. We draw on concepts of cultural foodways and 'nested markets' to assess the potential of reclaiming indigenous foodways.

The Uncomfortable 'Aesthetic Turn': Fracturing Art-Based Sociology in Neoliberal Academia

Driven by evolving socio-political pressures, contemporary sociology increasingly over-emphasises the production of impactful and solution-driven research to address so-called global economical-environmental-political '(poly-)crises'. This is well-documented and countered by emerging sociological works which highlight artistic and creative sociological engagements: a trend we coin as the 'aesthetic turn'. Recently, this 'aesthetic turn' has become increasingly celebrated, partly considering their 'alternative' impact, which often align with democratic values, including 'transformation', 'justice', and 'decolonisation'.

This conceptual paper cautions against the often-uncritical celebration of this sociological 'aesthetic turn' through a threefold problematisation. First, despite acknowledging the anthropogenic nature of contemporary 'emergencies' and their 'solutions' (sociological or artistic), we trouble its/their homogeneity and lack of cultural variances, underpinned by an Anglo-Eurocentric reductionism. Second, we build upon this underpinning to argue that this 'aesthetic turn' centres around neoliberalism-driven professionalisation of both sociology and the arts. Both disciplines are susceptible to 'elite capture': prioritising superficial reforms and symbolic representation over substantive change and reappropriating existing, hegemonic power structures (Olúfẹ́ Táíwò, 2022) (e.g., pragmatic realities of funding and ideological conformity). Sociology's obsession with the 'here-and-now' and 'nuance' (Healy, 2017), for instance, leads to fragmented theoretical and applied engagements with 'the arts', with little acknowledgement to the arts' commonplace homogeneity and capitalisation. Third, we problematise the internalised commodification of the 'aesthetic turn', especially when it (inevitably) claims social progression with assumed benefits (e.g., an emancipatory anti-capitalistic vision) and thus become marketable symbols (Baudrillard, 1993). Echoing critical humanities critics (Jameson, 2005), we argue that the utopian claims made by the 'aesthetic turn' paradoxically perpetuate their capitalistic 'use'. We conclude by challenging the foundational disciplinary premises of sociology, the arts, and their collective envisioning of 'social futures'. Sociology is not ready to hasten its 'aesthetic turn' until we sit uncomfortably with the arts, sociology, and their inherent tensions in a neoliberal academia.

Impact of Institutional Barriers on International Marketing of Healthcare Services: Elekta in the Emerging Market of South Africa

Healthcare marketing is a complex phenomenon due to the involvement of patients, concern about life situations, and interactions between individuals and firms in the service delivery process. In emerging markets, international healthcare marketing is intricate because of institutional barriers and the influence of cultural factors. This study explores how institutional constraints impact the marketing of healthcare services, focusing on Elekta, a Swedish subsidiary in South Africa. Through a case study approach including observation, interviews, and document analysis the research addresses two key questions. What institutional barriers do healthcare providers encounter in South Africa's emerging market, and how do they deal with those constraints to build networks and develop marketing strategies? We analyze the role of formal and informal institutional constraints and how the service provider deals with them by developing networks and trust in the local market. The findings suggest that for international marketing of healthcare services, it is crucial to follow local rules and regulations for establishing relationships with authorities and local bureaucracy. It is important to standardize the offering and provide the same quality of service as in developed countries. Collaborations with academic hospitals and local customers, offering access to global expertise and know-how, influence trust building. Additionally, partnerships with complementary firms, using local expertise, adapting to local institutional frameworks, helping with the planning of the service, and providing affordable high-quality solutions are vital for network development and effective marketing strategies. The research emphasizes the role of public organizations, as key market actors, shaping marketing strategies through their focus on equitable healthcare access. To succeed in South Africa's emerging market managers must overcome institutional barriers, collaborate with public organizations, maintain global standards of care, and contribute to the expansion of the boundaries of the healthcare market.

The Paradox of Globalization: Exploitation or Empowerment of Women?

This study examines the impact of globalization on women's empowerment in emerging markets, focusing on whether it leads to empowerment or exploitation. Globalization is often credited with raising incomes in developing economies, democratizing institutions, fostering cultural diversity, and increasing employment opportunities for women. However, when local cultural contexts are ignored, globalization can have negative consequences, making it a complex and paradoxical phenomenon. This paradox involves both the empowerment and exploitation of women.

We hypothesize that gender equality has the potential to improve women's conditions, expand career opportunities, and enhance participation in democratic decision-making, particularly in addressing workplace issues. To explore this, we conducted a multiple case study of Bangladesh's garment industry, using qualitative research and structured interviews with 39 female workers across six factories. A grounded theory approach was applied to analyze the data.

The findings reveal that cultural traditions and contextual factors can negatively affect women's working conditions. Many workers in this study expressed dissatisfaction with their wages, lack of control over their earnings, and limited opportunities for career advancement or decision-making. Yet,

despite these challenges, the paradox of globalization emerges women are still able to support their families, access healthier food, and utilize workplace skills to pursue entrepreneurial activities.

The study concludes that when institutional and social factors are addressed, globalization can economically empower women and improve decision-making within factories. However, it also highlights the risk of economic and cultural exploitation if these conditions are neglected.

FREI TOLEDO, RAIMUNDO* (Universidad Diego Portales, Chile)

Cultural Sociology in Chile: Moral Orientations and the Explanatory Power of Subjectivity

This article describes how cultural sociology in Chile has studied the role of subjectivities in social change. While important historical events and processes were taking place in the country, such as the end of the dictatorship (1990), the return to democracy, and the consolidation and contestation of the neoliberal model, cultural sociology was concerned with understanding the type of subjectivities that were emerging among Chileans and how the latter were responding to these momentous phenomena. While the fields of economics and political science focused on indicators of development and democratic representation, cultural sociology sought to understand how Chileans were processing these changes by examining their experiences, emotions, and moral evaluations. This focus on subjectivity has not been free from controversy, however. One level of dispute concerns the narratives of social change with which intellectual elites interpret the neoliberal transformation, that is, the cultural battle over the Chilean model. While some emphasize the advances of capitalist modernisation and the new, empowered subjectivity of Chileans capable of choosing their own paths, others highlight discontent resulting from individualism and the inequalities generated by the neoliberal transformation – a frustrated subjectivity. A second level refers to the dispute over the interpretation of moral categories that articulate meaning in everyday life – merit, effort, dignity, security, authenticity. While some see in these moral categories a reinforcement of neoliberal values and a neoliberal subject, others see in them a space of resistance that challenges the very consolidation of the neoliberal model, developing subjectivities that are resilient or resistant to the adaptation of this model. At these two levels, cultural sociology in Chile has not only highlighted the explanatory power of subjectivity but has also revealed the frictions involved in using subjectivity as a lens through which to interpret social change.

Mapping the Digital Self: a Biographic Cartography for Situating Social Media Impacts.

This study employs biographical methods to explore how individuals integrate social media into their life narratives within an increasingly digital and quantified society. Drawing from research on the “qualitative self” in new social media, we engaged 40 diverse participants from Santiago, Chile, in a three-stage process: life story recounting, biographical map creation, and follow-up interviews focused on digital experiences. Participants used a visual mapping technique with figure-coded stickers (triangles for places, circles for people, and squares for events) on two-axis biographical maps (timeline and positive/negative evaluation). Our findings show that most participants place social media at the “center of their lives,” reflecting its complex role that spans social connectivity, digital dependence, surveillance, and violence. Through quantitative analysis of the digitized maps and qualitative analysis of the accompanying narratives, we gain valuable insights into how individuals evaluate and integrate social media into their life stories. This biographical mapping method proves useful for both digital and biographical studies, offering a nuanced understanding of the “qualitative self” in our quantified society. By showcasing the potential of visual methods in exploring technologically mediated life experiences, this study contributes to biographical research by providing alternative ways to examine life stories and digital developments.

Airbnb As a Bottom-up Placemaking Tool: An Analysis of Tourist Flows in the City of Naples (Italy)

Overtourism poses significant challenges like housing crises, overcrowding, and environmental degradation. To tackle these issues, decentralization strategies aim to redirect tourists from historic centers to less affected areas (Mansilla & Milano, 2022). Simultaneously, Airbnb significantly contributes to overtourism but also acts as an influential placemaking tool (Törnberg, 2022).

This study focuses on Naples, Italy, a city where the process of touristification has been largely shaped at the community level, without significant intervention from local administrations or large corporate actors. As the city begins to show signs of overtourism, our research question is: Can Airbnb, with its ability to formulate narratives, redirect tourist flows in Naples and make non-touristified neighborhoods more attractive to tourists, potentially triggering a bottom-up model of tourism decentralization?

Using a text mining approach (Bolasco et al, 2004) with R software, the study analyzes descriptions of neighborhoods where Airbnb units are located. These dimensions will be further examined and visualized using Geographic Information Systems (GIS), representing the territorial narratives created by Airbnb hosts and highlighting differences between the center and the periphery.

Preliminary results indicate a clear spatial pattern in Airbnb distribution, concentrated in the historic center. Textual analysis reveals that listings in peripheral areas often highlight local resources, proximity to transport, and use positive language to enhance the area's image. This suggests Airbnb could influence perceptions of peripheral districts, potentially driving a bottom-up decentralization of tourist flows in the near future. These findings confirm that platform-driven narratives might influence tourism's spatial dynamics, potentially carrying broader implications for the sector.

Law As a Tool for Climate Justice: Learning from the Women's Movement. a Comparison between the Climate Movement and Women's Movement in the Use of Law As a Tool for Social Change.

Law is utilized to maintain and legitimize patriarchal structures and serves as a means to oppress and to uphold the status quo (cf. Butler 1991). However, law also functions as a mechanism for emancipation and the establishment of justice. It can be an important instrument for social movements to achieve progress and change (Gerhard 1997). Historically, the women's movement has employed legal frameworks to combat systemic inequalities and promote gender equality. Landmark cases, legal reforms, and international treaties have all played a central role in advancing women's rights. Similarly, the climate movement has begun to recognize the potential of law as a mechanism to hold governments and corporations accountable for environmental degradation and climate change. Notable examples include climate litigation against fossil fuel companies and governments, as well as advocacy for the recognition of the rights of nature (Setzer and Higham 2023). Despite these efforts, the climate movement often encounters significant obstacles, including political resistance, inadequate legal frameworks, and the entrenched interests of powerful stakeholders. Understanding how the women's movement is overcoming similar challenges can provide valuable insights into strategies that can be employed to enhance the effectiveness of climate justice initiatives. This study does not only draw lessons from past successes but also identifies innovative approaches that can be applied to the current climate crisis. Through a comparative analysis of the women's and the climate movement, this article examines how social movements utilize law to effect change and what strategies are employed to achieve legal reform. It aims to explore the parallels between the women's movement and the climate movement, focusing on how both utilize law as a tool for social justice. By comparing their tactics, successes, and challenges, this study aims to identify ways to improve the effectiveness of legal advocacy in climate justice initiatives.

FRERICHS, LEA* (University of Hamburg, Germany)

Navigating Legitimacy: The Role of Social Movements in Shaping Acceptance of Climate Litigation Judgments

If societies are not prepared for certain progressive court rulings and the resulting political guidelines, a backlash in politics and civil society may occur (Setzer and Vanhala 2019). For this reason, court rulings must be situated within the framework of the generally applicable norms of a society. Courts also maintain their legitimacy and that of the political system by ruling within these socially accepted norms (Vilaça 2024). Social movements can shape social discourses and norms, as well as exert pressure on political processes, thereby significantly influencing public perception and the relevance of certain issues within a population (Rucht 1994; Tarrow 2011). This article explores the extent to which the climate movement can contribute to the acceptance of climate litigation judgments, using the examples of the case *Neubauer v. Germany*, which received a high level of approval in both politics and civil society, and the case *KlimaSeniorinnen v. Switzerland*, which faced rejection in both politics and civil society (Blattner 2024). A comparative analysis of the judgments, one decided at the national level and the other at the international level, is conducted regarding the political and social reactions to the judgments and the role of the climate movement in these contexts.

FREUTEL FUNKE, TABEA* (University of Tuebingen, Germany)

Walter Benjamin As Inspiration - How "Go Alongs" with Children Become Empirically Based Miniatures

While methods of data collection develop rapidly in spatial and mobile research with children, ways to analyze, write and present these research findings are less frequently discussed. Especially the diversity of data from "go alongs" (Kusenbach, 2016) like pictures, memos, audios, transcripts and the own experience of the researcher might be challenging to bring into a linear text. Facing these questions in her dissertation *Time to walk alone- a comparative study of the transition to CIM in Berlin and New York*, Tabea was moved and inspired by Walter Benjamins sensitive *Miniatures* and their specific literary form. Benjamin wrote his *Miniatures* following the idea to map his biography in 1932 he "...deliberately called to mind those images which, in exile, are most apt to waken homesickness: images of childhood" (Benjamin, 2006). But in order to limit the effects of this 'inoculation', he chose a way of distancing himself by giving an "insight into the irretrievability-not the contingent biographical but the necessary social irretrievability-of the past" (Benjamin, 2006). Tabea aims to show how well phenomenological roots and data collection *on the move* might fit together in order to create and analyze unique and at the same time context specific perspectives on space. Within her presentation she shows *Empirically based miniatures*, which, written in a step-by-step process as short and dense texts, enable readers to explore a broad range of experiences interplaying the everyday movement of children through in- and outdoor spaces of their neighborhoods.

Education-to-Work Transitions in First-Generation University Graduates in New Universities of Greater Buenos Aires, Argentina

In recent years, Argentina has experienced a process of expansion of the public university system, through the creation of new national universities between 2007 and 2016. These institutions were born with an inclusive objective, seeking to offer university education to social sectors that previously did not have access to this educational level. Thus, in several of these universities (and particularly in those located in the Greater Buenos Aires area, that is, in the districts surrounding the City of Buenos Aires, characterized by population concentration and social inequality), a high percentage of students are the first generation of their families to achieve a university degree.

The university's promise for these students is not only obtaining a degree, but also achieving a job in their professional field. However, there are authors who warn about the risk that the stratification of the university

field affects the employment possibilities for students who come from less prestigious institutions. In this context, this paper analyses the university-to-work transitions in graduates from two of these new universities of Greater Buenos Aires, graduates who are the first generation of their families to access university. A particular research interest is whether there are or not intergenerational social mobility processes and which are the factors associated with such processes. Gender differences in these transitions are also explored. These aspects are examined in three different professional fields: health sector, engineering and social sciences.

To answer our questions, we appeal to a biographical approach, as the reconstruction of trajectories will allow us to relate the experiences and subjective choices of students with the institutional structures and devices (both within and outside the university) that condition them, limit them or, on the contrary, open up opportunities. To do so, we reconstruct life stories of graduates from in-depth interviews with a biographical script.

RC04-50.2

FREYTES FREY, ADA* (Universidad Nacional Arturo Jauretche / Universidad Nacional de Avellaneda, Argentina)

The Impact of a Support Program for Inter-Level Transitions on the Educational Trajectories of Students from Two Universities in Buenos Aires Province, Argentina.

The transition between secondary and university education represents a challenge for many students, particularly those who come from vulnerable sectors. Therefore, it acquires a strategic character in the processes of expansion and democratization of higher education systems. In this context, different policies have been developed to accompany such transitions. In this presentation, we aim to analyze one of these policies, implemented in Argentina between 2021 and 2024: the "Sigamos Estudiando (Let's Continue Studying)" Program, promoted and financed by the Secretariat of University Policies of that country. This program aimed to strengthen both the completion of the secondary level and the educational trajectories in the first years of university, through inter-level articulation projects designed by state universities.

In this presentation we seek to compare the projects carried out by two universities in Buenos Aires Province (the largest and most populated in Argentina), located in very diverse territories: one of them, in the Greater Buenos Aires and the other, in the interior of the province. On the one hand, we will examine the lines of action proposed by each institution and the inter-institutional networks built to implement them. On the other hand, we will analyze the impact of these actions on the educational trajectories of students who are performing their transition between secondary school and university.

The research uses a qualitative methodology: the reconstruction of each university's project was based on documentary analysis and interviews with key informants responsible for its implementation. The students' educational trajectories, their experiences in the inter-level transition and the impact of "Sigamos estudiando" Program were addressed through biographical interviews with students.

FRIKHA, YASMINE* (Université Laval, Canada)

The Construction of Occupational Therapists' Agency in Their Practice Context: A Case Study on French and Quebec Occupational Therapists

This study examines the construction of agency among occupational therapists (OTs) in France and Quebec (Canada), exploring how professionals negotiate their role within complex interprofessional environments. Agency can be defined as a temporally embedded and relational process of social engagement, shaped by past habits, oriented toward future possibilities, and contextualized within the present moment's contingencies (Emirbayer & Mische, 1998). Studying agency is particularly relevant in the context of occupational therapy, a profession that has historically operated on the margins of the healthcare system dominated by a biomedical model. This case study aims to understand how French and Quebec OTs construct their agency in response to challenges posed by dominant medical paradigms, organizational structures, and interprofessional hierarchies.

Drawing on interviews and interprofessional meeting observations, this research identifies key factors influencing agency in distal and proximal contexts. Distal variables encompass political, legal, and institutional aspects, particularly concerning professional groups and organizations, whereas proximal variables focus on the relational context surrounding individuals (Denis et al., 2022). The comparison between France and Quebec offers insights into how OTs from distinct health systems and professional regulations experience similar constraints but develop different strategies to practice.

The findings reveal that OTs engage in a dynamic process of agency construction by adapting to and resisting professional and managerial norms, negotiating their roles to ensure the profession's and clients' values are acknowledged. French OTs encounter more rigid hierarchical structures, which can limit their agency, while Quebec OTs benefit from a more collaborative model, allowing for greater role optimization and influence.

This research sheds light on how professionals enhance their agency to influence their own work, others' work, and organizational structures, fostering valuable connections among stakeholders. These connections empower professionals to address challenges and develop sustainable solutions, ultimately improving service quality for clients and strengthening professional identities.

FRINGANT, MATTHIAS* (Université Clermont Auvergne (UCA), France)

The Social Uses of Reflexivity: A Study of the Uses of the Word and Its Meanings from 1918 to 1968.

Following their introduction in seventeenth-century England and nineteenth-century France, "reflexivity" and "réflexivité" embarked on two different, yet structured, trajectories in the early twentieth century. While the term "reflexivity" was mainly used in logical positivism, "réflexivité" was primarily associated with the French humanities and a philosophy of the subject. The concept of reflexivity, as we understand it today, only emerged in the post-war period through a complex exchange between English- and French-speaking academic circles.

This paper would like to discuss some of the results of an empirical study of the social uses of the words "reflexivity" and "réflexivité" that was conducted for a PhD in sociology. Establishing two main genealogies of "reflexivity" in the first part of the twentieth century may help fostering a better understanding of the further contrasted uses of a central concept of the human and social sciences. More broadly speaking, this study could help organizing the periodisation of a history of "reflexivity".

Spatial Dimensions of Solution Design for Grand Challenges in Society - the Impact of Global and Local Knowledge Structures

The role of design across disciplinary perspectives is at a crucial juncture, poised to address the ecological and human wellbeing challenges facing global society. From a knowledge perspective, significant gaps exist in developing new concepts to tackle these issues both locally and globally. Knowledge from one part of the world cannot be applied universally as a panacea; instead, it requires contextualization and synthesis with local wisdom.

Only through such mobilization can we create new forms of generativity, which lies at the core of design theoretic explorations. This is particularly relevant in the context of rising AI generativity, which often relies solely on internet-based data, potentially ignoring local knowledge and proving ecologically wasteful with questionable limits on creativity. It also is not clear how the mobilization of local knowledge will get embedded in the digital world for use.

We must recognize the necessity for new conceptualization methods and institutions to inform the development of design approaches that transcend disciplines grounded in real-world problems. This endeavor encompasses crafts, arts, science, mathematics, and social sciences. Even contemporary design theories need adaptation and operationalization in this global/local context, and engineering, expanding the knowledge space that can be composed to generate relevant innovations and enhance society's problem-solving capabilities. We need create local and global institutional structures that bring together cultures, highlighting design patterns underrepresented in today's body of knowledge, thus bridging design research and practice with cultural and creative industries.

The Non-Closure of Open Labs – Understanding Critical Issues of Resource Integration

Research has lately investigated many creative or innovative work environments outside traditional organizations, such as Fab Labs, Maker Spaces, Tech Centres, Living Labs, or Real-World Labs. As a general term to capture the diversity of such places, researchers have suggested "Open Labs". It is not unusual for management research that the conceptual foundations of the term have remained weak. The aim of this paper is to advance theory in such a way that openness in the term "Open Lab" can be better understood.

In line with previous publications, the paper draws a connection between Open Labs and Open Science, which allows a distinction between openness regarding (1) the accessibility of space or technology for observers, (2) the involvement of stakeholders in knowledge flows, (3) productive work in research and design, or (4) decision-making in the course of an innovation project or broader problem-solving activity. All these accounts of openness have in common that they speak of an integration of people in domains where they have so far not been present. Openness is associated with an enablement or an expansion of activities, which fits well to general narratives of resource exploitation driving economic development. While this is suitable for promotional purposes, it obscures or obstructs the view on the structural changes resulting from the engagement in Open Labs.

As an alternative, this paper suggests focussing on the inherent negation in "openness". Similar to novelty, openness carries with it the idea of an absence of its opposite. Something is open if a closure is missing, but in speaking of openness, this closure is already imagined as a possibility. By rephrasing cases (1)-(4) regarding the respective closure that is overcome, attention is drawn to critical issues in the extant discourse on Open Labs, such as colonialist tendencies, disrespecting diversity in attributions of meaning.

Strategic Adaptation in Taiwanese Social Movements: Navigating Geopolitics, Electoral Transitions, and the Post-Sunflower Era

This paper examines the evolution of strategies adopted by contentious collective actors in highly sensitive geopolitical contexts, as they are simultaneously confronted with three interrelated fields: international relations, state-society dynamics, and internal competition within social movements. It focuses on the evolving strategies of youth and student-led movements in Taiwan between 2012 and 2020, a period marked by rising geopolitical tensions, Taiwan's strategic positioning in the China-U.S. rivalry, the political transition from Kuomintang (KMT) to Democratic Progressive Party (DPP) governance in 2016, and the reassessment of movement strategies following the pivotal Sunflower Movement of 2014. The paper explores how the issues, forms, and strategic engagement of youth activism have transformed in response to these internal and geopolitical shifts. Drawing on a qualitative Protest Event Analysis, interviews with long-term activists, and observations from one year of fieldwork in Taiwan conducted in 2024, the study highlights the dynamics of the youth protest cycle, particularly the strategic diversity that emerged after the Sunflower Movement. Despite a decrease in protest frequency following the electoral transition, youth activism has remained robust, evolving into institutionalized social movements, successfully entering electoral politics, and shifting towards new forms of activism through the rise of civil society organizations focused on countering China's growing hybrid warfare.

FROST, JACQUI* (Purdue University, USA)

Comparing Contested Conceptions of Science in Two Secular Congregations

Research shows that many nonreligious people identify strongly with science and consider it to be their primary epistemic authority. However, much of this research assumes that scientific worldviews among the nonreligious are largely homogenous and few studies attempt to examine diversity in how nonreligious people understand and engage with science or how those differences might lead to differences in nonreligious identities, values, and politics. In this paper, I argue that nonreligious people in fact have a variety of different approaches to science and they embody their scientific worldviews in different ways. I draw on a comparative case study of two secular congregations in the United States that were founded to celebrate scientific and nonreligious worldviews -- The Sunday Assembly and the Church of Perpetual Life -- to show that nonreligious organizations are doing continuous boundary work to construct and defend specific conceptions of science and that these boundaries are often contested and politicized. I highlight debates within and between these secular congregations regarding what gets counted as "rational" and "scientific," which kinds of science and scientists are promoted during services, and how science is used to justify often contrasting values and politics. These findings suggest that science is not just a set of methods used to make evidence-based decisions, it is a culturally constructed and contested meaning system that can promote a wide range of beliefs and values. And I argue that we need more comparative studies of nonreligious people and organizations to start fleshing out these diverse meanings around science in more detail.

FTOUHI, HIND* (Institut National d'Aménagement et d'Urbanisme, Morocco)

Des Jeunes Ruraux En Mouvement : Les Mobilités Comme Antidote Des Inégalités Territoriales ?

Bien que le Maroc ait réussi à réduire les écarts d'accès à l'enseignement entre les milieux urbain et rural, des inégalités persistent. Ces disparités se superposent aux opportunités d'emploi, qui sont moins nombreuses en milieu rural et souvent peu adaptées aux aspirations des jeunes ruraux d'aujourd'hui. La question se pose alors de savoir comment ces jeunes font face à ces inégalités. Pour contribuer à y répondre, cette communication a pour objectif de montrer comment la mobilité des jeunes ruraux constitue une stratégie pour pallier l'accès insuffisant aux structures d'éducation, de formation et aux opportunités d'insertion professionnelle.

À partir de deux cas d'étude situés dans des contextes très contrastés en termes de relief et de ressources – la plaine agricole du Saïss, au nord du Maroc, et la vallée du Drâa, au sud-est du pays – nous explorons les différentes formes de mobilité des jeunes ruraux. Nous montrons ensuite que

ces mobilités, loin de se limiter à de simples déplacements géographiques, permettent aux jeunes d'améliorer leurs conditions de vie, d'acquérir une plus grande autonomie et de dynamiser les territoires ruraux. Par ailleurs, les jeunes en mobilité maintiennent le lien avec leur localité d'origine et y retournent munis d'un capital financier et de savoir-faire qu'ils exploitent chez eux lorsque l'opportunité se présente.

Enfin, en analysant ces expériences à travers la dimension de genre, nous mettons en lumière que la mobilité et le retour sont vécus différemment selon qu'il s'agisse de jeunes hommes ou de jeunes femmes.

FU, LUNA YIHAN* (University of Leeds, United Kingdom)

"Men in the System (Tizhi)": State, Gender, and Masculinities in the Public Sector of China

This research examines how Chinese masculinities are reproduced, transformed, and contested within state-controlled bureaucratic work cultures by focusing on men working in the public sector. China's public sector, commonly referred to as *'Tizhi'*, meaning 'system' in English, comprises civil service, public service units, and state-owned enterprises and is ultimately governed by the Communist Party. Since the 2010s, economic and social changes including downsizing in the private sector and rising youth unemployment have made public sector jobs[1] desirable among younger generations due to their perceived stability, status and job security. I argue that the increase and dominance of men in these roles may produce new forms of hegemonic masculinities, reshaping gender relations and national identity in China. Drawing on my current doctoral research, this paper presents early findings from fieldwork conducted from September 2024 to January 2025, using photo-elicitation and semi-structured interviews with young men working in the public sector jobs. Using a creative visual methodology to explore masculinities across time and space, this paper examines how men in the public sector experience, contest, and embody state-promoted masculinities and gender ideologies in their everyday lives. This research addresses a gap in mainstream masculinity studies in this transformative era, by examining gender through the lens of an authoritarian state, a context uncommon in Western democracies and under-researched in Anglophone gender studies.

[1] It is estimated that 80 million people work in China's public sector, meaning roughly one in four workers in the country is employed in this sector (Radio Free Asia, 2023).

FUENTEALBA, RICARDO* (Universidad de O'Higgins, Chile)

Disasters and Urbanization: Risk Configurations and Uneven Spatial Development in Chile

As part of the ongoing climate crisis, cities are developing multiple sustainability and climate-related initiatives, with new roles for governments, residents and local organizations. While mainstream policies see cities as sites for saving the planet, urbanization and city development remain as contested issues, including how these relate to efforts for managing risks. There is an important work on urban disaster risk management. However, more attention is required to understand the genealogies of risk management configurations, especially considering the contentious character of urban disasters. These configurations emerge from historical, spatial and political processes and bring forth multiple actors across scales and domains of governance to deal with hazardous environments.

Following qualitative and spatial methods, and using a governance lens to understand urban disaster politics, in this presentation I analyze two cases in Chile. On one hand, the foothills of Santiago, the country's capital, where a number of initiatives exist after a landslide disaster in 1993, although scantily integrated and overly focused on emergency measures. The case describes how long-standing communities in the area remain excluded in risk management while also experiencing uneven development trajectories. On the other hand, I focus on smaller cities located in a more rural region in the center-south of Chile. In 2023, two meteorological events triggered important floods in both rural and urban spaces in the area, increasing awareness on the potential impacts of climate change for local residents, while also encouraging them to engage in local policy processes associated to risk management. Both cases highlight the emerging character of the risk configurations in place, including their contested discourses and practices, as well as their uneven impacts. Ultimately, the article shows the challenges to implement disaster mitigation initiatives and argues to develop more attention to the political dimension of city-making to govern risks inclusively.

Dispositivos Para Evaluar y Acompañar Trayectorias En Las Políticas De Cambio De La Escuela Secundaria En Argentina.

Desde la sanción de la obligatoriedad de la escuela secundaria en Argentina se han desplegado una serie de reformas de mediano alcance que buscan modificar aspectos selectivos que tendían a expulsar a aquellos estudiantes más alejados de la propuesta cultural de la escuela. Muchas de estas reformas, buscando garantizar trayectorias educativas exitosas, incorporan nuevos dispositivos que modifican las prácticas de evaluación y reorganizan los tiempos y espacios destinados a la enseñanza. Entre los aspectos de la organización escolar que se alteran están la gradualidad, las formas de promoción y de evaluación a lo largo de cada ciclo escolar. Eso va generando ciertos cuellos de botella y redefiniciones que generan malestar tanto en estudiantes como en docentes, posicionando así de forma crítica y redefiniendo sus formas de estar en la escuela.

En esta presentación, se exploran las reacciones y posicionamientos que docentes y estudiantes tienen frente a los dispositivos que se implementan en instituciones que implementan reformas educativas de transformación de la escuela secundaria obligatoria en Argentina. Para ello nos basamos en el material empírico producido en el marco de varios proyectos de investigación que han abordado políticas provinciales de cambio del nivel secundario.

FUENTES DÍAZ, ANTONIO* (Benemérita Universidad Autónoma de Puebla, Mexico)

Brokers Armados, Contenciones Criminales y Política De Las Armas En México

La literatura especializada en temas de seguridad en México, ha dado cuenta desde los años noventa del siglo XX, del surgimiento de organizaciones comunitarias o vecinales ejerciendo acciones informales de seguridad.

A partir de testimonios y reflexiones producidas a partir de trabajo de campo durante el periodo 2018-2023 en diferentes zonas del occidente y centro de México, se plantea que nuevas emergencias y consolidaciones de grupos defensivos armados se han registrado, a través de la incorporación de nuevos repertorios de contienda y de reconocimientos legales que los facultan como organizaciones legítimas que contienen los contextos de inseguridad criminal (extorsión, secuestro, desaparición y asesinato). Al hacerlo, se transforman en actores políticos relevantes a nivel local con base a su capacidad armada.

En estas nuevas agencias de los actores armados, se puede apreciar que la distancia material y simbólica entre comunidades y Estado, que genera percepciones de vacíos de interlocución, juega como detonante central para la conformación y actuación de organizaciones armadas defensivas que van a constituirse como interconectores políticos entre esos ámbitos locales y las agencias del Estado. A esta distancia, ocasionada por el diseño institucional y los recortes al gasto público, e incrementada por la ineficacia estructural de los operadores de justicia, se le adiciona la producida por la gobernanza criminal extendida en los territorios donde se operan modelos de renta extorsiva y otras formas predatorias que se imponen en las localidades y que en varios escenarios y momentos fusionan actores estatales y criminales.

Ante esa distancia, se hace precisa la interconexión, provista por organizaciones que funcionan como brokers armados que suplementan bienes y servicios, y que, al hacerlo, adquieren capacidad de interlocución y reconfiguración del poder local, avanzando a un nuevo tipo de clientelismo de la seguridad.

FUENTES LANDAETA, JAVIERA* (London School of Economics and Political Science, Chile)

Debt and Economic Violence: The Financial Experiences of Chilean Women.

Economic violence is one of the most prevalent and understudied forms of violence against women. The few empirical studies addressing economic violence tend to focus on intra-household dynamics of financial abuse related to domestic or intimate partner interactions. However, little is known about debt as a form of gender-based economic violence. Drawing on feminist approaches to violence (Vergès, 2022) and debt (Cavallero, 2021; Cavallero and Gago, 2019), this paper explores Chilean women experiences of regarding indebtedness and economic violence from a feminist perspective. We explore the relationship between debt and economic violence in Chile, because the

massive access to financial products and the increasing rates of indebtedness after the pandemic outbreak have led one fifth of the Chilean population to have a soaring financial burden, making Chile the leading country in Latin America in terms of household debt.

Using statistical data from the Chilean Financial Market Commission and 80 semi-structured interviews conducted as part of a study on women's economic autonomy in Chile, we show that meeting basic needs such as food, housing, and education is one of the main reasons for women's indebtedness. We also show that the lack of financial literacy and unattainable financial requirements imposed by banking institutions often push women into resorting to informal economic practices and risky institutions, increasing women's economic dependence and hindering their economic autonomy. In doing so, this paper contributes to expand theoretical conceptualizations and empirical approaches to economic violence and strengthen scholarship addressing gender-based violence from a feminist perspective.

College Premium Trajectories over the Life Course in Japan

Previous research has highlighted the heterogeneity of returns to college education among people from different socioeconomic backgrounds. This study advances upon prior efforts by examining long-term socioeconomic trajectories over individuals' life course rather than focusing solely on a single point in time. We investigate whether college premium trajectories (that is, the difference in socio-economic returns between college graduates and high school graduates) widen, remain constant or shrink over the life course and whether trajectories are further differentiated by social backgrounds. We use data from the Japanese Life Course Panel Surveys, nationally representative surveys conducted annually in Japan since 2007. The outcome variable is annual income, the treatment variable is respondents' education (college graduates vs high school graduates), the effect modifier variable is parental education (if one of the parents attended higher education), and a range of pretreatment covariates are controlled for. The results from our analyses show the followings: Among men, the college premium increases across the life course and the income gap widens with age even after adjusting for covariates. However, among women, the college premium remains stable across life course. With regard to the heterogeneity in the college premium by parental education, among men, the college premium becomes larger with age especially when parents have higher education. However, among women, the college premium persists over time and does not differ by parental education. Among men, it is possible that college graduates benefit more from Japanese employment practices (internal promotion, internal training, and OJT) than high school graduates, resulting in a widening college premium with age. Similarly, men from advantaged backgrounds are more skillful in converting college education into the benefits of Japanese employment practices than from those from disadvantaged backgrounds, resulting in a widening college premium with age between people from different backgrounds.

To What Extent Does Reducing Educational Inequality Decrease Occupational Inequality By Social Origins: A Causal Decomposition Analysis

This study examines how interventions in educational attainment can reduce occupational disparities by social origins. While education plays a crucial role in shaping the relationship between social background and occupational success, limited research directly addresses this question. The study analyzes data from the 2015 Social Stratification and Social Mobility Survey (SSM Survey) in Japan, focusing on employed residents aged 25-64. Using a causal decomposition method, it quantifies the effects of interventions aimed at reducing educational disparities between social categories. The research defines the outcome variable as the respondent's occupational status, the social category as parental occupational status, and the intervention as university enrollment. Findings reveal that universal university enrollment could reduce the disparity in occupational attainment by social origins by up to 40%, indicating that intervening through university enrollment effectively decreases this inequality. However, differences in occupational attainment by social origins persist even with this intervention. While the study demonstrates the significant impact of educational intervention, particularly universal university enrollment, in reducing occupational inequality, it also highlights the approach's limitations. The research emphasizes the need to explore various other intervention methods beyond universal college education. It underscores the importance of analyzing intervention effects within social stratification and educational research, providing valuable insights for academic discourse and policy considerations in addressing societal inequalities.

Sustainability of Community Activities By Students at Universities : A Comparative Study of the Watarai Japanese Tea Project and the Moray Eel's Local Production for Local Consumption Project

This paper examines the factors that contribute to the sustainability of community activities by students at universities. Since 1999, community activities at Japanese universities have become more active than ever before, due to significant government support. Additionally, many researchers such as Mizuno (2013) and Fujii (2015), have conducted studies on community activities at universities.

This paper presents an analysis of two case studies of projects in Mie Prefecture, Japan : the Watarai Japanese Tea Project and the Moray Eel's Local Production for Local Consumption Project. These projects are collaborative efforts with local municipalities and companies in the region reflecting a commitment to regional partnerships. The Watarai Japanese Tea Project commenced in 2016 , while the Moray Eel's Local Production for Local Consumption Project was initiated in 2022. The objective is to promote local specialty products, such as Japanese tea and moray eel, through product planning, development, sales, and PR, to revitalize the community through these activities, and to provide practical learning for the participating students. Furthermore, Mie Prefecture, especially the Ise-Shima area, is currently experiencing a notable problem of an aging society with a low birth rate, and is plagued by a lack of local actors. It is expected that these projects will assist in addressing this issue.

An analysis of these projects indicates that there are several factors that contribute to the sustainability of community activities by university students : student factors, government and corporate factors, community factors, faculty factors, project factors, and so on.

RC52-JS-152.2

FUJIMOTO, MASAYO* (Doshisha University, Japan)

Changes in Role of Professionals Due to Organizational Efficiency: From Creation Using Specialized Knowledge to Supervisory Duties

In modern society, artificial intelligence (AI) and automation technologies have been introduced in many workplaces. Additionally, AI is applied in professional work. The role expected of professionals is shifting from "creating" new knowledge by fully utilizing knowledge and skills to "monitoring" and "identifying errors" to verify whether hallucination appears in the answers provided by AI. In this study, we analyze cases such as medical AI, AI for creators, AI for the translation industry, AI for detecting fraudulent insurance claims, and demand forecasting, and demonstrate the manner by which the nature and quality of work is changing by enabling new hires to perform tasks that previously required sufficient knowledge and skills. Organizations tend to adopt policies that increase efficiency instead of develop the expertise of professionals. Consequently, work previously paid based on the expertise and skills of the person performing it becomes work that can be performed by someone with less experience, and the value of work experience and expertise is highly likely to decrease. However, because the expert remains responsible for the results of the work, the number of applicants is expected to decrease in the future owing to reduced job satisfaction and compensation.

RC52-JS-12.3

FUJIMOTO, MASAYO* (Doshisha University, Japan)

Changing Quality and Nature of Work Using Artificial Intelligence in Professional Roles

In today's society, automation technologies such as artificial intelligence (AI) are being used to replace not only simple tasks but also the tasks requiring specialized knowledge and skills. Systems for replacing the tasks of professionals are being developed to allow AI to acquire the knowledge and skills of experienced workers, as well as to allow new hires to derive appropriate answers. For example, in the insurance industry, detecting fraudulent claims is the responsibility of experienced workers with a wide range of knowledge and expertise; thus, it cannot be easily performed by new recruits. Companies allow AI to make simple decisions such that experienced workers need not perform basic tasks. In the medical field, AI is used in image diagnosis to avoid the risk of medical lawsuits due to misdiagnosis and to compensate for the inadequate experience of new doctors. In job interviews, AI, through its acquisition of the knowledge of experienced workers, is used to help new employees make moderate decisions. Although the use of AI in

these cases is efficient for the current organization, it does not consider the skill improvement of new employees who complete tasks by receiving answers that they do not understand from AI. However, new employees who do not learn the essentials cannot acquire the skills to understand when the system changes or when AI provides an incorrect answer. Thus, instead of ruminating on the content of their work based on their own expertise, they will be tasked to perform minor "operations," where AI provides a suitable answer for them. The quality of professional jobs may change and the number of jobs classified as associate professional or clerical may increase.

FUJISAKA, NOZOMI* (Osaka University, Japan)

Students' Strategies and Solidarity to Survive Student Maltreatment

This presentation aims to explore elementary students' strategies against teachers' oppressive behaviors. Teachers' continuous aggressive behaviors toward students, often termed student maltreatment, are frequently justified as normative educational practices across various countries. This situation has motivated researchers to clarify the frequency of occurrence and the damage (Gusfre et al., 2022).

This research employs autoethnography and interactive interviews to comprehend the classroom where student maltreatment occurred from former students' perspectives. I reflect on my personal experiences in 6th grade at a Japanese elementary school. For the interviews, I engaged former elementary students from the same class to gather their perspectives on their interactions with the teacher. The combination of the methodologies explains the former students' understanding and attempts while critically examining my standpoint.

The findings indicate that students employed some strategies to manage the situation. When a gap was revealed between their will and the teacher's guidance, former students experienced troubles, which could result in student maltreatment. Some students attempted to bridge the gap by suppressing their own desires or engaging in dialogue with the teacher, while others adapted their behavior to align with the teacher's emotional cues, masking their true feelings of anger or scorn. The students experienced great distress when performing, as Hochschild (2003) suggested, but simultaneously, they would resist in solidarity with their classmates. I never intend to trivialize the damage of any bullying or glorify a child's patience against power abuse. However, this result counters treating students as just an educational object or powerless to change their living environment. This presentation highlights the potential for students' collective performance and solidarity to transform rigid and oppressive teacher-student dynamics into more fluid and empowering relationships.

FUJIYOSHI, KEIJI* (Otemon Gakuin University, Japan)

For the Sake of What You Do: How Valuable Works Tend to be Underestimated in Japan

Exploitation is a popular word to analyze, criticize and even blame a capitalist economic system. The Stanford Encyclopedia of Philosophy explains it by stating, "To exploit someone is to take unfair advantage of them. It is to use another person's vulnerability for one's own benefit" at its beginning¹. Its implication seems clear. Those who are exploited are weaker and more vulnerable than those who exploit and its asymmetric relationship is relatively stable, which usually means exploitation happens between haves and have-nots. In this context, it shall be a common recognition that workers in a capitalist society are exploited insofar as they are forced to sell their labor power to capitalists for less than the full value of the commodities they produce with their labor². It is why workers should be protected by a labor union without which they can be easily exploited.

This paper explores and analyzes some cases seen in Japan which may make the above explanation of exploitation invalid and ineffective. These cases could be explained from a view point of valuelessness of valuable works. There are several sorts of criterion to measure valuelessness of work: (a) How much beneficial is it to others? (b) How much satisfying is it to yourself? (c) How much selfless are you in doing it? Criterion (c) is most important in some workplaces in Japan. It is, however, usually referred as devotion which is a different kind of human act from work. There can be seen some characteristic apparatuses which have social and cultural force to refrain labor from being seen as something to be rewarded or paid.

This view point shows how much people's identity in work places is drenched with a sense that enduring to be exploited is welcome or even honorable in Japan.

FUKUSHIMA, MIHOKO* (University of Miyazaki, Japan)

Good Taste? Bad Taste? Children's Orientation Towards the Taste of Tea

In this paper, we will focus on the ways in which children manage to evaluate the taste of green-tea. Traditionally, there is an established way of judging the quality of tea leaves: appearance, color, smell, and the taste and such a ritual was practiced everyday even at home in Japan. As the tea bags and pet-bottles have been more common, these days, children have little experience with teapots and tea leaves. Does this change in lifestyle mean that they no longer have a way to evaluate the taste tea?

By using conversation analysis as a methodology, we will explore how the children orient themselves to the taste of tea and how they perceive what is tasty and what is not tasty. We analyze the discussions among sixth-grade elementary school children who are exchanging ideas in small groups about the tea after tasting four kinds of tea. Although they do not drink tea brewed with tea leaves daily, they reveal that they are capable of making judgement on teas in their own ways and define each taste. As they reach the consensus of which tea is the best, they showed their orientation to the good taste by something non-bitter, familiar, and associated with their own experiences and memories.

People involved in the tea business are facing the issue of decline of tea industry and they often visit schools to pass on the tea culture to the younger generations. In such a setting, they tend to teach the "correct" way of judging the tea according to the traditions. We argue that paying attention to the children's own ways of tasting and appreciating the tea, which are not necessarily the same with the adults, might give us a new perspective to understand the way to incorporate them into the tea education activities.

FUSSER, MYRIELL* (Philipps-University Marburg, Germany)

Transnational Memories between Miami and Havana. How Imaginaries of Cuba's Past and Future Are Negotiated in the Diaspora and Beyond.

As a driver of social change, migration can be a crucial factor in the renegotiation of collective memory. While the consequences of migration for both receiving and sending societies are inherently political, this political nature is intensified in the case of Cuba. Cuban migration is a highly politicized issue, still embedded in a polarized discourse of Cold War narratives with competing conceptions of what a just society should entail. Yet, transnational connections and exchanges, especially between Miami and Havana, are a lived reality.

How is this tension being dealt with both within transnational families and within the diaspora in Miami? To what extent do transnational practices and the act of migration transform individual and collective memories, thereby affecting imaginaries about Cuba's past and future? How do intergenerational differences as well as categories such as race, class and gender shape these negotiations?

This paper will present the results of field research conducted with Cuban migrants of different emigration and age generations in Miami, and with their relatives in Havana. It analyzes how collective memories are constituted through diasporic practices, and how they travel and are reshaped in transnational spaces. For instance, Miami is a melting pot for Cubans from different emigrant generations and their descendants. Their memories of Cuba are different and highly contested, thus influencing imaginaries of Cuba's future. They depend on factors such as the reasons for migration, the particular point in time at which they left Cuba, and the transnational exchanges with families in Havana.

In sum, the paper takes a transnational perspective on the nexus of migration, transgenerational processes and memory.

Political Identity of Rural Women in the Panchayath Board: A Sociological Study in the Region of Jammu, Jammu and Kashmir

Even though women make up half of the population in the world, indeed, theirs always been discrimination towards them. Many studies prove this fact. The same is true in the case of India. In the field of education, economic empowerment, etc their percentage is way below the men. Even though many programs were initiated by the government of India to reduce these situations the progress achieved was not up to the mark. Especially when it comes to the political empowerment of women the circumstances are substandard. Jammu and Kashmir is the union territory of India which is known for its fluster as well as for its nature's beauty. This region was run through its own rules for a certain period but, recently after the removal of Article 370, the Government of India is trying to implement the rules and regulations that are applicable in the rest of the states of India.

To bring the developmental fruits to a grassroots level and for decentralization, local governmental bodies such as Panchayath boards at the village level were established through constitutional amendment Acts and are serving the development of the rural areas. This brings in the necessity to study the rural local bodies and the participation of women in the region of Jammu and Kashmir. This paper focuses on the participation of women in the rural local governing bodies present in the region of Jammu. The methodology includes qualitative research methods which include the techniques of Ethnography, Focus Group Discussions, etc.

The Livelihood Patterns of Vadderas of Telangana State with Special Reference to Yadadri District: An Ethnographic Study

From historical times, India has been known for its trade. The fine goods produced on this land were exported to many countries for which the credit goes to the skilled communities who lived here. It was their livelihood and also an indicator of their social identity. Unfortunately, the British invasion ruined it all. Many communities with no other choice left, changed their livelihood and many other communities developed new livelihoods for their sustenance. The spread of education, modernization, and mechanization is once again playing its role in influencing the livelihood patterns of the communities present in the post-modern era. The change in livelihood has its consequences as it can be viewed differently by different social scientists.

Vadderas, a de-notified tribe spread across the Telugu-speaking states were earlier believed to be forest-dwellers and were thrown out of the forests due to the forest laws implemented by the British leading to Vadderas becoming a nomadic tribe. Given their physical structure and strength, they opted for stone-making and soil-digging. They survived for many generations by offering their services to other communities. However, the percentage of people depending on this livelihood has drastically reduced at present. They now depend on different livelihoods such as drivers, plumbers, MGNREGA labourers, etc. Earlier they would use their physical strength and now technological advancement allowed them to adopt modern equipment for their livelihood. They are a downtrodden community and not much research is carried out on them. The authors attempted an ethnographic study on Vadderas and explored their livelihoods. The study was carried out in the Yadadri district of Telangana state, using semi-structured interview schedules, Focused Group Discussions (FGD) and observation. The narratives were collected and examined. Through this paper, the authors suggest focused policy interventions that may lead to better livelihood opportunities for the Vadderas.

 ABDEL JABER, MARAH (UChicago CMES, Palestine)

Imagined Geographies Vs. Real Geographies: The Devolution and Reimagining of the Egypt-Gaza Border in the Face of Catastrophe

The geography of Gaza, long a site of political contestation, has become a focal point of catastrophic destruction following the events of October 7, 2023. Israeli military actions in Gaza, compounded by a history of displacement and border instability, have exacerbated the erasure of both real and imagined geographies. This paper explores the rapid devolution of the Egypt-Gaza border, tracing its historical roots and examining how recent events have intensified the need to reconsider its future. Through an analysis of historical geography, contemporary border politics, and the role of displaced Palestinian communities, this paper argues that imagined geographies play a crucial role in shaping the possibilities for reconstruction and reclamation in Gaza. As Palestinian refugees and displaced populations continue to draw upon memory and historical imagination, they offer new visions of what liberation and return might look like in a landscape ravaged by war. By focusing on the dynamic relationship between rapidly devolving real and imagined geographies, this paper highlights how catastrophe destroys and reshapes borders, raising critical questions about the future of Gaza and its surrounding regions.

Recreating the Homeland: The Dynamics of Diasporic Communities and Cultural Reassembly Abroad

For many immigrants, the migration process is not only a geographical relocation but also a reimagining and recreation of the communities they left behind. Diaspora communities often strive to preserve cultural memory, traditions, and social structures while adapting to new surroundings. This paper explores the phenomenon of diasporic "recreation" through case studies of immigrant enclaves such as Little Egypt in Paterson, New Jersey, and Astoria, New York. These spaces offer a unique lens through which to examine how immigrant communities reassemble fragments of their homeland in foreign urban landscapes. By investigating the dynamics of these recreated geographies, this paper will explore the role of shared memory, cultural practices, and economic networks in sustaining a sense of home abroad. The re-establishment of familiar institutions—mosques, shops, restaurants, and community centers—enables immigrants to navigate their new environment and identity as a diaspora. At the same time, these enclaves serve as contested spaces where issues of assimilation, integration, and transnational identity unfold. This paper will argue that these recreated communities are not static replicas of the homeland but dynamic, hybrid spaces that continuously evolve as they negotiate between preservation and adaptation.

"Why Can't We Just Talk?": Rethinking Child-Centred Methodologies from/with Rejection.

In this paper, I reflect on the challenges (and joys) of engaging in child-centred research in the Global South, while walking the tightrope of adult-created research agendas, funding timelines, and Global North institutional ethics procedures. Following the participatory turn in the social sciences, research with children has adopted arts- and play-based methods, as these tap into children's "natural" ways of communication, mimicking how they interact with each other and with the world. They decrease – if not dismantle – differences in power, engage children who may not prefer verbal communication, and embrace the "messiness" of children's expression. My PhD research with 9-14 year old children in an urban coastal village in Chennai, India, demonstrates that childhoods in the Global South have a spatial materiality distinct from those in the Global North. Children's lived experience is shaped by their intersectional access to space as they combine play, everyday activism, and work.

Games, collaging, draw-and-tell, comic-making, songs, walking interviews... I went into the field with a sack full of methods to explore children's experiences of playing in the city. But what does one do when the children reject all the methods that we, as adults, expect them to respond to, and instead ask to be treated as adults? "Why can't we just talk?" This rejection, despite us having a comfortable rapport built on laughter, trust and friendship, pushed me to think critically about meanings and manifestations of consent, children's "natural" preference for arts- and play-based methods, and reconciling

child-centred research with the adult researcher. Just how far can one go, in going with the flow? In this paper, I consider the ethical and methodological dilemmas which reveal tensions in adult perceptions of play as method versus the reality of how it manifests in children's agency as co-creators of research.

Is Making Really Connecting? Research on Pro-Ams DIY Experience of Making.

This presentation delves into the fascinating interplay between time and sensory experiences in the vibrant world of DIY culture. By focusing on the influence of temporal rhythms and flows on the practices of amateur makers, we aim to uncover the profound impact of everyday temporalities on identity formation and sensory engagement.

Utilizing a range of research methods including participant observation, video and online diaries, and mapping, we delve into the intricate social and material dimensions of making in individual workshops and makerspaces. Our investigation explores the profound relationship between makers, tools, and materials, as well as the rich social connections that are forged through these activities. Inspired by David Gauntlett's *Making is Connecting*, our research reveals how DIYers not only craft objects but also form meaningful bonds with their physical and social environments, finding deep significance in the process.

In an era of accelerated living, our research sheds light on how shifting temporalities impact DIY culture and the knowledge of makers who transition from amateurs to pro-amateurs. By emphasizing the intertwining of everyday creation practices with time and sensory experiences, we unveil their emotional and affective dimensions in the Anthropocene.

This project is a collaboration between the Faculty of Humanities at the AGH University of Science and Technology and the Institute for Urban and Regional Development, and is generously funded by the National Science Center (NCN OPUS 23 2022/45/B/HS2/01554).

Makerspaces As a Care Spaces. Looking for a Self and Community Care through Vernacular Creativity.

Our presentation explores Polish maker spaces as emergent care places and "third spaces," where care, collaboration, and sustainability intersect with urban development. Makerspaces, often community-driven and non-commercial, function as "urban labs"—experimental environments that foster alternative urban futures. These spaces provide physical and social infrastructures that nurture relationships between people, materials, and their environments. Drawing from ongoing anthropological field research, including participant observation and video diaries, we investigate how makerspaces act as socio-material hubs fostering care practices, shaping both individual identities and contributing to broader urban and ecological sustainability.

By situating makerspaces within the discourse on care-based urban governance, we analyze their role in reimagining cities as spaces that prioritize community well-being and collective work. Makerspaces embody "care-full" relationships, where individuals engage in knowledge-sharing, mutual aid, and environmentally conscious tinkering. These third spaces challenge market-driven urban landscapes by exemplifying care as a transformative ethic, offering a collaborative ethos that prioritizes social and ecological well-being.

We examine makerspaces as care infrastructures through two lenses: first, as spaces providing tools and resources that foster social and material connections; second, as sites of care work where individuals come together to build, repair, and innovate with attention to sustainability and community resilience. These urban labs offer alternatives to dominant capitalist economies by fostering care economies rooted in solidarity, shared materials stewardship, and collective support.

This research enriches debates on care in urban studies by highlighting the role of informal care economies and their potential to shape alternative urban futures in the Anthropocene. Makerspaces, as sites of collective reproduction, socio-ecological empathy, and experimental urban labs, challenge traditional urban governance frameworks and position care as central to sustainable and just urban development.

Russia's War Against Ukraine and Polish-Ukrainian Relations: How Outside Aggression Alters Mutual Perceptions

This paper examines the consequences of Russia's war against Ukraine for Polish-Ukrainian relations with particular focus on the impact of frames of war on the Polish perception of Ukrainian national identity. The invasion of Ukraine by Russia has forced millions of people to seek refuge and safety abroad. Of all the world's countries, Poland has hosted the largest number of war refugees from Ukraine (adding to the large Ukrainian diaspora of economic migrants already present), and this historic exodus of people has created long-term and far-reaching social, economic, and policy consequences for the country. Based on analyses of source materials, public polls, and press content, this paper discusses the relations between Poles and Ukrainians in a historical perspective – from the Spring of Nations through the First and Second World Wars and post-war order to the present. Frames forged by the historical memory of the two nations bore drastic differences, which became obscured at the outbreak of the Russo-Ukrainian War by a sense of kinship and shared experience in the face of a common enemy. However, as the war has dragged on, dormant resentments and stereotypes have begun to be revived, hindering the success of policies and measures to integrate refugees into their host communities. This paper will explain how the shifts in public attitudes towards Ukrainians reflect the lingering persistence of pre-existing frames, but also how they affect and are affected by perceptions of the war.

GAILLIOT, ANNETTE* (University of California, Berkeley, USA)

Survey Targeting Using Demographics, Location, and Videos in Facebook

In this article, I explore the possibility of capturing survey respondents through video advertisements on Facebook. I illustrate this potential through data collection on home care workers throughout the United States that captured over 5,000 responses in a three month period. I describe the workflow of creating, targeting, and administering the advertisements on Facebook. In particular, I add to the literature surrounding online/social media advertisements for survey respondents by detailing a new process using demographic and geographic targeting. Additionally, I describe the development of targeted video advertisements in response to an increasingly "short-form" social media landscape and compare the performance of video to still image advertisements. These methods allow me to capture a population of home care workers that is difficult to reach and often not formally employed. While existing data on these workers is limited, I address concerns over biased sampling by comparing our sample to the American Community Survey data on home care workers. I conclude by providing a road map for how researchers can use these methods to capture information on other difficult to target populations.

A Methodological Reflection on Feasibility of Transnational Focus Group Discussions

Conducting focus group discussion research in a cross-cultural, multi-lingual, and multi-country context brings a number of methodological and practical challenges. Each configuration of languages, cultures or countries in international focus group research requires a different approach to fit to the specific circumstances faced by researchers. The presentation reflects upon an attempt to conduct focus group research that could be labelled as "transnational focus group discussions". The HEUREC project aimed to understand how European citizens perceive and debate issues of solidarity, reciprocity, and fairness in the European Union (EU). For that, we employed focus group discussion method. Initially, we conducted separate focus group discussions with citizens in each of nine selected EU member states. However, we further aspired to prompt a transnational dialogue, and invited participants from the project countries to gather together in a face-to-face setting and exchange ideas about solidarity in the EU with their fellow European citizens. We presumed that such a transnational setup will create a semblance of a European debate space. We expected that a communicative cross-country interaction will stimulate fresh insights on how solidarity is negotiated beyond participants' national contexts. The configuration of truly transnational focus groups is not common in social and political science research. The presentation, therefore, makes a valuable contribution to the field sharing reflection on how we implemented transnational focus group discussions; where we succeeded but also failed, and how do we assess the overall potential to employ transnational focus group discussions in the future.

A Mock Focus Group Discussion As a Multi-Purpose Hands-on Classroom Practice

Becoming a qualitative researcher means both acquiring methodological knowledge and learning to navigate the dynamic fieldwork of qualitative research. One needs to be able to make methodology-grounded decisions "on the spot" and balance numerous challenges emerging in the field. Therefore, "learning by doing" has become my preferred approach when teaching qualitative research in social research methodology modules. However, depending on a study field and pre-defined module characteristics I could not always engage students in any extensive practical learning. As a result, I have developed several tasks that can be implemented in the class but at the same time allow experiencing multiple aspects of qualitative research practice in general and a chosen method in particular. The mock focus group task entails all the constitutive elements of preparing and conducting a real-life discussion, from the choice of a topic to an analysis exercise and short reporting. It combines classroom work and independent individual or group work. Students are assigned certain roles (e.g. moderator(s), participants, observer(s), taker(s) of fieldnotes). Each student implements the role and later prepares a methodological reflection on it. An extensive multi-layered reflection session concluding the task provides students with an opportunity to connect their previous knowledge about the method, their experience practicing it, and emerging implications about the reality of qualitative fieldwork. The framework of the task allows for diverse adaptations depending on particular needs. For example, it could mirror an inter-cultural or multi-language qualitative research context. In the presentation, I share the mock focus group discussion task, describing its procedure and reflecting upon its value for the student learning outcomes.

GAJEWSKA ANITA, MAGDALENA* (University of Gdansk, Poland)

Doing Family in Three - Two Partners and an Animal Companion

In the presentation, I will refer to the research results obtained during the 2023/2024 study. This was an interdisciplinary (sociology & psychology) study of couples accompanied by their dogs, during which the whole 'families' took part in the measurements.

The main goal of the project was to identify the types of relationship between a young childless human couple and their dog. The study was carried out mainly as a sociological and psychological project dedicated to measuring interspecies relationships.

Its cognitive tasks was to realise the postulate of studying social reality with including a non-human perspective (sociology with animals). An important aim of the project was to introduce dogs in the research process in order to obtain direct data from them. The realisation of this task required the integration of methods from the field of natural sciences into the social sciences. The team of researchers decided to use measurement of cortisol levels in humans and dogs and ethological observation of the dogs' behaviour during the study. Nineteen couples between the ages of 21 and 46 took part. All couples did not have children. Sociological, in which we investigated with the combined interview method how couples talk about their relationship with their dog. The interview instrument was divided into three main episodes, which were opened with a measurement of cortisol in all study participants. The observation of the dog's behaviour and the couple's behaviour towards the dog in this part was also reflexive and provoked the definition of the role and type of interspecies bond by human and non-human participants. Qualitative sociological interview and ethological observation of the dog's behaviour were the main axis of the research procedure.

RC52-JS-101.4GALANTI, COSTANZA* (University of Padova, Italy)
PIRO, VALERIA (University of Padova, Italy)*Dirty Is Fine, Degrading Is Not: Healthcare Assistants in Long-Term Care Facilities Facing Low Wages and Unsafe Staffing Levels*

In this presentation, we discuss the findings of a research concerning the occupational health of healthcare assistants working in Italian long-term care facilities (hereafter "LTCFs"), conducted within a national project studying occupational health in Italy and adopting an intersectional approach ("InMigrHealth – Investigating Migrants' Occupational Health").

The study draws on five months of fieldwork in the Turin area (Italy; July – December 2024), involving: over thirty semi-structured recorded interviews to healthcare assistants and trade unionists; participant observation as a volunteer in a LTCF; shadowing of an healthcare assistant during her shifts; and observation of two national strike actions related to the renewal of national collective bargaining agreements.

Our findings show, first, that healthcare assistants do not find their work inherently degrading, despite such work involving contact with human waste and making them exposed to verbal and physical violence by patients. Instead, most workers stress how it is low wages and the organization of labor, and particularly its intensity, that makes it degrading. More specifically, they point to staffing shortages and to the regional regulation allocating insufficient care time to each elderly person residing in LTCFs.

Second, our findings show the tension emerging, in this context, from the stratification and hierarchization of healthcare occupations. More specifically, a conflict often emerges between healthcare assistants – charged with the most physically demanding, lowest-paid and least socially recognized job within healthcare occupations – and nurses, whose professional trajectory in the last thirty years involved a progressive shift from physically demanding manual labor to more clinical work. Interestingly, we notice how, in this conflict, healthcare assistants do not attempt to hide the “dirty” aspect of their work to gain social recognition. Rather, they insist on this aspect so as to make it visible and demand their work to be better organized, paid and socially recognized.

GALANTI, COSTANZA* (University of Padova, Italy)

“I Have Been Working Since I Was Six Years Old”: Combining Shadowing with Biographical Interviews to Study Occupational Health

This methodological reflection draws on fieldwork research on the occupational health of healthcare assistants working in long-term care facilities (Turin area, Italy, July–December 2024). In my presentation, I discuss the advantages of combining two qualitative methods – shadowing and biographical interviews – to study occupational health in the highly feminized occupation of healthcare assistants in long-term care.

First, I show how shadowing (spending up to 7 hours a day accompanying workers in their daily routine) allowed me to fully appreciate the mental and physical health and safety risks deriving from the specificity of the work environment and the intensity of the workload of healthcare assistants. This occurred, I argue, because shadowing made me aware of aspects that are usually not talked about in interviews as they are ‘embodied’ and given for granted (e.g. smells, noises) or are purposefully omitted being illegal or morally condemned (e.g.: the full consequences of working understaffed).

Second, I show how, on the other hand, biographical interviews allowed me to appreciate how the social processes that make working-class women suitable candidates for these low-wage, physically and mentally demanding jobs in the care sector, are similar to those making them perform informal or unpaid work throughout their life.

The holistic view on healthcare assistants’ health made possible by this integrated approach can inform evidence-based policy suggestions. In particular, I show how the health of healthcare assistants, mostly women coming from working-class backgrounds and entering the formal labour market later in their life, is negatively impacted by the combined effects of: having to perform an extremely demanding job, made even more intense due to staff shortages; earning low wages that oblige them to work multiple jobs; the high retirement age and a pension system that does not recognize the work they carried out informally throughout their life.

GALDAUSKAITE, DOVILE* (Vilnius University, Lithuania)

Childbearing in the Context of Personal Life Planning and Gender Role Change

This study focuses on the declining fertility rates in developed countries, particularly in Lithuania which outstands because of controversial gender equality trends, and the potential relationship with changing gender roles and personal life choices. While previous research has highlighted gender equality as a determinant of fertility, there is a lack of individual-level research that investigates how fertility intentions are influenced by personal life plans. The study aims to fill this gap by examining childbearing in the context of the changing gender roles and the self-constructed personal life plans by combining the demographical ideas on the links between low fertility and gender role change (McDonald, 2000) and supplementing it by sociological ideas on personal life planning, do-it-yourself biography and self-constructed identity projects (Beck & Beck-Gernsheim, 1995; Beck-Gernsheim, 2002; Giddens, 1992, 1999).

A mixed-methods approach is employed for the analysis of the social meanings attributed to childbearing and personal life planning. It involves thematic analysis of the sociological literature combined with the analysis of the content from thematic groups on the popular social network platform Facebook in Lithuania, as well as a survey of members of these thematic groups by using Google Forms. The survey questionnaire is developed by using the sociological family conceptualization proposed by Levin (1993).

The distinguished typology of the project of the self and the different women's lifestyles is (commitment to the child, self-oriented, oriented towards the internalizing experience, and oriented towards the external environment) reveals how the meanings related with children are integrated into personal life projects. Different projects of the self shape different orientations in life plans, and thus similar childbearing-related lifestyles do not necessarily carry the same meanings. In cases of voluntary childlessness, the meanings attributed to childbearing are related with the destruction of the projects of the self and non-constructive time allocation.

RC41-668.1

GALDAUSKAITE, DOVILE* (Vilnius University, Lithuania)

Links between Gender Role Attitudes and Fertility in the Selected European Countries during 1990-2017

Fundamental fertility changes in developed countries and persistently low fertility rates for the past a couple of decades were increasingly being interpreted using different measures of gender revolution (McDonald 2013; Goldscheider et al. 2015). The focus is on the relationship between different dimensions of the gender revolution and fertility in Lithuania, Sweden, Estonia, Austria, France, and Italy from 1990 to 2017.

Data and methods. The analysis is being done using nine datasets from five international surveys (European Values Study, International Social Survey Programme, Generations and Gender Programme, European Social Survey, and Population and Policy Acceptance Study) representing six European countries – Austria, France, Estonia, Italy, Lithuania and Sweden. Relations between gender role attitudes and fertility is analyzed using index of gender role attitudes, models of gender role attitudes are developed by using cluster analysis and afterwards included in the logistic regression models.

Results. In the long-term perspective, the changing attitudes towards gender roles are not unambiguously related to childbearing. There can be variations not only in the links between fertility and gender equity within different countries, but also differences in the direction of change. On a micro level, childbearing depends more on how the ongoing changes in attitudes towards the gender roles are accepted, rather than on the stages and progress of the gender revolution.

The Theory of the Social Reduction of Contingency As Critical Theory

The theory of the social reduction of contingency is a theory I've been working on for many years. In this theory I integrate aspects of Luhmann's social systems theory, Bourdieu's theory of practice and Latour's actor-network theory, amongst others. From this integration emerges the concept of contingency reductor social operator which allows me to observe the social not as a realm, but as a problem solved by communication, practical dispositions and capacities, and materiality. With this theory I've done empirical research on different topics. Most recently -along with my colleague Rodrigo Gómez- I've done research on climate change. In this research I've seen the need to integrate to the theory aspects of Marxist political economy and of critical theory. This collaboration needs to be deepened to enable the theory of the social reduction of contingency to go beyond the mere description and explanation of phenomena. In this paper I develop this collaboration. The main idea is that a critical theory consists of three moments: the critical one, the empirical one and the “therapeutical” one. The critical moment establishes the normative principles according to which reality is going to be evaluated and the “therapeutical” one consists of proposals to change social reality. However, to be able to connect these two moments critical theory needs to have a strong theoretical paradigm that fosters empirical research. Without empirical research critical theory becomes nothing more than wishful thinking. To change the social world, we need to know how it works and to know how it works we need a robust theory. The theory if the social reduction of contingency seeks to be this theory because it integrates important yields from different theories and therefore observes different aspects of social reality.

GALLEGO MONZÓ, JOAN* (University of Valencia, Spain)

El Problema De Realizar Una Teoría De La Práctica. Reflexiones Con Bourdieu y Adorno.

La sociología siempre ha tratado de explicar la acción de los individuos que viven en sociedad. Una de las enseñanzas fundamentales de la sociología clásica fue para explicar la acción de los individuos debemos recurrir a instancias o estructuras supraindividuales. Algunos teóricos del siglo XX, como el sociólogo francés Pierre Bourdieu y el filósofo y sociólogo alemán Theodor W. Adorno, han reflexionado sobre los problemas epistemológicos y sociales que supone elaborar una teoría de la acción. Pese a sus diferencias, ambos comparten un punto similar: la lógica de la práctica es de naturaleza distinta a la de lógica teórica o conceptual, pero esto no debe llevarnos a afirmar la inefabilidad del mundo de la acción ni a renunciar a cualquier intento teórico de explicarla. La sociología no puede renunciar al trabajo conceptual para inteligibilizar la práctica de los agentes. En esta presentación reflexionaremos sobre este reto que plantea la teoría de la práctica social y analizamos las teorías de la práctica elaboradas por Bourdieu y Adorno. Destacaremos un elemento común: ambos dirigen su atención a cómo lo social o estructural se impone y reproduce en y a través de agenciamientos diversos de los sujetos. No obstante, si bien Bourdieu llega a describir el sentido práctico como un proceso mediante el cual los agentes "hacen de la necesidad virtud", para Adorno, el sujeto que ha atravesado por las demandas sociales es un sujeto dañado.

SOTO CASÁS, PABLO (Universidade de Santiago de Compostela, Spain)

Resituando La Ética Digital Desde Una Perspectiva Crítica Ciberfeminista.

Desde sus inicios, Internet se concibió como un espacio libre de normas sociales. Sin embargo, la interacción entre usuarios provocó su evolución, permitiendo que cada persona encontrara su propio espacio de pertenencia. Las diferencias entre lo online y lo offline son claras, como la efimeridad de las interacciones, la atemporalidad y la ausencia de un espacio físico.

La ciencia social ha adaptado y creado métodos para estudiar Internet (Rogers, 2013). No obstante, al aplicar la ética de investigación, seguimos intentando encajar valores tradicionales en un entorno donde el tiempo y el espacio se construyen de manera diferente, resultando en una ética digitalizada y no digital.

Proponemos, por tanto, una ética de investigación basada en el ciberfeminismo, que sitúa los valores y la cotidianidad de Internet en el centro, utilizando el concepto de "conocimiento situado" (Haraway, 1991). Este modelo ético considera tres variables: nivel de anonimato, nivel de identidad y reflejo del cuerpo digital, y tipología de interacción.

El *nivel de anonimato* indica cuán rastreable es un usuario en la plataforma. Por ejemplo, un foro donde no es necesario registrarse difiere de una red social que exige datos personales. El *nivel de identidad y reflejo del cuerpo digital* aborda cuánto de la persona física se refleja en su uso de Internet, considerando cómo la plataforma facilita o limita la expresión de la identidad. Por último, la *tipología de interacción* se refiere a cómo los usuarios interactúan entre sí dentro de la plataforma.

Un/Masking Vulnerabilities – Centenarians and the Practices of Being "Exceptionally Old"

In many European countries, adults over 100 years old represent the fastest-growing population group. Existing research has explored the lives of centenarians primarily from psychological or public health perspectives, arguing that centenarians are prototypes for healthy, successful, and exceptional ageing. This paper develops a "doing" perspective on centenarianism by exploring the practices through which centenarians,

as subjects of exceptional ageing, are positioned as unique in their local communities. Based on qualitative interviews and participatory research conducted with 25 centenarians in Austria, this paper traces how the boundaries between "normal" and "deviant," "expected" and "exceptional," and "successful" and "unsuccessful" ageing are negotiated and established in the everyday lives of centenarians. The results highlight that practices of exceptional ageing revolve around the careful masking of vulnerabilities that emerge from the embodied experience of ageing. In our material, the 100th birthday is acknowledged as an important temporal marker in later life, establishing ideas about a good, valuable, and long life, while at the same time masking or making invisible the vulnerabilities that accompany ageing. Living a long life is further presented as an individual achievement, rather than a collective accomplishment, as it is often attributed to personal diligence, genetic advantages, and hard work. The paper discusses these results in relation to a late-modern culture of subjectivity, which foregrounds an agentic, self-realized self and tends to make invisible the vulnerabilities that characterize embodied existence. Based on these findings, the paper contributes to recent advancements in the sociology of ageing, challenging the common assumption that vulnerability poses a threat to meaningful and successful ageing. Instead, it highlights the power that lies in acknowledging the (shared) vulnerabilities that characterize life in late-modern societies.

'It's Not Working between Us Anymore...' – Power Imbalances and Legal Ambiguity in Berlin's Subletting Sector

The rental sector in Germany, and Berlin in particular, was until recently considered one of the most robust, secure and affordable in Europe. However, along with the commodification of the local housing market and the decline in social housing provision, rental prices in the city have risen by 142% between 2013 and 2023. In the face of increased competition for rental space, head tenants have emerged in a position of power in their relationship with subtenants. Despite legal instruments such as rent caps, this power unfolds in the informal rules of tenancy that regulate prices, uses and timescales of the relationship, including ad hoc termination as one of the key issues experienced by sub-tenants. In this paper, we examine the facets of these relationships and informal arrangements against the legal ambiguity (and often contradictory effects) of instruments designed to protect tenants. We further examine the potential of social movement proposals to address these issues through initiatives and organisations such as "Anmeldung für Alle" (Registration for all) and "Right to the City". Our analysis is based on research conducted in Berlin between September 2023 and March 2024, including interviews with 7 head tenants and 31 tenants, and a review of legislation regulating the local rental sector.

GALVIS ARIAS, NATALIA* (PGR Global Development Institute, University of Manchester, United Kingdom)

Care Blocks and Violence Against Women: Evidence from Colombia.

This study examines the impact of Care Blocks on the incidence and severity of domestic violence against women (VAW) in Bogotá, Colombia, at the cadastral zone level. Implemented in 2020, Care Blocks represent the first Care System for caregivers in Latin America and the Caribbean, designed to reduce women's unpaid care work. Using natural language processing (NLP), we classified VAW calls by risk level and used a difference-in-differences (DiD) approach with multiple time periods to estimate both the frequency and severity of VAW. Our findings reveal complex dynamics between public service provision and VAW reporting. The aggregate results indicate an increase in VAW calls in the post-implementation period of Care Blocks, with no effect on severity. However, disaggregated analysis shows a significant decrease in domestic violence reports in specific areas surrounding the Chapinero and Suba care block facilities. These results suggest heterogeneous effects of the intervention, highlighting the importance of localized analysis in policy evaluation.

Entre El Cuidado y El Cuidado De Sí: Narrativas Docentes y Trabajo Emocional En La Educación Infantil

La emergencia del cuidado como eje central en las instituciones de educación infantil ha transformado significativamente las prácticas pedagógicas. Sin embargo, estas transformaciones han generado nuevos desafíos y tensiones, particularmente en relación con el trabajo docente. Al enfatizar la importancia de las relaciones afectivas y la atención a las necesidades emocionales de los niños, se ha invisibilizado en gran medida la dimensión del trabajo emocional docente y las condiciones materiales en las que se desarrolla. Además, la implementación del cuidado en las instituciones de educación infantil afirma la necesidad de abordar la cuestión desde una perspectiva de género ya que puede promover discursos que profundicen la feminización de las prácticas de cuidado y la tarea docente.

Este trabajo se desprende de una tesis doctoral en elaboración basada en 28 entrevistas en profundidad a docentes de educación infantil de la Ciudad Autónoma de Buenos Aires. El análisis cualitativo con un enfoque interpretativo busca captar nudos entre la interpretación de las docentes sobre la dimensión afectiva de su práctica educativa y de cuidado y sus propias biografías. Con los aportes del "giro afectivo" interesa especialmente contribuir a la discusión sobre los sentidos que los y las docentes otorgan al cuidado como dimensión afectiva de la educación infantil, entrecruzado con las condiciones materiales del trabajo escolar y la experiencia subjetiva y de trabajo emocional que emerge de sus narrativas.

Algunos hallazgos permiten identificar la sobrecarga laboral, la falta de reconocimiento social y la escasa valoración económica de la tarea docente como problemas estructurales que afectan la calidad de los cuidados y generan un desgaste emocional en los profesionales. Asimismo la pregunta sobre quién cuida a quienes cuidan sobrevuela las narrativas docentes y visibiliza marcas del cuidado sobre el cuerpo y la subjetividad que no suelen ser reconocidas.

The Political Dimension of the Personal: Feminist Mentoring, Biographical Analysis and Teacher Professional Development.

This paper presents the results of a tutoring experience within the framework of a postgraduate course on educational policies and institutions with a gender approach developed by FLACSO Argentina. This virtual postgraduate course is aimed at teachers working in different educational environments, it lasts 10 months and has already been taken by more than 100 participants from Latin American countries. Through a qualitative analysis of the narratives of the participants in the exchange forums and assignments delivered, specific demands for accompaniment by the participants and strategies that seek to overcome experiences installed in the teacher training system in the country, linked to the conception of knowledge and perceptions on the accompaniment of adults in training, are evidenced.

The training does not only provide theoretical readings: the instructions question the biography of the teachers in training. The accompaniment is proposed according to the participants' possibilities, adapting to their schedules and working conditions, and listening attentively to their feelings about the evaluation instances, the learning process, and the collaboration among them. Mentoring thought through feminist lenses entails exchanges that facilitate the identification and socialization of teachers' personal and professional experiences, denaturalizing power relations and promoting the construction of knowledge from a critical and transformative perspective. It is positioned as feminist tutoring given the relationship between the personal and the professional, under the category *the personal is political*, and vice versa.

In an increasingly precarious and neoliberal academic context, feminist tutoring emerges as a space of resistance, care, and accompaniment that seeks to strengthen the participants' confidence in their teachers, in their learning process, and in their professional trajectories and positions. By encouraging self-reflection and professional experiences, feminist mentoring allows teachers to develop strategies to cope with institutional demands and build educational projects that promote equity and justice without accumulating discomfort or workload.

Biographies and Health Development in the Global South between Transnational Aid Artifacts and Local Communities

This work wants to put under investigation the intersection of care and cosmopolitan solidarity within the context of transnational collaborations between international non-governmental organizations (INGOs) and local communities. Grounded in biographical and ethnographic research conducted at the Nyololo Hospital in rural Tanzania, our work explores care as a fundamental dimension of social experience. The study interrogates how care practices emerge within the framework of global solidarity, reconfiguring traditional boundaries between local and external actors. By focusing on the lived experiences of volunteers, the research wants to shed a light on how care fosters new social identities while simultaneously revealing underlying power dynamics. The Nyololo Hospital is framed as a 'solidarity artifact,' representing both the material and symbolic outcomes of transnational engagement. Furthermore, the research critically reflects on the ethical implications of global interventions in local communities, underscoring the necessity of balancing external support with the empowerment of local actors. By scrutinizing the intersection of global care ethics and local realities, this work problematizes the notion that cosmopolitan solidarity can seamlessly promote socially sustainable development or mitigate structural inequalities. Instead, it highlights the tensions and challenges inherent in balancing global interventions with local empowerment, raising critical questions about the potential for such initiatives to address deep-rooted social disparities effectively.

GAMUZZA, AUGUSTO* (University of Catania, Italy)

Transnational Care and Cosmopolitan Solidarity: Looking for a Nexus of Global Engagement and Local Impact

Our work explores the concept of cosmopolitan solidarity (Fine 2018) as a form of care (Jenkins 2018), focusing on a case study conducted in Tanzania in 2024. Established through the collaboration of an international non-governmental organization (iNGO) and local actors, the Nyololo Hospital, located in a poor rural area of the country, serves as a tangible artifact of transnational solidarity providing concrete services for health in the region. It exemplifies a relational approach to care that transcends national borders, offering insights into the material and social outcomes of global solidarity. Drawing on biographical interviews of volunteers and ethnographic materials, the study investigates how solidarity, framed as an ethical principle, reconfigures traditional distinctions between insiders and outsiders within a given community. From a sociological perspective, the study explores how these initiatives shape new social and professional identities, as global volunteers and local communities collaborate across cultural and social divides. These interactions foster a shared sense of purpose but also bring to light underlying power dynamics. The hospital as a solidarity artifact becomes a site where global ideals intersect with local realities, presenting opportunities for social change while also raising challenges related to external interventions. Our research findings suggest that while development projects aim to reduce inequalities, they must carefully navigate the balance between global interventions and local community empowerment. Furthermore, the research unveils the complexities of these interactions, highlighting how global solidarity efforts must be sensitive to the specific social, cultural, and political contexts in which they operate. Scrutinizing the intersection of global care ethics and local realities, this research offers critical insights into the role of cosmopolitan care in promoting socially sustainable development.

How Caste Reproduces Class: Intersecting Educational Inequalities in India through Bourdieu's Theory

This paper critically examines the intersection of class and caste inequalities and its dynamics within the Indian educational system through the lens of Pierre Bourdieu's theory of social reproduction. In India, caste and class hierarchies are deeply intertwined, and students from lower castes who are frequently aligned with lower socioeconomic strata face structural and symbolic barriers to educational mobility. Bourdieu's key concepts, such as habitus, cultural capital, and field, are deployed to elucidate how these marginalized students are systematically disadvantaged within an educational field that privileges the cultural capital of dominant privileged-caste and upper-class groups. The reproduction of social hierarchies occurs as lower-caste students' habitus shaped by material deprivation and social

exclusion mismatches the dominant educational norms, leading to symbolic violence wherein their underachievement is naturalized and legitimized. This study is part of a broader Ph.D. thesis that examines schools and educational institutions across India as sites of social reproduction. Using qualitative methods, the research focuses on how lower-caste students experience educational mobility within a system that reinforces both class and caste inequality. Educational institutions, functioning as sites of social reproduction, contribute to the perpetuation of both class and caste inequality by reinforcing the preexisting social order. This process results in a restricted acquisition of cultural and social capital for lower-caste students, further consolidating their subaltern status in the labor market. The paper contends that Bourdieu's theoretical framework, particularly his analysis of the subtle mechanisms of power and domination through symbolic violence, is indispensable for understanding the persistence of caste and class inequalities in Indian society. Bourdieu's concepts provide a sociological lens to examine how the educational system, as a field of social reproduction, covertly reinforces existing hierarchies by privileging the cultural capital of dominant caste and class groups.

GANDA, ABHAS KUMAR* (University of Hyderabad, India, India)

Reproducing Inequality, Intersecting Hierarchies: Caste, Class, and Educational Reproduction in India and Germany

This paper tries to explore comparative sociological analysis of caste and class inequalities within the educational systems of India and Germany, guided by Pierre Bourdieu's theory of social reproduction. The central objective is to examine how education functions as a site for the reproduction of social hierarchies in each context, through mechanisms that reflect the respective social structures of caste in India and class in Germany. However, in India it can further be understood that the caste also reproduces the class. Drawing on conflict theory and critical theories of education, the study seeks to explore how the educational field functions as an instrument of social control, reproducing dominant power relations through the distribution of cultural capital, and legitimating existing inequalities through symbolic violence.

This is a part of the doctoral thesis that employed a mixed-methods design integrating qualitative interviews with marginalized caste and class students in India and used content analysis for Germany to capture subjective experiences of educational inequality.

The study demonstrates that in India, the intersection of caste and class produces a dual system of stratification, echoing Durkheim's theory of social division, whereby lower-caste students' habitus conflicts with the dominant cultural capital valorized within the educational field. The resulting symbolic violence, as conceptualized by Bourdieu, leads to the naturalization of their failure within the system, reinforcing caste-based social stratification. In Germany, the early tracking system reflects Weber's theory of life chances, where class-based inequalities are institutionalized through educational differentiation in education, privileging middle and upper class habitus. This reproduces class stratification through meritocratic discourses that obscure structural inequalities, reflecting Marxist critiques of ideological state apparatuses. This comparative analysis highlights the role of education as a mechanism of social reproduction, aligning with intersectionality and stratification, and emphasizes the need to challenge policies that perpetuate these inequalities in both contexts.

GANDLER, STEFAN* (Universidad Autónoma de Querétaro, Mexico)

Fetichismo, Cosificación y Alienación: Interpretaciones Del Pensamiento De Marx Desde La Teoría Crítica

A contracorriente de la moda anti-teórica en las ciencias sociales, así como a contracorriente de la supuesta tendencia en el ámbito partidista hace el 'centro'-que sólo son dos expresiones de la misma pereza mental, llamada ostentosamente 'fin de los grandes relatos'- queremos retomar aquí uno de los grandes temas de los debates del siglo XX, que es la lectura crítica, no dogmática del gigante decimonónico de la crítica a la actual forma económica y social. Uno de los puntos centrales de su obra magna *El Capital* es su crítica a la actual irracionalidad, no solamente en términos económicos, sino también en términos intrasubjetivos. Las paralelas que podemos ver en los conceptos Marxianos de *fetichismo*, *cosificación* y *aparición objetiva* con la crítica Freudiana a la supuesta *racionalidad omnipotente* de nuestra actual subjetividad es uno de los puntos claves, por qué el posterior *marxismo occidental* sobre todo la Teoría Crítica, pudieron confrontar de manera tan productiva a tales pensadores y sus aportaciones centrales.

La actual crítica a las ingenuidades de la teoría y realidad moderna se subordinó de tal manera al actual dogma anti-marxista que la nueva teoría crítica que tímidamente se formula en el incipiente siglo XXI en relación a la existente irracionalidad *dentro* de la sociedad altamente racionalizada, cortando una de sus raíces más fuertes y más nutridas, ya no se atreve a releer con la debida calma y libertad a los escritos de Karl Marx. A pesar de las consecuencias que ello pueda tener para el futuro profesional de cada uno, y a pesar de las omnipresentes suspicacias de *muy probablemente* ser apologistas del viejo dogmatismo tipo soviético, no está demás tomarnos la *libertad* de releer *aún en el siglo XXI* a uno de los autores centrales que han hecho posible la mayor parte del debate socio teórico.

GANDLER, STEFAN* (Universidad Autónoma de Querétaro, Mexico)

New Contributions to a Critical Theory from the Americas

The bulk of contemporary philosophical and sociological activity is based on the assumption that only thought born at the epicenter of military, economic and political power have "universal" significance. As such, many investigations into Latin America, for instance, consider its various countries and peoples as *objects* (as opposed to *subjects*) of scientific reflection. In order to overcome the intrinsic "philosophical Eurocentrism" that one inherits as a native of the so-called First World, I have carefully analyzed the works of Bolívar Echeverría, professor of philosophy at the Universidad Nacional Autónoma de México (UNAM). Echeverría's work in shaping the concepts of cultural *mestizaje* and *baroque ethos* has contributed significantly to understanding the myriad ways in which the capitalist modernity is manifests today.

Cultural *mestizaje* [*mestizaje cultural*] refers to the melding of Spanish/ European traditions with pre-Hispanic traditions – a process that has been particularly important to Mexican culture. However, it must be noted, in light of the experiences of other former colonies, that such an evolution is highly unusual. For example, until perhaps recently, the cultural *mestizaje* phenomenon in the United States was negligible at best, despite the coexistence and overlapping of distinct cultures. In its place existed (and arguably *still* exists) a deep and historic division of peoples – "races" – based on skin color. Notwithstanding, the U.S. is still considered one of the most progressive countries (progressive in the sense of Progress) in the world, whereas countries like Mexico are often regarded as "underdeveloped" or "developing" – a term that, once referred to a country's industrial evolution but has more recently come to be associated with the social structure and "everyday-life" culture.

GANGAS, SPYROS* (DEREE-The American College of Greece, Greece)

Caught in the Pincers of Value-Incommensurability and Moral Fundamentalism: A Durkheimian Rejoinder

Émile Durkheim -the foremost classical sociologist with a systematic focus on morality as a binding feature of societies- was also skeptical of its overuse. He cautioned against an excess of morality from which the first casualty is morality itself. In classical sociological theory, his work is the one that problematizes the role of collective values in society and how these are diffused under conditions of advanced division of labor. While analogous concerns can be reconstructed in the work of Marx (reading, as it were, his materialism as a value-project), Weber's value-perspectivism salvages values only in the domain of the ethics of personal integrity. His value-polytheism retains its contemporary appeal in guises that invoke the incessant 'social construction' of identities. A pluriverse of perspectives is posited as unconditional, while at the same time each plural voice is confiscating the validity of (its own) values by reducing 'irritability' from adverse standpoints in line with Parsons' deflationary appeal to value absolutism. Durkheim's moral sociology has experienced in recent years a moderate revival: initially rehabilitated as a reliable interlocutor within Critical Theory's emancipatory project (Habermas), Durkheimian axiology and its imprint on institutional arrangements (held to be transcendently valid), animates in part Axel Honneth's program of 'freedom's right' and Frederick Neuhouser's elective affinities across theories on social pathology. In this paper, I argue that social pathology can be discerned today as a value-problem where the value-constitution of reality takes an entrenched polarization between value incommensurability and value fundamentalism. The explanatory and practical stalemate goes beyond appeals to negative solidarity (Beck) or even to a persistent affirmation of human rights discourses, themselves subject to mediations by neo-liberal values. Rather, this impasse raises a pressing question for sociologists, which can be gleaned from Luhmann: what are the social mechanisms behind the amoral coordination of morally inflated standpoints?

RC35-580.5

GANGAS, SPYROS* (DEREE-The American College of Greece, Greece)

Žižek's Critical Theory of Society without Sociology

In this paper I argue that Žižek's critical confrontation with contemporary cultural shifts, institutional logics and ideological conflicts lacks a theory of society. Žižek circumvents the problem of 'the constitution of society' (Giddens) by recourse to the antinomies that ensue from a parallax-based epistemology: Drawing on Adorno's critique of sociology's description of society he presents the social as a parallax effect antinomy (i.e. society as an organic whole vs. society as a contractual arrangement among atomized individuals). Yet, the problem of society's transcendental conditions/imperatives haunts his project, despite masterful elisions (i.e. the idea that the parallax view of society, i.e. the antagonism between 'agency' and 'structure', is the form of the *thing-in-itself*). As I argue, the systemic levels of Žižek's engagement with the Social are glossed over by his grand Lacanian gesture that thematizes 'lack' and, consequently, repeals the sociality of the Social (condensed as the Big Other, but also reemerging as the inaccessible Reality of the Real). At the same time, Žižek regrets the Social's confiscation by dubious representations of it in various moral and identity fundamentalisms and their flipside: namely, eruptions of id-Evil into the social fabric. This view of society emerges as a result of Žižek's apophatic bracketing of sociology: for him the Social is scrutinized by recourse to German idealism and Marx's materialism, Lacan, theology, cinema, refracted also in his political interventions which figure as counter-intuitive instantiations of immanent critique. Notwithstanding Žižek's brilliant insights into facets of injustice in what is a mix of radical reversals, often tinged with a latent sobriety, the Social is ultimately explained away in terms of a social ontology, despite Žižek's radically materialist critique of it; it mainly reappears as a residual form in Žižek's critical problematization of how society thematizes its own self-description to conceal the epistemological 'gap'.

GANTZIAS, GEORGE* (Hellenic Open University, Greece)

Cultural Policy, Artificial Intelligence, Public Interest and Global Regulation: A New Order in Socio-Technic Globalization

In a few years' time, artificial intelligence (AI) has challenged irrevocably the decision-making process in cultural systems, socio-technic mechanisms and governance at global level. Artificial intelligence and robots exert strong pressure on traditional socio-technic systems, cultural policy and humans decision-making process. In order to cope with the artificial intelligence is important to protect public interest and cultural rights, all countries should collaborate to develop regulatory mechanisms to control automatic decision-making algorithms in democracy. For this purpose, the use of artificial intelligence system and algorithms, together with the protection of public interest, human decision-making and cultural rights may prove extremely valuable. At the end of 2022 the form of generative AI is a reality. Generative AI refers to programs that can, as the name suggests, generate text, images, music, and more. Nowadays all countries around the world faces the necessity of achieving democratic changes by developing new legislation regarding artificial intelligence and automated decision-making process. This paper will be based on public interest theories, regulation mechanisms and of socio-technic AI as well as socio-technic applications of AI technologies. An overview of cultural policies, regulation theories and actions on AI will also be presented. Particular attention will be paid to national and EU AI regulations mechanisms. Cultural strategies provide an excellent starting point for insights on the interplay between AI and cultural systems, and offer details on specific objectives and planned activities to move the needle on AI culture development and implementation. Finally, it analyzes the model business intelligence culture (BIC) and collective will democracy (CWD) as methodological tools to introduce a cultural policy mechanism and a regulation system to protect human rights, cultural products and public interest at global and local levels.

GANTZIAS, GEORGE* (Hellenic Open University, Greece)

Society By Humans Not By Robots: Robot Control, Human Resistance

Artificial intelligence and robots together with fake news have challenged irrevocably our society at global and local level. Global freedom declined for the 18th consecutive year in 2023. The breadth and depth of the deterioration were extensive. Political rights and civil liberties were diminished in 52 countries, while only 21 countries made improvements. In 2024, our social systems will need to develop a new socio-technic paradigm (i.e., the human intelligence culture [HIC]) in order to understand that human resources, public interest and regulation of artificial intelligence are the main issues in digital transformation. Recently, a new social order and digital systems had

been exposed to AI developments in our democratic systems. At the same time, digitization in cultural and social systems has meant that nation-states have become more socially plural and multicultural. These developments have provoked counterpressure's for governments to maintain or restore national social order in globalization. Within this context, we can identify the contrasting principles between the global versus local interests and between social rights, democratic citizenship, human's rights and automatic decision-making systems. This chapter examines and analyses artificial intelligence, robots, and human decision-making process together with the role of public interest and regulation in artificial intelligence and robots. It considers critical questions regarding global regulation, social standards and public interest. It examines the need for regulation in digital society. Finally, it outlines the model's human intelligence culture (HIC) and "Product and Process Regulation" (2PR) as methodological tools to analyze human and social rights in the digital transformation era.

Multidimensional Pension Inequalities in Urban China

Rapid aging and urbanization processes have led to a significant increase in the elderly population in urban China. Along with these processes and China's socioeconomic development, the Chinese state has implemented dramatic reforms of the pension system. As a result, pension has become the key source to affect well-being and social inequality of elder people. But there has been insufficient research on pension inequality in urban China.

Utilizing the nationally representative survey data based on the 2018 China Health and Retirement Longitudinal Study (CHARLS), we investigate multidimensional pension inequalities among urban retirees, in terms of pension coverage, pension schemes, and pension income. We examine how socioeconomic status indicators (e.g., education, urban household registration (*hukou*)), the state forces and factors (e.g., employment in the state sector, Communist Party membership as the political capital), and the market forces (e.g., the level of marketization) can affect multidimensional pension inequalities.

Our findings demonstrate that these different sets of factors all affect multidimensional pension inequalities among Chinese urban retirees. Specifically, a higher level of education, urban *hukou*, public sector employment, and Communist Party membership benefit individuals with a greater pension coverage, better schemes, and a higher income. Furthermore, the social-status gradient of pension is more pronounced in higher-tier pension schemes (i.e., the government and institutional pension and the Enterprise Employee Basic Pension) than the urban-rural resident social pension. Finally, provincial-level marketization interacts with individuals' socioeconomic statuses and state factors to affect pension income. In particular, marketization acts as an equalizing force by increasing pension income among individuals with a disadvantageous status or position in education, household registration, employment organization, and party affiliation. These findings deepen our understanding of well-being and pension inequalities of elderly people and also enrich the research on the broad patterns of social inequalities in urban China.

GARB, MAJA* (Faculty of Social Sciences, University of Ljubljana, Slovenia)

Food in the Military: Experiences of Slovenian Soldiers on Deployments Abroad

Since "an army marches on its stomach" (Napoleon), it is no surprise that food receives a great deal of attention in the military, with meals being the most important events of the day, to which operational work is also subordinated. Military dining facilities (can) have a special significance as well. However, despite such impressions, military nutrition in the armed forces is far from a well-regulated area, and soldiers naturally have their own tastes and often complain about the food. Nutrition is an especially difficult challenge in multinational environments during missions abroad. In the research on the Slovenian Armed Forces in peace operations, which my colleagues and I conducted from 2003 to 2008, we also touched upon this area. We found that there were generally no complaints about the quantity of food, but dissatisfaction arose among soldiers due to the monotony of the same type of food, mismatches in the tastes of different national cuisines, different national policies regarding alcohol consumption with meals, poor food preparation, etc. The in-theatre activities present an additional challenge, as operational ration packs are used. Although these packs contain enough food (a one-day supply in a meal-ready-to-eat packet), soldiers quickly grow tired of such meals, especially if logistics does not provide a variety of packs.

GARBE, SEBASTIAN* (University of Applied Sciences Fulda, Germany)

How Forests Protest – Posthumanist Social Movement Action within Forest Occupations in Germany's Climate Justice Movement

Taking Eduardo Kohn's challenging investigation on 'how forests think' as a point of departure, this contribution seeks to present and analyse how social movement actors give meaning to and conceptualise their protest action as part of complex human/non-human relationships within forest occupations in Germany.

Forest occupations have been a central strategy within Germany's climate justice movement, dating back to protests against deforestation for the expansion of the Frankfurt airport in the late 1980s. In recent years, the number and locations of forest occupations have increased significantly, successfully highlighting the ecologically disastrous consequences of expanding motorways, coal mines, and gravel pits in Germany. In these contexts, climate justice movement actors not only create protest communities within the occupations (the so-called *barrios*) but also form intimate relationships with their non-human surroundings.

This contribution seeks to put the concepts, meanings, and practices that these actors develop in relation to the forest in dialogue with posthumanist and social movement theory. It draws on ethnographic material from an ongoing participatory action research project within forest occupations in Germany. For example, when building treehouses, squatters avoid harming the forest, using only deadwood and ropes (instead of nails or screws) as construction material. In making sense of their actions, they frequently challenge anthropocentric understandings of human/nature divisions and claim to be part of 'nature defending itself'. By presenting these and other examples, this presentation will suggest that forest occupations represent an expression of posthumanist social movement action, where forests protest 'through us' against their destruction.

GARBE, SEBASTIAN* (University of Applied Sciences Fulda, Germany)

GERHARZ, EVA* (Fulda University of Applied Sciences, Germany)

'Defenders of Nature' – a Comparative Study on Indigenous Women's Struggle for Ecological Justice in Mexico and Colombia

The current climate crisis not only poses a risk to the planet's livelihood, but also threatens those particularly committed to environmental protection and ecological justice. For example, the latest Global Witness report reveals that 177 murders of environmental activists were committed worldwide in 2022. These murders occurred exclusively in the Global South, primarily in Latin America, South and Southeast Asia, with 36% of the victims being members of Indigenous groups and nations. Although 'only' 11% of the victims were women, they are doubly at risk due to their commitment to ecological justice and their gender.

This presentation project aims to discuss cases of 'defenders of nature' – Indigenous, Black, and peasant women environmental activists – in Latin America, who face racialised, colonial, and gender-specific persecution and violence through a comparative study in Mexico and Colombia. Building on critical globalisation, development, and global inequality studies, we will present a specific case study in each country, where infrastructural, development, and neoextractivist projects appropriate territories of Indigenous, Black, and peasant communities. To address the gendered, colonial, and racialised dimensions of these processes of dispossession and 'green colonialism', we will draw on decolonial and feminist theory from Latin America, developed in conversation with Indigenous cosmology. Particularly, the *cuerpo-territorio* approach of Indigenous Guatemalan feminist Lorena Cabnal allows us to describe how colonisation and ongoing dispossession negatively impact both the territories and the bodies of Indigenous women.

The comparative dimension of this presentation aims to foster a deeper understanding of the similarities in dispossession processes in the region and to highlight the protagonism of subalternised populations and communities – specifically Indigenous, Black, and peasant women – in the struggle for climate and ecological justice.

GARCÉS, GABRIELA* (Universidad de la Frontera, Chile)

Narrative Biographical Research with Mapuche Youth: Intercultural Ethics and Decoloniality of Being.

This work examines the ethical considerations of researching with young mapuche individuals regarding the processes of ethnic-cultural identity formation—Oneself (Ricoeur, 2006)—through a biographical narrative approach. It is situated within the socio-political and territorial context of Araucanía, the ancestral territory of the Mapuche people in Chile. The aim is to contribute to a situated research praxis that fosters decoloniality. To achieve this, I adopt the paradigm of intercultural ethics (Salas-Astraín, 2006; Fuica-García, 2020) and applied ethics in the context of biographical research (Kazmierska, 2018). This relational praxis is framed within historical processes of colonialism and coloniality (Maldonado-Torres, 2007; Mignolo, 2003; Quijano, 1997). It is essential to approach this work with "the critical consciousness of who we are and the place we occupy within the colonial chain" (Rivera-Cusicanqui, 2008, p. 169), recognizing the power structures we embody from our various positions. As discussed in this paper, we must strive for a chain of recognition where encounters with others are guided by an ethics of donation, human generosity, and responsibility (Maldonado-Torres, 2007). Throughout the research and co-construction of biographies, ethical dilemmas arise concerning: 1) The historical, sociocultural, and socio-spatial context of participants' lives and the research institution; 2) The intercultural interactions between researcher and participant; and 3) The exploration of young Mapuche individuals' identity as part of their life cycle and selfhood formation. In conclusion, this process activates potentialities of agency and contributes to understanding, knowledge, and social transformation at the three specified levels.

Lucha Social, Resistencia y Praxis Comunicativa De La Juventud En El Marco Del Paro Nacional De 2021 En Colombia

La ponencia presentará los resultados de la investigación correspondiente a la tesis doctoral en comunicación que aborda la praxis comunicativa ejercida por los sectores movilizadores, particularmente jóvenes proletarios precarizados, en tres puntos de resistencia en Bogotá/Colombia durante el Paro Nacional vivido el 28 de abril de 2021.

El Paro duró aproximadamente dos meses, y logró parar y/o restringir las actividades productivas, comerciales y laborales de un porcentaje importante de trabajadores ya fuera por su vinculación al paro o, como sucedió en la gran mayoría de los casos, por los bloqueos de carreteras nacionales que afectaron el comercio y la falta de suministro de materiales; tal situación generó un escenario de disputa con características suígeneris para el proceso de transformación política que vive actualmente Colombia.

En tal contexto de movilización, los y las jóvenes bajo diversos medios/artefactos/prácticas, pretendieron rebatir lecturas de la realidad posicionadas en los *mass media*, evidenciando las contradicciones de los repertorios instalados por las elites, y denunciando ante la esfera pública condiciones materiales de vida cada vez más precarias. Su praxis fue absolutamente rica, diversa, pero por sobre todo efectiva, al poner en marcha prácticas político comunicativas que buscaron no solo manifestar la inconformidad, sino entrar a disputar la construcción de sentido hegemónica sobre la democracia, lo público y la nación.

Effervescence in a University Classroom: Ethnography, Survey and Heart Rate Variability

This presentation will show the results of a study conducted in two classrooms (experimental and control) at a university in Mexico City. The students in both groups attended a Sociology course with the same teacher at the same time, and it was their first university course in Sociology.

The primary goal of this study is to observe the formation of solidarity relationships among new students. As Vincent Tinto states (1993), intellectual and social memberships are crucial for college students' continued educational trajectories. Tinto uses Durkheim's notion of rituals to argue that social communities 'influence the willingness of students to stay in college.'

Utilizing these insights, we combined a fresh interpretation of Durkheim's rituals (by E. Goffman and R. Collins) with cutting-edge social neuroscience and psychological physiology research on interactional synchronization (García-Andrade 2023, 2024) to craft an experimental design. We aimed to understand if and how a sense of membership and an emotional community were fostered in two groups of students attending the same university course in the same trimester.

The objective of the presentation is to show the theoretical background of the study, the operationalization of the concept of effervescence (the fundamental element of successful rituals) using three techniques, and some results obtained in an experiment conducted from June to September 2024 in Universidad Autónoma Metropolitana, Unidad Azcapotzalco.

We will show if recreational activities during the class promote effervescence in the experimental group. We are also interested in the conditions that favor or prevent the formation of a sense of membership or being part of the group. In the long run, the study will follow the students' trajectories, relations with other group members, and insertion into university life.

Generating Disinformation for Which Reasons? Political, Economic, and Social Consequences in the New Public Sphere

Disinformation and polarization are interconnected phenomena that feed into each other. On one hand, one of the most serious social effects of disinformation is that it becomes a catalyst for political and affective polarization among citizens. On the other hand, public sphere actors positioned at more extreme viewpoints resort to polarizing content because it is divisive and helps them attract citizens. These trends are further amplified by social media, which create echo chambers that give visibility to the most polarizing discourses. While political actors and the academic sphere have been analyzing the causes and political consequences of disinformation for years, it remains to be seen whether ordinary citizens perceive this phenomenon in the same way. To address this question, a survey was conducted among a representative sample of the population aged 15 and over residing in Andalusia (the most populous region of Spain, with 8.6 million inhabitants). The sample size was 1,550 people, of which 1,200 responses were collected online and 300 via telephone from those aged 60 and over, to avoid selection bias due to the digital divide among older populations. The margin of error was 2.5% with a confidence level of 95.5%. The population was asked about the main reasons for spreading disinformation, with the option to select up to three from the five offered: political motives (chosen by 86.2%), economic benefit (57.7%), to create social tension (40.4%), to gain notoriety and fame on social networks (34%), and for fun (2.6%). While results show there is broad consensus in public opinion that political and economic motives are the main reasons, a contingency table analysis with significance tests shows interesting differences based on age, educational level, interest in politics, voting behaviour, perceived social division, ideology, trust in the media, and trust in social networks.

Wanted to but Did Not: The Diverse Faces of Involuntary Childlessness in a Low Fertility Country

Involuntarily childless women (ICW) are a growing group in societies with low fertility, making it important to understand their characteristics and life paths to inform public policies. In Spain, 15% of women born between 1962 and 1973 are ICW. Using retrospective longitudinal data from the 2018 Spanish Fertility Survey, we apply Multichannel Sequence Analysis to identify different "types" of ICW and explore how their shares change across birth cohorts. We find four distinct clusters, proving the existence of diverse pathways to involuntary childlessness. Cluster 1, labeled "Family", consists mainly of ICW who never worked, finished their education early, left the parental home early, and lived with a partner throughout most of their reproductive lives. These women fit the "family-oriented" type described by Hakim, often living in traditional male-breadwinner households. Cluster 2, the "Adaptive" type, includes ICW who entered the workforce and completed their education early but never achieved job stability. They left the parental home and started living with a partner later than the "family-oriented" women, reflecting Hakim's "adaptive women". Cluster 3, "Career," contains ICW who studied longer, achieved job stability (often before age 30), and left the parental home later than those in the other groups. Fewer women in this cluster lived with a partner during their reproductive years. Cluster 4, called "Stayers," consists of ICW who stayed in their parental homes for very long, not living with a partner for most of their reproductive lives. Our results show that the proportion of "family-oriented" ICW is shrinking, while the share of "career-oriented" ICW is growing across cohorts.

What Stays, What Changes: Family and Fertility Among Immigrant Descendants

Immigrant descendants shape their family life and fertility by drawing from two cultures: their parents' country of origin and the society where they were raised. While demographers have studied the fertility of immigrant descendants, focusing on "how many" children they have and "when" they have them, little is known about "why" they hold specific intentions and behaviors and "how" these develop. Against this backdrop, our study aims to deepen understanding of immigrant descendants' family life and fertility by addressing two interrelated questions: 1) Why do immigrant descendants adopt certain family and fertility patterns from their "origin" society and others from their "destination" society? and 2) How do different socialization agents influence immigrant descendants' family and fertility behaviors?

To answer these questions, we conducted 16 in-depth interviews with descendants of immigrants from the Maghreb and Latin America living in Spain who at the moment of the interview were young adults. Spain's context is of special interest due to its persistently low and late fertility regime. Topics discussed included their parents' family culture, ideal family structure, number of children, age at parenthood, cultural identity, life goals, and relationships with socialization agents.

Key findings are: 1) The family and fertility behaviors of immigrant descendants must be understood within the broader context of their cultural and identity formation. 2) Socialization agents influence individuals toward either the parents' origin culture or the destination culture, or a combination of both. For instance, parents may encourage their children to retain some cultural traits while adopting new ones. 3) The social context in which immigrant descendants are raised plays a critical role. Specifically, the presence of an immigrant community from the same country or region as the parents provides additional exposure to their culture beyond the family setting.

Post-Capitalism: Reducing Climate Change While Increasing the Quality of Life

We discussed post-capitalism as a state to globally reduce climate change and increase the quality of life. In postcapitalism the world's system is no longer capitalism. We present different perspectives of authors to understand postcapitalism as an alternative to capitalism. According to some classical Marxists and evolutionary theorists, post-capitalism can emerge as a result of capitalism becomes obsolete. Other authors propose strategies to intentionally substitute capitalism, like socialism, anarchism, and degrowth. In the 1990's, Drucker described the possible evolution of capitalist society in his book *Post-Capitalist Society*. Drucker claimed that knowledge, rather than capital, land, or labor, will be the source of wealth. In a post-capitalist society classes are expected to be separated into knowledge workers or service workers. Drucker also supported rethinking the concept of intellectual property by creating a system of universal licenses in which knowledge will be accessible to all. In the 2010's Mason indicated that income inequality, periodic boom-and-bust cycles and capitalism's contributions to climate change have led to seriously consider what a post-capitalist society would be and function. Post-capitalism is expected to be possible by the new advances in automation and information technology, both of which are transforming production costs towards zero. Srnicek and Williams stated that capitalism crisis has been characterized by the inability to employ all members of society. They argued that there is a growing population who are outside the formal, waged work, living on the informal subsistence or by illegal means. In their book *Inventing the Future: Postcapitalism and a World Without Work*, they demand Universal Basic Income as a policy of dignity. These post-capitalist perspectives contribute to understand and overcome weaknesses of capitalism including climate change. Also, increasing the quality of life of people who actively oppose climate change and precarious jobs in this capitalist world system.

Universal Basic Income Projects: A Social Policy to Address the Employment Automation Process

The benefits and challenges of 15 Universal Basic Income (UBI) and Basic Income (IB) projects implemented in the world will be presented. The UBI is defined as a universal income or stipend that is received unconditionally by every population in a country or state, regardless of their ethnicity, gender, socioeconomic status, age or other conditions. The IB is an income or stipend that is conditionally received by a group of people in a state or country. The problem, objectives, justification, theoretical framework and design of the research on UBI projects will be presented. The research problem is contextualized by integrating authors who predict that between 2020 and 2030, 47% of jobs could disappear in the United States given the ongoing automation process. This situation makes imminent the creation of decent life policies such as the UBI. The objectives of this research are: 1) To analyze 15 UBI or IB projects implemented in different continents. 2) Identify the benefits of these projects. The methodology consisted of a documentary analysis. We collected research published between 2010 and 2024 in academic databases. Also state reports published in governmental and organizational webpages. The inclusion criteria were: 1) UBI or IB projects implemented in the past 15 years, and 2) UBI or IB programs implemented at least one year in each continent. One of the relevant results is that most of the projects analyzed are IB with particular political purposes. Most of these projects function as a supplementary social subsidy ('social welfare'). Some of the benefits are: 1) improving health, 2) increasing schooling, and 3) reducing the poverty rate. In conclusion, most of the projects analyzed are aimed at addressing short-term social welfare political agendas. Contrary to the UBI described as an equitable and social justice policy that unconditionally benefits all populations.

GARCÍA-VELÁZQUEZ, LUIS MIGUEL* (Universidad Nacional Autónoma de México, Mexico)

Marcos De Práctica Docente Frente a La Dislocación De Afecto y Cognición En La Enseñanza De Las Matemáticas

Las creencias personales y las emociones que se experimentan en la actividad matemática delimitan las actitudes hacia ella (Gómez-Chacón, 2000); Goldin (2007) agrega los valores a este entramado, conceptualizando las estructuras afectivas en matemáticas. Estas redes complejas inciden en la construcción de una identidad matemática, que afecta el autoconcepto, el desempeño, la intensidad, el compromiso, la vulnerabilidad y los valores epistémicos en relación con las matemáticas.

Al estudiar la actividad matemática dentro de las aulas es inapropiado considerar afecto y cognición como dimensiones separadas (Chamberlin, 2019). El desarrollo de estructuras afectivas en estudiantes está inmerso en las interacciones con docentes, en quienes influye un sistema de creencias sobre su rol y su eficiencia profesional, las motivaciones y las capacidades del estudiantado, la evaluación y los modelos de aprendizaje.

La enseñanza de las matemáticas en México se ha centrado históricamente en promover razonamiento lógico y destrezas técnicas, lo que motiva prácticas docentes que relegan a la dimensión afectiva a un lugar secundario, subordinado o contraproducente. En el marco del Proyecto Nacional de Investigación e Incidencia en la Enseñanza de las Matemáticas se realizaron intervenciones con docentes que desplegaron su sistemas de creencias frente a propuestas didácticas orientadas a las estructuras afectivas; en este trabajo se caracterizan perfiles, a partir de observaciones y entrevistas, que inciden en la posibilidad de adoptar estas estrategias didácticas enfocadas a la dimensión afectiva entramada con la cognitiva.

GARDEI, ESTHER* (University of Bonn, Germany)

Politization through Pioneers? the Historization of the German-Language Weekly 'orient' (1942-1943) in Israel and in the GDR

The German-language magazine *Orient* was published in Palestine/Israel between 1942 and 1943.[1] The *Orient* was a magazine by German exiles, who fled Germany in 1933. The first issue stated that the magazine was in favor of democratic principles and freedom of expression. Despite the seemingly uncritical nature, the first magazine already provoked a vehement reaction in the form of violent attacks on the staff - not only because of the German language, but also because of this political agenda. The editors initially decided to continue publishing. Ten months later, however, the *Orient* gave up - after a bomb attack on its printing house on Tuesday 2 February 1943 by revisionist Zionists.

The *Orient* shows how Israeli historical and sociological scholarship on primary sources relies heavily on the analysis of the pioneers that distort our perspectives on the past: As a sociologist, I will show how the history of the *Orient* and the source itself has been interpreted, politicized and possibly instrumentalized in several ways - not only in Israel, but also in the GDR, where some of the *Orient's* contributors, such as Arnold Zweig and Louis Fünberg, moved after the end of the Second World War. In the second, I will prove my point by presenting my findings on the "political program" of the *Orient*: The staff called for values such as tolerance of ambivalence and democracy for Palestine/Israel and published "post-Zionist" voices calling for a secular state of "Israel".

[1] My paper will give an insight into the results of my dissertation, which was submitted in August 2024.

WG11-946.5

GARDEI, ESTHER* (University of Bonn, Germany)

The Influence of Violence on 'liberal Traditions' in Israel/ Palestine: The Case of the 'orient' (1942-1943)

How does violence influence liberal thinking in Israel and the commitment to liberal values? How can liberals defend their values, when they are under existential threat? I will discuss these questions with reference to my empirical case study on the German-language magazine *Orient* that was published in Palestine/Israel between 1942 and 1943.[1] The first issue of the magazine stated that it was in favor of democratic values, like freedom of speech. Despite the seemingly uncritical nature of these aims, the first magazines already provoked a vehement reaction in the form of violent attacks on the staff - not only because of the German language, but also because of its political agenda: the *Orient* advocated liberal values, i.e. 'minority protection' and 'ambiguity tolerance'. From the opponents' perspective, the existence of the Jewish people in the 1940s was only secured by stressing the unity of the Jewish people as a first step towards a Jewish State. Critics of the *Orient* viewed the magazine as an anti-Semitic undertaking that could jeopardize the project of the future state through internal criticism. Despite violent attacks on staff members, the editors initially decided to continue publishing. Ten months later, however, the *Orient* gave up - after a bomb attack on its printing house by revisionist Zionists. The *Orient* is a significant example that shows how violent attacks threaten liberal positions in Israel. I will therefore not only share my analysis on the different reactions within the *Orient*-network to the violent attacks but argue that the case can help to understand current debates about Israel's security and democracy.

[1] My paper will give an insight into the results of my dissertation, which was submitted in August 2024.

African American Women and Violence in the United States

The Beijing Declaration and Platform for Action highlight violence against women as a critical area of concern. Since 1995, feminist sociologists have made strides in researching subgroups of women and their differential risk for violence, as well as noting the types of violence that they experience, be it at the hands of intimate partners, their families, strangers, or the state, and the lack of an effective response by legislators, legal institutions, and service providers. This presentation will cover my research on violence experienced by African American women in the United States in an effort to inform research and policy in the MENA region.

GARFIELD, GAIL* (John Jay College of Criminal Justice/CUNY, USA)

The Unseen Architects: Black Women and the Building of American Democracy

The Unseen Architects is part of a larger book project that explores Black women's paradoxical relationship with American democracy. Their experiences reveal the contradictions and conflicts inherent in the enormous political tension between the ideological framework upon which American democracy was founded, and the norms and practices carried out within the institutional structures of the democratic state. This historical tension between democratic ideals and established institutional praxis forces Black women to confront the racialized gender challenges encountered in their contradictory relationship with American democracy. Ironically, it is precisely this tension that shape their political contributions to strengthening American democracy, particular during transgressive and transformative moments in its political history. From the shadows of history's margins, they offer counternarratives that reframe dominant systems of knowledge, experience, and sociopolitical discourse. This paper retraces some of those critical historical moments in American history as a foundation for understanding the current turbulent political trends occurring in American democracy today. The focus is on the pivotal role Black women play during those moments in their attempts to advance racial, gender and social justice through their distinct political discourse of fundamental fairness, in the furtherance of protecting and advancing progressive changes in the body politics of American democracy. Where their political intellect, activism and unwavering commitment to the moral principles of fair-play aid in strengthening the body politics of democracy. Especially, during those periods that threatens the viability of the democratic state. In ways that severely compromises fundamental democratic principles and legal norms, while reversing political advancements undermining the very legitimacy of

the democratic state itself. Even though Black women efforts are largely unacknowledged or their importance erased altogether, their architectural influence in strengthening the body politics of American democracy is one of the essential political components that contributes to sustaining the future of American democracy.

Guidance Policies Reform in Italy and Users with Migratory Background: Teacher and PES Centres' Operators As Street - Level Bureaucrats

As part of the Recovery Plan guidance policies have become one of the main tools to follow the objective of "making European economies and societies more sustainable, resilient and better prepared for the challenges and opportunities of the ecological and digital transitions".

For Italy, indications on guidance reform have been provided for education and active labour policies: however, the policy implementation chain produced general governmental guidelines at local government that street-level bureaucrats have taken on definitive - or renewed one - relevance in policy making.

Both the policy implementation literature and the literature on street-level bureaucracies or street-level organizations have already convincingly argued that policy implementation is part of the policymaking process (Hupe, Buffat 2015) and that SLBs themselves are policy makers (Lipsky 2010).

The subject of this study is therefore the agency of frontline workers - Teachers and PES Centres' operators - to guide users with migratory background: students to post school transition and unemployed to workfare path.

Moreover, the frontline workers also under our spotlight need to use platforms for the users' assessment to standardize practices and procedures for the provision of public services (Busch *et al.* 2018).

To analyse the actual use of the standardised assessment tool by new civil servants to guidance, we conducted ethnographic observations in three PES Centres and in three schools in the Campania Region during the winter, spring and summer of 2024[1].

If equal access to public services is a foundational element of democratic societies (Bell & Jilke 2024), by exploring how SLBs interact with platforms and users, we conclude that SLBs exercise discretion through various strategies even just to allow equity both access and treatment otherwise denied by conditions of limbo due to bureaucratic and administrative systems.

Market Ideologies for Agroecology and the Promise of Socio-Economic Resilience: The Case of Argentina

Agroecology in Argentina has evolved through social movements that challenge the agribusiness model and Green Revolution technologies from the 1990s. It has been promoted as a means to achieve food sovereignty, environmental sustainability, and human health, and has garnered support through collaborations among diverse actors, leading to its integration into policy, education, and research sectors. Notable advances include the establishment of social welfare programs and networks that facilitate the exchange of knowledge while promoting its practices. While these developments have opened up the development of agroecology in the country, they have primarily focused on technical assistance, contributing to progress in areas like agronomic practices, and policy and expert discussions

However, despite the existence of alternative markets for agroecological products, the market dimension of agroecology still remains underexplored. Although they show potential to shift towards sustainable food systems, questions about their organization remain outstanding - particularly on marketing strategies and quality assurance.

Therefore we ask *how does agroecology become a recognized value through the networks that promote it within market channels?*

We conducted qualitative research in Argentina, collecting data from social and market initiatives claiming 'agroecological', to examining their quality assurance systems and market governance. We then compared their claims with three agroecological frameworks – FAO 10 Elements, HLPE 13 Principles, and Nyéléni 11 Pillars – to unveil the market ideology for agroecology in the Argentinean context.

After understanding how agroecological principles and elements differ in their approach to market development and outcomes, we open up discussion on what organizational mechanisms and institutions are necessary to further legitimize agroecology, how initiatives can move beyond technical assistance to build resilient markets, and how markets can ensure credibility and evolve into mainstream platforms.

Mother Nature: Spirituality and Gender Essentialism in Australian Natural Childbirth Communities

Since the turn of the twenty first century there has been increasing interest in spirituality as it relates to health, wellness and wellbeing. Spirituality has traditionally been understood in maternity care as relating primarily to organised religious practice; however, there are a plethora of emerging forms of spiritual discourse that emphasise a strong connection between natural childbirth and the perception of an intrinsic link between birthing women and the natural world. For some women, particularly those interested in new age and/or neopagan spirituality, childbirth may evoke a deep metaphorical sense of being at one with the cyclical nature of seasonal change and the earth's fertility. Here there is resonance with Bron Taylor's (2010) idea of 'dark green religion' in which nature is sacralised and interconnected. This perspective can offer profound insights and engender feelings of belonging and interconnectedness, and biopsychosocial wellbeing. However, it also invokes ideals of gender essentialism that exclude gender diverse birthing people, and often fathers - thus potentially reinforcing traditional gender roles. This presentation seeks to examine and problematise these aspects of new age spiritual birthing by examining the sparse existent literature on this topic and arguing a need for additional research into this emergent form of lived religion.

GARROD, JAYNE* (Deakin University, Australia)

The Lived Experiences of Neurodivergent Birthing People in Australia: A Qualitative, Reflexive Analysis

The experience of childbirth and parenting is both transformative and steeped in uncertainty. Disabled birth parents often experience additional barriers to able-bodied people in terms of achieving a positive birth experience. Redshaw et al. (2013) note that women with disabilities often experience multiple oppressions and forms of discrimination restricting their ability to achieve full societal participation. Despite growing societal awareness of neurodivergence as a neurological difference to be viewed through the lens of human rights and identity rather than a pathological defect, prevailing academic, medical and popular conceptions remain contested. Moreover, scholarly literature on neurodivergent mothers and birthing people remains scant. What exists reveals that autistic mothers in particular experience more difficulties in terms of verbal communication and sensory sensitivities in healthcare settings, engendering significant anxiety and trauma.

My qualitative PhD research focuses on the childbirth and parenting experiences of 15 birth parents identifying as neurodivergent (ADHD and Autistic). Utilising a neuroaffirming lens, it aims to better understand their experiences and amplify their voices. Importantly, I examine the issue methodologically from my insider positionality as a late-diagnosed neurodivergent mother. Invoking the Critical Disability and Mad Studies movements, 'a politics of neurological diversity recognises power inequalities between people differently situated in relation to neurology, comparable with social stratifications such as class, gender, and ethnicity' (Rosqvist et al., 2020).

Epistemological Discrimination and the Marginalization of Indigenous Knowledge and Feminism: A Critical Analysis

This paper explores the intricate link between epistemological discrimination and the exclusion of indigenous knowledge systems (IKS) and feminist perspectives within mainstream Western epistemology. Drawing from the works of scholars like Foucault, Alcoff, Potter, and Harding, the

paper argues that Western epistemology has historically positioned itself as the universal standard, leading to the marginalization and devaluation of alternative knowledge systems, particularly those rooted in indigenous and feminist traditions. The discussion focuses on how this epistemological hegemony perpetuates power imbalances, silences diverse voices, and impedes the recognition of women's knowledge, especially in rural contexts where indigenous practices are vital for sustainable livelihoods. By incorporating African feminism and ecofeminism, the paper addresses the challenges faced by rural women in the global South, emphasizing the need for an epistemological shift that acknowledges and validates multiple ways of knowing. The paper also critiques the limitations of Western feminist epistemology, arguing for a more inclusive approach that considers the intersection of race, class, and gender in knowledge production. Through this analysis, the paper calls for the mainstreaming of subjugated knowledges to create a more equitable and comprehensive epistemological framework that supports the liberation of marginalized communities.

RC29-465.1

GARUTSA, TENDAYI* (North West University, South Africa)

Theorizing Gender-Based Violence in the South African Context: African Feminisms

South African has recorded some of the heightened incidences of gender-based violence owing to high rates of poverty, systematic and structural inequalities, socio-cultural norms and values. The South African Police Service statistics show that, every three hours, a woman is killed. There has been a significant upward trend in violence against women making it to be otherwise referred to as a "Shadow Pandemic". Using a qualitative desktop study, this chapter aims to discuss and apply the basic tenets of the African feminisms framework to theorize gender-based violence within the South African context. Findings were analyzed through content analysis and data was grouped and presented in themes. From this study, findings show that the politics of masculinity in patriarchal systems legitimizes violence towards women. It reflects the system's weakness of failing to control the masculine hegemonic status held by many men within African contexts. African Feminisms does not only focus on challenging male dominance and female subordination but also challenges the status quo of contemporary patriarchy which constrains women from realizing their potential beyond their traditional roles as mothers and wives. This in turn challenges conservative gender norms that condone some behaviors which increases the levels of violence. This chapter recommends that Gender Based violence in the South African context should be analyzed through African epistemologies derived from the African Feminisms that critique Western feminisms for its dominant episteme position. This can be achieved by re-imagining and addressing norms and cultures that challenge gendered power dynamics and inequalities in various institutions that can exacerbate Gender based violence.

GASTAL DE CASTRO, FERNANDO* (Universidade Federal do Rio de Janeiro, Brazil)

Notas Sobre a Valorização Do Valor a Partir Da Periferia Do Capitalismo: Estudos Sobre a Dialética Modernizante Brasileira

Como conceber a complexidade da valorização do valor no âmbito do capitalismo periférico brasileiro? As raízes históricas do sistema do capital brasileiro e sua dialética modernizante encontra-se no mundo colonizado pelas necessidades de expansão do capital mercantil europeu, capaz de produzir uma consciência reificada por forças exógenas e uma síntese social operada não pelo trabalho livre, mas pelo trabalho escravizado. Logo se vê particularidades da valorização do valor caracterizada pela *condição periférica* que estrutura a realidade social-material brasileira a partir da *forma mercadoria periférica que we produzna* junção contraditória entre a modernização de forças produtivas externas a partir da revolução industrial do centro do sistema do capital e das forças produtivas internas coloniais. Correlativamente, a consciência reificada que se produz no Brasil, têm suas origens tanto no tripé latifúndio-escravidão-monocultura exportadora, nas exigências eurocêntricas da *Ilustração* bem como na cultura barroca, conforme a define Bolívar Echeverría. Por fim, o trabalho livre como síntese social entre a consciência reificada e o ser da mercadoria periférica tem suas origens no trabalho escravo que opera por quase quatro séculos a síntese social entre os povos afrodescendentes escravizados, a população de homens e mulheres livres e os grandes proprietários rurais. Neste quadro, a reificação da consciência periférica está fundada no arbítrio da consciência escravista, revestida pelo progressismo iluminista e pela forma mercadoria constituída pela estática do latifúndio agroexportador e pelas ambiguidades da modernidade barroca. Sustentamos nesse sentido, que a particularidade da dialética do valor que se totaliza ao longo do processo histórico brasileiro é dada pela *normalidade* do trabalho livre realizado com

práticas escravistas, a *institucionalidade* do Estado de direito como outra face do Estado de exceção e a *modernização* das forças produtivas realizando-se pela conservação das forças protocapitalistas baseadas no favor, no arbítrio, bem como no rigor do *ethos* realista misturado às ambiguidades da modernização barroca.

GASTEYER, STEPHEN* (Michigan State University, USA)

Dystopia or Survival: Settler Colonial Expansion, Dispossession, and Resistance By Native Americans and Palestinians

The driver of the global changes that have led to the Anthropocene can be at least in part attributed to what Bacon (2016) referred to as the eco-social violence of settler colonialism – the transformation of landscape and biodiversity to favor settler and colonial expansion in place of indigenous peoples. This paper argues that critical venues for investigating the roots, consequences, and challenges of environmental injustice are at the spaces of modern settler colonial expansion into the frontier – where private actors, aligned with nation-states, implement land grabs for territorial acquisition and resource extraction. Building on the literatures of settler colonialism (Wolfe 2006; 2011), frontier capitalism (Patel and Moore 2018), and the theory of transitional justice (Ribot and Peluso 2003), this paper uses two cases to demonstrate how settler colonial networks of aligned private interests with the protection of the state move into frontier territories: attempts to establish new mining activity in the Menominee Nation of the Upper Peninsula of Michigan; and colonization and expulsion of Palestinian communities in the Jordan Valley in the Occupied Palestinian Territory. Both cases demonstrate the role of assemblages of non-state and state actors and technologies in facilitating land grabs and exploitation through legal and narrative devices. Further, they demonstrate the role of such activities in creating dystopian futures of profound dispossession for some and enrichment of others. Both also demonstrate the role of movements of local and international solidarity that are mobilized to resist expansion into the frontier. While these cases remain unsettled, the context of stage of colonization, and existing legal constraints may well condition outcomes. These observations from these cases are used to offer new theoretical insights.

GATER, RICHARD* (Cardiff University, United Kingdom)

Future of Work Forecasts and the Employment Orientation of Contemporary Marginalised Working-Class Young Men

Advances in automation and new technologies are forecast to produce future employment changes, including a decline in routine manual jobs while increasing levels of jobs requiring stereotypical female traits, such as empathy and communication. This employment shift may negatively affect marginalised working-class young men who have historically been associated with manual job orientations and a rejection of feminine-associated work due to the inheritance and influence of a masculine identity. However, there is a lack of contemporary understanding regarding the employment aspirations of marginalised working-class young men.

Addressing the lack of contemporary knowledge regarding marginalised working-class young men and employment, this presentation explores the employment orientations of a group of marginalised working-class young men from the South Wales Valleys, UK, in the context of predicted future employment changes. The presentation draws on qualitative research that was undertaken collaboratively with a youth centre and included an ethnographic study of nine young men aged 12–21, alongside interviews with youth workers and a schoolteacher.

This presentation documents continuity and change concerning the common understanding of marginalised working-class young men's employment orientation. Continuity includes a protest masculine-related rejection of some service sector work and some attraction to manual employment influenced by cultural and structural factors. Change is observed through attraction to non-manual work that develops from what is referred to as a rupturing process or pivotal social influences that destabilise working-class masculine modes of being. The concept of a rupturing process provides valuable insights, suggesting that targeted interventions replicating this process could broaden the employment prospects of marginalised young men, better prepare them for future employment changes and enhance their prospects for securing decent work.

Uncertainty and the Pace of Refugee Integration

Refugee socioeconomic integration may follow different pathways and happen at varying paces. Utilizing data from the 2022 and 2023 waves of the IAB-BiB/FReDA-BAMF-SOEP panel survey as well as administrative data, this paper investigates the impact of uncertainty in settlement intentions of Ukrainian refugees in Germany on their speed of language and labor market integration. Due to the restrictions on emigration for men of military age, the group of refugees consists mainly of women, for whom the incidence of uncertainty is higher. Based on the assumptions of Goal-Setting and Rational Choice theories as well as the Immigrant Human Capital Investment model, we utilize survival analysis techniques and disentangle the effect of settlement intentions on the timing of German language course enrollment and transition to first employment among individuals with permanent settlement, uncertain, or short-term stay intentions. Our findings reveal that refugees with intentions to permanently settle in Germany enroll in language courses more quickly than those with uncertain intentions, while the latter do so more quickly than those planning to leave Germany after a short stay. A nuanced analysis of transitions to employment among these three groups of refugees suggests that individuals with permanent settlement intentions transition to their first jobs in the host country quicker than those with uncertain or short-term stay intentions. These findings suggest that uncertainty in settlement intentions may be detrimental to the speed of integration.

Challenges and Opportunities of Biographical Creative Workshops: Migration and Memory Research in the Mediterranean and the USA

Creative methods in the social sciences have challenged the traditional dichotomy between body and mind and the epistemological supremacy of verbal and textual elements, fostering various forms of 'extra-discursive turns.' The fields of migration and memory studies have similarly benefited from this methodological innovation, as creative methods uncover aspects of participants' experiences that might otherwise remain unarticulated. These recent creative research practices facilitate more nuanced and diverse forms of remembering, potentially revealing unexpected details of individual and collective experiences and generating unique memory assemblages.

However, the effect of creative methods is not merely to provide more effective, and ethically controversial, ways to 'extract' knowledge from participants. They can also facilitate a more radical restructuring of the research encounter, fostering reciprocity between participants and researchers, especially when both parties actively engage in the creative activities and share their biographical memories.

Based on the outcomes of two research projects on narratives, experiences, and memories of migrants and refugees in the Mediterranean and the United States (Horizon2020 ITHACA and Horizon-MSCA2021 MEMODIAS), in which both biographical interviews and creative biographical workshops have been adopted and intertwined, this paper proposes a reflection on some challenges and opportunities presented by creative biographical research:

- making silence materially and emotionally present even if not verbalized;
- managing the temporality of biographical accounts and creative activities in a way that allows us to welcome and hold together the various fragments of a biography, without forcing it into the linearity of a verbal narrative path;
- exploring the ethical and methodological complexity of the research encounter, taking into account the reflexivity of both participants and researchers;
- demanding responsibility for the social life of the artifacts after the research.

Transgenerational Diasporic Memories and Mnemonic Solidarity: The Case of the Afghan and Somali Diasporas in the USA and Italy

This paper is part of a broader research project exploring how Afghan and Somali diasporas in the USA and Italy shape their transnational cultural memories and how these communities interact with each other in sharing memory practices (Project Horizon-MSCA 2021 MEMODIAS).

Afghanistan and Somalia, both known for political violence, ethnicization of conflict, and state collapse, have seen significant migration to Europe and the US over the past three decades. Currently, Afghanistan faces a theocratic regime and instability, while Somalia shows signs of stabilization. How do these new situations influence their diasporas' memory practices concerning conflict, exile, and return? And how do different generations experience it?

The project is inspired by new trends in post-national, global memories, such as "cosmopolitan", "multidirectional", "travelling", "prosthetic", and "transnational" forms of memory. It emphasizes practices that build a shared communicative space to articulate the effects of the past in the present, aiming to create something valuable for the future (Inglis, 2016; Lim and Rosenhaft, 2021).

Drawing on biographical interviews and creative workshops conducted in the US and Italy, this paper explores how generational differences and interactions in the transnational and diasporic spaces of each community affect the possibility or impossibility of inter-diasporic forms of solidarity through memory.

Specific attention will be paid to:

- the reception context's role in shaping memory and transgenerational and inter-diasporic forms of knowledge sharing;
- how different sociability regimes affect interactions within and among diasporas;
- how social, economic, and legal constraints of the receiving context help the ones who arrived as children/youth, with blurred memories of the civil wars, understand their parents' struggles;
- how nostalgia intertwines with their sense of responsibility due to their new status as adults in the reception country;
- how return and ties with those left behind are shaped by different generational expectations.

Is 'Islamism' a Form of Conspiracy Theory? Mainstream Islamophobia in French Politics

Recent studies have explored the link between Islamophobia and conspiracy theories and focused on the word "Islamism", which is used to indicate the alleged ideological and electoral proximity between Muslims and the Left. This paper builds on Zia-Ebrahimi's argument (2023) that Islamism is based on conspiratorial thinking and linked to the "conspiratorial racialization" of Muslims. It argues that Islamism is an embryonic conspiracy theory that should be taken as seriously as other conspiracy theories against religious minorities (e.g. Judeo-Bolshevism), since it delegitimizes left-wing groups and academics working on Islamophobia as intellectual accomplices of political violence committed in the name of Islam. Conceptually, the paper contributes to ongoing debates on Islamophobia and conspiracy theories by unpacking which elements of conspiracy theories are present or absent in the discourse on Islamism. Empirically, it selects France as case study and carries out research on how Islamism has been used in the National Assembly (French lower house) and on X (formerly Twitter). The findings show that Islamism is a word employed not only by far-right parties, but also by mainstream Right and Left ones. The paper identifies four main targets of the putative Islamist conspiracy: institutions; gender relations; universities; Jewish people. The paper firstly discusses the contested origins of Islamism. Secondly, it reviews the literature on conspiracy theories and Islamophobia. After presenting its methodology and findings, the paper unpacks the essential elements of conspiracy theories present in Islamism. Finally, it concludes that Islamism is an embryonic conspiracy theory that should not be underestimated because of its potential discriminatory effects and its generalizability to other countries where Muslims are securitized.

At the Crossroads between Violence and Migration: Migrant Women's Grassroots Struggles Against Intersectional Violence in Spain

This paper addresses the intersectional violence faced by migrant women in Spain, emphasizing the complexity of their experiences beyond a traditional conception of gender-based violence (GBV). It highlights the limited scope of existing research on violence against migrant women, calling for an intersectional lens that considers how race, class, sexuality, and other axes of oppression intersect with gender and their impact in women's lives throughout the migration process. Using Spain as a case study, it explores the role of institutional barriers in exacerbating these insecurities and examines how migrant women resist violence through activism and political participation. The Spanish context, marked by progressive gender policies influenced by feminist mobilizations, serves as a critical backdrop to assess whether these advancements effectively protect migrant and racialized women. Ultimately, the paper highlights the importance of intersectional approaches in addressing GBV and showcases migrant women's agency in fighting against violence.

RC05-79.9

GAUDIOSO GAUDIOSO, DESIRÈ* (Scuola Normale Superiore, Italy)

At the Intersection between Gender-Based Violence and Migration: Migrant Women Resistance Against Institutional Violence(s) in Spain

While violence is a common thread in most migration journeys, research shows that women are disproportionately affected by the intersection of migration, violence, and insecurity. Much of the existing literature has focused on the violence experienced by women in their countries of origin—often in the context of war or political upheaval—and during the multiple border crossings they endure. Less attention has been paid to the various forms of violence that manifest once these women reach Europe.

This paper uses Spain as a case study to explore how institutional barriers exacerbate insecurities for migrant women and examines the ways in which they resist these forms of violence through activism and political participation.

I start the discussion highlighting how Spain's migration and asylum systems fail to adequately address the specific vulnerabilities of migrant women, underlining the insufficient employment of gender-sensitive tools in reception and asylum processes, as well as the lack of an intersectional approach in policies addressing migrant women needs.

In parallel, the paper assesses the limitations of Spanish policies targeting GBV. While acknowledging some improvements, I emphasize that migrant women's experiences and vulnerabilities remain underrepresented in Spanish law and policy. The intersection between gender-based violence and migration issues results in a form of intersectional discrimination that involves the persistent invisibility of migrant women's needs, their limited access to justice, protection and inclusion.

In response, the paper focuses on the activism of migrant and racialized women in Spain, analyzing how they confront violence and challenge the state's failure to provide them adequate support and protection.

Exploring Gender Dynamics in Indian Esports: A Sociological Study of Battlegrounds Mobile India (BGMI) and Women's Participation

This sociological study investigates the gender dynamics within the burgeoning esports industry in India, with a particular focus on Battlegrounds Mobile India (BGMI), a leading battle royale game. As esports continues to gain popularity, understanding the role of gender within this digital arena becomes crucial. This research employs a doctrinal methodology, analysing secondary data from academic literature, industry reports, and media sources to provide a nuanced understanding of the challenges and opportunities women face in the Indian esports landscape.

The study reveals that despite the growing interest in esports, women encounter significant barriers to participation. These include gender-based discrimination, limited access to resources, and entrenched societal stereotypes that question women's capabilities in competitive gaming. Such obstacles not only limit women's involvement but also perpetuate a male-dominated gaming culture. However, the research also highlights positive developments, such as initiatives aimed at promoting female participation and the rise of successful female gamers and influencers who challenge traditional gender norms.

By examining these dynamics, the study sheds light on the complex interplay between gender and digital culture in India. It underscores the importance of fostering an inclusive environment that supports and encourages female gamers. The findings suggest that while progress is being made, there is a need for concerted efforts from industry stakeholders, policymakers, and the gaming community to address gender disparities and create a more equitable esports ecosystem.

This study contributes to the broader discourse on gender equality in digital spaces and offers policy recommendations to enhance female participation in Indian esports. The implications of these findings underscore the need for continued efforts to bridge the gender gap and promote inclusivity in the rapidly evolving world of esports.

From 'Child' to 'Cadet': A Case Study of Sainik Schools System in India.

A school education is a primary way through which an individual gets socialized either through peers, teachers and curriculum. Indian Educational System involves various types of school but one of important are the residential schools which roots in colonialism. British started Rashtriya Indian Military College in 1922 as military training school for Indian boys. It was a Pre-Sandhurst institution to train selected boys along the lines of British Public School before joining pre-commission training. Later this became a feeder institution for officers in Armed forces. Along these lines in 1961, Sainik Schools, a premier military boarding schools, were started by then Defence Minister with objectives to remove regional imbalance in officers cadre and to bring public education to common masses. Funded by Ministry of Defence it is considered as feeder institution for officers in Indian forces.

This research paper first traces the history of military educational training and its roots in Indian Colonial history and how it shaped the initial level educational training for the cadets in military boarding schools. It further explore the evolution of Sainik School Systems in India and its schooling process which transforms the child into 'cadets' through its curriculum. This research intends to look at the construction of social identity through the mechanism of discipline to pursue the goal of defence officer in these school. Through Goffman's *'Total Institution'* and developing over Susie Scott 'Reinvented identities' this paper aims to look at the identity construction of cadets in these schools to homogenised identity of 'Sainik'. This paper also compare Sainik School in India to the military culture in past in other parts of world like in Turkey, Taiwan, Britain etc. Overall this paper attempts to critically analyse the transformational journey of children through military training even if they are selected into defences forces or not.

GAUTAM, PRERNA* (Tata Institute of Social Sciences, Mumbai, India)

Navigating Conflict Zones: Lessons from Fieldwork on Institutional Childcare amid Structural Violence in Kashmir

This paper presents a critical reflection on the lessons gleaned from fieldwork conducted during research on institutional childcare in Indian-administered Kashmir. Based on a phenomenological study carried out in the conflict-affected districts of Srinagar and Kupwara, the research focuses on the lived experiences of young adults orphaned by the ongoing armed conflict and raised in institutional care, as well as the perspectives of child care institution staff and government officials. The study offers a nuanced exploration of the complexities involved in conducting research in regions marked by structural violence and political instability.

The first section examines strategies for navigating the unique challenges posed by conducting fieldwork in politically volatile settings, emphasizing the ethical and methodological dilemmas inherent in such research. The paper addresses the importance of developing a localized ethical framework that acknowledges the region's historical, socio-political, and cultural intricacies, especially given the outsider-insider conundrum faced by the researcher, who is external to the region. This positionality not only shapes access to participants but also impacts the interpretation of data in conflict zones.

The second part of the paper delves into methodological insights, particularly the significance of employing snowball sampling in conflict settings, where trust and safety are critical concerns. In this context, the paper elaborates on how informal networks can be leveraged to facilitate participant recruitment and ensure data reliability. Finally, the paper discusses techniques for building rapport and establishing trust with participants in highly sensitive and traumatized environments, emphasizing the importance of cultural sensitivity and empathy. The reflection on these fieldwork experiences contributes to broader discussions on conducting ethically sound and methodologically robust research in conflict-affected regions.

GAUTAM GEDAM, SWAPNIL* (Indian Institute of Technology Bombay, India)

The Sonic Body Politics: Dalit Musicking and Aesthetics

Music is central to the cultural force; thus, it plays a distinctive role in organizing social, economic, and political spaces. For Dalits in India, the 'practice of caste' embodied in the Dalit body as a source of ritual dirt disavows their musical art from attaining cultural recognition and respect. Hence, their music is ascribed as vulgar, noisy, and chaotic (*Gondhal*). Against this backdrop, this paper investigates Dalit musical art in the form of 'Bhimgeet' (songs on Ambedkar, an anti-caste leader) and its relationship with sonic spatiality in the urban slums of Mumbai. Drawing on ethnographic fieldwork, I show how sound in the form of noise emanates from the spatial and social enacts on the body, thus shaping corporeality and aesthetics in producing sounds and, hence, music. Focusing on the body concerning sound, I argue that Dalit musicians place the 'gut' at the center of their musical expressions that acquire a discursive meaning in the sonic resistance to subvert the Hindu caste religiosity and aesthetics. In this effort, the sonic body is theorized from the operative framework of marginality to define its aesthetic value.

Re-Assembling the "Working Class" Concept in Russian Social Science: Historical Memory and Contemporary Insights

The research is aimed at studying the origin, formation, decline, and re-assembling of the "working class" as a synthetic scientific-ideological concept. The objectives of the study are to substantiate the necessity of actualizing the class approach in the study of modern Russian social structure through the scrutinizing of historical narratives. It has been shown that today there remains a gap between Russian and western tradition in the study of social inequality and class interactions. In accordance with Marxist ideology, in Soviet sociology a working class was regarded as a protagonist of social change, and the "proletarian truth" of Marxism was contraposed to "bourgeois" stratification theories. Meanwhile, in western tradition, "classes" were historically a part of the stratification discourse in its various conceptual variants (K. Marx, M. Weber, T. Parsons). In post-Soviet Russia, there was a total rejection of Marxist terms, including working-class discourse, in a dominating sociology, and social differentiation has been described in terms of structural functionalism since the 1990s. Whereas in western research fields, different conceptual frames of class studies co-existed and developed in discussion and dialogue up to the late 1980s-1990s, when the crisis of class approach happened under the influence of neoliberal politics and postmodern theory. In today's mainstream Russian sociology, there is still misusing of terms ("middle class" is used in the sense of a stratum, "working class" is usually replaced by euphemisms like "basic layer," etc.). We argue that there is a necessity to re-assemble the working-class concept under the conditions of a post-industrial society. We define the "new working class" as a group of employees engaged in all areas of material production and service sphere, whose work is routine, divided into standardized segments, amenable to algorithmization, not involved in management, and without any ownership in the organization where they work.

RC35-584.2

GAVRILYUK, TATIANA* (University of Tyumen, Russian Federation)

The Working Class in the Service Sector: Problem Statement and Current Sociological Discourse

The research is focused on the the review and analysis of the current sociological discourse devoted to the problems of routine service labor. Such aspects have been revealed in the research as the specifics of interactive service work, methods for assessing the number and composition of the service part of the working class, the new ways of the changed parameters of labor relations

theoretical conceptualization, features of service workers' class consciousness. It has been established that in the western discourse of sociology of labor, research in the service sphere currently occupies a leading position. The focus is on such problems as the structure of the new post-industrial working class, the inclusion of the client in the traditional worker/employer dyad as a third element that reconfigures stable structures of labor relations, the increased importance of "emotional labor", physicality and the so-called "soft qualities" of workers, the ideology of consumer sovereignty and the problems generated by it, precarization of labor, leading to the deprivation of interactive service workers, class consciousness and resistance practices of routine services employees. In Russian sociology service research has not been fully updated, there is no theoretical foundation, and the concept of service workers as part of the working class has not been formed. The majority of Russian authors rely on the structural and functional paradigm in the study of the service sphere, which does not correlate with the problems relevant to world sociology and the methods of their analysis. We propose the notion of the "new working class" and define it as a group of employees engaged in all areas of material production and service sphere, whose work is routine, divided into standardized segments, amenable to algorithmization, not involved in management, and without any ownership in the organization where they work.

GAY, PIERRE-ELOI* (ESSEC, France)

Agribusiness Corporate Elites, Historical Narratives and Climate Change in Brazil

Cet article vise à étudier l'hégémonie de l'agribusiness brésilien à l'aune des récits historiques articulant la relation entre nature et nation dans le contexte actuel de la crise climatique. En effet, malgré son impact écologique et climatique, il apparaît impensable pour les élites politiques et économiques dominantes d'envisager la sortie du modèle agricole productiviste et exportateur. La mobilisation de récits historiques par les élites patronales de l'agribusiness paraît jouer un rôle primordial dans l'adhésion des élites économiques et politiques et de la population au projet du secteur. Les élites patronales du secteur, principalement à la suite aux critiques environnementales qui leur ont été adressées au début des années 2000, se sont attachées à mettre en place un discours de propagande destiné à empêcher une mobilisation de l'opinion publique en leur défaveur et à la rallier à sa cause. Ce discours lie l'expansion et la réussite du secteur au développement national et à l'affirmation du pays en tant que puissance mondiale. Il reste à expliquer pourquoi celui-ci paraît convaincre dans de nombreuses couches de la population. Mon hypothèse est qu'il mobilise et fait référence à des récits historiques ancrés dans l'imaginaire collectif. Cet article vise à décrire les récits historiques réactivés par la défense du modèle hégémonique de l'agribusiness, comment ces derniers articulent des représentations de la nature et de la nation et quelles sont les racines de ces représentations en termes de groupes sociaux et de projets politiques associés. Cet article s'attache donc à décrire et mieux comprendre le rôle des élites patronales, et principalement des élites de l'agribusiness, dans la perpétuation de récits historiques dans l'imaginaire collectif, à évaluer le rôle de ces récits dans le maintien de leur hégémonie et donc dans la difficulté à enclencher une réponse à la hauteur de la crise climatique.

RC17-JS-224.5

GAY, PIERRE-ELOI* (FGV EAESP, Brazil)

Agribusiness Corporations and Climate Change Hegemony in Brazil

My paper arises from a paradox: while agribusiness corporations are responsible for the majority of Brazil's greenhouse gas emissions, they are also at the forefront of the country's response to the climate crisis. Therefore, how have the largest Brazilian agribusiness corporations articulated themselves to build and maintain their hegemony in the country's response to climate change? To answer this question, I chose to analyze the hegemony of agribusiness corporations in the climate agenda as a "regime" following the theoretical and methodological framework of Glynos and Howarth (2007) they call the logics of critical explanation. This allows me to engage in a dialogue with studies on corporate hegemony in the climate agenda within the organizational studies literature. This line of work has shown how rhetorical games of scale and time, tactical diversions, or concessions to environmental demands are key pillars for the longevity of corporate hegemony in the climate agenda. However, this line of work has found it difficult to explain why, despite the multiplication of extreme weather events, corporate hegemony still receives public consent. I contribute to this theoretical gap by introducing the study of fantasmatic logic in discourse. My research shows how, in the environmental and climate discourse of agribusiness corporate leaders, affect explains the binding force of the hegemonic discourse. This limits agribusiness corporate leaders' questioning of the current agribusiness model and, therefore, the adequacy of the sector's response to the scale and severity of the climate crisis.

RC54-832.4

GAYÃO, NICOLAU* (University of São Paulo, Brazil)

On the Intercorporeal Depth of Colonial Violence

A phenomenological understanding of the body holds great promise for making sociological sense of violence. It shows us that all violence done onto the body cuts through it down to its intercorporeality: the extended bodily relatedness. This intercorporeal depth of the body reveals its simultaneously concrete (physical) and symbolic (mental) existence as intertwined processes of concrescence and signification that mold the materiality and ideality of social life — our practices, ideas, desires, institutions and senses. In this view, the body is always embodiment within a world and embodiment is continuously weaving the world anew, as our bodies are both dimension (a condensed singular presence) and irradiation (an inheritance and openness towards others) of more general processes of becoming. Bodily violence, by virtue of this fleshy soil it sinks into, is a profound social force. This is visible in the ways that colonial violence acts as a temporal structuring in the unfolding of colonial worlds. Through the colonized body — both lived and felt in its suffering — colonial violence sows itself onward across a range of phenomena, from our ordinary temporality to deep-seated patterns of social change and recurrence, shaping the latent possibilities enshrined in our perceptual world. A closer look at how violence takes a structural hold of the body's intercorporeal depths allows us to see ambiguous or invisible forms of colonial relations in the contemporary world, in a way that is not blinded by more hypervisible forms (past and present) but coalesced with these into a better sense of the manifold dynamism proper to colonial relations as bodily relations all the way. The corporeality of colonial violence is richly described by Frantz Fanon, himself creatively rooted in Maurice Merleau-Ponty's phenomenology. Both *corpuses* are distended here towards this understanding of the social relation between the body, violence and time.

GAYET-VIAUD, CAROLE* (CNRS, France)

Streetcorner Politics: How Living Together Happens in Everyday Life Civil Interactions

This paper draws on ethnographic data to analyze the normative properties of urban encounters in Paris, France. Rather than treating civility exchanges as mere instances of ceremonial conduct, we focus on the reflexive dimensions of interacting in "a world of strangers" (Lofland 1973). We show how today's Parisian "culture of civility" (Becker, 1971) helps reconsidering the "Goffmanesque" (Emerson 2009, p. 537) approach to "public life" (Goffman, 1971) and the interaction order: not only do these "fleeting" encounters and "ceremonial interactions" prove to go beyond face-work issues, but they also put to test a practical sense of what people have in common, what they owe one another, and what they should stand and fight for among others, as mere citizens. By combining long-term participant observation ethnography and interviews, the research unveils the vivacity of emotions involved in civil interactions and the importance of reflexivity in how to be and do good in everyday situations of public life. Civility therefore no longer stands for a way of dealing with the "interaction order" and getting away with it, but rather as a local perspective for perceiving and acknowledging society as a whole through practical, day-to-day consequences and aspects (Rawls 2006). Civility is therefore an activity whereby democratic culture can be studied in the making. These orientations of attention, these modest attempts at accommodating with differences, showing interest, care, and even responsibility for strangers and for how our shared world goes, play an important part in the process of defining what a political community is – an "art of living together" that is ultimately both a means and an end.

GAYTÁN ALCALÁ, FELIPE* (Universidad La Salle México, Mexico)

Divergent Paths, Unexpected Results: The Integration of Young People into Faith Communities, the Comparative Experience between the Anglican Church (UK) and the Catholic Church (MX).

Faith communities worldwide are committed to integrating young people into social support and community solidarity programs, especially from a faith-based approach and from belonging to the Church that promotes it. This strategy was relevant for the Anglican Church diocese in Liverpool, UK, and the Catholic diocese in Mexico City. Both churches started from the diagnosis of a low participation of young people, not only in social activities but also in religious services, a low membership in their Church. To reactivate the commitment to the Gospel, these churches implemented 2014 a strategy of youth participation in community support and social assistance, religious or evangelical issues. The Anglican Church promoted and financed community centers, administered

by secular people appointed by the Church to which they had to report the activities. The topics were varied: care for the elderly, migration, ecology, etc. For its part, the Catholic Church recovers the experience of the Ecclesiastical Base Communities. It articulates the actions of young people from the parishes, attending to the community's needs and acting as mediators with governments in the demands of the parishioners. All this from the perspective of the committed Catholic. However, in both cases, the unintended consequences of the action led to unexpected results. The Anglican community centers grew with the participation of young people from a civic and non-religious ethic as the Church supposed. The young Catholic leaders distanced themselves from the Church and became political leaders, parliamentarians and leaders of secular struggles. This work recovers the experience with young people from both churches through interviews, documents, and images that account for the change in pastoral action in the cities and, above all, a change in the evangelization of the communities of faith.

GAYTÁN ALCALÁ, FELIPE* (Universidad La Salle México, Mexico)

Fear of the Different: Islam in Mexico, a National Security Issue.

In Mexico, Muslim communities are small and dispersed; their growth barely represents .07% of the total population of 127 million people (INEGI, 2020), made up mostly of converts and, to a lesser extent, of people from Muslim countries. However, Islam and Muslims are subject to surveillance and monitoring by the Mexican State and the United States, not only because of the events of September 11, 2001, in New York but also since the Zapatista rebellion of 1994 in which Hamas, attempted an alliance with the Zapatista Army through Spaniards who arrived with the alliance's mission. Why the surveillance of Muslims communities since 1994? The reason is more due to a national security scheme of the United States government that requires Mexico to have immigration control of people from Muslim countries, either as tourists or as immigrants trying to reach the United States through the border.

Similarly, without confirming the source, news was spread about al Qaeda and Hezbollah units operating in Mexico. This study conducted an analysis of the government's view on Islam, controls and the concept of migration. Methodologically, a discourse analysis was carried out on the representation of Muslims and Islam in official documents, in the news that pointed out the presence of al Qaeda, Hezbollah and Hamas in Mexico, as well as the representation (stereotype) of the Arab Muslim in Mexican popular culture.

Some results and images of what has been addressed will be presented through the concept of social representation of what is different and distant from Islam in a predominantly Catholic culture.

Practising Uncooperative Feminism through Sitting: Reflecting on and Resisting Gender Hierarchy in Commercial Postpartum Care

Research has shown that *selective* neoliberal rationality, driven by the privatisation of the market, rather than contradicting China's authoritarian governance, actually consolidates the state's legitimacy. This paper explores the seemingly contradictory yet cooperative discourses prevalent in the commercialisation of postpartum care, sitting-the-month practice. Drawing on in-depth interviews with postpartum women, their families, care entrepreneurs and workers, I argue that, on the one hand, there is a strand of market discourses, by framing empowerment as consumer choices, emphasises women's perpetual self-betterment through consumption. On the other hand, market discourses adapt to resonate with women's lived realities in order to sell services, in this case, reinforcing traditional gender roles rooted in Confucian familialism. By aligning with the state-endorsed gender arrangements, the market only provides a incoherent sense of 'empowerment', as well as individualised and temporary solutions, for women traversing the patriarchal script of domesticity. I contend that the individualistic and depoliticising approach to women's empowerment does not challenge any existing political ideology, especially the legitimacy of China's authoritarian regime. As a result, while celebrating women's *individual* empowerment, the market simultaneously sustains the patriarchal order that prioritises women's *relational* responsibilities. Reckoning with the discursive incoherence and contradiction, I argue, the commercial postpartum care services become a catalyst for women's multi-layered burden juggling between their contradictory gendered subjectivities. This paper aims to reimagine sitting-the-month practice as a time for women to reflect on structural gender injustice. Through 'sitting', postpartum women can develop a new understanding of 'self-care' as an act of self-preservation, resisting the social expectation to consistently provide care, and demanding care that they frequently provide but not reciprocated. In doing so, this paper highlights an uncooperative stance against the oppressive gender arrangements.

GECIENE, INGRIDA* (Vilnius University, Lithuania)

JONUTIS, KAROLIS (Vilnius University, Lithuania)

Fight for Landscape Formation: Discourse Analysis of Urban Activism in the 2018 Protest during Reconstruction of Reformatai Park in Vilnius (Lithuania)

The reconstruction of urban public spaces involves conflicting interests of various actors, including municipalities and business enterprises, while the preferences and needs of local communities are frequently ignored. It is especially evident in countries like Lithuania, where there is no strong tradition of urban collective action due to the suppression of civil society initiatives during the previous socialist regime. However, one case of reconstruction of Reformatai Park in Vilnius gained massive protests against the initial reconstruction plan, especially in social media. Thus, the aim of the presentation is to reveal the impact of social media in mobilization efforts that resulted in changes of reconstruction plan.

The presentation is based on insights from landscape sociology and particularly on a social constructionist perspective that defines "landscape" as created by a human act of conferring meaning on nature and the environment within a particular cultural context (Greider & Garkovich 1994). In this perspective, the cultural heritage and memory of historical places (Bender 2002) along with transformations of ideologies (Duncan & Duncan 1988) are crucial factors related to the construction of landscapes. Besides, the presentation is also based on insights from urban environmental activism studies, that reveal the structural and social-psychological factors of motivation of this activism (Bastidas at all 2023).

The presentation is based on discourse analysis of social media conducted in 2024 in the framework of project „(Post)Authoritarian landscapes“, financed by the Lithuanian Council of Science. Through a post-structural discourse analysis (Laclau & Mouffe, 1987), this study analyzes how selected groups articulate contrasting perspectives on public space. It investigates the resources these groups mobilize to advocate for their respective values and beliefs, which often lead to antagonistic relationships representing different ideological perspectives.

GECIENE, INGRIDA* (Vytautas Magnus University, Lithuania)

The Second Generation Migrants' Ties with the Home Country of Their Parents: Case of Lithuania

After regaining independence in 1991, one-fifth of the Lithuanian population emigrated abroad (Migration trends, 2023). While there have been numerous studies on the first generation of Lithuanian migrants who left the country after independence, there is a lack of knowledge regarding the ties of second-generation migrants. Hence, the aim of presentation is to reveal the connections of second-generation migrants with Lithuania.

Although second-generation migrants have been studied extensively worldwide, the primary focus of research has been on their identity, integration, and upward mobility. Transnational theory offers insights into the growing visibility and transnational claims of the second generation of migrants. While some authors argue that the second generation is less transnational than the migrant generation or engages in different forms of transnationalism (Maruyama & Stronza, 2010; Tie et al., 2015, Agyeman & Kyei 2019, etc.), others suggest that symbolic ties persist through "memories, nostalgia, and imagination" (Glick Schiller, 2004, 458) and continue to influence the transnational lives of the second generation (Levitt, 2009, 1231).

In the presentation the results of project "The connection with Lithuania of the second generation migrants who left the country after the regaining of independence" will be used. It was conducted 30 in-depth interviews with the first and second generation migrants in 5 countries (USA, Ireland, UK, Norway and Germany) by using matched interview method. These interviews reveal the nature of transnational connections of both generations and identify factors influencing transnational ties, such as identities, family and school socialisation, and the timing and context of migration.

God's Influencers: How Social Media Users Shape Religion and Pious Self-Fashioning

In this presentation, I introduce and discuss the programmatic editorial introduction of the forthcoming special issue "God's Influencers: How Social Media Users Shape Religion and Pious Self-Fashioning" (*Journal of Religion, Media and Digital Culture* 13:2). Drawing on the contributions included in the

special issue, this programmatic editorial explores resonances and dissonances between the six research articles, outlining their contribution to the field and sketching new research directions in the social-scientific study of Digital Religion. First, I reconsider the online/offline connection in relation to the religious actors examined. Second, I articulate a post techno-utopian vision of religion online, identifying digital media as a social space where inequalities, prejudices and power structures offline as well religious norms, orthopraxy and relations of epistemic authority can be both reinforced and challenged. Third, I shed light on the subjective turn in the way online religious actors understand and impart "authenticity", a heatedly debated concept in the context of both religion and social media. Fourth, I present some of the communicative strategies that the religious social media users examined in this special issue employ. And, finally, I conclude by sketching future research directions in the study of how social media users shape religion and pious self-fashioning.

Religion That Matters: Shi'i Materiality Beyond Karbala

This presentation will introduce and discuss the recently published book *Religion That Matters: Shi'i Materiality Beyond Karbala*. Published by Brill in 2024 (pp. 425), this book examines the material media — images objects clothes foodstuffs incense holy waters spaces and sounds — that instantiate somatic, corporeal and visceral experiences of Shi'i Muslim religiosity. Drawing on rich empirical case studies from diverse demographic and geographic contexts, the book includes twelve chapters that engage with conceptual debates in Religious Studies, Material Religion, Anthropology of Religion, Media Studies, and Cultural and Heritage Studies as well as Islamic Studies and Shi'i Studies. By examining how material things and less thing-like materialities make the *praesentia* and *potentia* of the Sacred tangible, how they cultivate intimate relations between human and more-than-human beings, and how they act as gateways and links to the Elsewhere and Otherworldly, *Religion That Matters* makes several propositions that push the frontiers of the social and anthropological study of religion. The volume also examines how materialities are integral to the politics of heritagization through processes that are shaped by competing social and political actors involved in the creation, recreation and canonization of religious — in this case Shi'i — heritage.

Leading scholars in Religious Studies and Material Religion have described *Religion That Matters* as a "programmatic intervention" and a "significant contribution ... towards analyzing complex aesthetic formations, ... the creation and transformation of religious spaces and atmospheres and the material and rather mundane techniques and technologies that might involve".

The eBook can be downloaded (open access, free of charge) and print copies can be ordered from the publisher's website: <https://brill.com/display/title/69727>.

Constructing Quality in the Hiring Process: Employers' Justifications for Selection Criteria

How employers justify their selection criteria when hiring skilled personnel is central to understanding the (re)production of inequalities in the labor market. Following the Sociology of Conventions, quality is constructed by justifying what is valued and how it is assessed (Boltanski/Thévenot 2018; Eymard-Duvernay/Marchal 1997). In hiring processes, applicants' qualifications are constructed through negotiating and assessing selection criteria (Ali/Brandl 2018; Lendaro/Imdorf 2012; Widmer 2012). The Regimes of Engagement approach distinguishes these justification situations from situations in which actors follow personal plans or act out of familiarity (Thévenot 2001, 2023). This paper contributes to the limited research on hiring that combines both approaches by asking: How are selection criteria for skilled personnel justified? Can patterns of meaning be identified? If so, are these related to characteristics of occupational fields, companies and recruiters?

Using Reflexive Thematic Analysis (Braun/Clarke 2022), we analyzed 35 interviews with those responsible for filling job vacancies in six occupational fields in Switzerland. We coded inductively through a theoretical lens. Codes that shared patterns of meaning in the dataset were categorized to construct themes that address our research questions.

Preliminary results show a variety of justifications for selection criteria as well as selection criteria that were not justified. For example, recruiters justify team fit as a selection criterion with various conventional values such as efficiency and tradition. This differs depending on company size. Team fit is assessed with socio-demographic characteristics of the previous team composition, but also with the recruiters' gut feeling. In contrast, job-specific educational credentials and professional experience act as must-have criteria. Here, recruiters act out of familiarity, without having to justify these criteria. However, companies faced with skills shortages negotiate these criteria and justify alternative criteria and assessments.

This shows that our analysis will help understanding current selection of skilled personnel and identifying which aspects (re)produce inequalities.

Reconstruction As Enclosure: The Politics of Property in the Post-Conflict City of Diyarbakir

This paper analyzes the post-conflict reconstruction scheme undertaken by the Turkish state in the historic center of Diyarbakir—Suriçi—in the aftermath of the 2015-2016 urban warfare. More specifically, it illustrates how the politics of property embedded in Suriçi's reconstruction is permeated with a normative urbanism whose ownership-cum-security-centered logics and imaginaries eventually lead to the enclosure of dwellers' urban commons.

Diyarbakir, as the heartland of Turkey's Kurdish-populated southeastern region, has long witnessed violence, the most recent of which was month-long clashes between Turkish security forces and Kurdish armed militias. In the course of "urbicide", the six neighborhoods that make up the eastern side of Suriçi witnessed total destruction, displacement and dispossession. Within a period of six years, under the aegis of overtly-centralized state bureaucracy, the ruined historic center has been planned, re-zoned and reconstructed in a way that has reinforced the state's capacity to master territory on the basis of proprietary logic. This has meant to dissipate centrifugal forces of local inhabitants who had cultivated place-based commons, which range from material resources such as land and housing to immaterial attributes like experience, knowledge and skills.

To address material and imaginative aspects of this contestation over the city, I bridge scholarship on (post-)conflict cities, mostly of the Global South, with critical property studies. Accordingly, I conceptualize enclosure not merely as the extinction of material resources, but also as a generative governmental apparatus pivotal in territorializing the state in cities subject to ruination and devastation.

Building on this approach and drawing on my long-standing research on the changing forms of spatial politics in Diyarbakir since the early 2010s, this paper ultimately argues that the property-centered logics and imaginaries mobilized throughout the reconstruction of Suriçi have un-made Suriçi as a place by dissolving Suriçi dwellers' commons and collective urban experience produced over generations.

Artificial Intelligence: Challenges and Recommendations

Artificial Intelligence has already attracted the attention of scholars, and we witnessed the rapid rise of the literature, especially in the last decade, with a wide range of focus, including devising normative and conceptual perspectives, and developing recommendations and solutions for the problems and challenges AI poses for society. One of the problems is inequalities in employing the possible benefits of AI. Most AI applications are in the Americas and Europe (de-Lima-Santos, 2022). Like local/ small organizations are disadvantaged vis-a-vis large ones due to a lack of resources and the higher cost of AI for the smaller organizations (Broussard, 2019), publishers at Global South are disadvantaged due to difficult political and economic conditions and challenges (Simon and Isaza-Ibarra, 2023). Nevertheless, the literature is dominated by American, British, and European cases (Sun et al., 2020; Crepel et al., 2021; Vergeer, 2020).

To some extent, AI is covered as a relatively autonomous force (de Haan et al., 2022), as a lack of agency where there is an invisible hand or looming threat over which one has no control at issue (Helberger et al., 2022: 1613). Then, can AI be used to downgrade the responsibility and agency in an oppressive context? What are the implications of this research in a society where there are many problems critical dissidents and marginalized communities are encountering regarding justice and rational-legal authority for the issue of data justice (Adebe, 2019)? What is the meaning of industry/company versus public or right versus left (Kaylee Graves, 2024; Brennan et al., 2018) in this context?

The focus of this presentation is to summarize the debates, approaches, developments, and recommendations regarding AI and society and open a discussion on whether, how, and to what extent the political and socio-cultural context plays a role.

The 'Traitorous' Bulgarian Vs the 'Good' English Neighbour? an Exploration of Media Portrayals of Migration from and to Bulgaria and Migrants' Counter-Narratives

While migration has always been a contentious issue in Bulgarian public discourse, the way it depicts those who leave the country and those who enter, particularly groups of 'desirable' migrants differ significantly. Drawing on research conducted with both Bulgarian migrants in the UK and British migrants in Bulgaria, this paper explores in a comparative manner persistent media portrayals of migration from and to the country in the context of wider socio-political restructuring and instability. Drawing on empirical data, the paper also considers migrants' counternarratives.

Focusing specifically on the migratory flows between Bulgaria and the UK, the findings reveal a stark contrast between how the migratory choices of Bulgarian and British nationals are presented in the Bulgarian media discourse. While emigrating is portrayed as a form of escapism at best and treason at worst, the choice of a growing number of British nationals choosing to relocate to rural and often depopulated areas in Bulgaria is overtly positive. The latter is in contrast with popular depictions of 'Brits abroad' that dominate the British public discourse, which take on markedly negative connotations. Though in-depth qualitative data from two studies with Bulgarian migrants in the UK and with British nationals in Bulgaria, these media discourses are then juxtaposed against migrants' own interpretations of their migratory choices. Ultimately, the paper reveals that migrants from and to Bulgaria employ a diverse range of strategies in order to justify their migration choices, often romanticising migration as a life choice to prove their worth.

Trajectories through the Field: Pragmatic Reflexivity and the Changing Social Locations of Environmentalists

This paper looks at changes over time in the practices and political identities of environment activists. Following a series of narrative interviews with Australian environmentalists it investigates:

- a) Their social and political trajectories, and;
- b) The pragmatic processes of deliberation that underpin their changing involvement in environmentalism.

Activists discussed in this paper share a common site of emergence in and around Australian anti-forestry campaigns in the late 1990s and early 2000s. They subsequently moved through an array of different groups and campaigns at a variety of scales. Their trajectories highlight a range of directional possibilities including pathways towards left-wing, liberal and far-right forms of environmentalism.

I interrogate activist reflexivity and how this affects the 'where' and 'how' of their unfolding participation in environmentalist action. Following Pierre Bourdieu, environmentalism is conceptualised as a social field with shared doxic beliefs and internal struggles. From their youthful emergence in the field, activists' social locations change over time as they reassess and adjust their practices. Activists pragmatically balance their involvement in environmental struggles with complex demands coming from other social fields in which they are invested.

They are engaged in a struggle for *viability* in what Ghassan Hage (2022) describes as a 'critical political economy of being'. This is highlighted by shifting political identities, repertoires and scales of action. These shifts do not only affect individual activists. They also affect the formation and dissolution of the groups to which they belong and the kinds of collective action that is developed. Activists bring skills and insights honed in prior struggles with them to their new social locations. This can result in the formation of novel and innovative practices and communities at the fringes of the field. However, it may also lead to the strengthening of conservative doxa and structures of power.

Towards a Unified Framework for Robustness and Sensitivity

Credible empirical research requires conducting "robustness checks" and/or "sensitivity analysis" as a way to assess how much the conclusions of a study depend on critical assumptions. However, current practice is highly heterogeneous, and there is no agreement on how to conduct and report such analyses in a transparent and coherent way. In this article, I aim to clarify the relationship between different forms of robustness (to model specification, variable inclusion, and observation inclusion), sensitivity (to unobserved confounding and sample selection, among others), and more generally uncertainty quantification approaches. I first show the shortcomings of common practice, including the lack of replicability, inconsistent application of tests, and obscure and uninterpretable reporting. Of particular importance is the change of the quantity of interest ("estimand") across analyses, making the comparison between alternative conclusions impossible. I also discuss other forms of assumption-dependency and uncertainty quantification, such as multiverse analysis and computational multi-model analysis, which do not neatly map into the traditional distinction. However, as they become more computationally tractable, they should be incorporated into a coherent framework. Finally, I discuss the issues with the stepwise approach to testing one assumption at a time, showing ways of assessing the sensitivity to multiple assumptions simultaneously. I exemplify this approach by discussing the sensitivity of robustness checks, and the robustness of sensitivity analyses.

GERBAUDO, PAOLO* (Complutense University Madrid, United Kingdom)

The Distrustful Digital Citizen: How the Digitalisation of Government Has Failed to Address the Crisis of Confidence in Public Institutions

Over the last 20 years, governments worldwide have implemented vast digital transformation programs, following the recommendations of supranational institutions such as the World Bank and the OECD (Falk, Römmele, and Silverman, 2017). Government digitalization has often been presented not only as a way to improve the efficiency of services but also as a solution to the chronic crisis of confidence in political institutions (Benay, 2018). But has digitalization truly helped address public distrust? In this paper, I argue that government digitalization programs have thus far failed to mend distrust in public institutions. I highlight that many countries that are part of the alliance of "leading digital governments"—such as Estonia, South Korea, Denmark, and the UK—have in fact experienced rising distrust in political institutions in recent years (OECD, 2024). The paper explores the reasons behind this failure. I argue that, beyond unrealistic expectations, this failure stems from the instrumental and transactional logic behind digitalization programs. With their emphasis on self-service, location independence, and seamless user experiences, these programs risk widening the gap between the state and its citizens, exacerbating the conditions of individualization and isolation that have often been seen as correlate of societal distrust (Inglehart and Welzel, 2000; Holmberg and Rothstein, 2012). This situation calls for a radical rethinking about the purpose of digital government and for some acceptance of its inherent limits. Even when digitalisation manages to increase the efficiency of certain public services, this may not automatically translate into achieving gains in terms of public trust in institutions which often hinges on other processes such as political participation, identity and sense of belonging. I conclude by developing some reflections on what the apparent intractability of the problem of distrust in public institutions contribute to the understanding of the nature of trust and distrust in a digital society.

Intersecting Inequalities: Gender Differences in Old-Age Poverty

This study investigates the intersectionality of gender and other social determinants in shaping poverty experiences among older adults. Biographical interviews are used to analyse the influence of factors such as childhood experiences, educational attainment, employment history, social networks and caring responsibilities on poverty outcomes, with a particular focus on the ways in which these factors intersect with gender. The study focuses on key life stages, namely childhood, education, employment, partnership and retirement, in order to gain insight into how these intersections contribute

to lifelong deprivations. The findings demonstrate that older women and men face unique challenges due to compounded inequalities across their lifespan. Our findings reveal significant disparities between older men and women, rooted in lifelong deprivations shaped by societal norms and expectations. By adopting an intersectional approach, this study highlights the need for targeted policies that address the complex nature of old-age poverty through a gender-sensitive lens.

Hair Speaks: Social Context and the Interpretation of Religious Signals--Evidence from a Pre-Registered Face-to-Face Large-Scale Experiment

We constantly make inferences about others based on their speech, posture, facial expression, physical attire, and so on. An important set of such signals which an individual is inferred on concerns the treatment of facial hair and head. Headscarves and the conservative dresses collectively referred to as veiling are particularly distinctive signals. Veiling is exclusively interpreted as a signal of Muslim religiosity. Beards too are widespread among Muslim men. But beards are less distinctive signals of Muslim religiosity for men than veils are for women. This is perhaps because or why many non-Muslim men also sport beards.

To understand how people interpret such signals we use a pre-registered, face-to-face factorial survey experiment with a large sample from Turkey. Turkey is a strategic research site for the purpose of the study because: (1) it is a non-Western context where the type of signals we study (beards and veils) are widespread (2) there is population heterogeneity, in that a sizable portion of the population is secular while the rest is conservative, and (3) the signals we study are not legislated, that is, they are not imposed as in Saudi Arabia or Iran, or forms of it are not banned as in some Western European countries or Tajikistan. These characteristics of the country make such visible signals potentially highly informative and rich (see Aksoy and Gambetta 2021) allowing us to test our hypotheses. Our hypotheses and the results broadly suggest that people's interpretations of such religious signals depend strongly on context (as measured, for example, by the level of religiosity or support for Islamic political parties in the neighbourhood), and that people factor in the possibility of strategic manipulation of one's religious attire depending on the context.

The Role of Cultural Signifiers in the Adaptation of Migrant and Displaced Armenian Women

Historically, Armenia has maintained a predominantly monocultural identity; however, recent years have witnessed a significant influx of populations from Syria, Russia, Ukraine, and those forcibly displaced from Artsakh (Nagorno Karabakh). Many individuals are fleeing war, violence, and political instability, seeking refuge and stability in their ancestral homeland. Each group arrives with distinct subcultures and lived experiences, navigating a shared language and ethnic identity while contending with the complexities of their new environment. This demographic shift has created a multifaceted tapestry of identities, as individuals seek safety, economic opportunities, and belonging within Armenia's evolving socio-political landscape.

This study examines the challenges faced by relocated and displaced Armenian women as they negotiate the preservation of their unique cultural identities amid injustices shaped by historical and contemporary imperialism and colonialism. Through narrative analysis of oral histories, we uncover the various obstacles these women encounter, including cultural dislocation, social integration, and the preservation of traditional practices within unfamiliar contexts.

Our analysis emphasizes the adaptive strategies employed by these women, highlighting the crucial role of cultural signifiers as anchors of identity and belonging. These symbols serve as vital resources for personal and communal resilience and foster solidarity—essential components for community cohesion in the face of systemic injustices.

While these women share a common heritage, their experiences are profoundly shaped by trauma stemming from conflict, loss, and displacement,

significantly impacting their adaptation processes. The intersections of gender, culture, and the legacies of colonial histories complicate their narratives, illustrating how their struggles are embedded within broader power dynamics.

By centering on the complexity of subcultural identities and the traumatic reasons for their presence in Armenia, this study reveals how these women navigate multiple layers of adversity. It underscores the critical importance of symbolism and cultural signifiers in cultivating solidarity and reinforcing community bonds amidst profound change.

GHEORGHIEV, OLGA* (Oslo Metropolitan University (OsloMet), Norway)

Automation and Migrant Workers: Redefining Hierarchies of Skill?

National and transnational labour markets are experiencing profound transformations linked to new opportunities for value accumulation resulting from implementing digital solutions. From automation of production processes to the algorithmisation of employment relations, the digitalisation of work quickly changes the relations between skill and the value assigned to it and redefines the notions of both skilled workers, and precarious labour. It also pushes workers to seek options for reskilling and retraining, as well as to adapt their strategies for resistance and collective action. How are the working lives of migrant workers impacted by these changes? How are technological transformations in production processes restructuring the ethnical hierarchies of skill and working conditions on the shopfloor? Does the robotisation of repetitive, low-added value tasks lead to the re-training and upskilling of migrant workers who typically occupy these positions? How is the spectrum of high to low skill redefined in this context? And finally, how do these technological transformations interact with migrant workers' capacity for resisting both sovereign and capital forces of discipline and control?

Drawing on theories of the labour process and autonomy of migration, this paper seeks to answer these questions by proposing an investigation of the labour market experiences of migrant workers through the concepts of indeterminacy of labour, mobility strategies and subjectivity. This study is based on interviews with migrant workers in the Czech Republic and ethnographic work in a factory that hires them and is transformed by digitalisation processes. The paper seeks to epistemologically shift the focus in studies on migrants' labour market integration from the binary between the citizen and the migrant to the experiences of migrant workers as laboratories that expose the mechanisms of the digital transformation of labour relations.

Too Empathic Not to be Manipulated? the Ambiguity of Empathy in International Self Help Bestsellers

From an analysis of the 10 international best sellers on self-love on Amazon.com in last 15 years, empathy appears both as a quality and as a weakness: this literature, meant to boost people self-esteem, advice women not to empathize too much, especially with relatives. The argument is that you have to balance empathy and compassion towards others and compassion and self-love towards yourself to avoid the risk of being manipulated and energetically depleted. We expose the main points of this widespread rhetoric that directly links empathy and power in social interactions. Many questions arise: how to establish this balance? When empathy and compassion are too much? What is the link between empathy and recognition? The ambiguous nature of empathy appears in its relation to power, that is in its relation to recognition and misrecognition, for the same person and at the same time.

Domestic Workers' Struggles in India's Care Economy: The Case of Migrant Women in Gurugram

The domestic workers' movement in India has been mobilizing for rights since the 1980s. The adoption of the ILO Convention 189 on Decent Work for Domestic Workers energized these efforts, encouraging greater coordination among groups and unions. However, despite the growing policy focus on the care economy through the Sustainable Development Goals (SDGs), the

movement continues to struggle for basic rights. Domestic work in India is largely performed by women from marginalized castes, with limited education or formal skills, leaving them vulnerable to exploitation.

Our research, under the project *"Sustaining Power: Women's Struggles against Contemporary Backlash in South Asia"* (SuPWR), explores these struggles in collaboration with the Center for Social Change and Development (CSCD) in Gurugram, Haryana. In this urban center, informal migrant women domestic workers coexist alongside a wealthy, international community, highlighting stark inequalities.

The study places domestic worker leaders at the center of inquiry to understand their daily vulnerabilities as migrants, including limited worker rights and barriers to social security. Access to safe and affordable rented housing emerged as a critical need, directly affecting their ability to work and participate in the movement. Their migrant status further exacerbates these challenges, complicating efforts to secure decent work and social protections.

This paper analyzes how the intersectional identity of migrant women domestic workers places them at the margins of the ongoing care economy dialogue in India, which focuses heavily on early childcare. Despite its importance, this focus has failed to improve conditions for domestic workers—the largest cadre of care providers. We argue that the workers' migrant status amplifies the difficulties in organizing for decent work, underscoring the need for inclusive policy frameworks that address both care and labor rights for all.

GHOSH, JOLLY* (London School of Economics and Political Science, India)

Where Is 'Trafficking' in the Anti-Trafficking Law? A Study of Bedia Sex Workers of India on the Juncture of Sexual Morality and Feminist Agency

Centuries ago, White merchants and explorers entered India for trading and gradually amalgamated Capitalism with hegemonic authoritarian rule by imposing colonial laws. This dehumanising process could be easily traced by understanding the epochs of the sex work industry. In India, a unique blanket of discrimination envelops the postcolonial society, i.e., the Caste System. *Bedia* is one such caste from the Bundelkhand region of Central India, where the women are socio-culturally assigned to solicit the upper-caste men. Therefore, the multi-folds of Caste, Coloniality, and Sexuality paint over the feminist agency of the prostitutes or the female sex workers (FSWs) with different interpretations such as sexually exploited and abused; sexually immoral and malevolent; forced and trafficked.

Unlike most academic studies that focus on the moral implications of the sex work industry, this paper discusses the human rights, feminist agency, and autonomy of FSWs. The methodology employs Critical Discourse Analysis of the Immoral Traffic (Prevention) Act-1956 (ITPA) to understand the colonial origins of the legal approach to sex work. Additionally, a Case Study of a legal petition filed by *Bedia* women provides insight into reclaiming their agency. The paper is structured into two key sections: first, an analysis of the colonial influence on Indian law reveals how the current problematic institutionalisation of sex work emerged. Second, a case study of *Bedia* FSWs locates their feminist agency despite dominant morality. In conclusion, this research paper brings into the limelight how the jargon used in ITPA shapes the feminist agency of *Bedia* women. It further illuminates how law, gender, and power interact to erase marginalised women's autonomy. Examining the *Bedia* community offers a lens to reconceptualise sex work beyond colonial moral frameworks.

GHOSH, SUDATTA* (South Asian University, India)

Performing Bodies, Labouring Bodies?: An Understanding of Art and Work through the Lives of the Nachnis of Purulia, India

This paper proposes to understand how artists engage in cultural labour (Prakash, 2019) and how marginalised artists like the Nachnis of eastern India are stigmatised for their art which is often considered to be vulgar and not falling into the purview of 'work' because it is considered to negatively impact the moral and social fabric of traditional Indian culture and heritage. The Nachnis are 'folk' dancers who draw their lineage from the erstwhile court dancers that would perform in the courts of kings and princes in Bengal. In the present scenario, their profession or 'work' comprises performing in various villages of West Bengal at night with predominantly men in the audience. Due to the nature of their performance and their gender-caste positionality, the dancers' bodies are not considered fit to be part of the category of labouring bodies. However, I argue through this paper that performing bodies are labouring bodies. They put in fixed hours of work, sweat, exhaust themselves, provide service, and receive payment at the end of the work. The dancers put

on a smile and dance for hours at end draped in bright, sequined sarees. They attract the attention of men whose gaze, a mixture of desire, disgust and fear, is fixed upon the dancer's moving body. This project is a curious questioning of what entails work and why the Nachni's moving body is not accepted as a working body. Thereafter, once it is rejected the status of a working body, what happens to the remnants of a 'non-working' artistic female body that is constantly living at the intersection of gender and caste? The larger question that this project aims to understand is the relation between art and work when it comes to vulnerable artistic agents living at the peripheries of society.

GIANNAKOPOULOS, ANGELOS* (National University of Kyiv-Mohyla Academy, Ukraine)

White Russian Ideology and Its Role Towards Russia's Historical Memory and the Invasion of Ukraine

Alongside the Great Russians and Belarusians, the Ukrainians are regarded as a Little Russian branch of the *all-Russian people* and do not exist from the perspective of the *White Russian émigré ideology*. In opposition to the Soviet regime which recognized Ukraine as a "sovereign" republic within the USSR, the rehabilitation of the White Russian ideology, which assumes that the Bolsheviks had created an "artificial" *Ukrainian nation*, has been massively supported by the Kremlin in recent decades. White Russian ideology argues that the Ukrainians were artificially created by the Austrians in the 19th century, by the Poles and Lenin at the beginning of the 20th century and finally by the USA, the CIA and the EU in more recent times in order to divide the "Russian" nation. The Ukrainian nationalists who came to power in a coup during the Euromaidan revolution, have turned, moreover, Ukraine into a puppet state run on behalf of Washington. They prevent the Little Russians from fulfilling their desire to join the *Russian world*. As a result, the US and the West turned Ukraine into an "anti-Russian" state that murdered Russian-speaking Ukrainians. The planning of the "special military operation" was heavily influenced by this ideology, assuming that Little Russians would welcome it as "liberation". The Kremlin cannot accept that the Russian military is since the invasion not welcomed anywhere in Ukraine. It refuses to recognize the existence of a Ukrainian nation and instead blames the Russian army, facing NATO troops and Western mercenaries, for its military defeats. The presentation examines how these widely held beliefs – which represent a Russian *collective historical memory* – played a role in Russia's invasion of Ukraine, how they are likely to play a role towards peace after the war, and how they will affect Russia's relations with the West.

WG08-JS-123.1

GIANNINI, VITO* (University of Bergamo, Italy)

Feeling Resentment: Exploring the Role of Empathy in the Social Construction of Victims and Villains

Empathy and resentment are very relevant emotional phenomena in social dynamics. While resentment has been analyzed in sociopolitical processes, the role of empathy in the moral construction of victims, villains, and heroes underlying social interactions of cooperation and conflict remains unclear. The concept of resentment has been interpreted in many ways, but it can be defined as an emotional response by a victim who perceives injustice or discrimination. Scholars distinguish various forms of resentment, understood both as an emotion and as an emotional mechanism, depending on its capacity to foster attitudes and actions of a *prosocial* type based on compassion, indignation, and a sense of justice or, conversely, of *antisocial* type oriented towards violence, revenge, and destruction of the other (Demertzis 2020; Tomelleri 2023; Salmela e Szanto 2024). The sociology of emotions has interpreted empathy as a process of taking on the others' emotions and as a "bridge" able to connect different cultural worlds (Shott 1979; Clark 1997; Hochschild 2016; Ruiz-Junco 2017). Empathy can be seen as a means of connecting individuals and making possible the activation of emotions (positive and negative) that can favor or limit the closeness or distance between personal and collective identities (Cerulo 2024). Therefore, different forms of resentment can be identified depending on the *degree* and *type* of empathy enacted toward victims and perpetrators by those involved in the interaction. The goal of the analysis is to explore the relationship between empathy and resentment in the psychosocial and cultural processes of victimhood/blaming as it emerges from the narratives and life stories of individuals. Based on the biographical experience of subjects from Italy, differing in cultural background, socioeconomic status, gender, age, education and ethnicity, the research aims to shed light on the role of empathy in the dynamics of resentment at the micro- and macro-social levels.

MANGIONE, ERICA* (Polytechnic University of Turin, Italy)

Closing the Gap: A Comparative Exploration of Financialised Geographies of Student Housing in the Cities of Turin and Milan, Italy

The paper compares how the recent involvement of institutional investors in the student housing sector has reshaped the politics of student bed provision in Italy and how multilevel regulatory frameworks and forms of statecraft have contributed to the production of contextual financialised geographies in the cities of Milan and Turin. Despite national legislation and recent reforms under the Next Generation EU plan opening to public co-financing of student halls managed by private operators, investment in and localisation of purpose-built student accommodation (PBSA) in Italy have been largely dependent upon local economic, social, spatial and institutional conditions that mediate and regulate the provision of student housing and its role within contextual urban redevelopment strategies. Drawing on the analysis of student housing consultancy reports, planning documents, and interviews with local administrators and PBSA operators, we show how financialised geographies of student housing in Milan and Turin articulate themselves in path-dependent ways that, while shaped by national legislation, are closely tied to local states' negotiations with private actors and contextual urban politics of representation. Still, notwithstanding the socio-economic differences occurring between the two cities, we argue that the creation of financialised student housing submarkets in the two cities similarly hinges on the promotion of an apparently unambiguous and neutral institutional discourse regarding the need to "close the gap" between potential demand and supply in student beds, which fundamentally ends up providing new avenues for rent extraction. In conclusion, we show that the porous relations between multilevel regulatory frameworks and contextual arrangements of the local state produce variegated geographies of financialisation, which, however, seem to converge towards a common dominant discourse whereby the private sector is portrayed as the only solution to bridge the retreat of the public.

Student (Im)Mobilities: Revisiting the Politics of International and Internal Higher Education Movements in Milan, Italy

The social sciences have long employed the concept of mobility to analyse migration flows, albeit often with a mobility bias (Schewel 2020) that emphasises networks, interconnectivity and the free flow of people. Yet, sustained trends in mobility studies have called for rethinking mobility in light of its counterpart — immobility — revealing how different mobility regimes are unevenly distributed across the globe and segments of society (Glick and Salazar 2013). Within this framework, housing emerges as a crucial context through which (im)mobility regimes are experienced, reinforced, or contested. This paper applies the concept of regimes of (im)mobility to reflect on the lived experience of university students at the intersection of residential and social mobility in the Italian context, looking at the experiences of three subgroups of mobile students in the city of Milan: international students, non-local students coming from other Italian regions, and students who commute from their place of residence to attend university. It does so by contextualising their experiences within the residualisation of public student housing policies at the national and regional level, the growing financialisation of the student housing sector, and a longstanding policy-led privilege of homeownership over rent that has created a shrinking and highly polarised rental sector (Poggio 2005). Drawing on data from an annual survey on student housing conditions administered by the Interdepartmental Centre for Research-Action on University Student Housing (C.A.S.A.) of the University of Milan-Bicocca, alongside focus groups with students, we show that while institutional discourse and student housing providers increasingly promote a language around internationalisation thanks to borderless student communities, differential access to the city in the face of rising rental costs and insufficient student support constrains an increasingly large number of students into regimes of immobility, thus contributing to making Milan an elitist choice for study.

"Populism Performing Democracy: Collective Emotions, Political Narratives, and Social Identities"

Describing populism as irrationality or deviance is misleading. Instead, populism is a heuristic coalescing social demands and grievances to generate collective decision-making. Emotions are processes that lead individuals to identify with, and act in accordance with, social groups. Populism brings to the fore affective imaginaries of trust and of distrust, of love and of hate, challenging political representation and fueling polarization. The mobilization of social identities serves to reify dominant groups and reproduce or contest the exclusion of marginalized populations. Democratic thinking must therefore critically examine how political demands are continually constructed in relation to historical, cultural, and social identities. With contributions from scholars convened by the UNPOP International Colloquium in Coimbra, Portugal (January 2024), this documentary provides critical insights into the interplay between emotions, narratives, and identities in politics. It posits a nuanced, multi-perspective approach to democracy as a socially constructed achievement.

Duties in Intercultural Democratisation

Over recent decades, democratic theorists have debated how to address increasing citizen disengagement and dissatisfaction, aiming to transform the social contract. A key issue is the lack of focus on the relationship between rights and duties in democratic theory. This presentation explores a forthcoming book on reconceptualizing duty within democratic theory, expanding the traditional rights-based approach. Historically, duty was politically imposed in pre-modern societies and downplayed by modern liberal political theory, which has prioritized rights, often viewed as symbolic, exclusionary, and entangled with imperialism and colonialism. The book critiques this emphasis on rights at the expense of duty, arguing that modern contractarian theories overlook the relational ontology of individuals within society. It highlights how duty has been neglected in modern democratic theory and develops a critical, intercultural perspective on democracy that integrates subjectivity, agency, and relationality—referred to as "dialogical ontology." Postcolonial and decolonial theories, particularly those inspired by M.K. Gandhi, are central to this rethinking of duty. Gandhi's vision of democracy, which stands in contrast to the imperialist social contract model, offers a framework to reassess the relationships between individuals, collectives, and society. His ideas challenge the traditional liberal approach and encourage a critical examination of the interplay between democracy, liberalism, and colonialism. The book proposes two key contributions: (a) reframing duty as a foundational category for political subjectivity, enabling a more agentic democratic theory, and (b) emphasizing the duty of democratic theory to engage with postcolonial critiques, creating a more inclusive and relational democratic framework.

Social Contract and the Political Mythologies of Colonial Empires

The social contract is often idealized as a myth underpinning modern liberal societies, yet it raises concerns from democratic perspectives. It shapes both individual and socio-political identity, foundational to liberal polities, but these polities have long been marked by structural inequalities rooted in colonial empires. Understanding the role of myth-making is crucial to unpacking the relationship between social contract theory, liberalism, and democracy. Political myths like the social contract are dynamic, adapting to social changes and fostering new socio-political narratives. These myths evolved during the shift from colonial empires to post-colonial states and continue to transform within supranational entities like the European Union (EU). Analyzing these transformations requires examining how political myths operate on both rational and emotional levels, particularly from a critical postcolonial perspective. This analysis reveals how social contract myths shape imperial, colonial, and postcolonial subjectivities. The social contract mythology in the EU, for example, constrains democratic aspirations of liberalizing societies, while the myth of the EU's green transition highlights

tensions between supranational ambitions and colonial legacies. Additionally, migration issues expose the lingering impact of imperial-colonial narratives at the state level. These dynamics suggest the need for empirical investigation into the intersection of political myths and social contracts at empire, state, and EU levels.

GIARELLI, GUIDO* (UNIVERSITY MAGNA GRAECIA OF CATANZARO, Italy)

The Role of the Medical Profession in the National Health Services of Western Europe

On the basis of a recently published book (Giarelli & Saks, 2024), the paper critically analyses the role played by the medical profession in the national health services (NHS) of Western Europe (UK, Scandinavia and Mediterranean countries) in the face of the challenges posed by neo-liberal policies during the last four decades. By a neo-Weberian and neoinstitutionalist perspective it looks at similarities and differences in the actions played by medical profession in various contexts in relationship with the other major actors of a health care systems, namely the state, the public, and the medical industrial complex.

Across the range of countries considered in the three Western European macro-regions, the interest-based agendas of the medical professions have recently been increasingly challenged by the emergence of the New Public Management: this has been linked to the rise of managerialist, corporatist and consumerist logics which have often been pitched – with medical workforce consequences – against professional logics in countries with an NHS. For all this, the evolution of the medical professions in the societies considered remains dynamic with both convergent and divergent trends.

Governance and Responsibility Issues in and By Meta-Organizations. the Case of FIFA.

Meta-organizations are increasingly portrayed as particularly suited to organizing collective action, addressing complex societal challenges, and serving as global problem solvers. However, they are also seen as paradoxical because member organizations often compete with the meta-organization for actorhood, decision-making power, and resources. This has two key implications: first, it can blur the lines of responsibility, making it difficult to determine which entity is accountable for specific actions within the meta-organization. Second, it influences how meta-organizations are governed and how governance structures are enforced.

We argue that governance is a central issue in meta-organizations, particularly in the context of global meta-organizations. By examining four core characteristics of meta-organizations – multi-referentiality, layers of social orders, dialectical actorhood, and multilevel decidedness – we explore how the dilution of responsibility arises and assess to what extent this dilution is an inherent feature of meta-organizations.

We analyze the case of FIFA, the global football association, along with its regional confederations and national football associations as members of the meta-organization. While FIFA has frequently faced societal criticism due to allegations of corruption and organizational misconduct, it simultaneously claims responsibility in the realms of societal justice, peace building, anti-racism and gender equality. Using a qualitative research methodology, our contributions are based on insights drawn from investigative interviews, organizational documents, and media reports.

Our research contributes to the study of meta-organizations in two key ways. First, we reveal how conflicting universalistic and particularistic expectations are managed and balanced through the intentional dilution of responsibility within the meta-organization. Second, we demonstrate that enforcing good governance presents a significant challenge for meta-organizations due to the competition for actorhood among members and the absence of a higher-level governance authority to enforce compliance.

Altering Power Relations in Defining AI Fairness: A Process of Negotiation from the Mammoth Project

The fairness of Artificial Intelligence (AI) systems is at the centre of many debates, but there are different perspectives on what it entails. At present, technical approaches dominate the scene. Discourses on AI fairness are frequently structured around the proposition of technical solutions designed to address algorithmic biases. This approach tends to privilege a computer science perspective on the problem and frequently fails to address the social context in which these systems are constructed and to recognise the diversity of opinions regarding what constitutes fairness when different stakeholders are involved in the discussion. As part of the EU-funded MAMMOTH project, we investigated a) how the problem of fairness in AI is approached by different disciplines through 29 interviews with experts from both computer sciences and social sciences, and b) how fairness is perceived by those groups who are often discriminated and marginalised by AI systems through 6 co-creation workshops and a survey which collected 171 responses. While the results show different approaches to fairness across the participants, they also help to identify a common ground on which to build a lay-socio-technical view on the issue. The presentation will demonstrate how these disparate approaches and opinions have been reconciled within the MAMMOTH project, and how fairness has been negotiated both between disciplines and in order to translate the concerns of vulnerable groups into technical requirements. The transition towards a lay-socio-technical perspective on AI fairness necessitates the redefinition of current power relations. These include the rebalancing of power between disciplines, where computer science currently holds a more dominant position than social sciences in determining the direction of technological development, and between experts and lay people, as people from vulnerable groups are often left out of the conversation.

Lgbtia+ Churches and Groups in Brazil and Christian Mystical Experiences

This article is a result of a doctorship thesis about the mystical experiences of LGBTIA+ christian people and their impacts on the creation of LGBTIA+ churches and groups in Brazil. The interlacement between two areas of knowledge was explored: sociology of religion and queer and gender studies, with an emphasis on the subareas: mystical experiences and queer and LGBTIA+ theologies. The general objective of the research was to identify LGBTIA+ churches in Brazil, describe and understand the mystical experiences related to the theologies advocated by these groups, as well as knowing the life stories of some of these leaders and tactics of diffusion of these experiences. Considering that traditional christian theologies reject sexual and gender diversity as a serious sin, it attempted to understand the doctrinal changes and transformations that occurred so that these LGBTIA+ groups could be welcomed within religious communities or create their own. It was a qualitative research with a comprehensive disposition, adopting a multidisciplinary view of the researched phenomena and using the life story methodology. To achieve this goal, a bibliographical review was carried out on the topic in academic, journalistic and ecclesiastical documents. The fieldwork included multiple data collection mechanisms, which included group observations and semi-structured interviews, via video calls during the COVID-19 pandemic, with eight LGBTIA+ people in leadership positions in their respective churches or religious groups. It sought to understand the life trajectories of these people and how mystical experiences changed themselves and the world around them. It is concluded that mystical experiences marked their life stories, with important impacts on the construction of churches and LGBTIA+ groups in Brazil. At the same time, several doctrinal divergences were observed between these churches, due to different views regarding sexuality and sexual morality to be adopted by people in their relationships and daily behaviour.

What Is a Victim? State Legibility in the Context of Disasters

Political scientist James C. Scott has revealed how the certainty with which states attempt to manage the social according to defined categories of observation has dynamics and consequences that sometimes produce state blindness (Scott, 1995; 1998). These projects of "state legibility" are simplifications that serve as tools for the modern state. State officials generate standardized categories or labels, which make their management

easier but also run the risk of hindering it. While for the state, the categories used often appear rational and objective, there is no single way in which states can observe the social. The categories used, far from being objective, respond to specific policies and administrative cultures. In the case of reconstruction processes, the category of "victimized" becomes very relevant in public policies since it allows access, or not, to a series of recovery and reconstruction benefits. Likewise, it is important for the state to achieve a definition of victim that is legitimate in the eyes of society, precisely because of the large amount of resources that are channeled as a result of it. In this article, I explore the case of Chile, a country historically used to earthquake, that has build institutions around this threat. Climate change, however, has posed new challenges to the state, and the ways it uses to see, understand and manage disaster victims. Ten years of public policy relating post disaster recovery efforts are analyzed and 20 interviews were made to understand state legibility efforts in the context of disaster recovery.

Futures Found and Lost? Revisiting Post-Work Imaginaries in an Era of 'polycrisis'

The 2010s saw increased enthusiasm for a particular vision of a post-work society, promulgated in response to the Global Financial Crisis. As a projective vision caught between utopia and manifesto it offered long-term hopes for abundance and leisure alongside short-term policy prescriptions of stronger welfare protections, state-led technological development and a cultural assault on the work ethic. Echoing figures such as Andre Gorz, Bertrand Russell and Paul Lafargue, 'post-workism' updated the notion of the leisure society for the information age but failed to grapple with limits on plausibility imposed by unfolding ecological crises. Demands for a post-work world have since ebbed to silence (again), even while the Covid-19 pandemic led to a dramatic hiatus in capitalist activity that reportedly sparked a 'great resignation' among those few who both glimpsed the possibilities of a life of meaningful activity outside the workplace and had the resources to pursue it.

This paper revisits the prognosis for the leisure society, exploring what remains of these visions if abundance were to be replaced with sufficiency. It identifies elements that might serve as both practical solutions and compensatory inducements to a socialism that forgoes the promise of material economic growth. Firstly, post-work ideas offer a re-evaluation of both work and leisure appropriate for futures in which much daily activity might be oriented toward local ecological restoration, mutual aid and community care in the context of multiple crises. Secondly, the emphasis on the near-zero marginal cost of digital products holds out hopes for continued gains in productivity in the information work required for building new forms of socio-economic organisation as well as the promise of the free circulation of patents, designs, entertainment and digital cultural products of all kinds. Finally, the question of whether such visions can grow beyond their roots in the global north is addressed.

Building Power Resources: Local Organising, Transnational Union Networks and the Regulation of the Shipbreaking Industry

The power resources approach has been used as interpretive lens in labour studies to understand the potential for unions to mobilise different forms of power and their combination and interaction. Many studies that use this approach have focused on the use of power resources to support organising in local workplace or industry contexts but there have been few studies that have conceptualised the supranational interaction of power resources. In this study we utilise the power resources approach to interpret multi-scalar worker organising and representation in a specific industry, employment, and geographic context: precariously employed workers engaged in shipbreaking in India and other South Asian nations. We seek to explain: 1) the relational interaction between local unions and unions at other geographic resolutions, most especially global unions; 2) the combination and mobilisation of power resources, especially associational, ideational, and institutional power; across geographic scale 3) the need for a dynamic rather than a static conceptualisation of union repertoires of action and access to power resources over time. Our study focuses on sustained and coordinated work by local and global unions over several decades to combine and deploy power resources, with associated repertoires of action, to improve working conditions and rights in this most precarious and dangerous of industries. In particular, we show how these efforts have supported local union organising and impactful health and safety interventions, most especially in India. The

formation and resourcing of regional and global union networks has also supported local unions but also provided organisational and campaign platforms to influence national and global authorities on the design and implementation of the regulation of the industry and its working conditions.

HIGGS, PAUL (University College London, United Kingdom)

The Sociogenesis of Later Life

This paper outlines the necessity of establishing a sociology of later life that is firmly located within contemporary social theory. While there exists considerable overlap between the sociology of ageing, ageing studies and social gerontology, what distinguishes a sociology of ageing and later life is its location within sociological theory. The present paper argues that the application of theories derived from the work of Bauman, Beck and Bourdieu can provide a solid basis for understanding the social changes that are contributing to the formation of later life as an emerging social space in the societies of the 21st century. In contrast to the position that old age occupied as a status or stratum of society. In pre- and first-modernity, the social changes of the last half century have seen a less constrained and more diverse social space reconfiguring the positions occupied by old age. From the work of Bourdieu we draw upon his notions of social space and the social field as a defined and delineated arena within social space. From the work of Bauman, we draw upon his work on consumerism and its role in forming generational identities and practices in 'liquid' modernity; and from Beck, we draw upon his re-working of the social processes of modernisation and the role that the cosmopolitanisation of everyday life plays in shaping the life course. In conclusion, this paper puts forward the case for reconfiguring the sociology of ageing as a sociology of later life and illustrates some of the vectors by which these social changes are emerging.

Being in a Legal Vacuum: How Unaccompanied Minors in France Deal with Biographical Uncertainty

In France unaccompanied minors are taken care by child welfare without the need for a legal status until they reach the age of 18, accessing their rights is not always straightforward. If they are not recognized as minors, they find themselves caught in a twofold "in-between": **In between two public policies** (*Child protection vs. migration and refugee policy*) and **In between two age categories** (*Minority vs. Majority*). They are in a legal vacuum, because the appeal against the children's judge **does not** suspend the contested decision (majority). As a consequence the young migrants are **considered adults** by the Youth Welfare Office, but **considered minors** by other public and private actors.

In Strasbourg, some of these "majeurs" (neither minors nor adults) find refuge at the Centre Bernanos, an association that helps them to cope with the many sources of uncertainty: asylum applications, appeals to the children's judge, applications for residence permits, housing, schooling and health care. In the presentation, we would like to discuss how the association, the professionals and, foremost, the youngsters themselves deal with the situation of uncertainty, precariousness and mistrust. How can professionals develop sensemaking projects with them if their immediate future is uncertain? How do the youngsters themselves deal with the daily uncertainty due to their "non-status"?

Our analysis is based on an action research with UAMs, professionals and researchers and students who are part of the French-German research group *Migreur*. We conducted narrative biographical interviews with UAMs, former UAMs, support families, lawyers, teachers, psychologist, social workers, and associations that take care of UAMs, in order to explore the scope of action of UAMs according to their educational and professional integration. Our analysis shows that despite all odds these young adults remain actors of their lives and pursue their goal of schooling.

 DELCROIX, CATHERINE (University of Strasbourg, France)

The Migreval Database: Methodological Contributions of a Restricted Access Qualitative Database in the Sociology of Migration

The "Migreval" database aims to share data on the sociology of migration in a comparative Franco-German context. It was created in 2006 by a network of Franco-German researchers from the Universities of Strasbourg and Frankfurt am Main. It works on international migration using qualitative approaches, in particular life stories and the method of biographical policy evaluation. The network is the successor of a doctoral seminar between the two universities set up by Ursula Apitzsch, Daniel Bertaux, Catherine Delcroix and Lena Inowlocki. In 2014, it was supported by the Franco-German University (UFA/DFH) to carry out joint research on the biographical evaluation of language learning policies for migrants in Strasbourg and Frankfurt and, in 2021, an action research on the fields of possibilities for unaccompanied minors (MNA) in France and Germany.

The Migreval database allows in-depth analysis of over 250 biographical narratives of migrants and migration actors in two different national contexts over time, sometimes nospanning several decades. It also facilitates collaboration between different researchers and the development of theoretical concepts across national and linguistic borders.

The presentation discusses how the creation of a qualitative database is in fact inseparable from the organisation of regular collaborative research seminars between database users, and shows with the help of concrete examples of our current projects how this tool promotes horizontal research practices.

Catholic support for mental health and spiritual problems. Linking religious knowledge, medical discourses, and human rights

Religious and medical knowledge have been intertwined at different historical moments. Beyond the opposition between scientific and spiritual discourses, different institutional dynamics have coincided in practices that relate to subjects, bodies, and communities. In contemporary Western societies, we observe the emergence of a demand for attention to non-specific ailments defined in the interstices of the physical, the psychic, the emotional, and the spiritual. In the face of these ailments, it is challenging to identify a specific disciplinary area of expertise, and there is an increasing demand for specialists in various fields: psychiatrists, pastors, priests, and coaches. The increased demand for healing and exorcism in the Catholic field reflects this dynamic. The practice of rituals of healing and exorcism, which has increased in the first decades of the 21st century, generates groups of "specialists" made up of committed lay people and nuns, often including doctors and psychiatrists. My ethnographic fieldwork allowed me to deepen the pastoral, ecclesiastical, and ideological positions of the faithful involved in the plural healing practices. As a result of my research, I can conclude that the representations of sociability, the body, and the Church are traversed by contemporary concerns related to sexuality and mental illness. Discourses about minorities, especially LGBTIQ minorities, emerge unexpectedly in this environment, straining the conservative Christian ideology that often shapes church groups.

GIRARDI, DAVIDE* (Salesian University Institute of Venice, Italy)

The Quasi-Citizenship of Young Descendants of Migrants in Italy: A Central Issue

This paper focuses on the experience of young people with a migration background in Italy. It has progressively consolidated, at least from a quantitative point of view. The increase in their presence in schools, their voice experiences through associations, and the growing space in the public debate have not yet translated into a systemic recognition. Still too often, young Italians with a migrant background are de facto Italians, without being so either in law - in the absence of a complete citizenship reform - or in terms of public rhetoric.

This situation entails for the descendants of migrants a field of possibilities characterised by multiple vectors of tension. From this point of view, their experience observes a *habitus* of "quasi-citizenship". On the one hand, young descendants of migrants act it out and put it in tension by identifying and tenaciously experimenting with spaces of substantial citizenship (school, associationism, informal practices). On the other hand, this *habitus* is repeatedly objectified by an almost limbic situation in which the horizon of citizenship by birth is repeatedly evoked as a goal now "imposed" by an accomplished quantitative presence but subsequently sacrificed insofar as it is defined as not a priority in the face of other "urgencies" of the country. This continuous postponement no longer takes on the appearance of a haphazard succession of disconnected practices of disavowal, but rather a sort of confirmation of those material and symbolic field constraints that continue to hinder the participation of young descendants of migrants in Italy. This "quasi-citizenship" then becomes a space of conflict between enabling and normalising practices, between voices from below and attempts at reconfiguration from above; but it also becomes a strategic space on which the chances of future participation in Italian society of young descendants of migrants depend in many ways.

GIRÓN GONZÁLEZ, ALICIA* (University Program Studies on Asia and Africa - UNAM, Mexico)

China's Belt and Road Initiative through Renewable and No Renewable Resources in Africa. Institutional Investors and Mutual Fund through the Chinese Corporations

The purpose of this paper is to expose the large investments of Chinese corporations in African countries, as well as to list the institutional investors and mutual funds that participate in these companies, considering the concept of "Haute Finance" and the implications for the economic and financial independence of African countries. Karl Polanyi in his book *The Great Transformation. The political and economic origins of our time* alluded to "Haute Finance", as a sui generis institution, typical of the last third of the nineteenth century and the first third of the twentieth, which functioned as the main link between the political and economic organization of the world. This period of history re-emerges in the face of the emergence of the geoeconomic, and political power achieved by China with its state-owned corporations. Corporations that are investing in Africa and in Latin America and the Caribbean based on the interests of the production process of the world's second power. A dialectical process between the needs of natural resources for climate change and the digital economy, as well as the need to increase investments, employment, productivity and greater profits. The companies analyzed in the presentation have totaled more than 145,310 million dollars. The financing is being provided in partnership with Policy Banks, Merger and Acquisitions (M&A), Foreign Direct Investment (FDI) + Policy Bank and Greenfield financing. Even private investors such as Black Rock and Vanguard, with the participation of these multiple institutional investors and mutual funds being the most important. In conclusion, a new financial geography in a regime of financial accumulation is gaining strength.

RC40-JS-124.1

GIUDICE, GIORGIA* (wageningen university & research, Netherlands)

Geo-Photovoice to Capture Desertification Landscapes and Perceptions

GeoPhotovoice aims to explore environmental problems while bringing together art, human geography and ethnoecology. It innovatively combines the adoption of a visual anthropology method (photovoice) together with the use of maps and remote sensing images. This combination in a research project can create a powerful and comprehensive approach to understanding and addressing complex issues such as environmental change, resource scarcity, community resilience, and land use. GeoPhotovoice, visually connects macro and micro levels of investigation allowing for the integration of quantitative visual data at a broad scale with insights that can only emerge from a more in-depth, context-sensitive investigation.

This case-study is about a visual synthesis that aims to understand the perceptions of farmers and shepherds of desertification in Sicily by combining community-driven visual narratives (photovoice) with scientific data from remote sensing and thematic maps. The goal is to develop a holistic approach to land management and climate change that incorporates on the one side local experiences, challenges and knowledge, and on the other scientific analysis and understanding of the phenomena. Specifically, remote sensing images and maps help observing changes in land use, water resources, wildfires, deforestation and environmental degradation over time and space, and therefore they help to study, to understand and to frame desertification as a scientific, measurable phenomena. However, while remote sensing and

maps are essential for gathering large-scale data and to visually communicate complex data and trends, it is fundamental to go beyond this narrative in favor of pluralistic one. This is why this research coined GeoPhotovoice method with the aim of studying environmental problems not only as scientific, technical and measurable phenomena. Rather, it aims to explore the narratives coming from community understanding, feelings and everyday actions related to the causes and effects of desertification, and to more general natural resource management and climate changes issues.

RC34-564.3

GIUFFRÈ, LUCA* (University of Milan, Italy)

Practical Digital Literacy: Exploring Practical Reasoning behind Teenagers Everyday Social Media Consumption

Social media are one of the main matter of concerns regarding teenagers. These platforms in fact entered young people's everyday life as complex sociotechnical infrastructures capable of supplying a constantly tailoring flow of content. Moreover, the growing time spent on along with possible negative outcomes spread out moral panic and anxieties (Rao & Lingam, 2020) which drive today's debate towards the need of educating youths to be digitally literate.

Approaches to digital literacy however tends to be fragmented and normative when it comes to defining adolescents' beneficial uses of platforms (Pangrazio et al., 2020). For this reason, I argue digital literacy research lacks in considering teenagers practical understandings of social media experiences, that is the practical knowledge to competently partake on said platforms which I refer to as *practical digital literacy*.

This research therefore aims at unravelling how teenagers consume and interact with social media content and which criteria are employed to define content of quality. The theoretical framework is drawn upon the work of Pierre Bourdieu who conceptualised practices as manifested embodiment of social structures deployed to properly participate in fields of consumption (1990).

To this purpose, I conducted an ethnography in 13 classes from 6 high schools in Italy. Students were involved in activities built on the embedded lesson approach (Dennen & Rutledge, 2018): a methodological stance for delivering lectures while collecting data through fieldnotes, group interviews and a survey. The analysis merged thematic clustering of qualitative data to the multiple correspondence analysis of the questionnaire, that is a statistical method for enhancing interpretability between consumption patterns and sociodemographic factors (LeRoux & Rouanet, 2010).

The findings expand the current understanding of youth practical reasoning rooted in a platformized social life (Caliandro et al, 2024) which is fundamental to reconceptualise digital and media education activities.

RC57-866.3

GIULIANI, GAIA* (Centre for Social Studies - University of Coimbra, Portugal)

A Scene of Lynching. or of the Coloniality of Italian Present.

In Italy, both high culture and "low," "popular," and "mass" culture retain enduring "figures of race" used to identify and define an alleged Italian 'difference' and superiority, establishing hierarchies of race and whiteness that severely impact people's lives. These figures are made of symbolic materials resurface today that give body to narratives that are more or less openly racist which are stored in Italian "colonial archive" (Ann Laura Stoler) and the "national archive of race" (Gloria Wekker). These archives have been constructed over centuries through what Del Boca calls "internal colonialism" and the Italian colonial enterprise, alongside colonial and racist meanings circulating in Europe through flows of ideas, images, and practices established at the four corners of empires. These materials, although discursive, possess the power, through institutional and social practices, to render vulnerable and expose to violence and death those who are identified as not belonging to the imagined national community.

To better illustrate how colonial and racial archives are reactivated today in a post-colonial context, my essay focuses on a critical reading of the latest tragic event in this long (and certainly partial) list: the murder of Alike Ogorchukwu, a 39-year-old Nigerian street vendor, in Civitanova Marche on July 29, 2022. This act was perpetrated by Filippo Ferlazzo, a thirty-year-old worker of Salernitan origin. In the following pages, I will attempt to offer a nuanced reading of this event, on one hand through an analysis of the Italian media landscape concerning migrants and migrations, and on the other hand through an examination of the similarities—and substantial differences—between this event and the scene of lynching, a specific historical mode of racist reprisal. This "scene" is evoked by the specifics of the event as it unfolded and how it was immediately sensationalized in the media.

GIULIANI, GIOVANNI AMERIGO* (University of Bologna, Italy)

DE LUIGI, NICOLA (University of Bologna, Italy)

CATTANI, LORENZO (University of Bologna, Italy)

Gender Attitudes and Modernization in Italy: The Persistence of Social Class

The theory of modernization asserts that as a society attains significant levels of existential security, people become more receptive to adopting new social norms that match emerging post-materialist, such as gender equality (Inglehart, 2008; Inglehart & Norris, 2003). The rise of secularization, increased educational attainment, greater participation of women in the workforce, and elevated divorce and single motherhood rates have catalyzed a movement towards gender equality values (Inglehart, 2018; Shorrock, 2018; Emmenegger & Manow, 2014). Consequently, the proportion of individuals embracing egalitarian or progressive views, advocating against gender-based segregation within and outside the household, has significantly grown (Inglehart, 2018). This demographic now surpasses in various national settings those adhering to conservative or traditionalist beliefs favoring gender-specific roles, where women are predominantly assigned caregiving responsibilities (Pavolini and Scalise, 2022; Giuliani, 2024).

An important but still underexplored analytical dimension of this phenomenon relates to geography and regional differences (Lomazzi, 2017). When considering the Italian case, these elements are particularly relevant, as the country exhibits marked differences between North and South. To explore these dynamics, this present study utilizes data from the 7th wave of the World Values Survey (WVS) and performs bootstrap linear regression and dominance analysis, with clustered standard errors.

Results show that while – consistently with modernization theory – age, gender, education, and religiosity are correlated with more egalitarian attitudes, the urban-rural continuum – an essential component of classical modernization theory – appears less relevant. Instead, the occupational class of employment is a significant predictor of progressive gender attitudes, especially among higher-skilled individuals such as managers and professionals. Specifically we observe that education and social class mediate the relationship between gender attitudes and town size. These findings challenge certain assumptions of modernization theory and underscore the importance of class-based analyses in understanding the evolution of gender attitudes in Italy.

GLAUCIA KRUSE, VILLAS-BÔAS* (Universidade Federal do Rio de Janeiro, Brazil)

The Politics of Brazilian Contemporary Art

In this text, I compare the works and speeches of Adriana Varejão and Ernesto Neto, Brazilians belonging to a successful generation of contemporary art artists. I inquire about the notions of past, present and future that are inscribed in their works and how the singular temporality of their works is associated with the content of the mission they attribute to art. My hypothesis is that in the transition from modern art to contemporary art, the prerogative of art imagining/fantasizing a single future was discarded, however, the intention of bringing it closer to the spectator was maintained. The policy of approaching art, however, has undergone such a turnaround that it is no longer just a question of awakening the spectator's feelings or making him a being endowed with sensitivity, but, effectively, of inviting him to political participation.

Climate Justice and Transitions: Redressing Inequalities and Dismantling Structures of Oppression

A transformative approach to just transition calls for dismantling systems of oppressive power such as colonialism, cis-heteropatriarchy and racial capitalism. A radical transition aims to redress structural inequalities, de-emphasize large-scale institutions and market-based solutions, and strengthen civil society. Across the world, First Nations peoples, people with Lived Experience and local communities are demanding that climate justice is the foundation of transformative transition planning and implementation. Some features of climate justice in transitions include addressing intersecting inequalities, climate reparations, First Nations sovereignty, and community-led disaster prevention, preparation, response and recovery.

This paper examines community demands for climate justice and transition with a critical case study of a rural community transitioning from the extraction and burning of fossil fuels in Western Australia. It explores tensions and conflicts for minoritised communities in a government-led transition that is predominantly industry and worker-focused. The paper highlights a range of community-developed strategies for upholding the rights of First Nations land, peoples and community in transition policy and practice. Some examples include First Nations governance of transition decision-making; strengthening community relationships and collective care; privileging more-than-human participation; and, ensuring equitable redistribution of transition resources beyond industry to address the needs, health and wellbeing of all community members and place. The paper argues that First Nations and intersectional climate justice is imperative to equitable and inclusive transitions.

A Case for a Global Ecological Regime: How to Foster Resonance on a Planetary Scale

The need for sustainability should be understood as the motivation of Ellis' (2020) insight on the need of a global ecological law. This new branch of law would also entail a new way of articulation the notion of subjects of law. Drawing from the brief Latour's (2014r) reformulation on the concept of natural law and the law of the nations, Ellis (2020) argues for a new law system focused on stabilizing expectations on how to save humanity from itself. The concept of Anthropocene unveiled the collective capacity of the humanity to change our planet in a geological scale: the planetary systems were not independent of the human actions, but our capacity to change the Earth would be pivotal on dictating how the planet would keep evolving. So, instead of a natural law that is transcendent to humanity and that could be only unveiled by specific prophets, law should be understood as a set of rules focused on ensuring our collective survival against the world that we are creating for ourselves. Sustainability, then, could be understood as a cognitive device to measure how our actions are impacting the planet, specifically if they are contributing to ensure our collective survival. That means that a global ecological law can be devised as a means of coordinating and synchronizing the actions of organizations towards our collective safety. This law would operate through a system based on science and law, creating a regime following Teubners concepts. The code sustainable/unsustainable would ensure a stronger resonance (Luhmann, 1986) between society and its physical environment. That should happen through the cognitive dispositions of science, that would select the communications about the physical environment, and of law, that would then process that information in terms of its relevance to a governance system of rules on global ecology.

Escaping the Trap of Temporary Employment: Precariousness Among Young People before and after Spain's 2021 Labour Market Reform Act

Temporary employment has been the core dimension of employment precariousness in Spain for decades. In December 2021, a labour market reform aimed at reducing the use of fixed-term contracts, which especially affected young people, was passed. This research compares the situation of young workers before and after this labour market reform, with the objective of identifying internal differences among this age group. The results show a substantial reduction in the prevalence of temporary employment after the reform, although they also show that temporary employment, as well as incipient forms of precariousness such as involuntary part-time employment, are more concentrated than before among the most disadvantaged in this age group, following traditional patterns of segmentation in the labour market. This research, therefore, provides insights into which profiles of young workers were better off after the reform and which were not, offering valuable lessons for other countries with similar labour market challenges.

Overall, the labour market reform approved in December 2021 has somewhat improved the situation of labour market precariousness that a very high percentage of young Spanish workers were experiencing at the time. This indicates that the effects that certain policy recommendations based on economic orthodoxy have had on the working population can be counteracted by political action, by passing the necessary legislative reforms. However, greater monitoring and sanctions by government against the fraudulent use of certain types of contracts is necessary to prevent employers from misusing legally and formally accepted employment contract types. The increase in involuntary part-time employment in elementary occupations could be an indicator of this misuse, with companies hiring part-time workers to perform tasks that are in reality full-time.

GODSHAW, DAN* (University of Bristol, United Kingdom)

Immigration Detention, Masculinities and Dishonourment

Immigration detention is used across the world to contain and intervene on the mobility of those deemed to lack the legal right to remain within states. Detention centers, including those in the UK, have been shown to be sites in which detainees are subject to a plethora of harms. In the UK, immigration detention is primarily targeted at men, and especially men racialised as brown and black. Yet there is little work that explores the harms of immigration detention through the combined lenses of masculinity, race and harm when considering the impact of these carceral practice. I argue in this paper that the state exerts gendered violence on men through detainment by subjecting them to a process of profound dishonourment.

Given that honor is central to hegemonic contestations of masculinity, and that dishonourment – the evacuation of autonomy, integrity, and wholeness – is posited by Orlando Patterson (1982) as integral to the production of colonial power, I argue that dishonourment via detention intervenes on the production of masculinities, limiting access to gendered repertoires that confer legitimacy, and subordinating racialised men to the violence of the gendered state. This process functions in part produce docile, disposable and deportable men, altering masculinities in the process. Drawing on interviews, artwork, and other qualitative material from an ethnography of male-only immigration detention centres in the UK, this paper explores the ways in which men experience and respond to dishonourment in detention.

GOENKA, RICHA GOENKA* (Rishihood University, India)

Who Is Insane? : From Psychiatric to Sociological Explanation of Mental Health Issues

This paper challenges the individual-focused explanations of psychiatry for mental health issues like anxiety disorders, offering a sociological perspective instead. Based on the analysis of 30 case studies, I observed that individuals with these disorders often possess traits like deep self-reflection,

a strong moral compass, better understanding of emotions and concern for others' emotional well-being. These individuals, often seen as immature by their peers, struggle to conform to traditional definitions of success. They internalize values such as honesty, empathy and passion, which society outwardly promotes but inconsistently practices.

Building on the Power Threat Meaning (PTM) framework proposed as an alternative by some psychologists to the Diagnostic Statistical Manual of Mental Disorders, society functions with coping mechanisms divided by power hierarchies. Those at the top reject the idealistic values focusing on profit. People lower in the hierarchy live a dual life—outwardly espousing the idealistic values but privately adopting behaviors to succeed. Some feel conflicted yet maintain this duality for survival, while others use defense mechanisms like denial to adapt.

However, individuals with mental health issues often refuse or are unable to adopt this duality, remaining true to their values. This challenges the implicit social contract maintained between different levels of power hierarchy, leading to their diagnosis with mental disorders. Psychiatry, as Thomas Szasz argued, serves as a tool to label those who resist societal norms.

Psychotherapy for these individuals involves two paths: helping them conform to societal expectations or fostering their strength to maintain their integrity against immense social pressure. Both paths are challenging, with the latter requiring resilience that can lead to emotional breakdowns. Ultimately, this paper suggests that these individuals' mental health issues stem from their struggle to adapt to the hypocrisy inherent in the society. It also explores other options to address their mental health struggles more effectively.

Sexual Violence Among Gay and Bisexual Men – an Exploration

Sexual violence remains an issue that pervasively shapes gender relations. Yet, its role in the lives of gay and bisexual men and thus their specific entanglement within gender relations has received limited scholarly attention. This presentation explores the part that sexual violence may play in gay and bisexual masculinities and life courses. This investigation promises unique insights into broader questions of gender relations and the lived experiences of LGBTQ+ individuals.

Drawing on both quantitative and qualitative studies, this presentation reviews the state of existing research while introducing preliminary findings from a dissertation project based on biographical interviews with gay and bisexual men. Early results suggest a heightened vulnerability to sexual violence at critical points in life, particularly around the time of coming out, first interactions with other gay men, and initial sexual experiences. They will be presented in the form of short case studies, which demonstrate that the experiences of discrimination and concealment during youth and adolescence exacerbate this vulnerability, making young men more susceptible to predatory behavior.

By examining these biographical trajectories, the research contributes to a deeper understanding of how sexual violence impacts gay and bisexual men and sheds light on the ways in which heteronormativity entangles violence, gender and sexuality.

GOFFRE, NORA* (Rennes 2, France)

Integrating Trauma-Informed Approaches into Sociological Research: Methodological and Ethical Innovations

The issue of **trauma** has long been considered the domain of psychology. As a result, it has been largely **overlooked by sociologists**, even by those conducting fieldwork with **psychotraumatized individuals**. By overlooking the contributions of psychotraumatology, traditional qualitative research techniques in sociology can inadvertently contribute to **silencing survivors**, **triggering trauma (PTSD)**, and even **retraumatization**. These canonical methods may also contribute to the underestimation of the scope of these forms of violence and their relevance as key variables in sociological inquiry, in addition to raising important ethical concerns.

Informed by my background in **socio-anthropology** and **psychotraumatology**, I have developed a research protocol incorporating **popular education methods**, notably the **Theatre of the Oppressed**, during my PhD research on paid domestic work in Bolivia and Peru. I will analyze how this methods have provided valuable insights into **gender-based violence** and **trauma**, while challenging traditional epistemological and ethical frameworks in qualitative sociology.

I will argue that these tools are especially relevant to research involving individuals who experience **mental health issues as a consequence of violence**, as they create safer environments for participants to articulate their experiences of violence, its structural causes, and its mental health impacts. Additionally, these approaches are crucial from an **ethical standpoint**, as they are more respectful of the needs of psychotraumatized individuals, ensuring that research practices do not inadvertently re-traumatize or silence participants, particularly regarding **stigmatized issues** like **sexual and gender-based violence** and **mental health**.

GOGESCU, FIONA* (London School of Economics, United Kingdom)

Understandings of Educational Privilege in Germany and Romania

This paper uses mixed methods to investigate how individuals from Germany and Romania perceive and conceptualise educational privilege. First, using population-level data from Round 9 of the European Social Survey, I construct a variable named 'perceptions of privilege' that measures the difference between the perceived fairness of respondents' own chances to get the educational level sought, and the perceived fairness of educational opportunities for everyone else in their country. To investigate the reasons for the differences observed regarding the perceived (un)fairness of opportunities, this paper employs semi-structured interviews with elite students from both Germany and Romania. These students can provide an insider's perspective into what constitutes educational privilege in these two countries. It was found that Romanian participants associate educational privilege with both cultural and financial resources, while German participants associate educational privilege mostly with cultural capital. The conceptualisations of educational privilege can be understood in the context of educational stratification in Romania and Germany. Thus, in line with findings by Matsuoka (2019) this article found that the strategies employed by parents who engage in concerted cultivation (Lareau, 2011) to gain educational advantages differed depending on the timing and requirements of high-stakes educational transitions in different educational systems. This article contributes to the limited research on whether and how highly educated people acknowledge and conceptualise their privilege (Friedman et al., 2021; Walgenbach and Reher, 2016; Power et al., 2016) by exploring privilege not as a contradiction to individual merit, but as the resources and opportunities to effectively channel effort and develop talents.

GOH, LAURA* (University of New South Wales, Australia)

Diverse Pathways to Cohousing: The Australian Experience

Interest in cohousing continues to grow in Australia, yet the pathways to achieving this form of collaborative housing are varied. This paper examines the distinct journeys of cohousing in four different Australian states: Australian Capital Territory, New South Wales, South Australia and Victoria. Statutory planning reforms, experimental housing programs, and tribunal resolutions have all contributed to the recognition of this model. Enabling this housing model to thrive would offer a shared, more sustainable community living experience. Why, then, is the journey so diverse? Through policy analysis, grey literature review, and semi-structured interviews with government representatives and cohousing groups, this paper seeks to understand the reasons behind the variation in approach. Comparisons between the cohousing outcomes achieved through formal planning reform versus experimental governance programs are explored. Cohousing is a diverse housing type, with residents adapting the form to suit their context, environment and needs of the group. This research questions if the regulatory structures in place to support cohousing in each case study jurisdiction are robust enough to support diversity of form. The paper provides insight into the complexities of introducing a new housing type across different planning systems, establishing a base for future international comparative work.

A Bright Future, but for Whom? Infrastructural Promises and the Reproduction of Inequality

This article focuses on the High Speed Railway 2 (HS2) that is under construction between London and Birmingham, United Kingdom, to examine how its "promise" (Anand, Gupta, and Appel 2018) of a better, greener, faster, more equal, and more prosperous future has helped reproduce inter-regional inequalities between the South and North of England. While initial proposals of this infrastructure project, originally planned to be the largest in

Europe, offered the closing of the gap between the prosperous South and the struggling North, the recent cancellation of the project's northern leg exposed the government's foregrounding of the South in decisions relating to financial and infrastructural investment. The discontinuation of the HS2 led to an outcry in the North, which expressed feelings of disappointment, abandonment, and their future being cancelled. Based on participant-observations at community events and interviews with local authorities, HS2 managers, and members of affected communities in London (in the south-east of England) and Crewe (in the north-west of England), this paper questions who the real beneficiaries of this mega infrastructure project are. It examines how promises of jobs, greater connectivity, and economic relief legitimised public spending on the HS2 only to reproduce inter-regional inequalities between the South and the North.

Horizontalism As Strategy: A Critical Analysis of Strengths and Limitations

In the last few decades, the Alter-Globalization movement, the Arab Spring, and the Occupy movements around the world have favoured horizontalist modes of organization, typically combined with principles like de-centralization of power, anti-hierarchy, anti-institutionalism, and non-violence. As the popularity of horizontalism made it a staple of the contemporary repertoire of contention, its merits as a strategy have either been unquestioned, or entirely dismissed. Based on two years of fieldwork and ethnographic interviews with anti-authoritarian grassroots activists in Istanbul, Turkey between 2016 and 2018, this paper critically analyzes the strengths and limitations of horizontalism as a strategy. Grounded in my empirical findings and engaging with both theoretical and empirical work on horizontality and political organization, the paper draws out the lessons learned from the past decade's experiments with horizontal organization. The aim is to reflect on ways to move beyond the binaries of the Old Left and the New Left, horizontal and vertical, and tactics and strategy, in a bid to contribute to discussions on strategies that are suitable for achieving transformative social change in our current socio-political conditions, across various political regimes.

GOLDHAUSEN, JASMIN* (University of Bayreuth, Germany)

Decolonizing Universities from within? Challenges and Chances of Academic Activist Work

Universities play a central role in the legitimization, production and dissemination of knowledge. These processes are political and are involved in various forms of (re)production of social inequality. For example recent developments in higher education policy, such as the ongoing economization of universities worldwide, further reinforce intersectional inequalities and colonial continuities despite a supposed institutional commitment to social justice and diversity. (cf. Brunner 2023; Gutiérrez-Rodríguez et al. 2016; Stein & Andreotti 2016).

Decolonial and feminist social movements have been demanding and shaping a power-critical analysis and transformation of the higher education system for decades. But how is it possible to advocate for a more just transformation of society and science within an institution whose foundations, logics and practices repeatedly contradict this concern? Especially when "critical knowledge projects" (Collins 2019) like decolonial or intersectionality studies are currently being increasingly discredited and threatened by anti-woke sentiments?

In my doctoral project, I approach this paradox from the perspective of precarious early career academics at German universities who try to advocate for a Decolonization of science and higher education as "scholar activist" (Collins 2017) while "deal[ing] with the dialectics of un/doing epistemic violence" (Brunner 2023) in their academic work. More specifically, the focus of the research lies on the resistant strategies and (everyday) practices that these actors develop in the conflicting academic field of ethical contradictions, (colonial) power asymmetries and unequal working conditions. For the analysis, a qualitative intersectional approach will be applied, including problem-centered interviews and participatory workshops. The aim of the project is to collect and jointly develop limits and possibilities for concrete political interventions as well as everyday resistant thinking and action strategies within outside and against the neoliberal university.

GOLDMAN, MICHAEL* (University of Minnesota-Twin Cities, USA)

Hidden Empire of Finance: How Wall Street Profits from our Cities and Fuels Global Inequality

The lecture reflects the idea of 'following the money' circulating across cities and their infrastructural projects -- from Bengaluru (India) to Chicago (USA) to Valencia (Spain). I trace the unregulated capital flows from shadow banking LLCs in places like the Cayman Islands that 'invest and exit' their liquid capital across fixed-capital infrastructure, often leaving in their wake socialized forms of debt. I portray this historical conjuncture, conceptually, as *speculative urbanism*, a set of practices in which global finance plays an increasingly important role in urban transformation, governance, and everyday city life. I suggest an analytical-methodological approach that is attuned to global finance's relentless dynamism and inter-scalar hyper-mobility working across the postcolonial map -- what can be called a *relational-conjunctural approach*.

Whereas the scholarship on urban financialization makes sharp distinctions between what occurs in the global North and South, portraying the process in the South as one of subordination or peripheralization and in the North as mature and stable (although volatile), this talk seeks to demonstrate that the North-South divide is less effective as an explanatory power.

By contrast, I look closely at finance's use of inter-scalar tools (such as arbitrage, interest rate swaps, collateralized debt obligations, currency hedges) designed to work *across* borders, sectors, infrastructures, and conditions, as mediated by state actors. The focus here is on financial strategies emerging from the detritus of the 2008 global financial crisis and shaped by the expanding power of global finance as its capital circulates through urban projects and their debts. I highlight its foundational practice of *financialization through dispossession* in cities and emphasize the value of the theory-method-politics nexus of such an approach.

RC19-271.4

GOLDMAN, MICHAEL* (University of Minnesota-Twin Cities, USA)

Speculative Urbanism and the Financialisation of Public Life of the City

This paper offers an analytical-methodological approach to understand this current historical conjuncture in which global finance capital plays an increasingly important role in urban transformation. Whereas the scholarship makes sharp distinctions between what occurs in the global North and the South, this paper presents an analytical approach that is attuned to the inter-scalar hyper-mobility of finance capital working across the postcolonial map. The paper suggests the method of "following the financial strategy" by analyzing urban forms and projects as processes constituted by the nexus of practices in finance and city planning. It looks closely at finance's use of inter-scalar financial tools (such as arbitrage, interest rate swaps, collateralized debt obligations, currency hedges) that work across borders, sectors, infrastructures, and conditions. The paper analyzes financial transactions occurring in and across cities of Spain, the USA, and India. The focus is on financial strategies emerging from the detritus of the 2008 financial crisis and the mobilization of public space and goods as the next/last frontier of financialisation that seeks to undermine any sincere attempts towards universalism.

GOLDSTEIN, PIOTR* (DeZIM Berlin, Germany)

Everyday Activism Meets Lifelong Social Engagement: Insights from 10+ Years of Research with Everyday (Migrant) Activists

This paper brings together the findings of several research projects. It takes as a point of departure research on quiet 'everyday' activism that happens outside of the framework of NGOs, foundations, and protest movements (Goldstein 2017). Individuals engaged in such activism often decide to act single-handedly, work in informal groups, or enact their activism during one-off ad-hoc initiatives. Drawing on findings from Serbia & Poland, the project aims to understand how these individuals situate their 'acts of citizenship' (Isin 2008) performed beyond, against, or in parallel to their other social engagements.

This focus is combined with findings of a long-term ongoing visual ethnography of (everyday) activism of migrants and ethnic minorities (Goldstein & Lorenz 2019, 2022; Goldstein 2021a, 2021b). The activism of my research partners is often invisible because they engage in causes beyond those important to their own community. What is more, their activism happens outside any minority or migrant community structures, and, at times, it takes forms that, compared to the activism of those who can afford more grand forms of activism, seem insignificant.

Finally, I draw on those two perspectives in my current research on transborder commuters and recent migrants in the Polish-German border zone. Tracing their life stories and histories of their often "everyday" activism allows us to notice and better understand the broad spectrum and discreet forms of their social engagement on both sides of the border. It also sheds new light on their relationships not only with their compatriots and the host community but also with Ukrainian refugees, who are still an often overlooked but important actor in the Polish-German border region.

GOLDSTEIN, PIOTR* (DeZIM Berlin, Germany)

Legacies and Practices of Diversity in a Post-Multi-Ethnic City

Lodz throughout the nineteenth century rose from a small town to one of the fastest demographically developing cities in the world, one that had no ethnic majority but similarly sized German, Jewish and Polish populations. Thessaloniki, has long been an international symbol of diversity and cosmopolitanism. For big part of its history the city had a Sephardic-Jewish majority and considerable Turkish, Slavic-speaking and Greek populations.

Both cities changed from truly cosmopolitan to practically mono-ethnic throughout the twentieth century, primarily because of wars, expulsions, and migrations. Now, at the beginning of the twenty-first century, because of new wars and new migrations, both again become more diverse – ethnically, culturally, and linguistically. In Lodz where at the beginning of the twentieth century one could see shop-signs in German, Yiddish, Polish and Russian, today multilingual, mostly Ukrainian, and Russian signs, make their (re)entry into the public space. In Thessaloniki, new migrants, mostly from Africa and the Middle East change the soundscape of the city.

Working with the activists who cherish multi-ethnic past in their work, remaining minorities, and new migrants, this paper explores ways in which the bygone diversity is being remembered, the new one is practised, and the links between the two are drawn. It makes use of visual and sensory ethnography to better understand studied change.

GOLDSTONE, JACK* (George Mason University, USA)

Why Are There so Many Revolutions in the 21st Century?

Scholars in the 1980s argued that the age of revolutions was over. They reasoned that revolutions involved efforts to overthrow autocratic monarchies, empires, dictatorships, or colonial governments, and that all of these kinds of regimes had either disappeared, or were in the process of disappearing, as democratic forms of government spread throughout the world.

Yet they were seriously mistaken. Revolutions have continued to occur with great frequency in the first quarter of the 21st century. Even major social revolutions have occurred: ISIS's briefly successful effort to create a new Caliphate in Syria and Iraq, the ongoing effort of the Houthis to reshape the government and replace the elites of Yemen, and the successful effort of the Taliban to throw off the pro-Western regime in Kabul and create a new Afghanistan under strict Islamic rule are clearly cases of social revolution. In addition, political revolutions have proliferated, from the Rose Revolution in Georgia in 2003 and the Orange Revolution in Ukraine in 2004 up through the Arab Revolutions of 2010-2011 and the revolutions that forced out leaders in Ukraine (2014), Armenia (2018), Sudan (2019), Sri Lanka (2022) and Bangladesh (2024), to mention just a few of the forcible overturning of governments since 2000.

This paper will argue that there are three main causes that have promoted the unexpected resurgence of revolutions in the 21st century: (1) the return of dictatorships as democracies proved unstable and the earlier wave of democratization was reversed; (2) the effects of global capitalism and punitive monetary policies, which put developing nations into debt while enriching corrupt leaders; and (3) the spread of models of civic, non-violent actions as an effective mode of revolution.

GOLÍAS PÉREZ, MONTSERRAT* (University of A Coruña, Spain)

OSO, LAURA (CISPAC, University of A Coruña, Spain)

Between Memory and Opportunity: The Descendants of Spaniards in Argentina and Access to Citizenship

In 2007, the Law of Historical Memory (52/2007) came into force in Spain, including a temporary provision in its text, the 7th Additional Provision, which responded to a longstanding demand: nationality for the grandchildren of Spaniards. However, the inconsistencies of this provision excluded potential Spaniards, who continued to press their claim until the approval of the Law of Democratic Memory (20/2022), which again provides, albeit temporarily, a pathway through its 8th Additional Provision. The motivations behind the demand and application for Spanish nationality reflect the transmission of a dual legacy, both material and symbolic. The desire to become Spanish is a reaffirmation of the identity learned and inherited; it is a form of reparation and recognition for the first migrant generations. Yet, it also serves as a practical tool for accessing resources and expanding migratory opportunities.

This proposal centres on a longitudinal and intersectional study of the significance of Spanish nationality for descendants of Spaniards in Argentina, as both a symbol of identity and a means of facilitating mobility within a transnational space.

To this end, a qualitative methodology based on a biographical approach was applied. This method has been selected in line with the research topic, aiming to reconstruct migrant, family, and historical memories through informants' narratives, allowing for the construction of family life stories from different perspectives (gender, generation, and place of residence). From this qualitative material, we produced genograms—graphic diagrams that represent family structures and interpersonal relationships—which hold significant potential for reproducing the dynamics of family mobility and immobility.

"I Work Casually, It's Not an Adult Job Yet" - the Experience of "Not-Real Jobs" Among the Youth Entering Labour Market in Poland

This study explores the complex labour market experiences of young adults as they navigate "not-real jobs" - positions seen as temporary or secondary in nature - before securing what they define as "real jobs."

First, we present the data on the situation of young Poles on the labour market, based on the national survey conducted as a part of the bigger research project "ULTRAGEN: Becoming an adult in times of ultra-uncertainty: intergenerational theory of 'shaky' transitions" funded by the National Science Centre of Poland. The representative sample consisted of 2104 young Poles (49% of women) aged 18-35 (M = 27.55; SD = 4.99). Secondly, we analyse the longitudinal qualitative interviews from the ULTRAGEN project.

The results indicated that the "not-real jobs" (often part-time or seasonal roles) offered participants flexibility during studies or other life pursuits but were characterised by limited stability and reduced fit with educational attainment and life goals. In contrast, "real jobs" aligned with career aspirations, offered financial and psychological stability, and were typically associated with corporate or professional settings.

While some participants transitioned into "real jobs" during the study period, often aided by educational achievements or promotions, others remained in temporary positions, emphasising barriers such as skills mismatches, market demand shifts, concerns about automation, and consequences of the pandemic. Experiences in "not-real jobs" varied widely, with some individuals valuing these roles for experimentation and self-discovery, while others faced negative working conditions that clarified career paths they wished to avoid.

The findings are discussed highlighting a growing precarity in the youth labour market, where aspirations for stability clash with economic uncertainty, leading to a pervasive sense of instability.

The Role of Slovenian Sociologists in Shaping National Imaginary through Discursive Practices

This study investigates the impact of Slovenian sociology on the national imaginary, focussing on its role in specific cultural, political, and economic situations, and employs cultural political economy as a conceptual framework. It focuses on the late 1980s and early 1990s transition era, emphasising the evolutionary processes of discourse variety, selection, and retention during post-socialist transformation. While new discourses arose, existing semiotic orders remained, demonstrating route dependency. Slovenian sociology's progress from the communist period to its engagement with current concerns, such as technological expansion and globalisation, is examined.

The work utilises Borut Rončević's categorisation of sociologists' responsibilities, from marginalised professionals to active actors in society development. It further examines Slovenian sociology, including works by Adam and Makarovič, Jogan, Vičič, and Kerševan, with a focus on Zdravko Mlinar's thorough monographs.

This empirical analysis compares the content of two sociological publications, *Teorija in praksa* and *Družboslovne razprave*, from 1987 to 2017. The authors examined 445 journal entries from designated years to identify prominent sociological topics and their relationships over time. This analysis compares the structural settings and dominating discourses of the communist, post-communist, and contemporary eras, demonstrating how Slovenian sociology has helped to shape new semiotic orders in the context of democratisation and globalisation.

Factors Related to Ethnic Inequalities in Accessing Health Services and Child Registration in Honduras

This article examines the relationship between access to health services and birth registration in Honduras, highlighting how increased healthcare coverage can reduce under-registration of births. In January 2014, the Ministry of Health and the Civil Registry implemented a hospital registration system, whose main action was the installation of civil registry offices in public maternity wards across the country to ensure the immediate registration of newborns. A statistical model was applied to the population census of 2015 to analyze the factors associated with the under-registration, complemented with interviews with government officials about the main barriers in the process of registering children. Despite persistent challenges in the health system, by 2019, 94% of births took place in institutional settings, but only 50% of newborns were registered at this stage. This is due to various barriers limiting access to civil registry, mainly in health services in maternity wards, as well as other ethnic-racial and rural barriers, which underscores the need for more inclusive public policies to ensure universal access to birth registration.

Scaping from Violence and Rebuilding Resources. Inclusion in a New Context of Vulnerabilities

Internally Displaced Persons due to Violence (IDPVs) people differentiate from other types of migration such as exile, migration for economic reasons or those caused by natural disasters. IDPV people subtly escape from their home and place of residence due to armed conflicts, generalized violence, and violations of human rights, without crossing an international border like refugees. This research analyzes the situation of IDPVs people in Mexico, in contrast to displaced due to other causes and non-displaced people. A logistic model was applied to analyze the factors associated with the IDPV. Laws and policies to protect this group were analyzed to suggest the guidelines for distributional justice and policies to promote their integration in their destinations. Results in Mexico show that IDPV people have a higher level of education, a lower level of income and housing conditions, a lower access to health services, and housing equipment, compared to the other groups. Their comparative advantages are the acquired resources such the complete nuclear family, the higher level of education and access to ICT. Despite these advantages, they no longer had the usefulness of these resources, that became useless, because they escaped and lost social and work networks, housing, goods and documents. In the destination context, they are inserted in peripheral locations far from the work centers and work in the informal market. Indigenous groups are more vulnerable to IDPVs when projects of development are forcibly installed in their lands. Distributional justice, laws and social policies are scarce and improvements should focus on access to housing and jobs according to their level of education, strengthening family and social ties and recovering the resources lost in the place of origin.

Queering Political Representation in the Global South: Some Reflections from Latin America and Africa

Lesbian, gay, bisexual, trans, and intersex (LGBTI+) rights in the Global South have been currently in the spotlight for paradoxical reasons. On the one hand, several countries (such as Argentina, Uruguay and South Africa) have gained prominence on the international scene thanks to laws that have extended various rights to people who dissent from cis-heteronormative standards. On the other hand, high rates of LGBTI+-phobic violence persist in many countries. Political leaders with explicitly sexist, homophobic and transphobic discourses have risen to power, and in many countries (such as in Sub-Saharan Africa), they use anti-sodomy laws inherited from European Colonial Power to prosecute LGBTI+ people. In this context, we

also observe the growing participation of openly LGBTI+ people in political parties and elections, achieving positions in the executive and legislative branches at various levels of government. Their presence in the legislature (especially that of trans women parliamentarians) has challenged sexism that prevails in spaces of political representation, leading to several cases of gender-based political violence. This proposal seeks to discuss the limits and possibilities of action of LGBTI+ parliamentarians in constructing sexual citizenship in the Global South. Drawing on the academic literature on gender and politics, with particular emphasis on the discussions on gender quotas, descriptive representation and political violence, the proposal aims to discuss the obstacles experienced by these parliamentarians, from the construction of their candidacy to their performance in parliamentary bodies. Reflections will be based on semi-structured interviews conducted with LGBTI+ parliamentarians currently in elected office in Brazil, Peru and South Africa. The analyses aim to understand how political gender-based violence affects the actions of these parliamentarians and its possible impacts on the participation of LGBTI+ people in institutional politics and LGBTI+ politics in general in Latin America and Africa.

GONÇALVES JUNIOR, OSWALDO* (Unicamp, Brazil)

Public Policies and Poverty in the Brazilian Semi-arid Region: Lessons in Resilience and Adaptation in Facing the Climate Crisis?

The focus of this paper is the process of social construction of the goat milk market in the northeastern semi-arid region, using Economic Sociology as a reference, which understands that economic phenomena are social by their nature. In this sense, this contribution privileges a look at history, traditions, cultures, values, ideas, forms of association, networks of social actors, etc. In regions marked by historic poverty and the climate crisis, this issue gains relevance. Goat and sheep farming dates back to arrival of the Portuguese in Brazil in the 16th century, with these animals being seen as inferior compared to cattle, whose breeding is linked to social status. This is a contradiction, as the breeding of these animals is more adapted to the conditions of the semi-arid climate. This culture of devaluation and the resistance to change that it generates is confronted by a "network of enthusiasts" made up of researchers, managers, technicians and creators linked to a set of institutions. The federal government, through the Programa de Aquisição de Alimentos - PAA (Food Acquisition Program), has been developing Milk Programs for almost two decades in partnership with states, promoting markets for family farming products and food security. In this induced process, the construction of markets promotes the restructuring of social ties, expanding the list of relationships to which individuals were previously subjected to experiencing these practices. The procedural independence of public policy and the conquest of private markets by farmers also draws attention. Due to the rapidly worsening climate emergency conditions, the research allows us to reflect on paths that consider resilience and adaptation.

Punishment in Michel Foucault: Beyond Docile Bodies

The sociology of punishment often presents punishment in Michel Foucault's thought as a primarily instrumental social practice, whose most notable product is the formation of docile bodies characterized by submission to a power impervious to resistance. This perspective stems from a reading of *Discipline and Punish* that considers Foucault's characterization of punishment as inattentive to the relationship that this social practice maintains with values and the moral dimension of society, sometimes understood as "cultural" elements that go beyond power relations. This article aims to show that, for Foucault, punishment produces, beyond simple docile bodies, the most diverse modes of subjectivation, including those of delinquency, insurrection, resistance, and counter-conduct. The second and third courses taught by Foucault at the Collège de France, *Theories and Penal Institutions* and *The Punitive Society*, as well as the conference series *Truth and Juridical Forms*, will be used for this purpose. This material represents the bulk of Foucault's work on punishment in the first half of the 1970s, before the publication of *Discipline and Punish*. In the concluding remarks, it is pointed out that in the philosopher's work, punishment can be understood not only as subordinate to the functioning of instrumental or negative relations of power defined in advance and producers of experiences of subjection - necessarily unilateral - but also, and above all, as a tool capable of producing values and, on a larger scale, morality and the multiple experiences of subjectivation that correspond to it. Foucault's texts on punishment thus remain an object of study, dialogue and confrontation for researchers interested in explaining punitive phenomena today.

Who's Fooling Who? When Partisan Loyalty Doesn't Trump Democratic Commitments

Recent scholarship has deepened our understanding of the factors that drive democratic deconsolidation in Western liberal democracies. A key finding is that partisan bias strongly influences the extent to which citizens are willing to compromise on core democratic values. When their preferred party is in office, citizens tolerate violations of democratic norms, while they display a stronger commitment to democracy when their party is in opposition. In contrast, democratic political cultures foster pro-democratic attitudes and aspirations for deepening democracy. Support for democracy is particularly robust in countries where liberal elements such as legislative and judicial constraints on the executive are more deeply ingrained.

But are citizens in highly democratic countries truly immune to partisan bias? Some argue that motivated reasoning—where individuals process biased information to bolster their party attachment and social identity—is inevitable. Others contend that it also involves a balance between reinforcing party loyalty and making accurate evaluations, influenced by external conditions. In this view, more liberal democracies create informational environments where anti-democratic attitudes are harder to justify, thus constraining motivated reasoning, reducing the risk of partisan-driven anti-democratic views, and elevating democratic commitments over partisan loyalty.

Running on data from the *Understandings and Evaluations of Democracy* modules in the European Social Survey (ESS), multilevel models provide evidence that the belief that governments should stick to their policies when they contradict public opinion is a minority view across 18 European countries. This view is even rarer in countries with stronger liberal democratic traditions. In addition, while supporters of incumbent parties are more likely to favor sticking to policies, this inclination weakens significantly in more liberal settings, even among those who strongly identify with incumbent parties. These findings lend empirical support for the notion that in liberal democracies, party supporters are less willing to trade off democratic values for partisan loyalty.

Resilience and Resistance: Examining the Exclusion of the Sama Badjao Indigenous Community in Post-Disaster Context

Extreme weather events are becoming increasingly destructive and unpredictable. Their impacts affect groups of people differently due to pre-existing discrimination and inequalities. In this presentation, I use a decolonial intersectional approach to examine the exclusion of the Sama Badjao, a former seafaring Indigenous community, focusing on their post-disaster experiences following Super Typhoon Rai in 2021. These experiences are situated within a historical context of exclusion and growing inequality shaped by gender, ethnicity, religion, and other intersecting factors. Drawing on data from my 10-month fieldwork (2021-2022) in the coastal area of Bato, Leyte, Central Philippines, I present how exclusion manifests as two ethnicities (In-group/outgroup) interact together during and after the typhoon with the scarcity of resources. The findings address the pervasive othering of the Indigenous community in the form of stigmas and stereotypes, highlighting how they resist dominant narratives, counteract their imposed identities, and challenge the representation of 'Badjao' on the periphery. Finally, it offers insights for developing inclusive disaster recovery and rehabilitation programs and addressing other long-term community concerns.

Categorising Anti-Muslim Discourse on Twitter: Hate Speech and Toxicity in the Spanish Context

In 2023, anti-Muslim discourse on social media has increased to 25% from the 20% recorded in 2022, making it the third most prevalent form of hate speech in Spain according to OBERAXE. This underscores the imperative for an extensive examination of online Islamophobic discourse. The study focuses on messages related to Islam and the Spanish-speaking Muslim community on Twitter in Spain from January 1, 2010, to December 31, 2022, utilizing a substantial sample of 21,326 tweets obtained through Twitter's

(now X) API v.2. Geographical coordinates were collected to pinpoint regions where Islamophobic messages are most concentrated. Furthermore, an analysis of bigoted anti-Muslim language in tweets was conducted using a codebook based on established instruments. The analysis also incorporated the Perspective API to evaluate toxicity levels in Islamophobic and anti-Muslim discourse. The results revealed that 28.2% of messages were identified as Islamophobic, with 2,475 displaying explicit and irrational hatred. Additionally, rhetoric associating Muslims with invasion, terrorism, and crime was prevalent. The Perspective API demonstrated limited effectiveness in detecting Islamophobic hate speech, highlighting the necessity for a specialized tool tailored to this purpose.

GONZALEZ BENSON, ODESSA* (University of Michigan, USA)

"I Call It My Backpack Office": Organizational Materiality of Refugee-Led Grassroots Organizations Vis-a-Vis Refugee-Serving Professionalized Agencies

Recent scholarship interrogates grassroots refugee-led organizations (RLOs) as institutions in multilevel governance vis-a-vis professionalized refugee/migrant-serving organizations. Whereas the latter, as street-level bureaucracies, are constrained by policies, funding and the political sphere, refugee-led organizations enact resistances and affordances at the most local levels of governance. This paper contributes to this line of scholarship by drawing from a new materialist lens to hone in on the relevance of materiality, space, infrastructure and relationality in analyses of refugees' organizational life. Analysis draws upon multiple sources of data: surveys, focus groups and interviews with refugee leaders in the United States; and survey and interviews with migrant workers and practitioners in Canada. This paper argues that organizations' occupying of physical space, use of digital tools and deployment of privatized resources are bound to their visibility as an institution and to the actuality of their practices. Borrowed office space, WhatsApp group chats, a grocery store, and a refugee's 'backpack office', for instance, emerge as salient in examining the settlement and integration practices of RLOs. The material is examined not merely with tangible qualities, but also with symbolic capacities. That is, the physical spaces, digital tools and material resources of RLOs yield meaning—affordances and limitations—that shape their work. The nimble, small, improvising RLO is contrasted with the stable, established social service agency. In their grassroots endeavors, the symbolic legitimacy and the materiality of refugee-led organizations go hand-in-hand and are mutually constitutive.

Estrategias y Agencias Locales En Contextos De Recuperación Post-Desastre: Hacia Un Abordaje Situado a Partir De Los Incendios Forestales De 2024 En Chile

Este trabajo tiene por objetivo reflexionar sobre brechas, oportunidades y obstáculos en el desarrollo de procesos situados de recuperación y reconstrucción post desastre, teniendo en consideración las desigualdades preexistentes en los territorios y, por ende, cómo las mismas pueden enactuar diversas estrategias y agencias de locales y exógenas al respecto. Nuestra reflexión se sustenta en un abordaje metodológico mixto, que incluye la aplicación de un cuestionario en zonas afectadas, entrevistas a personas afectadas y otros actores clave involucrados en el proceso de respuesta y recuperación, y el desarrollo de una extendida investigación etnográfica. Todas estas técnicas se aplicaron en la ciudad de Quilpué, en Chile central, zona afectada por devastadores incendios de interfaz urbano-rural en el verano de 2024. A partir de la premisa de que los desastres no afectan a todas las personas y poblaciones de igual manera, ya que la distribución del daño está íntimamente ligada a las desigualdades sociales preexistentes en una sociedad determinada, en este trabajo proponemos que el proceso de recuperación post-desastre debe ser entendido de manera diferenciada, demandando políticas y prácticas que reconozcan y respondan a la diversidad de realidades presentes en los diferentes territorios. Ello implica, asimismo, reconocer que las situaciones de vulnerabilidad no solo determinan el impacto inmediato de los desastres, sino también configuran los procesos de recuperación y sus resultados.

Beyond Inclusion and Co-Optation, Understanding Youth Representation in Authoritarian Settings: The Case of Moroccan Youth Quotas (2016-2021)

In many countries worldwide, young people suffer from low political representation and social exclusion. Under the pressure of international organisations, which have made these issues a global concern, many governments in countries where the young constitute most of the population have taken measures to address the problem. One such measure has been the implementation of parliamentary quotas. Interestingly, authoritarian and hybrid regimes in North Africa and the Great Lakes region have predominantly embraced these quotas. This prompts the question: Who are these MPs, and how do they engage with their political regimes? We present a recent case study on the Moroccan parliament (2016-2020) that explores this relationship for the first time. The study examines the profiles of MPs, their political paths, discourses, and parliamentary activities. Using mixed methods, we explored the implementation of youth quotas and discovered a more profound narrative. The findings extend beyond mere concepts of inclusion or co-optation, shedding light on the intergenerational conflicts within the political class. Regardless of their party affiliations, these MPs embodied the aspirations of a burgeoning middle class determined to secure their place in the country's political arena.

Analyzing the Evolution of Vision: A Methodological Framework Using Sequence Analysis

This communication proposes a methodological framework using sequence analysis (SA) to study the evolution of vision, focusing on how changes in vision develop over time and the influence of lifestyle factors on these changes following the principles of participatory action research (PAR). We aim to capture the natural progression of vision conditions and the potential impacts of non-medical interventions (thus excluding surgery, medical treatment, or even the use of glasses), such as vision coaching based on natural vision improvement techniques, habits, and lifestyle adjustments. In line with the principles of PAR, this approach allows for the active participation of individuals in the collection and evaluation of their own visual experiences.

Sequence analysis enables a holistic examination of individual vision histories, tracking changes in vision-related states over time. Our methodological approach captures patterns such as improvements, stability, or deterioration of vision, which can later be used to examine how these patterns are influenced by various factors, such as screen time, outdoor exposure, and relaxation practices. This communication explores the definition of these sequences and the different possibilities for incorporating various indicators of vision. Once defined, the calculation of sequence dissimilarities, followed by clustering algorithms, could allow us to identify common patterns and deviations in the evolution of vision health based on individuals' self-assessment.

Diferencias Regionales en la Violencia Homicida en Mexico: El Caso de la Frontera con Estados Unidos

Este estudio analiza el comportamiento de la violencia homicida y su impacto en la esperanza de vida en los estados de la frontera norte de México (Baja California, Sonora, Chihuahua, Coahuila, Nuevo León y Tamaulipas) entre 1998 y 2022, lo compara con lo sucedido en el resto del país en el mismo lapso e indaga sobre las razones que explican las diferencias observadas

entre los estados fronterizos y el resto del país. Los homicidios se estudian desde dos perspectivas: la tendencia de la tasa ajustada por sexo y edad entre 1998 y 2022 y el efecto que la mortalidad por homicidios ha tenido en la esperanza de vida, a partir del cálculo de los años de esperanza de vida perdidos por esta causa entre 0 y 85 años en los trienios 1998-2000 y 2020-2022. Los resultados reflejan que en la frontera norte los años de esperanza de vida masculina perdidos casi se triplicaron entre ambos trienios -un reflejo del incremento de la mortalidad juvenil por esta causa, mayor que en el resto del país; algo similar ha sucedido en el caso de las mujeres: aunque en su caso no se ha reducido la esperanza de vida, su crecimiento se ha visto frenado por el aumento de la tasa de homicidios; estos hallazgos son algo diferentes a lo observado en el resto de México. Asimismo, algunos estados y ciudades fronterizas han presentado consistentemente altas tasas de homicidio en el período analizado. La fuerte presencia de los carteles del narcotráfico en el norte del país, el flujo de armas de fuego provenientes de Estados Unidos y la existencia de una población migrante con altos niveles de vulnerabilidad son factores que ayudan a entender las diferencias regionales en la violencia homicida en México.

La Inserción Laboral De Los Egresados Universitarios En Andalucía

En un contexto lleno de incertidumbres económicas, sociales y políticas los procesos de inserción laboral y su capacidad para confrontar potenciales escenarios recesivos tienen una especial significación. El interés que suscitan problemáticas como la inserción laboral de los jóvenes plantean la necesidad de profundizar en su comprensión a través de análisis exhaustivos. En el marco de esa necesidad se situaría la presente investigación. En concreto, en la de llevar a cabo un abordaje minucioso de la caracterización y las implicaciones de la inserción laboral de los egresados universitarios en Andalucía.

La metodología empleada es de carácter cuantitativo a partir del uso de fuentes secundarias de información, en concreto, los microdatos de los que dispone el Instituto de Estadística y Cartografía de Andalucía (IECA), relativos a la Inserción laboral de los egresados en universidades públicas de Andalucía. El IECA parte de un conjunto de datos estandarizados resultante de la explotación de los ficheros de rendimiento académico que proceden de las universidades y los registros del Servicio Andaluz de Empleo.

La población objeto del estudio está formada por las promociones de egresados de titulaciones oficiales de universidades públicas de Andalucía correspondientes a cada año académico desde el curso 2011-2012 hasta el último disponible.

Para la consecución de los objetivos planteados se utiliza un instrumento de operativización conceptual denominado: Tipología estructural y articulada, el cual remite a una propuesta metodológica de construcción de tipologías que se desarrolla en el trabajo publicado en López-Roldán (1994, 1996a, 1996b) y se operativiza desde el punto de vista técnico en Domínguez y López-Roldán (1996).

En esta comunicación, de manera específica, se exponen los resultados de aplicar la tipología estructural y articulada al objeto de analizar la inserción laboral de los egresados universitarios andaluces que contribuyen a su caracterización y conocimiento.

Listening to Right Wing Populist Voters in Spain. Analysis of Four Focus Group with Vox Switcher Voters.

This paper analyses four focus groups carried out in Spain in 2023 (after the General election) with switcher voters from mainstream political parties that moved to voted for a Right-Wing Populist Party (Vox in Spain). We carried out separated sex-groups, two with working classes (with female and male voters respectively) and two with medium-high classes voters. The moderation guide tried to incentive participants to talk about the problems and difficulties they encounter in their daily lives and see to explore how they connected them with their voting choices. Carrying out separated-sex groups has allowed us to compare the discourses of male vs female voters exploring similarities and differences in their values, needs and demands. We carried on a traditional content analysis applying the coding protocol developed within the Horizon

Europe Project UNTWIST (<https://cordis.europa.eu/project/id/101060836>), using ATLAS.ti, and a complementary exploratory analysis with the software Iramuteq. The paper will present empirical evidence on the needs and demands that male and female voters of Vox experience, and their rationale for having moved from mainstream parties to RWPP.

Decision Making in Crisis: The Entrepreneur's Perspective in Contingency Contexts and Its Contribution to Business Death

The purpose of this work is to understand the lived experiences of entrepreneurs, emphasizing how their decisions impact the mortality of companies in crisis contexts. From this perspective, reality is a socially constructed phenomenon, and the analysis of the narratives of decision makers allows us to unravel the complex dynamics that underlie their decision-making processes. The study takes place in Celaya, Guanajuato, Mexico, one of the most violent and unsafe cities. It investigates how external pressure and uncertainty affect the perspective of entrepreneurs in contingency situations. These factors can distort your judgment and consequently influence the development of strategies and decision making for survival and continuity. This study is framed in the constructivist paradigm and uses a qualitative approach that combines narrative phenomenological methodologies and grounded theory. It has been identified how the choices they make at critical moments can lead to both the survival and dissolution of their businesses. These choices are not necessarily referenced to instrumental and economic rationality, but rather are impregnated with the history of the businessman's life, his lived experience, his emotions and his fears regarding the past, present and future of the business company.

Chinese Investments in Mozambique: Bilateral Cooperation As an Agenda to Overcome the Prostration of Underdevelopment?

Mozambique is on a bloc of countries that are among the poorest in the world. As a nation that suffered colonial domination and subjugation by the Portuguese, it had to fight, not without pain, a long civil war after independence, which meant great destruction of its infrastructure, famine, waves of refugees, death and a legacy of millions of anti-personnel landmines that are still scattered and active throughout Mozambican territory. This article will address bilateral cooperation between China and Mozambique in recent decades, evaluating the impact of Chinese capital investments to expand and improve the infrastructure of the East African country. In the first part, the state of the Mozambican economy will be reviewed, which through its extractive sector of aluminum, titanium, graphite and natural gas has export products that represent important sources of income. The second part analyzes the long process of rebuilding the country, where China is a major player with investment flows that reached 4.6 billion dollars in 2022. In the third part, the areas of urgent need for investment in the country will be reviewed, where the Ministry of Industry and Commerce has already expressed its desire to expand the country's infrastructure - the greatest challenge - with an improvement and expansion of existing roads, as well as bridges. The state of other economic sectors that need an injection of resources is reviewed, such as agriculture, heavy industry - with the steel industry at the forefront - which urgently requires the impetus to start from there towards large projects. Finally, towards the end of the article, conclusions will be issued, putting into context a multipolar world that is emerging, with a new model of cooperation between countries

Sociopolítica Africana, Inmigración y Literatura. Un Puente De Papel Canarias-Africa: El Articulismo Pionero En Español De El Hadji Amadou Ndoeye

El Hadji Amadou Ndoeye (Rufique, Senegal, 1947-Dakar, Senegal, 4 de marzo de 2013) fue profesor de Lengua y Literatura españolas en la Universidad Cheick Anta Diop de Dakar. Entre los meses de julio de 1999 y julio de 2000, Ndoeye se convirtió en el primer intelectual africano cuyos artículos eran publicados por un periódico en español, *La Tribuna de Canarias*. Los 61 artículos

aparecieron cada lunes, y en ellos Ndoye vertió su vocación pedagógica para consolidar su rol de puente entre Canarias y el África continental, y de forma precisa su país, Senegal. El articulismo en español de Ndoye abordó varios bloques temáticos: la realidad sociopolítica africana, en su conjunto, con aproximaciones a varios de sus países y líderes; el fenómeno migratorio y la relación entre Canarias y el continente; la literatura de Canarias, de cuya narrativa era uno de los mayores expertos; la literatura, el arte y la música africanas; la literatura y lengua españolas; y el fútbol. La cita de Ndoye con los lectores de Canarias trascendía la mera aportación periodística, porque se producía antes de la primera oleada migratoria a las islas, y en un contexto de desconocimiento recíproco, cuando nadie miraba a África. En ese contexto, un profesor senegalés explicaba, en español, las proximidad histórica y cultural de las sociedades de las dos orillas, contagiaba su amor por la literatura canaria, y compartía la contradicción de “enseñar español siendo negro”, y cómo se “estremecía al notar cómo el idioma de Alonso Quesada trata a los seres humanos de piel oscura”.

Participatory Action Research on Vulnerability, Loneliness and Ageing in the Urban Environment. the Photovoice Elderly Seville Study.

Ageing in urban settings has been addressed in scientific literature, both internationally and nationally. However, this topic has been scarcely explored from the intersection of variables such as vulnerability, loneliness, and old age in the urban environment in Spain using participatory action research such as photovoice. The objective of this research was to study the perceptions of people aged 65-80 living in the districts of Macarena and Cerro-Amate regarding aging, vulnerability, and loneliness within their surrounding environment, and the possible ways to improve their situation. This research drew on the Photovoice technique. The districts of Macarena and Cerro-Amate were selected among the 11 districts in Seville using an ad-hoc index based on sociodemographic indicators. The research recruited 36 participants from these two districts, 15 living in the Macarena district and 11 living in the Cerro-Amate district. Participants were included in one photo elicitation group regarding their age (e.g., 65-72 and 73-80). After taking pictures, the participants selected up to 5 pictures, discussed them and elaborated on categories and themes in successive meetings based on the pictures they took. Participants identified two different types of vulnerability: economic and age-related. They also identified three different types of loneliness labelled as solitude, unwanted and imposed. Participants did not perceive themselves as elderly because they had very active lifestyles. Otherwise they took pictures of trees and compared ageing in the urban environment to the strength of the trees growing. Ageing in the urban environment was related to architectural barriers, age barriers, socioeconomic vulnerability, poor health status, loneliness. Loneliness, vulnerability and ageing in the urban environment were affected by socioeconomic status. Researchers empowered participants by giving them tools to identify their surroundings and assets that may be improved. This research project is not yet over and now researchers have to spread results with stakeholders.

Qualitative Study on Health, Health-Related Behaviors, and Risk Factors in People Aged 70-79 in Two Spanish Cities: Seville and Lleida

It is expected that the elderly population will continue to increase in contemporary societies due to the rise in longevity. However, increased longevity is not associated with better health. The aim of this research is to explore the lifestyle habits and health risk factors of people aged 70-79 living in Seville and Lleida. In this qualitative research, we conducted focus groups and semi-structured interviews as data collection instruments. Between October 2023 and April 2024, 16 interviews and 8 focus groups were conducted. The sample consisted of 73 people. The average age of the participants in the focus groups was 73.8 years, while the average age of those interviewed was 75.3. The participants' eating habits followed certain uniform patterns influenced by their relationships with family members. Women tend to cook traditional meals and freeze them. This strategy of cooking in large

quantities was used to save time at home and have prepared food available, but also to share part of the food with family members. Regarding physical activity, participants based it on three pillars: group activities organized by public centers, gyms, and walk. In terms of alcohol consumption, we identified two trends: the normalization of daily consumption and the reduction of consumption due to health issues. However, while the consumption of wine and beer seems to be well-regarded and socially accepted, the consumption of distilled alcohol is not. Finally, there was some awareness of the harmful effects of smoking, which has led many older adults to quit smoking. This awareness was often due to personal health issues or observing the effects on those close to them (friends, family, spouses, etc.). The study of risk factors and lifestyle habits is important for understanding behaviors that negatively impact health, adapting public policies, and promoting preventive health programs to ensure healthy aging.

Why W. E. B. Du Bois Became a Marxist

W. E. B. Du Bois, the father of American sociology, visited the Soviet Union in 1926, declaring afterwards that “I am a Bolshevik.” He undertook an intensive study of Marx, Engels, and Lenin in 1933-34, when he was 65 years old, in an effort to become what he called a “perfect Marxist.” He was clearly influenced at this time by a group of so-called Young Turks in the National Association for the Advancement of Colored People (NAACP) who advocated for building a strong interracial labor movement in the U.S. Du Bois's radicalization would result in his resignation from the NAACP in 1934. His *magnum opus*, *Black Reconstruction in America, 1860-1880*, published in 1935, and his subsequent writings reflect his turn to Marxism, a theoretical move he thought essential for understanding racism and racial oppression. This paper examines the reasons why Marxism appealed to Du Bois, and why he turned to Marxism in the 1930s, despite his strong misgivings at the time with the politics of the Communist Party in the United States.

Migrants in Medicine: Exploring the Workplace Experiences of Doctors in the NHS

The NHS is one of the most important sectors in the UK economy and society, chosen as “a signifier of Britishness” in the opening ceremony of the 2012 London Olympic Games and often described as a ‘uniquely British’ institution (Simpson 2014:58). It has also historically attracted considerable numbers of migrant professionals. Recent data show that 35% of doctors in England's NHS are non-British (Baker 2023), a trend projected to continue over the next decade (GMC 2023). However, migrant healthcare professionals have been found to experience various forms of exclusion, arising from immigration policies and institutional practices within the sector (O'Brien and Ackroyd 2012). Additionally, the NHS has undergone a range of new public management initiatives aimed at increasing efficiency, transparency and accountability, which have led to rising bureaucracy, precariousness, and workloads for staff (Leicht et al 2009). How these increasing pressures have affected diverse groups within the sector is less well understood, and a deeper exploration of their experiences, resilience and wellbeing is needed.

Against this backdrop, our paper examines the workplace experiences of doctors in the NHS, particularly focusing on comparisons between British, foreign-born, UK-trained and foreign-trained doctors. Data collection (semi-structured interviews) and analysis for this project are ongoing. Early findings suggest that pressures such as managerialism, overwork, burnout and lack of work-life balance are common across all groups. However, results also indicate a segmented profession where foreign origin and foreign training influence perceptions of doctors' competence, expertise and authority, further intensifying their work and limiting their inclusion. These findings contribute to a more nuanced understanding of the pressures faced by different professional groups, particularly foreign-born and foreign-trained doctors, and challenge assumptions about the internationalisation of professions (Pustelnikovaite and Chillas 2023; Muzio et al 2011).

Black Brazilian Feminisms: Confronting Inequality in Brazil through Creative Practice and the Arts

Brazil is a significant economic power in the Latin American and Caribbean region. However, it is also a country of dramatic inequalities rooted in its colonial history and political development. Traditionally, these social inequalities have been explained in terms of class, however many contemporary scholars agree that this image of Brazil was overstated and that racialized and gendered hierarchies are deeply entrenched in the society. Furthermore, Afro-Brazilian activists and feminist scholars have brought attention to the social and economic exclusion of women of African descent in Brazil, within a cultural context where strong symbolic associations between black women, poverty and subservient positions exist. Anti-racist and feminist struggles in Brazil tend to be channeled into certain domains of action, such as social policy, law and public education. However, there are important arenas of action that are relatively less explored, due to the focus on more "rational" responses to racism. This article considers Black women's mobilization against racism through creative, artistic and spiritual work. I argue that it is important to consider these kinds of processes as they may operate in a different, more visceral way that makes it possible to engage with the emotive side of racism. Sommer (2005) indicates that cultural agency may create more "wobble room" in the interstices of social structures. Black women's work in cultural organizations have sought to deploy the medium of art, culture, storytelling and spirituality to raise black women's self esteem, confidence and self expression. While these organizations are sometimes subject to appropriation and recolonization by dominant patriarchal forces, it has the potential to challenge racialized and gendered hierarchies in Brazil by suggesting new "structures of feeling."

The Ghosts of Irish Past: The History of Women's Obstetric and Reproductive Violence in Ireland

The stigmatisation, tabooisation and fear attached to women's reproductive anatomy and its functions has a long history in Western mentality overall (Shorter, 1982; Laqueur, 1990; Lindquist, 2016). The 20th century Irish history provides a long list of examples of institutional and obstetric violence on Irish women and their bodies, including cases of incarceration of young women, forced adoptions, barbaric medical procedures on birthing women, or a complete lack of autonomy over their reproductive bodies. Some argue that in the Irish case of a tight union of religious, national and medical powers resulted in a perfect storm of consequences mapped across women's reproductive bodies in the post-independence Ireland (Delay & Sundstrom, 2020). Using historical records and archival medical research from the past three hundred years of Irish history of women's bodies, this paper discusses how the social and historical discourses of power shape Irish women's reproductive rights and the quality of healthcare till this day.

Decolonizing the Sociology of Law in Central and Eastern Europe: Rethinking Legal Discourses and Colonial Legacies

This presentation examines whether the sociology of law in Central and Eastern Europe (CEE) requires decolonization, challenging the common assumption that CEE countries, because they lack overseas colonies and have not undergone formal postcolonial and decolonization phases, are exempt from the need to decolonize thought, research, and education. It presents a critical analysis of legal discourses in national and European tribunal rulings involving CEE countries, focusing on topics such as Islam, migrants, and the Palestinian question.

The findings reveal the persistence of Orientalist narratives and colonial logics in legal interpretations, which continue to shape judicial decisions and the production of legal knowledge in the region. The presentation draws on the Polish context to illustrate how some CEE countries experienced periods of regional colonization and harbored aspirations for overseas expansion, even if these ambitions did not result in lasting overseas colonies. It addresses both the 'native' colonial mindset, rooted in local colonial aspirations, and 'imported' colonial ideologies that have permeated legal reasoning. The analysis shows how historical and contemporary power dynamics influence legal discourses, suggesting that coloniality operates in subtle but enduring ways, even in regions without a direct colonial past.

The presentation advocates for the integration of decolonial perspectives in legal education and research in the CEE, with a particular emphasis on the sociology of law. It calls for incorporating decolonial perspectives to address the hidden legacies of coloniality that continue to shape legal epistemologies and societal attitudes. This approach invites a broader debate on the importance of decolonial thought in CEE legal scholarship and its potential to foster more inclusive and critically engaged socio-legal research.

Analyzing Forced Hysterectomies in Underlying Neoliberal Policies and Health Inequities Under the Migration-Development Regime

This paper analyzes neoliberal policies and health disparities by investigating the phenomenon of 'coerced hysterectomies' among female migrant sugarcane laborers in Maharashtra, India. The study uses the Migration-Development Regime (MDR) paradigm to examine how state-driven neoliberal development policies, which emphasize economic growth and labor exploitation, intensify the vulnerability of marginalized workers (Agarwala, 2022). These policies prioritize agricultural productivity and labor efficiency over the health and rights of workers, especially women, who are coerced into medical interventions, such as hysterectomies, to avert interruptions caused by menstruation and pregnancy (Bennet, 1992). The research utilizes qualitative methodologies, encompassing policy analysis, interviews with impacted women as well as ethnographic fieldnotes (50% of the in-depth interviews have been completed, with 20 of approx. 40 persons sample size interviewed) from labor camps to elucidate the circumstances resulting in these 'forced' hysterectomies. A subsequent data collection phase is scheduled for October to November 2024. These practices exemplify a development model that commodifies female labor, undermining women reproductive health for the sake of economic efficiency (NHRC & Sarojini N.B, 2006). The research contends that India's neoliberal employment and migration framework sustains these disparities, viewing female bodies as commodities while neglecting reproductive health. The MDR approach examines how state policies prioritizing labor mobility and production lead to coercive hysterectomies, framing women's reproductive capacity as an impediment to productivity. The report advocates for a reassessment of development plans to avert the compromise of health rights for economic benefits. The research specifically emphasizes how migration regulations perpetuate patriarchal perspectives that objectify women's bodies, exacerbating systemic gender discrimination and health inequities. The results highlight the necessity for legislative changes to guarantee that economic development does not compromise the rights and health of marginalized workers positioning the analysis within the ambit of the Migration Development Regime Framework.

GOSPODARCZYK, MARTA* (University of Warsaw, Poland)

"If Only a Man Could Control the Rain!" - Strategies of Polish Farming Households in Times of Drought

This presentation examines the coping strategies undertaken by Polish farming households affected by drought. In recent years, drought has become increasingly common and is considered one of the most pressing and persistent problems facing farming in Poland today. Farming household members, then, have been faced with a new dimension of their labour, centered on attempting to mitigate, minimize and counter the negative effects of the climate change-connected drought.

The presentation is based on semi-structured interviews with adult members of farming households in Eastern Poland and participant observations conducted over a year in one research location in the area. Farming in Poland is largely a familial matter, with family members serving as the labor force at the farm, performing specific tasks, segregated based on gender and age. Drought has forced farming household members to confront this new challenge; this presentation aims to show the gendered dimension of the decision-making processes and the intra-household hierarchy reflected in these strategies, which fall under the umbrella of sustainability labour.

In the course of the analysis, a taxonomy of the coping strategies has been developed: (1) weary acceptance; (2) modernization and change; (3) reliance on external (i.e. governmental) help. The presentation will characterize each strategy, connecting them to the larger theme of sustainability regulations on the national and European Union levels, as well as attempting to problematize the climate change denialism present in the investigated farming community.

Residency Restrictions and Their Consequences for the Well-Being of Refugees in Germany

Individuals seeking protection in Germany are geographically distributed by authorities after their arrival. In the assigned region they are obliged to live in reception centers and shared accommodations until the asylum procedure has been completed. Originally, residential restrictions were lifted once a protection status was granted. However, since the so-called Integration Act came into force on the 6th of August 2016, freedom of movement is restricted further and refugees can be subject to a residency restriction for additional three years after they were granted protection. Depending on the federal state they live in, this restriction can be as narrowly as on the district or municipality level. This paper investigates how residency restrictions affect the subjective well-being of refugees. It is hypothesized that for example through feelings of exclusion or disenfranchisement residency restriction can have an impact on health outcomes.

The paper relies on the IAB-BAMF-SOEP Survey of Refugees and methodologically employs an instrumental variable approach where the timing of being granted protection status (pre or post the reform) is used as an instrument. Additionally, the paper leverages the distribution of refugees across Germany upon arrival and state-level variations in implementing the restrictions.

With the paper, a more precise understanding of the factors that can influence refugee well-being in the host country and of the extensive effects of limiting the spatial mobility of individuals is enabled. Since health is a basic prerequisite for labor market participation, ways of how the holistic integration of refugees into the labor market and society can be improved will become apparent.

Are Self-Reported Measures of Well-Being Reliable and Valid?

Background:

The growing recognition of children's and young people's (CYP) rights to have a good childhood and good future life chances, coupled with the injunction from the New Sociology of Childhood to consult with CYP as active agents, has resulted in an increasing number of studies on CYP's well-being at national and international levels. However, developing reliable and valid measures of well-being suitable for comparative study is still considered one of the significant challenges for research with CYP from different countries. This paper discusses the limitations and advantages of some measures of well-being using data from a survey in Bangladesh. This study was administered as part of the 3rd Wave of the Children's Worlds International Survey on Children's Well-Being (ISCWeB). This paper will focus on the reliability and validity of overall and domain-specific measures (e.g., safety, home, material conditions, relationships with friends, family, and teachers) of well-being.

Methods:

Data for this paper are obtained from over 3000 primary and secondary school children (aged between 8 and 15 years) living in three large cities in Bangladesh. Exploratory factor analysis is carried out to examine the factor structure of the multiple-item measures of overall and domain-specific well-being. Then, Cronbach's Alpha is computed to examine the reliability of the scales. Finally, convergent, discriminant and criterion validity of the scales are assessed by testing the relations of these scales with other theoretically relevant variables, e.g., age, gender, satisfaction with health, pro-social behaviour, emotional symptom, and self-esteem.

Results and conclusion:

Although some multi-item measures of overall and domain-specific well-being appear to work well in measuring child well-being in Bangladesh, there is still scope for improving the measures. These findings are discussed in the context of previous empirical studies on child well-being in developing and developed countries. Suggestions for future comparative research are put forward.

Youth Subjective Well-Being: Explaining Variations By Micro and Macro Social Factors

Over the past few decades, a large number of studies have been conducted to explain variations in subjective well-being. Influenced by bottom-up theories, most of these studies emphasised micro-level demographic factors, which were consistently found to be able to explicate only a small amount of variation in well-being. To find a better explanation, researchers guided by this theoretical framework now focus more on macro-level contextual factors. However, these studies are mainly based on adults. There is little systematic evidence on how contextual factors such as self-perceived evaluation of the condition of democracy in the country, inequality, human rights situation, and trust for institutions and organisations are related to youth subjective well-being. The present study aims to fill this gap by exploring the relative strength of these micro and macro-level factors in explaining variation in youth subjective well-being.

Data for this study are from a recent survey conducted over 17,000 young people aged 16 to 25 from 14 European countries. A two-stage multiple regression analysis is carried out to examine the influence of micro and macro-level factors. In stage 1, micro-level demographic factors of age, gender, ethnic background, religious affiliation, occupational status, country of birth, and class are used to explain variation in the subjective well-being scale. In stage 2, macro-level contextual factors of young people's assessment of the state of democracy in the country, inequality, human rights situation, and trust for institutions and organisations are added to the analysis. These models are then evaluated regarding their ability to explain variation in subjective well-being. Findings are discussed in the context of previous empirical studies and theories on subjective well-being. Suggestions for future research have also been put forward.

The Implications of Institutional Evaluation and Accreditation in Greek and British Higher Education on the Organizational Autonomy of Universities and the Professional Autonomy of Faculty

This paper examines the internationalization of educational policy making and the homogenization of evaluation practices in Higher Education (HE) across Europe, with a focus on Greece and Britain. More specifically, it explores the impact of the new regulatory frameworks regarding institutional evaluation and accreditation on the *organizational autonomy* of universities (and generally HE institutions), and on the *professional autonomy of the faculty*. In Britain, evaluation and accreditation is relatively well-embedded into the domestic HE system, and, more recently, it has been exported to other parts of the world, not least through satellite campuses and overseas university branches. In Greece, these processes have intensified since the early 2000s through concerted policy efforts by all recent administrations.

This study employs a Critical Discourse Analysis approach to scrutinize the language, ideology and rhetoric of a variety of documents that relate to the evaluation and accreditation of HE institutions in Greece and Britain. The documents we analyzed come from *official sources*, which include parliamentary proceedings, legislation texts, ministerial decisions and circulars, governmental discussion papers, policy reports published by official evaluation and accreditation agencies and the like.

Analysis from the Greek documents points to an over-centralized Greek "Regulatory State", which is increasingly demanding from HE institutions to be "accountable" and produce "evidence" that they comply with criteria of efficiency and effectiveness. Analysis from British documents shows that the pressures described in relation to the Greek context, namely accountability and efficiency, form part of a wider discourse around the sustainability of the current HE architecture and especially its funding system, which is based largely on income from tuition fees.

Our findings show that the evaluation and accreditation of the Greek and British HE institutions, according to criteria of accountability, efficiency and effectiveness, raise issues about academic freedom as well as about faculty and institutional autonomy.

GOW, JAMELLA* (Bowdoin College, USA)

Coordinating Crimmigration in the Caribbean Borderlands

In the U.S., the rise in cooperation between local law enforcement and immigration enforcement has been called "crimmigration" a process which criminalizes predominantly nonwhite migrants. This phenomenon, however, is not limited to the U.S. border. Through the Third Border Initiative and Operation Bahamas, Turks, and Caicos, the U.S. has coordinated with CARICOM and other Caribbean nations to serve as a transnational arm of immigration enforcement for the U.S. Further, the Guantanamo Bay detention center and the Ramey Border Patrol station in Cuba and Puerto Rico, respectively, extend the reach of the U.S. Border Patrol into the Caribbean. While in other work I explore the transnational links bridging the U.S. and the Caribbean into a shared crimmigration space, this paper focuses on role of Caribbean nations themselves in doing the work of bordering either of their own citizens or other migrants crossing their borders to reach destinations in the U.S. and neighboring countries. For example, as García Peña (2016) emphasizes, the racialized treatment of Haitians in the Dominican Republic cannot be separated from both the linkages between U.S. and Caribbean racial projects and the ongoing criminalization of migration within and beyond the Caribbean. This paper takes the Caribbean as a starting point to explore the ways in which immigrant and military collaborations within the Caribbean expand the reach of U.S. border enforcement and turn the region into a borderland space. If borderlands highlight the blurry lines where border communities merge and the reality that border-crossings reflect the ongoing crossings of people, ideas, and cultures, the coordination between the U.S. and Caribbean highlights its social and cultural connectivity. I explore how Caribbean nations have made the phenomenon of crimmigration transnational through a historical examination of policies linking Caribbean migrant pathways throughout the region to the U.S.

Earthquake Disaster Management in Turkey and the Contractor As a Scapegoat Figure

The Anthropocene represents a transformative epoch where human activity is the dominant force shaping the environment, creating unprecedented legal and societal challenges. Turkey, as a high seismic activity has witnessed the collapse of over 35,000 buildings and the loss of more than 50,000 lives in the 2023 earthquakes which has prompted critical evaluations of current disaster management. This research examines the "judicialization" of earthquakes, exploring how criminal justice addresses the environmental dimensions of disasters through the prosecution of contractors. Central to this inquiry is the contractor's evolving role as a scapegoat figure within the justice system and how this reflects broader socio-political responses to environmental destruction.

By analyzing legal and social reactions, this study poses several key questions: How is the contractor's responsibility defined in terms of punishment? Does the criminal justice system adopt a protective perspective or a punitive treatment in the trials of contractors? How do the actors of the justice system take their stand, and according to what do they change? What strategies do the parties (victims and defendants) to the proceedings adopt in response? Which is the contribution of experts and "out of court" actors to the trials and how do they influence the state of affairs?

To answer these questions, we will conduct interviews with a range of stakeholders, including judicial actors (judges, prosecutors, lawyers, defendants, victims, experts) and "out of court" actors (journalists, NGOs, public opinion). Additionally, through participant observation of ongoing and future trials, we will explore how judicial rituals serve to address societal trauma by holding contractors accountable, thus illustrating the justice system's role in managing disasters. This research ultimately aims to shed light on how criminal justice systems navigate the complex intersections of legal, environmental, and social responsibilities in the Anthropocene era.

The Role of Humour in Shaping Discourse about Ageing - a Qualitative Analysis of Tiktok Videos Created By Older Adults

Humour in our life has its various functions and can derive from various topics. We might associate humour with laughter that we deem as positive, jokes and humour are not predominantly positive. Another topic that we are interested in, ageing is usually seen as negative, as generally the social, economic and personal burdens are highlighted when talked about the topic.

This presentation examines how TikTokers above the age of sixty in Hungary seek to refine representations of ageing online through humorous short videos. Platforms, such as TikTok, are usually associated with the younger generations; however, it is important to note that older adults' online presence also contributes to online discourse construction, making research such as this one essential. This presentation aims to interpret the age-related humorous content created by older adults through classical humour perspectives, i.e. Relief, Incongruity and Superiority Theories, and to analyse them according to their sources of humour, highlighting the more positive tones of the humour about ageing. Visual Video and Audio Analyses and Discourse Analyses were used for these purposes.

The following topics emerged as sources of humour: chronological age, ageist stereotypes, use of technology, bonding humour between generations. While the first three categories could be interpreted through one or more classical theories, bonding humour could not. Although bonding humour can be described as typically positive, the three other categories also offered light-hearted and joyous moments too. This topic and the analysis offer the questioning of the negative interpretation of ageing.

GRAEF, JAN* (European University Institute, Italy)

Out of Sight, out of Mind? Examining Trends in Inter-Generational Family Support in Ghana

Within the recently abounding literature on global family change, one particular direction of historical change that has been documented involves a trend towards nuclear living arrangements comprising only primary kin, which has been shown to be most pronounced among countries in Sub-Saharan Africa (Esteve & Reher 2024). This trend towards nuclear arrangements resonates with accounts of several scholars claiming a *nuclearization* of the family in Ghana (Annim et al. 2015; Dzamedo et al. 2018; Kpoor 2015; Nukunya 2003; Oppong 1971, 1977; Tagnan et al. 2022). Nuclearization, according to these authors, comprises a transformation concerning the organization of family life, in which the traditional model of the extended family increasingly recedes in favour of the nuclear family, manifesting itself in corresponding alterations in the composition of households and intra-familial relationships, which involves the weakening of inter-generational ties between (adult) individuals and their parents. The few existing studies seeking to document these shifts, however, are either solely focusing on household compositions, which neglect family ties beyond the household, or are based on small-scale qualitative data. In this study, I seek to overcome these shortcomings by drawing on nationally representative repeated cross-sectional data from the Ghana Living Standards Surveys to trace how flows of financial and material support to and from non-coresident kin, particularly parents, have changed across the last decades in Ghana, and whether these trends resemble the alleged pattern of weakening inter-generational ties and family nuclearization more generally. Based on specific theoretical arguments, I further examine whether these trajectories evolve differently across socio-demographic groups of individuals. Given that families remain the primary source of social assistance and protection in the context of low levels of formal welfare provision in Ghana (Barrientos 2023), these trends can be assumed to entail profound implications for the well-being of individuals across generations.

MATIDZA, KHULISO (Centre for Social Development in Africa, University of Johannesburg, South Africa)

What Can Platform Workers Tell Us about the Nature of the Social Contract and Labour Relations?

Platform work has received a great deal of research attention. In social policy literature, much of this research has focused on the effects on workers' vulnerability. However, in contexts with widespread unemployment, platform work is also seen as a potential panacea. It also offers work that is accessible to and flexible for many who are otherwise excluded from the labour market – youth, women, people with disabilities, and migrants. How, then, can the very legitimate concerns about how platform work undermines decent work be balanced with the potential it holds to encourage employment growth? Much has to do with the nature of the social contract and how that continues to be negotiated by the state, companies that own the platforms, and workers that use the platforms.

An exploratory qualitative research design was employed to investigate how the social contract needs to be reconceptualised in the context of platform work. Twenty platform workers (ten place-based and ten web-based) participated in semi-structured interviews concerning how they understood their relationship to the platform, wages, access to benefits, and thoughts about social insurance. These interviews were complemented with key informant interviews with platform representatives and policy makers.

The findings demonstrate the complexity of how temporary employment practices intersect with platform work, evidence of confusion over worker identification, which undermines the ability of workers to advocate for better work conditions, how workers value the work and wages, despite being excluded from the benefits that formal employees enjoy, and workers' views on the importance of social insurance.

The findings demonstrate how there is a need for innovative social and labour policy thinking that both supports platform work, but also ensures that workers enjoy greater security and benefits. The study both draws on and contributes to the research on expanding social protection to informal workers.

Decarbonization in Canada's Energy Policy-Planning Network: From Opposition to Delay

Through a social network and discourse network analysis, this study examines differing stances on decarbonization within Canada's elite 'energy policy-planning network.' First, I examine the positions of over two dozen industry-linked civil society groups (including think tanks, business councils and energy-focused industry associations) on climate policy and decarbonization from 2022-2023, and second, the wider network of interlocks they are embedded in and help form. Findings point to a bifurcation of the network between a 'extractive-populist' segment that promotes fossil fuel expansion and opposes virtually all forms of climate action, and an ascendant 'green growth' bloc that contradictorily supports low-carbon transition and the fossil economy (with the promise of emission reduction technologies, like carbon capture and storage and other technological solutions, including hydrogen). Fossil fuel firms are found to be central to the energy policy-planning network, and interestingly, large fossil producers and multinationals link most strongly with the green growth bloc. The analysis helps illuminate the prospects of and barriers to decarbonization and energy transition in one major fossil producing region. It opens to a consideration of ideological and material fragmentation within corporate capital and the fossil fuel industry itself in response to climate change, as well as divergences and complementarities between policy networks that either oppose or delay energy transition.

GRAHAM, NICOLAS* (University of British Columbia, Canada)

Ecosocialist Transformation: Between Socialist Ecomodernism and Degrowth

This paper articulates a vision of ecosocialism centering on transformations in the forces and relations of production. This outlook is advanced through a sympathetic critique of socialist ecomodernism on the one hand and degrowth on the other hand. I suggest that while socialist or left ecomodernism offers

a vital critique of the way 'green productive forces' (e.g., renewable energies, ecological efficiency and even negative emissions technology) are fettered within fossil capitalism, advocacy of a socialist 'politics of more' within this literature (defined as growth in material output and individual consumption) risks fetishizing capitalist production relations as eternal. Degrowth proponents, by contrast, have argued that relying on technological change is not enough to solve the ecological crisis, and emphasize the need to reduce energy and matter use in the Global North, at a speed faster than what efficiency improvements can deliver. Yet, degrowth approaches (even post-capitalist variants) to transforming economies and productive forces tend to centre a politics of scale, rather than underlying social relations. In doing so, they can fail to distinguish between qualitative and quantitative aspects of growth and foreclose positive ecological and human potentials of developments in the productive forces. While socialist ecomodernism and degrowth offer seemingly contrasting approaches to addressing ecological and climate crises, I suggest that both have limitations, but also offer essential elements within a broader struggle for ecosocialist (and anti-imperialist) transformation.

Competence Framework for Life and Work As Technological Ensemble in Neoliberal Governmentality

The competence framework has become an extended technological ensemble from north to south, working as a key to lifelong learning in contemporary neoliberal governmentality (Foucault). It is present in the European Union EntreComp, the ILO Core Skills for life and work in the 21st Century, the World Bank Skills Towards Employability and Productivity (STEP) measurement program, and in the official pedagogic discourses of the continuous educational reforms in Latin America.

A fundamental attribute of the competence model is its necessary focus on assessable and effective performance in real contexts. While aiming to regulate knowledge transmission and acquisition forms, these technological ensembles create forms of behaviour, shape desires, and modulate subjectivities. In contemporary discursive and non-discursive practices, in addition to the meanings and the conduction of conducts they try to bring into play, there is a compulsion to evaluate the performance of individuals, teaching activity, and the effectiveness of institutions and the education systems. The discrete delimitation of effective and competent performances allows for evaluation, comparability, measurement, and the definition of a 'league table', which operates as a ruler of conduction of how subjects must modify themselves.

In the context of neoliberal governmentality, the competency technology embraced the entrepreneurial self as a subjectivation regime, by which the boundaries of life and work, private and public, are blurred and through social control technologies and technologies of the self produce subordinate subjectivities that are in constant failure to reach introjected standards. Subjects are compelled to constant training, a capacity of trainability, that through lifelong learning legitimates Totally Pedagogised Societies (Bernstein).

To understand this process, we study the transmission of knowledge related to life and work constructed as common to both spheres at the level of Official Pedagogic Discourse and local pedagogic practices in educational and work contexts.

GRANZOTTO, MICHELE* (University of Naples "Federico II", Italy)

Performing Arts Laboratory As a Social Research Practice. Issues and Problems

When Othello kills Desdemona, the audience cries and is moved. Yet, on stage there is no real murder, it is fiction, and everyone knows it. What happens is a relationship between *physical* and *effectual-phenomenal reality* (Böhme, 2001), in which perceived reality produces physical effects, following dynamics that, with the Neue Phänomenologie (NP) (Schmitz, 2009) we could call *atmospheric*.

This contribution aims to bring an empirical experience in which I used a Performing Arts Laboratory (PAL) as a social research method, to investigate the relationship between these two types of reality in a specific social group with disabilities, applying the NP to the social theory of emotions. In the first part, I will highlight the reasons why I used a PAL as an empirical tool - such as the deep methodological reflection required by following a neophenomenological approach - and also compare with other cases in which theatrical practices have been used in research, such as the Forum Theater.

In the second part, I will describe my research experience, whose core is a PAL dedicated to people with different visual abilities (blind and partially sighted), to which I have added interviews and shadowing. I will bring as an example some extracts from the field diary, and some testimonies that emerged during the interviews following the laboratory period.

In the third part, resuming the theoretical discourse, I will highlight some methodological issues that emerged during the practice and some strengths that testify to the effectiveness of a PAL as a tool for social research. In particular, resuming some theoretical issues specific to NP, such as the concepts of *lived-body*, and *involuntary vital presence*, I will focus on the role and training of the researcher who follows a neophenomenological theoretical approach and his relationship with those who participate in the research.

WG08-913.1

GRANZOTTO, MICHELE* (University of Naples "Federico II", Italy)

The Neue Phänomenologie and the Category of the Patheur, a Bridge between Atmospheres and Social Sensitivity.

In the context of the current climate crisis, we might ask ourselves: "Why, if people know, do nothing?". Starting from this research question, between phenomenology and the sociology of emotions, I propose to analyze a particular aspect of subjectivity, introducing Hermann Schmitz's *Neue Phänomenologie* (NP).

First, I will introduce NP, highlighting its concept of subjectivity, and its differences from classical phenomenology. NP emphasizes the pathic and affective aspect of social action, thanks to the category of the *patheur* - a person capable of communicating affectively with what he perceives.

In the second phase, I will focus on the NP concept of *atmosphere*, observing how the *patheur* can communicate affectively with them, becoming a privileged category to observe the emergence of sociality. Here, I will highlight how the concept of "atmosphere" can include that of "emotion", "passion" and "feeling", depending on the different degrees of atmospheric involvement.

In the third phase, I will bring the theoretical framework just drawn to the light of Simmelian essays on the senses and aesthetics. The aim will be to highlight how atmospheric and sensitive experience can be shared, and therefore become social.

Returning to the initial question, the aim is to open up to a model of neo-phenomenological social theory, capable of giving new keys to reading the sociological aspect of emotions and sensitivity. In this framework, it is possible to observe a *sensitivity* shaped by an atmospherically connoted social, which the person does not control and does not know in its entirety: a social capable of orienting sensitivities towards some stimuli and styles rather than others.

I believe that research in this direction is fundamental to dealing with the current climate crisis, where, it is important to raise awareness especially in the individual, with the aim of a widespread change in lifestyles and consumption.

GRASSI, EDMONDO* (San Raffaele University of Rome, Italy)

From Programmability to Complexity: Genai and Algoagents between Roman Cauliflower and Ginger

The advancement of GenAI is redefining social dynamics—from the imagination to home automation—through the creation of new digital actors that interact and actively participate in the construction of social reality. This presentation explores how algoagents transcend traditional boundaries between human and machine, assuming communicative and emotional roles that profoundly influence the plasticity of the human brain and its capacity to produce epistemological structures, while simultaneously redefining the ontological boundaries of the self.

The metaphor in the title offers a field for critical reflection: the cauliflower, with its fractal configuration, symbolizes the programmability and predictability of technologies like GenAI, where every response is the result of calculated and replicable design. In contrast, the ginger root, with its rhizomatic and complex form, represents the unpredictability and richness of emerging interactions that develop when these algoagents come into contact with the human social fabric. This contrast highlights how, despite the apparent control and order of algorithmic technologies, their integration with human social and emotional reality leads to new and nuanced dynamics that challenge initial expectations.

As the result of long-term and ongoing research, this presentation, using the heuristic device of hybrid ontology, will introduce four actor categories with which human entities will share centrality in the development of social changes.

GRASSI, EDMONDO* (San Raffaele University of Rome, Italy)

Zeitgeist As a Heuristic Device for the Critical Analysis of Futures in the Anthropocene

This contribution explores the use of the concept of *Zeitgeist* as a heuristic device in futures research, with particular attention to its application in the analysis of sociocultural and technological dynamics in the Anthropocene. Starting from a critical reflection on contemporary epistemologies, the article investigates how the *Zeitgeist*, understood as an architecture of cultural and technoscientific codes, can provide an interpretative key to understanding ongoing transformations and collective expectations for the future.

The work questions how intelligent algorithms, as an expression of the contemporary *Zeitgeist*, not only reflect but also actively shape visions of the future, contributing to the definition of plausible, preferable, or preventable scenarios. This perspective intersects with the theoretical critique of technoscientific narratives, highlighting the ethical and political implications of how risks and opportunities are calculated, visualized, and often obscured.

Through a dialogue with the thoughts of authors such as de Certeau, Kosselleck, and Toulmin, the intersection between critical epistemologies and practices of anticipation is explored, highlighting how dominant narratives influence the production and legitimization of futures. The contribution advocates for a democratization of futures research, arguing that the inclusion of marginalized perspectives and critical reflection on epistemic codes can lead to a more equitable and nuanced understanding of possible futures in the Anthropocene.

In conclusion, the *Zeitgeist* is presented not as a monolithic entity, but as a dynamic set of codes that, through the interaction between history, technology, and culture, provides a framework for the critical analysis of social transformations and future projections, offering new tools for sociological research in an era of global turbulence.

GRASSO, MARIA* (Queen Mary University of London, United Kingdom)

Generations, Crises, Inequalities and Solidarities

The most recent generations of young people have gone through several challenging experiences in their formative years. They have experienced economic crisis, political crisis, a health crisis, an ongoing environmental crisis, a cost of living crisis. These developments have impacted on young people in many ways including in terms of their political, social and economic outlooks, their educational paths, employment, economic security, and the opportunities available to them to flourish and enact positive social change for the future. All these experiences are likely to have impacted on young people coming of age and experiencing their formative years in profound ways leading to the formation of new values in relation to those of generations coming of age in previous periods. In particular, this could be reflected in growing support for leftist values amongst young generations coming of age through these experiences. Moreover, these experiences are variegated within generations in terms of different dynamics of experiences such as those relating to gender or class or spatial inequalities. I will critically examine these crucial aspects in relation to generations and social change and build on insights from previous work to examine how these patterns can lead to opportunities for the development of solidarities and collective political action for social change in the current socio-historical juncture.

GRAZIOLI, MARGHERITA* (Gran Sasso Science Institute, Italy)

URSO, GIULIA (Gran Sasso Science Institute, Italy)

More Than Numbers: Reconceptualizing Left-Behindness and Remoteness within Italian Inner Areas.

In this presentation, we advance the reconceptualization of two tenets of the debate about left-behind regions, i.e., remoteness (Bocco, 2016) and left-behindness (Pike et al., 2023). We do it by discussing the theoretical implications of the fieldwork we conducted in 2023 to explore the public and social infrastructures (Klinenberg, 2018; Tomaney et al., 2023) of the areas that are included in the Italian institutional geography of remoted(d) areas, that is the one of "inner areas" (aree interne). Here, we argue that we need new concepts and methods to grapple with the situated process and multidimensionality of being (and feeling) left behind, as well as to understand the infrastructures that inform how people interact, organize, make, unmake, and remake societal and spatial configurations in their everyday lives. Based on

our findings, we argue that remoteness is not just the measure of how distant places are from the primary urban hubs of welfare services and facilities, nor is left-behindness the mere tabulation of the tangible infrastructure that is present or absent in a specific place. We define remoteness as the relational perception of how remote the place is where people live based on the relation and comparison to other peer locations (e.g., similar rural, mountain or valley ones), usually in a context of proximity. Relatedly, we understand left-behindness as the processual evaluation of the intra-place ability to secure the public-social infrastructures that are deemed pivotal for retaining a sense of place (e.g., a school, a cafeteria, a post office, or a grocery shop) beyond the definition of essential services, and the capacity of external actors (especially multilevel institutional ones) to supply the missing tangible and intangible resources needed to salvage (or restore) them.

RC21-330.3

GRAZIOLI, MARGHERITA* (Gran Sasso Science Institute, Italy)

Understanding the Radical Politics of Inhabitation Beyond Dwelling: The Habitability Crisis As Method.

In this presentation, I advance the "habitability crisis" as the method to zoom in on the conflicted intersections of social infrastructures, sociospatial practices, contentious politics, and late-neoliberal capitalist assemblages that further and counter the curated uninhabitability (Simone, 2019) of urban and non-urban spaces within the contemporary context of polycrisis (Morin and Kern, 1999; Tooze, 2022). Here, I follow Mezzadra's and Neilson's (2013) understanding of the 'border as method' to conceive habitability as an epistemological device that "is at work whenever a distinction between subject and object is established" (p. 16) and that thus informs conceptual questions and methods as it "deals with such instances of tricky conceptual overlapping and confusion through the punctual analysis of concrete" case studies (p. 15). Speaking of the "habitability crisis" (Grazioli, 2024), the first instance of conceptual fuzziness is the definition (and possibly distinction) of things such as dwelling, home, housing, inhabitation and shelter. Aligning with Lancione's (2023) effort of reading through (and beyond) the bordering entrenched in the politics (and policing) of home/lessness, I conceive the habitability crisis as an instrument to acknowledge both the grand scales of the widespread impossibility to make and inhabit space, and the fine grain of those forms of inhabitation and infrastructure that counter it within and beyond dwelling (and shelter) (Boano and Astolfo, 2021; Lancione and Simone, 2021). In this presentation, I focus on the habitability crisis as a method to understand, and stand with, those grassroots forms of inhabitation, social infrastructures and reproduction, makeshift placemaking, squatting, "bodily precarious politics" (Lancione, 2018) that emerge "in the interstices of home and its foundational lessness" (Lancione, 2023, p.viii), and whose insurgence compose a "liberatory politics of home" (Lancione, 2023) beyond the "binary reading of home and its other" (Lancione, 2023, p. viii), hence beyond the habitability crisis itself.

A Sustainability Propensity Index to Assess a Migrants Integration Policy Programme: An NLP-Based Approach

This paper presents an experimental methodology for measuring the sustainability propensity of 530 National projects funded by a European Programme focused on migrants and refugees integration using a composite indicator. The study proposes a systematic approach for evaluating the achievement of a policy programme and its impact on both society and the beneficiaries over time. To construct the Sustainability Propensity Index (SPI) for each national project, we employed a sociocultural profiling method called Emotional Text Mining (ETM) applied to the contents their final reports. ETM is grounded in a socio-constructivist approach and utilizes natural language processing procedures (NLP), and a non-supervised bottom-up approach to identify the reports content and assess their sustainability propensity. We analyzed six sections from projects' final report to identify prerequisites for sustainability. Even if sustainability can only be assessed post-project, early prerequisites can be included in the project planning phase. Hence, using a bottom-up NLP approach, we have extracted these prerequisites for sustainability identified by the scientific literature as project effectiveness, continuity of activities, and contribution to contextual change. We collected text from 530 project final reports, resulting in a corpus of nearly one million terms and 16,000 comparable chunks of text. We applied ETM procedure to identify 19 clusters of similar text chunks, which were then interpreted and assigned to the above mentioned sustainability dimensions on the basis of four experts' assessments. Subsequently, we calculated indices for effectiveness, continuity, and change, normalizing them between zero and one, while also assessing project criticalities. A SPI was derived by aggregating these indices and subtracting criticalities. The final ranking of the projects was

compared with that resulting from traditional qualitative analysis, revealing strong convergence between the two methods. These findings indicate that semi-automatic text mining techniques can streamline the evaluation process, enhancing efficiency without sacrificing accuracy.

Aging Narratives and Emotions

According to the World Health Organization (WHO), the global population of people aged 60 and older is steadily rising, projected to reach 1.4 billion by 2030 and 2 billion by 2050. In response, WHO promotes healthy aging, which is defined as developing and maintaining the functional ability that supports well-being in later life. This functional ability is influenced by an individual's intrinsic capacity, the environment, and the interactions between the two. In particular, societal attitudes and perceptions of aging are crucial in promoting healthy aging.

This study reports the preliminary findings of a larger National Research Project (PRIN 2022, Prot. 2022RAESSJ) aimed at gaining deeper insights into elderly Italians' perception of aging, and develop and test a health promotion indicator. We conducted interviews with nearly one hundred individuals, exploring their narratives of daily life. These open-ended interviews were transcribed verbatim, producing a corpus of 150,000 words. Emotional Text Mining (ETM), a socioconstructivist, bottom-up, non-supervised method, was used to identify the cultural, symbolic categories, representations, and sentiments related to aging.

The findings reveal that aging is perceived as a multidimensional process of change, characterized by transitions between past and present, work and retirement, living with others and living alone, and a reduction in social life. These transitions are often driven by losses—such as employment, loved ones, or physical strength—and the ongoing need to adapt to new realities.

The study suggests that aging is not solely defined by disease, but is deeply intertwined with continuous social and personal transformation. As Erikson observed, this stage of life challenges individuals to reorganize their social and relational lives in response to the physical, mental and social changes of aging. Ultimately, the study emphasizes that aging cannot be reduced to biological decline, offering a richer understanding of how elderly people experience and express their daily life.

Anchoring Values to Value: An Open-Source Investigation of Corporate Social Responsibility Practices in Lululemon

This paper presents findings from an open-source investigation into corporate social responsibility (CSR) in lululemon, a global sportswear brand which claims to be advancing various forms of social justice through its activities. A relatively original methodological approach is advanced here in the use of various deployment of digital techniques emerging from open-source investigation, usually associated with journalism and intelligence services. Open-source techniques meet ethnography to explore the practices and discourses associated with lululemon's branding and corporate governance. Four themes are discussed, including branding as CSR; anchoring values to value; constructing a problem, offering a solution; and managing supply chains. The research uncovers the way various strategies of externalization take place in the formation of CSR agendas, and particularly attempts to distance and obscure harmful aspects of production from the warm and fuzzy feelings crafted through other activities. Some challenges and opportunities in deploying open-source research in social science are also covered. The paper finishes with significance of CSR practices for generating value in contemporary capitalism.

'Benefits Distress': Violent Proletarianisation and the Production of Mental Health Harms in the English Welfare System

This paper will draw on longitudinal qualitative study exploring the lived experiences of mental health service users in England who are also claiming disability benefits. The institutional violence arising from the UK government's programme of welfare reform and social security retrenchment has been well documented. This paper adds to that literature by outlining the socio-genesis of stressful and traumatic experiences as a result of engagement with benefit assessment and administration processes. The analysis draws on a 'zemiological' or 'social harm' approach (Canning and Tombs, 2022) to shed new light on the sociological and socio-political dynamics undermining claimants' subjective wellbeing and generating and/or exacerbating experiences of mental distress.

The specific contribution of the paper is to identify and elaborate the particular forms and dynamics of 'mental health harm' (Pemberton, 2016) that are being generated in the welfare system by what Grover (2019) describes as processes of 'violent proletarianisation'. These processes seek to drive claimants into the labour market through violent bureaucratic measures linked to wider neoliberal logics of austerity and public service commodification. These include cuts to benefit entitlements, an escalation of coercive measures to engender labour market 'activation', and punitive forms of welfare conditionality. These are buttressed through the weaponisation by the state (and other corporate actors) of stigma, shame and social blame in relation to 'welfare dependency'. These strategies are, moreover, integral to the crafting by the neoliberal state of 'technologies of consent' for this punitive agenda. In summary, the key contribution of the paper is to highlight the mechanisms of mental health harm production, what we call 'benefits distress', and identify how these are underpinned by preventable social and structural harms arising from the political, economic and policy decisions of the state and its corporate partners in the welfare sector.

Sheltering, at a Distance: Distributed Sheltering Efforts in Response to the 2024 Noto Peninsula Earthquake

On January 1st, 2024, the Noto Peninsula Earthquake, a M7.6 earthquake, struck the Ishikawa and Toyama Prefectures of Japan at 4:10PM, resulting in at least 282 deaths and the evacuation of coastal residents to tsunami shelters. While the tsunami had localized impacts, the effects of the earthquake were felt across the region, and a largescale sheltering effort was designed to accommodate displaced survivors. Given the remoteness of the affected area and the needs of the affected population, however, responders struggled to bring necessary supplies and services to evacuees, and the decision was made to move most evacuees to larger inland cities, often hundreds of kilometers away from their homes. For this RAPID study, our team explored how emergency management stakeholders navigated evacuation, sheltering, and re-entry planning and decision-making during this event. We conducted 16 semi-structured interviews with emergency management stakeholders at Japan's local, prefecture, and central government levels in July 2024. Participants were recruited using a purposive sampling strategy designed to identify agency representatives and other officials involved in response to the earthquake. While analysis is still ongoing, preliminary findings center around three key issues. We found that the shift to intermediate and long-term sheltering away from the affected area was largely improvised to address the medical and caregiving needs of elders and individuals requiring assistance. Second, participants frequently reflected on how the response to the Noto Earthquake was largely influenced by lessons learned from the 2011 Tōhoku Earthquake and Tsunami, particularly regarding transport and sheltering of the elderly population. Third, we found a disconnect between local- and prefecture-level decision-making around sheltering decisions, leading to considerable anxiety on the part of local governments regarding the long-term viability of their communities. Our findings provide insights for future evacuation and sheltering efforts where shelters are established away from the affected location.

Learning about Poverty and Preferences for Redistribution: Results from a Survey Experiment in Italy

Preferences for redistribution have attracted the attention of researchers from different disciplines for many decades. With reference to classical assumption of political economy and previous studies, we can argue that those who have a weaker social or income position have a higher demand for redistribution. However, the causal relationship between income and preferences for redistribution is not clear cut.

We present results of a survey experiment in Italy (N=2000) that shed light on whether objective information about one's personal self-interest in redistribution affects individual preferences for redistribution. Rational learning theory predicts that if individuals reveal that they are poor, they are much more likely to increase their demand for redistribution compared to those individuals who will learn that they are not poor.

The experiment is designed to explore the mechanism of how individuals shape their preferences for redistribution in response to exposure to information about their income situation with reference to poverty line. Respondents are randomly divided into treatment and control group. The members of the treatment group, based on information about household composition and household income, are informed about their objective position in income distribution with reference to the poverty line: they receive a personalized treatment. The members of the control group get information unrelated to inequality, poverty or redistribution (placebo treatment). Members of both groups are asked questions measuring preferences for redistribution. The subsequent data analyses are done on the whole sample and subsamples. The contextual effect of poverty and inequality is tested through a comparative analysis of Italian macro-regions.

The experiment is pre-registered and will be run by Dynata in November 2024.

From Personal Health to Planetary Care: Women's Activism and Toxicity Narratives in Uruguay and Catalonia

In the context of planetary health, this paper explores how women in rural communities in Catalonia and Uruguay articulate their personal health experiences alongside a broader critique of toxic modernity. Through qualitative analysis of narratives and healing practices, it becomes evident that these women confront challenges related to environmental toxicity while emerging as activists advocating for ecological justice. The notions of toxicity—both in their abstract and literal senses—intertwine with their discourses on health, leading to collective practices aimed at remedying both individual well-being and the health of the planet.

Spirituality, understood as an active and dynamic relationship with nature, emerges as a crucial motivator in their activism. Women adopt a holistic approach that integrates individual healing practices with collective efforts for ecological well-being. Furthermore, these women engage in a subversive exercise that challenges hegemonic scientific epistemologies, opening space for imagining alternative futures. By exploring these interactions, this presentation will contribute to the discussion on the role of spirituality in health and environmental activism, emphasizing how these women generate alternative interpretations of planetary health beyond biomedical models.

GRIFFIOEN, DIDI M.E.* (Amsterdam University of Applied Sciences, Netherlands)

'Strong Living Labs' in Higher Education: Balancing Interests in Transdisciplinary Collaboration

Multiple roles in co-creation process yields integrating multiple values, norms, and discourses. Participants bring their own 'standard to satisfy' (Hoffmann, Thompson Klein, & Pohl, 2019), what is considered 'normal' (Felt et al. 2016), in problems to tackle, what knowledge or quality norms to apply, what product to deliver (Schikowitz, 2020). When not addressed, these mutual differences potentially 'obstruct' collaboration and innovation (Lahsen

& Turnhout, 2021) and therefore need to become balanced (Raymond et al., 2010). However, guidelines to do so are limited (Hossain et al., 2019).

This paper proposes the Strong Living Lab (SLL) instrument to add a meta-layer of communication to collaborative processes, providing each participant explicitly the right and the tools to defend and negotiate their own interests. Therefore, the intersubjectivity that exists between researchers is pragmatically expanded from an 'epistemology of research' to a collective 'epistemology of practice' (see also Popa et al., 2015). Or rephrased: the knowledge values underpinning a collective innovation will be known between all participants in a lab by explication and negotiation, also the scientific ones. The underpinning concept of 'Strong Objectivity' is derived from Sandra Harding (1992, 1993, 1995), who proposed 'objectivity' and 'neutrality' to be 'too weak' to implicitly included norms in scientific approaches (Lahsen & Turnhout, 2021), leaving knowledge development biased by its scientific frames. Strong Objectivity addresses the values and norms of all participants, creating a more equal playing field.

The proposed principle of Strong Objectivity in SLL resonates highly with the asset of transdisciplinarity to include all relevant perspectives in innovation processes (Gibbons et al., 1994; Nowotny, Scott, & Gibbons, 2001). Voicing of interests in transdisciplinary innovation has been tried before (e.g. Klenk & Meehan, 2017). However, assigning participants to defend their own values' boundary is new in SLL. The proposed Strong Living Labs instrument will be discussed with the audience.

'STEM'Ming the Leaky Pipeline for Women and Non-Binary Students in STEM. an Inter-Disciplinary Study on Women and Gender Diverse Student's Experiences in STEM.

Despite an increase in the number of women and other minority groups in undergraduate STEM (science, technology, engineering and mathematics) programs, they still remain underrepresented or excluded in academia and the workplace. Women and non-binary persons are historically underrepresented minorities and unfortunately this is still the case in 2024. The reasoning as to why women and non-binary student's are not pursuing academic careers in STEM is less well explored. In fact, many studies into the factors contributing to the leaky pipeline of STEM have largely overlooked experiences faced by gender diverse students all together with a brief search identifying only three. We sought to ask how does the educational experience affect the decision to move away from pursuing studies and ultimately a career in STEM? Using the lens of SCCT (Social Cognitive Career Theory) we sought to identify factors that influence STEM educational choices made by women and non-binary students. We aim to build onto Lent's theory (1994) by exploring how implementing inclusive pedagogy can enhance the student experience for female and non-binary students.

This study aims to fill the literature gap by exploring the personal experiences of women and gender diverse in STEM to gain an insight on what factors support or impede the choices of female and non-binary students in STEM disciplines. This study also explores first-hand the roles played by educators in an inter-disciplinary context. By shining a sociological lens onto the educational experience of women and non-binary students, it is hoped that implementing new and innovative teaching practices leading to positive educational experiences will ultimately stem the leaking pipeline of STEM.

Young People, Participation and Solidarity. Results of a Qualitative Social Research

Today, more than ever, post-modern society is a social system dominated by processes of individualisation (Beck, 1986) and pervasive dis-aggregation (Giddens, 1991) as a result of the fragile social bonds (Bauman, 2003) between individuals, in particular young people. However, even if this scenario is dominated by uncertainty, several authors have emphasised the persistence of strong social bonds within small communities and small urban aggregations where the younger generations live (Howley, 2006; Johnson et al., 2005; Petrin et al., 2011). Based on these epistemological assumptions, was conducted a qualitative social research in a small Italian region, by conducting interviews introduced with the visual technique of photo-elicitation (Ciampi, 2007), which made possible to (re)trace the deep meanings expressed by the young people interviewed, concerning solidarity and bonding within local communities. The

empirical results demonstrate the strong desire of younger to influence the communities they belong to, on the basis of intergenerational values which are themselves constructed on social love and mutual support. Therefore - as shown by the research - this seems to be one of the prevailing ways of encouraging participation and maintaining social ties, even despite the individualising drives and global crises typical of the contemporary world.

Social Policy in the Age of Digitalization and Aging. How New Opportunities Create New Inequalities

Social Policy in the Age of Digitalization and Aging. How New Opportunities Create New Inequalities

The established theoretical tradition considers social policy as an interaction between the state, the economy and NCOs/NGOs, i.e. the 3 sectors of society. At the same time, the active population was considered to be permanently employed working men. Criticism of this tradition immediately highlighted its failure to take into account women's participation in the labor market, on the one hand, and their economic contribution through the "home economics", on the other. Thus, the approach to SP through the economy/society of work (according to Weber) needed to be complemented by the economy/society of care (the Catholic subsidiarity principle). The noticeable increase in women's participation in the labor market contributed to the expansion of the service sector to replace domestic service with hired labor in the service sector. Thus, the welfare state became a "service welfare state".

Step by step, it turned out that developed social obligations limit the investment opportunities of the social economy, and, moreover, greatly increase the cost of labor. This led to a constant influx of migrants to jobs in developed European countries, since employers had no social insurance obligations towards them. Further development of digitalization of public administration is complicated by the elderly people's uneven proficiency in important skills of communication with government services, banks, etc., despite the fact that the number of digital services is growing and they are becoming more convenient.

The research was supported by a grant from the Russian Science Foundation № 24-78-10118 (<https://rscf.ru/project/24-78-10118/>).

The Challenges of Mobilizing after Emergency Events: Linking Debates on Moral Shocks and Man-Made Disasters

For over four decades social movement scholars have investigated the connection between violence and protest, focusing chiefly on the policing of contention. From this work, we know that "moral shocks", and the protests they spark are not exclusive to repressive violence. On the contrary, empirical evidence shows that a variety of violent events are able to mobilize opposition if responsibility can be attributed to authorities acting disproportionately, illegitimately, or irresponsibly with regard to common expectations of how they should have behaved. One category of events that has remained conspicuously underexplored, however, are emergency events. These events can range from natural disasters, such as earthquakes, floods, and hurricanes to a broader spectrum of unforeseen human-induced crises, such as wildfires or dam collapses. Zooming in on the aftermath of these events, this paper explores the dynamics by which moral shocks in response to mass casualty events can become opportunities for social mobilization. In contrast to previous research on the conditions of backlash events, we focus on instants of non-repressive and unintentional, yet state-facilitated violence that resulted in a massive loss of life and sparked attempts at social mobilization. With the 2023 Derna dam collapse in Eastern Libya, the 2023 Earthquake in Turkey, and the 2020 Beirut Port explosion, we compare three cases of deadly catastrophes where state neglect and absent accountability were directly responsible in creating the conditions for loss of life on a mass scale and aim to understand how natural disasters act as a precipice for social change, examining the conditions under which mobilization efforts are initiated, the challenges they face, and the outcomes they achieve.

GRINBERG LUIS, LEV* (Ben Gurion University, Israel)

Between Popular Resistance and Violent Escalation, the Case of Israel-Palestine

While the Palestinian popular revolt (first Intifada) in 1987 led to a mutual recognition agreement in 1993, the second Intifada in 2000 led to five years of Israeli military lethal repression and terrorist acts taking the lives of 4000 Palestinians and 1000 Israelis. The second Intifada didn't lead to mutual recognition but to a military move: unilateral withdrawal of Israeli army and the establishment of a blockade around Gaza. The blockade led to three big rounds of rocket firing from Gaza and Israeli air force "mowing the grass" (2008, 2012, 2014) and dozens of smaller aerial violent clashes between Palestinian rockets and Israeli air force strikes.

Following the October 7 Hamas territorial invasion of the Israeli settlements around Gaza and the slaughter of 1200 Israeli men, women and children (of them civilians), and the abduction of 250 hostages, some sociologists and activists interpreted the attack as a legitimate act of resistance to the blockade, ignoring the expected violent retaliation and disastrous deterioration. The Israeli military used unprecedented brutal violence, killing more than 40000 Palestinians, destroying entire neighborhoods and public institutions, claiming self-defense, acts that were recognized as a "plausible" case of genocide by the ICJ initial resolution in January 2024.

In this paper I will elaborate the conceptual distinction between resistance, which aims to open political space for recognition, representation and negotiation, on the one hand, and intractable violence leading to mutual lethal violent clashes, on the other hand. I already suggested the distinction between these two forms of struggle on my previous works - Politics and Violence, 2010; Mo[ve]ments of Resistance, 2014. In this paper I'll elaborate on the dynamics that led to the present deterioration, within a historical path dependent eventful sociology approach, including the regional and global factors, examining the current critical turning point it created.

Revolutionary Waves and Lines of the 20TH Century

This paper analyzes the main features of the twentieth-century revolutions, and their difference from those of the 19th century. In the twentieth century, revolutionary activities increasingly moved from the World System core to its semi-periphery or even to the periphery. New types of revolution emerged, whereas less widespread types widely diffused. First of all, these were Communist revolutions, and toward the end of the century as a result of the decline of Communism – anti-communist ones as well as power-modernist and others. The paper offers a new typology of revolutions. The twentieth-century revolutionary process is described in chronological order as comprising five revolutionary waves. The paper considers some aspects of the theory of revolution as applied to revolutions of the twentieth century. In particular, such concept as lines of revolutions is introduced; their connection with revolutionary waves and differences from them are shown. The lines of revolutions show significant similarities in the causes, character, goals and results of revolutions of certain periods (up to three-four decades). Moreover, the lines of revolutions do not coincide with the waves of revolutions. The wave of revolutions is a more objective concept associated with a group of fairly close-in-time events (often associated with a specific region and some common world-system event). The line is a more theoretical construct, combining cases of different chronologies from different waves, but there are also quite objective things behind it. Nine lines of revolutions are analyzed (five in the first half of the century, four in the second). Much attention is paid to the analysis of revolution as one of the transformative changes (along with others – including coups, reforms, violent modernization, etc.) in theory and in relation to different periods.

GRININ, LEONID* (Institute of Oriental Studies of the Russian Academy of Sciences, Moscow, Russian Federation)

The Twenty-First Century Revolutions and the World System's Reconfiguration

At present the World System and world order are undergoing dramatic transformations. Revolutions will be an integral part of these systemic changes; therefore, their numbers and the world-system effect are likely to be significant. In this paper, I analyze in what way the twenty-first century revolutions will relate to the transformations of the World System and world order. My argument is based on the theory of the periodical catch-ups

experienced by the political component of the World System, which tends to lag behind the economic component. Such gaps are eventually bridged, but not smoothly. On the contrary, this catch-up is likely to be rather complex, turbulent and conflictive. The twenty-first century revolutions appear to be part of a broad and conflict-ridden process of catch-up of the World-System's political component to its economic component. This catch-up provokes strong structural transformations, described as the reconfiguration of the World System. With the Arab Spring a reconfiguration of the World System started that will remain associated with revolutionary processes in the twenty-first century. I expect that connected with the political catch-up the number of revolutions and their role as a means of the world-system transformation will not decrease, but may even increase noticeably. I analyze the future of revolutions in terms of their typology and other aspects: 1) the evaluation of their number compared with the previous period; 2) their role as a tool defining future progress of societies and the World System; 3) the scale and power of revolutions; 4) the possibility of revolutionary waves, and 5) possible changes of the forms of revolutionary events. I also discuss the possible role the types of revolutions that have spread in previous periods, and the possibility that revolutions may continue to form

Countering Far-Right through Fashion: Cultural Resistance and the Disruption of Exclusionary Aesthetics

The far-right has increasingly appropriated fashion as a tool for disseminating its ideological agenda, leveraging aesthetic codes, symbols, and stylistic choices to create a cultural identity rooted in the exclusion of otherness. Far-right fashion has become a significant arena in the broader struggle over socio-cultural values and orientations. This analysis focuses on the counter-strategies that have emerged in response, including both grassroots and institutional interventions aimed at deconstructing and disempowering far-right aesthetics. These counter-strategies act as forms of cultural resistance, reclaiming fashion spaces for inclusivity and actively promoting more pluralistic expressions of identity. In doing so, they challenge the normalization of extremist narratives within the symbolic and visual domains of the fashion industry, and consequently, within society as a whole.

RC47-731.4

GRIPPO, ANDREA* (Akademie der bildenden Künste Vienna, Austria)

The Weaponization of Fashion: Far-Right Aesthetics in the Pursuit of Cultural Hegemony

Since the turn of the millennium, far-right social movements have appropriated the "language of fashion" (Barthes 1967) for strategic purposes (Miller-Idriss 2018; Gaugele 2019). Fashion has become a crucial vehicle for the far-right's mobilization and transnationalization, shaping both personal and collective identities, stimulating emotions, and mobilizing adherents (Gaugele and Grippo 2024). As part of a broader cultural revolution from the right, fashion has been weaponized. Far-right actors have rebranded extremist symbols and slogans into trendy, subcultural aesthetics, repackaging extremist views into wearable statements. They normalize their messages and blur the lines between political expression and consumer choice. By blending far right imagery with mainstream aesthetics and references to popculture, the far-right provides not-yet-politicized individuals with easy access to the social movement, creating a symbolic space where support for far-right causes can flourish. This phenomenon represents an "aesthetic attack on open society" (Hornuff 2019). The far-right's battle for cultural hegemony is not fought solely in the streets or at the ballot box, but also in the everyday details of life, including clothing choices and aesthetic practices. Understanding transformations in far-right collective action is imperative for actors committed to challenging the far-right's control over socio-cultural orientations and supporting an inclusive transformation of society.

Hegemony, Uneven Development and Nature: Understanding Forestry Practices in Polish Carpathian Woods

The article examines the escalating environmental conflict surrounding forestry policies in Poland. Forest ecosystems have been identified as vital to maintaining the stability of the biosphere and its cycles within the planetary boundaries, including their role in biodiversity, water retention, and carbon sequestration. However, forests serve vital economic functions, as well,

mainly as reservoirs of timber, a key resource for many industrial value chains. Increasing tension between these two dimensions of forests' metabolism can be observed in the Carpathian region of Poland, as identified by the multiple conflicts between the public institution State Forests, the wood industry, local communities, scientists, and the environmental movement. In particular, the intensified logging in old-growth forests in peripheral, mountain locations is a subject of intensified controversy.

The study investigates forestry practices in two Polish mountain communes - Bircza and Zawoja - highlighting their differing political economies and responses to state-led forestry regulations. Utilizing qualitative interviews and quantitative data and drawing from Gramsci's theory of hegemony we analyze the historical material conditions and power dynamics shaping local forestry practices. Building on critical state theory, we perceive forestry practice and policy as embedded into a broader socioeconomic system of a semi-peripheral, dependent market economy. Arguably, extraction, processing and exports of timber resources fuels Poland's development, in a spatially uneven manner.

The State Forests National Forest Holding, as the dominant entity, influences economic and environmental decisions through both coercion and consent, perpetuating productivist forestry methods that prioritize timber production over ecological diversity and sustainability. The findings suggest that cooptation of rural populations is facilitated by the uneven development and long-standing spatial economic and political divisions. Including social aspects into the content of environmental conflicts may offer pathways toward more equitable and ecologically sensitive forest management while challenging the entrenched hegemonic structures of forestry governance in Poland.

GROENEWALD, LIEZL* (Stellenbosch University, South Africa)

The Impact of Ethical Culture Maturity on Whistleblowing

Organizational culture exists on many levels and can be described by studying organizational structures, policies, rituals, stories and behavioral standards and promoted values. These values guide organizational behavior, decisions and actions and are found at the deepest level of the culture. Whistleblowing, often viewed as a form of organizational dissent, suggests that organizational culture plays a role in employees' decisions to blow the whistle.

Several models of organizational culture have been developed. An area of commonality between these models is that organizational culture is defined in terms of values, norms and behavior. Values are convictions that people hold about what they believe are important and desirable. In an organizational setting, values are a set of shared beliefs that organizations view as desirable and that should serve as the foundation of all behavior of employees.

Organizational culture provides employees with a sense of identity and affects the way employees interact with each other and other stakeholders. It may also influence how much employees identify with their organization – an important motivation for whistleblowers. Where employees identify strongly with the organizational values and culture, their sense of identity will be threatened by the wrongdoing of others resulting in them acting by reporting the wrongdoers.

A strong ethical organizational culture that creates an environment that facilitates the disclosure of organizational misconduct, is thus an imperative. In strong ethical cultures employees feel that they can rely on the support of management and colleagues for blowing the whistle. They are also confident that their reports will be taken seriously, be addressed in the appropriate manner and that they will not be victimized for speaking up.

This paper will provide insight into the effect of ethical organizational culture maturity on employees' willingness to report observed wrongdoing.

Geopolitical Fabrics: Industrial Zones, Migrant Labour and Jordan's Transformation into a Garment Production Hub

Jordan features several special economic zones (SEZs) for export-oriented clothing production. New factory clusters are currently being developed and the garment sector features prominently in governmental economic development visions. Yet Jordan neither makes for a profitable clothing production location, nor does its garment industry benefit the national economy. High energy- and labour costs inflate production costs, and the garment factories clustered in the SEZs mostly belong to foreign investors

who benefit from generous tax breaks, employ foreign labour, and repatriate their profits. To unpack this conundrum, this paper examines how Jordan's SEZs emerged as *geopolitical constructs*, in the context of US peace diplomacy between Israel and Jordan. It explores how the extra-territorial production zones were established – and continue to be bolstered – by distinct spatial and legal regimes of exception that favour Jordan's insertion into the global garment value chain. The paper's key argument is that the ex-post creation of a *dormitory migrant labour control regime* in Jordan's SEZs proved vital to guaranteeing the sector's global competitiveness. This labour regime was enabled through the suspension of national labour law and regulations; as well as the transformation of the SEZs into quasi-carceral living and working environments. To legitimise this exploitative and racialised labour regime, US government agencies have funded the establishment of a *Better Work* program by the International Labour Organisation (ILO). The program's focus on international compliance standards and its co-optation of the garment sector's unitary labour union has since helped to obfuscate the continued exclusion of garment workers from national labour law, be it the minimum wage or health insurance provisions. Taken together, this paper shows how geopolitical manoeuvring not only shapes geographies of global production and work, but also actively produces and perpetuates particular forms of labour exploitation.

Plastic Waste, Not Used Clothes: Sensing the Toxic Ends of the Circular Economy

Flows of donated second-hand clothing from the Global North to the Global South have long been integral to solving the surplus problem produced by the garment industry. In light of unprecedented apparel production volumes and stricter environmental regulations for disposal of excess stocks in the Global North, the proportion of new, unsold garments that ends up on this export market has grown exponentially. This paper challenges dominant framings of the transnational used clothing trade as a "circular economy" by examining its *toxic ends* in Tunisia, North Africa's largest current importer and re-exporter of used garments. It investigates how those who handle imported used clothing on a day-to-day level to earn a living experience and encounter ever-larger quantities of cheaply-manufactured, synthetic fast-fashion surplus in Tunisia. From the used clothes sorting factory; to the wholesale district; and informal repair shops: this study elucidates diminishing possibilities for value retrieval, cutting short what used to be renewed cycles of circulation, exchange and transformation. Shedding light on these limits to valuation exposes how the profit-maximising logics of global capitalist production increasingly transform textile rests from desirable commodities into toxic surplus, with far-reaching social, economic and ecological consequences in secondary markets.

Feminine Ways of Knowing and Humanitarian VR Film

Narrative Virtual Reality is a new form of digital storytelling, promoted by a handful of global tech companies such as Meta, HTC, and Apple, who are presenting VR as the medium of the future. At the origin of this new mass medium, the VR industry advanced the myth of VR as the "ultimate empathy machine" (Chris Milk, 2015). Although this myth has been widely critiqued (Crawford-Holland, 2018; Gruenewald, 2019; Hassan, 2020; Suzuki, 2022), in its wake a large number of humanitarian VR films were produced, many of which were funded by large supranational organizations such as the United Nations.

We argue that many of these VR films perpetuate age-old gender stereotypes under the cloak of cutting-edge digital technology, because they often present feminine ways of knowing in negative contexts. As part of a larger GRF funded project on VR film, we are building a database that currently consists of over 1500 VR films, of which we classify more than 5% as humanitarian. Astonishingly, over 90% of those films feature passive female victims. By contrast, the few male characters in such films usually take on a more active role, e.g. as soldiers or as wildlife guards. Our argument results from a quantitative analysis of ca. 70 humanitarian VR films that shows how five types of women's ways of knowing are represented: silence, received knowledge, subjective knowledge, procedural knowledge, and narrative inquiry (Belenky et al, 1986). In addition, we will present a qualitative analysis of three paradigmatic VR films to show how they employ embodied negative experiences of feminine epistemology. We will conclude with a contrasting discussion of four indigenous VR films, which present examples of feminine knowledge creation in a more active and hopeful way.

Anatomy of "Social" Expertise Today: Historical Displacements of the Sciences at the Service of Brazilian Philanthropy (1995-2022)

Since 2008, the emergence of a political presence at the national level on the part of the large Brazilian foundations has been striking. However, few studies have been devoted to professional groups and specialized knowledge that shape philanthropic action. Thus, this presentation shall analyze models of knowledge at the service of Brazilian philanthropy. To this end, it is used a Multiple Correspondence Analysis (MCA) on a database (n=480) made up of actors from foundations and their research centers and companies. In doing so, it is possible to distinguish two poles of power: experts in applied microeconomics who, through academic research and political consultation, identify public problems, on the one hand; and consultant-engineers who adapt management techniques to the search for large-scale impact, on the other hand. In both cases, these experts materialize the ideal of the "social" as the Other of the "economic", in line with "non-profit" philanthropic claims.

Furthermore, these new "social" experts marginalize the sciences that were engaged in the advent of modern philanthropy in Brazil from the 1990s onwards. Previously, political anthropology and public health were models of knowledge engaged in the modernization of Brazilian philanthropy in order to strengthen the "organized civil society" through "community-level projects", in the wake of social criticism of the centralization of technocratic power during the civil-military dictatorship (1964-1985). These models of knowledge were also financed by an ascendant economic elite at that time, who sought to differentiate themselves from the "conservatism" and "corporatism" of the previous generation. However, a new generation of Brazilian foundations, linked to large banks and investment funds, tend to increasingly disqualify this first model of philanthropy focused on local projects. Hence, it is precisely this new generation that today will invest in actions with "impact" and "scale" through the knowledge of applied microeconomics and consultant-engineers.

GRÜTTNER, MICHAEL* (DZHW, Germany)

After Succeeding Against the Odds: Dropout Intentions of Students from Refugee Backgrounds at German Universities

Germany is one of the countries worldwide that has received the most refugees. Despite many challenges, some refugees have meanwhile made their way to a German university either via domestic schooling or via a foreign higher education entrance qualification and additional study preparation (e.g. "Studienkolleg" or "Deutsche Sprachprüfung für den Hochschulzugang"). In addition, Germany is one of the most popular destination countries for international students. While there are already some studies on the integration process and dropout intentions of international students at German universities, this perspective has so far been completely lacking in relation to refugee students. Moreover, there is no comparative research on the mentioned student groups and domestic students. We use data from a large representative survey of students at German universities conducted by the DZHW in the summer semester 2021 (The Student Survey) to investigate the level and determinants of dropout intentions of refugee students from a comparative perspective. Therefore, we compare four student groups: domestic students, domestic refugee students, international students, and international refugee students. We adopt theoretical considerations of both the student integration model of Tinto as well as rational choice theory to investigate dropout intentions of refugee students and to explain differences between the mentioned student groups in the tendency to consider to dropout of higher education. We present bivariate results on group differences as well as multivariate regression models. Taking domestic students as a reference group, it turns out that higher dropout intentions can only be observed for domestic refugee students, but not for international (refugee) students. This is partially explained by disadvantages in social and academic integration as well as financial difficulties. We discuss implications for further research and for migration and higher education policy.

"Environment First" or 'Development First'? Emotional Social Values in Chinese and Overseas Brand Communication

In recent years, the branding of overseas activism has been characterized by the "environment first" trend, which mainly includes branding for DEI, ESG and SDG, etc. These values have dominated the global media discourse, spreading to the Chinese market and Chinese enterprises from the international community level, but their influence on the end-users of the Chinese market has begun to diminish. However, their influence on the end-users in the Chinese market has begun to diminish, catering to the political, economic, and cultural trend of anti-globalization and territorialization.

The rapid development of Internet technology in China is driving changes in the platform-based society and consumers, increasing the trend of emotional marketing pursued by online consumers. This paper uncovers the intensifying differences between Chinese and Western branding values, which reflect the ideals of a nation and society behind them, and can be used to explain the emotional social thinking that distinguishes Chinese contemporary market consumerism from Western environmentalism. That is, Western globalized brands envision a set of "perfectionist" ideal values, intending to perpetuate the moralistic high ground of developed societies, and attempting to cut through historical stereotypes of unbridled capital expansion and overseas resource plunder by establishing SDGs, ESGs, and DEIs, among others.

This study establishes a new concept of "Pragmanisive Brand Values (PBVs)" for Chinese brand market practices, which explains the socio-cultural dimension of Chinese consumers' "reluctance" to get close to overseas brand values. It explains the deep-rooted reasons why Chinese consumers have become "reluctant to get close" to overseas brand values at the socio-cultural level, which provides a practical guide to local social brand ethics and communication for consumers to embark on a new brand emotional path after the reform and opening up of Chinese society.

Model Minority or Global Middle Class?: Understanding the Parenting Strategies of People of Chinese Ethnic Identity in the UK

The history of Chinese migration to the UK extends over two centuries, from low numbers until mid-20th century, to significant growth with the Chinese restaurant boom of the 1950s-60s, and to large numbers of Chinese students in higher education institutions since the 1990s. People of Chinese ethnic identity are a numerical, social and political minority with limited visibility but notable for their educational achievement documented in national level statistics, whether in terms GCSE results or higher education enrollment rates. Situated in a long-standing debate about the Model Minority discourse in migration studies in the global North, this study unpacks possible mechanisms underlying the academic achievement patterns for the Chinese ethnic group in contemporary Britain. In particular, we address the inherent tension between cultural and structural arguments in this debate, namely the relative strength of particular cultural beliefs/values, or structural resources and mechanisms. We empirically answer this question by examining data on parenting values and behaviors from the 2009-10 wave of the UK Household Longitudinal Study, which includes an Ethnic Minority Booster Sample. We reveal that compared to the white majority and other ethnic groups, the Chinese are in general younger, largely first-generation immigrants, highly selected by educational attainment, and less settled in family-making. Among different ethnic minority groups, the Chinese do not report a significantly higher value on children's educational achievement, though the gap between them and the white majority remains notable. Further, results show that the Chinese as a group practice a parenting style characterized by sensitive, child-centric and warm, contrary to the 'tiger parenting/mothering' stereotype prevalent in pop culture. We contend that the overachievement of the Chinese minority in the UK is associated with conscientious and sensitive parenting to support children's development among a highly selected global middle class, rather than a specific set of 'Chinese' values.

Planning Strategy after an Emergency. the Case of Italian Social Centres

Four years ago, the health crisis brought in by the sudden outbreak of Covid-19 placed movements in front of the strategic dilemma of whether and how to respond. Literature suggested that movements mobilized in different forms, adapting to the constraints posed by the emergency conditions. They staged online protests; engaged in mutual aid activism; denounced the structural nature of the emergency linking it with pre-existing and long denounced crises. However, these analysis present two shortcomings. First, movements reactions are presented as self-evident, as snapshot of what happened in conditions in which agency was supposed to be on halt. Second, they are bound to the first pandemic year, 2020, thus leaving out of the scope of the analysis an understanding of how strategy evolved following the change in emergency context. This paper aims to fill these gaps and to unpack the process of movements' strategy change against the pandemic context covering the period 2020-2023. This timeframe was indeed characterized by the outbreak of the emergency and, progressively, by its normalisation with the comeback of a presumed "normality". How was strategy been adjusted in the meantime? Did the strategic choices taken on the short-term as emergency response sediment overtime and become part of a longer-term strategy planning? This paper examines the relationship between strategy negotiation and collective action outcomes over the course of the pandemic emergency. It focuses on the case of Italian social centres adopting direct social action during the lockdown. These actors mobilised to provide for the needs of the most vulnerable by organizing local Voluntary Solidarity Brigades. However, only some of them maintained the Brigade in the afterwards of the emergency. The paper addresses the pathways that led similar actors taking up the same form of action to eventually take on different strategic choices out of the emergency.

GUARDIGLI, FEDERICA* (Scuola Normale Superiore, Italy)

ZAMPONI, LORENZO* (Scuola Normale Superiore, Italy)

Planning the Future amidst Shifting Temporalities. the Case of Italian Social Movement Actors

Over the past decades, a series of recurring crises have bound democratic politics to a never-ending presentism. Reduced to the management of day-to-day emergencies, democracies have been stripped of their ability to project toward the future. Increasingly challenged in imagining possible futures, democracies struggle to act and plan in the face of epochal challenges. On the contrary, against this backdrop, futures have been central in social movement activity. Imagined futures are indeed key drivers of social movement action. By contesting the status quo, movements inherently open new horizons of possibility and compete as players in the arena for the negotiation of the world to come. They plan their activities, combining strategy with anticipation; they produce knowledge, challenging established paradigms; they engage with prefigurative politics, anticipating the social change they are pursuing in their practices. While discussions about the future in social movement studies have touched upon how assumptions of time and temporality influence action and strategy, little has been said on how movements see and plan the future in times marked by shifting conceptions of time. How are grassroots civil society actors discussing, imagining and prefiguring the future in their action? How does the sense of urgency triggered recurring emergencies impact on their strategy negotiation? What are the visions of the future? This paper aims to address these questions by focusing on the Italian case. In particular, it considers a series of grassroots civil society actors in prominent issue areas (labour, gender, environment, migration), based on qualitative interviews. In doing so, the paper engages with discussion on temporality and movement strategy while advancing knowledge on an under-researched area of study concerning future and collective action.

No Turning Back: Remote Workers during the Pandemic and the Decision to Leave in-Person Workplaces in Italy. an Exploratory Research

The article discusses the evolution of the opinions and perceptions of remote work by knowledge workers in Italy, between the first lockdown imposed by the Covid-19 pandemic in March 2020 and the post-pandemic phase. The qualitative study is composed of a first set of 35 interviews with Italian knowledge workers who experienced an imposed transition to remote

working due to the pandemic, conducted in spring 2020 – and a second set of 24 follow-up interviews with a portion of the initial sample, carried out in 2023. The article illustrates the emergence of new needs by workers linked to greater autonomy and flexibility in managing work-life balance, expressed through the request for greater remote work, that led a third of the interviewees to leave the workplace in search for more remotisation. Using Hirschman's (1972) interpretative categories of exit and voice we show that, although in most cases companies have maintained a certain amount of remote work following the acute phase of the pandemic crisis, many workers find remote work no longer renounceable, to the point of abandoning their job in order to maintain a certain amount of flexibility.

GUAZZO, COSTANZA* (University of Milan, Italy)

Young Highly-Skilled, Underemployed Welfare Recipients in Italy during the Pandemic.

The idea of enjoying and deriving meaning from one's work is the heart of the post-Fordist work ethic. But precariousness is the norm in Mediterranean economies, and work is insufficient to gain economic independence for many young adults. Drawing from 32 qualitative interviews with young highly-skilled income support recipients in Turin, Italy (Reddito di Cittadinanza), the research investigated how work was framed by young highly-skilled adults as a means of recognition and economic security in low-work intensity contexts during the pandemic. In Italy, young adults who have entered the workforce from the 1990s onward have encountered the challenges of labour contract flexibilization and precarization (Murgia, Poggio 2012). Their work experience is characterised by a lack of protections both within the labour market itself and from the Italian welfare system, still unprepared to address the needs of atypical, seasonal, flexible, and freelance workers, despite their prevalence. The doctoral research focused on the meanings of work for 32 young adults in situations of low work intensity, who received conditional income support during the pandemic in Turin between 2020 and 2022, and on their relationship with work, at a time marked by great uncertainty about the future and the economic sustainability of the present. The different work meanings emerging from participants' narrations were analysed, as interviewees appeared to assign distinct meanings to their working activity and to their (unfulfilled) expectations on the functions of work. Considering the meaning they attributed to work and the motivations regarding the Reddito di Cittadinanza request, it was thus possible to identify three ideal types: the Fordist, Post Fordist and Post Romantic worker. These three ideal types took into account the different visions of work that seemed to influence them most.

Social Representations of Unconditional Basic Income: A Sociological Analysis from the Basque Country

This study examines the social representations of Unconditional Basic Income (UBI) in the Basque Country, focusing on how UBI is understood, supported, or contested within public discourse. The research draws on 26 individual interviews and employs a reflexive thematic analysis to capture a range of views on UBI. The sample includes diverse sociodemographic profiles, enabling a comprehensive understanding of the ideological landscape surrounding UBI. The study identifies four major thematic categories: (1) *Origins of social inequality*, which contrasts individual responsibility and structural explanations for poverty and inequality; (2) *The right to a good life*, discussing UBI as a pathway to freedom from traditional work obligations, improved well-being, and personal emancipation; (3) *Accessibility*, focusing on debates around who should be eligible to receive UBI, and whether it should be universal or means-tested; and (4) *Feasibility*, examining the perceived economic, political, and cultural challenges to the practical implementation of UBI.

The findings reveal strong ideological divisions in how UBI is perceived. Supporters emphasize values of equality, freedom, and social justice, viewing UBI as a necessary reform to address systemic inequalities. Opponents raise concerns about its economic viability, its impact on work incentives, and the challenge of building political consensus. Additionally, tensions emerge regarding the concepts of deservingness and reciprocity, with some participants expressing skepticism about unconditional financial support.

The discussion suggests that for UBI to gain broader acceptance, proponents must address these concerns by framing it as a universal right that fosters social solidarity, rather than a conditional or transactional aid. The study highlights the importance of promoting UBI as part of a broader movement for social justice and systemic change, challenging entrenched capitalist structure

Towards the Integration of Extreme Heat Planning Responses in Latin American Cities

The intensification and frequency of heat waves in recent years have been "silently" claiming more lives than any other climate phenomenon. Governments in different cities around the world are increasingly integrating adaptation actions to cope with climate impacts. Still, the speed and pace of adopting these plans and actions vary greatly. Although extreme heat is a growing concern for cities, the science-policy interface in how information is used in policymaking remains unclear. Academic studies tend to focus on Urban Heat Island mapping and measurement, while only an emerging body of literature focuses on extreme heat planning and governance processes in an urban context. A range of authors from the fields of public health, meteorology, urban planning, and the built environment conclude articles with a call to rethink forms of city production and to integrate public policies that would foster cross-governmental and interdisciplinary collaboration in extreme heat planning processes. However, there are challenges to achieving the permeability of global and national climate policies, particularly in cities of the global south, where there are complex barriers to implementing climate adaptation actions. Based on a literature review on local-level climate change adaptation frameworks in the global south, heat governance, and heat action planning, this study explores extreme heat planning processes as emerging pathways of socio-ecological change. Drawing on case studies from two of the largest Latin American cities, Rio de Janeiro and Mexico City, the study looks into the role of these cities in heat governance and the strategies and institutional frameworks that support and/or hinder heat resilience action planning. The outcomes from this research seek to facilitate the science-policy transition by identifying several avenues for intersectoral and multiscale approaches to heat action planning in a Latin American context.

Navigating Extremes with Transformers and Fuzzy Logic: Polarization in the Spanish Presidential Ejections 2023

In this communication we present a case study of the Spanish General Elections (2023) in which we have measured the affective polarization in the digital debate. The official electoral campaign took place after the unexpected call of the Spanish president on July 23. By employing transformer models, we assessed various topics and conducted sentiment analysis within the political discourse of the elections to gauge the emotional tone of the discussions. Our findings revealed that the most frequently debated subjects were Candidates ($n_1 = 17170$) and Opposition ($n_3 = 15327$), both exhibiting significant levels of polarization. Utilizing an affective polarization framework, we implemented a polarization metric (JDJ) rooted in a fuzzy set theory. Among the topics analyzed, activism showed the highest polarization, while voting had the lowest. Using transformers, we have detected topics and applied sentiment analysis in the political debate during the elections to measure the emotional valence of the debate. We found that the topics that occupy most of the debate are Candidates ($n_1 = 17170$) and Opposition ($n_3 = 15327$). These topics also present the highest typical polarization deviances. Based on the affective polarization, we applied a polarization measure (JDJ) based on the fuzzy sets. The topic activism has the highest polarization value and topic voting the lowest. Thanks to this analysis we can identify the presence of a dichotomy that defines the Spanish political reality, the positive image of traditional political participation and engagement juxtaposed against an aversion to collective action initiatives.

Les Impasses (routes, zones, concessions, ports) Des Migrations Et Des Segmentations Du Marché Du Travail.

La segmentation du marché du travail international est encore plus visible aux frontières des pays, que ce soit dans leurs ports, leurs zones de concession, leurs zones de libre-échange ou leurs zones de transit. Souvent

organisées autour de la migration/mobilité des personnes, ces impasses du capitalisme deviennent des lieux de circulation, d'extraction, de stockage et de recyclage. Cette session se penchera sur ces espaces/impasses, qui recourent ou captent la mobilité des migrants, ou les obstacles auxquels ils sont confrontés dans leur travail sur ces marchés du travail internationaux. C'est le cas, par exemple, de la gestion des déchets (de la ferraille à la seconde main), un secteur qui se structure en lieux qui rendent temporairement invisible la gestion des déchets et des matériaux mis au rebut, et confinent donc certains territoires à des économies de récupération et de réparation en développement. Mais c'est aussi dans ces zones franches que se concentrent les activités industrielles, où toutes les marchandises sont exportées et où la main-d'œuvre migrante et réfugiée est majoritaire et est affectée à la production, comme dans les « catplacés » de Tripoli en Libye.

In the Shadow of Silence: Navigating Cultural Expectations and Legal Ambiguities in Chinese Sexual Harassment

This paper investigates the sociocultural, institutional, and legal barriers that prevent women in China from seeking justice in cases of sexual harassment. Drawing on qualitative interviews with over 30 participants, including victims, lawyers, police officers, and judges, this study employs Bourdieu's theory of social capital to analyze how social networks, resources, cultural norms, and imperfect legal frameworks contribute to an environment that silences victims and normalizes harassment. Bourdieu's framework provides insights into how social capital—or the lack thereof—plays a crucial role in shaping access to justice and how the interplay between cultural expectations and institutional weaknesses intensifies these barriers.

The findings reveal that Chinese societal norms emphasizing female chastity and a reluctance to discuss sexual matters create a moral stigma around victims of sexual harassment, further compounded by a lack of social capital. Victims often lack supportive networks that would empower them to navigate the legal system, which itself is marked by legal imperfections and inconsistencies that complicate the pursuit of justice. These social and cultural factors interact with an imperfect legal system that lacks clear protections and often fails to adequately address victims' needs. Legal inadequacies not only deter victims from reporting but also mirror and reinforce the societal norms that prioritize male-dominated power structures and stigmatize victims. Consequently, institutional responses often reflect cultural biases, perpetuating a cycle of silence, shame, and inaction.

Using Bourdieu's theory to explore the interaction between social and cultural capital and the limitations of the legal system, this study underscores the need for comprehensive reforms to enhance legal protections, expand access to supportive resources, and challenge the societal norms that contribute to victims' isolation and disempowerment. Such changes are essential to fostering an environment that encourages victims to seek justice and shifts cultural perceptions around gender and harassment.

GUILLAUME, OLIVIER* (EDF Lab, France)

Embedded Digital Tools, Controls and Privacy at Work

Within companies, the safety of facilities and people often results from a search for transparency of activities to reduce uncertainties and errors. In this perspective, digital tools (portable terminals, smartphones with dedicated applications) embedded in workers capture data on real activities to optimize their programming, times and traffic routes. Inscribed on the body, equipped with sensors or geolocation devices, these tools also enter into the private life and intimacy of workers and raise the question of whether they can protect themselves from them. To answer this, communication will clarify the notions of intimacy and private life at work. They involve workers arranging collective symbolic spaces to deploy socialization rituals, "interstitial" spaces (Fustier, 2012) to exchange professional knowledge and intimate spaces to reflect on the evolution of their activities thanks to local and informational confidentiality (Palm, 2009 a, b). But spatial reforms through shared and open offices and embedded digital tools offer managers the possibility of accessing areas from which they were excluded. Workers then develop resistance and negotiation skills to thwart certain technologies and impose limits on managers.

Two empirical industrial cases will show that private life at work is composed of rituals, "behind the scenes" activities (Goffman, 1973) and exchanges in organizational interstices to circulate expert knowledge and consolidate mutual assistance necessary for professional efficiency.

Open workspaces and embedded technologies lead workers to take refuge in more remote "interstitial and intimate spaces" or to negotiate the use of digital technologies. They favor those that amplify dialogue between

colleagues on the site to the detriment of external experts and thwart those that would track their movements. They also require managers, dependent on the contributions of their subordinates, to limit the calculations of times and movements.

RC17-JS-47.3

GUILLAUME, OLIVIER* (EDF Lab, France)

Understanding Organizational and Industrial Risk. from Environment to Territory

In this communication, we will return to the notion of organizational risk and its management, particularly for industries. We'd want to show that their genesis must not focus solely on the socio-technical systems internal to industries but must be linked to external organizations. It is therefore necessary to take into account the perceptions, interests, and strategies of other organizations such as political systems, residents' associations, and public forces in the territories bordering industries. To illustrate these ideas, the communication will present several empirical cases, particularly from the operation of hydroelectric power plants. It will show that understanding the origin of accidents and the evolution of risk management must decline a generic analysis combining a micro-social dimension highlighting the experience of risks and the personal knowledge of local residents, a meso-social dimension taking into account the role of associative communities of practice, and a macro-social dimension taking into account the actions and strategies of elected politicians and public forces. Although informed and aware, local residents agree to face risks, transgress prohibitions and cause incidents that will change the management of industrial risks. This management will not be effective if it excludes local residents from certain areas and does not recognize the legitimacy of their practices. In conclusion, the contribution will propose a discussion on the articulation between environment and industrial risk. More than environment, it is necessary to use the notion of territory which highlights more the importance of the history and strategic political actions of the actors.

Interseccionalidad

Mi propuesta busca ver si hay espacio dentro de los debates feministas actuales para discusiones que consideren espectros feministas que no sean universales. En otras palabras, dada la existencia de una multiplicidad de mujeres, ¿qué mujeres están representando el género dentro de los discursos feministas? ¿Qué papel desempeñan los grupos feministas actuales en el reconocimiento de los diferentes tipos de mujeres? ¿Representan efectivamente el género y su diversidad? ¿Qué voces se escuchan dentro de los grupos feministas?

Pensando que, en general, los debates feministas actuales aún no abordan temas que son importantes para ciertos colectivos de mujeres, hemos entendido que un espacio feminista verdaderamente inclusivo aún está ausente, y por lo tanto es un obstáculo para la creación de una epistemología justa.

La propuesta de discusión se relaciona con el reconocimiento de que no se han identificado metodologías que faciliten la participación de diversos grupos de mujeres en áreas consideradas feministas. Es decir, se observa una falta de democratización en espacios percibidos como plurales, imposibilitando contextos o producciones que respeten las diferencias del grupo.

Además, la ausencia de voces feministas que representen a los diversos grupos de mujeres refleja una injusticia epistemológica, ya que no abarca otros tipos de producción de conocimiento que no son universales (el conocimiento del modelo de mujer universal). Pensamos que hay un borramiento de los discursos feministas que no son hegemónicos.

¿Cuántas veces vemos a mujeres (o personas en general) creando investigaciones sobre grupos y tratando la investigación desde el punto de vista de la investigadora - la investigada, sin ninguna participación activa de esas personas que actúan como contenido de la investigación? Teniendo esto en cuenta, nos preguntamos: ¿dónde están esas personas que forman parte del género femenino, pero que no tienen espacio para la participación activa en la resolución de sus propios problemas?

GUIZZARDI, GIACOMO* (Alma Mater Studiorum - Università di Bologna, Italy)

Working and Suffering in "Aidland". A Study on Meaning and Alienation in International Aid Work

Given its object, scope, and context of action, aid work is a working sector that "naturally" exposes employees to a significant emotional burden. Nevertheless, beyond this "inescapable" emotional charge, critical analysis has shown how working conditions typical of the sector (e.g. normalized overwork; absence of clear boundaries defining working time and spaces; frequent job insecurity - with the proper differentiation between "expatriate staff" and "local staff" statuses) exercise a decisive influence over the occurrence of widespread situations of work-related suffering, denouncing the normalization of what has been represented as a "burnout culture" that would characterize the sector as a whole. Instead, the issues of quality of work and work meaning in the field appear to be widely less thematized, although aid work could represent (again, with the proper differentiation between "expatriate" and "local" professionals) an exemplary case of a work sector charged with great expectations in terms of meaning. Based on empirical work involving several expatriate and local aid workers, this contribution aims to highlight how focusing on the issues of work quality and meaning could represent a significant analytical opportunity to give an account of different forms of work-related suffering in international aid work. To this end, the theories of alienation developed by the "fourth generation" of the Frankfurt School are proposed as valuable analytical tools. The perspective based on the fundamental concept of "relationship" (between the subject and himself, the subject and the world) proposed by these theories indeed provides an interpretative lens useful for studying the object of work considering jointly its dimensions of working conditions and meaning. Accordingly, it is argued that questioning the relationship between subjects and the world, mediated by work, promoted by the organizational arrangement of the sector, constitutes a fruitful starting point for critically observing work in international aid, and its diseases.

Suppression of Thinking: Governmental Silencing and Control of Higher Education

In the United States, institutions of higher education have benefited from a general history of the government supporting institutional efforts while not directing them. The thought being that those within the academy are to be thought leaders and creators of knowledge and that having too much direct governmental oversight might stifle these efforts. Yet, in more recent political climates in the US and around the world, the very idea of thinking and questioning the status quo are seen as threatening to the control of the some over the many. Everything we do in higher education is assumed to be nefarious and have direct political intent. The scrutiny facing our institutions of higher education is not simply aimed at some nebulous organization but directly at the humans who provide it life. Our institutions and our administrators, staff, and faculty are under constant surveillance and viable threats of physical and mental harm. We must support each other in our work, and we must recognize that many administrators, staff, and faculty are tired, disheartened, and frankly scared about the future. At this time, we need to not just defend the work of higher education but to champion it. We must uphold the trust between the citizenry and the academy that places higher education as a beacon of wisdom, a harbinger of thought, an usher of new ideas, and an inquisitor into the assumptions of normative and traditional cultural and sociopolitical ways of being. Higher education is not just value added in the equation of thriving democracy, it is a necessity for its very existence. In this talk I will explore the ways attacks on higher education are direct attacks on democracy and provide examples of governmental regulations being wielded at higher education as a means of silencing not just scholars but the citizenry.

BINAY, BERIVAN (Aydın Adnan Menderes University, Turkey)
UYSA, MÜGE (Aydın Adnan Menderes University, Turkey)*Bibliometric Analysis of Social Science Articles on Drug Addiction: 2010-2024*

Drug addiction is a prominent global issue that is becoming more and more problematic with serious consequences for public and individual health. In terms of addiction literature, studies conducted and to be conducted in social sciences help us to understand the deeper sociocultural causes of the problem. This study aims to examine the reflections of substance addiction, which has become an important problem in societies, in the social sciences literature. At the same time, it aims to shed light on the common qualitative and quantitative characteristics of the literature.

Science and the production of scientific knowledge have a social character and are therefore sociological. The study aims to present the conceptual and intellectual profile of the articles published in the field of social science on substance addiction between 2010-2024 and to interpret the findings sociologically. In this respect, the study is limited to articles that address addiction rather than addiction. The articles were obtained from the online version of Web of Science, by selecting social science fields in the 'Web of Science Categories'. The screening was conducted with the keywords "Society and Substance Abuse", "Sociology of Addiction", "Addiction", "Drug", "Drug Use", "Drug Addiction", "Illicit Drug Use", "Drug Abuse", "Adolescent Drug Use", "Drug Problems", "Drug Use Behaviour", "Drug Dependence", "Drug Dealing", "Illegal Drug Use", "Drug Possession", "Addiction Relapse". The data were analysed by bibliometrics, as it is a macro-oriented science mapping tool that measures scientific elements in a specific field.

In the study, the intellectual map of the field will be tried to be revealed by presenting (i) prominent authors, journals and institutions, (ii) conceptual network, (iii) distribution of concepts by year and will be interpreted from a sociological perspective.

Conflicts over the Coastal Sand Dune Region in Southern India: Unveiling the 'identity Politics' Underlying Environmental Narratives

This paper focuses on the conflicting narratives between the coastal Hindu non-fishing community and the Christian fishing community, both seeking control over the coastal sand dune space and resources in one of the southern

regions of India. While the Christian fishing community advocates for harbour development along the sand dune area, citing livelihood opportunities, the Hindu non-fishing community opposes it in the name of conservation of sand dunes and protection of Olive Ridley turtles. Media reports have often framed the issue as a simple narrative of "good guys" those opposing the harbour in the name of conservation, versus "bad guys" those advocating for the harbour and the potential destruction of the sand dunes. A clear dichotomy is being established between the population of Hindu non-fishers and Christian fishers. This form of portrayal largely ignores the latent interests or the complex representation of the reality that these conflicts are deeply intertwined with cultural identities and historical events like riots alongside economic interests.

I have widened the political ecology lens to appreciate how conflicts over resources are also means of cultural conquest (e.g. identity) and not just political-economic assertion, which is demonstrated through this ethnographic study. This paper shifts the way we understand everyday life in the coastal sand dune region by highlighting how environmental issues are used as tools to assert cultural identities, particularly between the Hindu Nadar non-fishing and Christian fishing communities.

I draw on Stuart Hall's concepts of articulation and positioning to analyse how the Hindu non-fishing communities of Kanyakumari, India, construct environmental narratives that appear legitimate, garnering solidarity from environmentalists and other stakeholders from local to national level. These narratives, while seemingly focused on environmental concerns, also carry latent interests that intertwine with cultural identity. This analysis demonstrates how environmental politics is increasingly shaped by cultural politics.

GUNAWANSA, MIRA* (The University of Melbourne, Australia)

The Mental Load and Transnational Care: Understanding How South Asian Migrant Mothers Undertake Caregiving in Melbourne, Australia

This paper argues that the mental load framework—commonly used to understand the cognitive, domestic and emotional work involved in managing daily life—offers a valuable lens for analysing the complexities of transnational family dynamics post-migration. By building on Baldassar and Merla's care circulation framework, this study integrates the mental load to explore the often-invisible burdens migrant mothers face in managing caregiving responsibilities across borders.

Focusing on South Asian migrant mothers in Melbourne, a key site of migration and multiculturalism in Australia, this paper presents findings from in-depth interviews that highlight the intersectional challenges faced by racialised migrant mothers. These women frequently juggle caregiving duties in both their host and home countries, navigating the emotional, logistical, and cultural complexities of transnational caregiving. This research underscores how these mothers experience diverse forms of mental load, particularly when caregiving responsibilities are distanced, asymmetrical, or inadequately shared among family members.

This study contributes to existing scholarship in two key ways: (1) it emphasises the diversity of migrant mothering experiences, particularly within South Asian communities, and (2) it suggests that the care circulation framework's roots in collectivist care practices can be adapted more widely to help alleviate the mental load of mothers in transnational contexts. By centering the experiences of BIPOC migrant mothers—who are often excluded from focus in family and migration studies—this paper fills a critical gap in understanding how the mental load framework can enhance analyses of caregiving in transnational families and calls for a more nuanced approach to understanding caregiving in an increasingly globalised world.

GÜNEY, K. MURAT* (Özyeğin University, Turkey)

Earthquake Risk and the Politics of the Maybe in Istanbul, Türkiye

Türkiye's largest city Istanbul, with a population of 16 million that spreads across two continents, is also located on one of the world's most dangerous earthquake fault lines. In the last 25 years following the 7.4 magnitude earthquake in neighboring Izmit in 1999, Istanbul has been converted to a massive (re)construction site. While this paper questions the premise that development inevitably leads to urban resilience and social justice it demonstrates how disaster capitalism quickly converted the earthquake risk in Istanbul to an opportunity for construction-led economic growth. The subsequent urban transformation and housing development projects

affect communities unevenly while the perpetuating disaster capitalism that triggered a construction boom and resulted in a 60% population increase paradoxically made the mega-city more fragile and disaster prone.

Whereas earthquake risk becomes an excuse to create wealth through construction on valuable land and makes those who reside in high-income neighbourhoods live, large numbers of low-income residents who live in risky buildings on low-value land are ignored and let die. Thus, urban renewal projects have increased inequalities and vulnerabilities and resulted in the displacement and dispossession of the urban poor. This research also shows the power of political decisions taken and not taken over life and death, by disclosing the possibility of 'the politics of the maybe' that might work for life's interest, yet are not implemented. The politics of the maybe refers to the non-market-oriented alternative political options to overcome the disaster risk such as using thousands of newly constructed vacant apartments in Istanbul to settle low-income residents who live in risky buildings. Thus, this paper introduces 'the politics of the maybe' as a challenge to disaster capitalism's construction and development projects by making visible that the imposed solution is just one single political choice among a wide range of other available possibilities.

Pathways to College Majors: Decomposing the Effects of Family Background through High School STEM Experiences

This paper investigates how family background shapes college major choices through high school experiences in STEM. Using data from the High School Longitudinal Study (HSL: 2009-18) to measure college majors and high school experiences in STEM course-taking and extracurricular activities, I use OLS regression, multinomial logit regression, and KHB decomposition to examine the effects of family background on college major choices. First, I found that parents' education and occupation fields explain differences in major choices better than common measures of family socioeconomic backgrounds, such as family income and parental education. Family income and parent's education level are important factors, in whether the student can enter a four-year college or not. However, there is no significant and consistent influence on students' major choices. In contrast, having parents with STEM backgrounds could significantly encourage students into STEM majors. Second, I find that using the traditional binary oppositional classification of STEM or non-STEM majors is insufficient to support a more nuanced analysis. There are differences in financial returns even among STEM majors, which are traditionally expected to be more financially rewarding. Students with parents in STEM fields prefer vocational STEM majors rather than Art & Science STEM majors. Third, I found a specific pathway through which parental STEM background influences major choice, namely using high school STEM experiences. Students with a parental STEM background are more likely to take additional STEM courses and participate in extracurricular STEM activities, which in turn increases their likelihood of majoring in vocational STEM fields.

Power Triangle: Power Dynamics and Children's Agency in Chinese Liushou (Left-Behind) Families

Migration may lead to changes in the power dynamics between children and adults in the family, and children may change their behaviour to exercise agency in response to migration itself and their circumstances. Along with the changing family dynamics and structure in contemporary

China, including the transformed central value of Confucian familism—filial piety—and the increasingly child-oriented family, we need to rethink the capability of children in China and the roles they play in family and society. Guided by the social-relational framework, this study conceptualises Chinese 'liushou' (left-behind) children as active agents embedded in the rural multi-generational relationship system to explore how children navigate and negotiate their positions and roles within family power dynamics after their parents have migrated. Through eight months of ethnographic fieldwork in China's Sichuan Province, including a combination of semi-structured interviews and participant observation, this study reveals that a new power structure has emerged in many Chinese liushou families due to the prolonged physical absence of parents. This structure consists of migrant parents whose authority is challenged, children who experience a vacuum of parental power in discipline, and grandparents who take on the role of disciplinarians. We conceptualise this power arrangement as a 'power triangle', offering new insights into restructured family relationships on a global migration scale. Unlike mainstream migration studies that largely focus on the binary relationship between migrant parents and children, the concept of the 'power triangle' includes caregivers in the power dynamics of liushou families, allowing us to move beyond a binary framework. It offers a more comprehensive understanding of the complex relationships and power dynamics among multiple participants within these families, including the liushou children, migrant parents, and substitute caregivers (grandparents). These relationships involve mutual influence and negotiation as each party seeks to achieve their goals while maintaining their bonds.

Rural Women As 'Docile Bodies': Discipline of Informal Female Workers and the Resistance to Disciplinary Power in Midwest China

The informal employment of rural women is commonly depicted as being exploitative and unregulated. Particularly in the Global South, female rural workers in informal sectors, as a significant source of labour in globalisation, are subjected to severe deprivation of rights and benefits. In one of the 'world's factories', China, the issue is further aggravated by the patriarchal cultural values, the gendered division of labour, and the state's rigorous control of core enterprises. For such political and cultural specificities, rural women's informal employment in Chinese (state-owned) sectors appears to be an interesting topic that invites extensive studies.

This research is based on fieldwork in a state-owned tobacco-leaf acquisition site in a rural region of Midwest China. Through in-depth ethnographic observation and interviews with temporal female workers at the site, we revealed the structural coercions the workers endured in the forms of rigid spatial and temporal organisations. From a Foucauldian analytical lens, we argued that the female workers' experiences embodied how disciplinary power regulates and turns individuals into 'docile bodies' to improve their structural functionality. In the meantime, our findings also unpacked the female workers' strategies in resistance to disciplinary power, including tactic management of attendance and intentional underperformance at work. The female workers' endeavour to enhance their work conditions epitomised how Chinese rural women performed their autonomy to counter the disciplines and oppressions in informal employment. By conducting this research, we appeal to broad investigations of the disciplinary exploitation of rural women, as well as their agentic resistance, in the informal economy in the Global South.

GUPTA, LAKSHANA* (Himachal Pradesh University, Shimla, India)

The Interplay of Language and Identity: Sociological Perspectives on the Use of Gender Pronouns

The present paper explores how the simple act of using gender pronouns reflects deeper language and identity dynamics. Pronouns are not just words; they represent who we are and how we wish to be seen in society. For transgender individuals, being addressed by the correct pronouns is crucial for feeling recognized and respected. However, resistance to using these pronouns often reveals traditional views on gender that can marginalize those who do not fit within the conventional binary framework.

The goal of this paper is to understand how gender pronouns influence social interactions and power dynamics in institutional settings such as schools, hospitals, workplaces, and media. By studying how people talk about and utilize pronouns, this paper sheds light on the struggles and triumphs of those whose identities are often misunderstood or dismissed.

The examination includes institutional policies and public interactions using qualitative discourse analysis. Additionally, a questionnaire is designed to collect individual experiences to grasp the broader societal consequences of pronoun application.

Preliminary findings indicate that while some embrace inclusive language, others resist it due to deeply ingrained cultural beliefs. The adoption of such language signifies progressive shifts towards greater inclusivity. This paper aims to contribute to ongoing discussions in sociology regarding the intersection of language, identity, and power, highlighting how seemingly simple linguistic choices carry profound implications for social equality and representation.

GUPTA, NAMITA* (Professor, Centre for Human Rights and Duties, Panjab University, Chandigarh, India)

Families of the Drug Addicts: An Invisible Vulnerable Group in India

Drug abuse is one of the most serious challenges across the world in recent times. An estimated 271 million people of the global population aged 15-64 had used drugs in the year 2016 while 35 million people worldwide suffer from drug use disorders. India being between the Golden Crescent and Golden Triangle, both corners of India are victims of massive drug imports, while the state of Punjab being on the North-Western corner is the most affected. This problem has taken a different shape over the years in Punjab affecting most of the youth population, which in itself a serious issue. Drug addiction does not affect only to the addict. It creates a vicious circle of impoverishment in the family of the addict. It specifically affects the women in the household. The addiction of the husband makes wife more vulnerable-economically, socially as well as psychologically. Therefore, it becomes important to study the impact of drug addiction on the families of the addicts in specific. The paper will endeavor to analyze the socio-cultural, psychological, and economic impacts of drug addiction on the families of the addicts and will assess the various challenges faced by the women in the treatment and rehabilitation of their spouses.

GUPTA, NAMITA* (Professor, Centre for Human Rights and Duties, Panjab University, Chandigarh, India)

Gender Based Analysis of Urban Homelessness in India

The right to adequate housing is a human rights issue globally. The violation of this right leads to the violation of other indivisible human rights. Homelessness has become a major human right challenge for an emerging economy like India. According to the Census 2011, India has more than 1.77 million homeless people, of which 52.95 per cent are in urban areas. Independent estimates, however, place the total number of homeless persons in India at about 2.3 million. Homelessness itself is the grave violation of basic right to shelter. It affects both men and women but women tend to be disproportionately affected. Women are often exposed to violence and intense emotional stress after homelessness because of their close ties to the home and their role as caregivers for the entire family. For the women, the non-realization of this right or its violation has specific consequences, not seen in the same way in the case of men. This paper will endeavor to delve into the lives of urban homeless women in India and will analyze the problems faced by them in the context of human rights.

Gender and Sexual Minorities in the Healthcare Professions: A National Analysis of Diversification and Wage Inequalities

A growing body of literature has quantified gender inequalities in healthcare professions, including gendered wage gaps, despite women representing 70% of the global health workforce. Statistical and taste-based discrimination have been postulated to account for differences in professional earnings among women versus men. Empirical studies from different countries indicate women physicians earn less than men due to "unexplained" factors, often attributed to consequences of gender discrimination, including fewer opportunities for career advancement among women in the traditionally male-dominated medical profession. Gender wage gaps also persist in female-dominated professions such as nursing, associated with accelerated promotions and other workplace rewards favouring men. The evidence base is less clear on wage disparities in terms of intersecting dimensions of gender

and sexual diversity (GSD). In Canada, the 2021 Census became the first large-scale data source (in this country or anywhere) collecting information on both sex at birth and gender identity, along with same-gender couples, allowing to distinguish gender and sexual minority individuals. Approximately 0.3% of the adult population were enumerated as transgender or non-binary, and 1.5% of census families represented same-gender or transgender/non-binary couples. This novel observational study leverages the de-identified census microdata to describe GSD in the Canadian medical and nursing professions, as identified through the National Occupational Classification. First we will assess whether the healthcare workforce reflects the population it serves in relation to GSD. Second, we will apply regression-based Oaxaca-Blinder models to structurally decompose differences in mean earnings (logged) by gender and GSD, controlling for other professional and personal characteristics (e.g., education, hours worked, racial/ethnic origin), along with what proportions of the earnings gaps remain unexplained by the measured predictors — a residual commonly attributed to statistical evidence of discrimination. Results will enhance understanding of whether gender wage gaps in health labour are exacerbated or attenuated by intersecting GSD identities.

Reason and Risk: Challenging the Expert-Public Divide in the Risk Debates on Uranium Mining in India

For the last two decades, since the nuclear weapon tests in May 1998, India's oldest uranium mines have been mired in controversy. Located on Adivasi (indigenous) land, these mines are suspected of causing adverse health effects on mine workers and nearby villagers. The controversy involves conflicting claims about the health impacts, their causes, and potential links to radiation. Various actors—including local anti-nuclear activists, NGOs, physicians, physicists, and officials from the state-owned Uranium Corporation of India Limited (UCIL)—have used different methodologies to analyze and attribute these health issues.

Perception of radiation risks is central to this debate. Mine workers and activists believe radiation from the mines and tailing ponds is responsible for the health problems observed over generations. However, UCIL and government officials dismiss these claims as "myths," positioning themselves as the scientific authority on the matter.

This paper deconstructs these competing claims by applying cultural and sociological studies on risk, along with discourse analysis to examine the language and narratives used by each group to legitimize their positions. Mainstream discourse and many scholars of risk (particularly psychometric studies) often distinguish between objective assessments by experts and subjective, emotion-based perceptions by the public. This paper contributes to the literature challenging this objective-subjective binary by presenting three arguments: First, expert definitions and assessments of risk are not as unanimous as often perceived—experts argue and dispute each other's conclusions. Second, public perceptions of risk are not merely emotional but grounded in cognitive assessments shaped by their social experiences with institutions that manage risks. Third, technical experts do not operate in apolitical contexts and are not immune to the politicization of risk controversies.

Global Inequality & Epistemic Geographies: The Unbearable Parochialism of American Sociology

How does parochialism persist in sociology publications in the U.S., the hegemonic center of the academic knowledge industry? While scholars routinely debate the theoretical and cultural paradigms that account for introversion in U.S.-based social sciences and humanities, empirical studies predominantly emphasize bibliometric documentations of global inequality or political economic theories for the global dominance of the U.S. These approaches, however, are ill-suited to disaggregate the national unit; they cannot tell us why diverse journals adopt similar practices nor do they explain the considerable variation in introversion across U.S. journals. In this study, I combine a novel bibliometric analysis with a cultural approach rooted in sociology of knowledge's emphasis on expert *practices* to ask: How do expert practices contribute to structures of geographic (in)visibilities in global fields of knowledge production?

Drawing on semi-structured interviews with editors and editorial board members of sociology journals (both in and out of the U.S.), a content analysis of introductory statements by new editors in U.S. sociology between 2000 and 2024, and a bibliometric analysis of sociology publications globally, I examine how editorial practices reflect, shape, and reinforce the geographic boundaries of sociology in the U.S. Extending Knorr-Cetina's concept of epistemic cultures, I argue that a set of machineries for knowledge-making (e.g., review

norms, editorial norms) are common among journals that identify strongly with "American sociology"—constituting an American *epistemic geography*. Such journals reify the boundaries of U.S. sociology and contribute to the production of what Pereira terms *epistemic status* of geographies in the global field of sociology. I further argue that U.S.-based journals that do *not* identify strongly with "American sociology" (and rebrand, say, as "international") enjoy added flexibility to adjust their machineries to call for further inclusion of submissions from the Global Majority.

The Satellite's Gaze: A Postcolonial Commentary on Development Economics

Satellite data has grown in popularity among developmental economists over the last two decades. It is heralded to circumvent informality and data manipulation, and it promises unique visibility on global poverty. How might the use of satellite data in developmental research reconfigure knowledge production of the Global South in the Global North? I offer a preliminary discussion, drawing on post- and de-colonial work of North-South developmental relations, poverty, visibility and cartography, and data politics and surveillance. My goal is not to survey the still-early instances of satellite-driven research; instead, I locate the turn to satellite data in postcolonial narratives of developmental economics, and I theorize its consequences on Northern understandings of development, space, and poverty.

Using a network analysis of citations, I find that satellite imagery technologies are forged and propagated by economists in North America and Europe, but used predominantly to study Asia, Africa, and South and Latin America, amplifying the distance between the people studying and the people studied. Indeed, the most influential publications are those written by economists in the North and study Africa. In addition, a cursory examination of the most central publications in the global North and global South using satellite data suggest that the North is invested in themes of global visibility, poverty, and "Africa" whereas the South is more invested in locally contextualized, within-nation studies, especially on land use. While the new era of satellite data may offer promising new possibilities for social scientific research, it may also serve to reinforce pre-existing hegemonies: Northern satellite research on global poverty arguably extracts data from and about marginalized regions, disempowers actors it strives to "see" by prohibiting participation, and reinforces problematic epistemologies of space and poverty.

Determinants of Citizens' Willingness to Cooperate with the Police: The Role of Legal Cynicism, Power Distance, and Self-Efficacy

This study investigates citizens' willingness to cooperate with the police in person and through existing digital technology by examining several influencing factors. Prior studies have documented the relationship between police legitimacy, fear of victimization, and police cooperation. Police legitimacy reflects citizens' belief in the fairness and effectiveness of law enforcement, which in turn shapes their willingness to cooperate during encounters and report crimes or suspicious activities. Fear of victimization can either motivate or inhibit interaction with the police. However, scant research explored the influence of other factors that may contribute to police cooperation. Chief among them is legal cynicism which refers to perceptions of the law and its enforcers as illegitimate and ineffective, a skepticism which may decrease collaboration. Two other key factors in explaining citizens' willingness to cooperate are power distance, which reflects beliefs about the degree to which hierarchical and nondemocratic procedures for governance are acceptable, and political self-efficacy, which is the confidence in one's political knowledge and ability to influence outcomes. In this study, controlling for the role of political legitimacy and fear of victimization, we explore the impact of other factors, such as legal cynicism, political self-efficacy, and power distance the citizens' willingness to assist the police in both traditional and digital contexts. Data for the study comes from a survey of 570 university students in St. Petersburg, Russian Federation. The study discusses policy implications for fostering police-community relations and enhancing effective security coproduction strategies in the new digital age.

Human Rights Issues and Challenges Among Bhil Tribes of Madhya Pradesh: A Case Study

Bhils are one of the most primitive and significant tribes of India Located in Western and central west part of India. One of most predominant indigenous and once rulers Bhils traditionally lived off the practice of shifting cultivation, hunting and gathering in forests. First encounter of change for Bhils came with intrusion of British for extracting timber they displaced the bhil tribes from their lands hence first attack on bhils rights as habitat and living conditions, also making it difficult for them to follow their natural practice of subsistence. Yet when India gained independence in 1947 Bhils condition worsened. Indian rulers intensified the process of extraction initiated by the British and refrained from providing the tribals with tools to survive the modern world, like education, medicine and economic skills. Then, in 1957, the group was displaced from their ancestral lands by Madhya Pradesh's Forest department, which declared their land "reserved forests." Though the Indian Forest Act (1927) made provisions to help farmers settle their claims, the forest department exploited the tribals' lack of knowledge about these laws and took away their lands, and effectively their food, livelihood source as well. Lack of essential skills for living in changed surroundings and their displacement from native places leads their conditions more miserable and indicates depletion of human rights. Migrations to other states for work, seasonal employment, poor health and prolonged social exclusion from mainstream addresses a lot about violations of their basic rights. This paper aims to identify and address such human rights challenges among bhil tribes of Jhabua and Alirajpur districts of Madhya Pradesh India. For study researcher used techniques like Personal interview and Focused group discussion for getting qualitative data from primary sources. Secondary data taken from Gazetteers, Government Reports, Articles and other sources as a part of case study.

The Socio-Cultural Impact and Challenges of Tribal Tourism: A Case Study (In Reference to Jhabua and Alirajpur Regions of Madhya Pradesh State, India)

Tourism is a modern and growing industry that has a high impact on human life. The interface between culture and tourism is immense and they have both negative and positive outcomes for one another. Tribal tourism involves leisure activities in tribal indigenous areas. Tribal Tourism is connected with tribal culture, values and traditions, tourism products owned and operated by tribal people ,it includes tribal habitat, heritage, history and handicrafts, owned by tribals. The Jhabua and Alirajpur region is known for its Bhil tribes and their vibrant culture, both tangible and intangible tribal indigenous cultural heritage, has been the source of tourist attractions for long. One of the main challenges in tribal tourism is to identify and address conflict situations between tourists and local natives. Threats to ethnic identities of a group as cultural impact of over tourism activities leads to tension situation sometimes. This paper identifies such situations and suggests mutual solutions given by Natives. Respondents of this study are local indigenous people (the host community) and tourists both. If tribal tourism managed properly, it can significantly contribute to the preservation and enhancement of cultural diversity and sensitivity. Otherwise, it can also deteriorate cultures of destination communities .This paper aims to identify and address Socio-cultural impact and challenges of tourist activities among Bhil tribes of Madhya Pradesh, India. Researcher selected study destinations which are Bhil tribe dominated areas. For study researcher used techniques like conducting individual Interviews and felicitating Focus Group Discussion (FGD) as a qualitative research method for data collection. Findings of paper highlights major impacts and challenges of tourism and leisure activities in tribal hinterland .In conclusion, tribal tourism has the potential to be a powerful tool for the development of tribal communities, offering significant economic, cultural, and social benefits if its challenges addressed carefully and sensitively.

PHIBBS, PETER (The University of Sydney, Australia)

Anti-Planning Narratives, Housing Supply and Affordability: An Australian Case Study

Debates about housing affordability have in many countries focused on the role of land use planning in constraining new supply. Despite differences in regulatory systems and housing markets, there is a striking similarity in these debates which often prescribe deregulatory reform as a fix for affordability pressures. With reference to Australia where planning reform has been a primary response to such concerns since the turn of the new millennium, this paper examines the nature of Australia's 'anti-planning' narratives; including the key claims made about the planning system and its impacts on housing markets; the key proponents of these narratives; and the strategies they employ. We situate this analysis against the backdrop of Australia's 'actually existing' planning settings and housing market conditions over two decades, presenting key housing supply and market indicators (housing approval/refusal rates; completions; land supply pipelines; house prices; rental affordability). We conclude that 'anti-planning' narratives have mobilised concerns around housing supply and affordability to pursue deregulatory reform agendas which perpetuate myths around the causes of and solutions to housing problems in order to distract from fundamental structural change.

Judging the Sustainability and Being Accountable - Different Approaches and Perspectives on ESG Reporting for Judicial Offices

Over the past few decades, sustainability has become a critical concern for all organizations: nowadays, no one could step aside from a global task of being more responsible and accountable on this issue.

European lawmakers have been introducing enforceable rules to strengthen the mandatory accountability and regulate the reporting requirements on ESG matters. The introduction of a new set of European standards that are tuned on the various sizes of organizations may lead to an unambiguous, easy-to-compare framework of sustainability reporting.

Although ESG reporting is typically associated with the corporate world, public sector institutions are recognizing the importance of managing this issue and demonstrate their commitment towards sustainability. For this reason, this research aims to explore the bounds of European normative.

This challenge is even more important for the Judicial Offices, that are increasingly called to judge cases of misleading advertising and false statements on ESG topics. Although some Courts and Prosecutor's Offices occasionally released documents labeled as "Social Responsibility Report", often the main concern of these reports is the judiciary efficiency far more than the actual impact on the environment, workers, local communities and other stakeholders.

The raise of internal awareness and external expectations on the ESG accountability could possibly come into conflict with the predominant organizational culture and the established practices in Courts. Starting from several case studies current situation in several European countries and a specific survey, our work aims to explore current approaches and future perspectives on this topic, with a focus on the consistency between choices made by a sample of Judicial Offices and the European ESG reporting framework.

The History and Present of Human Trafficking on Mexico's Southern Border: An Intersectional Perspective

Chiapas is the southern border that divides the states of Mexico and Guatemala. The introduction of capitalism to this region since the mid-nineteenth century has made this border region a destination for migrant labour, mainly from China. Today, it has become an area of recruitment, destination and passage for victims of human trafficking, both nationals and foreigners. In the nineteenth century, the mobility of foreign immigrants was mainly of young men to build the railway route and work in the coffee and

rubber plantations, among others. The current situation is one of trafficking in women, children and adolescents. In this paper we are interested in exploring the condition of border territory, as its situation requires an intersectional analysis of the social and criminal processes that occur or pass through the border areas between these two precarious nations.

Youth and Intersectionality: Research Results in Mexico City

This paper presents research results on young people living and transiting the metropolitan area of the Valley of Mexico, where the megalopolis of Mexico City is located. Different research techniques employed inform how much young people like the city considering different experiences generated by social divisions due to an intersectional approach, which mark inequalities, opportunities and privileges.

Referring to the place where people live provides preliminary information about their satisfaction with, or rejection of, everyday life. Young people express their experiences in peripheral municipalities or municipalities; they highlight insecurity, assaults, violence, traffic, entertainment, mobility.

Results are presented on the perception of young women in urban and semi-urban areas. Results also highlight young people's perceptions of who attends the best schools and the location of these schools in the most exclusive neighbourhoods of the city, which complements the information on chains of inequalities and chains of privilege based on ethnicity, social class, skin colour, age group, ancestry.

Fundamentos Para La Creación De Una Red Nacional De Inclusión y Educación Inclusiva En México

El rechazo tácito o explícito hacia los sectores de la población considerados como vulnerables, que más bien han sido y son "vulnerados", se ha acompañado por actitudes que en muchos casos, han desembocado en comportamientos y prácticas de exclusión, discriminación e injusticia social. También se han forjado estructuras que han derivado en barreras que impiden el crecimiento y participación de una mayoría de los miembros de una comunidad. El sector educativo no ha estado al margen de estas circunstancias. No obstante, cada vez más se enfatiza la necesidad de construir una sociedad con miras a que todos, sin distinción alguna, formen parte de ella. Por tanto, la inclusión en general, así como la educación inclusiva en lo particular, llevan aparejada en sus fundamentos la aceptación de la pluralidad y las diferencias, lo que implica que todas las personas necesitan estar incluidas en la vida educativa y social.

Con base en lo señalado, cobró relevancia desarrollar y presentar el proyecto de creación de una Red Nacional sobre Inclusión crítica en las IES Mexicanas, cuya finalidad es valorar la pertinencia y relevancia de una red de colaboración con alcance nacional que permita visibilizar la importancia que por derecho tienen los Grupos de Atención Prioritaria en vulnerabilidad y vulnerados (Personas con discapacidad, indígenas, afrodescendientes, personas de la diversidad genérico-sexual, adultos mayores) para promover que en los diferentes niveles educativos se cumpla con los preceptos que dan fundamento a la equidad, accesibilidad, no discriminación y la inclusión para que incidan en el cambio necesario, real y efectivo de la cultura, las estructuras sociales y políticas, así como de las prácticas educativas institucionales.

Actors, Social Mobilisation and Water Conflicts in Colombia

River ecosystems globally face increasing extraction, pollution and transformation by agro-industry, mineral extraction processes, fishing, energy production, and their use for the transport of goods. This situation is driving conflicting stakeholder interactions in hydro-social territories that tend to be aggravated by the scarcity of aquifers due to climate change.

This context has led to new social mobilisation agendas that build water-related identities through collective action. In the case of Colombia, water scarcity due to climate change is a problem that combines access to water for

some communities, pollution and the reduction in water quality with energy supply, which in almost the entire territory depends on hydroelectric plants, generating resistance on the part of different actors.

The research question is: What types of collective actions do socio-environmental movements develop around conflicts related to water management and what types of identities emerge in such conflicts?

My objective is to systematise information on the collective actions developed by socio-environmental movements in water conflicts and to analyse the types of identities that are being generated.

As a methodology I use the EJ Atlas database because it contains a taxonomy of different conflicts that have global relevance. Specifically, I plan to take the information on collective actions developed by socio-environmental movements and then reorganise it in SPSS software. This allows us to systematise the data using an ordinal scale (López and Fachelli, 2016) based on the frequency of the different forms of mobilisation.

In addition to providing a theoretical framework that unites concepts from political ecology, environmental sociology and social movement theory, this paper aims to present the construction of identities based on the collective actions of socio-environmental movements in the Colombian case, in order to understand the dispute over public policies with an integral vision of the socio-natural in hydro-social territories.

Procesos De Reflexividad Metodológica Sobre El Cuerpo, Las Materialidades y Las Emociones

La incorporación de enfoques teóricos y metodológicos sensibles a las mediaciones material, corporal/sensorial y emocional a la práctica investigativa es un proceso que parte de no sólo del conocimiento de la literatura que a partir de los años noventa está emergiendo con fuerza en los estudios sociales, sino de un proceso de reflexividad por parte de investigadores e investigadoras. En el campo de los estudios de religión en América Latina como región y en México en particular, este proceso se ha visto propiciado por proyectos colectivos de investigación realizados hasta los últimos años en torno a la metodología de la "Religiosidad vivida" (McGuire, 2008; Ammerman, 2014; Rabbia et al, 2019) En esta ponencia me propongo recuperar los rasgos más relevantes de las elaboraciones reflexivas que los 24 investigadores/as participantes en el proyecto "Religión y sociedad en México: recomposiciones desde la experiencia y el sentido practicado (2019-2020)" (Juárez, De la Torre y Gutiérrez Zúñiga, 2023) generaron a partir de la experiencia colectiva de adopción y aplicación de este enfoque para realizar 27 entrevistas a una muestra representativa de la diversidad religiosa actual del país. Se describirán las estrategias de co-formación establecidas entre los integrantes del proyecto que permitieron primero el conocimiento de este enfoque teórico metodológico, segundo la puesta en práctica en la entrevista y tercero, la atención a estas mediaciones como rasgo fundamental del análisis de la experiencia de lo sagrado en las vidas cotidianas de nuestros entrevistados, y finalmente la recuperación crítica y reflexiva realizada por los integrantes del equipo en torno a este experimento investigativo.

GUTIERREZ-CROCCO, FRANCISCA* (Universidad Austral de Chile, Chile)

From Climate Crisis to Labor Control: Workers' Responses to Corporate Environmental Strategies

While there is growing academic interest in the impact of the climate crisis on workers, the question of how this phenomenon alters labor relations in the workplace remains largely unexplored. Using Labor Process Theory as a foundation, our research investigates how firms' strategies to mitigate and adapt to climate change influence the control mechanisms over workers. We aim to understand how these corporate strategies, while not explicitly designed for this purpose, affect management's capacity for coercion and persuasion, as well as trade unions' practices of accommodation and resistance. At the conference, we will present preliminary findings from a case study conducted in a Chilean forestry company. This study involved analyzing corporate reports and conducting 25 interviews with managers, union leaders, and environmentalists in communities surrounding the company's operations. The case study reveals that companies have leveraged the climate crisis to increase control over workers and align them more closely with corporate interests. The presentation will examine the social fractures this situation creates in local territories and the challenges faced by trade unions in responding to these changes.

GUTIERREZ-CROCCO, FRANCISCA* (Universidad Austral de Chile, Chile)

Transformative, Accommodative, and Assimilative Social Bonds. Unpacking Workers' Solidarity in Delivery Digital Platforms

Despite the control that algorithms exert over the labor process and the individualized nature of the work, food delivery workers on digital platforms have created communities to support each other through social networks and everyday encounters in the city. Existing literature has explored this 'solidarity' as a precursor to the more organized and disruptive forms of collective action that have emerged in recent years. However, there has been limited discussion on how these communities contribute to the reproduction of workers' consent to the labor regime. This article, based on a study of delivery workers in Buenos Aires and Santiago—including 65 semi-structured interviews, 14 shadowing sessions, and 650 surveys—identifies three functions of workers' solidarity: transformation, accommodation, and assimilation of the values, norms, and behaviors imposed by digital platforms. The article argues that understanding these three functions and the tensions between them is crucial for analyzing capital-labor relations on digital platforms. It also examines the theoretical and practical implications of these findings.

GUTIÉRREZ-GAMERO JURADO, MARIO* (Universidad Complutense de Madrid, Spain)

Social Aesthetics As a Return to the Baumgartian Inferior Gnoseology.

In his *Aesthetics* (1750), Alexander Gottlieb Baumgarten introduces the idea of aesthetics as philosophy of art, inferior gnoseology and the art of thinking beautifully. Only the second meaning of the term survives in the first chapter of the *Critique of Pure Reason*, and, as a consequence, inferior gnoseology has been discussed without reference to its original link with aesthetics by both analytic and continental traditions of philosophy. In this paper we would like to recuperate this baumgartian concept but with the aim to show its relevance in Social Studies. To do this, we explore the connection between the internal logic of aesthetic testimony and what Marxist theory conceives as ideology.

Navigating Life in Migration: Socio-Spatial Integration of Newcomers

The existing research on **migration and integration** has traditionally centered on labor markets, education, and housing, leaving the role of daily life and community networks in fostering migrant integration understudied. This project explores how (semi-) public spaces and 'third places,' not limited to but including parks, cultural venues, and community centers, influence migrants' sense of belonging and participation in life in the context of Belgium. This study draws on the disciplines of urban sociology, migration studies and human geography with the aim of establishing socio-spatial experiences as a significant factor in the process of integration and seclusion, particularly for newly arrived migrants.

This project engages with the concept of 'throwntogetherness' by examining the extent to which diverse (semi-) public space and third places serve as meeting points where migrants and long-term residents can interact and form connections, or whether they perpetuate social exclusion. By investigating the intersecting trajectories of migration and the use of public spaces and third places, the project aims to capture the complex dynamics of place-making and socio-spatial cohesion in an era of increasing diversity. Moreover, an investigation of migrants' access to these spaces allows us to consider how their sense of belonging and integration and mental wellbeing are shaped by these spatial experiences.

Ultimately, our approach addresses the notion of 'urban throwntogetherness' and public space from migration perspective, providing an interdisciplinary lens. As part of the larger 'Migrant Voices Project,' this initial qualitative phase of the project employs focus group discussions to explore how community networks and socio-spatial integration—or lack thereof— affects migrants' participation in everyday life, sense of belonging and mental wellbeing. These findings will contribute to broader discussions on segregation in public spaces, offering insights into how third places and (semi-) public environments shape migrant experiences of integration and wellbeing across different contexts.

RC47-735.3

GUZMAN-CONCHA, CESAR* (Scuola Normale Superiore, Italy)

Carriers of Change: Conceptualizing Outcomes of Contention over the Long-Term

This article proposes a framework to understand how contentious politics can influence outcomes in the long-term. The literature on social movement outcomes argues that the capacity of social movements to produce outcomes depends on the reactions of public opinion, allies, and political parties, which act as mediating factors that shape the range and depth of the potential responses of the state to activism. Accordingly, causality is mostly indirect and easier to find in shorter temporal frames, i.e., when there are fewer iterations between the original causes and the outcome of interest. However, the literature is more ambiguous when it comes to the long-term. While important works in this field have covered long periods of time, this article argues that a better understanding of the temporal dimension of contentious politics is required to clarify how contention produces long-term outcomes. The core argument is that social movements will be more consequential when they can produce outcomes that produce outcomes. When such outcomes emerge in early phases, social movements can extend and amplify their influence in later phases. Drawing on the metaphor of time-travelling, the article theorizes the concept of carriers of change. Carriers can be understood as time-machines that convey demands, ideas, and actors from one moment in time to another. But unlike time-machines, demands, ideas and actors change in the journey. Conceptually, carriers represent typical-ideal pathways that allow an event that occurred in t1 to navigate through t2 and produce impacts in t3. Four such carriers are identified and discussed: coalitions, organizations, (sub)cultures and collective identities, and policy agents. The framework is illustrated with contention politics in Chile between 2006 and 2022.

Knowledge Creation about Migration: Analysing Open Access Policies and Practices in Migration-Related Journals

In recent decades, the open science movement and open access practices have developed in various disciplines. Stakeholders, including research institutions, professional organisations, academic journals and others, have focused on making research FAIR, i.e. findable, accessible, interoperable and reusable. These various stakeholders have committed considerable resources to promoting open science. However, there are still questions about the extent to which science and publications are open. In this paper, we address these questions with empirical focus and referring to migration research.

In our analysis, we are interested in the politics and practice of Open Science and Open Access (OA) in the field of migration. Migration debates have long been concerned with the question of how knowledge is created, with a particular focus on the potential biases and juxtaposition of perspectives from the Global North and the Global South (and more recently the Global East). This paper contributes to this debate by analysing how open access policies and practices have evolved in migration-related academic journals. We use metadata on publications in selected migration-related academic journals. We study OA publications in terms of the time of publication, the affiliation of the authors of the articles, the number of citations and others. Our analysis shows not only the development of OA over time, but also the availability of the OA route for different groups of researchers (e.g. from the Global North versus the Global South and East). The analyses are carried out using the metadata of publications from the Web of Science and make it possible to show the extent of OA in the context of migration as well as some of its correlates.

Reconfiguring Secularity in Public Life: Popular Religiosity, Secularism and the Changing Dynamics of an Islamic Shrine Festival in Kerala, South India

In South Asia, popular religiosity is deeply embedded in ordinary life and plays a significant role in shaping secular practices and conceptions of public life. These practices and conceptions, emerging within and in response to the discourses and practices of popular religiosity, are predicated on a specific (vernacularized) understanding of secularism that carries deeper normative commitments and expectations beyond the formal separation of religion and politics. This paper, anchored in the study of *Veliyancode Chandanakkudam Nercha* – a carnivalesque Islamic shrine festival in Kerala, South India – examines its changing dynamics and the shifting modalities of religious and non-religious engagement with it.

Having emerged as a communal ritual-practice in the early 20th century, this *nercha* has evolved into a mass carnivalesque festival of the region, attracting thousands of participants, irrespective of religious and caste affiliations. Over time, forms of participation in and responses to the *nercha* have also undergone significant transformations. Through a meticulous ethnography of discourses and practices associated with this *nercha*, the paper focuses on two important aspects: First, it traces the evolution of the *nercha* from a ritual-practice to a mass carnivalesque festival and critically examines the varied conceptualizations of *nercha* by different actors in the field. Second, it investigates how traditionalist Sunni Muslims in the locality delineate acceptable and unacceptable forms of religiosity and how their position on such popular religious festivals has shifted in recent times. In doing so, the paper aims to explicate the ways in which the actor constellations – religious and non-religious – negotiate the boundaries between the religious and the secular – thereby redefining the 'legitimate space' of religion in public life – and to offer a nuanced conceptualization of postcolonial secularity in terms of the cultural meanings underlying this process.

BAJOU, CAREMA (University of Luxembourg, Luxembourg)

From Communities to Places: Post-Plural Activism in the Anthropocene

Collective social intervention is traditionally focussing on social problems within communities. Although the notion of community can be defined in multiple ways (e.g. ethnicity, class), territorial approaches to community have been dominant over the last decades at least in the European context. Communities are thus thought of as urban quarters and social intervention designed to aim at social integration or cohesion.

The present contribution will relate the experiences from an action-research project started back in 2017 and raising the question of how collective social intervention could be conceptualised if the entry point were places in their multi-dimensional (material, ideational, emotional, temporal and spatial) and relational arrangement of human and non-human entities: a small public place in front of a supermarket, a parking lot behind the town hall, etc. And what would it look like if the same places were the sites of intervention, if social problems and target populations emerging in the process were not displaced or institutionalised? In the course of experimentation, the project team developed three main intervention strategies with regard to the multi-dimensionality and the relationality of human and non-human entities, namely the strategies of extension (inserting new entities into the arrangement, thus extending the perception of the existing arrangement), inversion, and exaggeration. These intervention strategies allowed more specifically to question the taken-for-grantedness of the infrastructure, social problem work, etc. Making places the point of departure of intervention allowed moreover to re-think the 'use' of places as tools (and not only contexts) in social activism, not least with regard to climate change/environmental problems and their abstract and complex 'nature'.

HABIB, SADIA* (University of Manchester, United Kingdom)

Young People's Activism in Museums: Co-Creating Knowledge for Racial Justice

This paper examines young people's activism for racial justice during the COVID-19 pandemic and Black Lives Matter mobilisation. It focuses on a collaborative project involving young people (aged 16-25), curators, academics, and poets, primarily from global majority backgrounds, who engaged in critical anti-racist and decolonial work within a UK museum context from 2020 to 2022. Through reflective workshops and arts-based research, participants reimagined concepts of justice and challenged traditional knowledge hierarchies in cultural institutions. The study investigates how intergenerational and interdisciplinary partnerships create epistemologies that confront 'institutional whiteness' (Ahmed, 2007).

Drawing on the concept of epistephraxis (Cooper et al., 2021), the research analyses how young people-led creative interventions generate new understandings of racial justice and promote justice-oriented futures. Data collected from collaborative workshops and subsequent creative responses demonstrate the potential of arts-based methodologies to produce transformative knowledge and action.

This paper contributes to ongoing discussions about sociology's role in addressing Anthropocene conditions by highlighting the power of young people's activism in museum spaces. It argues that centring global majority young people's voices and creative expression can push museums to rethink critical engagement with environmental and social justice issues.

The findings suggest that embracing these alternative forms of knowing can equip both sociologists and citizens to navigate the complex intersections of racial, environmental, and intergenerational justice. By supporting such collaborations, museums can reimagine knowledge production that is more just and responsive to the challenges of the Anthropocene.

Perception and Adoption of Digital Technologies in Agriculture: Insights from the Fès-Meknès Region

In recent years, agriculture in the Fès-Meknès region, a key economic area of Morocco, has faced significant challenges, such as water scarcity, soil degradation, and limited adoption of modern technologies. Digital transformation is emerging as a crucial solution to enhance efficiency, sustainability, and competitiveness in the sector. This study examines how agricultural actors perceive and adopt digital technologies and assesses their impact on farming practices and resource management.

The focus is on innovative technologies like remote sensing, crop monitoring sensors, smart irrigation systems, and drones, which optimize resource management, particularly water, while increasing agricultural yields. These tools offer substantial potential to meet the growing demand for sustainable farming in an environment with limited natural resources.

The methodology combines semi-structured interviews with farmers, technology innovators, and policymakers to explore their perceptions and the barriers to adopting digital tools. Quantitative surveys further assess adoption levels and identify challenges. Additionally, a comparative analysis between traditional farming methods and those using digital technologies is conducted to evaluate their impact on water savings and yields.

The results provide valuable insights into the dynamics of digital technology adoption in the Fès-Meknès region, highlighting key drivers for

successful digital transformation in agriculture. By identifying both barriers and opportunities, the study offers practical recommendations for promoting broader adoption of these technologies, contributing to the modernization and sustainability of agriculture in the region.

Knowledge, Care and Repair. the State-Led Plan for Mass Graves Exhumations in Galicia (Spain).

This paper is based on data gathered during repeated ethnographic fieldwork following the State-led Plan for exhuming mass graves from the civil war and Francoism in Galicia (Spain). It will be essentially based on dense descriptions gathered via the method of participant observation, informal interviews conducted on the spot, and in-depth interviews after the event.

As "landscapes of terror" (Ferrándiz, 2014), mass graves represent a deep necropolitical object, insofar as they were (one of) the Franco regime's expression of "its control over mortality and [its definition of] life as the deployment and manifestation of power" (Mbembe, 2006). These exhumations were first a citizen's process - carried out by civil associations - and then also a state process, as part of the Plan embodied in the *Ley de Memoria Democrática* of 2022. The aim is similar: to "dignify" the memory of the victims of Francoism.

As a scientific device at the crossroads of various disciplines, exhumations have the legitimacy to raise questions that had long been dismissed in favor of the "exemplary Transition" narrative (Aguilar, 2008). In this context, "the body has an incomparable capacity to reveal crucial features of the conditions in which it lives and dies" (Klinenberg, 2002; p.122), leading to a veritable "corporeal epistemology" (Ibid) in which bodies become revelators of the social norms and situations in which they lived, but also those in force at the time of their exhumation.

The aim of this presentation is twofold. Firstly, to construct a critical reflection on this memorial policy by addressing the question of the construction and use of knowledges in the encounter between citizen and state-led actions. Secondly, to think of exhumations as processes of *caring* for victims and memories, by focusing on the people and dynamics that put this care in place.

LARABI, SAMIR (Université de Béjaia, Algeria)

The Commons Facing Extractivism : Inquiring Anthropocene and a Life-Changing Project (Algeria)

In the wake of the energy transition and to free itself from the grip of fossil fuels, Algeria is increasingly turning to mining and renewable energies. This paper explores an example of a lead and zinc mining project in two rural communes in the wilaya of Béjaia, Amizour and Tala Hamza, and the reaction of the communities affected by the project. Unlike many mining operations in Algeria, this area is close to relatively densely populated semi-urban centres resulting from the gradual de-ruralization that Algeria has undergone since the 1980s. In this paper, we look at the arguments put forward by the groups opposing the project, their formation, their alliances and their ability to react in order to safeguard the ecological (wetlands, 'mountain cultures') as well as the human and health aspects.

We analyze the arguments that focus on attachment to the land at a time when land is less and less used as a means of subsistence, yet serves as a place of attachment and identity, as well as immaterial goods (cemetery, historical places and *et lieu de mémoire*). In addition, our analyses are attentive to the nature of mobilisations and protests, and their relevance to extractive projects that take no account of the populations concerned: what alternatives do they offer, how viable are they, and what are the possible convergences that exist between them and with cases in Algeria and in the neighbouring countries? Finally, and more importantly, how the Commons are maintained among regions that have undergone important structural transformations?

RC48-754.2

HADJ-MOUSSA, RATIBA* (York University, Canada)

Transient Body, Transiting Body: The Disappeared or the Programmed Oblivion (Algeria)

This paper examines how the putative transiting from one detention center to another of abducted or apprehended citizens by various state forces during the Algeria's civil war (1992-2002), and the way in which disappearance is constructed and shaped. During this war, between 150-200 hundreds

thousands of people disappeared. Searches by their families during the difficult and dangerous times of the conflict as well as in its aftermath have ended in dismissals, as if the bodies had “evaporated”. This paper shows that this vanishment is, on hand, an intrinsic part of a managing technology that uses the detainee's displacement, real or unfounded, as a way to invisibilize them at the very moment of their arrest/abduction, and on the other hand, how within this detainee's “mobility” the search by their relatives becomes itself and paradoxically part of their invisibilization. It is as if the families have de-duplicated and confirmed the disappearance, leaving the body in transit, between life and death, in a “non-lieu”.

To illustrate this repressive ordering, based on a presupposed displacement of bodies in detention, the techniques of transition/erasure, and the chain of memory belonging to Algeria's own history and to other practices of oblivion adopted elsewhere (e.g., Latin American dictatorships), we draw on a phenomenological analysis of the spaces supposed to be traversed by the detainees/disappeared, as recounted in their relatives' search narratives. We also discuss the relationships of these spaces to temporal layers, that is to the moment of the arrest/abduction and its aftermath, to account for these bodies in transit and the politically and militarily programmed oblivion.

HADJICOSTANDI-ANANG, JOANNA* (University of Texas PB, USA)

Imagine Justice: State and Local Violent Tactics in West Texas, USA.

When I moved to West Texas from Boston, I was told that race relations are very smooth in this area and that “anybody could move in any neighborhood one chooses to buy a house in”. Following my Sociological Imagination, I soon discovered that this was far from the truth and that the governing bodies encouraged deep economic, political and ideological divisions among the marginalized populations.

This presentation is based on two research studies I conducted as I readily integrated into the communities. The first one was the collection of Oral Histories from the small Black community (5-6%), starting with the early migrants in the region, who spoke about the inefficient role of local government in their settling efforts or getting appropriate jobs, in the segregated South Side of town. The study also included the large “Hispanic” population (50-60%) that resided mainly in the West side of town. The second study is based on the Triethnic (Black, Hispanic and Anglo, proportionately) Committee that was instituted in the early 80s to oversee the integration of “Minority” kids into the just desegregated school system in 1982 while mirroring the state violence implemented in many other cities of the US South. I became part of the committee in 1998 till 2018 when it was dissolved by the system based on the belief that the gender and racial injustices had already been transformed. In depth interviews in 2021 with several members of the committee presented a different image.

The intersection of race, and gender relations are examined in depth and issues of local and state government violent interference with migration, political and economic integration of the underrepresented populations and the unsuccessful efforts for social transformation and justice in the region are analyzed in depth.

HAERPFER, CHRISTIAN* (Institute for Comparative Survey Research, Austria)

Trust in National Governments in 30 European Democracies, 1990-2024

Political trust is regarded as an important element of regime support and factor of regime stability; it is widely associated with a number of positive outcomes in representative European democracies. Political trust drives citizens' interest and engagement in politics, increases voting turnout and makes law-abiding behaviour more common. Political trust is frequently equated to diffuse regime support and thus linked to the effective functioning and stability of the political system. The topic of this paper is ‘Trust in National Governments in Europe’. The paper will describe and analyse the structure and levels of citizen's trust in national governments in all 27 member states of the European Union and in Switzerland, Norway and the United Kingdom. Hence the paper will cover 30 European democracies. The period of descriptive and explanatory analysis is from 1990 until 2024. The paper will present the first results of the HORIZON EUROPE study of ‘Trust in European Democracies – TRUEDEM’, which is directed by the author of this paper. The paper will present a multivariate model of explanation of trust in 30 National Governments in Europe.

HAEUSL, WALTER* (Scuola Normale Superiore, Italy)

Left-Wing Populism and the Incorporation of Precarious Workers: A Comparative Study of the Movimento Cinque Stelle and Unidas Podemos

In the 2010s new left-wing populist parties emerged in Southern Europe, deeply restructuring the national political context. Little attention has so far been devoted to the concrete policy measures pursued by left-wing populism and the ideational factors underpinning them. Against this background, this paper comparatively investigates the social, labour and income policies pursued by the Movimento Cinque Stelle (M5S) in Italy and Unidas Podemos (UP) in Spain during Conte (2018-2021) and Sanchez (2020-present) governments, as well as the socio-economic ideology driving them.

Through the analysis of policy documents and secondary sources, I demonstrate that the M5S and UP share a commitment to ‘de-dualize’ the national labour market and welfare institutions, i.e. extending protection to outsiders. This shared orientation is manifest in key policies, such as the regulation of temporary work, the substantial raise/introduction of a statutory minimum wage, and the introduction of minimum guaranteed income schemes. Mobilizing foundational party documents, I further argue that their political project has been one of incorporation of precarious workers into the State, similar to what has happened in Latin America (Kapiszewski et al. 2021). This opposes left populism to right populism, whose project is one of conservative safeguard of secure workers against precarious workers, while keeping them subordinate to capital (Rathgeb 2020).

Despite commonalities, I argue that UP has gone far beyond the M5S in de-dualizing the labour market and the welfare state. I claim that this difference can be traced back to party ideology, as Unidas Podemos has a more radical and coherent ideology than the Five Star Movement, as largely discussed in the existing literature. Ideological specificities, also explain why some policies implemented by the M5S are exclusionary towards foreign nationals. This argument is confronted with alternative – and complementary – explanations, such as the respective government composition and duration.

HAEUSL, WALTER* (Scuola Normale Superiore, Italy)

Living Precarity and Talking Politics. Biographies of Precarious Workers in Spain and Italy

Precarious workers—those who experience both employment instability and financial insecurity—are often seen as an emerging lower class in post-industrial societies. Recent political science literature has examined the political preferences of precarious workers, generally finding that they are more likely to abstain from voting, and when they do participate, they tend to support radical left parties (Rovny and Rovny 2017). However, there is surprisingly little research on the processes behind these patterns: how individuals experiencing precarity understand their situation, and what motivates their political choices. This study investigates how precarious workers interpret their labor market trajectories, their class identity (if any), and how they think politically. To address these questions, the study draws on ~ 50 life history interviews with precarious workers, varying in education, occupation, age, and gender, conducted in Italy and Spain (~25 per country) during 2024.

The findings, as of now, reveal three types of precarious workers. The first group exhibits (techno-) populist tendencies, expressing distrust towards political figures and largely abstaining from elections. They demonstrate low political competence, tend to normalize their precarity, and struggle to conceptualize themselves in terms of social class. In this case, precarity extends beyond the labor market to permeate all aspects of life, leading to political alienation. The second group holds leftist political views, possesses medium to high political competence, and is relatively comfortable thinking of themselves in class terms. This group, typically more educated, links precarity to frustrated aspirations of achieving middle-class security. A third, more intermediate group combines social populist ideas (centered on dignity) with political despair and/or skepticism. While they can thoughtfully assess which parties and policies would benefit them, they are hesitant to believe that their situation can meaningfully improve.

RC35-577.1

HAHN, KORNELIA* (University of Salzburg, Austria)

The Social Digitalisation Concept to Assessing Digital Transformation

The *social digitalisation* concept (Hahn 2021) offers a new approach of how digital transformation has shaped the relationship between individuals and society. Rather than assuming an ongoing 'digital revolution', this concept shows that the apparent disruptions we are experiencing today are neither unprecedented nor entirely dependent on material digital technology. These findings suggest that the technological determinism inherent in dominant concepts of digitalisation has prevented us from gaining as fuller understanding of the far-reaching, and often unjust, consequences of digital processing. Thus, *social digitalisation* creates an analytical concept for analysing contemporary societies that addresses the highly entangled and typically opaque power structures of digital processing. With this concept, I demonstrate the necessity of analysing digital transformation within specific contexts and in relation to specific social groups in order to identify the different consequences of digital transformations. The study of these consequences sheds light on numerous social problems that have not yet been linked to the different experiences of digitalisation. I argue that this novel concept of digitalisation not only highlights the need for a persistent assessment of the various impacts of the social digital transformation, but also provides a concrete framework for such an assessment.

RC28-JS-49.4

HAJJI, RAHIM* (Magdeburg-Stendal University of Applied Sciences, Germany)

The Loneliness of Refugees in Germany

Loneliness is a widespread phenomenon among refugees. Empirical studies show that 30% of refugees in Germany experience loneliness, compared to only 15% in the host society (Löbel et al., 2021). Loneliness can significantly affect health, for example, by contributing to the development of depression (Leigh-Hunt et al., 2017).

Losing one's homeland due to war, persecution, or threat often leads to the loss of social networks, such as friends, acquaintances, and family members, which intensifies loneliness in the host country. Empirical studies also indicate that a lack of language skills hinders integration into the host society, thereby fostering a sense of loneliness (Nguyen et al., 2024). However, little research has explored how regional factors—such as population density and the proportion of foreign citizens—or individual factors—such as the perceived absence of a welcoming culture, experiences of discrimination, and feelings of fear—influence the experience of loneliness.

To address this question, the 2016 IAB-BAMF-SOEP survey was analyzed, focusing on refugees who immigrated to Germany between 2013 and 2015. This period was marked by increasing xenophobic sentiment in Germany (Jäckle et al., 2017). A total of 4,321 refugees were surveyed, and the data was linked to regional information from the INKAR database.

The results of a hierarchical regression analysis revealed that refugees in regions with higher population density and a larger proportion of foreign citizens report significantly lower levels of loneliness. On an individual level, however, the absence of a welcoming culture, experiences of discrimination, fear, and lack of language skills are significantly associated with higher levels of loneliness.

These findings expand the current body of research and suggest valuable intervention points. Specifically, language education programs and initiatives aimed at promoting social networks and fostering a welcoming culture could help reduce loneliness among refugees.

Public Policies for Underground Water Preservation between Ecological Constraints, Economic Needs, and Cultural Resistance: Mejjate Commune As a Case Study

Hakim Assissou, Driss Benlarbi et Mustapha Merizak

Morocco has adopted a liberal economic policy for the agricultural sector. Agriculture is thus oriented towards the international market for agricultural products, which drives farmers to overexploit underground water to maximize yields for export. The expansion of large-scale farming in addition to the growing needs of family agriculture have significantly impacted the availability of groundwater. In response, the state has taken

measures to address water shortages by constructing more large-scale dams to protect this natural resource. These dams are designed to store large quantities of water for various purposes, a portion of which will be allocated to irrigate farms downstream. The construction of the M'DEZ dam aims to store substantial water reserves to irrigate agricultural plots in the Mejjate commune. After identifying the farmers affected in the Saïs plain, public authorities plan to raise awareness among them to integrate into the groundwater sustainability project, emphasizing the strategic importance of groundwater as a resource that must be protected. The water resources in the dam will be made available for irrigation in exchange for the farmers' commitment to preserving underground water. This participatory approach is being implemented in a social climate of distrust between public actors and the local population, which remains attached to its ancestral culture and traditional methods of managing natural resources, particularly water. Through participant observation and in-depth interviews with farmers, local development agents, and representatives of directly involved organizations, we seek to grasp the dynamics of the relationship between public authorities and farmers as well as the impact on the nature and quality of social ties that develop in this context.

"Alone Australia": Spirituality and Nature-Connection in the Anthropocene

Since the turn of the twenty-first century, scholars of religion have focused considerable attention on religious diversity and the rise of the non-religious, particularly in so-called Western societies. There has also been a rise of people identifying as spiritual, be they religious or not, and reporting a strong connection with nature, be they spiritual or not, globally. Both of these trends are certainly evident in Australia, particularly in recent data on the diverse worldviews of young Australians, and are currently being investigated by scholars in the Australian Research Council funded project on 'Australian Spirituality'. Spirituality in Australia has strong Indigenous, religious and holistic dimensions, and has been described as a down-to-earth, relational spirituality, informed by Indigenous and Asia knowledges, given Australia's geographical proximity to Asia and long history of flows of people, trade and ideas between these continents. This paper presents findings of a case study of the reality TV survival program 'Alone Australia', set in lutruwita, the Tasmanian wilderness and broadcast in 2023. It explores four contestants' – one Indigenous, one Christian, one Buddhist, and one holistic spiritual – views on nature and spirituality in the Anthropocene, revealing insights on 'spiritual complexity' in this Country that can further inform scholarly understandings of spirituality and nature-connection more broadly.

HALLEY A, JEFFREY* (The University of Texas at San Antonio, USA)

Is the Avant-Garde Still Possible? Is Social Change Still Possible? the Particular and the Totality in Dada and Pussy Riot.

If the comment attributed to Fredric Jameson that it is harder to imagine the end of capitalism than the ecological destruction of the world is valid, then time and temporality are important to discuss in looking at the avant-garde and its relation to contemporary political change. What is the role of the avant-garde in this process? This paper will discuss two avant-gardes, Dada, and Pussy Riot, in relation to their use of what we can call the particular, and the totality.

The particular, in art or politics, can stand as a weapon against a totality that has inadvertently denied the very moment on which it depends for its own organic constitution, against a false or dominating totality. In art and politics, this is the capacity and de-reifying importance of critique, exemplified by the avant-garde critique of instrumental rationality,

The first example of the process of particularization accomplished by early twentieth century Dada artists, is illustrated by their practice of an attack on means ends relations through chance artistic practices.

The second example, concerning the Russian avant-garde group Pussy Riot's performance intervention in Moscow's Cathedral of Christ the Savior, entails a strategy of intervention on the level of an imagined totality.

An excursus regarding the seizure of the GPO in the Irish Easter Rising illuminates the complex relationships between culture and political change.

This would involve using concepts from Ernst Bloch, Walter Benjamin, and Max Tomba to redeem repressed or neglected parts of art and political

practice. Bloch speaks of the “not yet,” and the “hope principal.” Benjamin challenges seeing history as a continuum. There is an unfinished past which can redeem the present. Avant-garde and political practices involve a critique and a transcendence of the given, and are congealed as images that are recuperable, such as the Paris Commune.

Strong Structuration Theory and Social Policy: Linking Social Citizenship Rights and Practices

The examination of the interplay between formal social rights and people's de facto opportunities for achieving full and effective social citizenship is a key focus in social policy research. Strong structuration theory focuses on the links between society and the individual, holding great potential to explain the active agency of persons at risk of poverty and social exclusion, their coping and resistance strategies, as well as the potential for social transformation. Despite its explanatory potential, the theory has rarely been applied in empirical social policy research. This paper has two sections. The first section provides an overview of the key components of Strong Structuration Theory within the broader context of practice theory. The second section applies the theory to a study of the opportunities to exercise social citizenship among persons at risk of poverty and exclusion in Europe. Drawing on findings from the Horizon 2020 project “EUROSHIP- Closing gaps in European Social Citizenship”, the paper discusses the efforts of persons at risk of poverty and social exclusion to improve their own life opportunities and achieve full and effective participation in society.

La Sociabilité Sportive Et De Loisir Dans L'Espace Littoral De La Ville Du Rabat : Vers Une Dynamique Du Processus D'intégration Sociale.

Les villes côtières du Maroc sont porteuses d'un grand potentiel naturel intégrationniste pour les populations locales, notamment les jeunes qui sont devenus de plus en plus attachés aux activités sportives et de loisirs. Le développement des infrastructures de loisirs et de sports sur le littoral peut être un moteur de dynamisation sociale et économique. Au niveau de la ville de Rabat, nous supposons que les pratiques du loisir développées sur le littoral sont porteuses d'une grande capacité d'amélioration de la qualité de vie des habitants et de la sociabilité de toute une génération passionnée par le loisir.

L'objectif de cette étude est d'examiner comment les activités sportives et de loisirs développées dans l'espace littoral de Rabat contribuent à l'intégration sociale des jeunes de la ville. La méthodologie inclut une revue de la littérature, des enquêtes auprès des jeunes et des observations de terrain.

Nous prévoyons que ces activités favorisent non seulement la sociabilité et l'intégration sociale des jeunes, mais également l'attractivité touristique de Rabat, contribuant ainsi au développement durable de la région. Les résultats de cette recherche pourraient informer les politiques publiques et les initiatives communautaires visant à maximiser les bénéfices sociaux et économiques des espaces littoraux.

HAMEL, CHRISTELLE* (National Institute for Demographic Studies (INED --France), France)

Paths of Violence Experienced By People Who Have Been Involved in Prostitution during Their Lives in France

To what extent have people who have turned to prostitution in the course of their lives been subjected to violence in their childhood? We propose to objectify these people's pathways to violence using the *Violences et rapport de genre survey*, carried out by the Institut national d'études démographiques in 2015, during which 27,000 women and men, aged between 20 and 69, representative of the population residing in metropolitan France answered an in-depth questionnaire on violence.

The question used to identify those concerned was: “In the course of your life, have you ever had sexual intercourse to get out of a difficult financial situation or to improve your daily life, or in exchange for money?” One hundred and forty-six people responded positively (0.7% of men and 0.55% of women).

What are their socio-demographic characteristics? Their parents' occupations at the age of 14 do not distinguish them from the rest of the

population. They grew up in families of all socio-professional backgrounds. Among these people, those declaring themselves homo- or bi-sexual at the time of the survey are strongly over-represented: 7% of men say they are exclusively gay and 11% bisexual, while 22% of women say they are bisexual. Financially, 40% say they are “struggling to get by” or “can't manage without going into debt”, and 30% have lived on the streets or in very precarious housing.

Did they experience violence in childhood? 42% say they grew up in a family where there were “serious tensions or a climate of violence between their parents”, and 18% said they grew up in a family where there was “repeated beating and abuse of themselves or another member of the family”. 40% reported psychological violence against themselves, 28% physical violence and 15% incestuous sexual violence. Finally, 25% said their first sexual intercourse had been forced.

Intersectional Approaches to Healthcare Access for Racialized LGBTQI+ Migrants: Community Alliances and Systemic Barriers

This presentation addresses the compounded health disparities faced by racialized LGBTQI+ migrants, emphasizing the intersection of race, migration status, sexual orientation, and gender identity as key factors influencing access to healthcare. These populations face structural barriers such as xenophobia, racism, homophobia, and transphobia, all of which are exacerbated by the COVID-19 pandemic. Disruptions to social services have worsened health outcomes and wellbeing for these vulnerable groups, highlighting the urgent need for targeted, intersectional strategies to address these inequities.

While existing research has focused on the social determinants of health, few studies explore the agency and resilience of racialized LGBTQI+ migrants in overcoming these challenges. This presentation contributes to the proposed session's goals by examining the role of community engagement and intersectional collaboration in mitigating health disparities. Drawing on the partnership between the Mauve Clinic and AGIR, an organization supporting LGBTQI+ migrants in Quebec, this presentation showcases how alliances between healthcare providers and community organizations can create more equitable access to care.

Through an intersectional lens, this research explores strategies for overcoming structural barriers, focusing on case studies and the empirical outcomes of these partnerships. Methodologically, the presentation draws from a field study conducted between October 2023 and June 2024, including semi-structured interviews and participant observation. These findings offer practical insights for designing inclusive healthcare interventions that address the compounded vulnerabilities of racialized LGBTQI+ migrants.

This presentation aligns with the session's emphasis on vulnerable populations by not only analyzing systemic barriers but also highlighting actionable strategies through community collaboration. It aims to foster a deeper understanding of how intersectional approaches can inform healthcare policy and practice, ultimately promoting the health and wellbeing of marginalized populations.

HAMILA, AHMED* (University of Montreal, Canada)

Revisiting Transnational LGBTQI+ Solidarity

In recent years, different governmental entities have launched transnational solidarity initiatives to defend LGBTQI+ rights beyond their borders. A notable example is Canada, which, through its inaugural 2SLGBTQI+ Federal Action Plan has committed to various measures supporting LGBTQI+ rights on the international stage as part of its Feminist International Assistance Policy devised by Global Affairs Canada. While some view governmental engagement on LGBTQI+ issues internationally as beneficial and necessary, others are skeptical, perceiving these transnational solidarity efforts as forms of homonationalism or homocolonialism. These critics argue that such efforts reinforce sexual democratization—a process where countries of the global North define, celebrate, and control a narrowly normative sexual identity category. Far from being liberating, these transnational solidarity initiatives may perpetuate colonial privileges and impose neoliberal norms on local cultures and autonomies.

These issues are particularly pronounced in the Francophone context, where the French language and laws criminalizing same-sex relations—remnants of colonization—persist in many countries of the global South. Consequently, it is essential to examine this colonial legacy and its articulation within the current context of governmental transnational solidarity initiatives concerning LGBTQI+ issues.

In this presentation, I will revisit the conception of transnational LGBTQI+ solidarity and its limitations, drawing on insights from nine focus groups conducted during the 2nd international Égides conference held in November 2024. During this conference, nearly fifty LGBTQI+ activists from over twenty Francophone countries in the Global North and South discussed the definition, operationalization, and limitations of transnational solidarity. They also explored ways to implement a transnational LGBTQI+ solidarity approach through a decolonial lens. This presentation aims to highlight the complexities and challenges of such solidarity efforts and to propose strategies for a decolonial approach that acknowledges and addresses the power imbalances and colonial legacies inherent in current practices.

HAMMER, RICARDA* (UC Berkeley, USA)

Claudia Jones and the Reimagining of Citizenship: Anticolonialism and the 1962 Commonwealth Immigrants Act

While sociologists have largely approached citizenship through a nation-centric lens, this paper theorizes it as a governance tool in the service of empire and postcolonial erasure. I focus on the struggles over Britain's most influential post-war citizenship legislation, the 1962 Commonwealth Immigrants Act, which effectively turned Black British imperial subjects into "immigrants." Although all British imperial subjects had the right to live and work in metropolitan Britain, the Commonwealth Immigrants Act imposed a "color bar" on British post-war immigration. Tracing its eventual passage, I focus on three archival constituencies central to the making of the CIA: (1) Home Office and colonial office debates and correspondence, (2) the writings of early social scientists, who came to construct the "Black presence" as an intrusion into the post-war British nation, (3) and the work of anticolonial activists, who offered a "path not taken." Amongst the latter, I highlight the work of the Trinidadian anticolonial activist Claudia Jones, who exposed how the state used citizenship as a tool to manage racist exclusion while the obscuring Britain's colonial past. Engaged in counter-hegemonic struggles, Jones' presented citizenship as a reparative measure grounded in historical imperial connections, the right to movement and long-standing economic exploitation. She argued that citizenship could not be understood solely within the boundaries of the nation-state but had to account for the global structures of exploitation established through empire. As such, Jones framed immigration not as a national issue but as a consequence of empire, demanding that post-imperial Britain recognize its historical responsibility to colonial subjects. Yet, with the eventual passage of the Commonwealth Immigrants Act, Britain turned "the race question" into an "immigration question," thus translating racism into a problem of liberal state-building, while erasing and bifurcating its imperial roots.

Sociology Hesitant: Exploring the Methodological Implications of Contemporary Du Boisian Sociology

Contemporary U.S. sociology is undergoing a long delayed but welcome Du Boisian transformation. Sparked by several recent works—most importantly Aldon Morris' (2015) *The Scholar Denied*—a slate of sociologists have begun to recover Du Bois from the margins of disciplinary history and have worked on articulating the theoretical foundations for contemporary sociology. While U.S. sociology has largely modeled itself in the image of the Chicago School, recent scholarly interventions have made clear that Du Bois' work presents a path not taken. If Chicago sociologists constructed marginalized and oppressed groups as "problem peoples," Du Bois' sociology begins with the question: "How does it feel to be a problem?" As Du Bois himself moved towards global frameworks, this presentation situates Du Bois' work as an entry point to articulate a sociology based on second sight, the knowledge generated from the lived experiences of marginalized and oppressed groups. Yet, while contemporary Du Boisian sociologists have largely focused on Du Bois' theoretical innovations, this presentation reflects on the methodological implications of this development. What do research ethics and data collection look like from a Du Boisian perspective? How might Du Boisian sociology generate a more accountable, relevant, and emancipatory sociological project? With such questions in mind, we reflect on the joint production of an edited volume, which brings together contemporary Du Boisian sociologists across the US, who challenge dominant methodological approaches. We discuss the significance of Du Bois' changing stance on science and politics, and the role of ethics in sociological methodologies and research practices.

How Chatgpt Is Just a New Tool for Old Practices: The Democratization of Learning and Cheating Practices Among University Students through AI Chatbots

The advent of Artificial Intelligence (AI) chatbots such as ChatGPT has caused widespread upheaval in the higher education sector. University students can use these chatbots for refining their writing, finding literature, obtaining feedback, brainstorming topics, and producing text. The growing use of such tools in higher education has sparked much debate about the opportunities and challenges they present. A significant concern has been how AI chatbots can be utilized to cheat in assignments, exams, etc.

One core assumption underlying the debate is that AI chatbots have indeed yielded completely novel possibilities of learning and cheating. We challenge this assumption. Drawing on a dataset of focus group interviews with 61 university students we outline students' different practices of AI chatbot usage including different forms of cheating. For each of these practices we discuss to what degree they mirror or differ from practices that already existed before the introduction of AI chatbots.

We will show that none of the possibilities that AI chatbots offer – be it as learning and writing support, as a tutor, or for cheating – is indeed novel. Every type of learning, writing or cheating practice that involve AI chatbots, has existed before. However, in the past, many possibilities of supporting learning and writing, and of cheating (e.g., ghostwriting) were only available to highly privileged students possessing sufficient amounts of capital to leverage such possibilities. In this respect, AI chatbots have merely brought a democratization of options.

We conclude that widespread concerns about potentials for academic dishonesty cannot be explained by the alleged novelty of possibilities that AI chatbots offer. Instead, the democratization of means to successfully cheat appear to be the cause of the widespread concerns. Thus, these widespread concerns revolving around cheating with AI chatbots exhibit the underlying structural discriminations of underprivileged students with limited capital.

Experiences of Discrimination and Their Consequences for Well-Being

Enhancing empathy and social love among citizens requires eliminating discrimination. Experiences of discrimination leaves long-lasting damages on the victim's self-esteem and their well-being. I explore the consequences of discrimination experiences on well-beings of the discriminated analyzing the survey data of South Korea between 2022 and 2024. Using information on whether the respondent have experiences discrimination, what are the reasons for discrimination, and how they reacted to discrimination, I show variances in the way discrimination experiences negatively influence well-beings of the discriminated. To promote empathy and social love, I suggest ways to deal with the negative impact of discrimination on well-being of people.

WG08-904.3HAN, MARY* (Hong Kong Baptist University, Hong Kong)
PATULNY, ROGER* (Hong Kong Baptist University, Australia)*Misandry and the Ontology of Hatred: Voices from Chinese Cyberspace*

The issue of misandry is particularly prevalent in the Chinese cyberspace, where male-hating discourses have gained prominence due to strict regulation of offline feminist activities. Present conceptions of misandry, alongside misogyny, have significant theoretical shortcomings. Research on gender-based hatred has historically focused more on misogyny than misandry. This imbalance stems from the politicization of misogyny, which is often conflated with patriarchal control -- rendering the corresponding females' hatred towards men invisible. This conflation has resulted in a binary *pro-feminism* vs. *anti-feminism*, oversimplifying the complexity of both feminine and masculine emotional styles. Studies have also not adequately examined how different types of masculinities/femininities influence gender-based hatred. Women's misandrist hatred may well be directed towards perceived 'hegemonic masculine' attitudes and behaviors, rather than towards 'inclusive masculinity', or men and masculinity in general.

We argue there is an insufficient understanding of the ontology of hatred in relevant literature. Combining emotion-based theories, we propose a conception of hatred-particularly inter-gender group hatred as an affective intentional quality. Hatred emerges from complex amalgam of emotions (e.g., anger, contempt) that manifest in attitudes containing one or more of the following orientations: 1) maintaining "permanent othering"; 2) annihilating the target; 3) passive rebellion to reclaim (limited) power, and 4) correcting unwanted behaviors to put the object of hatred 'back in its place'. We exemplify these dynamics through misandry discourses in Chinese cyberspace and argue for a key distinction is that the former three are demonstrable in clear 'us vs. them' situations (e.g. antisemitism), while the 'corrective' dynamic reflects hatred in gender relations where "fibrous" interconnections between men and women serve neither to separate nor unite them, but to tie them 'apart-together', hierarchically. This research finally aims to explore how women's online expressions of hatred foster affective solidarity and feminism and envisions equitable gender relations and desirable masculinity.

RC04-68.3HAN, SIQI* (The Chinese University of Hong Kong, Hong Kong)
LI, YUE (The Chinese University of Hong Kong, Hong Kong)*The Gap between Interdisciplinary Teaching and Interdisciplinary Research and Its Consequences on the Earnings Inequality across American Universities*

Interdisciplinarity is highly advocated in higher education today. However, empirical evidence on the benefits of interdisciplinarity is restricted to learning outcomes during college rather than post-graduation outcomes. Some even argue that it has no positive effect on earnings returns because it does not solve practical problems in the labor market. We question this argument by clarifying two different mechanisms through which interdisciplinarity benefits students. Students could gain better knowledge and skills through *interdisciplinary teaching* (IDT) and improve their earnings returns in the labor market. Or, they could benefit from attending schools that primarily pursue *interdisciplinary research* (IDR) - such schools tend to have higher institutional prestige, which confer students higher economic returns to their degrees without necessarily or directly increasing their practical skills. Assisted by natural language processing techniques, we use two big textual databases to

quantitatively measure IDT and IDR in the same methodological framework. We then look at how the two types of interdisciplinarity matter for economic returns to college degrees. We find that the level of our numeric indices for IDT and IDR may not always align at the same institution; IDT has a larger earnings premium for students' future earnings than IDR does; earnings returns to IDT are higher for institutions with larger enrollment sizes where the current IDT is low. These findings suggest a horizontal stratification based on IDT and IDR, highlighting the risks for institutions with a gap between the levels of interdisciplinary research and interdisciplinary teaching.

HAN HAN, CORAL YU* (University of Surrey, United Kingdom)

Food Waste Reduction through Consumers' Agency and Material Interventions: A Case Study of Middle-Class Consumers in Kunming, China

This project examines the sociological dimensions of food waste at the consumption stage, focusing on Kunming, a mid-sized, multi-ethnic city in Southwest China. Conducted over a 9-month multi-sited ethnography at various food consumption sites and through in-situ interviews with 44 participants from 29 middle-class households, this research explores how Kunming consumers navigate sustainable food practices. Drawing on sociological frameworks such as gender and intersectionality (Collins & Bilge, 2020), actor-network theory (Callon, 1999; Latour, 2007), and social practice theory which recognizes the impacts of material entities (Shove et al., 2012), the study investigates how intersecting social identities, non-human mediators, and alternative foodways shape sustainable consumption and contribute to food waste prevention.

To be specific, Kunming participants were influenced by both physical and virtual artifacts in their food consumption environments, such as the "empty-plate" advocacy in workplace canteens and the "no-utensils" options on Chinese takeaway platforms. However, the effectiveness of these environmental interventions depended on both their implementation and consumer engagement. Additionally, consumers' agency played a significant role in reducing food waste. Female ethnic minority participants, for example, employed the indigenous marinating techniques to preserve food and extend its shelf life. Meanwhile, younger professionals turned to digital platforms like Douyin (the Chinese version of TikTok) to source cross-regional foods, such as salmon from Xinjiang salt water, which they perceived as safer and less polluted than local options, helping to prevent food waste driven by safety concerns. This research provides valuable insights into how diverse social identities and contemporary artifacts contribute to sustainable food consumption and food waste reduction in an urban, multi-ethnic context.

RC47-JS-38.1

HANAFI, SARI* (American University of Beirut, Lebanon)

Academic Freedom Under Fire As Gaza Burns

During the war on Gaza, we witness Western genocide-enabling silence, not only at the political level but also among the large sector of media and academia. The refusal of Western governments to call for a ceasefire is making them accomplices to crimes against humanity. We can roughly speak of a division within the international community: the Global North — heavily dominated by the Israeli lobby — has mostly sided with the Israeli regime's ethnic cleansing of the Palestinian people (with some exceptions) while the Global South (also with some exceptions) in favor of permanent ceasefire and a peace process.

In this talk, I will advance four factors that can explain the Western genocidal Israeli position, namely, the memory of the Holocaust between sincerity and certain instrumentalization and guilt-washing; the idea that Israel as a secular state that can do no wrong; Islamophobia and the image of Hamas, seen only through its religious agenda and not national liberation one; and Euro-American colonial legacy.

RC05-69.1

HANAFI, SARI* (American University of Beirut, Lebanon)

War on Gaza: Genocide in the Times of the Anthropocene

The scale of bombs Israel has dropped on the Gaza Strip since the start of its large-scale war on 7 October 2023 is the equivalent of 15 nuclear bombs (30,000 tons of explosives per day). I will argue in this talk that the war on Gaza is a continuation of the Israeli colonial project in the Occupied Palestinian territories in which there is a passage from spacio-cide (targeting land for the purpose of rendering it unlivable to foster the inevitable 'voluntary' transfer

of the Palestinian population) to genocide. This genocide has a huge impact on destruction not only to humans but also to the environment. I will extend the notion of Anthropocene, unprecedented to go beyond global warming and climate change to think how this has been carried out not only by capitalism (Jason Moore's concept of capitalocene) but also by colonial power (Colonialocene).

RC39-637.5

HANAMURE, YUTA* (Graduate School of Law, Keio University, Japan)

Memories of Communities Remembered By Cultural Property and Heritage in the Damaged Museum

On March 11, 2011, the Great East Japan Earthquake struck, leading to a tsunami and a nuclear disaster in the Tohoku region of Japan. In Tomioka Town, home to a nuclear power plant, all residents were forced to evacuate until 2017. During this evacuation, people lost land, customs, and memories that form the foundation for inheriting the region's cultural heritage. Additionally, political issues surrounding polluted land and the complicated relationship with the power company divided the community.

The Tomioka Archive Museum, which opened in 2021, categorizes its exhibits into two types. The properties that signify the disaster are referred to as "disaster heritage," while those that help future residents understand the community are called "local materials." This research aims to clarify how residents create narratives by viewing the cultural properties and heritage displayed at the museum and how the museum serves as a space for reconstructing and inheriting shared memories.

Walter Benjamin, in his *On the Concept of History*, expressed that constructing history by oppressed local people is described as "to blush history against the grain." Through this investigation, three main points were revealed. First, clarifying the subject of the text in museum displays and incorporating residents' narratives helps avoid alienating visitors with differing opinions. Second, the museum encourages residents to empathize with the displays about "disaster heritage," which evoke painful memories. Third, as disaster recovery progresses, the emergence of properties that can be classified as both "disaster heritage" and "local materials" reflects changing perspectives over time and offers diverse viewpoints on these properties.

In this way, I clarified how the museum's displays enable residents to recall memories that are difficult to narrate regarding the disaster, empowering each individual to connect with their history in their own way. The museum enables people to 'blush history against the grain' through heritage.

HANANE, ALLIOUI* (Sociology, Morocco)

Study of the Construction of Norms Via the Nawāzil of Drugs in Morocco Since Medieval Period.

Drugs are not a recent problem in Morocco. Since the Islamization of the latter, this problem has floated on the Moroccan societal scene where political power and religious power come into line in periods and remain silent in others. To dissect when and how these two powers dealt with the social problems linked to drugs and to highlight their attitudes towards the social practices envisaged in the Moroccan context for centuries, we will use nawāzil, plural of nazila (specific case); it is a branch of fiqh in Islam that belongs to a literary tradition of jurisprudential collections (fatāwās). The nawāzil contain legal provisions relating to new emerging facts, in which there is no direct legal or jurisprudential text or previous interpretation to which they can be applied. The corpora of the nawāzil are normative texts, they belong to the science of law in Islam (the shari'ā). For more understanding, we will shed light on the construction of drugs' norms in Morocco depending on a historization of these norms so as to move from a normative culturalism to an anthropological normative fact. On the one hand, we will adopt historical anthropology as an approach to raise the socio-economic facts and politico-religious acts relating to drugs in Morocco since medieval period, aiming to disclose the structure of Moroccan society in relation to drugs, and on the other hand, we will discover how the norms relating to drugs were constructed.

Developing Digital Mental Health Tools: Examining the Ways That Digital Mental Health Tools Are Produced across Australia and the Philippines

Digital mental health has emerged as a contemporary site for the provision of mental health services, support and stigma reduction. Situated within the emergence of broader global digital health tools, digital mental health promises decreased costs of implementation, reduced barriers to access and ease of navigation of existing complex systems. Yet such promises often obscure the ways that such tools emerge, their logics and the actors involved in their emergence. This work-in-progress paper interrogates and examines the emergence of digital mental health tools across two contexts: Australia and the Philippines. Drawing on interviews with practitioners, designers and policymakers involved in digital mental health we examine how digital mental health tools are narrativized and (re)produce health in practice. Our findings highlight how tools are developed in a field constituted by new(er) actors, including commercial organisations, accrediting bodies, software developers, clinicians, citizens and the state. The technologies themselves respond to varied stakeholder needs, offering support to pathways into care. Users, both people with mental illness and clinicians, are offered a variety of supports to situate and support their needs and engage in forms of care. The findings also point to the ways that key tensions sit between concerns about privacy, data and evidence, and how these interface with plans to provide tailored and personalised care. Further, digital mental health, as our findings show, has multiple, often competing temporal and contextual demands, for example, from being both general to contextual, and being both responsive and slow. We argue that digital health cultures and digital tech cultures entangle, and produce versions of health in dynamic and ongoing ways. We consider the implications of these entanglements for making sense of the production of digital mental health.

HANKAQUI, YANIS* (Futur Combat Command - French Ground Forces, France)

The Effects of the Digitization of Operational Functions in Professional Military Education: The Organizational Challenge of Competency Management in French Infantry Units

This communication examines the impact of battlefield digitization on the increasing technical complexity of military professions, particularly in French infantry units. It focuses on how the integration of digital technologies into the operational functions of the French Army has reshaped the roles and competencies required for soldiers, especially officers and non-commissioned officers (NCOs). This evolution also contributes to transforming **Professional Military Education**, by introducing new demands for technical skills necessary to master digital tools.

The communication is based on a sociological study titled "**Information and Communication Technologies and Command**," conducted through semi-structured interviews with 12 French infantry officers who served during the introduction of the first information systems. It also draws from the findings of a PhD dissertation in the sociology of organizations and military labor, which combines interviews with ethnographic immersion. The results highlight the organizational challenges created by this technological evolution, particularly in managing competencies within infantry regiments. As digital systems become increasingly central to military operations, training programs must adapt to ensure that soldiers at all levels are proficient in both traditional combat skills and new digital tools.

From the case of the French armed forces, we will see that the digital transformation has led to a complexity in **Professional Military Education (PME)**, which now needs to integrate digital skills while maintaining fundamental combat capabilities in the face of potential system failures. This results in a tension in military training due to the overlapping of competencies.

In conclusion, the research underscores the growing need for advanced technical skills and highlights the organizational challenges involved in continually updating and managing these competencies within an evolving digital battlefield environment.

RC17-JS-47.4

HANKAOU, YANIS* (Futur Combat Command - French Ground Forces, France)

The French Ground Forces on the Frontlines of the Digital Revolution: Understanding the Technological Transformation of Command at the Intersection of Professional Identity, Organization, and Activity through the Case of Junior Infantry Officers.

The digitalization of combat activity represents a crucial transformation for Western armies since the 1990s, integrating digital technologies into military operations, particularly through operational information and communication systems (SIOC). These technologies facilitate localization, communication, and information sharing across various military hierarchies, promising a rationalization of combat practices. However, this digitization raises concerns about the autonomy of officers and an increased dependence on digital systems, which may limit their capacity for action in the event of a failure.

An analysis of junior infantry officers, based on interviews conducted between 2022 and 2023 at the École Militaire de Paris, reveals that the introduction of SIOC has reconfigured command practices and the organization of regiments (Professional Military Education, competencies management, etc.). Although these tools are intended to rationalize work, they encounter organizational constraints and the professional identity of officers, which relies on the embodiment of charismatic authority. This authority manifests through verbal communication, which is essential for establishing connections with subordinates, even in the presence of digital technologies.

Bruno Latour, in *Science in Action*, emphasizes that the effectiveness of a technology depends on its use and the actors' appropriation. Officers prioritize tools that encourage direct communication, such as radios, to morally influence their men and gather information on the ground. Thus, the NEB should not be viewed as a revolution disrupting military practices but rather as a complement to existing methods, illustrating how technical changes must navigate the constraints of activity, organization, and professional identity.

Our objective will be to demonstrate that the management of technological change is contingent upon organizational factors, professional identity, and the contingencies of activity, as evidenced by the case of the digitization of land forces.

HANNES, KARIN* (KU Leuven, Belgium)

Co-Designing Futures - Processes and Practices of Thinking-with and Making-with a Multiplicity of Agents

What do short term living lab experiences have to offer in stimulating relational creativity toward multispecies speculations? In this paper we present an innovative theoretical-methodological approach that merges living lab methodology with futures studies techniques to help us rethink our position as humans within the ecological system and develop a sense of understanding about how to best use the power of nature to respond to the challenges of our time. Our Living Lab approach consisted of four phases: (a) problematizing and exploring new approaches to relate to other-than humans; (b) co-researching and designing multispecies pathways; (c) evaluating the consequences of these new pathways; (d) sharing and discussing alternative possibilities through social fiction writing. We initially piloted the method between the safe walls of the university with a bunch of scholars of the antropocene. Three of us took the experiment beyond these walls by means of a voluntary lock down in a 24-hectare art park under severe pandemic conditions. The park was approximately 60 km from the university and presented itself as a protected paradise that offered us three large knowledge containers. Our involvement in this experiment of thinking outside the box from within a container box, while at the same time residing in the fertile frontier between wilderness and civilisation, was at first an act of academic disobedience. It was based on our assumption that to be able to re-imagine a social reality differently (with inclusion of how to relate to something relatively small and invisible like a virus) one needs to be able to collectively experience some of the potential future scenario's first hand. It raised awareness about the sort of human we were capable of becoming in an ecosystem where different species compete for space.

RC33-546.1

HANNES, KARIN* (KU Leuven, Belgium)

Translating Complex Social Theories into a Tangible Design - Bringing Barad, Braidotti and Bennett's Post-Humanism to Life

The content of books from recognized philosophers and sociologists has been a cornerstone in the education of many generations of graduated academics. However, the influence of books in the curriculum is declining, often in favor of articles providing students with a more condensed but also a more fragmented exposure to theoretical content. In addition, it has become more difficult to motivate students to read. We asked multiple cohorts of bachelor and master students to engage with an original work of feminist scholars Karen Barad, Jane Bennett and Rosi Braidotti and translate their complex theories into a 2 or 3-dimensional creative art work. Our aim was to increase students' sensitivity for contemporary feminist theories in the new materialist and post-human tradition, while simultaneously challenging the standard academic conventions in discussing and disseminating scholarly insights. In this paper we will theoretically situate student's initial resistance to the assignment, describe how this affected us as teachers and explain how we gradually moved forward with the course component to encourage pro-active learning. Our findings are empirically grounded in observations of groups of students who took the course and our own auto-ethnographic experience of being criticized and reactivated into the creation of learning bridges. We identified six of those bridges that were gradually embedded in the course module over time: non-linear reading, concept maps, exemplification, icebreakers, spatialisation of theory and connecting the creative design work with the idea of a social phenomenon or movement. In doing so we shaped our educational trajectory in a way that did justice to the concept matter-meaning making addressed in the books from the new-materialist feminist authors we asked the students to read.

HAO, PU* (Hong Kong Baptist University, Hong Kong)

Migrant Entrepreneurship and Enclave Economies in Urban China

This paper explores migrant entrepreneurship and the development of enclave economies in urban China. As China rapidly urbanizes, millions of rural migrants move to cities seeking better economic opportunities but face significant barriers, such as limited access to formal employment, social services, and integration into urban society. In response, many turn to entrepreneurship, creating vibrant enclave economies that serve both migrant and broader urban populations.

The study employs a mixed-methods approach, combining quantitative data analysis with qualitative fieldwork in migrant enclaves in Guangzhou and Shenzhen. It examines the types of businesses migrants establish, the factors driving entrepreneurial activity, and the economic and social impacts of these businesses on migrant communities and the urban economy. Key factors influencing migrant entrepreneurship include access to financial resources, social networks, the regulatory environment, and new market opportunities from the platform economy.

Findings reveal that migrant entrepreneurs often leverage their unique social capital to create niche markets, such as kitchens and warehouses for delivery platforms and online stores. These enclave economies provide essential goods and services, create employment opportunities, and foster a sense of community among migrants. However, the study also highlights challenges such as limited business scalability, competition with local entrepreneurs, and vulnerabilities to economic fluctuations and regulatory changes, especially amid the Covid-19 pandemic.

The paper argues that migrant entrepreneurship is crucial for the economic integration of migrants and the dynamism of urban economies in China. It calls for policies that support migrant entrepreneurs through improved access to finance, training programs, and more inclusive regulatory frameworks. By fostering a supportive environment for migrant entrepreneurship, urban societies can harness the full potential of their migrant population, promoting more inclusive and more just economic growth.

RC30-486.2

HAO, PU* (Hong Kong Baptist University, Hong Kong)

Mobility of Female Workers on Gender-Agnostic Gig Platforms in China

Mobility, defined as the ability to move between locations, is a means of accessing opportunities but is not gender-neutral. Globally, women often experience more limited mobility, undertaking shorter journeys and relying more on pedestrian and public transportation. Constraints in gendered mobility, including temporal, spatial, and social aspects, are prevalent due

to societal norms and regulations. This has traditionally resulted in men dominating mobility-intensive professions like drivers and couriers. However, the past decade has seen a significant increase in female participation in these sectors, driven by gig platforms for ride-sharing and food delivery services. Research on gender in sociology and labor studies has yet to fully explore platform-based gig work.

Despite safety concerns and societal norms, gig platforms offer women unrestricted employment access, appealing due to their perceived inclusivity and flexibility. However, these platforms often perpetuate gender biases through dispatching and ranking mechanisms that favor traditionally masculine traits, leading to gender pay gaps and increased health and safety risks for women. This highlights the complex interplay between gender-agnostic algorithmic control and gendered work experiences.

This paper uses mixed methods to investigate the experiences of female gig workers in three large cities in China. It aims to understand how these workers access gig opportunities while navigating migration, family dynamics, daily spatial practices, and balancing gig work with domestic responsibilities. In China's patriarchal context and the absence of regulatory oversight over gig platforms, the analysis reveals that female gig workers experience marginalization from mobility, in mobility, and by mobility under stringent algorithmic control. The findings contribute to gender-conscious approaches in gig platform design and regulation, with the potential to mitigate bias, address harassment, enhance safety measures, and reduce other adverse social consequences that disproportionately affect women in the gig economy.

HAQUE, EVE* (York University, Canada)

The Language of Citizenship: Canada's Language Proficiency Requirements for Citizenship

The history of Canada is one of immigration and settlement and therefore Canada continues to maintain one of the world's highest formal immigration rates. However, immigration to Canada is a program that is built on white settler colonialism that dispossessed the Indigenous peoples of the land that is now known as Canada and for decades the Canadian state has also had explicitly racist and gendered exclusionary immigration policies. Although Canada has moved away from immigration policies that are explicitly exclusionary on the basis of race since the 1970s, as many scholars have shown (Abu-Laban, 1998; Preston, Kim, Hudyma, Mandell, Luxton & Hemphill, 2013), the state has instituted other covert and proxy forms of maintaining gendered and racial preferences for immigration.

In this exploratory paper, I want to argue that official language proficiency in either English or French (the two official languages of Canada) is used by the Canadian state as one of these proxy technologies for constituting and maintaining hierarchies of gender and racial preferences in immigration policy. This builds on earlier work I have done on immigrant language training programs for newcomers to Canada (Haque, 2014; Haque, 2014; Haque & Valeo, 2017). For my data, I draw on observational and interview data from several adult citizenship immigration classes offered to newcomers to Canada in Toronto; Canada's largest immigrant receiving city. These are preparatory language classes that serve a dual purpose in that the course content is meant to prepare the learners for the Canadian citizenship test and passing the course means obtaining the Canadian Language Benchmark 4 level which is a requirement for the Canadian citizenship application. The struggles and barriers that newcomers encounter in these seemingly race neutral citizenship requirements in fact reveal the continued gendered and racial preferences of Canadian immigration policy.

HAQUE, MD AMINUL* (University of Dhaka, Bangladesh)
AFRIN, SADIYA (Department of Population Sciences,
Bangladesh)

Assessment of the Determinants of Active Aging Situation in Bangladesh

Background: The older population is growing first in Bangladesh; however, the determinants of Active Aging (AA) are poorly known. Objectives: The study aimed to assess the determinants influencing AA in Bangladesh. Methods: A cross-sectional study was conducted among 518 older adults aged 60 and over. Following the WHO AAI model, socio-demographic, personal, behavioral, and physical environment, and health and social services characteristics of the respondents, have been collected using a semi-structured questionnaire to know the significant determinants of AA in Bangladesh. In addition, 11 KIIs were conducted among experts and policymakers to learn more about the AAI situation. Both bivariate and multivariate levels of analysis were performed to analyze the quantitative data, and thematic analysis was done for qualitative data. Results: The AAI for males was higher (0.64) than

for females (0.53). Among the 22 determinants, age, place of residence, religion, income, decision-making capacity, adequate sleep, avoidance of smokeless tobacco intake, television watching as a leisure activity, and use of medicine (10 determinants) significantly influenced AAI. However, the active participation of the respondents in each of the determinants could have been higher. The AAI was 10-15 % higher among the respondents who actively complied with the above determinants daily. The qualitative data shows that the determinants of AAI were deeply rooted in the country's socio-cultural, economic, and spatial conditions. More policy documents need to be made regarding the importance of the determinants of AA to improve overall AAI. Conclusion: Effective initiatives are required to enhance AAI's socio-cultural, economic, and health system-related determinants to improve moderate to high AAI. Relevant ministries and departments should take measures to increase awareness and participation of people in the lifestyle-related determinants of AAI. This result will help policymakers from concerned ministries, departments, and development partners take determinant-specific initiatives to improve the country's AAI situation.

FOLDES, IONUT* (Universitatea Babes-Bolyai, Romania)

Intergenerational Care Challenges in Romania: Assessing Senior Citizens' Access to Care amid Migration and Service Gaps

In Romania, support for senior citizens is predominantly based on a familism-by-default approach to intergenerational responsibility, placing the majority of caregiving duties on families rather than the state. Governmental funding for financial assistance or institutionalized public support for family care is largely lacking, and cultural norms strongly expect adult children to care for their aging parents. Over the past two decades, mass migration has resulted in a significant reduction in available caregivers, impacting multiple generations. Additionally, the country's market-based and formal care services remain underdeveloped and insufficient, with notable regional disparities—rural areas, in particular, are lagging behind. In this context, older adults with health issues and functional limitations often encounter a reorganization of intergenerational care strategies, which may result in some of their care needs being unmet. The gap between the care seniors require and the care they actually receive can adversely affect their health and well-being.

Utilizing recent data from a 2024 national survey of 900 individuals aged 65 and over, this analysis assesses the care resources available to seniors and compares them against their care needs. It examines how various care sources—familial, market-based, and formal services—are integrated. The study identifies which seniors are better equipped with care agency and resources and who is more likely to experience unmet needs. Building on previous findings, it is anticipated that seniors with severe functional limitations, those living alone, and individuals in poorer regions (where emigration has been most pronounced and market or formal services are least accessible) are the most vulnerable and likely to encounter gaps in care resources.

ALVES, PATRICIA (University of Technology Sydney,
Australia)

Young People, Algorithmic Resistance and 'Doing Nothing' As Slow Digital Citizenship

Traditional conceptualisations of youth citizenship prioritise public expressions and acts, and doing nothing is associated with disengagement, passivity and civic deficit. Digital citizenship is no exception; with the measure of good digital citizenship being the ability to actively participate in society and have one's voice heard online. Young people are often celebrated as those most able to enact digital citizenship through digital competencies, visibility online, and acts of advocacy and activism in online publics. However, more recently, discussions in this field have moved away from how digital technologies are enhancing youth civic participation to a focus on how individual and collective agency is undermined by platform business models and technical design, which is directed toward "systematic collection and processing of massive amounts of data generated through the traces we leave behind" (Hintz et al, 2019:1). In platform societies, civic and political expression is often algorithmically channelled, instant, public, emotive and susceptible to error. Moreover, platform societies reward immediacy, speed, action and reaction to feed the algorithm, thereby aligning with new accelerated generational temporalities. In this paper we consider how young people who

are highly aware of and concerned about social and political issues engage in digital practices of 'doing nothing', such as refusing to comment or share, as a critical and mindful civic response to platform societies. Drawing on a study of digital citizenship amongst Australian youth, we demonstrate how young people are engaged in different purposeful practices of algorithmic resistance that look like 'doing nothing' but in fact constitute forms of what we conceptualise as 'slow' digital citizenship. We seek to understand how young people enact 'slow' everyday digital practices to navigate platform societies which demand a certain speed of engagement, rob them of attention and compromise their ability to think freely and critically.

Internal Knowledge Transfer in German Higher Education Institutions: Insights from a Mixed-Methods Approach (BMBF Project AGICA)

Higher education institutions (HEIs) are global generators of knowledge that are structured around four main pillars: research, teaching, administration and the third mission e.g. knowledge transfer. All offer different areas of expertise and have different roles, but they are interrelated as numerous HE-internal processes involve all pillars. In order for an HEI to function most effectively in relation to its organisational development, we suggest that HEIs should utilize unused potential of their own internal expertise through reciprocal, recursive transfer of knowledge between all pillars.

In the German BMBF-funded research project AGICA (Agile Campus. University-internal knowledge transfer between science and administration) we ask how knowledge transfer between different pillars is being used with a view to supporting organisational development.

Following 26 exploratory qualitative interviews at three HEIs in one of Germany's 16 federal states, an online survey was conducted in spring 2024 with 1,020 participants, followed by additional interviews with leaders in different areas. Results suggest that researchers mainly exchange knowledge with decentralised university administration with less knowledge transfer to central university administration. The role of so-called HE managers is also analysed. Here, results suggest the potential of university management for greater knowledge transfer.

The AGICA project has also investigated whether innovation labs as separate structures can promote the recursive transfer of knowledge within an HEI. Two interviews with lab leaders and results of a nationwide survey of 12 former project coordinators of innovation labs in 2023 are presented, suggesting that the mandate of the university management and a positive leadership are important for effective internal knowledge transfer. To summarise: we present results of how and whether the gap of knowledge transfer between research and other pillars is bridged in the context of German HEIs.

Current and Future Configurations of Labor and Power for Ethics Workers in Tech

In examining the relationship between technological design and power in the workplace, no context is perhaps more important than the tech industry itself, whose products already impact almost all industries even before the current race to monetize AI. This paper explores labor and power in the context of recent changes in tech companies - specifically recent trends to create new jobs and structures that integrate ethical concerns into their tech development processes and products. Our data come from an NSF-sponsored project that collected a set of 30 semi-structured interviews with hiring

managers who were looking to fill what we refer to as 'ethical tech' jobs (ethics related roles like ethical hacker or director of responsible AI), and 'tech critics,' a category that includes people who used to work in the tech industry and specifically in roles related to ethics or responsibility. Our analysis examines how configurations of organizational structures, culture, and leadership can limit the power of those working in roles relating to ethics. Our findings show workers are often limited in their ability to make meaningful assertions about product designs that might minimize unintended consequences and provide broader benefits for users because of their positionality—both in terms of identity and hierarchical location in the organization. Respondents illuminate how interdisciplinary education opportunities provide future ethical tech workers with transferable skills that might help them overcome challenges, while bringing a diversity and justice lens to R&D. We conclude by discussing policy implications for AI and tech work, as well as suggestions for educators to best prepare students for ethical tech positions.

Sharing Domesticity: What Can Online Rental Listing Texts Reveal about Homemaking Among Strangers?

Long-term home sharing now happens across longer periods, among wider demographics, in more and more cities and in a growing diversity of settings. Yet, we know relatively little about what kind of housing shared renting delivers. Sharing may happen by choice or by necessity but we know little about *how* tenants make home with strangers. This study leverages artificial intelligence and natural language processing tools to ask: What does the language of shared rental listing texts reveal about homemaking in shared rental housing? We draw on thousands of online listings for shared units in Los Angeles, California. We train a deep learning BERT model and analyze listing texts for verbal cues on the envisioned sharing relationship. For a subset of listings, we conduct qualitative thematic content coding for a deeper qualitative exploration. We find that language reliably distinguishes home sharing relationships focused on cost from those focused on building a congenial sharing environment. Texts signaling a transactional focus contain fewer personal details, use short sentences, and often signal a desire for minimal interaction. Those with a social orientation, on the other hand, tend to share more personal descriptors as well as subtle cues suggesting what types of applicants are welcome or unwelcome. Whereas transactionally-oriented listings talk about "tenants" rather than "roommates," and describe "access" to different parts of the unit, socially-oriented listings call the unit a "home" and use evocative language to paint a mental image of it. Our results contribute to the nascent literature on the new sociogeographies of home. Understanding how shared unit tenants make home informs theorizing domesticity as it is evolving alongside changing housing strategies in traditional homeowner societies of the Global North.

Global Conflicts and Food Security: Bridging the Gendered Divides through Innovative Technologies

Around 795 million individuals, including approximately one-ninth of the global population, experience undernourishment. This sickness is prevalent in less developed countries and isolated areas. The rapid development and progression of emerging technology can efficiently address the four components of food security. The large-scale, mostly male outmigration has caused a shift in the agriculture sector. On the one hand, the gendered nature of agricultural work might result from replacing the migrant members' previous tasks with those in the household who remain primarily female and have children. Food (in)security and migration have many components, and migration offers opportunities and concerns for food security. For nations to grow more robust regarding food security, hunger, and management of water resources, gender-sensitive design is essential. Also, the application of genetic modification, methods for improving soil fertility, and modern irrigation technology might significantly increase the availability of food. Employing post-harvest and agro-processing technology can enhance the accessibility of food.

In this particular situation, a viable option is to provide technical support to female farmers engaged in sustainable agriculture by promoting affordable and readily accessible technologies, with tailored training initiatives. The strategy emphasizes the significance of optimizing resource allocation and diversifying the variety of crops grown, which can help women reduce risks and improve household nutrition. Within the realm of international development

efforts centered around agriculture, known as Agriculture for Development (A4D), there is an increasing recognition that attaining sustainable agriculture requires tackling gender-influenced power dynamics. The historical presence of gender inequality has impeded the progress of creating food systems that are both inclusive and sustainable. This challenge endures in the current era. Concurrently, gender is gaining increasing visibility and being actively debated in connection with A4D.

HASE UETA, MARIANA* (Wageningen University & Research, Netherlands)

Temporalities, (Dis)Entanglements, and Technology Innovation in the Transformation of the Farmer's Identity

Dairy farming in the Netherlands is not only an important sector of the economy, but also an identity linked to national pride. However, the recent environmental policies have been creating a sense of instability and insecurity among this group, which reacted with heavily disruptive protests. In the effort to respond to the changing demands, many farmers have been adopting technologies that change how their work is done, the relationships constructed between different subjects on the farm, transforming the assemblage that constitutes their identity, and ultimately inaugurating new temporalities of food production.

In this article, identity is discussed as a changing constellation in the context of technological change. I argue that this identity constellation is an assemblage of human and non-human entanglements, that dictate different kinds of temporalities in the farm. The group of dairy farmers in the Netherlands who were interviewed in 2023 showed great openness and willingness to adopt new technologies to assist their work. However, the degree of openness varied according to how this technology challenged their previous identity assemblage structure.

This process had, as a result, a changing perception about what it means to be a farmer and what they would be willing to change. The development of a specific technology, Precision Fermentation, that aims to sustainably produce a product similar to milk without the need for the cows or their expertise as farmers, also puts their perceptions in question. The development and introduction of novel technologies inaugurate new possibilities for sustainable dairy production and present new challenges to the actors in the conventional industry. I ask how much can the assemblage of dairy farmer identity change while still being considered dairy farmer? These assemblages will not only impact their own identities, but inaugurate new temporalities of food production.

Greenwashing Vs. Local Climate and Sustainable Integrity: In the Case of the 2011 Tsunami Reconstruction Projects

Greenwashing vs. local climate and sustainable integrity focuses on the conflicts related to the national government's planning reconstruction projects in the tsunami-dictated areas in Japan. On May 10, 2011, two months after the Great East Japan Earthquake, the government's "the Great East Japan Earthquake Reconstruction Planning Council" announced "the Seven Principles for Reconstruction Planning" under the slogan of "the creative recovery." Principle 2 states that the basic principle is community-based reconstruction. Principle 4 states that renewable energy for local climate protection will promote the construction of regions. However, Higashimatsushima City is the only disaster-stricken area in Miyagi Prefecture that promotes the utilization of solar energy. All seven principles of recovery seem to have been empty, especially the "community-based reconstruction," such as greenwashing.

Overall, the national government and the prefecture have led the reconstruction process, which included the construction of giant sea walls and rising roads, relocation to higher ground, group-relocation promotion projects, and land readjustment projects. The reconstruction was dependent on large public works projects by major construction companies. The scope of municipalities' initiatives could have been more extensive. These principles did not include the words and phrases of affected citizens or sufferers. Their points of view are responsible for keeping real, local, sustainable integrity.

Principle 5 strangely stresses aiming for simultaneous recovery from the great earthquake and revitalizing the Japanese economy. It seems unclear why recovering the affected local area can promote the revitalization of the macroeconomy of the whole of Japan and vice versa. As it turned out, this principle triggered the use of the reconstruction budget for other purposes in non-disaster-affected areas. The slogan "the creative recovery" has functioned as a magical phrase and a kind of greenwashing to use the reconstruction budget arbitrarily.

HASEGAWA, KOICHI* (Shokei Gakuin University, Japan)

The Fukushima Nuclear Accident: The Human Accident By Ineffectiveness of Safety Regulation

After the 2011 Fukushima nuclear accident, in eastern part of Japan, not only evacuees but also all Japanese people faced risks of exposure to radiation. People got furious at, distrusted of, and disappointed at the national government, Tokyo Electric Power Company (TEPCO), which owns the Fukushima power plant and is responsible for the accident, media, and nuclear experts. Innocent smiles had disappeared. Mothers got worried about their children's safety and the level of contamination in foods, school lunches, water, homes, schools, swimming pools, the paths leading to schools, and playgrounds. Citizens had to be constantly aware of the level of radiation. They could no longer trust official government and media reports on "safety."

The Fukushima nuclear accident revealed the mishandling of the power company and the central government in dealing with the accident, the failure of Japan's risk culture and risk framing on nuclear energy, a chain of underestimations, and the ineffectiveness of safety regulation. The first immediate cause of the accident was an underestimation of the risk posed by tsunamis. The level of safety awareness among TEPCO and the regulatory agencies of the Nuclear Safety Commission (NSC) and the Nuclear and Industrial Safety Agency (NISA) was shallow. The NSC did not have safety review standards concerning tsunamis until the Fukushima accident. There was virtually no defense against tsunamis.

Typically, the government and utility companies shared the assumption that there was no need to prepare for a station blackout and failed to anticipate evacuation beyond a ten-kilometer radius. None of Japan's electric power companies have anticipated a loss of all external power supplies and backup generators for more than thirty minutes. The NSC was responsible for neglecting the need to prepare for the possibility of a station blackout.

HASHEMI, MANATA* (University of Oklahoma, USA)

Success Narrative Frames: Claiming Recognition and Countering Disadvantage in Iran

In recent years there has been a rise in protests led by socially and/or economically marginalized groups in Iran. These movements suggest new modes of citizen engagement, whereby those on the sidelines are making increasing claims to cultural membership. While such instances of popular protest often receive the most attention in analyses and scholarship of contemporary Iran, these moments of visible resistance are often preceded by more quiet everyday forms of disruption to dominant power structures that go unaccounted for.

Building on the emerging sociological literature on recognition, this paper examines how poor stigmatized service workers in Iran resist their marginalization and lay claim to belonging and recognition amid heightened economic insecurity. Drawing on 25 in-depth interviews in the provinces of Mazandaran, Semnan, and Lorestan, I highlight how workers use evaluative schema revolving around interpretations of wealth, the rich, and success – what I term *success narrative frames* – to counter their disadvantage and articulate alternative imaginaries of what it means to be successful in Iran today. I demonstrate how these discursive strategies minimize the importance of material wealth and the economically privileged. Instead, workers' success narrative frames place emphasis on 1) quality of life and 2) benevolence that serve as the basis of moral distinctions from rich "others." Appeals to both dimensions lead workers to elevate their status and code culturally embedded qualities such as generosity and caretaking as indicative of their own success. However, in deconstructing the classed social order by creating an alternative ranking system based on moral rather than economic benchmarks, workers amplify the same processes of evaluation that have contributed to their own exclusion. These findings prompt consideration of how recognition claims in settings marked by the normalization of crisis and economic uncertainty can foster subjective well-being while also reifying distrust and weakening cross-class solidarities.

Comparing Inclusive and Exclusive Trends in the Impacts of Parental Leave Policies in Lithuania and the Czech Republic

This paper aims to analyse the development paths of parental leave policies and their outcomes in two Central and Eastern European countries, Lithuania and the Czech Republic, through a gender and intersectional lens. Although both countries joined the EU two decades ago and share a common historical communist past, the design of parental leave policies and their outcomes differ significantly. Drawing on extensive research on the development of parental leave policies in both countries, secondary data on the use of parental leave and parents' practices, as well as contextual analysis, this paper discusses the impact of long-term and recent trends in parental leave policies on gender and intersectional inequalities. Empirically, the analysis focuses on the following dimensions of inequality: 1) the de/gendering impact of parental leave policies and the involvement of fathers in care, 2) the impact of leave policies on deepening/reducing socio-economic inequalities of single-parent and low-income families, and 3) the impact of leave policies on the inclusion/exclusion of same-sex families.

The results of the analysis show that the impact of parental leave policies on gender equality in care has stalled in the Czech Republic, while in Lithuania, despite explicit pro-equality policies, only limited progress has been made. The impact of parental leave policies on socio-economic inequalities suggests that policy changes towards greater flexibility of parental leave have been used to better accommodate parents with higher incomes. Moreover, the policies have been selectively pronatalist and exclusionary towards lower-income families (namely single parents and ethnic minority parents). In addition, policies in both countries have remained exclusionary towards same-sex parents, who have remained completely excluded from at least some of the parental leave benefits because one of the carers is not recognised as a legal parent.

'Being the Messengers': Young Ahmadiyya Women Doing Tabligh through Vernacular Theology

This ethnographic study conducted for two years (2022-2024) examines young Ahmadi women's vernacular 'Tabligh' (religious proselytization) practices in Finland. It maps their religious outreach through street theology methods, such as giving out pamphlets and through smaller community meetings where women gather to learn more about religious doctrine and participate in acts of civic engagement. This study also highlights a critical element in their proselytization, termed 'silent Tabligh', which focuses on serving humanity. The Ahmadiyya women consider this an inseparable part of their religious mission. To achieve silent Tabligh- impacting society through their behaviour and character, they are involved in various voluntary works within the Ahmadiyya Jamaat structure. Situated within 'vernacular theology', the paper examines how these women start weaving their way through religio-civic responsibilities in response to the growing insecurities regarding Islam in Finnish society. This work also contributes to broader discussions about the potential for Faith-Based Organizations (FBOs) to encourage youth civic engagement and social cohesion in multicultural societies. This is a first study on Ahmadi women's Tabligh efforts in Finnish context and it also highlights how young Ahmadi women are redefining the gendered role of religious activism in secular environments by serving faith and humanity. This study adds to the scholarly understanding of the intersection of gender, diaspora, and civic responsibility in religious minority communities.

HASSAN ATTALLA, HAMDY* (Zayed University, United Arab Emirates)

Climate Justice in the Anthropocene: An African Perspective on Equity and Transition

In the Anthropocene, a geological epoch defined by human-driven environmental changes, climate justice is increasingly critical, particularly from an African perspective. Africa contributes less than 4% to global emissions yet faces mounting pressure to abandon hydrocarbons. This raises fundamental questions about fairness: Why should African nations bear the burden of mitigating climate change caused by industrialized countries with historically high emissions? While global climate goals urge rapid decarbonization,

African leaders, such as Ex Senegalese President Macky Sall, emphasize the importance of balancing environmental responsibility with developmental needs. Natural gas is often viewed as a "bridge fuel" that could enable industrialization while supporting renewable energy deployment. However, international financial conditions tied to climate action often restrict Africa's ability to pursue this path, forcing leaders to choose between growth and compliance with stringent environmental standards.

Furthermore, the actions of wealthier nations during the energy crisis—where Europe and the U.S. have increased their reliance on fossil fuels—expose a double standard. African nations, therefore, call for equitable climate policies that consider their developmental stage and potential. With immense untapped renewable resources, Africa has the potential to become a global leader in clean energy, but this requires significant investment, technology transfer, and fair partnerships. Moreover, reforms in global financial systems are essential to ensure that African countries can access the affordable financing needed for this transition. In the Anthropocene, achieving climate justice means addressing the uneven impacts of climate change and ensuring that the international community supports Africa's path to a sustainable future.

RC09-135.1

HASSAN ATTALLA, HAMDY* (Zayed University, Egypt)

State Vs. Civil Society: The Politics of Inequality in North Africa

This paper critically examines the relationship between civil society and inequality in North Africa, focusing on the role of civil society organizations (CSOs) within authoritarian and transitional regimes. The main argument suggests that the role and effectiveness of CSOs are heavily influenced by the political context, where authoritarian regimes often suppress or co-opt civil society to maintain control, contributing to social and economic inequality. The research aims to explore how this dynamic perpetuates inequality in the region and asks: *How do authoritarian regimes in North Africa impact the development and role of civil society? How does the relationship between the state and civil society influence inequality?*

The methodology includes a comparative case study of North African countries, employing qualitative and quantitative data from government reports, CSO publications, and international indices. Through this analysis, the paper highlights the dialectical relationship between the state and civil society, referencing theories from Hegel, Marx, and Gramsci to frame the evolving roles of CSOs. These theoretical perspectives offer insights into how state dominance marginalizes civil society, reinforcing social hierarchies and limiting the political engagement necessary to challenge inequality.

Findings indicate that civil society has struggled to function independently in countries like Algeria, Tunisia, and Morocco due to state interference, leading to weakened social movements and diminished public trust. The state's overreach hinders CSOs' advocacy efforts and exacerbates economic and social inequalities by limiting citizens' access to essential services and political participation. The paper concludes that a stronger, more independent civil society could counter authoritarianism, fostering greater equality and democratic governance in the region.

Analysing the Postures of Researchers Supporting the Creation of a Farmers' Groundwater Association in Tunisia

In the Limaoua region in Tunisia, a collective of farmers was recently built to deal with groundwater overexploitation. The area belongs to the Jeffara system (Gabes South aquifer). Water in the Limaoua area is mainly used for agriculture, especially arboriculture. The area includes about 630 farmers. Most of them are large farmers owning plots from 10 to 300 hectares, but the area also has six public irrigated perimeters where farmers own smaller plots (0.5- 1ha). The area benefits from the good quality of the soil, access to grid energy, and road infrastructures allowing easy access from the city of Gabes. These advantages attracted many new arrivals over the last fifteen years, especially wealthy populations who acquired land. Most of these installations have been accompanied by the creation of boreholes and surface wells, licit

or illicit, leading to overexploitation of the aquifer. The annual drop in the aquifer level is between 0.4 and 1m. In 2017, the administration created a "safeguard zone" to limit the number of drillings. This created tensions between farmers and the administration, and the number of boreholes, particularly illicit ones, continued to increase. In this context, a multi-stakeholder participatory process was launched in 2021 to find a common ground. It led to the creation of a farmers' association in December 2023. This intervention will focus on the postures and practices of researchers in this process. For this, it will use a framework to unravel the research postures and practices of the different researchers involved: detached/embedded, flexible framing/ inductive bricolage, etc. and how these might have affected the conception and implementation of the participatory process. This framework is based on the work of Hazard et al (2020) and Chambers et al (2021) and was developed in the frame of the Transdisciplinary Pathways for Sustainable Water Governance (Transwater) project.

Evaluating Participatory Processes in Water and Environmental Policymaking: Framework and Applications

Our intervention will draw from 20 years of experience as researchers supporting the evaluation of participatory processes in policymaking in the field of water and environmental governance. We will detail the principles and theoretical framework that we are using, as well as case studies in two countries. The theoretical framework is part of the CoOPLAGE approach, developed by an interdisciplinary group of researchers and practitioners from Montpellier (France) and beyond (Hassenforder & Ferrand, 2024). CoOPLAGE is the French acronym for "Coupling Open and Participatory Tools to Let Actors Adapt for Environmental Management". The main assumption underlying evaluation in the CoOPLAGE approach is that evaluation should support citizens and other actors when making decisions in a policy-process. We will argue that 12 principles can be applied for evaluation to support the transparency and accountability of public policies: useful, participative, subjective, early, reflexive, adaptive, fixed, open, simple, endogenous, mixed and plural. After presenting this theoretical framework, we will illustrate its application in two cases. In the Drôme region in France, citizens participated in the participatory process and in its evaluation towards the revision of the river basin management plan. In Tunisia, more than 4000 citizens participated in the elaboration of integrated territorial management plans in 6 rural territories. The evaluation of this process raised challenges in terms of numbers of people involved, diversity of data collected, multiplicity of evaluation objectives, etc. Our intervention will highlight the challenges and lessons learnt from these experiences.

HASSINE, RAFAËLLE* (École des Hautes Études en Sciences Sociales, France)

Collectively Producing Contemporary Artworks : Studio Work from Idea to Object

For recognized contemporary artists, delegating work to other professionals has become commonplace (Dubois 2024). Some artists, with sufficient financial resources, work in studios alongside highly skilled professionals. These professionals are rarely mentioned in the literature on artistic work, and their contributions to the value of the artwork are often overshadowed by the artist (Beech, 2015).

Based on a three-month ethnography in the studio of a Berlin-based sculptor leading a team of 10 professionals, combined with observations and interviews conducted at 12 other studios, I aim to explore the role of collaborators in creating the conditions for the effectiveness of the artist's "signature effect" and, consequently, in the valorization of artworks. How does this collaborative work embed each unique piece within a collection of objects that share visual, material, and conceptual qualities associated with the same creator? In other words, since art is valued through the attribution of a creation to a particular artist, by what processes does a network of actors produce an object that is constructed as an expression of the artist's personality?

First, I will clarify the modes of contracting and organizing the work, showing how the studio adopts the neoliberal model of a networked enterprise, mobilizing personnel to carry out different projects simultaneously. Contemporary artworks appear not only as the result of project management (Boltanski and Chiapello, 2011), but also as "project objects" (Boutinet, 2008), whose realization requires a preliminary design phase. I will begin by detailing

how the characteristics of the object in development are elaborated, starting from the artist's initial idea. Then, I will explain the operations that allow for its materialization. I will adopt an approach drawn from STS (Farias&Wilkie, 2016) to describe the work, tools, skills, and knowledge deployed to collaboratively produce a new object that bears the mark of its author.

HATANO, AYAKO* (University of Oxford, Japan)

The Role of Civil Society Organizations in Business and Human Rights Litigation: Hate Speech in the Technology Sector

Civil society organizations (CSOs) and individuals have become pivotal actors in business and human rights litigation, particularly in the technology and digital sectors. This study explores how CSOs leverage human rights instruments and principles, such as the United Nations Guiding Principles on Business and Human Rights (UNGPs), through strategic litigation and advocacy. By examining key case studies, it illustrates how CSOs influence corporate accountability, shape legal frameworks, and mobilize public opinion to address issues such as online hate speech and violations of digital rights. The analysis draws on global challenges, including the role of social media in exacerbating conflict and violence, and highlights the limitations of government regulation in this domain. The paper also discusses how strategic litigation has driven reforms in balancing content moderation, protecting freedom of expression, and ensuring privacy and data protection, offering valuable lessons for global application.

The paper underscores the socio-political impact of CSO-led litigation, showing how these efforts shape societal norms, influence legal and regulatory frameworks, and alter corporate behavior. It highlights common strategies employed by CSOs, including litigation, collaboration, and public advocacy, while addressing the challenges they face in a rapidly evolving digital landscape. The paper explores how these actors shape human rights norms both globally and locally and investigates whether strategic litigation and global social movements are extensions of hegemonic rule-making or tools that grassroots individuals incorporate into their local human rights practices with a victim-survivor-centered approach. Ultimately, the paper aims to contribute to the ongoing discourse on business and human rights, the regulation of online hate speech, and corporate accountability in the digital age, emphasizing the critical role of CSOs in vernacularizing human rights norms and shaping a rights-respecting future.

RC37-608.1

HATTATOGLU, DILEK* (independent scholar, Turkey)

Brief Introduction to the Life-Imprisoned Kurdish Literature

I will briefly introduce the case of Kurdish literature sentenced to life imprisonment. Using the criterion of having at least one published work, there are around 250 life-imprisoned writers from five different generations who were born between the years 1950 to 1999. Most of them are still in prison but some have been released after completing 30 years of imprisonment, like the panelists of this session.

The analysis of the works belonging to this literature sheds light on the different aspects of the daily life of the Kurdish and Turkish people. However, prior to this analysis, the very emergence of this literature says more about how to deal with the damage to collective and individual memories, as well as to the links and relationships between generations. In other words, the emergence of these generations of writers and their extensive coverage points to the frequency of life sentence and its equivalents, and highlights that mass incarceration functions as a generation-cide.

RC38-627.5

HATTATOGLU, DILEK* (independent scholar, Turkey)

Oral History As Literature Versus Silencing

Here, I will discuss that literature can be a powerful medium for the creation of narratives belonging to those who are systematically repressed. Since adding these narratives as foundational material to collective memory requires collective struggles on several levels and this goes beyond this article, my discussion will be limited to the possibilities of literature for the formation of memory of resistance against repression and violence in all spheres (social, political, intimate) and for its transmission to younger generations. I develop my discussion in the case of the literature of political prisoners imprisoned for life in Turkey; with the criterion of having at least one published literary work, there are more than 250 political prisoners with life sentences from 5 different generations (born between 1950 and 2000) whose work differs from poems to narratives/memoirs, short stories, novels, biographies, essays and oral histories. However, I will focus on three books of oral histories (Kardaki

Kan by Yalçinkaya, Toprağın Şarkısı by Perişan, and Gün Ağarırken by Şahin) that focus on state violence in Turkey's recent past. The silencing strategies of the dominant powers in many parts of this planet can be summarized as the forced disappearance of people, the murder of individuals or groups, and mass incarceration. Through the analysis of the above-mentioned oral histories, I will argue that, as the case of life-imprisoned Kurdish literature shows us, literature has the power to neutralize/deactivate these silencing strategies, insofar as it adds to collective and individual memories a dimension of resistance and recovers the links between old and new generations. The construction of the past allows the latter to understand the present and shape the future.

Empathy and Power in Live-in Care

Live-in care, a form of home-based care in which migrant caregivers live in the homes of the care-recipient, is a complex care system in which both interpersonal relationships and power relations play a central role, are not stable and are constantly (re)negotiated. In live-in arrangements, empathy is not only exercised as an emotional ability to empathize with another person's situation (Auriemma 2013), but also in the context of instrumental power, as the behavior of those involved is often influenced by 'controlling the behavior of others through threats and promises' (Popitz 1992, transl. by authors).

In our contribution, we want to explore the relationship between power and empathy in the home care of people with dementia by live-in carers. We analyzed interviews with live-in carers, care-recipients and their relatives as well as participant observations in households.

The study shows that empathy in home care by Eastern European live-in carers cannot be separated from power as a phenomenon. While empathy forms the foundation for building trust between the parties in the care arrangement, it also harbors the potential to reinforce existing power asymmetries. This is particularly evident in the relationship between relatives and live-in carers: Relatives often act out of empathic motives by responding to needs of live-in carers. However, this empathy might function as grounds to expect more care as contractually stipulated. Our findings show that live-in carers also use empathy towards the care-recipient or their relatives to improve their own working conditions. Empathy thus becomes the basis for regulating labor relations.

Analyzing the ambivalent role of empathy in these arrangements expands the predominantly positive portrayals of empathy in research. It illustrates that empathy in asymmetrical power relations can function not only as a means of strengthening social bonds, but also as an instrument of control and the exercise of power.

Formalizing Leadership Hierarchies, Dividing Professional Organizations

This paper examines how a formal reconfiguration of the management structure within Danish public hospitals has reshaped professional leadership hierarchies among medical doctors. Triggered by a 2021 union agreement, the reform mandated a new managerial position between senior consultants and clinical directors, thereby restructuring the professional landscape and altering career pathways. Using the concept of formal organization, this study explores how the new management hierarchy influences doctors' professional identities and inter-hierarchical relationships, thereby challenging the traditional distinction between 'knowledge elites' and 'administrative elites' in healthcare (Freidson, 1985; Waring, 2014).

Based on qualitative group interviews with doctor-managers at three Danish hospitals, this paper reveals how formalized managerial positions have introduced new value conflicts, impacting doctors' perceptions of good leadership and professional status. Theoretically, the study combines literature on professional (re)stratification with pragmatic studies of valuation to elucidate how the reform redefines the boundaries of professional jurisdiction, highlighting the consequences of integrating formal organization elements in a domain where informality and professional autonomy have traditionally prevailed.

This case study underscores the enduring relevance of formal organization in structuring and mediating complex professional relations. This study

contributes to understanding the societal and organizational implications of formalizing professional work, particularly in how such shifts affect inter-professional boundary negotiations and the enactment of formalized roles in healthcare settings.

Navigating at the Boundaries of Dying: Modes of Professional Deliberation

When is enough, enough? Dying in the 21st century is marked by paradox. Healthcare systems worldwide are facing resource scarcity, yet an increasing number of patients receive treatment with limited benefits during their final days of life. Accordingly, professionals originally trained to cure disease are now being tasked with the responsibility of mitigating 'bad dying', and facilitating the beginning of the emerging and contemporary life course; 'the end of life'. We don't know enough about the challenges and potentials this task presents for health professionals such as oncologists and hematologists. Accordingly, this study aims to develop a theory on what we call 'transition work', i.e. a theory that offers insights and concepts to grasp and qualify the efforts of health professionals working at the boundaries of dying. In this endeavour, the project draws on sociological and philosophical traditions and zooms in on modes of professional deliberation in navigating at the boundaries of dying.

No More Revolutions in the Anthropocene? Why the Slippery Slope of Low-Carbon Energy Transitions Disadvantages Progressive Politics

Historical research shows that progressive political revolutions and social transformations occurred during times of energy transitions. This has been the case most eminently in the transition from agrarian to industrial energy systems. It shattered the feudal order, fostered the emergence of liberalism, and supported universalistic political demands. Some observers expect that the imminent transition towards a post-fossil energy system will repeat this pattern and trigger a progressive development towards an ever more inclusive post-fossil polity. In this paper, we argue that the opposite is more likely. The emerging post-carbon energy system is on a slippery slope towards particularistic tribalism and post-liberal politics.

We begin by introducing the distinction between an *expansive* energy transition (moving toward higher energy density and abundance) and a *reductive* energy transition (moving towards lower density and limited availability). In the former case (covering all previous energy transitions in history), universal demands (e.g. for equality) and particularistic interests (in material prosperity) mutually reinforce each other. The societal outlook is one of improving the lives of the masses through the realization of universal norms. In the second case, however, universal demands and particularistic interests disintegrate and disempower each other. As a result, the universal demand for global equality under conditions of scarcity may not get backed up by the particularistic interest in securing one's material way of life. The societal outlook in a reductive energy transition is therefore one of impending scarcity and loss, which fosters post-liberal imaginaries of defense and adaptation. At least in the near Anthropocene future, we conclude, social struggles will take place on an inclined plane, where 'progressive' political imaginaries of global ecological solidarity are structurally disadvantaged over 'retrograde' imaginaries of tribalism, nationalism and the protection of vested rights.

Global Labor Dynamics and Privacy in Online Platform Markets

The rapid expansion of online platform markets is transforming labor dynamics and economic structures globally, raising significant concerns about workers' rights and privacy. While the EU Platform Work Directive represents a crucial step towards granting platform workers employee status, challenges remain on a global scale. This study employs a bibliometric

analysis of 1,145 publications, utilizing Scopus data and VOSviewer software, to explore key themes related to privacy and working conditions in platform work. Our findings reveal that, although interests in protecting workers' rights and privacy are globally shared, implementation varies across regions. For example, Germany's emphasis on separating intelligence-gathering from law enforcement, rooted in its historical commitment to protecting individual dignity and privacy, contrasts with the U.S., where integrated undercover tactics are more readily employed, reflecting different privacy priorities. The analysis reveals the complexity and diversity of perspectives surrounding platform work and privacy concerns across different regions. While the global interest in protecting workers' rights is evident, the approaches to addressing these issues vary significantly, shaped by historical, cultural, and legal contexts. The contrast between Germany's cautious stance on surveillance and the more integrated practices in the U.S. reflects deeper societal values and priorities. These differences highlight the challenges of crafting universally applicable regulations and underscore the necessity for dialogue and cooperation in developing balanced, culturally sensitive solutions that respect both economic innovation and fundamental rights.

Theaterpractices for Traumaprocessing & Strengthening the Narratives of Migrantized Women in Belgium

This paper will study a pilot theatre project for vulnerable migrantised women set up by Empact (a socio-cultural civil society organisation in Flanders) as part of the Horizon Europe project RelncluGen. This participatory theatre project centralises the remembrance and honouring of migration narratives and labour migration histories in general and the intergenerational role of migrant women and mothers in particular. As the government saw 1st generation women primarily as reproductive forces, gender injustices were perpetuated. 2nd generation women struggled with this, making their pain expressible and finding empowerment through storytelling. Through the involvement of these migrant women as agents from the start of the trajectory, this paper will shed light on the role of theatre (skills) as a tool for socio-cultural empowerment.

Additionally, the authors will position themselves in this chapter as migrantised women using arts based (applied) research. The idea of this trajectory was initiated by the second author who has guided a previous project called 'Tesrith an Arif' (Bride from the Rif), initiated by Empact's member association 'Vrouwkracht' (Female Power). In this previous project many migrant women got on stage for the first time and could speak in a safe environment being a women's only safe space. The first author (partly) participated in the theatre project and initiated the co-creative development of this paper's main reflections. Finally, the third author will contribute by reflecting on the discourses in this pilot project as creator of the art science production "(Un)Certain Mothers" which prior to the start of this project was screened by and received attention and admiration from Empact's member associations. As a result many of Empact's participating women showed a great interest in developing their own theatre play where they could remember and honour their past experiences both as daughters and mothers of Moroccan immigration in Belgium

CUFAR, KRISTINA (Institute of Criminology at the Faculty of Law Ljubljana, Slovenia)

The Battle for Slovenia's National Imaginary: Attacks on the Arts and Cultural Sphere As Tools of Democratic Backsliding

This paper analyses the cultural and ideological strategies employed by Slovenia's 14th government, led by Janez Janša (2020–2022), to shift the national cultural sphere towards the (far) right. Under the guise of a "state of emergency" during the Covid-19 pandemic, the government adopted increasingly authoritarian measures aimed at neutralising perceived threats from left-leaning cultural and intellectual actors. These interventions included replacing the directors of major cultural institutions, defunding progressive artistic projects, and publicly attacking, devaluing, and criticising artists and curators. In parallel, the government sought to erase socialist and left-wing legacies by removing public artworks and discrediting critical cultural institutions.

Our study constructs a timeline of these measures and pivotal events, identifying key pressure points where the government attempted to take

over the cultural sphere and impose a nationalist, conservative agenda. The analysis focuses on the effectiveness of these efforts and the resistance they provoked from the cultural workers, civil society, and progressive movements. By tracking the overlap between these interventions and the increasingly illiberal "state of emergency" governance, the paper highlights how the Janša government manipulated both public health and cultural crises to further its ideological aims.

Situating this case within the broader trend of far-right cultural strategies across Europe, especially in Central Europe, the paper demonstrates how Janša's government sought to reshape Slovenia's national imaginary not just through political power, but by redefining the cultural symbols, narratives, and institutions. It further examines how these tactics mirror the far right's increasing focus on culture as a battlefield for ideological dominance, offering insights into the potential for resistance and counteraction.

The Practice of in-Family Exchange Marriages and the Changes Occurred in the Practice

A significant proportion of rural marriages in Pakistan have been the exchange marriages. Its prevalence is very common in Pakistan. It is a type of marriage where a family arranges the marriage of a pair of son and daughter with the pair of son and daughter of other family. Some common factors responsible for this practice include dispute settlement between tribes, concept of maintaining blood purity, poverty of families, economic support during difficult time and land holding. Violence, emotional stress among the people engaged in the marriages, child exploitation, drugs addictions of the children, psychological abuses, disorders like depression and suicide and honor killings have been the consequences of the phenomenon. In order to investigate the in-family exchange marriages, a quantitative study was conducted in Punjab province of Pakistan. A representative sample of 1300 respondents were included in the study. Data were collected through questionnaire. The major findings of the study indicate that exchange marriage has been practiced by the literate people in significant proportion as a part of tradition which negates the notion that educated people usually change the traditional practices that do not have beneficial effects on the society. The study has also revealed the pattern of in-family exchange marriages and found that inside the family, exchange marriages have their prevalence in the paternal uncle's house.

HAYES, GRAEME* (Aston University, United Kingdom)

Strategy, Adaptation and Power: The Climate Disobedience Protest Cycle, 2018-2024

Extinction Rebellion's emergence in 2018/19 launched a new wave of arrestable climate action in the UK and elsewhere. This action was expressly presented as strategic, the outcome of experimentation, reflection and feedback; a theory of change; claims to rationality and efficacy; and an exceptionalist critique of extant climate activism. In this paper, I discuss the evolution of the arrestable action of XR and its spin-off organisations, Insulate Britain and Just Stop Oil. Whilst established understandings of strategy and tactics in social movement literatures primarily differentiate between strategy and tactics through a temporal lens, I argue here that this misrepresents strategy, placing it outside the pressures that produce adaptive responses and minimising the relations of power and culture within which it is itself determined. Drawing on what de Certeau (1984) calls 'the control of the proper', or the spatial (as opposed to temporal) components of action, I argue that in the UK the climate arrestable strategy launched in 2018 has been destabilised and profoundly transformed through its interactions with the 'control spaces' of internal movement culture and external political and policing response. Here, the strategic continuity of arrestability frames a hollowed-out, if spectacular, set of tactical applications. I conclude by reflecting on the ideational value attached to strategic claims.

From the Lab to the Industrial Park: Enactment of Professional Knowledge in the Energy Transition

In the context of climate change and energy transition targets, governments are looking for possible 'future fuels' that can be implemented in the short to medium term. Within the next decade the natural gas sector will be making a substantial transition to alternatives including hydrogen and ammonia. Our analysis addresses the management of sociotechnical risk in the transition. We move beyond an organizational view of accident prevention to the broader forms of social organization and forms of failure that actors must grapple. This includes the work context in which suppliers, logistics companies, consultants and contractors will have a major impact on the safety of new facilities that may be owned and operated by others. While a network view extends consideration of power relationships in useful ways, it moves analysis further away for consideration of the working life of professionals and changes in what is required of them. Implementation of such new technology at an industrial scale requires creation and enactment of new professional knowledge. This introduces a new category of epistemic risks addressing such issues as who owns theoretical knowledge about the new technology, how a new embodied knowledge can be developed and how both kinds of knowledge can best be shared. A network analysis is also silent on sources of risk beyond the technology, including those related to austerity and audit cultures, and political factors. This paper explores such structural and epistemic risks and their implications for organizations and professionals.

Sociology of (Non)Religiosity in Post-Socialist Countries: Comparative Study between Croatia, Slovenia, and the Czech Republic

The most extensive sociological comparative empirical surveys (WWS, ISSP, EVS, ESS) have been showing differences in levels of religiosity between countries all over the world for years. Significant findings were and are changes in different levels of religiosity. However, these surveys also showed some countries with a high level of non-religiosity and atheism, particularly in Europe. Besides other insights, these data were the empirical basis for discussions among scholars about secularization theory. Sociological interest with the authority of its data and conclusions in a certain way becomes a tool that the organized (non)religious communities use for their purposes. Following Bourdieu (1971), who claimed that every academic or scientific production is basically political and tries to influence the determined structure of relations of symbolic dominance, Quack (2014) explicitly specified scientific studies of (non)religiosity as part of the nonreligious field. Using the comparative perspective between three post-socialist countries, Croatia, Slovenia, and the Czech Republic, which share some characteristics but still have unique historical and cultural contexts, this paper will analyze different socio-demographic and other characteristics of the nonreligious people as well as social expectations about the public role of religion among chosen countries. Following insights from our analysis, we discuss challenges of the impact of sociology of (non)religion in the post-socialist transformations of these countries.

The Cultivation, Performance and Governance of Emotions in Digital Era in Contemporary China

Internet, particularly mobile Internet, and related applications, platforms and devices have been largely popularised in contemporary China. As the digital landscape becomes increasingly embedded in daily life, various online spaces now serve as critical arenas for the expression, amplification, and negotiation of emotions. In other words, digital platforms notably mediate and reshape emotional experiences in relation to offline social realities. Unlike physical spaces where emotional expression is often tempered by

face-to-face interaction and social norms, online environments can foster heightened emotional responses due to anonymity, the rapid dissemination of information, and algorithm-driven content circulation. Thus, digital platforms may intensify, distort, and even polarise emotional responses based on the interconnections between online and offline spheres. Additionally, the amplification of emotions through public discussion on digital platforms can exacerbate social divisions, fostering emotional rifts between different social groups and creating social distinctions. This, in turn, poses challenges to social harmony and complicates the state's approach to emotional governance.

By interrogating how digital emotions are cultivated and performed, and drawing on key debates in emotional sociology, this paper asks how these digital emotions can both challenge and inform traditional concepts of emotional experience. Moreover, it explores the implications of these dynamics for emotional governance in contemporary China, addressing how the state and society respond to the unique emotional landscapes forged in the digital age.

Unity amidst Diversity: Chinatown Anti-Prison Protests

This research investigates the diverse coalition of activists protesting the construction of a mega jail in Manhattan's Chinatown, part of New York City's plan to close Rikers Island. Despite the issue being localized and neighborhood-specific, the protests have attracted participants from various ethnic and social backgrounds, including Chinatown residents, non-Chinese activists, and individuals from other neighborhoods. This study explores how this broad coalition formed and how different groups with distinct interests were mobilized around a shared cause.

Drawing from theories on urban collective action, displacement, and social movement mobilization, this study addresses key questions: What motivates individuals with minimal direct ties to Chinatown or the jail construction to participate in the protest? How do the protest organizers use narratives of displacement and racial discrimination to build solidarity across diverse groups?

Methodologically, the research employs an ethnographic approach, combining participant observation with semi-structured interviews for 7 months. By actively engaging in the protests, documenting participant demographics, roles, and interactions, and analyzing social media materials, this research sought to understand the factors and mechanisms that drive mobilization and sustain the coalition.

The research identifies three main categories of participants: broad protest alliances (including organizers and organizations members), interest groups with cooperative ties to the alliance, and individuals who are not formally part of the alliance but are concerned with the Chinatown jail or broader social justice issues. These diverse groups are connected through three core local social organizations, which facilitate the formation of a wide-ranging protest front through the exchange of resources and the development of social networks.

This research contributes to the understanding of cross-ethnic mobilization and collective action in the context of urban displacement and gentrification. It offers insights into how grassroots activism can influence local government decisions regarding public spaces.

HE, YIJIN* (Beijing University of Technology, China)

Theoretical Dislocation and Juxtaposition: The Reestablishment of Chinese Sociology in the 1980s

Chinese sociology began its reestablishment in the late 1970s, following its abolition in the 1950s during the formation of New China in 1949 and a shift in higher education strategy. Due to its prolonged abolition, Chinese sociology was out of step with the theoretical developments of Western sociology, despite being regarded as one of the world's most flourishing disciplines prior to World War II.

The reestablishment of sociology as a discipline in China became intertwined with the introduction of postmodernism and postcolonialism into Chinese academic circles. At the same time, various opposing historical theories were also introduced into the Chinese context. For Chinese sociologists, Max Weber was regarded as a prophetic figure in diagnosing Chinese culture during the 1980s, and as a key classical theorist who inspired the reconstruction of Chinese sociology. In contrast, scholars in literature and arts theory who engaged with postmodern and postcolonial thought were eager to pursue an alternative modernity grounded in Chinese autonomy, aiming to debunk and deconstruct Western-centric theories. Following this trend, Max Weber's work was challenged for its connections to Orientalism.

As a result, the landscape of social theory in Chinese sociology during the 1980s became somewhat unusual. On one hand, the theoretical dislocation caused by the abolition of Chinese sociology created significant gaps. On the other hand, the reestablishment and institutionalization of Chinese sociology in the 1980s brought a juxtaposition of opposing theories. This influence continues to shape contemporary Chinese sociology.

Representación De La Masacre De Nanjing En Las Redes Sociales: Emociones, Trauma y Consumo

La Masacre de Nanjing es uno de los recuerdos colectivos más dolorosos para la nación china y la humanidad. A lo largo de los años, este acontecimiento viene cobrando importancia en la narrativa dominante china con el objetivo de reforzar la solidaridad y de revitalizar la nación china. En este sentido ha pasado a ser un trauma cultural y un tema constantemente representado en la literatura y las artes. Al entrar en la era de la plataforma, en las redes sociales tales como Tiktok, Wechat, Weibo, vienen apareciendo nuevas formas de representación de la Masacre de Nanjing constituyendo nuevos espacios donde se configuran distintas y complicadas emociones y sensibilidades. Nosotros, a través de las indagaciones, buscamos responder a las siguientes preguntas: ¿por qué se caracterizan estas nuevas formas de representación de la Masacre de Nanjing? ¿qué son las características del consumo de estos contenidos por parte de los usuarios de Internet? ¿qué son los motivos de los influencers al creer y publicar periódicamente contenidos sobre la Masacre de Nanjing? Descubrimos que detrás de las emociones uniformes y extremadas incitadas por los videos cortos están la economía de atención y la de las emociones. Aunque los videos cortos también se ven censurados, en comparación con los medios tradicionales, aquellos tienen más probabilidades de no ser regulados por las instituciones públicas y las narrativas dominantes y sólo está en juego la lógica de la producción capitalista.

HEATH, MELANIE* (McMaster University, Canada)

The Role of the Monogamous State in Anti-LGBTQ+ Politics

Scholars of sexuality have explored the relationship between the state and sexuality, theorizing the ways that the regulation of sexuality defines state logics and understandings. These scholars have critiqued the tendency when studying the state to treat it as a monolithic, rational, and static entity. For example, Jyoti Puri (2016) theorizes the "sexual state" to challenge the dominant idea of the diminishment of state-based governance in the era of globalization. Instead, she argues, the state remains a key player in its ability to modify, expand, and justify power by focusing on sexuality and its disruption of the social order. The sexual state has been important in enabling anti-LGBTQ+ politics in various global contexts. At the same time, scholars have yet to theorize how monogamy and the monogamous state also plays a role in enabling anti-LGBTQ+ politics. This talk examines the monogamous state as constituting a grid of intelligibility that connects understandings of perverse sexuality to anti-LGBTQ+ politics, in contradistinction to moral and productive monogamy. It theorizes how slippery slope arguments have been used in the construction of the monogamous state.

Fading Legacies of Sufi Women's Leadership: The Decline of Female Religious Authority within Sufi Brotherhoods in Morocco

Throughout history, religious governance was predominantly in the hands of male clergy; yet, women, despite prevalent restrictions, have held positions of authority. While the paradigms of religious authority and agency were commonplace among *Sufi* women in the past, as revealed by a congeries of Moroccan hagiographical accounts, women's religious authority has dissipated with the institutionalization of *Sufism* and the organization of *Sufi* brotherhoods. Although *Sufi* thought and traditions often transcended the existing boundaries of Islamic orthodoxy towards the issue of who should embody religious authority, *Sufi* women engaged in *Sufi* scholarship and Islamic erudition, often incarnating a good command of religious knowledge. Therefore, this paper examines the changing mode of spirituality, where, in contemporary contexts, there has been a remarkable shift in women's leadership and religious governance.

The general drift in *Sufi* women's position, for example, has sparked a rupture in the continuum of sainthood (or *walaya*) that historically connected

the past to the present. Importantly, the current paper problematizes this transformation, which signifies not merely an adjustment in leadership dynamics but raises critical questions about the implications for gendered variations within Islamic and *Sufi* contexts. The present study seeks to unveil the intersection of gender, religion, and authority, and to redefine the constituents, pervasiveness, and limitations of religious authority in light of ongoing sociocultural processes. This paper interacts with the issue of authority as it builds on stories and struggles of women's diminished authority within *Sufi* orders, and undergirds the role of gender in the contemporary landscape of *Sufism*.

What Is Corporate-Speak for Planetary Survival? – Communicating "Physical Environment" through Corporate Due Diligence Laws

Concepts such as the Anthropocene, or Planetary Boundaries, have been engaged to mobilize knowledge on the degradation and exhaustion of the physical environment produced by the scientific system as visible (and especially, actionable) risks in other social systems (Ellis, 2020). Taking Niklas Luhmann's (1986) descriptions of the complexity of communicating about the physical environment in other social systems as a point of departure, the Anthropocene can be described as an attempt by society of understanding the physical environment in such a way to make it more apt to cause resonance towards other social systems.

When it comes to establishing normative expectations on environmental protections in the legal system, this already highly complex and difficult endeavour might have their impact limited by multi-national companies and wide global value chains (GVCs), which are both pointed out as having the potential to incur enormous amounts of harm, and possessing legal forms that are able to evade the legal scrutiny from states. In order to address this gap and increase the resonance both domestic, regional and international regulation has turned to the language of Corporate Due Diligence in order to make global value chain visible, and thereby subjected to jurisdiction, even if extra-territorially. But how well do the concepts communicate and travel through the articulation of the problem and the legal shape of addressing it?.

In this paper, I investigate how the environmental urgencies and limits imposed by the the physical environment are perceived and communicated about in attempts at regulating global value chains through corporate due-diligence laws. Through the use of legal analysis, and complemented with preliminary results of ethnographic fieldwork in Professional Trade Fairs, I highlight the ways in which the cognitive expectations of the Anthropocene regarding the physical environment appear (or disappear) in contemporary GVC regulations.

Grafting Sustainable Values Together with Geographical Indications in Norway

The link between the system for Geographical Indications (GIs) and sustainability has been on the international and European agenda for more than 30 years. Recently, the United Nations' Food and Agriculture Organization (FAO) has published reports on the importance of increasing sustainability in GI systems. The pillars of sustainable practices that are suggested to be adapted locally are: environmental integrity, social well-being, economic resilience, and good governance (FAO, 2024:3). Several international producer associations holding GIs have already implemented methods in accordance with the pillars launched by FAO, and in February 2025 FAO will host a conference with a primary focus on "Innovation for Sustainability" in GI systems. This international development is also reflected in recent changes to EU regulations on GIs, which from spring 2024 will allow producers to document sustainable practices and include these in product specifications.

Despite the international attention an effort to combine the system of GIs with sustainability measures, the integration of sustainability into the Norwegian system for GIs remains underexplored by national authorities and researchers. This paper aims to fill this gap by addressing the food cultural conditions for how Norwegian GIs, traditionally focused on place-based specificity and cultural preservation, can be adapted to include broader sustainability objectives, and how the scheme can be adapted to the Norwegian food culture.

The analysis highlights the importance of adaptive strategies and practices in food cultural adaptation work (Hegnes 2023) in the scaling of alternative food initiatives. It also considers challenges, particularly regarding standardization,

which could risk weakening regional identities and the distinctiveness of local food cultures. Another possible unintended consequence that will be discussed is food labeling cannibalization (Hegnes 2023).

Seeing Red: Wildfire Visualizations in the Anthropocene

Every year, forest fires are flaring up all around the world again, gradually coloring the skies in gloomy shades of orange and red. These fires have become increasingly prevalent in media portrayals of climate change, often depicted through highly aestheticized and spectacular visuals. This paper examines how such representations—found in news coverage, social media, and popular culture—shape public perceptions of both the fires themselves and the broader environmental crises they signal. Focusing on the emotional and sensory dimensions of these images, I explore whether they provoke urgency or contribute to a growing normalization of catastrophe. This presentation argues that wildfire imagery plays a dual role: as a striking visual symbol of the Anthropocene and as a tool through which public narratives about climate risk are constructed, negotiated, and contested.

HEINZ, JANA* (Hochschule München, University of Applied Sciences, Germany)

Co-Transforming Education in Digital Societies

Educational institutions face profound challenges in adapting to digital transformations. Due to their rigid structures, they often struggle to move beyond traditional ideas of education. Thus, current research predominantly focuses on measuring the effects of digital tools on learning outcomes rather than exploring how education itself is fundamentally transformed. This narrow approach neglects innovative imaginaries of education, instead reinforcing existing paradigms. In particular, discourse around digital education is often dominated by dystopian narratives, such as fears of digital surveillance or the dehumanizing effects of automation. While this criticism is justified, this pessimistic view reinforces the limitations in envisioning and co-creating education in digital societies. By concentrating on risks and drawbacks, we overlook opportunities to design educational environments that are equitable, inclusive, and suited to the diverse needs of learners in the 21st century. Exploring utopian perspectives could offer innovative insights that encourage actively designing education. Such perspectives can help address persistent issues like educational inequality, the digital divide, and increasingly heterogeneous student populations.

This paper discusses three research and development projects that exemplify how education can be rethought to better align with the transforming digital societies—and their challenges. The first project explores how to open up classrooms to the diverse needs and prior (digital) knowledge of students to enhance educational equity. The second project investigates the use of artificial intelligence in reading, highlighting both the potential benefits and challenges of integrating AI into learning processes. The third project focuses on school development processes, illustrating how various stakeholders in educational institutions can co-transform their schools to better meet the demands of a digital society.

By critically engaging with these projects, the paper advocates for a transdisciplinary approach to co-designing digital education that goes beyond mere adaptation to digital tools, seeking instead to reimagine and actively develop educational institutions in digital societies.

Methodological Challenges in Collecting Data from Transitional Age Youth: Implications for Sensitive Topics – a Literature Review

This literature review aims to examine the methodological challenges in collecting data on transitional age youth (TAY), individuals transitioning from adolescence to adulthood, typically aged 16-24. TAY represents a diverse group, with variations in cognitive and socio-emotional development, as well as cultural background, complicating data collection efforts. Accurately

representing TAY perspectives is crucial due to the developmental significance of this age group, as it informs key areas such as mental health, education, and social behavior. Effectively collecting data may be especially important when addressing sensitive and emotional topics that require careful and nuanced approaches to ensure reliability and validity. This review intends to highlight specific challenges across various data collection methods, including written, face-to-face, and online approaches.

Peer-reviewed articles are sourced from scientific databases such as Google Scholar, JSTOR, PubMed, PsychINFO, and Web of Science, using keywords like 'young adults,' 'adolescence,' 'youth,' 'sensitive topics,' 'data collection,' and 'methodological challenges.' Articles will be selected based on their relevance to TAY and their focus on challenges such as cognitive and socio-emotional factors, language barriers, engagement methods, and inclusiveness. Both qualitative and quantitative studies are anticipated to provide a comprehensive view of the issues in engaging this population.

A preliminary scan of the literature indicates that key challenges include developmental factors influencing how TAY process information and interact with researchers, and adapting communication styles and data collection methods. Face-to-face interviews ease discomfort through multiple interactions but could create social pressure. Online methods offer convenience and access to marginalized groups, yet risk disengagement. Diaries promote spontaneous expression but require sustained effort, while visual methods bridge language barriers but deter less creative participants. This review aims to provide researchers with a clearer understanding of the challenges in collecting reliable data from TAY, particularly on sensitive topics that demand careful consideration to ensure valid results.

A Palette of Place: Children, Co-Creation with Colour and Rethinking Pedagogical Ethics in the Making of Art

What does colour do in the process of building place relations? As a species we have a long complicated history with colour, informing our primal side of danger, food, community and cultural meaning. In building a palette of place with natural, foraged materials questions arise. What are the artistic, ethico-ontological implications of claiming a work when it was co-created? How can an artist curb the ego and habits of human-superiority when we recognize only the human creator? How does a simple act of signing a work become a colonizing act of aggression? Why is it important to interrogate and interrupt this habit?

Recognizing the power of language and the habits of creating within a community of kin convey strong messages for young children. As soon as children can write their names, they are encouraged to claim their artistic works in acts of propriety ownership. This simple task fuels the individuality of me and mine and casts aside the complicated, collective, others found in the space of attention instead of intention (Ranganath, 2024). This paper is an effort to think with the intimate colours of place relations, a palette of place (Hennessy, 2022) as a process of making more-than-human relations. In building community with place colour stops being something, an object, instead becoming the intimacy of a sensory-intellectual understanding of what colour does (Finlay, 2007). This move from colour as feature, adjective and descriptor to a presence, and mediated medium of a kinscape (Vowel, 2022) in relations is a move I understand as building a palette of place.

How does this collaborative approach to "signing" and "dating" art become an ethical pedagogy of a palette of place? How does this diminish habits of othering nature in favour of a shared world change pedagogical work with young children in precarious planet times?

HENRIQUEZ OJEDA, KARLA* (Université catholique de Louvain, Belgium)

Challenging Dictatorship Political Socialization: The Transformative Power of Social Movements

This paper shows the results of a qualitative study, taking the proposal that social movements transform individuals and societies. It develops two arguments to demonstrate how social movements change Chilean society and its citizens. The first is that social movements break into young people's everyday lives by changing the course of institutional political socialization and the relationship activists have with politics. Second, social movements create the conditions for activists to live egosyntonic experiences in which, momentarily, the tension between how activists perceive themselves, their desires and wishes, and the limitations that capitalist societies impose through different forms of domination disappear. Finally, the conclusion shows that studying egosyntonic experiences and accelerated socialization allows us to understand cultural changes in citizenship.

HENRIQUEZ OJEDA, KARLA* (Université catholique de Louvain, Belgium)

Transgenerational Trauma and Memory Transmission: The Role of Social Movements in the Chilean Post-Dictatorship

The political violence provoked by the dictatorship in Chile has had consequences on new generations and the transmission of memory is one of the ways of recognising its effects. Using an approach that integrates the individual, the social and the collective, we investigate how the memory of the political violence provoked by the dictatorship is transmitted. To do so, we analyse qualitative sources including reports, articles and interviews with activists. We show how trauma is transmitted transgenerationally, and how social movements play a crucial role in opening up spaces to rearticulate trauma and re-elaborate family histories, thus facilitating the process of memory transmission. In conclusion, we argue that social movements are a way to study the long-term effects of political violence on generations that did not live through the dictatorship, and that understanding these effects will help to strengthen transitional justice policies.

Working Backwards but Not 'backwards': Indigenous Arts-Based Research and Challenging Western Research Designs

This paper discusses a community-engaged digital storytelling project with Indigenous gang members in Saskatoon, Saskatchewan, Canada. Partnering with the community-based organization STR8 UP, who has over 25 years working with Indigenous Peoples engaged in street gangs, the project looked to have STR8 UP members reflect on the life and impact of STR8 UPs founder, Father Andre Polievre. The theme and direction of the digital stories were defined by STR8 UP and follows a process of 'working backwards to move forward' in research. The importance of this research and methodology is that Indigenous street gang research has been limited to research methods that have focused primarily on traditional sociological and anthropological approaches such as surveys, ethnography, and semi-structured interviews. This has limited our understandings of why and how individuals get involved and leave the street gang lifestyle. Arts-based research, such as digital stories, have the potential to shift our understandings and provide a deeper perspective into the lifeworlds of those involved in street spaces. However, caution must be used to ensure that the research does not pornify or reinforce stereotypical tropes that further marginalize peoples living in gang communities. Through an Indigenous methodological approach that centres the concept of relationality, digital storytelling becomes a tool for individuals to tell their story from their perspective, providing a thicker understanding of the complexities that have led to one's inclusion and exiting from street gangs.

COVID-19 and Education in the Caribbean: Regaining Lost Ground

Sustainable Development Goal (SDG) 4 calls for inclusive and equitable quality education for all. This paper examines the impact of COVID-19 on the education system and educational outcomes in the Caribbean. The paper focusses on Jamaica, Haiti and St. Vincent and the Grenadines. These countries were chosen because of their varying size and economic status.

Data from primary and secondary sources were utilised to examine the impact of the pandemic on children in these countries. Primary data from 50 essays and research papers presented by children in child conference (2020-2022) was analysed. Interviews were also conducted with teachers, school counsellors, government and non-government officials. Secondary data from previous research and print media were also analysed.

Data analyses revealed where ground was lost: learning loss, poor development of social skills, increased mental and physical insecurity. The pandemic exacerbated social inequalities. The digital divide affected access to online education when schools closed. Performance metrics manifested deterioration in academic performance. Children lamented the loss of social contact with their friends at school and increased mental and physical abuse. Mental health challenges among children were also highlighted by teachers and school counsellors. Children in poorer families, those from the rural areas and those living with disabilities are particularly disadvantaged in all three countries.

Children themselves proposed recommendations to regain lost ground: targeted individual attention at school; more electronic devices and increased

access to mental health care. They also wanted more attention from their parents. Adult respondents wanted increased investment in education, more counsellors in schools, an increased number of special education teachers and 24-hour helplines for children and their caregivers in need of counselling.

Based on the findings, regaining lost ground requires a collective approach from governments, educators, families and communities, ensuring that no child is left behind in the fulfilment of SDG 4.

HERBERN, PETRONELLE* (OsloMet-Storbyuniversitetet, Norway)

Serial Mapping Focus Group: Expanding Participation within the IE Frame

Background: The ongoing Ph.D. project "Hva er samhandling?"/ "What is collaboration?" is exploring how services for children, youth, and families in a Norwegian municipality do work together. A serial mapping focus group, which meets quarterly, accompanies the research to ensure its relevance.

Introduction: Institutional Ethnography (IE) aims to ensure proximity and relevance to the "knowers" everyday life (Smith, 2005, s. 9). It promotes the inclusion of informants, the field, the community, and academia equally, allowing for a collective examination of a study object and accommodating different perspectives (Gullestad, 2003).

Significance to IE: IE's ontological position emphasizes participation, yet there's a risk of leaning away from it. The subjective experiences of the knowers experiences are incorporated when mapping and illuminating translocal relations, however, this may occur without the direct involvement of the knowers in the later stages of the research process.

Methodology: Introducing the serial mapping focus group within the IE frame, ensures proximity and meaningful knowledge development. It provides a longitudinal perspective and includes key individuals who balance being service practitioners and collaboration engineers. Their lived experiences inform the research direction, question framing, and material interpretation. Despite not being action research, the group's ongoing experiences feed back into their work.

Significance to IE Methods Development: The method increases data collection and perspective breadth (Baden et al., 2022), keeping the researcher grounded in the material. It also helps navigate power dynamics between the field and researcher (Madriz, 2003), fostering trust and ensuring research relevance at the data source.

Listening to Science - How the Earth System Sciences Shape Planetary Thinking in Late Modern Societies: A Sociology of the Planetary

The type of knowledge about climate change that is the most assertive and influential in socio-political processes is produced by the Earth System Sciences (ESS). From data collection to computerized climate modeling, the ESS rely heavily on advanced digital technologies. These technologies shape the publicly available type of climate change knowledge, carrying often implicit assumptions that are being inscribed into them, and structurally predetermining possible ways of knowing.

Despite their orientation towards quantified and linear types of knowledge, the ESS transform ecological understandings by developing ways of thinking in multiple interdependent systems. Its scientific approach to climate change lies in the translation (Callon) of quantified data points and the laws of physics into a planetary frame of reference. Thus, planetary thinking also carries promises for a Sociology in the Anthropocene, aiming to overcome modern dualisms. Given the hegemonic role the ESS play in understanding planetary conditions and socio-ecological relations, the research project "Sociology of the Planetary" critically examines the production of knowledge within this field, highlighting the implicit assumptions that shape its methods through and with technologies.

Presenting preliminary results from ethnographic research at two sites of ESS knowledge production (focusing on in-situ data collection and climate-modeling) the authors will discuss the production of planetary knowledge through three main research goals: First, to reconstruct the implicit assumptions within the ESS in order to develop a sociological understanding of the field. Second, to reflect on these findings in relation to social theory, exploring the potential of the concept of "planetary thinking" as derived from

the field in challenging the anthropocentrism in sociological theory and enrich sociological frameworks for understanding planetary dynamics. Third, the project seeks to fathom opportunities for enriching ESS knowledge production through dialogue with sociological knowledge beyond the integration of quantitative modeling of the so-called *human system*.

TREVISAN, ANA CAROLINA (anacarolinatcf@gmail.com, Portugal)

Critical Paths for Data Analysis in Social Sciences: Practical Application for Analyzing Data on Polarization, Populism, and Post-Truth (3 P's)

With the expansion of technological tools for data analysis, the integration of theoretical, methodological, and technical aspects has become essential in the social sciences and humanities. Building data models—such as Data Warehouses, Data Lakes, and dashboards—requires researchers to take an active role in decisions like variable selection, data categorization, and the creation of analytical indicators, ensuring that the models meet the complex needs of social research. By aligning research questions, hypotheses, and methods with the capabilities and limitations of data analysis, researchers can better address complex relationships between dimensions, categories, and analytical measures, enabling greater versatility and scalability for robust, contemporary analyses.

As a practical example, this proposal applies to the analysis of discourses in social media related to Polarization, Populism, and Post-Truth (3 P's), phenomena that have challenged social scientists' understanding in the current digital context. However, the model and principles discussed here are broadly applicable to other areas of investigation in sociology and across the social sciences, fostering more balanced interdisciplinary collaboration and communication between social science researchers and information technology specialists. This ensures that control over the analytical process remains with the researchers, who can draw on the expertise and advice of data analysts, without compromising theoretical and contextual integrity.

The topics for discussion are:

1. Developing effective data models applicable to the analysis of complex social phenomena.
2. Enabling researchers to have more control and autonomy over critical decisions in data collection and analysis.
3. Promoting interdisciplinary cooperation between social sciences and IT, while maintaining theoretical rigor in the analyses.
4. Presenting a practical application for analyzing discourses in social media related to Polarization, Populism, and Post-Truth (3 P's).

HERISON FERREIRA, ALLAN* (New University of Lisbon (Universidade Nova de Lisboa NOVA/FCSH), Portugal)

Meta-Identity and Digital Platforms: The Influence of Algorithmic Decision-Making on Social and Personal Identities

The rise of digital platforms has reshaped how individuals construct and perceive social and personal identities. From a sociological perspective, meta-identity refers to the categorizable and indexable information that individuals provide to digital platforms. This data is processed on a large scale to set parameters that influence algorithms, often shaped by the unclear intentions of decision-makers. The impact of such algorithmic decision-making is profound, creating identity frameworks users might not fully control or understand.

This proposal presents findings from the analysis of over 400 content creators who produced approximately 100 amateur films in a laboratory environment for platforms. By comparing how authors, their peers, and the public label these works with the categorizations generated by platforms like YouTube, the study examines divergences that may occur between human and algorithmic understandings. It explores how these differences shape identity, influence public visibility, reinforce stereotypes, and limit the diversity of perspectives available to creators and audiences.

The study offers a critical perspective on the broader impact of algorithmic decision-making and highlights the need for greater transparency in how platforms manage data. It advocates for policies to ensure fairer, more inclusive digital environments where content creators and users can maintain control over their identities and the narratives shaped by platforms.

Topics for Discussion:

1. Analyze the role of meta-identity in shaping social and personal identities on digital platforms.
2. Present findings from over 400 content creators and 100 amateur films, examining how platforms categorize user identities.
3. Explore the implications of algorithmic decision-making on the diversity of perspectives and identity construction.
4. Discuss the importance of transparency, user control, and policy-making to mitigate the impacts of algorithmic identity formation.

Promotion of Art Literacy of Residents of Rural Areas As a Condition for the Diversity of Cultural Services

The focus of the research is the cultural policy initiative of the "cultural services basket" in rural areas and the barriers that hinder the diversity and availability of cultural offerings. One of the barriers is the art literacy of the residents of rural areas, which is more based in folk art experience and community knowledge (H. Becker), less so in the experience of formal art and culture education.

The theoretical understanding of art literacy of rural residents is based on the assumption of art literacy as a part of cultural and social capital (P. Bourdieu), as well as on studies exploring the formation of art literacy of rural residents and the associated risks of stratification.

The data reveal statistically significant differences in cultural consumption and participation in the population of different territories, with relatively low activity in professional and institutional art offer. Thus we look for solutions for more active consumption by residents of rural areas, to ensure the diversity of the cultural offer and to promote the access of rural residents to professional art.

We put forward two research questions: 1) What features of art literacy characterize residents of rural areas and how to develop these? 2) How to adapt the offer of professional and institutional art for residents of rural areas, according to the specific knowledge of their art literacy?

A set of indicators of art literacy of residents of rural areas was developed and a national scale measurement of art literacy was carried out using a representative quantitative survey of Latvian residents (15-74). Qualitative scenario modeling was used, identifying the main conditions for developing the need for professional art. Three scenarios of art literacy development were tested in five case-study areas, to foster a balance between the demand for folk art and professional art in cultural consumption.

HERMELO, MANUEL* (Voices Research and Consultancy, Argentina)

Environmental Beliefs and Expectations in Latin America

The paper *Environmental Beliefs and Expectations in Latin America* addresses citizens' perceptions and attitudes towards climate change and its impact in the region. Through the integration of opinion studies based on longitudinal surveys, such as the World Values Survey, and international comparative studies conducted by networks like WIN, GIA, and Latinobarómetro, the paper provides an in-depth analysis of social perceptions regarding the environment, the causes of global warming, and the effectiveness of governmental policies in this area.

The research identifies that, although environmental issues are not spontaneously mentioned as a top priority in the region, there is a strong belief that economic growth can be reconciled with environmental protection. This reflects a growing awareness of the importance of sustainable development and the need for policies that balance these two aspects.

Regarding the causes of climate change, the study highlights that a significant majority of citizens in the region attribute this phenomenon to human actions. Moreover, extreme events such as floods and droughts are perceived as concrete evidence of climate change, which underscores the urgency for decisive action on this issue.

The paper also points out that, despite high awareness of climate change, there is a division of opinion regarding the ability to take effective action

against it. This polarization is accompanied by widespread criticism of governments for their lack of effective measures to address the climate crisis. The study concludes that in order to tackle environmental challenges, greater cooperation between civil society, the private sector, and governments is essential.

HERNANDEZ MEDINA, ESTHER* (Pomona College, USA)

Los Grupos Antiderechos: The Expansion of the Far Right in the Dominican Republic

Delegitimizing attacks against the feminist and LGBTQ+ movements are part of a long-standing tradition on the part of the most conservative religious groups in the Dominican Republic informed by the disproportionate power the Catholic Church hierarchy yields through the diplomatic agreement (Concordato) the Vatican has with the state since 1954 (Paiewonsky, 2002; Lara, 2020). However, these attacks have multiplied since 2019, when these groups orchestrated a campaign against an attempt to reactivate the Ministry of Education's gender equality work (Hernández-Medina 2020); and eventually succeeded in defeating it. This presentation examines the evolution of these far-right attacks attempting to curtail women's and LGBTQ+ rights as part of the conservative backlash that has taken place in Latin America since 2016 (González Vélez and Castro 2018); a more recent phenomenon the Dominican Republic is a relative newcomer to. By using Touraine (1983) and Castells' (2010 [1999]) social movement framework and Gramsci's (2003 [1971], Crehan 2002) hegemony theory, this presentation shows how these movements have grown in the Dominican Republic, the collective actors that are part of them, the unlikely alliances that sustain them (e.g., between the Catholic Church hierarchy and the leaders of conservative protestant denominations), and the effects they are having in their "cultural war" against all progressive movements in the country. The presentation also addresses how these far-right movements are recycling racist and anti-Haitian narratives to expand their base; even though many Christian groups work with poor racialized communities and with Haitian migrants. In so doing they are aligning even with fascist paramilitary groups tolerated by the government given its own anti-Haitian rhetoric and practice. The presentation ends by analysing the potential lessons the feminist, LGBTQ+ and other progressive movements can learn from their anti-racist peers and in particular from the movements led by Dominican women of Haitian descent (Mayes 2018).

HERNANDEZ MONTILLA, MARIANA* (The University of Manchester, United Kingdom)

Policy Coherence in Sustainable Development: Aligning Forest Restoration Goals with Indigenous Rights in Mexico's Governance Framework

Forest landscape restoration (FLR) has emerged as a critical global sustainability challenge, addressing climate change and biodiversity loss while intersecting with indigenous peoples and local communities' (IPLCs) rights. This study examines how existing IPLC land rights policies in Mexico align with FLR frameworks, offering insights into the complexities of implementing global sustainability initiatives at the national level.

We analysed 24 key policies nospanning 1988-2024, developing novel indices for IPLC inclusion and FLR alignment. Our findings reveal significant governance gaps: while 22 policies mention IPLCs, only 3 grant them substantial decision-making autonomy. FLR alignment scores averaged 19.5 out of 24, indicating strong incorporation of FLR principles but exposing weaknesses in adaptive management (1.93/3) and local adaptation strategies (2.14/3).

Key governance challenges include limited inter-governmental coordination (20 policies) and over-reliance on institutional capacity (18 policies). These issues contribute to fragmented implementation of FLR initiatives and inconsistent approaches to IPLC engagement. Additionally, 12 policies struggle to balance economic development with conservation goals, particularly in IPLC areas where livelihoods are forest-dependant.

We propose establishing a cross-sectoral FLR coordination body within the National Forestry Program and revising the Agrarian Law to include specific provisions for protecting IPLC land rights in restoration efforts. We also recommend developing mechanisms for integrating traditional ecological knowledge into restoration strategies and creating flexible funding mechanisms to support long-term, community-led restoration efforts.

This research highlights the intricate relationship between global sustainability goals, national policy frameworks, and local rights. It demonstrates the need for adaptive governance mechanisms that can bridge policy aspirations and practical implementation, adding evidence that

support that global initiatives like FLR are effectively localized while respecting IPLC rights. Our findings contribute to broader discussions on multi-level governance of sustainability challenges, offering lessons that may inform policy alignment and implementation strategies for FLR and other global environmental initiatives beyond Mexico.

RC04-48.4

HERNANDEZ POLO, LEONEL* (Universidad Nacional Autónoma de México - University of Groningen, Mexico)

Vital Life Experiences and Future Aspirations of Second-Generation Youth Mexican Immigrants in US. Vital Chances from Unequal Background

The aim of this research is to identify the vital life experiences (vital chances) that define their access or not access to higher education of Second-Generation Mexican immigrants in the United States. This includes analyzing how their biographies, social and cultural contexts, family backgrounds and the socioeconomic disadvantages impact their aspirations for the future. Due to the fact Second-Generation are considered as immigrants, even though they were born in the United States, they are faced with different social and structural inequalities hard to overcome as a result of this kind of exclusion. In this research, it is important to understand what kind of discrimination, segregation and barriers may be limiting their capability to aspire and how these challenges can lead to feelings of frustration, failure, or guilt when their aspirations are not realized or were frustrated.

Method.- Life Story (Bertaux, 1997) and Course Life (Giele & Elder, 1998) methods are used for collecting and data analysis. The analytical framework involves three temporalities: 1) family and migratory background; 2) current status and conditions; and 3) future aspirations capabilities. The theoretical framework used is the capabilities approach (Sen, 2005; Appadurai, 2004) from the perspective of social inequalities (Dubet, 2023, 2011; Therborn, 2013).

First findings.- Vital chances are strongly intertwined to integration processes; 2) parent's conceptions of education impact in scholar trajectory and 3) school environment at elementary levels generates or obstructs vital opportunities in the future.

Importance.- Studying the experiences of Second Generation Mexican immigrants who have successfully entered tertiary education can provide valuable role models and inspiration for other young people facing similar social conditions, who aspire to pursue higher education in the US. Furthermore, findings will contribute to the conceptualization of future aspirations in post-migration contexts and offer insights on what agency and empowerment capabilities mean within disadvantageous conditions.

HERRALA, ELISE* (Haverford College, USA)

Precarity in Times of Transition: Artistic Opportunity and Limitation in 1990s Moscow

The 1990s in postsocialist Russia was marked by economic and cultural precarity. Although the collapse of the USSR brought an end to artistic censorship in Russia, it also dismantled the institutional scaffolding of the art world. Artists were suddenly ushered into a free market, which brought considerable uncertainty. Yet it was in part the lack of institutions that gave artists increased artistic autonomy and space for creativity. I argue that the 1990s—a decade sandwiched between the restrictions of the Soviet period and the pressures of the capitalist art market—paradoxically offered an unprecedented moment of cultural freedom for artists. I show how artists adapted to instability, focusing on the precarity created by the absence of an institutional or market structure for the arts. The result is that artists were able to develop a new language of Russian art while simultaneously building a postsocialist arts infrastructure that a new generation of artists enjoy today.

My talk is based on interviews and ethnography in Moscow. I focus on the generation of artists born between 1951–1970, who came of age during the Soviet period but developed their careers in the chaos of the 1990s. This generation was caught in a temporal triad: looking ahead to a more promising postsocialist future, reckoning with the uncertainty of the present in the 1990s, and retaining the training and nostalgia of the socialist past. They used art to critique and make intelligible the societal, political, and economic changes happening around them. But it was not just the subject matter of their work that reflected the transition; style and form did so as well. This paper considers the precarity that Russian artists experienced in the 1990s, addressing how they struggled to survive but also how they leveraged the artistic freedom into new creative possibilities.

RC24-389.3

HERRALA, ELISE* (Haverford College, USA)

Toward an Economic Sociology of Waste

We tend to think of waste as epiphenomenal to the core processes of capitalism: as an *outcome* of the production, circulation, and consumption of commodities. But what if we were to theorize the generation, movement, and disposal of waste as essential to, and constitutive of, 21st-century capitalism rather than epiphenomenal to it? This paper sketches what an economic sociology of waste could look like.

A useful starting point is to consider two meanings of the word "waste" in English. The *material conception of waste* refers to products of human activity discarded as useless or worthless (e.g., industrial waste), and often has a technical, morally neutral valence expressed in statistics and chemistry (e.g., metric tons of CO₂ or spent nuclear fuel). Capitalist institutions and processes generate material waste (e.g., factories, power plants), circulate it (sewage systems, transnational e-waste regimes), recycle it, and try to mitigate it (environmental consultancies, regulatory agencies). In contrast, the *moral conception of waste* refers to things consumed without adequate return (wasted money, time, or energy) or neglect (wasted opportunity) and emerges from discourse, culture, and politics. Debates about climate change and environmental despoliation often counterpose incommensurable dimensions of both definitions, such as the moral cost of laying off oil workers in a proposed nature preserve versus the moral cost of letting endangered species go extinct.

An economic sociology of waste would make its distinctive contribution investigating how the material and moral conceptions of waste intersect: how do they constitute each other in environmental debates? And how do they emerge from, and then shape, the inequalities, institutions, and worldviews characteristic of contemporary global capitalism? The foundational theoretical premise here is that waste is at once materially consequential and socially constructed. Economic interests and logics are central to deciding what counts as waste and what to do about it.

Continuity and Rupture: Understanding Antisemitism Among Jews in Germany before and after October 7th

The question of how antisemitism should be characterised and understood was a concern for Jews in Germany long before the massacre of October 7th and the wave of antisemitic protests that followed. At the same time, October 7th as a collective experience of violence also marked a major rupture for the Jewish communities in Germany affecting the relation towards the non-Jewish German society.

From a sociology of knowledge perspective, we address how the understanding of antisemitism among Jews living in Germany has changed since October 7th. To analyse the interweaving of continuity and rupture we rely on problem-centred interviews with Jews conducted before and after the massacre. Although we can clearly identify pre-existing patterns of interpretation after October 7th, major shifts are apparent. Four aspects are especially relevant.

Firstly, the criticism that non-Jewish German society recognises and understands antisemitism far too rarely is still valid but has drastically intensified in its urgency with the recent antisemitic protests and attacks. Secondly, the understanding of antisemitism as a long existing problem for society as a whole, which can affect Jews from all sides, has also changed after October 7th. Jews are increasingly highlighting the violence posed by left-wing and Islamist actors over antisemitism from the right. Thirdly, Jews emphasise the significance of October 7th by interpreting the day as a historical and sometimes even retraumatizing caesura. In this regard some interviewees link their current experiences to the nationalist socialist past of Germany. Lastly, the interviewees demand solidarity, which does not remain empty words, but is often lacking even in the face of current atrocities.

RC52-807.6HERRERA, CRISTINA* (El Colegio de Mexico, Mexico)
MUÑOZ AGUIRRE, CHRISTIAN DENNIS (independiente, Mexico)*La Feminización Selectiva Del Campo Profesional De La Arquitectura En México*

En México la arquitectura es una profesión históricamente masculinizada en la que crecientemente ingresan mujeres. Sin embargo, si bien hay casi paridad de género en las escuelas de arquitectura persiste la segregación ocupacional por género: solo 30% de las mujeres se desempeña en la profesión, la mayoría en oficinas y cuando están en obras, pocas llegan a puestos directivos. Esta ponencia presenta resultados de una investigación cuyo objetivo fue analizar los efectos de la creciente inserción de las mujeres en el campo de la arquitectura en México. El estudio se basa en entrevistas en profundidad con mujeres y hombres del campo profesional y académico de la arquitectura y en datos cuantitativos secundarios. Los resultados muestran que el campo de la arquitectura ha cambiado debido a nuevas tecnologías, nuevos mercados de consumo y nuevas demandas regulatorias.

Estos fenómenos han diversificado el campo laboral y han favorecido la inserción de las mujeres. Al mismo tiempo las reglas que establecen lo que define el campo profesional se resisten al cambio. Estas reglas suponen un profesional ideal dedicado de tiempo completo al liderazgo de un despacho propio, lo que dificulta la conciliación entre profesión y vida personal, afectando en mayor medida a las mujeres. Sin embargo, se observan indicios de erosión de estas reglas, producto de la feminización y del cambio generacional: 1. la desertión de jóvenes profesionales de ambos sexos de puestos que implican formas de trabajo extenuantes con pocas perspectivas de ascenso, 2. la valoración del tiempo personal y el autocuidado que lleva a elegir campos considerados "auxiliares", 3. la flexibilización de la organización del trabajo en aquellos despachos liderados por mujeres, para lograr la conciliación entre la vida laboral y personal.

HERRERO, AMARANTA* (University of Barcelona, Spain)

Advancing a More-Than-Human Governance of Disasters: Insights from a Drought Management Controversy on Urban Gardens in Barcelona (Spain)

The escalating impacts of multifaceted climate-related disasters create increasing challenges for cities and call for enlarged understandings of the entanglements between human and more-than-human worlds in the Anthropocene. There are pressing reasons to develop more responsive governance frameworks that bolster the resilience of all urban inhabitants and their environments. Drawing on Action Network Theory (ANT), this paper seeks to examine a controversy about Barcelona's urban gardens involving a dispute about the criteria for establishing water restrictions during a severe drought in the region of Catalonia (Spain). Results from this slow emergency case show how specific institutions, regulations, and practices can undermine environmental governance and resilience during the unfolding of disasters. They also shed light on the emergence of multispecies solidarity, and new community practices as a response to, and a preparation for new urban threats. These adaptive practices lay the foundation for a framework for more-than-human governance of disasters to be applied in urban settings and beyond. By incorporating shared vulnerabilities into disaster governance, we can enhance social and environmental resilience in the face of increasingly severe weather events. Advancing more-than-human governance in disaster prevention, management, and regeneration is crucial for creating sustainable and resilient futures in a rapidly changing world.

RC40-661.3HERRERO, AMARANTA* (University of Barcelona, Spain)
MORAGUES, ANA (University of Barcelona, Spain)*Food Sharing Governance in European Cities: Insights from a Scoping Review*

Food sharing initiatives are expanding rapidly in urban areas, offering new opportunities to shape more sustainable urban food systems through collaborative efforts. These initiatives encompass practices conducted by formal or informal organisations collaborating in growing, cooking, eating, or distributing food as well as sharing food-related skills, knowledge, spaces, and/or tools. Food-sharing initiatives are influenced by internal and external governance dynamics that shape their capacity to deliver different types of benefits. This paper presents a scoping review in order to understand the current knowledge of food sharing governance in Europe and reveal the governance elements that play a role in promoting or hindering the

expansion and impact of food sharing initiatives. Our research includes both a quantitative and a qualitative analyses: the quantitative assessments of existing literature highlights areas for further investigation, while the qualitative analysis enhances comprehension of the benefits food sharing initiatives entail, and the barriers and enablers they encounter. The analysis of the literature informs the development of a new framework for categorizing internal and external elements of food-sharing governance across nine dimensions: structural factors, regulation, resources, discourses, relations (including power relations), participation, knowledge, internal organisation, and actors. We conclude by highlighting the need to avoid idealistic views and thoroughly evaluate these initiatives within their specific contexts while recognising their potential to transform the food system and create the mechanisms to maximise their benefits.

HERTEL, FLORIAN* (Europa-Universität Flensburg, Germany)

Theoretical and Conceptual Reflections on Higher Education Admission Regimes from an Internationally Comparative Perspective

In many countries, access to high socio-economic status (SES) positions is often contingent upon obtaining a university degree. As upper secondary educational attainment levels rise, competition for university admission intensifies. Under these conditions, inequalities in higher education may grow if the supply of study opportunities does not keep pace with the increasing demand. Access to higher education varies significantly across countries, as do their respective admission systems. This covariation suggests a potential relationship between social inequality in university access and the admission procedures employed in different nations. However, empirical research into the inequality effects of various admission systems remains limited.

This presentation addresses the challenges and potential solutions for studying admission regimes in a comparative context. Admission regimes are defined as the set of rules and processes that govern the allocation of individuals to universities. Drawing on a literature review of case studies and expert interviews with scholars specializing in educational inequality, we identify four key dimensions—supply, eligibility, selectivity, and organizational form—that characterize higher education admission systems. After examining these dimensions, each with its own set of subdimensions, we analyze how these factors may limit opportunities in degree programs and influence institutional or degree choices.

Our analysis explores how specific features and rules of admission systems might mediate or moderate the primary and secondary effects in educational decision-making processes. First empirical findings indicate that certain institutional features are correlated with aggregate inequality patterns across countries. Further analyses will focus on the individual-level processes that might drive this aggregate correlation. The presentation concludes with a problematization of the chosen approach, the categorization of country-wide regimes and potential fallacies that have to be reflected before further investigation.

Towards a Truth Telling Commission on British Imperialism

This paper explores the potential for a Truth-Telling Commission on British Imperialism to confront the historical legacies of colonialism and imperialism within Britain, its relationships with former colonies, and in the international order. Existing literature demonstrates how truth commissions can expose colonial harms and foster reconciliation, yet no such initiative has been pursued in Britain despite its role in global imperialism. Building on this transitional justice scholarship and the decolonial school, this study analyzes truth-telling commissions in British settler-colonies Australia and Canada to draw lessons for a UK context. Through qualitative methods, including fieldwork, interviews with stakeholders, and public engagement events, this research develops a blueprint for how Britain could meaningfully reckon with its imperial past, offering an intellectual and practical foundation for reparative justice. This paper contributes to the historical sociology of anticolonialism by analyzing how institutionalized truth-telling could dismantle the enduring legacies of empire, supporting movements for justice and equality in both Britain and its former colonies. It also brings honesty to the obstacles - ontological, epistemic, and material - that calling for and institutionalising such a commission would bring, and in doing so invites further research and public debate as to the need and nature of such a commission. By situating Britain as a necessary site of global anticolonial efforts, this research advances scholarly understanding of the dynamics of imperialism and its ongoing impact on modernity.

Discontent and Resistance in Platform Work. Crowd Workers' Communities and Orientations in India, the USA and Germany

The paper presents an empirical study of forms and antecedents of resistance by crowd workers on the digital labour platforms Amazon Mechanical Turk and Upwork. Digital labour platforms constitute transnational labour markets where requesters (often from companies located in the global North) outsource tasks to an often large number of workers (many of whom are located in the global South). Remote crowd work usually comes with deprivations for workers and precariousness, as market power is unequally distributed and used by platform companies and requesters at the expense of workers (e.g., Shor et al. 2020; Irani/Siberman 2014; Fieseler et al. 2018). However, due to the characteristics of remote crowd work, collective voice or representation of interests are difficult to achieve, despite the disadvantages and deprivations many crowd workers encounter (Lehdonvirta 2016; Al-Ani & Stumpp 2016).

The paper examines discontent among groups of crowd workers from different countries as well as the forms and conditions for collective action. It pursues the following research questions: (1) Which forms of (collective) resistance can be observed among crowd workers from different countries and on different platforms? (2) Which are the factors that may foster or hinder (collective) resistance? Informed by mobilization theory (Kelly 1998) and a concept of work orientations, empirical results of a 2024-quantitative web-survey (n=1,022) of crowd workers from India, the USA and Germany on the online labour platforms Upwork and Amazon Mechanical Turk are compared.

Findings show that some groups of crowd workers reveal work orientations which are favorable to collective action and appear to be open to mobilization efforts, while others appear rather reluctant. It is argued that communication and involvement in digital communities are important conditions that may foster mobilization. The research sheds some light on practical implications for organizing activities.

New Avenues for Labor Relations in the Platform Economy? the Institutionalization of the Youtubers Union-IG Metall Coalition

The paper presentation focuses on the factors that explain the emergence and accomplishments of the 'FairTube' campaign, which was initiated in 2019 by the YouTubers Union and the German metalworkers' union IG Metall, and was later established as a formalised German association. While the initial focus of the campaign was on changing the monetization rules, which YouTube had altered very abruptly in 2017, the initiative subsequently focused on improving the working conditions of content creators. Methodologically, we deploy a mixed-methods design that flanks media discourse network analysis (DNA) through qualitative content analysis of expert interviews, which helps to analyse the interaction between these established and new actors in the governance and interest representation in the digital platform economy. Theoretically, the study combines power resource concepts with framing approaches to grasp both ideologies and power as focal points in the cooperation.

Our findings reveal a 'hybrid form of governance' that, by aligning ideologies and combining sources of power, was able to accomplish most of the goals set out by the campaign (e.g., avoiding arbitrary platform decisions, increasing transparency and communication, securing creators' incomes). We conclude that new forms of collective action may mitigate particular negative consequences of the platform economy that stem from asymmetric power relations. However, trade unions did not use the case as a role model yet to address deprivations in the digital economy. The study seeks to contribute to a better understanding of platform work and to the concepts of power, ideas and interests in industrial relations and offers practical conclusion for the unions and actors involved.

Motherhood in the Empty Nest – a Lack of Social Recognition?

In my presentation I will focus on a socially and sociologically unrecognized stage of motherhood when adult children leave the family home. Regarding family policies, social context, and individual attitudes towards this stage and reconfiguration of a mother's social role of a mother – there is still a notable gap in the research on family issues. Becoming a mother in an empty nest is an individual process following considerable life changes. Despite its

importance, it appears to be treated with less validity than the experiences of mothers who are navigating through the early stages of motherhood. Therefore, I will present what happens in the lives of women whose role as mothers is being transformed.

With the departure of children, time is released for mothers to pursue their individual and professional needs. While the mother's role shifts from everyday mode to a latent or out-of-everyday mode – the caregiver role (which is part of the mother's role) does not seem to have an end. Mothers of adult children remain trapped in the panini sandwich generation, which forces them to care for their parents, in-laws, and sometimes, even their partners themselves. It is not easy to predict the duration and intensity of the necessary assistance. A natural consequence of the physiological ageing process affects the continuation of entanglement in responsibilities. There are not just remote maternal duties (towards adult children), but also extra duties as daughters of ageing parents.

The presentation is based on empirical material collected between 2019 and 2021 within a 36-month longitudinal qualitative study of individuals and couples in Poland whose adult children had left the family home.

HESS, CAROLIN* (King's College London, United Kingdom)

The Impact of Relationships and Domestic Abuse and Violence in Women's Trajectories out of Homelessness

Women's homelessness is rising and there is increasing evidence that domestic abuse and violence is a dominant cause for women's entry into homelessness. For many, the experience of (sexual/domestic) violence and abuse continue to present in their homelessness trajectories. Despite the introduction of some empowerment-based policies in the UK, such as the Domestic Abuse Act 2021, giving those who are homeless because of domestic abuse priority need for accommodation, a clear right of action and resources are missing. This has led to a very different reality of service delivery and practice and the actual lived experience of these women.

The research, based on my doctoral project, draws on 43 in-depth interviews and participant observations with a diverse range of women who have experienced both homelessness and domestic abuse, as well as practitioners within the system. It investigates how women's relationships, experiences of abuse and violence, shape their engagement with homelessness services, practitioners and the housing system in general. It investigates how institutional and everyday violence often perpetuate a cycle of control and surveillance the women are hoping to escape, placing them in precarious situations and sometimes leading to further abuse and exchanges of sexual services for shelter or resources.

This research underscores the gendered nature of homelessness, where women often conceal their homelessness identities and occupy precarious spaces and relationships to manage risk. The presentation will consider some implication of the findings and how services and safe spaces can become a critical location for addressing the needs of these women.

A Spiral of Violence and Status? a Longitudinal Network Analysis of the Interplay between Gender Culture, Social Networks, and Violence Among Adolescents.

This study employs network analysis to shed new light on the relationship between aggressive behavior and status attribution in school. Building on and contributing to literatures on cultural orientations and social networks, we develop a theoretical framework that yields new hypotheses on the interplay between aggressive behavior and peer status. Empirically, we use Exponential Random Graph Models (ERGMs) to analyze a unique longitudinal dataset of over 4,000 students across 43 schools, collected in Germany. We explore whether peers incentivize aggressive behavior, with a particular focus on same-gender and cross-gender status ascription. Our findings reveal that, on average, aggressive peers receive more status attributions than non-aggressive peers. Contrary to previous research, we find that this relationship is not significantly stronger for boys than for girls. While gender homophily emerges as a stronger predictor than preference for aggressive peers, aggressive individuals receive more status attributions, within both gender groups. Notably, aggressive boys receive more status attributions from girls than aggressive girls receive from boys, though this effect is only observable in the first year of data collection when students are youngest. By examining who rewards whom for aggressive behavior, we illuminate a self-perpetuating cycle of aggression and social status. Our findings underscore the value of a relational, gender-specific perspective and contribute to ongoing discussions about violence-promoting subcultures in school settings.

HEYERMANN VIAL, JOSEFINA* (Pontificia Universidad Católica de Chile, Chile)

Capacitismo y Diversificación De La Enseñanza: La Producción Educativa De Lo Infrahumano

Las políticas de educación inclusiva en Chile se han fundamentado en el diagnóstico de estudiantes con discapacidad y la normalización de estos estudiantes a través del ingreso a la escuela regular. Estas políticas toman como base a la Clasificación Internacional de Funcionamiento, de la Discapacidad y de la Salud, donde se definen las características de un cuerpo sano. Así, terminan por defender a los cuerpos "normales" a través del ejercicio del biopoder hacia la población considerada como desviada de esta norma, ejerciendo mayores controles mientras más diferente sea, fomentando los espacios de exclusión. Esta investigación busca caracterizar los elementos materiales y semióticos que producen a la diversificación de la enseñanza como una estrategia legítima de educación inclusiva, a pesar de que produzca aparatos de control y exclusión. La investigación se posiciona desde la teoría de ensamblajes, que busca estudiar las formas en las cuales las relaciones entre agentes materiales, discursivos, humanos y no humanos se producen generando flujos de mutua afectación. Este análisis permitió evidenciar que la diversificación de la enseñanza es legitimada por las políticas de educación inclusiva en el proceso de producción de los estudiantes que salen de la norma como sujetos infrahumanos. De esta forma, los estándares capacitistas, evidenciados a través de los aprendizajes mínimos requeridos para la promoción escolar, resultarán claves para la categorización de los estudiantes según sus niveles de educabilidad y, por tanto, su nivel de humanidad.

Comment Nommer Son Objet ? Sociologie Des Catégories d'Islam Et De Musulman En Contexte Minoritaire.

Les catégories d'« islam » et de « musulman » sont chargées de représentations sociale et leur usage public, en contexte européen, dépasse largement la simple dimension religieuse. Dès lors, toute sociologie de l'islam suppose, au préalable, une sociologie de la sociologie de l'islam, qui vise à identifier les conditions sociales, politiques et historiques dans lesquelles ces catégories sont mobilisées. Lors de mes différentes enquêtes de terrain menées auprès de chefs d'entreprises ou de médecins de confession ou de culture musulmane (c'est à dire socialisés au sein de ces familles), j'ai déjà eu à me confronter à de longues hésitations (parfois des refus) de mes enquêté-e-s quant à leur participation à mes recherches, dès lors qu'elles

prenaient explicitement pour objet d'étude des « musulman-e-s ». La justification restait la plupart du temps la même : ne pas vouloir être réduit à leur seule dimension religieuse, dimension associée à une série d'images et de représentations négatives dont ils ou elles souhaitaient se défaire. Je m'appuierai sur ces témoignages pour souligner la difficulté du sociologue face aux catégories qu'il doit choisir pour nommer son groupe d'enquête-e-s et le risque d'enfermer ces derniers dans un discours contraint et délimité par ces mêmes catégories. Or, si le travail du sociologue consiste à faire un usage vertueux de cet « inconfort » méthodologique, il ne doit jamais oublier, pour expliquer leurs discours et comportements, de convoquer dans son analyse l'ensemble des caractéristiques sociales (classe, âge, genre, etc.) qui définit ses enquêté.e.s.

HICHAM, BENAÏSSA* (GSRL (EPHE-CNRS), France)

Enquêter Sur L'islam: Les Obstacles Au Métier De Sociologue.

L'« l'islam » est cet « objet chaud » dont parlait Jean Leca, il y a plus de 30 ans, à la source de différentes luttes politiques et symboliques, conduisant presque mécaniquement, à l'accusation du parti-pris idéologique. Accusation redoublant dès lors que l'analyste entretient avec son objet d'analyse une relation familiale ou familière. Ainsi, prendre pour étude, un objet traitant de près ou de loin de « l'islam », constitué publiquement comme un « problème social », c'est s'exposer à reproduire dans son analyse ce qui est présupposé dans les représentations collectives (Bourdieu, Passeron). L'islam étant un objet social qui fait problème, il est alors tentant de prendre pour objet d'étude le problème que pose l'islam, c'est à dire de construire sa problématique qu'en référence au problème social qu'il pose. C'est pourquoi, il y a une urgence toute particulière à appliquer à l'objet « islam » les réflexions les plus abouties en matière de sociologie critique. En effet, la méthode de la sociologie réflexive qui s'interroge sur elle-même, c'est à dire sur ses conditions sociales et politiques de productions, permet de mettre en lumière les obstacles sociaux qui se dressent entre le sociologue et son objet. Dans la continuité des travaux qui s'inscrivent dans cette démarche de réflexivité et tout particulièrement des travaux qui s'intéressent aux questions de « race » dans le rapport à l'enquête et aux enquêté.e.s, je souhaite aborder, lors de ma communication, une série d'obstacles fondamentaux qui constituent des biais épistémologiques majeurs lorsqu'on étudie l'objet « islam ». A partir de mes expériences de terrain, je traiterai de l'obstacle assez classique de la transformation d'un problème social en problème sociologique; puis m'intéresserai à l'obstacle constitué par les effets de champ disciplinaire; pour terminer enfin par la redoutable question du rapport des sociologues aux croyances religieuses.

HICKEY-MOODY, ANNA* (Maynooth University, Australia)

Animating the Material Politics of the Anthropocene

Digital qualitative (Waltorp 2018, Fullager et al 2017, Horst 2015) and sensory methods (Coleman, 2021, 2020) offer practical ways to understand the embodied and experiential nature of young people's subjectivities and affinities. Drawing on digital animation workshops I ran with young people in coal mining areas, in this paper I examine how they experience belonging and attachment in the Anthropocene. Understanding attachments allows research to move beyond an individual's relationship to their immediate environment to think about a wider range of experiential, embodied and emotional 'acts of citizenship' (Isin and Neilson 2008). This paper builds on recent advances in affect studies, applying ideas and practices from this work to new contexts: the digital animation workshop in coal mining towns. I analyse my data via a conception of identity as a material and emplaced assemblage of affects that is created through human and non-human relationships, and this is an ideal way to approach the study of young people's systems of value in mining economies. Belonging, identity and value are not singular or static. They are iteratively produced through struggle and action, brought into being through multi-scaled acts and assemblages. Both consciously and unconsciously, carbon economies are embedded in the multi-scaled, iterative production of subjectivity. Considering carbon production and consumption as acts of youth citizenship, I develop new ideas about how the material politics of citizenship in mining communities are comprised.

Collaging LGBTQ+ Lives Online across Religious and Cultural Difference

Religion and sex are subjects about which people feel emotional and passionate, uncomfortable and unsettled. Life after death, spirits, ghosts, passion, desire, love - the many forms in which these subjects come into our worlds- create excitement. Our research on queer youth in religious communities is designed to understand young people's entanglements of religion and sexuality: areas of passionate attachment. Our approach has been designed from the perspective of affect: **feelings and acts of being moved are at the centre of how we work.** As a method, affect allows for the exploration of how feelings from knowledges, actions, interactions, and contexts, impact a young person's capacity to act. We employ affective digital ethnography to map entanglements of emotion, desire, faith, and feeling, in young lives and catalogue the practices of care and of judgement developed by religious youth. The research embodies an ethical research praxis, allowing for a becoming-with the affective nature of the project. This paper presents new empirical research from our Australian Research Council funded Discovery Project on young people, sexuality and religion. We focus on the visual data collected in interviews and will explore how the methods work in terms of generating data and supporting participants in exploring quite complex and personal subjects in productive ways.

Developing the Karuk Tribe Department of Natural Resources Data & Knowledge Sovereignty Policy

There is an urgent need for the development and implementation of collective Indigenous privacy laws, regulations and standards. While settler-colonial governments are lagging in UNDRIP's implementation, Indigenous communities are creating their own policies. Karuk interest in asserting IDSov partially comes from a history of settler-colonial resource extraction in the region (e.g., the gold rush, timber rush, fish rush, green rush, TEK rush, and data rush). The Karuk Tribe Department of Natural Resources ("Karuk DNR") has, in recent years, identified receptive conditions for the development of an Indigenous Data & Knowledge Sovereignty ("IDKSov") Policy. Non-Tribal collaborators have increasingly sought guidance on how to approach the Tribe in a respectful way with regard to their Knowledge and data. Pursuit of providing such guidance has thus far revealed there are few, if any, examples of a comparable context to follow. The IDKSov Policy is emanating from Karuk Tribal Community engagement in the form of workshops, panels, a speaker series, and youth outreach. Our policy development process will be shared to academic spaces through the dissertation of Sierra Hicks, PhD student in the Department of Natural Resources and the Environment at Cornell University, and Karuk DNR Data & Knowledge Sovereignty Fellow (contract worker). Sierra's dissertation is currently undergoing co-design as a part of a decolonizing methodology, but ethnographic study of the policy development process is slated to begin in early 2025. Building on theoretical frameworks of Political Ecology and Indigenous Futurism, this dissertation seeks to make a practical contribution to the citable material that informs coming local, state, and federal IDSov laws, regulations and standards. Reporting of initial findings, as well as reflections on the past two years of our Karuk IDSov collaboration, is what we seek to bring to this session.

Collaboration, Coordination and Coherence in a Competitive Sector: Tertiary Education System-Building in England

Fragmentation and the need for greater coherence and coordination have been identified as major challenges in England's skills system, emphasising the need to bring "Higher Education and Further Education closer together" (DfE, 2024, p. 16). While efforts to create a more coordinated and collaborative tertiary education system have been long-standing (Simmons, 2009), they are now gaining renewed traction in national policy debates (e.g. Hazelkorn, 2023; Maylor et al., 2024; Phoenix, 2023; Richmond & Regan, 2024; Robson et al., 2024; Work & Ansell, 2021). This discussion is further intensified by the policy divergence between England and the other UK nations, where England's tertiary education landscape is characterised by marketisation and competition, while Scotland, Wales, and Northern Ireland are moving toward more coordinated and collaborative approaches (Hodgson et al., 2019).

Drawing on comprehensive reviews of literature, workshops and policy discussions with tertiary education leaders, and interviews with key stakeholders at both national and regional levels, this presentation will examine the possibilities and challenges of transitioning from governance modes rooted in competition and "steering from a distance" toward a more integrated and collaborative post-compulsory education system. In the context of the marketisation of tertiary education in England, the paper examines tensions between pecuniary goals, public good imperatives, and the impacts of competition on inter-institutional collaboration. Additionally, the paper will explore regional collaborative initiatives, identifying key factors that facilitate local synergies within England's fragmented tertiary education system.

Parental Narratives of Good Education: Education Quality As a Floating and Empty Signifier and Governmental Effects in Chile

My paper examines parents' sense-making of education quality in their educational narratives. The Chilean education system has been described as a paradigmatic case of market-driven policies (school choice, competition and privatisation), which have produced deep socioeconomic school segregation (Bellei et al., 2019). To add nuances to common depictions of education quality as academic outcomes, my study approaches quality as a floating signifier. This means a term whose ascription of meaning is achieved through relations with other elements. This process is contested by multiple discourses (Jørgensen & Phillips, 2002; Laclau & Mouffe, 2014). The floating character has as a condition the signifier's emptiness (Laclau, 2014), making education quality an absent fullness that mobilises and motivates the articulation of diverse practices and meanings (Clarke, 2014; Fernández-González & Monarca, 2018; Howson, 2017).

The study draws on 47 narrative interviews with parents in Santiago, Chile. Approaching narrative as a space of interactions between discourse and experience (Tew, 2002), the analysis focused on the commonalities and tensions in the meaning's articulation of education quality. The results account for the political and multifaceted character of education quality at the everyday life level. Parents have rich notions of education quality, which go beyond academic performance. When discussing quality, parents refer to well-being, children's individuality and school's social composition. The paper argues that despite the multiplicity of meaning, education quality as an empty and floating signifier has become a powerful governmental tool that promotes families' self-regulation through logics of comparability and responsibilisation.

On-Farm Experimentation and Disease Management: Insights from a Study of Winegrape Producers in Tasmania, Australia

Farmers worldwide conduct experiments on their own farms. Their on-farm experimentation is undertaken to test and modify crops, technologies, and practices to fit their specific circumstances and context. Importantly, on-farm

experimentation is a key mode of farmer learning. By observing, assessing, and reflecting during experimentation, farmers not only learn about the performance of tested practices, but also develop and accumulate knowledge about the dynamics of local farming systems. However, integrating such experimentation into extension practice has been challenging historically due to the dominance of a scientific approach that is reductionist and which privileges replicated small-plot trials, providing limited insight into how new practices will perform at other locations and across seasons or varieties. To address these limitations, collaborative On-Farm Experimentation (OFE) has been recently proposed as new approach to agricultural research and innovation that 'brings agricultural stakeholders together around mutually beneficial experimentation to support farmers' own management decisions' (Lacoste et al., 2022: 2). In this paper, we present progress in applying and adapting an OFE approach in the context of on-farm trials conducted in eight vineyards operated commercially in Tasmania to manage botrytis bunch rot, a disease that is estimated to directly cost the wine industry in Tasmania 20-30% of processed value in a severe season. Drawing upon qualitative data from pre-trial and post-trial interviews, and observational data collected during the trials, we examine how participants interpret the value of the trials and forms of collaboration, learning and actions that were a consequence of the OFE process. In doing so, we also critically assess what can be learned from our application of a collaborative OFE approach in contributing to 'more flexible, responsive and adaptive outcomes' (Comi, 2023: 17) for producers as well as farming regions.

HIGGINS, ISABELLE* (University of Cambridge, United Kingdom)

Stealth Supremacy: The Reproduction of Structural Inequality through Everyday Digital Practice.

In this paper, I argue that the concept of 'stealth supremacy' offers productive capacity as a 'racial grammar' (Bonilla-Silva, 1997), allowing connections to be drawn between everyday digital practices undertaken by Christian conservative women commentators in the USA and the reproduction of hetero-patriarchal-white supremacy. I demonstrate this by locating, interrogating and critically assessing the work of three online producers who create digital content for audiences in the hundreds of thousands. I pay attention first to YouTube content that encourages young women to become 'stay at home moms' through self-fashioning practices which promote 'finding a traditional husband', before turning to podcasts which encourage young mothers to 'oppose the killing of babies' by donating to and funding anti-abortion pregnancy centres across the USA and making specific voting decisions, and then finally analyzing Instagram content which encourages mothers to 'question everything' when seeking medical care, and vaccinations specifically, for their children - this content contains a range of medical mis and disinformation. By working through these three empirical cases, data from which was gathered during two three-month periods of digital ethnography, and using critical technocultural discourse analysis (Brock, 2018) to analyse this content in the context of its production, reception and the underlying cultural practices and beliefs of technology designers and users, I show that these types of everyday digital practices require sustained sociological engagement. This engagement must centre questions of structural violence and social reproduction, whilst being mindful of risks of sensationalism and spectacle. It is important to consider this content as 'structural' because the content itself promotes the 'shoring up' of material advantages to white supremacist movements, through a range of both online and offline practices, which encourage actions from women at all life stages. Deep seated social inequalities are thus refracted and reproduced through everyday, online practices.

HIGGS, PAUL* (University College London, United Kingdom)

The Anthropocene and the Rewriting of Intergenerational Solidarity

Discussions about intergenerational solidarity mix notions of generation as a kinship relationship with those positing it as a social relationship. This underlying tension has emerged at times of social ferment such as the 1960s generational schism and now in the era of what has been called the 'Anthropocene' where human induced climate change is implicated in creating dangerous changes for both the world's population and the planet. It has also potentially foreshortened any positive future for yet to be born generations. In this paper we address how ideas of generations and generational conflict have begun to be framed around climate change as the social generation once identified with the protest politics of the 1960s has been re-framed as a generation of 'greedy geezers'. This 'new' generational conflict has come on the back of earlier arguments concerning generational conflict and generational equity centring on welfare provision toward older people. These

arguments shifted ideas of intergenerational solidarity, and the deserts owed to older generations, to the negative position of households with children. Within this framework the idea of generational accounting emerged, based on the priority of creating generational stability in public spending. This led to a turn away from present to future inequalities.

In the 21st century, this future orientation was turned to broader concerns regarding the planet as precariousness and risk became lodestones for politics. Sociologists such as Ulrich Beck identified a new generational line of fracture emerging over climate change, between young 'global generations' and old 'homo neandertalis'. We focus on the implications of this transformation in the meaning of intergenerational solidarity in the context of a wider framing regarding the differential obligations and responsibilities for the past, present and future well-being of the planet itself.

MATSUTANI, MITSURU (Chukyo University, Japan)

Why Do Non-Sympathizers Participate in Demonstrations? the Role of Social Capital in Facilitating Mobilization Processes

Participation in protests have been one of central topics of social movement studies, focusing on micromobilization processes that persuade sympathizers to take action. Many studies have sought to understand how consensus mobilization can be transformed into action mobilization or how mobilization potential produces demonstrators. However, previous research has largely concentrated on sympathetic participants and overlooked "non-sympathetic protesters" who do not like social movements but still participate in protest events. We argue that a significant number of non-sympathizers can and do participate in protests, and we clarify why they choose to join. We conducted a large-scale online survey on street demonstrations in Japan in 2017 (N = 77,084), as Japan experienced the largest wave of demonstrations in the last four decades following the meltdown of a nuclear power plant in 2011. Our data reveal that nearly one third of demonstrators were non-sympathizers of social movements. While social capital (notably group affiliations) is the most important variable to promote participation in demonstrations, we find distinct effects of different types of groups: (1) Affiliation with community associations heightened sympathy for the movement but did not lead to involvement in protests; (2) Whilst belonging to political groups (mostly conservative organizations in the Japanese context) lowered sympathy for the movement, it promoted participation in demonstrations. (3) Affiliation with civic groups heightened sympathy for the movement and facilitated participation in protests. The implications of these results are twofold: (a) not all group affiliations, especially those with non-political organizations, promote participation in collective action; and (b) even though they may be unfavorable to social movements, political groups can be important predictors of being asked to protest and can serve as social capital, propelling the recruitment of non-sympathizers to join demonstrations.

HILAMO, HEIKKI* (Finnish Institute for Health and Welfare, Finland)

Analyzing Social Security Benefits for War Veterans through the Lens of the Politics of Recognition

In traditional social security frameworks social security is defined as the protection that a society provides to individuals and households to ensure access to healthcare and to guarantee income security. This approach is primarily need-based, focusing on providing essential support to individuals who find themselves in vulnerable situations due to specific life circumstances. However, when considering the impacts of war, it becomes evident that traditional social security frameworks must adapt to address the unique needs and conditions that war presents.

The concept of the politics of recognition emphasizes the importance of acknowledgment and validation of individual and collective identities within societal contexts. This concept is particularly pertinent when analyzing social security benefits for war veterans, a group whose recognition—or lack thereof—can have profound implications for societal stability, especially in the aftermath of conflicts. This research explores how the politics of recognition applies to the social security benefits allocated to war veterans in five countries—Russia, Ukraine, the United States, Israel, and Finland—each with distinct historical experiences of interstate warfare.

The relevance of this analysis is heightened by the ongoing war between Ukraine and Russia. In the aftermath of such conflicts, the way a society treats its veterans can play a critical role in either stabilizing or destabilizing the post-war order.

The research will address the following questions:

1. How are war veterans recognized and valorized within each country's social security system?
2. What are the similarities and differences in the social security benefits provided to war veterans across selected countries and how do these differences reflect the historical and cultural contexts of each country with reference to politics of recognition?

This research employs comparative policy analysis at the level of benefit legislation, a method particularly useful for examining comparative public policy.

Leveraging Digital Trace Data to Explore Wealth Perception in Inequality Research

Wealth perception plays a crucial role in shaping societal attitudes towards inequality, influencing public support for policies and the social acceptance of wealth disparities. Traditional data sources have provided essential insights, yet they are often constrained by limitations such as self-report biases and declining survey participation. In contrast, digital trace data, derived from social media, offers an unfiltered, real-time glimpse into how wealth is portrayed and perceived by the public—providing a unique and authentic lens to understand the dynamics of inequality. Our study leverages data from Instagram to analyze the representation of wealth among billionaires and their audiences, utilizing advanced analytical tools such as deep learning, sentiment analysis, and image feature extraction. By examining posts from a selected sample of Forbes billionaires, we uncover patterns of conspicuous versus inconspicuous consumption and analyze their effects on public sentiment. Our findings indicate that curated, glamorous portrayals of wealth generally elicit positive responses from audiences, contributing to aspirational dynamics. However, instances of overtly conspicuous consumption often produce polarized reactions, highlighting the complex interplay of admiration and resentment among different social groups. The use of digital trace data in this context reveals nuanced dynamics of social stratification that are challenging to capture through traditional methods. Social media platforms provide a fertile ground for observing emotional contagion, where public sentiment about wealth and inequality spreads and evolves in real-time. This paper also addresses the methodological challenges involved in using these novel data sources, emphasizing the need for ethical considerations and the integration of computational methods to enhance our understanding of inequality. By focusing on wealth perception, we underscore the power of digital data in reshaping the field of inequality research, offering new dimensions of insight into the public's relationship with wealth and disparity.

The Personal Is Political and the Political Is Personal: The Public/Private Partitioning of Gender

The turn of the 21st century has seen – in political campaigns, policy debates, court cases, street protests, and social media firestorms across Europe and the Americas – an explosion of popular mobilization, controversy, and litigation around what is sometimes called "gender ideology." "Ideology" in these debates is typically used pejoratively, to denounce an educational/political agenda as one of indoctrination and manipulation, but the term also suggests an underlying reality that is more convoluted and problematic than its explicit derogatory use suggests. If we understand the word "ideology," in its more neutral sense, to mean a relatively systematic practical constellation of beliefs that shapes understanding and facilitates communicability of experience of self and world, then a proliferating, multiplicity of irreconcilable *ideologies* is increasingly all that remains of gender categories in liberal societies. Liberal modes of governance were born in the separation of religious convictions of conscience from civic rights and obligations, a pragmatic strategy for governing European populations that were consuming themselves in civil warfare in the 16th, 17th, and early 18th centuries. As with religion in 17th century Europe, the categories of gender, at least when it comes to questions of ontology and ethical value, increasingly only have meaningful content as personal categories in the private sphere – where they are indeed ever more meaningful; in the organizational and administrative terms of public spaces, discourses, civic rights and obligations, the meaningful content of gender categories, the rationale of their demarcations, and the criteria of their adjudications are dissolving, and rather quickly. How to agree to disagree about the categories of "man," "woman," "boy," "girl," which permeate

historically and practically liberal societies? This paper examines some recent court cases around pronoun policies in higher education institutions to see how public/private divisions are being drawn around this new ethical good/truth: gender.

Indigenous Based Research in Academia

Relationality is the key element in Indigenous research and it's something I've become more interested in exploring through my academic career. Relationality is the interconnectedness of all beings including the environment. As a femme Michif Otipemisiwak (woman of the Metis Nation), it's important to me to incorporate this idea of relationality into my research and studies as I'm not only representing myself but all my relations who came before. Indigenous relationality challenges Western methodologies in that it prioritizes the relationship, the reciprocity within the community and accountability. Western research is focused primarily on individualistic gain and recognition. This approach redefines the relationship between the subject(s) and the researcher. Incorporating Indigenous relational frameworks advocates for a culturally respectful approach, brings in relational responsibility person to person and makes the research a collective benefit. Western researchers tend to overlook the importance of relationship and Indigenous communities will not work with researchers unless there is a connection made and respect earned.

In my experience when Indigenous knowledge is compared to Western knowledge there seems to be this underlying assumption that Indigenous knowledge is inferior. This causes barriers in Western academia where Indigenous knowledge and Indigenous research practices get turned away because they are seen as invalid or unscientific. Where there is no relationship there is no understanding, therefore in order to understand and effectively use Indigenous relationality in research, researchers must be willing to connect, to listen and to take accountability.

Agency of Young People in Structurally Weak Regions and the Influence of Family

The emigration of young people poses a challenge, as they are the central resource for addressing the problems of structurally weak regions, which are identified as areas in need of support (the EU project PAYPIRD 1999-2003).

This presentation will focus on young people in "structurally weak regions", primarily addressing the restrictions placed on young people's options for action. Young adults remain if they perceive themselves as having the power to act and thus advance as local actors (van Breda et al., 2023). In terms of collective agency theories, this can only be established relationally with the actors and conditions in a processual manner (Raitelhuber, 2018).

As an intergenerational educational space, family is one of the most influential factors, serving as a place of orientation and support (Busse, 2017). From a transgenerational perspective in which the (grand)parents' generations impact subsequent generations, contextual conditions affecting young people's options for action become visible (Hille et al., 2022). Focusing on educational practices in their entanglement with family and youth stay negotiations, economic opportunities, and socio-cultural images of "structurally weak regions" seems worthwhile, as the resulting decisions have consequences for the individual—and in summation of individual choices, for the region. In this context, young adults carry a latent scope for agency—an inherent capacity to influence and shape their trajectories. The intricacies of this intergenerational and regional interplay contribute to individuals' diverse and evolving educational experiences, laying the foundation for their agency in navigating the complexities of adulthood.

Exploring the reconstruction of educational practices and regional understanding within families unveils the dynamic interaction between familial influences and broader regional perspectives (Hille & Schulze, 2023). The presentation should discuss the concept of 'structurally weak regions', take an intergenerational perspective on space and its effects on young people's agency, and theoretically discuss these effects.

Climate Boundaries: Linking Emotional Dimensions of the Relational Foundations of Solidarity to Civil Sphere Theory

In this paper, we ask how solidarities and symbolic boundaries are formed and articulated in the context of the climate crisis in four European societies: Austria, Slovakia, Norway, and Spain. As a theoretical contribution, we combine a Durkheimian and a Bourdieusian approach to symbolic boundaries and argue that a feminist sociology of emotions perspective provides novel and timely impulses to understand constructions of "us" and "them" and resources of solidarity in the climate crisis. We define climate boundaries as the boundaries individuals draw by evaluating people and social groups to make sense of everyday attitudes and behaviors related to the climate crisis. The sociology of emotions perspective helps us better understand how individuals make sense of climate issues through their embeddedness in everyday social relationships, and how they perceive matters of justice, inequality, and solidarity around climate as integral to these everyday constellations.

Based on empirical observations of climate boundaries as micro-foundations of social solidarity, we ask how these meaning-making resources employ narratives from larger public debates that enact and generalize particular visions of solidarity, civility, and justice within the climate crisis, in each of our four cases. By linking the findings from our interviews with broader meanings that circulate in the public, we show that climate boundaries are a key element of civil sphere contestations. The empirical core of our project are 30 interviews on climate boundaries and solidarities with individuals with different class backgrounds respectively in Austria, Slovakia, Spain and Norway (120 interviews) as well as a comparative look at findings from public opinion surveys on climate as well as relevant public debates. We will devote special attention to the case of Austria in our presentation.

The paper is part of the Horizon Europe project CIDAPE – Climate, Inequality, and Democratic Action: The Force of Political Emotions (2024-2027).

Violence and Resistance in the Making of a Settler Colonial City

The history of Tel Aviv is usually told as a story of a peaceful evolution from a Jewish suburb of Jaffa into a modern, western "Hebrew city." The everyday violence involved in shaping an exclusive Jewish urbanity is usually silenced in historical accounts on the formation of Tel Aviv. Following Trouillot's call to uncover the silences that operate in the formation of historical narratives we seek to "unsilence" the everyday violence constitutive of the formation of Tel Aviv as a modern, western, and exclusively Jewish sphere, through the case study of the municipal struggle against illegal hawking in the 1940s. Hawkers—both Jewish and Arab—were a vital part of Tel Aviv's cityscape from early on. Some hawkers held a municipal license, but numerous others—mostly Arabs and Middle Eastern Jews—hawked without a license. Hawking was a juncture of many municipal, commercial, and public concerns, as well as a site of social tensions, along class, ethnic and religious lines. Yet conflicts over hawking, as Jonathan Shapiro Anjaria argues, are not just about power—they are no less about ideas and imaginaries of the city. This lecture will focus on the municipal struggle against illegal hawking and city residents' responses, both to the hawkers and to the municipal efforts to displace them. As a new city and a Jewish enclave, Tel Aviv was a focus of settler imaginaries of ethno-national purity and progress, which municipal authorities tried to enforce in the public space. Yet implementing this vision of Western modernity and Jewish exclusivity in the heterogeneous space of the city was conflict-ridden, contentious and often violent. As we will show, the very escalation of the municipal treatment of unlicensed hawkers sparked growing public expressions of solidarity with the hawkers and resistance to municipal inspectors.

How Do Postgraduate Academics Promote Social Responsibility in Their Work?

In the development of the project "Applied Ethics and Education" from the National Autonomous University of Mexico, we considered relevant to study the issue of the social responsibility of the universities. This interest is based on the importance of the mission traditionally attributed to higher education institutions and the existence of a business model that privileges the capitalization of knowledge. Faced with this reality, the question was asked to a group of postgraduate academics: how do you promote social responsibility in your work? We employed a qualitative research, in which a questionnaire of open questions, and a content analysis was used through which a great diversity of strategies was identified that was organized into four categories: Search for social relevance, Relationship with students, Ethics and Values, and Dissemination of the academic work. These results were compared with the literature analysis carried out, and in this way the importance of the strong relation between the university and the communities was confirmed. The role played by postgraduate professors and researchers was also emphasized, so that, through their work, they respond to the diversity of social problems and can contribute to the construction of a more just and inclusive society.
